PREFACE

Sukh Ram
Minister of State
Communications
India

सत्यमेव जयते

Studded with snowy ranges, lush green forests, singing streams, verdant vales, shimmering lakes Himachal Pradesh is a tourists paradise. This picturesque hilly territory has become a household name amongst lakhs of people not only in India but all over the world. The life and landscape of Himachal is a colourful canvas of a free and fearless society which draws its nectar of strength from the shrines of different religions.

After attaining full statehood Himachal Pradesh has made various strides in Social, Economic and Cultural fields which needs exposure to the countrymen. Himachal Pradesh remained hidden from the eyes of Scholars for a very long time. But in the recent past some good work has been done by some individuals. "The Wonderland Himachal Pradesh" is one of the greatest efforts to provide most authentic, comprehensive and invaluable information to the readers.

It is a matter of great satisfiaction that the work completed by Prof. Jag Mohan Balokhra on Himachal Pradesh is first major work of such a high quality and precision.

While extending my good wishes to the author, I hope the book will generate greater interest in this hilly state.

Sukh Ram

Note: This preface was written for the first edition of the book in 1995 and has been retained as such.

FOREWORD

Prem Kumar Dhumal
M.P (Lok Sabha)
1- Meena Bagh
New Delhi-110001

सत्यमेव जयते

It is a matter of great pleasure that a book entitled "The Wonderland Himachal Pradesh" has been written by Prof. Jag Mohan Balokhra-a son of the soil and published by H.G Publications, New Delhi.

It is the first genuine attempt to unravel the scenic beauty, location, art, culture, architecture, economic development, social structure and unique position of this most beautiful Himalayan State to the World. So far this beautiful state has remained hidden from the critical and creative eyes. The present volume contains most thorough, useful and scholarly information on various topics.

This book is likely to give a true picture of the beautiful State to the readers through its 750 odd pages and inspire them to visit the godly state personally.

I congratualate young Prof. Jag Mohan Balokhra on this brave attempt and wish that readers of varied sections will appreciate this great work and make it an integral part of their collection.

Prem Kumar Dhumal
Dt. 06.11.1995

Note: This foreword was written for the first edition of the book in 1995 and has been retained as such.

Writer's Note

Himahcal Pradesh is a beautiful land, inhabited by people of various caste, creed and religious groups. Inspite of its heterogeneous social and cultural agglomeration, there is a common feeling among all of them i.e. ***'The Pride of being Himachali.'*** This Wonderland located in the lap of the Western Himalayas has been adorned by beautiful, brave, courageous, honest and hard-working people having unflinching faith in religious ceremonies and the existence of supernatural power. Its unique composition, location and character all make it **'The Wonderland'**. In the past, a good stock of work has been done by scholars to provide information to the readers, related to various aspects of the state, but there has hardly been any effort on the part of scholars to present Himachal Pradesh in the shape of a land of unified geographical, social, cultural and economic vision and destination. It took me long four years to complete this encyclopedia on Himachal Pradesh. In the process I had to pass through some very critical moments of my life. The greatest difficulty in the completion of this work came from various study centers (libraries), where the attitude of Librarians was un-co-operative and is that of feudal lord of medieval period.

This work would have not seen the light of the day, had I not constantlybeen inspired by the people around. It will be unkind of me if I don't mention the name of few of them, who regularly inspired me.

Smt. Giano Devi Sharma (my mother), Prof. Prem Kumar Dhumal, Raja Maheshwar Singh, V.K. Malhotra (Former Economic Advisor H.P Govt.), Dr. Madhu Varshney, Chief Librians and Staff members of Central Secretariat Library (Shashtri Bhavan, New Delhi), Archeological Survey of India (New Delhi), H.P Secretariat Library, Directorate of Economics and Statistics, Shimla, Academy of Language and Culture, Shimla, H.P University Library etc.

My special thanks are to my family members- Madan Mohan Sharma any Vijay Mohan Sharma (brothers) Mrs. and Mr. Oma Nand Nadda, Mrs. & Mr. Purshottam Chand Sharma and Bharti Balokhra (my wife) who were constantly helping in the early completion of this book.

My thanks are also to Mrs. And Mr. D.R. Sharma (Compositor) and his whole family for the sleepless nights they had to spent while the composition work was going in full swing.

The completion of this work would have not been possible without the active support of Vaishali Arora (Asstt. Editor), Elsamma Jacob and Radha Verma, who continuously helped me in providing mistake free publication.

Last but not least, I am thankful to all those ungrateful people, who tried to assassin me morally and physically, when I was about to achieve the best of my efforts. Now I leave it to them and to my esteemed readers to judge, who have been successful in this long unending battle.

In the end I request my readers to send their opinion on and about this work by writing back to the publisher. Truthful analysis and critical estimate will be the real reward of this mammoth work.

Date: December, 1995

Acknowledgement -IInd Edition

I am very thankful to my readers who appreciated this book in a big way and made it an integral part of their information house on Himachal Pradesh. In the second edition necessary changes have been made and a new chapter on Police Administration has also been included under the guidance of Former Director General of H.P. Police Mr. Rati Ram Verma, who is currently discharging the most delicate and sensitive job of a Chairman, H.P Public Service Commission. A number of facts have also been added in almost all chapters to make it update.

Date: February 1997

Acknowledgement -IIIrd Edition

It is a proud privilege for me to introduce the IIIrd Edition of this book. In this revised edition a Chapter on Communities has been added to equip readers with more information on certain communities, which form an integral and important part of state's composite culture and life. The communities covered are-Ghirath, Khampa, Pangwal and Kinnaura.

Date: January, 2003

Acknowledgement -IVth Edition

Since 2003, a great deal of changes have taken place, so it was found pertinent to update the data and necessary information incorporated in the previous editions. In this edition a number of additions have been made in almost all the chapters, which resulted into making it a mammoth work on this tiny state. Our two son, Deepak H. Balokhra and Aaditya D. Balokhra have been perennial source of inspiration all through this period. I am thankful to all those who helped me in the completion of this project.

Date: September, 2007

Acknowledgement 2015 Edition

I am delighted and feel honored while presenting the 31st revised edition of this book with wider coverage to each and every topic. I am extremely sorry for keeping my readers wait so long as the book was running out of stock for last one year. Thanks for waiting so long. I wish the wait has been handsomely rewarded.

Jag Mohan Balokhra
Date: December 2014

CONTENTS

THE BEAUTIFUL LAND

"He who goes to the hills, goes to his mother,
the loving, nourishing bounteous mother".

— 'The Puranas'

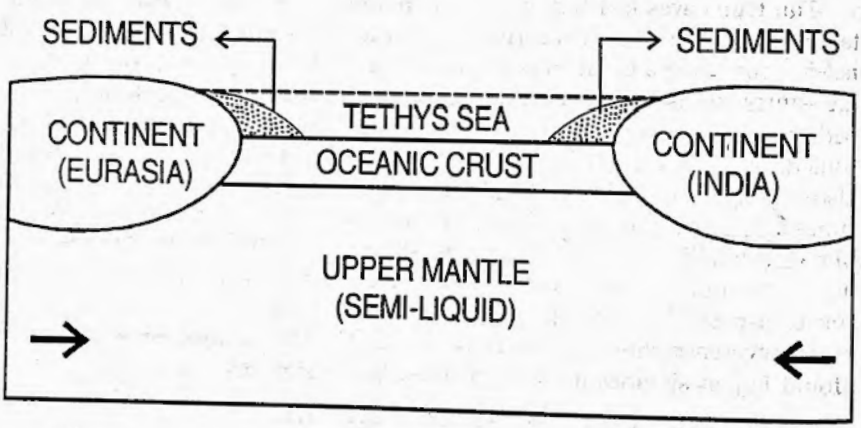
Himalayas are the greatest of all mountain systems which extend approximately to 2,410 kms. from North–West and to South–East their width is between 250 to 300 kms. The mountains of Peninsular India such as the Aravallis, the Satpuras, the Vindhyas and the Nilgiris are over 1,000 million years old. The Himalayas are one of the youngest among the mountain systems in India. These are believed to be only 40 million years old. It took about 50 to 70 million years for this landmass to rise and to form the highest mountain system in the world.

The Himalayas in Hindu tradition are much more than a majestic mountain range that extends in a 2,410-km curve across South Asia. Hindus revere it not just for being a home to rare sanative herbs, nor even as a haven for exciting winter sports. To the Hindus this great grandfather-like figure has always been an abode of gods. So they referred to the Himalayas as *devatma* or God-souled. *Giri-raj* or the "King of Mountains", as the Himalayas is often called, is also a deity by itself in the Hindu pantheon. Hindus view the Himalayas as supremely sacred, as a corollary to seeing god in every atom of the universe. The mighty altitude of the Himalayas is a constant remembrance to the loftiness of the human soul, its vastness. a prototype for the universality of human consciousness. Even Mount Olympus in Greek mythology would pale in front of the reverence shown to the Himalayas in the Hindu mythology. Neither is Mount Fuji as significant to the Japanese as the Himalayas to Hindus.

ORIGIN OF THE HIMALAYAS

Many geologists have offered their views regarding the origin of the Himalayas. Among the early researchers mention may however be made of Sues, Burrad, Fuch, Valdiya, Wadia etc. It is believed that the Himalayas have originated as a result of sedimentation of a vast Tethys geosyncline that lay between the Gondwana landmass in the South and Angara landmass in the North. The soft sediments in the geosyncline were subsequently upheaved in several phases.

The origin of the Himalayas is related to continent–continent collision. Continent-continent collision occurs when two continental plates collide. As the Continents are carried by plates move, they move towards each other, the



ocean basin is reduced in size and eventually closed. (Plates are broad rigid segments of Earth's Upper layer–100 km. in thickness, which floats on underlying plastic or semiliquid layer) The Himalayas were formed when Gondawanaland (or Indian Plate) moved towards Eurasian plate and eventually enclosing the Tethys sea.

The following were the Major Events in the generation of the Himalayas:

(1) Geoclinal sediments occurred along the margins of each continent. A Geosyncline is a very long (thousand of kilometres), relatively narrow (a few hundred kms) Zone or basin in which marine sediments and volcanic rocks collect.

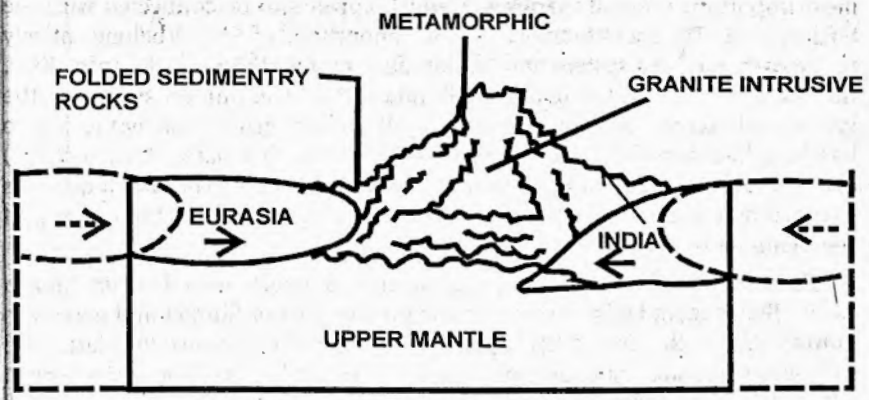
(2) The wedge of sediments along the margins of Indian plate and Surasin plate deformed as the ocean basin decreased in size.

(3) As the continents approached each other before colliding, segments of the remaining ocean crust were deformed by over thrusting and were finally squeezed between the converging plates. This marked the site of welding of two plates called a suture zone. The Indus–Tsangpo suture Zone is one such zone.

(4) As collision proceeded, the oceanic crust descended into the mantle and was consumed. The continental crust could not subduct like oceanic crust for its buoyancy from descending into the mantle, thus creating a double layer of low density which rose buoyantly to produce a broad belt of deformed rocks with adjacent high plateau, e.g., '*Tibet*'.

(5) As resisting force built up, convergence stopped, the mountain belt was eroded and it adjusted itself isostatically. (Isostasy is a balance or equilibrium between adjacent blocks of crust resting on plastic mantle).

GEOLOGY



Most of the geologically mapped area of Himachal Pradesh is covered by

tertiary rocks except the Northern and North-Eastern portions of Chamba district where older formations like carboniferous-trias and Silurian and pre-Cambrian gneissose-granite are also found. The structural features of the Chamba district fall in line with geological characters of the North-West Himalayas.

Along the Southern margin of the mountain region the Shivaliks are found in contact with the old Himalayan rocks, the line of junction between them being a thrust, the old Himalayan thus appearing above the tertiary beds. Since the Dharamshala beds are seen overlying the Shivalik formation and underlying the volcanic series, the base and top contacts of the bed are thrust planes seen in the Dalhousie area.

In the Dalhousie area, the trap comes in-between the Crabo-triassic series and the tertiary rocks, but in the '*Bandal-Dihur*' area it comes in between the Carbo-triassic series and the upper silurian conglomerate. In both the Dalhousie and the Bandal-Dihur areas the trap is found in contact with the upper silurian conglomerate on the one side and the Carbo-triassic limestones on the other.

In the Dalhousie neighbourhood, the rock in contact with the volcanic series South of '*Dain Kund*' is a quartzite which appears to correspond with the consisting of slates and limestones. Northwards, the rocks of the Carbo-triassic series are succeeded by a band of gneissose-granite. Around *Chamba*, the older Himalayan formations are exposed, to South of Chamba, and gneissose-granite are exposed with some overlying sequence of Silurian, carboniferuostrias and volcanic series formations. From Basohli, the Shivaliks

continue with a steady N.E. 5° E. dip all the way to Bhond.

At Bhond, the Shivaliks dip under indurated red clays and fine grained sandstones of dark grey colour. These rocks are presumed to represent the '*Dagshai*' and '*Kasauli*' groups equivalent to the Dharamshala beds. In short the Chamba district and the Dalhousie area geologically possess all the characteristics of the North-West Himalayas, though local details vary. Along

the Southern margin the Nahan series predominate.

In the areas which were formerly included in the Kangra district, all the three types of the stratified rocks of the Himalayas are to be found. To the North of Spiti, the Tibetan zone is represented by a series of beds extending in age from Cambrian to cretaceous; this is separated from the central zone by the granite range between Spiti and Kullu.

The rocks of the central zone consist of '*slates*' '*conglomerate*' and '*limestone*' representing the Infra-Blaini and overlying systems of the Shimla area: still farther to the South the third of sub-Himalayan zone consists of shales and sandstones (Sirmaur series) of Lower tertiary age and sandstones and conglomerates belonging to the upper Tertiary Shivalik series. The slate or quartz–micaschist of the central zone is fissible and of considerable value for roofing purposes; it is quarried at and around Kanihara. Gypsum occurs in large quantity in lower Spiti.

Towards the South and the South–West lie the Shimla hills, extending towards Mandi in the North–West, towards Sirmaur in the East and the Bushahr in the North-East. Mandi area lies partly on rocks belonging to the Central Himalayan alone, of unknown age and partly on Tertiary shales and sandstones. The rocks of the central zone consist of slates, conglomerates and limestones, which have been referred to as the Infra–Blaini and Blaini and Krol groups of the Shimla area.

The sandstones and shales of the sub-Himalayan zone belong to the Sirmaur series, of Lower Tertiary age and to the Shivalik series (Upper Tertiary). The most important mineral is rock-salt which appears to be connected with the tertiary beds. The rocks founds in the neighbourhood of *Shimla* belong entirely to the carbonaceous system and fall into four groups-the Krol, the Infra-Krol, the Blaini and the Infra-Blaini or Shimla slates. The Shimla slates are the lowest beds seen; they are succeeded by the Blaini group, consisting of two bands of boulder–slate, separated by white weathering slates (bleach slates) and overlain by a thin band of pink dolomitic limestone. The Blaini group is overlain by a band of black carbonaceous slate which follows the outcrop of the Blaini beds.

The overlying beds consist of a great mass of quartzite and schist, known as the Boileauganj beds; they cover the greater part of Shimla and extend to Jutogh, Above this is the Krol group consisting of carbonaceous slates and carbonaceous and crystalline limestones, with beds of horn-blendegranet schist which probably represent old volcanic ash-beds; they are largely developed in prospect Hill and Jutogh, Intrusive diorite is found among the lower limestones of the Krol group on the Southern slopes of Jutogh. No fossils have been found in any of these rocks and in consequence their geological age is unknown.

In the South-Eastern corner of Himachal the greater part of Sirmaur region lies on rocks of Tertiary age, with beds belonging to the carbonaceous system (Krol and Blaini groups) on the North and North-East. The Lower Tertiary

rocks are particularly well developed; and the Sirmaur series which includes, the Subathu, the Dagshai and Kasauli groups, takes its name from the Sirmaur slate. The upper Tertiary, or the Shivalik series, is largely developed in the neighbourhood of Nahan where the lower beds consist of a great mass of sandstones, the Nahan group, these are overlain by sandstones and conglomerates (middle and upper Shivaliks) containing a rich mammalian fauna of Pliocene age.

There are three transverse zones in the Himalayas. They are:

(i) Western Himalayas : (Jammu-Kashmir and Himachal Pradesh).

(ii) Central Himalayas : (Uttrakhand Pradesh hill districts) and

(iii) Eastern Himalayas : (from Sangrila range upto and including the Brahmaputra watershed): There are marked differences between these zones in respect of climate, topography and vegetation.

Himachal takes its name from the Himalayas. Himachal literally means "Land of snowy mountains". Himachal Pradesh is a small world in itself, which is entered into through the plains of Punjab, or Shivalik hills or through hills of Shimla, through beautiful "meandering valleys", covered with pine and typical temperate mountain flora.

Someone has drawn a beautiful picture of Himachal Pradesh in his poetic words, "***Eternal snows, lush green forests, singing streams, dancing birds, lovely lakes, verdant vales, emerald meadows, smiling glaciers and gay girls:– this is the picture of Himachal Pradesh which sprawls in the North Western lap of the Himalayas.***"

GEOGRAPHY OF HIMACHLAL

Himachal Pradesh is bound between 30°22 to 33°12' North latitude and 75°47' to 79°4' East longitude. To the East, it forms India's border with Tibet, to the North lies state of Jammu & Kashmir, Uttarakhand in the South–East, Haryana in the South and Punjab in the West. The entire territory of Himachal Pradesh is mountainous with altitude varying from 350 to 7000 metres above the mean sea level. Himachal Pradesh is a hilly and mountainous tract. Geographically, it forms part of western Himalayas, and thus presents an intricate pattern of mountain ranges, hills and valleys. There is general increase in elevation from West to East and from South to North. Thus it covers almost the same area as '*Jalandhara*' known to the ancient geographers of India. They had defined the Himalayan range into five distinct divisions as follows:

खण्डाः पंच हिमालयस्य कथिता।

नेपाल कूर्माचलये केदारोथा जलन्धरो व रुचिर कश्मीर संज्ञाऽक्ति।

It need not be said that two of the three Eastern divisions of the Himalayas, Kurmachala (Kumaon) and Kedara (Garhwal) at one end and the Western

division, Kashmir at the other, form borders of Himachal Pradesh. This leaves no doubt that the region of the Himalayas, known to the ancient geographers as Jalandhara, was indeed Himachal Pradesh. The ancient name JALANDHARA (*Jalam-dhara*) had a geo-physical connotation—'*Jalam dharati iti Jalandharah*' (that which holds for the carries water is called Jalandhara). And this very aptly applies to mountainous Himachal Pradesh, in which the four great rivers of Punjab–Chanab, Ravi, Beas and Sutlej–with a number of their tributaries originate. And this is why the ancient geographers call this region Jalandhara.

In ancient tradition, the name 'Jalandhara' is attributed to a demon of that name, who is said to be the son of 'Sagara' (ocean) and 'Ganga' the river. The story in the ***Padma Purana*** *alludes to the geo–physical formation of the Himalayas in the remote past. According to it, when Jalandhara was born, the earth trembled and wept and the three worlds resounded. Then Brahma came to Sagara and asked, "Why O Sagara! does thou produce such loud and fearful sounds?" Sagara replied, "It is not I but my mighty son, who thus roars".*

At this the son took hold of Brahma's beard and would not release him. Then Sagara smilingly got his beard free from the hands of his son. Thereupon Brahma said, "From his holding of my beard so firmly, let him be named Jalandhara. This Jalandhara shall be unconquered by gods and shall through my favour enjoy the three worlds". When the boy grew up, 'Sukra', the priest of the demons, came to Sagara and said, "Thy son, through his might firmly enjoys the three worlds. Do thou therefore, recede from 'Jambudvipa' and leave it unwashed by thy waves". Sagara (ocean) thereupon withdrew his waves.

Topographically, Himachal's territory from South to North can be divided into three zones – 'The Shivaliks' or Outer Himalayas, Inner Himalayas or 'Mid-mountains' and 'Alpine Zone' or the Greater Himalayas.

The lower hills of district *Kangra, Hamipur, Una, Bilaspur* and lower parts of *Mandi, Solan* and *Sirmaur* are known as 'Shilvalik Hills'. The annual rainfall in this zone varies from 1500 mm to 1800 mm. The famous places covered in this zone are – Paonta valley, Nahan tehsil, Pachhad and Renuka tehsils of Sirmaur district; Balh valley and Joginder Nagar area of Mandi district; Kangra, Nurpur, Dehra, Jwali and Palampur tehsils of Kangra district; Dalhousie, Bhattiyat, and Churah of Chamba district.

In ancient times Shivalik hills were known as 'Manak Parbat'. Shivalik literally means "*tresses of the Shiva*". They are composed of highly unconsolidated deposits which easily lend themselves to erosion. the result has been deforestation and a high rate of erosion, leading to formation of 'Chos' (small streams) which have laid Waste and made huge sandy tracts of the land in the plains below.

The altitude of this zone ranges from 350 metres or 1050 feet to 1500 metres or 4500 feet above mean sea level. Stone-embeded shallow and loam

to clay soils are found in this zone. This area is suitable for the cultivation of maize, wheat, ginger, sugarcane, paddy, table potatoes and citrus fruits.

The inner Himalayas or Mid-mountains (1500 metres or 4500 feet to 4500 metres or 13,500 feet above mean sea level). The lesser Himalayas are marked by a gradual elevation towards the Dhauladhar and Pir Panjal ranges. In this zone falls all areas like the upper areas of the tehsils of Pachhad and Renuka in Sirmaur district; Chachiot and Karsog tehsils of Mandi district; upper parts of Kangra and Palampur tehsil and dalhousie, Bhattiyat and Churah areas of Chamba district. To the South of Shimla is high peak of Choordhar (3, 647 m.) also known as *Choorah Chandani.* To the North of Satluj, the rise of the lesser Himalayas is gradual. The series of parallel ranges are divided by longitudinal valleys, the only exception being the Kullu valley which runs transverse to the main alignment. There is a continuous increase in the height from plains to the hills.

The variety of soil found in these areas ranges from silty loam to clay loam of dark brown colour, which is useful for seed potatoes and temperate fruits. Such soil is found in the areas of Pachhad, Renuka, Arki, Solan, Jogindernagar, Kangra, Palampur, Dalhousie, Chamba, Upper Bhattiyat and Churah.

The soil of upper parts of Shimla district, Sirmaur and Chamba is shallower in depth, with silty loam to loam of dark brown colour. From the horticultural point of view, this area is the most useful for stone and soft fruits. The two famous ranges of lesser Himalayas are; **'Pir Panjal'** (in Chamba district) and **'Dhauladhar'** (Kangra, Chamba and Mandi district). The Kangra valley is a longitudinal and an open long tract at the foot of the Dhauladhar which means the '*White peak*'.

It branches off from the great Himalayan range near **'Badrinath'** (in Uttrakhand) and forms the most striking feature. It is intercepted by the Satluj at '*Rampur – Bushahr*', by the Beas at '*Larji*' and by the Ravi near South–West of Chamba. The Northern flank of the Dhauladhar impinges against the Southern flanks of the Pir Panjal range at the mountain knot of '*Bara Banghal*'. Dhauladhar range has an abrupt rise of 3,600 metres above the Kangra valley, the landscape of which it completely dominates. On the Southern side of this range an old moraine is found at as low a height as 1,200 mts. while in some parts of Kangra, glaciers were believed to have descended to 950 metres.

The largest of the lesser Himalayan range, the '*Pir Panjal*', separates from the greater Himalayan range near the bank of the Satluj, forming the water-divide between the Chenab on the one side and the Beas and the Ravi on the other. It bends towards the Dhauladhar range near Bara Banghal, the source of the Ravi. Numerous passes and glaciers exist in the Pir Panjal range.

The Greater Himalayas or Alpine zone : (Altitude 4,500 metres and above from mean sea level). To the North of the Pir Panjal and Dhauladhar ranges are the more lofty mountain ranges, known as the '*Greater Himalaya*' and '*Zanskar ranges*'. The Great Himalayan range runs along the Eastern

Salient Landscape and Soilscape Features of Four Broad Physiographic Region of Western Himalayas

1	2	3	4	5
Particulars and Characteristics	*I Outer Shiwalik or Sub-Himalayan Zone*	*II Lower Himalayan or Mid-Hill Zone*	*III Higher Himalayan or High Hill Zone*	*IV Tibetan Himalayan or Cold Zone (Trans-Himalayan)*
Elevation in mtrs. Above mean sea level. Extent of % of total geographical area.	Upto 800 mtrs. Foot-hill and valley areas. 30 per cent ±	800-1600 mtrs. Hilly and mountainous. 10 per cent ±	1600-2700 mtrs. Alpine pastures. 25 per cent ±	1600 – 3600 mtrs. & above Lahaul Spiti. Kinnaur Range. 36 per cent ±
Geology	Tertiary formations with great thickness of detrital rocks, clays and conglomerates. Mostly sandstones, shales and conglomerates.	Granite and other crystalline rocks of unfossiliferous sediments. Mostly phyllites, slates ferruginous quartzite, carbonacenous shales.	Rocks lack fossils. Mostly granite, granite gneisses outcropped within metamorphic phyllites.	Complete sequence of fossiliferous strata. Mostly mica schist, ferruginous slates, sand stones, lime stones, etc.
Climate	Sub-tropical and rainfall 1500 mm	Mild warm temperate 1500 to 3000 mm.	Humid cool temperate 1000-1500 mm. Some snow.	Dry cold temperate snowy and frigid. Less than 500 mm. Mostly snow.
Vegetation	Tropical thorn and dry deciduous Sal and other mixed vegetation & grasses.	Sub-tropical broad leaved and pine and grasses. Alder and grasses.	Wet and Himalayan Temperate like Deodar, Spruce, Kail, Chestnut, Walnut, Maple, and alpine pastures.	Sub alpine, moist and dry alpine like Kharsu, Blue Pine, Juniper, Saix Harbaceous Flora

Soilscape	Regosols, cambisols and luvisols, well developed soils over alluvium, acidic skeletal, brown forest soil shallow to deep, sometimes stony. Fair fertility.	Cambisols and Regosols. Fairly fertile brown forest soils, acidic skeletal stony, litbic, shallow to moderately deep.	Cambisols, acrisols and gleysols. Mostly poor to fair infertility. Brown forest soils, podzolic, meadow soils, mostly rich in humus. Stony, lithic, and shallow.	Cambisols, brunizem. Mostly poor in fertility, lithic silicious brown forest soils, dark grey soils, rich in humus, shallow stony and rocky.
Erosion Conditions	Moderate to very severe sheet, rill, gully, stream bank cutting.	Moderate to severe sheet, rill, gully and occasional landside.	Slight to moderate sheet and rill and landslides.	Prone to erosion due to glaciers and avalanches.
Extent of cultivation % of total cultivated areas.	55 per cent ±	30 per cent ±	10 per cent ±	5 per cent ±
Important Crops	Wheat, maize, paddy, gram, sugarcane, mustard, potato, vegetable, berseem. Mostly rainfled, partly irrigated.	Maize, wheat, pulses, barley, paddy, vegetables, ginger, quality seeds of vegetables. Mostly rainfled partly irrigated.	Wheat, barley, lesser millets, buck wheat, maize quality seed, potato, temperate vegetables. Mostly rainfed partly irrigated.	Quality seed potato, temperate and European vegetables, wheat, barley buck wheat, amaranths. Mostly irrigated.
Fruits	Mango, guava, citrus, litchi, loquat	Peaches, plum apricot, walnut, pears, pomegranate.	Apples, pears, chestnut, walnut, cherry.	Raisin, grapes, prunes, drying varieties of apricot, grapes, chilgoza etc.

Source: A Handbook of the Himalayas – S.S. Negi.

boundary and is cut across by the Satluj. The range separates the drainage of the Spiti from that of the Beas. This comprises *Kinnaur district, Pangi* – tehsil of Chamba district and some area of *Lahaul* and *Spiti.*

The Great Himalayan axis and crystallized core of the whole system is composed fundamentally of intruded grainles and grasses. The rainfall is very scanty in this zone. Soil is of high texture with variable fertility. Climate is temperate in summer and semi–arctic in winter.

This climate and soil is best suited for the cultivation of dry fruits. Snowfall in the Greater Himalayas starts in the mid of October and continues till March-April. During this period, the whole region remains cut off from the rest of the world. Life at that time looks much isolated and thorny. Some of the famous passes of this zone are-Sach pass, Chini pass, Chabia pass and Kugti pass (district Chamba), Rohtang pass, Kunzam pass and Baralacha pass (district Kinnaur) and Hamta pass and Chandrakherni pass (district Lahaul & Spiti). The famous 'Zanskar range' falls in this part of the Pradesh. It is the Eastern most range and separates Spiti and Kinnaur from Tibet. The Zanskar range has peaks rising over 6,500 metres. Shilla (7,025 mts.) and Riwo Phargyul (6,791 mts.) are the highest among its peaks. The range is cut across by the Satluj.

Physiographically, the state can be divided into five zones, viz. (i) **Wet sub–temperate zone** comprising of Palampur and Dharmshala area of Kangra district, Joginder Nagar area of Mandi district and Dalhousie area of Chamba district; (ii) **Humid sub–temperate zone,** comprising of Kullu and Shimla districts and parts of Mandi, Solan, Chamba, Kangra and Sirmaur districts; (iii) **Dry temperate,** alpine high lands which include major parts of Lahaul-Spiti, Pangi and Kinnaur; (iv) **Humid sub-tropical zone,** comprising of Bilaspur, major parts of Mandi district, Nahan area of Sirmaur district, Bhattiyat valley of Chamba district, Nalagarh area of Solan district, Hamirpur district and Dehra and Nurpur areas of Kangra district, and (v) **Sub-humid** tropical zone comprising of Una district, Paonta Sahib area of Sirmaur district and Indora area of Kangra district.

The climate of Himachal Pradesh varies at different altitudes from semi–tropical to the semi-arctic. The average rainfall is 152 cms (60 inches). The highest rainfall is in '*Kangra district at Dharamshala*' and lowest in *Lahaul–Spiti at place Spiti.* The climate of the Kangra valley, Beas valley, Shivalik hills and Kiarda valley is very severe in Summer, while Winter is pleasant and there is moderate variation in the day and night temperatures. Snowfall in this zone is rare. The climate in the mid–Himalayan (or lesser Himalaya) range, which covers Shimla ranges and Ravi valley, is pleasant in summer and very cold in winter. The snowfall is heavy.

In the Chandra-Bhaga and Kinnaur valleys climate is temperate in summer and semi-arctic in winter. In the alpine zone, snowfall normally begins in October and after December the whole valley is under snow till March-April. The whole area remains cut off and villages become almost isolated. During winter the inhabitants move to the lower hills.

The year in Himachal Pradesh is divided into three seasons–Cold (also called in local language '*Sardi*' and '*Thandi*')–(October to February) Hot (Garmi) – (March to June); and Rainy (Barsat) (July to September). The Himalayas, the world's highest and most majestic mountain ranges are considered as the *'weather maker of Asia.'* Nestling in their lap is Himachal where a veil of misty mountains helps the changing seasons play their varied roles. However it's the monsoon that casts a magical spell, touching every aspect of this magical land.

In Himachal, the monsoon displays its myriad wondrous moods. Clouds floating in cobalt skies suddenly turn dark and roll and rumble and bring down showers of rain. The '*rim-jhim*' drizzle has a musical song and can linger on for hours. Often raindrops freeze to drop as hail while mist engulfs all that comes its way. Fog plays hide and seek, lifting to unveil a hidden world. Waterfalls like the Rahalla near Manali cascade down from misty heights. The rivers Ravi, Beas and Satluj swell and roar over boulders.

Indeed, after a summer of slumber, life springs to a rebirth. Listen to the Gaddi shepherds happily play lilting melodies on flutes as pastures turn lush green... new leaves unfurl and a lonely Kangra lass pines "... *Giri ghata ghanghor, thandiyan boondan paeyian, aaye nahin chitchor...*" (Dark clouds hover in the sky, cool raindrops are falling, but my beloved hasn't come).

The monsoon permeates the consciousness of the Paharis, inspiring them to create beautiful art works. In a Kangra painting, Radha is drenched in rain; her wet '*ghaghra*' and tresses cling to her slender figure while long-plumed birds in the backdrop take refuge in a tree's dense branches as she waits in vain for Krishna. In another painting they cling to each other under an umbrella, oblivious of the rain. What happens when the rain comes down? Our umbrellas go up! See how several multihued umbrellas carried by Shimlaites on the Mall, give a picture of abstract art in geometrical patterns. The capital gives a just-washed look.

Near Shimla is Mashobra, derived from 'Maishaira' pertaining to a herd of buffaloes *'mais'* means buffalo. It's the monsoon that filled Mashobra's pools with water and it is here the villagers drive their flocks to wallow in them.

By October the skies are clear and morning and evenings are brazenly cold. Humidity is low. Mornings and nights in the valleys are very cold. Snowfall occurs in the higher hills generally in December and January and occasionally it may be experienced earlier or later. At altitude above 3,000 metres, the average snowfall is about two metres and lasts from December to March. Above 4,500 metres is perpetual snow. By the end of February temperature begins to rise slowly.

Spring, from mid–February to March. April is extremely delightful. The air is *cool* and *fresh*, flowers of beautiful colours adorn the valleys, forests, slopes and grassy fields. The weather becomes hot and dusty by the end of April in the areas adjoining the plains but remains pleasant and comfortable

in the places located on higher altitudes.

The monsoon arrives generally towards the end of June or July. The entire region becomes green and fresh, streams begin to swell and springs are replenished. July and August are the rainiest months and considerable damage is caused by erosion, floods and land slides. Humidity in Himachal Pradesh is generally higher than in the adjoining plains during the monsoons and pre-monsoon periods. *There is continuous declining in the humidity after September till April. There is decrease in the rainfall beyond Kullu towards Lahaul-Spiti and Kinnaur, due to rain-shadow effect.* Spiti is the driest area of Himachal Pradesh, having rainfall below 50 mm as it is enclosed by rising mountains from all sides.

Dharamshala is the rainiest place with 3,400 mm rainfall per annum. Shimla and Nurpur fall in a rainfall zone of 1,500 mm – 2,000 mm; Dharamshala, Kangra, Palampur and Jogindernagar in a zone exceeding 2,000 mm. Towards Mandi, Rampur, Kullu, Kalpa and Keylong there is gradual decrease in rainfall while the whole of the Lahaul and Spiti valley receives less than 500 mm rainfall in a year.

A number of factors are taken into account to discuss the Himalayas into various climatic regions. These are–

- Temperature, Precipitation and other Climatic conditions.
- Altitude; and
- Latitude.

Based on these, the Western Himalayas may be divided into the climatic regions as shown below:

Climatic Regions	Altitudinal range (in mtrs.)
Arctic	Over 4500
Sub-arctic	3500 - 4500
Temperate	2000 - 3500
Sub-tropical	700 - 2000
Tropical	Below 700

Physiography has its own effect on the climatic variations in the Himalayas, such as–

- South-facing slopes receive more sunlight and rain.
- The lower slopes lying behind high ridge are shady and fall in the rain shadow zone.
- There occurs less precipitation in the form of snow on South facing slopes.
- The snow line is higher on Southern aspects.

Altitude: The elevation of a particular place has an impact on the climatic conditions prevailing there, tends to change with an increase or decrease of altitude after every 200 mts. While it may be heavily snowing on the hills and

peaks around Kullu but just below the Kullu town may be basking in the sunshine. The distribution of rainfall and temperature is influenced to a large extent by altitude. The total rainfall received increases with altitude upto an elevation of about 250 mts. Further upwards it starts decreasing as snow being to account for a major part of the precipitation. Rainfall is very low in tracts lying across the main Himalayan wall. The high altitude desert Lahaul Spiti receive scanty rainfall. In these tracts, rainfall is limited to a few showers each year.

The temperature decreases slowly with increase in altitude upto an elevation of about 2,500 mts, after which the fall becomes sharper. In general, increase in elevation is associated with the reduction both in temperature and pressure. Some of the dominant factors which operate at high altitude are oxygen and carbon dioxide deficiencies, thin atmosphere, intense isolation and arid atmosphere.

It is observed that rainfall starts decreasing at about 6,000 feet and finally above 12,000 feet there is virtually no rainfall. The local relief conditions give rise to strange thermal effects. A slope facing towards East experiences warm mornings and cool afternoons whereas, one facing West, experiences cool morning and warm afternoons. These inversions in temperature are seen when air cooled by radiation at night flows downhill into valley bottom and settles there. Thus undisturbed by winds, this cool air reduces the temperature of the valley bottom at night by several degrees as compared to nearby tracts on the top of the ridge. The morning sun dissolves this mist and forces it to rise upwards in the form of cumulus or stratocumulus clouds.

There are some special climatic phenomenon, which has relation to the topography of the Western Himalayas.

(a) Gravity Winds : These are vertical movements of air produced as a result of changes in temperature during various parts of the day. There is a downward movement of air from the ridge top to the valley bottom after sunset each day. Thus, one may notice a cloud moving across a ridge in the evening. The rising sun warms the air and dissolves the mist. Warm air starts rising up in the form of giant clouds. Persons desirous of watching snowclad mountain and valley top, must get up early to catch a glimpse of the exhilarating panorama or else as the day advances, the rising clouds indistinct the view.

As the day progresses, high energy unabatic winds start blowing up the mountain slopes. Around midday, these winds attain very high speed. Thus, it becomes cloudy at mountain tops during the early afternoon. At very high altitudes, usually over 6500 mts., gravity winds attain uncommon velocities. They tend to produce white plumes on the tops of snow-clad peaks. These plumes consist of cold, dry, powdery snow, blown by the wind. In the evening, once again high energy Katabetic winds start blowing down the mountain slopes and the cycle continues uninterruptedly.

(b) Western Disturbances : The world known Westernly winds of the mid-latitudes make their presence felt in the Western Himalayas. The western

disturbances bring rain at lower elevations and snowfall in the higher reaches. The approach of the Western disturbances is marked by warm winds blowing in from the South-East. Later on, cirrus and cirrocumulus clouds begin to appear, thereby filling the grey skies with stratus clouds. The Westerly disturbances may even generate blizzard and snowstorms, thereby obstructing air traffic leading to the closure of mountain passes. Different altitudes experience a separate set of climatic conditions. There is drizzling rain at lower altitudes, sleet at mid-altitudes and snowfall and blizzards at higher reaches.

(c) Visibility : In the month of May and June, there is haze and dust in the Western Himalayan and in the trans Himalayan zone. The skies are usually free from clouds but visibility is poor, because of this haze that may extend upto 5 kms or more. The hot dusty winds from the Indo-Gangetic plain blow up dust into the skies over the Western Himalayas.

The atmospheric turbidity occurring there during the summer season is only a little lower than that prevailing in other parts of Northern India. The turbid layer of air extends deep upto Kullu and Kalpa in Himachal Pradesh. The air blowing over the trans Himalayan valley is also turbid, primarily due to the fact that there is little rainfall.

(d) Jet Streams : These are mainly prevalent at very high elevations. These are high speed winds which develop in the narrow belt of the upper atmosphere during winter months. At times, the jet streams may attain speeds of over 200 kms per hour.

(e) Lee Waves : These are strong winds which cause considerable erosion and damage. They occur on the leeward side of a mountain.

The following factors govern the speed force and direction of winds in the Himalayan region:

(i) Stability of the atmosphere.
(ii) Prevailing climatic conditions.
(iii) Speed profile of the wind.
(iv) Altitude at which the wind is blowing.
(v) Shape and size of the obstacle.
(vi) Stratification of the air mass.

(f) South-West Monsoon Rains : The maximum rainfall in the Himalayan region occurs due to SW monsoon. It strikes the Eastern Himalayas first and causes very heavy rainfall there. The quantity of rainfall decreases from Eastern to Western direction of the Himalayas.

(g) Winter Monsoons : These winds are similar to the North East trade winds that blow all over the globe at mid-latitudes during this time of the year. NE monsoon winds bring winter rain to many parts of the Himalaya. They bring widespread rain to the Western and central Himalayas. This wind has been known to blow away men and animals from mountain tops.

There has been a rise of 1.7°C in the average temperature and a decrease

of about 15 to 20 per cent in the average snowfall in the Himalayas, which have made winters warmer there. As a result, a sudden spurt in snowfall and rainfall is now a reality as far as the Himalayas are concerned, which urgently need the latest green technology being used in the USA and Switzerland to combat climate change. The Himalayas, the largest source of fresh water and the country's snow crown, have experienced a significant rise of 1.7°C in the average winter temperature during the past 100 years.

Snow and Avalanche study Establishment (SASE) Studied the data of the past 140 years on snow and rainfall in the Himalayan region to arrive at this conclusion. The average snowfall in the Himalayas has decreased by 15 to 20 per cent, which is quite significant. The scientists attribute the rise in the winter temperature partly to global warming and partly to a surge in the traffic and pollution in the high- altitude Manali Rohtang-Lahaul-Leh-Ladakh region during the summer season. The carbon deposits emitted by heavy traffic lead to a rise in temperature and reducing the winter span. The climate change can be checked as has been achieved in Switzerland. They use electric trolleys for transport and use non- conventional sources of energy. The USA has been painting "barren peaks white in summers" that reflect the sun rays back into space, reducing the local temperature.

There is reference to the Himalayas in our historical scriptures. *"Among mountains I am the Himalayas"*, said Lord Krishna in Srimad Bhagvad Gita. From time immemorial it has allured the sages and saints, adventurers and explorers, pilgrims and pleasure seekers, alike, Kalidasa, the great Sanskrit poet described it as *Devtatma*. The poet further described this mountain system in the following words. "There is a mountain in the North, ensouled by Divinity named Himalaya, the King of all mountains. Stretching from East to West it is located on the earth as a measuring rod".

Its splendid beauty, grandeur and mysteries have influenced all spheres of life of the Indian people from the very early times. Its highest peaks, the steepest escarpments, great crests crowned with perpetual snows towering above the most deeply scooped and verdant valleys resplendent with lakes and rushing the most precipitous ravines, swift, cascading, falling, foaming rivers that cut the deepest gorges and the most numerous mountain glaciers which feed large rivers and lake systems, the highest living species of plant and animal life found anywhere in the world.

Running from Kashmir to Assam, the center of Himalaya lies near Lop Nor Lake in the Sinkiang province of China. The actual Himalayan range commences from Nanga Parbat (8126 mts) in the North West, extends through Pakistan, Kashmir, Himachal Pradesh, Garhwal, Kumaun, Nepal, Sikkim, Bhutan, Arunachal Pradesh to end at Namche Barwa (7,828mts) in the East. The Great Himalayan Range rises to its maximum height in Nepal having 9 of the 14 highest peaks of the world above 8000 mts. From West to East these are Dhaulagiri (8172 mts), Annapurna-I (8078 mts), Manalsu (8157 mts), Kaoseng-tsan-Feng or Gosainthan or Shisha Pangma (8014 mts), Cho Oyu

(8153 mts), Mount Everest or Sagarmatha, (8848 mts), Makalu (8471 mts), Lhotse (Nepal Himalaya) (8501 mts), Kanchenjunga (8598 mts). Nepal has as many as 1310 mountain peaks. Besides these, there are numerous beautiful peaks of diverse altitudes in the Himalayas.

NATURAL RESOURCES OF THE HIMALAYAS

The Himalayas have exercised a unique influence on our existence. They have not only shaped our mythology, but have also ruled our destiny as a nation. This loftiest chain of mountains, with its peaks piercing the sky, has been the source of inspiration to *saints, scholars, priests, poets, philosophers and artists* in many forms. The Himalayas control the climate of the country and through its rivers thriving the prosperity of more than one third of the total population living in the plains of *'Indus', 'Ganges' and 'Brahmaputra'.*

The Himalayas play vital part in replenishing the water resources in India. Indus, Ganges and Brahmaputra are the three prominent river systems having their source in the Himalayas. They drain the country and provide a large potential for irrigation and domestic use and also for the generation of hydroelectric power. The total catchment area of these three rivers is about 8,00,000 666 millard cu,m; over 245 millard cu,m is accounted by these three rivers of the Himalayas. The melting of the snow and rain keep the drainage system of extra peninsular healthy and also enrich the subsurface flow of water.

The Himalayas are rich in mineral resources, such as fuels, atomic minerals, precious and semiprecious stones and other industrial minerals. Minerals are non renewable resources and constitute an integral part of the physical component of the environment and physical settings. Mindless mining and blasting could prove dangerous from environment point of view. With the rapid depletion of fuel resources of the country, attention is being given towards non-conventional energy resources, such as *solar energy, wind energy, wave energy and geothermal energy.* In many parts of the Himalayas geothermal springs are available, which are hot and boiling sometime.

Forests exert a powerful influence on our climate and economic development. The gross area under forests in the Himalayan region is approximately 32,53,100 hectare. Of this 24,03,000 hect. is under the control of forest department, 6,26,500 hectare is under civil management, 2,07,100 hect. is under control of panchayats and 16,500 hect. is under private ownership (1988). The Western part has mainly conifers; the whole Eastern part has a rich growth of rhododendrons, etc. In the past three decades over-exploitation, mismanagement, illegal felling of trees for fuel, fodder and timber has greatly added to reducing the forests cover in the Himalayas.

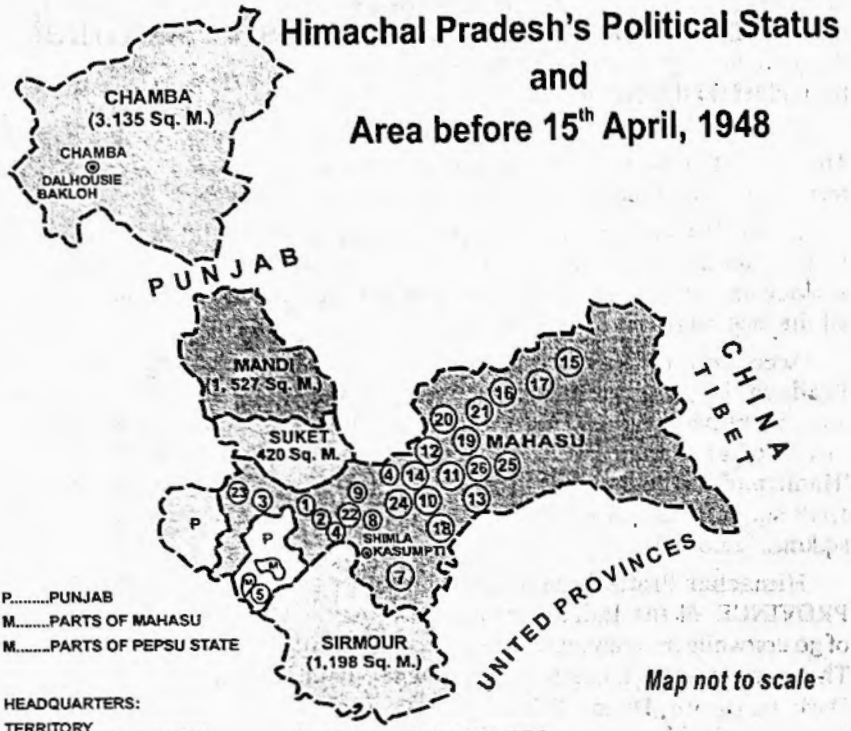
The total estimated hydro-electric power potential in India is about 41 million k w h at 60 percent load factor (1994). In the Himalayas this potential is about 24 million k w h and in the Western Ghat it is 6 million kwh. In the past decades, government has concentrated greatly on the hydel power projects to ensure regular and uninterrupted supply of power to the domestic and

industrial consumption. In the Western and Central Himalayas, Tehri Dam Project, Nathpa Jhakri Project and Chamera Projects are big enough to meet the demand of power hungry Northern India. Some micro level projects have been given to the private sector.

The increasing size of population has shown its impact on the hills too. The population pressure has acquired more and more land in the inaccessible terrains of the Himalayan belt.

In the Himalayas, there are enough opportunities for trekking, skiing, fishing, mountaineering, riding, sight seeing and boating. Natural beauty, ecology and environment, rich cultural heritage of the Himalayan states are all the best recreational resources.

According to Surveyor General of India the **total area of Himachal Pradesh is 55,673 square kilometres which is divided into twelve** administrative districts. Out of this total area 32,271 square kms. (58.0%) is measured area according to the revenue records of the Pradesh. Area wise, **'Hamirpur' is the smallest district of the Pradesh which covers an area of** 1,118 sq. kms. (2.01%) and **'Lahaul-Spiti' covers the largest area** of 13,835 sq.kms. (24.85%).



Himachal Pradesh came into being as a 'CHIEF COMMISSIONER PROVINCE' of the Indian Union on 15th **April, 1948** as a result of merger of 30 erstwhile princely states of Punjab and Shimla hills into the Indian Union. These states were Baghat, Bhajji, Baghal, Beja, Balsan, Bushahr, Chamba, Darkoti, Delath, Dhadi, Dhami, Ghund, Jubbal, Khaneti, Koti, Kumarsain, Kunihar, Kuthar, Mandi, Madhan, Mahlog, Mangal, Ratesh, Keonthal, Rawingarh, Sangri, Sirmaur, Suket, Tharoch and Theog. All these areas at that time constituted into four districts viz. *Chamba, Mahasu, Mandi* and *Sirmaur* with an area of 27,169 sq.kms. In 1951 it was made a part 'C' state.

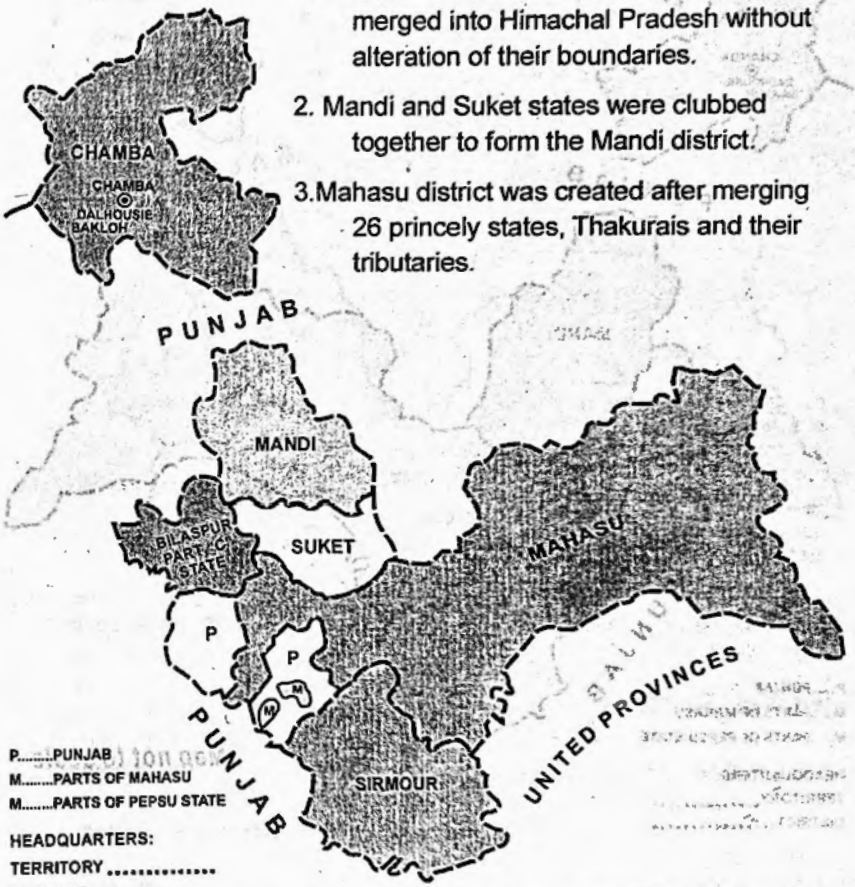
On 1st July, 1954, the neighbouring part 'C' state of **'Bilaspur'** was integrated with Himachal Pradesh, thereby adding one more district with an area of 1,068 square kilometers.

Himachal Pradesh maintained its status of a part 'C' state of the Indian Union till 1956, when the States Reorganization Commission headed by Mr. Justice Fazil Ali and two members i.e. H.N. Kunzru and K.M. Panikar submitted its recommendation to abolish the categorization of states as part A,B,C etc., and recommended the merger of all part 'C' states either to the adjoining states of higher status or to maintain these independently as union territories for a specified period. Hence Himachal Pradesh was termed as a Union Territory till a further decision was taken. Its status as Union territory continued till the award of a full fledged statehood on 25th January, 1971. In 1960, the border tehsil of Mahasu district (Chini tehsil) was carved out as a separate administrative unit and district Kinnaur was formed raising the total number of districts to six. In 1963 "Territorial Council" was provided to the state.

On 1st November, 1966, the Punjab state was reorganized with the

Himachal Pradesh's Political Status and Area before 15th April, 1948

SHIMLA HILL STATES



Princely States

1.	Baghal	120 sq. m.	14.	Kumharsain	84 sq. m.
2.	Kunihar	75 sq. m.	15.	Rampur Bushahr	3651 sq. m.
3.	Mangal	14.5 sq. m.	16.	Khaneti	19 sq. m.
4.	Baghat	33 sq. m.	17.	Delath	4 sq. m.
5.	Beja	5 sq. m.	18.	Madhan	9 sq. m.
6.	Kuthar	1 sq. m.	19.	Jubbal	297 sq. m.
7.	Junga	295 sq. m.	20.	Dhadi	35 sq. m.
8.	Dharni	28 sq. m.	21.	Rawingarh	7 sq. m.
9.	Koti	50 sq. m.	22.	Bhajji	94 sq. m.
10.	Theog	144 sq. m.	23.	Mahlog	49 sq. m.
11.	Ghund	28 sq. m.	24.	Sangri	21 sq. m.
12.	Ratesh	2 sq. m.	25.	Darkoti	5 sq. m.
13.	Balson	7.5 sq. m.	26.	Tharoch	70 sq. m.

Note: Shimla Hill States comprising 26 princely states and Thakurais were clubbed together to form the Mahasu district. Identification No. of the above mentioned princely states does not necessarily represent exact location. The area called Mahasu had certain parts of PEPSU state in it, as refered 'M' in the map.

Birth of Himachal Pradesh : As Chief Commissioner Province on 15th April, 1948

1. Chamba and Sirmour princely states were merged into Himachal Pradesh without alteration of their boundaries.
2. Mandi and Suket states were clubbed together to form the Mandi district.
3. Mahasu district was created after merging 26 princely states, Thakurais and their tributaries.

TERRITORY .....
DISTRICT .....

On the basis of the Punjab Boundary Commission Report, districts of Punjab, that is Kangra, Lahaul-Spiti and parts of Kullu and Shimla were transferred to Himachal Pradesh. The total number of districts increased to nine.

Chamba, Bilaspur, Kangra, Kullu, Mandi, Lahaul-Spiti, Kinnaur, Shimla and Sirmaur.

formation of Haryana as a separate state and merger of the then Kullu, Kangra, Shimla and some hilly areas of Hoshiarpur district and Dalhousie of Gurdaspur district of Punjab into Himachal Pradesh ; thus constituting four new district viz. Kullu, Lahaul-Spiti, Kangra and Shimla and merging Dalhousie into Chamba district. With this addition the Himachal Pradesh was constituted of ten districts with an area of 55,673 sq.kms. and a population of 28.12 lakh according to 1961 population census.

On 1st September, 1972, two more districts viz. 'Hamirpur' and 'Una' were created by trifurcation of Kangra district and the Mahasu district was reorganized as Shimla and Solan districts. In this reorganization, Shimla city was reorganized with the erstwhile Mahasu district to form as Shimla district. Areas of Nalagarh and Kandaghat were tagged with Solan district. Solan as a district was also created in 1972. Since 1st September, 1972 onwards, there has been no changes in the administrative structure of Himachal Pradesh except carving out of new sub tehsils and raising of sub-tehsils to the level of tehsils.

After the merger of some hilly areas of the composite Punjab state with Himachal Pradesh in 1966, the area of the latter increased by 106 percent and population by 108 percent. Ever since the merger of the new areas, these have continued to be referred to as the 'OLD' and the 'NEW' areas respectively, in popular discussion and sometimes in Government documents. In 1972, with the re-organization of the districts, there has been a shuffling of areas belonging to the erstwhile 'old' and 'new' categories, so that some districts now contain pockets from both of them. The following is the classification of two areas :

'Old' Himachal : Districts of Chamba, Kinnaur, Bilaspur, Mandi, Sirmaur and Shimla.

Shimla district contains areas from 'old' Himachal except the capital town of Shimla itself, which properly belongs to 'new' Himachal state.

'New' Himachal : Districts of Kangra, Kullu, Lahaul-Spiti, Hamirpur and Una.

The Solan district which has been excluded from both the categories is an excellent example which now contains two tehsils, i.e. Solan and Arki from 'old' Himachal and three tehsils, i.e. Kasauli, Nalagarh and Kandaghat from the 'new'. According to the 1991 census report, 'old' Himachal accounts for 48.4 percent of the area and 52.3 percent of the population; while 'new' for the remaining 51.6 percent of the area and 47.7 percent of the population, excluding the Solan district.

LAKES IN HIMACHAL

Himachal Pradesh with its beautiful hills, in the lap of lofty snow clad mountains, has myriad lakes with cool and serene water, which mirror the immense beauty of this Paradise on earth. Followings are the well-known lakes in Himachal Pradesh:

Govind Sagar : An artificial lake formed as a result of the world famous Bhakra Dam on the river Satluj, is in district Bilaspur, called **Govind Sagar.** It is becoming famous for water sport and fishing. Bhakra is the world's highest gravity dam, has rightly been described by Pt. Jawahar Lal Nehru as a *'New temple of Resurgent India'.* The lake upstream adds immeasurably to the scenic beauty of the dam. The crystal clear water flowing out through river outlets in the shape of a cascade soothes one's eyes. The area of this lake is about 168 sq.km and it exists between Slappar and Bhakra villages on 88 km. length.

A large quantity of silt that makes its way into the 10,000- hectare Gobind Sagar, the country's largest fishing pond, every year has spelt doom for fish breeding grounds. The fish production in the reservoir has nose-dived by nearly 50 per cent in the past years. Millions of tonnes of silt enters the Gobind Sagar every year. During the monsoons, the silt enters the Sutlej due to soil erosion because of the construction of dams upstream like Karcham Wangtu in Kinnaur and Kol Dam near the Mandi-Bilaspur border.

The other villains are mining sites of cement plants at Darlaghat, Bagha and Barmana, and PWD roads being built in the catchment areas of the Sutluj and its tributaries like the Seer, the Gambhar and the Sukhad. These feeding streams of the Sutluj carry huge loads of silt into the Govind sagar.

Ghadasaru Lake : Located in district Chamba. It is 24 kms from Tissa. Tissa is 72 Kms from Chamba. This is located at an altitude of 3505 msl (mean sea level) with circumference nearly 1 km. Lake is mostly visited by local people to offer prayer at Kali temple, located on its bank.

Khajjiar Lake : In the centre of a grassy meadow, it is 1.5 km long and 1 km wide, and surrounded by cedar forest, a small lake, called the Kund, forms the centre piece of Khajjiar. This is the magical paradise called 'Khajjiar Lake'. A temple dedicated to 'Khajjiar Nag' is also located there. It is 24 km from Dalhousie on the way to Chamba. Khajjiar is known as *'Mini Switzerland'.*

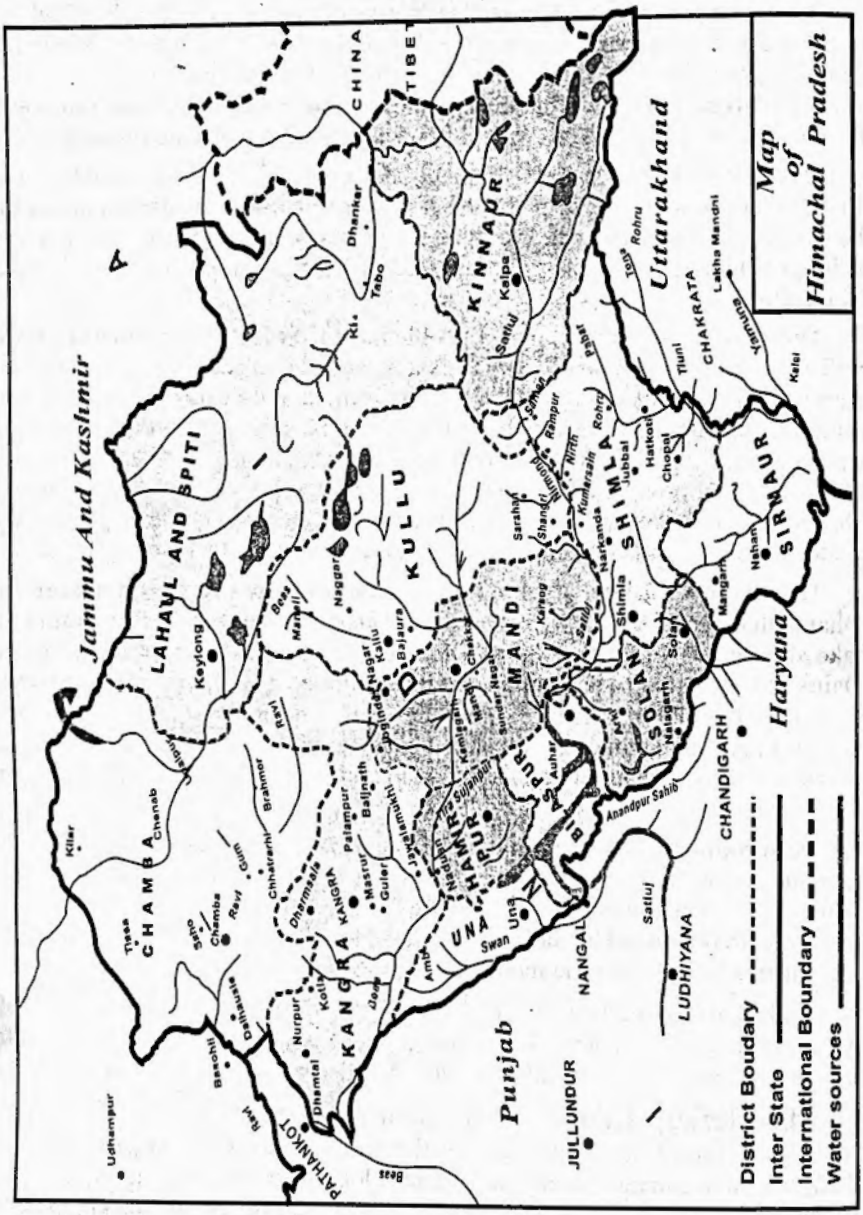
It lies in a depression formed by ancient glaciation. Dense conifer and broad leaved forests cover the steep mountain slopes around this lake. Thousands of tourists visit this place every year. To make it a major tourist attraction, state government has started its beautification plan. It is located at an altitude of 1951 mts. It was christened mini Switzerland by Swiss Envoy Willy P. Blazer on 7th July 1992, and was put on the world map. In the presence of Indian officials P. Blazer put up a yellow Swiss hiking footpath sign board which formally and officially declared Khajjiar as 'mini Switzerland'.

The sign board also indicates the actual distance from the Swiss capital Berne upto Khajjiar as 6194 km. Blazer as per tradition of his country had taken a stone from Khajjiar which was made a part of stone sculpture installed opposite the Parliament mansion in Berne. Places all over the world similar to Switzerland in respect of geographical and topographical traits and scenic elegance are named after it. Hence Khajjiar became the 160th tourist spot in the world to be christened mini Switzerland.

Sensuousness and beauty of Keat's poetry and Wordsworth's belief in quietness and strength of nature come alive and are perceptibly felt at Khajjiar. This lake remains full of water in all seasons. It requires no rain water for survival. For a close view, it has been made accessible with the help of a wooden bridge. A tiny island covered with reeds, keep floating to divine reasons.

With its alluring charm, soothing quietness and abundant natural beauty, Khajjiar can be made more attractive. The lake, the centre of attraction has to be cleared of weeds and silt. Wet dredging is the answer, say experts. Horse-riding circular roads needs a drain to take the rain water out of the "bowl". The gullies need to be filled.

The grazing rights of the local people have to be curtailed. For this, they will have to be adequately compensated and given alternative pastures. According to official sources, to curb unwarranted and unruly activities in the ambients of Khajjiar lake, this beauty spot has been designated as " a special development area " under the Town and Country Planning Act and to look after the cleanliness and development of Khajjiar, a body called, " the Khajjiar Development Board" has been constituted of members of various departments under the chairmanship of the Deputy Commissioner of Chamba.



Lama Dal Lake : 45 kms from Chamba on the inner slopes of Dhauladhar range. This is a *group of seven lakes*, the largest of all is Lama Dal lake situated at an altitude of 3962 meters (13200 feet). It is 20 km from Dainkund. It is said to have unknown depth and considered to be scared one. The biggest of all lakes. The lake stretches to in area of about 2 sq km. Having such a huge lake at such an altitude is mesmerizing. To add to it the lake is surrounded by perennial glaciers. The local Gaddi tribals visit the lake on Janmashtami.

Manimahesh Lake : 35 kms form Bharmaur. The lake of Manimahesh is 3950 metres above sea level at the foot of Mount Kailash (5,660 metres), which is perhaps the highest of sacred waters in Chamba district. This lake is supposed to be blessed by Kali and protected by Lord Shiva. A fair is held every year at this lake during the month of August or September.

Mahakali Lake: This lake is also in district Chamba, on an elevation of 3657 metres above sea level. It is a little bigger than Khajjiar and Manimahesh lake in Churah area of Chamba district. It is dedicated to goddess Kali.

Chanderkup Lake: It is situated at an elevation of 3450 mts (14000 feet). It is one of the many lakes in the upper regions of Chamba towards Dharamshala. During summer season ice blocks keep floating in it to make it a memorable scene. It has mixed terrain, steep and rough while snow covers it for most of the time. This lake is situated at the highest altitude in the Dhaula dhar range.

Dal Lake : Located in district Kangra and is 11 kms from Dharamshala, the district headquarters. The lake lies amidst hills and stately fir trees. Dal

Water Sources (Map of Himachal Pradesh)

Based upon the Survey of India map with the permission of the Surveyor-General of India

to 'Lord Driveshwar' built by sage Agastaya. After 15 days of Janmashtami a fair known 'Radhashtami' takes place there. This is located at an altitude of 1775 met. above msl. This is also known as 'Bhagsunag Lake'.

Kareri Lake : It is 35 km. from Dharamshala, at an elevation of 1,810 metres. It is surrounded by green meadows, oak and pine trees. Kareri lake water, falls into the Layun river.

Kumarwah Lake : It is 40 km. from Mandi town. This lake is situated in Chachiyot tehsil of Mandi district at an elevation of 3150 mts. An annual fair is held there. It is considered a sacred lake and the rare characteristics of this lake is that all the gold and silver offerings accumulated at a shrine nearby are thrown in this lake. There are many popular beliefs associated with this lake.

Rewalsar Lake : It is situated at about 25 km. from Mandi. It is an important place of pilgrimage. This lake is known for its *floating island.* As with the formation of Rewalsar lake, the legend goes that princess Mandarva, the daughter of king 'Arshadhara' of 'Zahor' (the Tibetan name of Mandi) resolved to renounce her royal ties and dedicated herself to the religious order. The king agreed and she took her bows before a Buddhist scholar named 'Shantarakshita' (believed to be the brother of Padamasambhava). Padmasambhava having observed that she was a dedicated pupil, came through the air from 'Uddiyana' and appeared in person to give her teachings. A cowherd who saw all this spread the sirmour that he had seen the princess with Charlatan.

The news aroused King's wrath. He thought that his daughter has broken the vow by flirting with a man. On king's order, the princess was put in a deep hole in the earth full of thorns and Padmasambhava was taken out to a secluded place, tied to a wooden pyre which was then set on fire. When the smoke did not clear off for a week, the king visited the spot and found to his surprise that the place had turned into a Lake with Lotus in the centre. Padmasambhava had manifested himself. Repenting king offered him his kingdom and princess Mandharva was married to him. Rewalsar is known as *Padmacan* to the Buddhist which means 'Lotus possessing' and is considered the place, where the spirit of Padmasambhava rests. Rewalsar is a small circular Lake with three quarters of a mile in diameter.

The natural islands moving on the water surface is a veritable feast to the eyes. How the islands broke off from the mainland and started floating in the lake, is still a mystery to man. The Lake is also associated with Nag cult or serpent worshipping. The lake water is believed to be flowing underground from Rewalsar to 'Nagchala' (a place 10 km. from Mandi on the Mandi-Shimla National Highway). The Hindus believe that it was here that the 'Lomas Rishi' held his penance in devotion to lord Shiva. Overwhelmed, Shiva gave the Rishi, the seven floating islands in reward. There is also a Sikh Shrine 'Gurudwara' built in commemoration of Guru Govind Singh's visit to this place. It is a very

built in commemoration of Guru Govind Singh's visit to this place. It is a very sacred place.

Kunt Bhayog Lake : It is situated at the hill top of Rewalsar town at an altitude of 1700 mts. It is enclosed by hills from two sides. This lake is about 12 to 15 mt. deep at the centre.

Kalasar Lake : The Kalasar lake is situated at an altitude of 1755 mt. above mean sea level, at the top of the Rewalsar town. It is surrounded by beautiful green hills and experiences snowfall during winter.

Prashar Lake : It lies at 2743 metres above sea level and is 30 kms from Mandi town. This lake is situated on a cup like valley. A temple of great scenic beauty is also there. The pagoda like three storeyed temple and its surroundings make a great impression on the beholders.

No other temple in the Western Himalayas can rival the grandeur of the setting of Prashar Rishi. A fair is held here in the month of June every year, where people gather from all neighbouring villages. Local products are displayed and sold in large quantity. This lake is fed by small mountain streams. High mountains of middle Himalayas surround this lake. Kullu district has three famous lakes, namely *Bhrigu, Dhashahr* and *Sareul Sar.* Bhrigu and Dhashahr are not far from Manali, the famous tourist resort. Sareul Sar, is 5 km. from Jalori in Kullu. The water of the lake is cool, calm and clear. There is also a temple on the bank of this lake.

Bhrigu lake : is situated at the height of 4235 mt. above the mean sea level near Rohtang pass. Its depth is about 3mt. and it remains under snow for the whole winter. Being sacred, this lake is visited by the people of Kullu, Mandi and Lahaul valley.

Servalsar Lake : It is situated at the top of 'Jalori pass' in Kullu district at an altitude of 3100 mts. It is 20 km from Banjar towards Anni.

Chandranahan Lake : It is situated on 'Chanshal peak' in Rohru tehsil, district Shimla, at an altitude of 4,267 metres. The *Pabar river* originates from this lake.

Tanu Jubbal Lake : Near Narkanda is situated the other lake of Shimla district.

Karali Lake : It is located on the Chhota Shali hillock just on the other side of Shali peak. The size of the lake is almost equal to the size of the Annadale ground of Shimla. The lake is a sheet of dirty water, but from a great way up the hill, its first sight between the trees is unforgettable, because of, its shining like a big emerald in the Sun. It is also located in district Shimla.

Nako Lake : Famous for skating. It is near Nako village at an altitude of 3,662 mts. It freezes in winter and people enjoy skating on this lake. There is another lake named *'Sorong Lake'* in Kinnaur district.

Renuka Lake : About 45 kms from Nahan, is one of the most picturesque

lakes in Himachal with its crystal clear water. It is shaped like a sleeping woman; legend has it that this lake was founded when mother Renuka was sacrificed by her son Parshuram in obedience to his father, the sage 'Jamdagni'. It has a circumference of 2.5 kms. Today myths brought to the fore, when each year in November, a fair is held to celebrate the immortality of Renuka and her son.

Several idols of Parshuram, (who is believed to be the sixth incarnation of Lord Vishnu) and local deities, placed in decorated planquins are carried by an impressive procession to Parshuram Tal. Before the idols are installed in the temple, they are given bath in this holy Lake symbolizing the body of the mother.

The Renuka lake is the biggest natural oval lake, near Dadahu. It lies in depression formed by a fault in the earths crust. The Renuka lake is fed by a small stream flowing in from the lower Himalayan hills surrounding it. These slopes are covered with dense sub-tropical forests. The lake Shelters a wild life sanctuary having species of deer, water birds, red jungle fowl, black pheasants, pair of Lions, bear and large number of sambar, chital and peacock. Its history depicts that Giri river at one time used to flow along the side of Renuka lake and eventually merged with Jalal river near 'Gadile'. On the basis of physico-chemical characteristics this lake should be regarded as hard water type.

Saketi Lake : It is located near Shivalik Fossil Park in Sirmaur district. It was a lake at one time but now it is filled with sand and stones from near by hills. The lake could be developed as a good tourist centre by removing sand and stones from the lake, developing its outer walls to stop flow of the undesired material into it.

Sukhsar Lake : It is located at an altitude at 1760 mts. above the mean sea level at the top of the Rewalsar town. It is surrounded by rising hills and thick bushy vegetation in the catchment area. The lake also receives snowfall during winter.

Mantilai Lake : This lake is *source of Parbati river.* It is situated at an elevation of 4116 mts. There is a beautiful range of Parbati peaks surrounding the lake.

Shringtingu Lake : Its height is 4200 mts. from Seri, if one follows Gohru Nullaha, one would reach Shringtingu lake. The panoramic view of Bara Banghal is enjoyable from this place. To reach this lake one has to go from Manali to Khanol then to Tenta and further to Jammu Dugh (2250 mts.) via Seri.

Suraj Tal : It is situated at an altitude of 4800 mts. This is a beautiful lake, the *source of Bhaga river.* This lake is located opposite Baralacha having about 1200x1600 sq.mts. of area. There is a good trek to it by Zingzing bar. This lake is located in district Lahaul-Spiti.

Chandra Tal : Chandra Tal is in central Lahaul at an altitude of 4270

met. above mean sea level. It is also known as the *'lake of the moon'*. The crystal clear waters of the lake shining in the light are too inviting and one just can't shrink having short bath in the cold water. It is the source of Chandra river, beautifully set on a large meadow between a lower ridge and Kunzum range.

Chinese Pilgrim Hiuen Tsang, called this lake, *Lohitya Sarover*. The lake lies in large depression formed by glaciers and remains completely frozen during winter. It is nearly one and a half kilometer long and is situated near Baralacha having 1200x1600 sq.mts. of area. A number of temples exist on the periphery of the lake, which treasures crystal clear water and magnificent scenery.

Una-so Lake : This lake is situated in the Lahaul-Spiti district of the state.

Pong Lake : It is formed between Dehra and Pongdam. Its length is 42 km. It is made out of Beas river. In 1960, a dam was built on the Beas river in Himachal Pradesh. This dam resulted in formation of huge reservoir-Pong lake. This mass of water varies from 180 sq.km to 400 sq.km. the lake was declared sanctuary in 1983. The Bhakra Beas Management Board (BBMB) acquired about 20,000 hectares of land for this reservoir. The reservoir displaced 95 villages and its residents, resettled in other places, continued to reside in the fringe areas, as the water level recedes. This area is cultivated by them, although the land remains with the BBMB.

A visit to Pong lake shows that the main lake, having four islands and vast flat fringe on the bank of Beas, provides the best feeding ground for water birds and a nestling place for migratory birds. The Pong dam wetlands have emerged as a major habitat for migratory water birds. Expectedly 30 to 50 thousand migratory birds, belonging to 54 species, visit the lake every year. The increased number of birds has led to the wetlands gaining international importance.

The Pong dam is the only place in India other than Bharatpur (Rajasthan) where the rare red necked grebe has been found. All land over 440 m above sea level is in a 5 km. radius of the lake – an area of roughly 20,000 hectare, has been notified as buffer zone. The wetlands support oriental elements in the fauna, including mammals like barking deer, wild bear, fox and sambhar and reptiles. Unauthorized construction in the fringe areas at the Pong dam lake has not only posed a menance to the nearby sanctuary but also led to the accumulation of silt at the dam reservoir.

Along with unauthorized cultivation, there is pressure from livestock grazing on the banks of the lake which goes unheeded. It is another factor which adds to the deterioration of the lake's surroundings. Thus, unauthorized cultivation has threatened the Pong dam lake, thereby endangering migratory birds. The base-line information left by a British Police Officer in 1920 has proved useful to build data on bird diversity in the area, leading to its designation as "protected. The study has also illustrated the importance of records and the

role of amateur naturalists in monitoring bio-diversity changes.

The Pong is the only place in India other than Bharatpur where the rare red-necked grebe has been found. The lake has one permanent island and several other seasonal ones that are connected to the shore. The area of the water body varies from 18,000 to 30,000 hectare, depending on the time of the year. The reservoir has rapidly become an important staging and wintering area for a wide variety of migratory birds. A survey in December, 1985, recorded about 10,000 ducks near the Southern shore of the lake and another several thousand near the mouth of the 'Gaj Kund'. A majority were 'anas platyrhynchos', but significant number of A 'acuta', A creeca and Authya ferina were also present. A moderate number of shore birds were observed around Dehra and near mouth of Gaj kund; mainly Tringa Totanus, T. Nebularia, T. Ochropas, Actitis hypoleucos and Calidris Tempinchii.

Pandoh Lake : The Pandoh lake is 14 km from Mandi towards Aut on the Mandi-Kullu national highway no 21. The lake has been formed due to the construction of Pandoh dam after diverting the water of the Beas River to Satluj at Slappar. The water is being carried by two long tunnels of 13 km each under the hills along with 12 km open channel.

Chamera lake : It is formed owing to construction of 540 mw Chamera hydroelectric project on the river Ravi near village Chamera in district Chamba. It is situated at a distance of 25 km from the famous hill resort of Dalhousie and is visible from the Chamba-Pathankot highway. The road connecting the Chamera Dam goes along the lake to '*Bhalie temple*' and the famous thick forest of Bhandal Valley.

RIVER SYSTEM

Greater Himalayas may not compete with the plains region for agricultural purposes, but it is the perennial source of five rivers which flow through Himachal Pradesh and provide abundance of water to the Indus-river basin. The upper area opens up the winds from central Asia and to a greater extent becomes inaccessible to the Indian monsoon. Pine forests, cliffs and glaciers become the features of the region and cultivable land becomes scarce. The Himalayan mountain chain has a dominant influence on the climatic conditions prevailing over Indian sub-continent. They lie in the path of rain-bearing monsoon winds and thus bring rain to a large part of India.

The Himalaya houses a vast reservoir of moisture both in the form of ice, fresh-water and underground water. The rivers draining the Himalayas sustain life in the Northern part of the Indian sub-continent. The drainage system of Himalaya is very complex. It is composed both of rivers and glaciers. Himalayan river criss-cross the entire mountain chain. In fact a number of rivers are older than the mountain system. They have cut across the various mountain ranges.

In the Rig Veda, four out of the five rivers which flow through Himachal Pradesh, found mention, viz, Asikni (*Chenab*), Purushani (*Ravi*), Arjikiya

(*Beas*) and Sutudri or Shatadru (*Satluj*). The fifth river Yamuna, which rises from Yamunotri, has mythical relation to the Sun. Today not Punjab, but Himachal Pradesh is to be called the land of five rivers. These are only big rivers systems; in addition to these, numerous small rivers and thousands of waterfalls, streams, rills and rivulets provide water for irrigation and cool drink for weary wayfarers. The rivers in Himachal Pradesh have slanting flow and so are useful for hydro-electric power generation. The rivers along with their tributaries find their course, amidst the deep ravines and green valleys before they enter the plains.

Rivers, with their tributary systems, are the main channels of drainage of the land surface. They are at the same time also the chief agents of land erosion and the main lines for the transport of the products of the land to sea. The drainage systems of the two regions peninsular and extra-peninsular India had to accommodate themselves to two very widely divergent topography, necessarily having different character. *Himachal Pradesh falls into the drainage system of the extra-peninsular area.* One unique distinction of Himachal region is that it provides water both to the Indus and the Ganga basins.

(a) Indus River System : The river Indus rises from the Tibetan plateau and enters the Himalaya in Ladakh. It enters the Kashmir region near its confluence with the river Gurtang, at an elevation of about 4200 mts. The drainage basin of the Indus river system extends from the Naga Parbat mass in the extreme North-Western part of the country to the Western slopes of the Shimla ridge in Himachal Pradesh.

It includes the whole of Jammu and Kashmir and most of Himachal Pradesh. The extreme Northern tract of the Indus basin comprises of the cold deserts of Ladakh, Lahaul Spiti and Pooh. South of this tract lies the higher Himalayan mountain wall. The lower and middle Himalayas occupy the central part of the Indus basin. The low rolling Shivalik hills occur along its Southern periphery.

Climatic conditions in the Indus river system vary from arctic to sub-tropical. The cold desert area remains devoid of rainfall and experiences heavy snowfall. The important rivers of this system are *the Satluj, the Beas, the Ravi, the Chenab* and *the Jhelum.* Out of these five, four flow through Himachal Pradesh. Detailed description has been given to these rivers along with their tributaries in the following pages.

(b) Ganga River System : The drainage basin of the Ganga river system covers about one third of the Western Himalaya and the entire Central Himalaya. This basin extends from the Eastern face of the Shimla ridge in Himachal Pradesh to the South Western slopes of the Kanchanjunga massif on the Nepal Sikkim border, thereby including parts of Kinnaur, Shimla, Solan and Sirmaur district of Himachal and Garhwal, Kumaun and Nepal.

The Ganga is the most sacred river of India. The story of the Ganga from her source to sea, from ancient times to the modern period is the story of

India's civilization and culture. The Ganga has its source near *Gomukh glacier*, near Gangotri (Uttrakhand). The Ganga is formed by two head streams namely Alaknanda and Bhagirathi. It enters the plains near Haridwar. The Yamuna meets this river at Allahabad known as SANGAM. The Ganga is the master stream of the area. South of Farakka, the river divides into a number of channels to form 'Sunder Ban Delta' (Largest in the world). The main tributaries of the Ganga system are *the Yamuna, Bhagirathi* and *Alaknanda, Kali* and its tributaries, *the Ghagra, the Gandak* and *the Kosi river.* The important settlements between its bank are – Haridwar, Kanpur, Allahabad, Varanasi, Patna and Calcutta.

RIVERS AND TRIBUTARIES

YAMUNA

It enters Himachal Pradesh at *'Khadar Majri'* in Sirmaur district. Yamuna river is the largest tributary of the Ganga. The Yamuna has mythical relation to the Sun. It rises from *'Yamunotri'* in Garhwal hills and forms the Eastern boundary with Uttarakhand. The Yamuna is the *Eastern-most river* of Himachal Pradesh. Its famous tributaries are Tons, Pabbar and Giri or Giri Ganga. The Giri Ganga rises from near 'Kupar peak' just above Jubbal town in Shimla district, Tons from Yamunotri and Pabbar from Chandro Nahan Lake near the 'Chanshal peak' in Rohru tehsil of Shimla district. Its total catchment area in Himachal is 2,320 square km. It leaves the state near 'Tajewala' and enters into the Haryana state. It flows nearly 22 km. in Himachal Pradesh.

TRIBUTARIES

Jalal River : Jalal is the small tributary of the Giri river in Himachal Pradesh. It rises from 'Dharthi ranges' adjoining Pacchad and joins Yamuna at *'Dadahu'* from the right side. It also joins the river Giriganga at Dadahu. The origin and entire course of this river lies in the lower Himalayas. This is the rainfed river and has abrupt flow during the rainy season. A number of human settlements have come up along with Jalal river. These include Bagthan and Dadhau.

Markanda River : Markanda is a small river of Nahan area of the Sirmaur district. It rises from the Southern face of the lower Himalayas on the Western extremity of the Kiarda dun (Panota) valley. The lower Himalayan hills of Nahan occur on the right flank of the Markanda valley while the low rolling Shivalik hills are on its left flank. It is a rainfed river and has very low flow in the winter and summer months, but rises abruptly in the monsoon.

Andhra River : This is a tributary of the Pabbar River which in turn drains into the Tons river. This river rises from a small glacier tenated in a cirque of the lower hills of the main Himalayas in the area to the North West of Chirgaon in Shimla district. Thereafter it flows in a general direction towards South-East and merges with the Pabbar river at *Chirgaon.*

Giri River : The river Giri is an important tributary of the Yamuna. It drains a part of South-Eastern Himachal Pradesh. The Giri or Giriganga as it is famous in the Jubbal, Rohru hills that rises from 'Kupar peak' just above Jubbal town after flowing through the heart of Shimla hills flown down in the South-Eastern direction and divides the Sirmaur district into two equal parts that are known as *Cis-Giri* and *Trans-Giri region* and joins Yamuna upstream of Paonta below Mokkampur. The river Ashni joins Giri river near Sadhupul (Chail) while river Jalal which originates from Dharthi ranges adjoining Pacchad joins it at Dadahu from the right side. The water from the Giri river is led through a tunnel to the power house of Girinagar and after that it is led into the Bata river.

Asni River : The Asni river is a tributary of the Giri river which in turn drains into the Yamuna river. This river flows along a deep V shaped valley whose side slopes vary from steep to precipitous. It has carved a steep gorge across the offshoots of the Nag Tibba ridge. Numerous small springs fed tributaries join the Asni river at various places along its course.

Bata River : This river originates in the boulders below the 'Nahan ridge' in the South-Western corner of Himachal Pradesh as the *Jalmusa-ka-Khala.* It is mainly fed by rain water that is cycled as underground water before finally coming up on the surface as a spring. The river flows below the surface for a part of its length in its upper reaches, thereafter the water flows on the surface. Large and wide terraces have been formed by it. The small tributaries which join the Bata river in the Paonta valley are :

– *Khara-Ka-Khala* flowing in a Southern direction from the Nahan ridge.

– *Kanser Khala* originating from the Southern slopes of the Nahan (Kanser ridge).

Pabbar River : The Pabbar is a tributary of the Tons river, which in turn drains into the river Yamuna. This rises from the Dhauladhar range (South facing slopes) near the border of UP and Himachal Pradesh and the extreme North-Eastern of Shimla district. The main stream is fed by the Chandra Nahan glacier and springs originating from underground waters. It joins the Tons river at the base of the Chakrata massif near the border of Uttrakhand and Himachal Pradesh.

Patsari River : The Patsari is a small spring fed tributary of the Pabbar river. This river rises from the lower Himalayan hills near Kharapathar in Shimla district of Himachal Pradesh. This river joins the Pabbar river near the mountain hamlet of Patsari about 10 kms upstream of Rohru. Its bed is strewn with boulders of various sizes. Small villages and hamlets have come up along the Patsari river.

Tons River : This river is an important tributary of the Yamuna river and joins it at *'Kalsi'* in the North-Western part of Dehradun valley (approximately 48 km. away from Dehradun.) It rises as the following two feeder streams – the Supin river rises in the Northern part of the Tons

catchment near the Himachal Pradesh and Uttrakhand border – the Rupin river rises from a glacier at the head of the famous Har-Ki-Dun valley in the North-North Eastern part of the Tons catchment.

These two feeder streams merge near the mountain hamlet of 'Naitwar' and the channel downstream of Naitwar is known as Tons river. The Tons river flows along a V shaped valley. A number of settlements have come up along the Tons river, such as Tuni, Naitwar and Menus. The main geomorphic features of the Yamuna valley are interlocking spurs, gorges, steep rock benches and terraces. The latter have been formed by the river over the past thousands of years. The area drained by the Yamuna system includes Giri-Satluj water divide in Himachal Pradesh to the Yamuna Bhilangana water divide in Garhwal. To be more precise the South-Eastern slopes at the Shimla ridge are drained by the Yamuna system. The utilisation of water of the river system is being done by way of transportation of timber logs, irrigation and a hydel power generation. After Himachal Pradesh the river flows through the state of Haryana, Delhi and Uttar Pradesh where it merges with the Ganga river at Allahabad. The Yamuna is 2,525 km long.

SATLUJ

Rises from beyond Indian border in the Southern slopes of the Kailash mountain, near 'Mansarover lake' from *'Rakas lake'* as Longchhen Khabag river (in Tibet) is the the largest among the five rivers of Himachal Pradesh. It enters Himachal at *'Shipki'* (altitude 6,608 mts.) and flows into the South-Westerly direction through Kinnaur, Shimla, Kullu, Solan, Mandi and Bilaspur districts. Its course in Himachal Pradesh is 320 Kms from 'Rakastal', with famous tributaries viz, the Spiti, the Ropa, the Taiti, the Kashang, the Mulgaon, the Yula, the Wanger, the Throng and the Rupi as right bank tributaries, whereas the Tirung, the Gayanthing, the Baspa, the Duling and the Soldang are left bank tributaries.

It leaves Himachal Pradesh to enter the plains of Punjab at *'Bhakhra'*, where the world's highest gravity dam has been constructed on this river. Its total catchment area in Himachal Pradesh is 20,000 sq.kms. Its vedic name is *'Satudri'* and Sanskrit name *'Shatadru'*. The Satluj finally drains into the Indus in Pakistan. The catchment area of about 50140 square km of Satluj river is located above the permanent snow line at an altitude of 4500 msl. The upper tracts of the Satluj valley are under a permanent snow cover. The prominent human settlements that have come on the banks of the Satluj river are Namgia, Kalpa, Rampur, Tattapani, Sunni and Bilaspur. Its total length is 1448 Km.

TRIBUTARIES

Baspa River : Baspa is an important tributary of the river Satluj in its upper courses. The Baspa is joined by many smaller channels draining snow melt waters. The Baspa river has cut across the main Himalayan range. Thereafter it empties itself into the river Satluj in district Kinnaur. Baspa

originates from the Baspa hills, joins it from the left bank near *Karcham* (Kalpa). Satluj river leaves Kinnaur district in the West near *'Chauhra'* and enters Shimla district.

Spiti River : The Spiti river originates from Kunzum range and 'Tegpo' and 'Kabzian' streams are its tributaries. Water draining of the famous Pin valley area are also a part of the Spiti river system. Its position across the main Himalayan range deprives it from the benefit of the South-West monsoons that causes widespread rain in most parts of India from June to September. The river attains peak discharge in late summer due to glacier melting. After flowing through Spiti valley, the Spiti river meets Satluj at 'Namgia' in Kinnaur district traversing a length of about 150 km from the North West, beyond that it flows in South-West direction in the Pradesh. Huge mountains rise to very high elevations on either sides of the Spiti river and its numerous tributaries. The mountains are barren and largely devoid of a vegetative cover. The main settlements along the Spiti river and its tributaries are Hansi and Dhankar Gompa.

The Nogli Khad : It Joins Satluj below Rampur Bushahr. It touches Kullu district in Nirmand tehsil opposite to Rampur tehsil of Shimla district. The river Satluj enters Mandi district near Firnu village in the Chawasigarh and passes through the areas of Mahunm, Bagra, Batwara, Derahat and Dehar. Practically, the whole of the ancient Suket state except Jaidevi and Balh circles drains into Satluj. The main tributaries of the Satluj in district Mandi are Siun, Bahlu, Kotlu, Behna, Siman, Bantrehr, Khadel and Bhagmati.

Soan River : The Soan river rises from the Southern slopes of the Shivalik range also known as 'Solasinghi' range in the tract to the East of the Beas gap across the Southern periphery of the Kangra valley. It joins the Satluj river near its gorge across the Shivalik hills which forms the boundary of Himachal Pradesh and Punjab. Its gradient is not very steep and the slopes of the Soan catchment vary from gentle to steep. In the summer the discharge drops drastically, while during monsoon it is in spate.

BEAS

The Rohtang pass at 13,050 feet, 51 km. North of Manali gateway to the valleys of Lahaul and Spiti lies on the main Manali-Leh highway. It has remained the main attraction for all tourists visiting this picturesque hill resort. During the season from early June to mid-October, thousands of tourists visit the pass every day.

Besides affording a magnificent view of the snow-clad mountains of Lahaul, this pass is also the source of the river Beas. This river while fulfilling the thirst of many local travellers, also quenches the thirst of the fields of Punjab and Pakistan before flowing into the Arabian Sea. The river emerges from a cavern at the Rohtang pass and assumes different identities as the seasons go by. It flows from a clear blue easy flowing mountain river to an awesome torrent during the monsoon. The name Rohtang is a new one, the old one being *"Bhrigu*

Tung". On the South of this pass lay the civilized state of Kullant (Kullu), while to the North lay the more desolate and barren areas of Lahaul and Spiti. Both these areas were not connected and according to legend the people prayed to Lord Shiva to make a way. Lord Shiva with his *trishul* cut the *"BhriguTung"* mountain and made a path that is now known as the Rohtang pass. On the right of this pass lies the source of the river Beas also known as "Beas Rishi". At this spot the great thinker and writer of the Mahabharata, Maharishi Vyas, meditated.

To the south of this source lies another source known as *'Beas Kund'*. Both these mountain streams meet at 'Palachan village', 10 km. north of Manalli to form the river Beas. In ancient times the river was not known as the river Beas but as *"Arjiki"* and till the time of the Mahabharata this remained its name. The enmity between Rishi Vashisht and Vishwamitra is well known.

It is said that once Vishwamitra killed a hundred sons of Rishi Vashisht and in sheer agony Muni Vashisht jumped into the river "Arjiki" after having tied himself with ropes. But the river got him out of the water after removing the rope. This place is now known as Vashisht village. According to legend since the river had broken the ropes tying Rishi Vashisht, it became known as river *"Vipasha"*. Today, the world famous tourist resort of Manali is situated on the right banks of the river Beas. From Manali, this holy river after passing through dense evergreen forests reaches the town of Kullu.

On both banks of the river Beas many places which are the symbols of ancient civilizations have dwelled and prospered, namely Manali, Naggar, Katrain, Raison, Kullu, Pandoh, Mandi and Sujanpur. After covering hundreds of kilometres through the hills, the river at *'Hari Ka Patan'* in Ferozepore district of Punjab embraces the river Sutluj before flowing into Pakistan. The attraction of the river has been so great that whoever came here, remained to stay. The great sages *Narad, Vashisht, Vishwamitra, Bhrigu, Jamdagni, Bharadwaj, Vamdev, Kapil, Gautam, Shringi, Vyas, Prashar, Kanav* and *Parshuram* came here on different occasions and meditated on the banks of this river. Till today their temples exist in this valley of Vyas.

Its main tributaries are; the Parbati, the Spin and the Malana nala in the East; and the Solang, the Manalsu, the Sujoin, the Phojal and the Sarvari streams in the West. In Kangra, it is joined by Binwa, Neogal, Banganga, Gaj, Dehr and Chakki from North, and Kunah, Maseh, Khairan and 'Man' from the South. The Beas enters Kangra district at *'Sandhol'* and leaves it near *'Mirthal'*. At *'Bajawa'*, it enters Mandi district. Mandi town is situated on its left bank. In Mandi district, its own Northern feeders are Hansa, Tirthan, Bakhli, Jiuni, Suketi, Panddi, Son and Bather. The Northern and Eastern tributaries of the Beas are perennial and snow fed, while Southern are seasonal. Its flow is maximum during monsoon months. At Pandoh, in Mandi district, the waters of the Beas have been diverted through a big tunnel to join the Satluj. It flows for 256 kms. in Himachal Pradesh.

The Beas (Vedic *Arjiki* or *Arjikiya* and *Sanskrit Vipasa*) forms the world famous valleys of Kullu and Kangra. This river bears testimony of those historical events which do not find mention in the recorded history. It has played a significant role in the development of peculiar hill culture which pervades the life of hill people living in the towns and surrounding villages since ages. We have to owe to this sacred river in terms of our culture, economy and social life. The important settlement on the Banks of the Beas are Kullu, Mandi, Bajaura, Pandoh, Sujanpur Tehra, Nadaun and Dehra-Gopipur. The total length is 460 km.

TRIBUTARIES

Awa River : Rises from the Dhauladhar range in the Kangra Valley of Himachal Pradesh. It flows in a South-Westerly direction before joining the river Beas. It receives both snowfed as well as rainfall water from smaller channels.

Baner River : It is also known as 'Baner Khad' ; is a tributary of the Beas river and drains the central part of the Kangra valley. The Baner Khad rises as a small snow fed channel on the Southern slopes of the Dhauladhar range near Palampur. The general direction of flow of the Baner river is towards South-West. Huge boulders cover the river bed in its upper course.

Banganga River : Banganga river joins the Beas river in the Kangra valley. It rises from the Southern slopes of the Dhauladhar range. The river is fed by snow melt waters and channels emanating from springs. Large fertile sediments have been formed all along the river near its mouth.

Chakki River : It drains the South-Western part of Himachal Pradesh. The Chakki river rises as a small snow-fed and rain fed stream from the Southern slopes of the Dhauladhar range. This river enters Punjab near Pathankot and joins the Beas river. It has deposited an enormous quantity of sediments of various sizes in the form of terraces in this tract. These are under cultivation. Many settlements lie along the Chakki river, Nurpur town is the most known one.

Gaj Khad : It rises as a small streams from the snows on the Southern slopes of the Dhauladhar range in Kangra district. A number of small streams form the Gaj Khad. Steep slopes occur in the upper catchment of this river. The Gaj river joins the Beas a little upstream of the Pong dam lake.

Harla River : Harla river rises as a small channel from the snows in the depression of the North-Western plank of Kullu valley. It joins the river Beas near *Bhuntar*. The Harla river has a small catchment in the form of a narrow V-shaped valley. Numerous snow fed streams join the river Harla.

Luni River : Luni River rises from the South slopes of Dhauladhar in the Kangra valley. It merges with the river Beas in the central part of Kangra valley.

Manuni River : Manuni river rises from Southern slopes of the

Dhauladhar range and joins the river Beas. Steep slopes form the upper catchment of the Manuni river. There is a sharp fall in its gradient. Huge river terraces occur on the both sides of the river bed, which are used for cultivation extensively.

Parbati River : The Parbati river rises in the snowy wastes upstream of Manikaran on the foothills of the main Himalayan range in Kullu district. The glacier which feeds this river descends down from the steep Southern slopes of the main Himalayas. It joins the river Beas at *Shamshi* in Kullu valley. Small terraces found on the both sides of the river have been formed by it over the past thousands of years. Hot water springs at Manikaran pour their water into this river. 'Manikaran' and 'Kasol' are the important human settlements along this river.

Patlikhul River : This river is a tributary of the Beas river in the Manali area of Kullu district. It rises from the snow covered peak on the Southern slopes of the Pir Panjal range and thereafter it flows into the Beas river upstream of Kullu.

Sainj River : It rises from the water divides of the Beas and Satluj rivers in the lower ranges of the main Himalayas to the East of Kullu. Thereafter it flows towards South-West to join the Beas. Just before it cuts across the Dhauladhar range near Larji. The Sainj valley is V shaped and the river flows past a series of interlocking spurs. It has widened near the mouth of the river.

Suketi River : This river is a tributary of the Beas river in the Kangra valley. It rises from the South facing slopes of Dhauladhar range. A number of small channels join the Suketi river in its upper reaches. The river has formed huge terraces, most of which are under cultivation. The upper catchment of the river consists of steep slopes.

Tirthan River : It is a tributary of the Beas river. It rises from the base of an offshoot of the great or main Himalayan range to the South-East of Kullu. Thereafter it follows a South Westerly course and flows into the Beas at *Larji* just before it cuts across the Dhauladhar range. A number of channels which join the river Tirthan are snowfed. The Tirthan flows along a deep V shaped valley in its upper reaches. Lower down, the valley opens up and it is fairly wide near its confluence with the Beas river.

Uhl River : Uhl is another tributary of the Beas which rises as two feeder channels in the area to the North of the Dhauladhar range in Himachal Pradesh. Thereafter the two channels cross this gigantic mountain barrier and merge at the base of the Southern slopes to form the main channel of the Uhl river in Kangra area. It flows for a considerable distance along the base of the Dhauladhar range. Then it turns towards the South-East to merge with the Beas near the town of 'Mandi'.

CHENAB

Two streams namely 'Chandra' and 'Bhaga' rise on the opposite sides of the

Baralacha pass at an elevation of 4,891 mts., and meet at *Tandi* (2,286 mts.) to form the river Chenab. The Chandra rises from the South-East and Bhaga from the North-West of the Baralacha pass. It enters Pangi valley of Chamba district near *'Bhujind'* and leaves the district at *'Sansari Nala'* to enter Podar valley of Kashmir. It flows in Himachal for 122 kms. With its total length of 1,200 kms, it has a catchment area of 61,000 sq.kms out of which 7,500 sq.kms lie in Himachal Pradesh. It is the largest river of Himachal Pradesh in terms of volume of waters. The Chenab valley is a structural trough formed by the great Himalayan and Pir Panjal ranges.

TRIBUTARIES

The Miyar Nullah joins Chenab in Lahaul, while Saicher Nullah joins it in Pangi valley. Its tributaries in its lower course are river Jammu Tavi and Bhaga, while the river Munawarwali is in Dun valley. It meets the Indus river at *Mithankot* about 950 miles down in Pakistan and ultimately joins Arabian sea. The important human settlements that have come up along this river are Udaipur, Killar, Doda and Ramban.

Bhaga River : This river originates from the Lahaul valley. A number of snowfed rivers join it during its course, before it joins the Chandra stream at Tandi. From its origin it flows in the South-South-Westerly direction as a raging torrent before joining the river Chandra. U shaped valleys, waterfalls, glaciers and moraines characterizes the upper catchment of the Bhaga river. The entire tract is devoid of a vegetative cover. The discharge of this river increases during the summer months, when the snow on the high mountains starts melting.

Chandra River : It rises in the snows lying at the base of the main Himalayan range in Lahaul-Spiti district. Thereafter it flows for a considerable distance along the base of thin range in the South-East direction, before making a 180° turn and taking a South-West course in Spiti valley. The entire area is a vast cold desert that receives little or no rains as it lies in the rain shadow of the Pir Panjal range lying towards South. The important human settlement along the river is *Koksar.*

RAVI

Rises from *'Bara Banghal'* – a branch of Dhauladhar as a joint stream formed by the glacier fed 'Badal' and 'Tant Gari'. The right bank tributaries of the Ravi are the *Budhil, Tundahan Beljedi, Saho* and *Siul;* and its left bank tributary worth mentioning is *Chirchind Nala.* Town Chamba is situated on the right bank of the Ravi. In later Sanskritik period it came to be known by the name of Irawati. The Ravi flows by the foot of Dalhousie hill, through the famous Chamba Valley. The river with its length of about 158 km. in Himachal has a catchment area of about 5,451 sq.kms. As the Ravi flows down from the heights, it passes hill sides with terraced fields. Sometimes the hills seem to move away and the river comes out into lovely green valleys.

The ravaging river looks devastating in its fury. It carries away even sturdy

trees. The Ravi first flows Westward through a trough separating the 'Pir Panjal' from Dhauladhar range. It flows nearly 130 kms. in Chamba region, before leaving it finally at *'Kheri'*. Alexander's historians called it the *'Hydraster'* and also *'Rhouadis'*. The Nag Tibba range within a South-Westerly orientation, joins the Dhauladhar and Pir Panjal ranges to form the Banghal catchment of about 97 km circumference. The Ravi forms the biggest sub-micro region of Chamba district. From Bara Banghal of Kangra district, it flows through Bara Bansu, Tretha Chanota and Ulhansa. The Ravi merges with the Chenab in Pakistan. The well known human settlements along the river are – Bharmaur, Madhopur and Chamba town. Its total length is 720 km.

TRIBUTARIES

Bhadal River : It rises from the snowy range of the area lying between the Pir Panjal and Dhauladhar ranges in the Bara Banghal area of the Central Himachal Pradesh. It flows in a Westerly direction before merging with the Tant Gari river, to form the mainstream of the Ravi. Bhadal river's catchment is made up of U-shaped valleys, waterfalls, moraines, cirques and towering peaks.

Siul River : It is the tributary of the Ravi river. It rises from the tract between the Dhauladhar and Pir Panjal ranges near J & K and Himachal Pradesh border. Then after this river flows towards East, takes a U-turn and attains a South-Westerly course before flowing into the Ravi river downstream of Chamba. River Baira is the prominent tributary of the Siul river. This river is fed by both snow melt water and spring waters.

Baira River : It rises from the snows on Southern slopes of the Pir Panjal range in Himachal Pradesh. Numerous tributaries of the Baira river are also fed by the snow and so make it a Perennial river before it joins the Siul river, which is a tributary of the Ravi river. Its catchment consists of steep slopes, deep valleys and terraces that have been laid down by the river since a long time.

Tant Gari : It is a tributary of the Ravi. This river rises as a small stream from the slopes of an off-shoot of the Pir Panjal range in the area East of Bharmaur in Chamba district. The Tant Gari then quickly descends down the steep slopes to form the Ravi river after merging with the Bhadal river. Melting snow is the perennial source of water for this river. A number of small streams join this river on its way, before it makes the part of the river Ravi. The Tant Giri valley is U-shaped. Its bottom is strewn with boulders and morainic deposits laid down by glaciers in the past.

SWAN RIVER

The Swan river catchment in lower Shivaliks in Una district of Himachal Pradesh is one of highly degraded land masses in the Himalayas calling for elaborate corrective measures for the restoration of its ecology. The sound land husbandry is indispensable for the sustainability of agriculture and overall

quality and stability of the environment. Many prospering civilizations have vanished in the hoary past with the degradation of their land resources. This is obvious from the fact, that it takes nature hundreds of years to have formed few centimeters of top fertile soil supporting plant and human life.

The recurring floods in the Swan river and its numerous tributaries *(Malahat Khad, Takewali Khad, Hum Khad, Barera Khad, Garni Khad, Gubri Khad, Panoja ke khad, Sunkali wali Khad and Amb wali Khad)* cause colossal damage to agricultural lands, civil works, property, animal and human life. The dimension of large scale deposition brought about by river could well be imagined from its being called as the "River of Sorrows" by the local people. The prime factors subscribing to fast pace of degradation are massive soil erosion and floods. The barren step slopes unable to hold and infilter rain water transmit a great surge of water and sediments into the stream network.

The valuable agricultural lands in the piedmont and flood plain are either swept away with the gushing flood waters or rendered unproductive with the spread of barren sand or gravel over them. The continued neglect of the soil and water conservation programmes, obviously spells a big environmental and socio-economic catastrophe in the region. The present day district Una, known as the Jawan Valley or Jaswan Dun Valley in the middle ages and a tehsil of Hoshiarpur district of Punjab (before the reorganization of Himachal Pradesh in 1966) comprises the area falling between the first two ranges of Shivalik Valley spreading from Ropar in the East to Talwara in the West and from near Daulatpur in the North-West to Punjab boundary in the South.

The Swain river intersects district Una in almost two equal parts. Out of total areas of 1540 Sq. km. of Una district, the Swain river and its tributaries *(chos)* cover about 1290 sq. km. The rest of the area falls in the Lun khad catchment. However, out of this 29.97 sq. km. is urban area. The State Highway No. 25 passes through the centre of catchment while numerous other roads cross it from West to East. The catchment represents all the three tehsils - Una, Amb, Bangana and sub-tehsil Haroli. As a matter of fact the Swan river is affecting the whole of Una district.

The Swan catchment falls between 31°17'30" N to 31°50'10" latitude and 75°58'17"E to 76°23'13" E longitude. It is bordered by Kangra district in the North, Hamirpur in the East, Rupnagar (Punjab) in the South and Hoshiarpur district from South-West to North-West. The altitude of the tract varies from 335 m at Santokhgarh to 976 m at Chintpurni temple above msl. Geomorphologically, the area could be divided in hills, piedmonts and flood plains. However, Physiographically it comprises of units such as hill tops, escarpments, river terraces and braided river plains etc.

Swan being the principal sorrow river of the tract flows from North-West to South-East and confluences with Satluj river (near Anandpur in the South) 14 km down Santokhgarh at Rupnagar in Punjab. Towards the Northern and North-Eastern parts are Dhinsar Dhar and Ramgarh Dhar form the water

divide, separating the Swan basin from the Satluj basin. However, towards the North-Western part the Katar Dhar forms the water divide separating the Swan catchment from the Beas drainage basin.

During rains it is colossally a broad river but at other times it is a petty stream divided into two – three channels almost lost in its sandy bed. The river is fed by number of ephemeral streams (khads/chos), total 73 within the territory of Himachal Pradesh draining from both the flanks of the river. But the fact is that hilly terrain on both sides of the river is highly dissected, broken and ravenous, representing all sorts of pluvial, linear, fluvial and polymorphous erosion forms.

The swan river catchment falls in sub-humid, sub-tropical zone. The mean annual rainfall in the region is around 1000 mm to 1400 mm. A major portion of the precipitation (about 75%) is received during monsoon period from June to September months. July and August are the wettest months. The period from March to April and October to November is generally bright. May and June are the hot months and are quite windy with lot of dust in the air. December to February is the cool period.

The forests of catchment are essentially of outer Shivalik type divided into two broad categories of the Chil and Scrub forests. The former is found between 500 m to 820 m above msl as pure and mixed with scrub species. It belongs to unstable type. The most important scrub species is Khair (Acacia catechu). The Chil and Khair are the important economic species of the tract. *Chil* produces resin and timber and *Khair* provides *'Katha'*. The third important produce of the forest is fuel wood.

Roe and Duff demarcated the forests first of all during British days, in 1870-72 formed a part of the then Una tehsil of Hoshiarpur district of Punjab. Based on the revised survey of forest types of India by Champion and Seth (1964), these forests are designated as Northern Dry Mixed Deciduous Forests and Lower or Shivalik Chil Pine forests.

There is hardly any area in the forests, which is not engulfed by the active surface erosion forms like sheet erosion, rill and gully erosion and polymorphous erosion. All these forms are associated with numerous landslides and slips to give the landscape a look of bizarre bad Lands. The areas are highly dissected and have steep barren slopes, sharp ridges and extensive ravines. Because of recurrent hazard of unleashing fury of Swan river the rich top soil capable of holding water and nutrients is virtually removed from whole of the area. It seems that in the absence of elaborate soil conservation measures, the highly eroded forest area will remain recalcitrant to all sort of rejuvenation measures.

The increased anthropogenic intervention in the form of excessive grazing, lopping, felling of trees (for road construction, special occasions like marriages and cremations, TD rights etc.) and recurrent forest-fires have led to a large scale deterioration of once thickly forested area. The entire tract is in a state of

retrogression now, spelling socio economic and environmental catastrophe in the near future.

Based upon the data available with agriculture department and the ground survey information suggests a major portion of cultivated area to be under wheat and maize. The cereal crop next to maize and wheat is rice. The oil crops, mainly *Sarson* and *Toria* were noticed to be raised as mixed crops with wheat or in some instances as pure crops. The other crops of prominence are sugarcane and vegetables. A large chunk of cultivated lands around Una and Santokhgarh are used for raising vegetables. The important vegetables of the area are onion, brinjal, ghia, tomato, cucumber and bhindi during summer and potato, peas, carrot, cauliflower, turnip and radish during winter.

The mango is principal crop, occupying about 40% of area under fruits. Other important fruits are citrus and pear. Generally Swan river bed is extensively used by migratory growers from outside for raising melons cucumber, ghia, pumpkin, shimla mirch and snake gourd etc. Anybody would wonder as to how the crops grow so well in the barren sound offering inhospitable environment.

The growers generally Muslims have inherited the art of cultivating these crops down the ages from their ancestors. This community of people has been pursuing the profession in different parts of the country offering similar land forms along the river banks. The growers secure these lands after paying some nominal amount to the local landowners. However, this activity causing instability in the river bed, may not be ecologically sound.

To some extent people themselves are also responsible for the growing menace of spillage of flood waters from the rivulets and Swan river into their agricultural land. At a number of places, the people have extended cultivation even to the fringes of Swan river and its tributaries damaging the natural embankments formed over time.

The tree, grass and shrub growth along the banks acts as a natural barrier against the floods by reducing the velocity and scouring action of flood water. The vegetation would also have deposited sediments into it, raising the level of banks over time and forming sort of natural embankments along the stream courses. But people unmindful of their action are even encroaching upon the most vulnerable stream banks.

All sorts of these activities within the limits of buffer zone of streams *(nallahas/khads/chos)* and the Swan river, are in contravention to the provisions of 'Choes Act' that forbids any human intervention within the immediate vicinity of the stream or river. Besides, the Nautor lands granted to landless are often on steep slopes and are impoverished, becoming a potential soil erosion hazard. An abiding solution might not be in sight until the hilly catchment of the river was kept free of much of anthropogenic intervention leading to large-scale-degradation of land and biotic resources. The local human and livestock population have been growing fast exerting lot of pressure

on the existing land resources, for the fulfildment of their material needs.

The agriculture in the hills is of subsistent type, forcing people to draw upon forest resources increasingly to supplement their income. The activities such as timber and energy requirements, carrying head loads of fuel wood throughout the year, fodder for animals, grazing etc. if not curved well in time would surely, deprive the region even of its small vegetative cover. Already the lower riches of the hills adjacent to villages along the right flank of Swan river are completely denuded. Such hills unable to retain and infilter water are causing enormous soil and water loss increasing menace of flash floods and destruction downstream.

Swan river has 73 tributaries. In 2013 central government approved Rs. 922/- crore for its Channelisation. The eleven km. stretch from Daulatpur bridge to Gagret bridge was identified for this purpose to cover all the 73 tributaries. The total length of channelisation is 387. 58 km. and out of this 1200 square km. is watershed area.

HOT SPRINGS

Himachal Pradesh has been endowned with a number of hot springs by nature. Most of these are located in the Satluj and Beas valleys. Generally there are three types of water springs observed in Himachal Pradesh. They are ordinary springs, mineral springs and thermal water springs. An ordinary water spring can be defined as temporary or permanent passing underground water to the surface. Mineral water spring has dissolved minerals; whereas the thermal water spring has the distinctive high temperature water. Hot water springs have become quite popular in Himachal Pradesh for their medicinal properties. All springs have one common feature i.e. there is natural fluctuation in the quantity of water which is attributed mainly due to climatic conditions in the area.

Tattapani

It is 51 kms from Shimla and 29 kms from Naldera, a famous tourist resort is located in district Mandi. This is located on the right bank of the Satluj at an altitude of 656 mts. This natural sulphur spring is invigorating and has curative power for various kinds of bodily and imaginative ailments. The water level of the spring rises up with the rise in water level of the river. The place Tattapani is also famous for the attractive costumes of the people. Now a substantial part of this spring has submerged in the Kol dam project.

Mani Karan

There are a great number of springs at this place in a distance of 1.3 km along the bank of the river Parbati from the old bridge to Brahmaganga in the Parbati valley of Kullu district. Manikaran is 45 kms from Kullu. The water gushes up with pressure and its temperature is well above boiling point. There is no sulphur or iron in the water, but is said to be radio-active. Thousands of people take a dip in its hot waters. The water is so hot that pulses (dal), rice,

chapattis, vegetables etc. can be boiled and cooked in it.

The healing properties of the Mani Karan springs are well known all over the country and pilgrims from far-off places come here for the cure of their aliments. Pneumonia, gout, bronchitis, rheumatism and muscular pains are said to be rapidly cured by taking bath in this water. According to a legend, Mani Karan is also associated with Lord Shiva and his consort Parbati. It is said that once, while Maa Parbati was taking bath, here she lost her ear-rings in the Kund (Pond). When she told it to Lord Shiva, he became furious and looked at the water of the Kund with great anger. With this, thousands of ear-rings flowed out from the boiling water and since then the water of the spring is boiling. The name Mani Karan also means ear rings. The rocks surrounding the springs are uncomfortably hot. Mani Karan is also famous for an ancient Hindu temple and a gurudwara.

Kasol : It is 1 km further up stream Mani Karan and 32 kms from Bhuntar, where the *'first airport of Himachal Pradesh'* is situated. The temperature of the water here is much lower than that of Mani Karan. Kasol hot water spring is located opposite to 'Nikhthan village'. It is 42 kms from Kullu and situated on the bank of Parbati river.

Khirganga : It is 26 kms from Kullu and 10 kms from Pulga. It is also famous for hot water springs. The water here too is not that much hot as it is at Mani Karan.

Vashisht : 3 kms from Manali, is located on the left bank of the river Beas, but well above the river. The hot water springs emerge through grantic gnessies which, in this part of the Himalaya, cover a very large area. The place Vashisht is also famous for the temples of 'Vashisht Rishi' and 'Lord Rama'. Vashisht hot water springs have made this low-profile village famous around the world. The village lies 3 km from Manali on the left bank of the Beas, at the foot of laterite and conglomerate rock hill covered with deodar and pines. The water *'Kunds'* are in the centre of the village. The temperature of the water in the 'kund' is around 111°F but the temperature of the water at the mouth of the spring is 23°F.

An average about 2000-3000 people take a dip in the tanks each day. One tank is reserved for females. As the tourism industry flourished in this region, the Himachal Pradesh Tourism Development Corporation built Turkish type baths, 500 mts. below Vashisht village to tap the springs curative potential. Hot water from the spring is brought through pipe and stored in a huge water tank, from where the water is channelled through pipes to the bathrooms of the HPTDC. Hot water springs are not as common in India as they are in Japan and Newzealand.

The origin of hot spring may be either magmatic – originating from magma, the hot molten thrust of the earth or meteoric – ground (meteoric) water meets the magmatic surface and the heated liquid emerges as hot spring. Hot spring are mostly alkaline although there are several that are acidic. They

are generally rich in minerals. Most contain calcium, silica and sulphur.

The main attraction of springs is their mystic curative powers. Perhaps this is why most hot springs have a temple in their vicinity. According to legend when the 'Ashwamegha' Yagya was being solemnized by Lord Rama, Vashisht Rishi was conspicuously absent from the assembly of saints. As he was the *'Kul Guru'* (family priest), Lord Rama directed Laxmana and Shringee Rishi to bring Rishi Vashisht to Ayodhya. Shringee Rishi and Laxmana found Rishi Vashisht meditating at the present site. As the area was at that time under deep snow, Rishi Vashisht asked Laxmana to release an *'agni ban'* (fire guided arrows) on the ground. Following which hot water gushed out enabling Shringee Rishi and Laxmana to have a hot bath. The hot water has been flowing ever since. To keep up the sanctity of the shrine the gods and goddesses of Kullu valley come to the Vashisht spring to have a bath, while Rishi Vashisht himself bathes in the scared waters of icy, 'Bhrigu lake'.

Jeori : There are also hot water springs at Jeori in Kinnaur district, situated on the right bank of Unu Nallah, beyond Rampur-Bushahr on Hindustan – Tibet Road. Besides the above mentioned hot water springs there are also few well known water falls and Kund (Springs) in Himachal Pradesh. They are *Rahla Water falls* near Manali in Kullu district; Satdhara water spring near Panjpulla in Chamba district; *Dhanchho* water falls, near Bharmaur in Chamba district, *Kalika Kund* at Man in Chamba district, *Chadwick falls* near Summer Hill in Shimla district and Bhagsunag water falls near Macleodganj in district Kangra. In Kangra valley there are a good number of hot water springs containing a good quantity of salt and iodine. Two springs, one at *Kopra* (near Nadaun) and other at *Jawalamukhi* on the bank of river Beas were discovered on 10th Dec. 1854. There is also a spring at *Lunani*. The *Salol* spring in the Kangra valley, was discovered by the then chief medical officer of Kangra, captain A. Colman. In the plum valley there is a spring near Baijnath.

GLACIERS

A glacier is a body of ice that originates on land by the recrystallization of snow under definite condition : it needs (a) a distinct area where more snow or ice usually accumulates than what melts – the accumulation zone, (b) another distinct area where more snow or ice usually melts or Wastes than what accumulates-the ablation zone and (c) a slow transfer (by creep) of the ice mass from the first region to the second. In the accumulation zone, even at the peak of summer the temperature is too low to melt all the snow and even some ice. The line separating accumulation and ablation zone is called the equilibrium line. The terminus of the glacier or the snow represents the lowest point, where ice can survive. Sometimes water flows down from the snow of the glacier to form a lake down stream.

Glaciers vary widely in forms and characteristics. The major morphological types include (i) the cliff and the cirque glaciers, (ii) the valley glaciers and

(iii) the continental ice sheets. The glaciers in the Himalayas, the Scandinavia, the Alps and the Americas fall in the category of the temperate glaciers. In the temperate glaciers, the temperatures are not much below the melting point of ice, except in winter, when the top layer may be frozen to a depths of ten metres. Besides direct precipitation, in the Himalayas, avalanches also form an important source of snow deposition because of the steepness of the hills. Also the Himalayan glaciers are at much higher altitudes compared to many others, such as Alpine glaciers, because the Himalayas, being at lower latitude, are warmer. The perennial snow line in the Indian Himalayas ranges from an altitude of about 4,300 met. in the West to 5,600 mets. in the East; though this line may change from year to year even for individual glaciers.

Glaciers, including the huge Greeland and Antarctica ice sheets, contain more than three-quarters of the world's fresh water. The fresh water from the Himalayan glaciers has a special significance for India. Glaciers are important source of water for the Northern rivers, most of which have large catchment areas thick with glaciers. During the monsoon, the rains feed these rivers and in the winter ground water sustains them, but in the lean period of summer most of their water comes from melting snow and glaciers, that is why the Northern rivers are perennial, unlike peninsular rivers.

The Himalayas which have nearly 15,000 glaciers – are one of the largest continental areas under ice. It is estimated that about 33,000 square kilometres constituting about 17 per cent of the Himalayas and 16,000 square kilometres amounting to nearly 37 per cent of the Karakoram are ice-clad. An average Himalayan glacier has a capacity of about a tenth of a cubic kilometre, but even a medium glacier can provide enough water to fill a large dam like Bhakra, which has a capacity of about 8 cubic kilometers. And a large glacier like Gangotri can fill it three times. There is very little information pertaining to the Himalayan glaciers and their dynamics. We have hardly any information of how much water Indian rivers get from snow, rain, groundwater or glacier melt in different seasons.

The glaciers world over are shrinking. In fact, the recession of glaciers began a few centuries ago. Even pilgrims trekking to snow covered Himalayas bring fresh corroboration of this worldwide trend. Indeed, if the ice-sheets melt, the sea level would rise, inundating low lying coastal areas.

There are several techniques used in studying glacier dynamics. These include methods of dating glacier ice, mapping and mass balance studies.

Receding glaciers have behind unconsolidated debris that may become the source material for landslides. The melting seasons of glacier coincides with the arrival of monsoon. In river basins where monsoon are weak, the melt water acts as a substitute for the precipitation. However in those basins where there is an ample rainfall from the monsoon, the melt water adds to the flow of river and causes floods. In many glaciated areas, as soon as the sun rises, the level of the melted water in the streams rises and leads to flash

floods during mid day. This is a very common phenomenon in the glaciers of Himachal Pradesh and Kashmir. In Himachal Pradesh the following glaciers are prominently known – Bara Shigri, Bhadal, Chandra Nahan, Gora, Chandra Bhaga, Nela, Beas Kund, Dudhon and Parbati, Mukkila and Miyar, Perad etc.

Glaciers in local language are known as *"Shigri"*. There are four major concentration of glaciers in Himachal Pradesh ; namely (i) Bara Banghal, lying amidst Kullu, Kangra, Chamba and Lahaul valleys, feeding the river Ravi, (ii) near the tri-junction of Kullu, Spiti and Kinnaur ; feeding the tributaries of the Beas and Satluj and (iii) in the zone of Lahaul – Spiti and Kullu valleys, feeding glacial tributaries of the Beas river,

Bara Shigri, is the largest glacier in Himachal Pradesh, located in the Chandra valley of Lahaul and feeding the river Chenab. It is about 3 km wide and 25 km long. It is tenanted in a cirque on the middle slopes of the main Himalayan range. Small tributary glaciers feed the trunk glacier. High mountains surround Bara Shigri glacier from three sides. The entire tract is devoid of vegetative cover. It is said that in the year 1936 this glacier caused a great havoc in Chandra valley and formed a large lake known as Chandertal. This glacier was conquered in 1956 by all women mountaineers, in 1958 by Stephenson and in 1970 by Major Baljit Singh who trekked it successfully. In 1957 Geological Survey of India undertook a study of this glacier and for this purpose G.N.Dutt and F.Ahmed were deputed.

The other prominent glacier of Chandra valley in Lahaul are – Chhota Shigri, Pacha, Kulti, Shipting, Ding Karmo, Tapn, Gyephang, Shili, Bolunag and Shamundri. The Gyephang glacier is named after the supreme Gyephang deity of Lahaul valley which had temple at Sarahan. The Gyephang peak most well known is shaped somewhat like Matterhorn in Switzerland is snow clad throughout the year. The local fanatics considered it the Manimahesh of Lahaul. Kulti glacier is near Koksar. The Milang glacier to the North of Kulti is located between Darcha and Khekrar. Taragiri glacier is also located near Milang glacier. The Milang glacier was first climbed by the National Union of Students Expedition in 1939.

Bhadal Glacier is located on the South-Western slopes of the Pir Panjal range in the Bara Banghal area of Kangra district of Himachal Pradesh. The river Bhadal is fed by this glacier, which is one of main tributaries of the river Ravi. The surface of this glacier is strewn with boulders and other glacier deposits. Heavy snowfall in winter causes a rapid expansion of this glacier while in summer this is visited by migratory graziers.

Chandra Glacier : It is located on the slopes of the main Himalaya in the Lahaul-Spiti district of Himachal Pradesh. This glacier is responsible for forming Chanderlal lake and has originally separated from Bara Shigri glacier. It feeds the river Chandra, which along with Bhaga forms the Chenab.

Bhaga Glacier : It is located on the slopes of the main Himalayan range in Lahaul area of Himachal Pradesh. The river Bhaga originates from this

glacier. High snow clad peaks surround this glacier on all sides. Bhaga glacier can be approached via Koksar and Tandi in Lahaul-Spiti district. It is 25 km long. The main glacier in Pattan valley are Shila, Kugti, Lainghar, Doksha and Nilkant. The important glacier of the Bhaga valley are Milang, Mukkila, Lady of keylong and Gangstang.

Chandra Nahan : Chandra Nahan glacier is located on the South-Eastern slopes of the main Himalaya in the area to the North-West of Rohru in Himachal Pradesh. The river Pabbar is fed by this glacier. Minor tributary glaciers join the trunk glacier. It has carved a depression and in it lies the Chandra Nahan lake. The glacier is surrounded by high rising peaks, having elevations about 6,000 meters.

The lady of Keylong : Glacier is situated at an altitude of about 6061 mts. which can be seen from Keylong and is very popular among visitors. It was named so by 'Lady Elashainghday' about a century ago during British Raj. It remains snow covered round the year. But in the middle, there is seen a dark bare patch that looks like the figure of a woman, walking with a load on her back. Geological Survey of India has also recorded it as the 'LADY OF KEYLONG'.

Gora Glacier : The glacier is tenanted on the South-facing slopes of the main Himalayan range of Himachal Pradesh. Gora glacier has receded in the recent past due to a negative mass balance.

Mukkila Glacier : The Mukkila glacier of Bhaga valley is situated at the height of about 6478 mts.

Sonapani : It is only about five and half km. from the confluence of Kulti Nala and has been surveyed twice. First in 1906 by Walker and Pascoe and second time in 1957 by Kurion and Munshi from the Geological Survey of India. Sonapani glacier is visible from the Rohtang Pass.

Dudhon and Parbati : These glaciers are located in district Kullu having length of 15 km each. They feed the river Parbati.

Perad Glacier : The Perad Glacier is a small, easily accessible near Putiruni, which in local dialect means broken rock, that has a nice cave too.

Miyar Glacier : is 12 km long in Lahaul area, feeding the river Miyar.

Beas Kund : This glacier is the feeder of the river Beas and is located on the South facing, slopes of the towering Pir Panjal near the world famous Rohtang pass.

Himalayan glaciers that feed the Chenab and Beas valleys are alive and kicking, and may "ring in an era of slight cooling". Reason: The longest glacier, *Mayar*, and the largest glacier, *Bara Shigri*, and the monsoon-fed *Parbati glacier* have been receiving "better snowfall" for the past years and have stabilised. Contrary to popular belief, snowfall in the Himalayas, in fact, has been on the rise and avalanches can be seen near the Chandra-Bhaga-Mayar rivers in June. The major glaciers in this part of the Himalayas have shown a positive trend and it bodes well for hydropower projects and farmers in the

region. The snowfall in 2010-11 was the heaviest since 1979 in the Mayar-Chandra valley. "It was not dry snow, but was heavy with moisture content that improves the formation of glaciers".

However, its impact on glaciers will be visible after 10 years as a glacier's "response time is more then 10 years". A team of Geomorphologist studied four major glaciers-Manthora, Karpat, Ulthampu and Tharong in the Mayar valley in May 2011, and found that the first two have stabilised and, in fact, Manthora has increased in size. "However, the last two have reduced, but Ulthampu is a hanging glacier and does not matter much".

The Mayar glacier is the longest and it has shrunk by just 120 m since 1975. "However, the snowfall has improved during the past years and is bound to have an impact on the ice cover. Similarly, the Bara Shigri glacier, which has the largest ice cover - 192 sq km - in the Himalayas, has witnessed no change so far. The 4-km-long Pin Parbati glacier in the Beas valley has been stable for years.

The scientists say that climate change has shown a cyclic change after 27 years, alternating between "slight global cooling and slight global warming". "The trend since 2008 is towards "slight cooling". But we need another 30 years to draw a conclusion on climate change".

On the other hand, the Snow and Avalanche Establishment (SASE) Observes that the snowfall in the Bhaga valley at Pastsio and the Beas valley at Dhundi has increased during the past years. There are many other small and medium sized glacier in the state. Some of them are - Tichu Glacier, Sara Umga Glacier, South Dakka Glacier, North Glacier, Chandi-Ka- Glacier, Sammuder Tapa Glacier, Taragiri Glacier, Rai Ghar Glacier, Bhadal Glacier, Tapni Lahuni Glacier, Sili Laluni Glacier, Shan Glacier, Tal Glacier, Shipting Glacier etc. etc.

PROMINENT VALLEYS

Valleys are the important feature of Himachal Pradesh. Physiographically they are the places where human civilization has flourished in this mountainous region. Some of the important valleys found in Himachal Pradesh are given below:

Satluj Valley

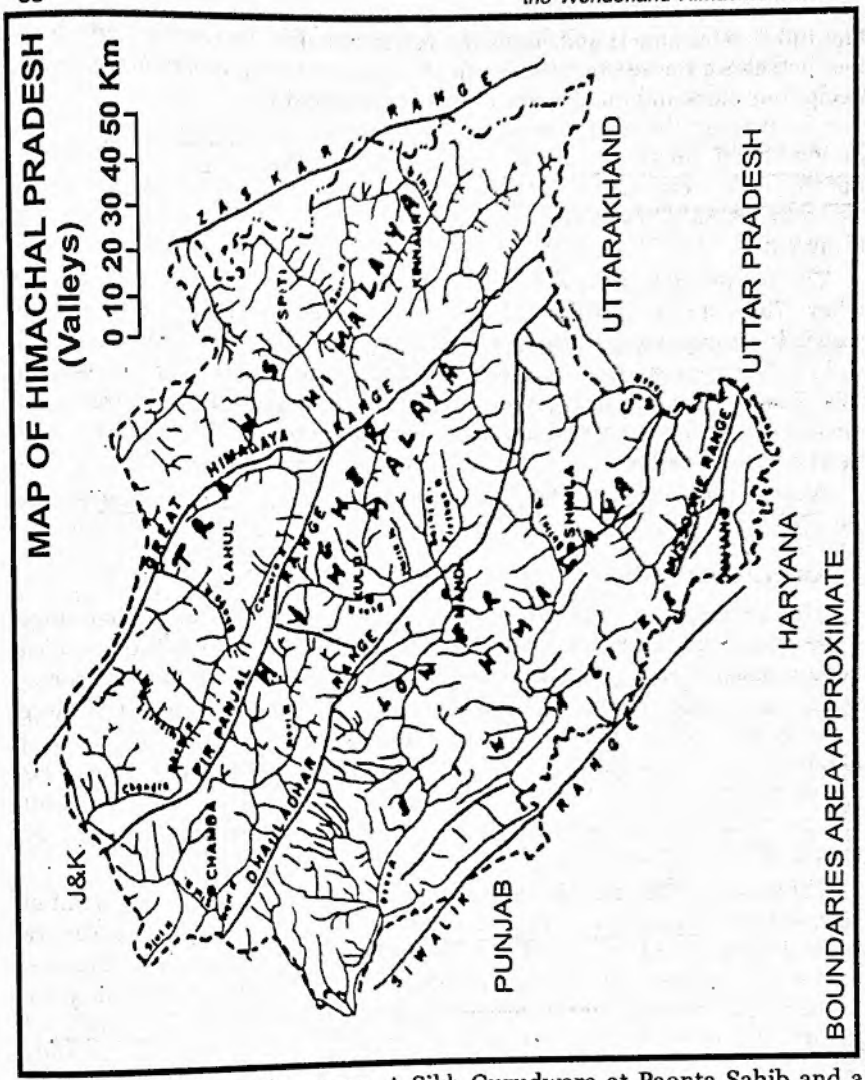
A long valley has been formed by the Satluj river from Shipki to Bilaspur. The river enters Indian territory near Shipki. This river has cut across the Dhauladhar, Pir Panjal, main Himalaya and Zanskar ranges. The town of Bilaspur, Rampur and Bhaba are located along the Satluj river in this valley. The major landslides in the geologically fragile terrain of the Sutlej basin have been included in the "red list" under the integrated catchment area treatment plan to pave the way for special technical interventions required for stabilization. The Pune-based Nayak Environment Research Institute which prepared the plan in 2011 for catchment of the river upstream Kol Dam

identified 181 major landslides in the catchment area spread over 20,000 sq km. A Red book was prepared in which technical interventions of the sliding strata was given in detail for various major landslides.

The main objective of adopting a focused approach to deal with landslides is to arrest the ever-increasing level of silt in the river which frequently forces power projects like the 1,500-MW Nathpa Jhakri to shutdown. The landslides hasten the process of soil erosion and contribute maximum silt. The emphasis of the catchment area treatment plans implemented by the Forest Department is one bioengineering treatment, mainly there are a number of permanent land slide points which will require techniques like soil nailing, rock bolting, and tieback walls for stabilization. Such works could be assigned to specialized construction agencies. Once the landslide are tackled, the level of silt in the river will be reduced considerably.

In the rest of the catchment, the degraded areas will be treated through bioengineering works and to provide a lasting solution to the problem of soil erosion measures like change in land use switch over to environment- friendly crop system, plantation of most suitable forest species and other initiatives will be undertaken. The plan will help promote sustainable livelihoods, improve water retention and facilitate "Payment for environment services" to raise stakes of the local community.

Kiarda-dun Valley Also Paonta Valley



This valley is situated in the South-Eastern corner of the state. It is also known as *'Paonta valley'* after the town which lies in the valley. This is located in the Markanda and Dharti ranges. Jamuna river separates it from Dehra Dun. For broader understanding the valley, Kiarda-dun may be divided into three *district* tracts:

(a) The tract which consists the Neli Khera and the adjoining hills of the lower Dharti on the North of the Bata, East of Jamun Khala, West of Tila Gharib Nath, and South of Rajban which indeed may be regarded as included in it as it is a plain area.

(b) The Par-dun tract, which is surrounded by hills lies near Majra village. This waste forest, though the terrain shows that it was once cultivated and was a fertile tract.

(c) The Dun proper which lies between the Yamuna and the lower parts of Dharti range and Poka hills and is partially watered by the Giri and the Bata streams.

A greater part of Kiarda-dun valley which is plain falls within the *Cis-Giri* division and a very small part in a corner spreading across the Giri falls into the trans-Giri division. Kiarda-dun valley is very fertile as it is watered by Giri and Bata rivers. Till a century back this valley was a dense forest, inhabited by wild beasts such as tigers and elephants. It was only during the period of Raja Shamsher Parkash that people settled in it. Wheat, maize, ginger, millet and

sugarcane are the major crops. A Sikh Gurudwara at Paonta Sahib and a Ram Mandir are the two famous religious places in this valley. Now Paonta has fastly emerged as an industrial town. The people of this valley are well off. Adjoining to the Kiarda valley is the Dun and Sproon valleys of Solan district, mostly flat and fertile and cultivation of cereals and off season vegetables is extensively practised.

Kullu Valley

This is a broad open valley formed by the Beas river between Mandi and Larji. This valley is famous for the beauty and its majestic hills covered with

pine and Deodar forests and sprawling apple orchards. The course of the Beas river presents a succession of magnificent scenery, including cataracts, gorges, precipitous cliffs and mountains, clad with forests of Deodar, towering above trees of Pine on the lower rocky ridges. Kullu valley is sandwiched between the Pir Panjal, lower Himalayan and great Himalayan ranges. It is believed that this valley was once a vast lake. This valley is 75 km. in length and about two to four kms in width and ends near famous Rohtang pass, 25 km. North of Manali.

The towns of Mandi, Kullu, Bhuntar, Manali and Shamshi lie in this valley. The climate of Kullu valley is healthy and delightful and has little snowfall in comparison to the Lahaul and high Shimla ranges. The people of Kullu valley are very laborious and skilful than those of Shimla and Kangra hills. They have a naturally joyous temperament, hilarity, fun and free play, particularly during fairs and festivals. They are very fond of ornaments and multi-coloured clothes.

Naggar Castle, Nehru Kund, Roerich Art Gallery, Hidimba Temple and hot water springs are the main attraction of this valley.

Kangra Valley

This is an extensive dun-type valley located between the Dhauladhar range in the North and the Shivalik hills in the South. It ranges from West to East rising gradually from Shahpur to Baijnath and Palampur. Many visitors and writers have made references and the people of this valley are beautiful. Here in the Kangra valley, coupled with the beauty of landscape is the beauty of humanity. In this valley, we do find the Kangra paintings known for their ageless beauty, in which human love has been represented in line and colour with great delicacy and which continue to throb with passion even after the passing of two centuries.

The Kangra valley has also been found important from historical point of view, with the discovery of Paleolithic hand tools in the area. The Kangra valley is dotted with places of tourist interest, old forts, ancient temples, picturesque villages and side valleys. The important towns of this valley are Baijnath, Palampur, Kangra, Nurpur and Dharamshala. Shoba Singh Art Gallery (Andretta) Shiva temple (Baijnath), Tibetan government in exile (Mcleodganj), Chamunda Mandir, Bajreshwari temple and Tapovan (Sandeepani Himalaya) are the famous attractions of Kangra valley.

The Bara Banghal Valley

It is adjoining to the Kangra valley and lies between the Dhauladhar and Pir Panjal ranges. It is partly in Kangra and partly in Chamba district. The river Ravi rises from the slopes of this valley.

Balh Valley

This is also known as *Sundernagar valley* and is broad open dun type valley

between an off shoot of the Shimla Ridge in the North and Shivalik hills in the South. The valley stretches from Gutker in the North to Sundernagar in the South, Baggi in the East and Gumma in the West. Suketi Khad (stream) divides this valley roughly into two parts. The soil found in this valley is loam in texture and light grey to brown in colour. The main crops are wheat, maize, sugarcane, ginger and paddy. To promote mixed farming, dairying, animal husbandry, vegetable cultivation and horticulture, manuring and soil conservation Indo-German agriculture project was started in this valley in November 1962.

Chamba Valley

This is also known as *Ravi Valley.* Although this valley is quite unexposed, but now the means of communication have made inroads into the interior parts of this valley. The scenery is of a picturesque and varied character presenting many delightful sights. In the lower parts, the trees grown are wild olive, pomegranate and fig trees mingling with the *acacia, shisam, pipal* and some other trees. Small village and hamlets extending over the landscape presents a beautiful picture to the visitor.

On the mountain slopes the fields are usually small in size and are arranged in terraces, the lower border of each being formed by a rough wall to make the ground more level for ploughing. In most parts of the Chamba valley, under 2500 mts. only two crops are reaped per year. There are rice fields in the lower level, with maize, wheat, barley and other cereals high up. Northern mountain slopes are covered with forests, while Southern are often quite bare. The Chamba valley is famous for medicinal herbs and varieties of flowers. This valley is fairly populated. The people here are very handsome, hardworking and honest. The important towns located in this valley are Chamba, Bharmaur, Dalhousie and Khajjiar. Adjoining to the Chamba valley is the Pangi valley, extending along the Chenab river as it cuts through the Pir Panjal and off shoots of the main Himalayan ranges. This is one of the remotest and most beautiful tracts of the Western Himalayas.

Lahaul and Spiti Valleys

The Lahaul valley lies to the North of the Pir Panjal and main Himalayan ranges. It is made up of the rivers Chandra and Bhaga till Tandi and Chenab from Tandi to Udaipur, downstream of which lies the famous Pangi valley. The Spiti valley has been formed by the Spiti river. It is situated between the main Himalayan and Zanskar ranges. Kaza a small town is located in the Spiti valley. The Lahaul and Spiti valleys surrounded by mountains with elevations ranging from 3000 to 6500 metres above the mean sea level. This valley is famous for high snowfall and severe winter.

The people of Lahaul valley are cheerful and of kind disposition. They are superstitious, credulous, industrious and honest. The land in Lahaul valley is quite fertile and extensively used for off season vegetables and seed potatoes. In comparison to Spiti, Lahaul valley has better irrigation facilities.

The crops grown here are barley and buck wheat. The area is quite famous for Bhuddist monasteries. Pin valley is the tributary of Spiti valley in the trans-Himalayan zone.

Baspa Valley AKA Sangla

This is also known as *'Sangla valley'* formed by Baspa river in Kinnaur. The altitude of this valley varies from 1830 metres at the confluence of the Baspa river with the Satluj and 3475 metres at the highest village of 'Chitkul'. The Baspa river flows in this valley for approximately ninety five kms. The valley is richly cultivated. This valley is famous for green pastures, flowers and fruit trees. At the head of the valley lies the lofty Chung Shakhago pass. Due to heavy snowfall, the upper ranges of this valley remain snow covered and so hardly any vegetation is grown. From Chitkul to Satluj lies the inhabited part of the valley.

The prominent vegetation found in the Baspa valley is deodars, blues pines, firs and silver birch in the upper zones. Baspa valley gets fair amount of monsoon rains and so has very good grassy land and alpine pastures. It opens into Satluj valley down stream of Tshong-Tong owing to the excellent climate and fertile landscape, the people in this valley are quite rich and prosperous.

Pabbar Valley AKA Rohru Valley

This is also known as *Rohru valley*, drained by the river Pabbar which originates from Chansal peak South of Kinnaur and its tributaries. The valley extends from Hatkoti upto Tikri at the base of Chansal. There are a great number of small *khads* (streams) passing though this valley and making the zig-zag shape of the valleys at various points. The important stream passing through this valley are Andhra Khad, Pejore and Shhikri streams. The altitude of the peaks in this valley varies from 1500 metres to 5000 metres.

The common trees grown in this valley are blue pine at lower elevations, spruce and silver-fir at the higher. During summer Pabbar valley is quite hot. The people of Pabbar valley are simple, hardworking and contended, fond of fairs and festivals, singing and dancing. Main crops grown in the valley are maize, barley, wheat, pulses, rice, potatoes and millets. In the recent past government has introduced plans for horticulture expansions. Pabbar river is famous for trout fish, which was introduced in this river by Mr. Glover a British Chief Conservators of forests in 1938-39.

Himachal Pradesh has been endowned with a number of peaks and passes some of them are mentioned below :-

PEAKS, ALTITUDE AND LOCATION

S. No.	Peak	Altitude to Mean Mean Sea Level (Mets.)	Location
1.	Cholang	3,270	Dhauladhar Range (Distt. Kangra)
2.	Shach	3,540	Kullu

3.	Choordhar	3,647	Shimla
4.	Narsing Tibba	3,730	Chamba
5.	Hargaran	3,850	Lahaul – Spiti
6.	Gauri Devi Ka Tibba	4,030	Chamba
7.	Patalsu	4,470	Kullu
8.	Ghoralantinu	4,760	Kullu-Kangra
9.	Pin Parbati	4,800	Kullu
10.	Inder Kila	4,940	Kullu
11.	Shringla	4,999	Lahaul – Spiti
12.	Murangla	5,060	Lahaul – Spiti
13.	Lachalungla	5,060	Lahaul – Spiti
14.	Thamsar	5,080	Chamba
15.	Srikhanda	5,182	Kullu
16.	Shitidhar	5,290	Kullu
17.	Umasila	5,294	-
18.	Raldang	5,499	Kinnaur
19.	Parangla	5,579	-
20.	Gushu	5,607	Kinnaur
21.	Saltu Da Par	5,650	Lahaul – Spiti
22.	Kailash	5,660	Bharmaur (Distt. Chamba)
23.	Pishu	5,672	Kinnaur
24.	Bara Kanda	5,860	Bharmaur (Distt. Chamba)
25.	Hanuman Tibba	5,860	Kullu – Kangra
26.	Maiwa Kandinoo	5,944	Kullu
27.	Pir Panjal	5,972	Chamba
28.	Solang	5,975	Kullu
29.	Deo Tibba	6,001	Kullu
30.	Gepang Goh	6,050	Lahaul – Spiti
31.	Mukar Beh	6,070	Lahaul – Spiti
32.	Shikar Beh	6,200	Lahaul – Spiti
33.	Indrasan	6,220	Kullu – Manali
34.	Shigrila	6,230	Lahaul – Spiti
35.	Phawarang	6,349	Kinnaur
36.	Gyephang	6,400	Lahaul – Spiti
37.	Dibibokri Pyramid	6,400	Kullu
38.	Jorkaden	6,473	Kinnaur
39.	Kinner Kailash	6,500	Kinnaur
40.	Mulkila	6,520	Lahaul – Spiti
41.	Manerang	6,597	Spiti
42.	Shipki	6,608	Kinnaur
43.	Leo-Pargial (Riwo Phargyul)	6,791	Kinnaur
44.	Shilla	7,025	Kinnaur (the highest)

MOUNTAIN PASSES IN HIMACHAL

Himachal Pradesh has a good number of mountain passes, which are center of attraction for various reasons. These are narrow passages and are of paramount importance when mountains are barriers against travel and trade. The utility of a Pass depends upon its elevation above lower land at either end, length of time in which it is free of snow, thus open to travel and the type of area it joins. Himachal pradesh is a wonderful land where one can pursue any adventure such as mountaineering, trekking, rock-climbing, skiing, hand-gliding, heli-skiing, water sports, (including white water sports), golfing, hunting, fishing and crossing of high Passes over one range to another etc. Some of the important Passes are discussed below:-

Baralacha Pass: The Baralacha Pass (Baralacha La) situated on Manali-Leh road, about 75 km from Keylong towards Leh, is at an elevation of 4890 mts. and nearly 8 km long. It is known the "pass with cross roads on summit" and the roads from Zanskar, Ladakh, Spiti and Lahaul meet on the top of it.

Bhaba Pass: It is located in Kinnaur district. To go across Bhaba Pass from Manali one is to go to Kaza over Rohtang Pass and Kunzum La first then to Attargo (3250 mts) by bus further to Mikkim (3658 mts), then and easy walk of 18 Km across Spiti river, then to Muth Jhulah (3811 mts) a 12 Km distance crossing Parahio river at Sagnam, further a normal climbing of 14 Km to Baldur (3963 mts) and finally walk to Pulti (3354 mts) a 14 Km distance having easy gradient to Bhaba Pass.

Cheni Pass: In Chamba region it is situated at an elevation afterwards becomes easy. Descent through Mindhal is easy. This village is known for a famous temple of Kali where a fair is held in August.

Darati Pass: It is situated at an elevation of 4720 meters in the Chamba region. From Chamba one has to move to Alyas (4300 mts) via Bhango (2450 mts). Here starts the steep climb of the Pass. To descend over grassy and moraine slopes to Tandi (2650 mts) one has to come down further to Udaipur which is known for Triloknath temple.

Hamta Pass: It is situated at an elevation of about 4270 mts. One has to go beyond Manali through Indrasan, Deo Tibba and Inder Killa climbing to its top. During descending one meets the historic cave 'Arjun Gufa' at Bhanara (2300 mts).

Kunjum Pass: Kunjum Pass provides the main approach to Spiti from Lahaul. The Spiti area is separated by the great kunjum Range from where the Spiti river originates. This Pass is situated at 60 km from Gramphoo towards Kaza on the Gramphoo-Kaza-Sumdo road. Shigri peak in all its grandeur is seen right in front from kunjum pass. Local people have built a Goddess Durga temple on the Pass now. For crossing, it closes earlier and open later than Rohtang. Located at 4520 mts elevation.

Manirang Pass: To cross Manirang Pass the Manessar Pass (3949 mts.)

located above the confluence of Ropa and Chuktayanjan rivulets, has to be crossed while walking 12 km distance from Ropa (2925 mts) to Panktil (4000 mts.), beyond Kalpa. One has to go further through Sumdo Thach (ground) till one reaches the difficult climbing to the very base of manirang Pass from Pomachan (3933 mts) to Ramkali (4421 mts), a distance of 10 km. From Ramkali traverse through the steep gully, a difficult going to reach the very zenith of this Pass.

Rohtang Pass: Rohtang Pass forms the main gateway between Lahaul Valley and the rest of the Southern area of Kullu-Manali. Rohtang is a famous Pass across the Pir Panjal range on the National Highway to Leh being the world's second highest road point. Though not very high, only 3978 mts. it is one of the most hazardous Passes anywhere. Due to the heavy toll of lives, it is notorious for its sudden blizzards and snow for 7-8 months in a year.

The first Englishman to reach the Rohtang Pass was Moorecraft who called it Ritanka Jot. In 1820 he took the mule path to reach it and quite accurately and scientifically had recorded the altitude (13300 ft.) of this mountain Pass. He was followed by a second expedition undertaken by Dr. J.G. Gerard, Lord Elgin the then Governor General crossed it twice on the same day in 1863. The former calculated its height 13000 ft., while the Survey of India recently has established its height 3955 mts (13050 ft.) above the msl.

Sach Pass: The most convenient route for trekking into the famous Pangi Valley in Chamba district is through the Sach Pass (4395 mts.) Killar having a helipad facility is 137 km from Chamba and could be reached through this Pass.

Shinghor Pass: This Pass too is approached from Alyas, lying beyond Dharamshala at an elevation of about 4310 mts. The route is very steep and waterless.

Tempola Pass: It is situated in the district of Lahaul and Spiti. One has to walk along Yoche nullaha to the base of this pass. To descend one has to pass by Khoksar village (3140 mts). From khoksar either return to keylong or to Spiti via kunzum Pass or may go to Manali via Rohtang Pass.

Waru Pass: It is between Dharamshala and Chamba at an elevation of abort 3870 mts It is very windy, rough and stiff Pass however many beautiful peaks are visible from its top.

PASSES, AND JOTS IN HIMACHAL

S. No.	Name of the Pass	Altitude to Mean Mean Sea Level (Mts.)	Location
1.	Basodan	2,400	Chamba – Bhattiyat
2.	Dulchi	2,788	Mandi – Kullu
3.	Bhubu	2,895	Joginder Nagar – Kullu
4.	Padri	3,050	Chamba – Jammu

5.	Jalori	3,135	Inner & Outer Seraj in Kullu
6.	Chauri	3,150	Chamba – Kangra
7.	Rashol Jot	3,230	Kullu
8.	Pajanund Galu	3,280	Mandi - Kullu
9.	Khauli Galu	3,440	Kullu
10.	Jalsu Ka Jot	3,450	Kangra – Chamba
11.	Chandrakhani Galu	3,600	Kullu
12.	Tainti Galu	3,600	Kullu
13.	Baleni Jot	3,730	Kangra – Chamba
14.	Gharhu Jot	3,730	Kullu
15.	Sari Galu	3,740	Kullu – Kangra
16.	Waru Pass	3,870	Kangra – Chamba
17.	Shibaling Pass	3,980	Kinnaur
18.	Rohtang Pass	3,978	Kullu – Lahaul
19.	Bherianga Pass	4,140	Kullu – Kangra
20.	Hamtah Jot Pass	4,270	Pir Panjal – Kullu – Spiti
21.	Singoor Pass	4,310	Kangra – Bharmaur
22.	Indrahar Pass	4,320	Kangra – Bharmaur
23.	Tori Jot	4,360	Kangra – Chamba
24.	Sach Pass	4,395	Chamba – Pangi
25.	Ranjcha Pass	4,400	Lahaul – Spiti
26.	Shipkila	4,500	Lahaul – Spiti
27.	Kunzam La	4,520	Lahaul – Spiti
28.	Shi Jot	4,530	Kullu
29.	Rangchi Galu	4,540	Kullu
30.	Tamsar Pass	4,572	Kangra – Bara Banghal
31.	Shinka Pass	4,575	Kinnaur – Gharwal
32.	BuruaPass (Buran Ghati)	4,578	Kinnaur – Garhwal
33.	Rupin Ghati	4,625	Kinnaur – Garhwal
34.	Talang Pass	4,640	Kangra – Chamba
35.	Kathikukri	4,640	Kullu – Kangra
36.	Gairu Jot	4,660	Kangra
37.	Drati Pass	4,720	Chamba – Pangi
38.	Kalicho	4,729	Lahaul – Bharmaur
39.	Khidala Galu	4,750	Chamba
40.	Nikhora Pass	4,750	Kangra – Bharmaur
41.	Animal Pass	4,880	Kullu
42.	Manali Pass	4,880	Manali – Kangra
43.	Bara Lachala	4,890	Pangi-Range, Lahaul,Bharmaur
44.	Temp La	4,930	Lahaul – Spiti (
45.	Chabia Pass	4,934	Pangi-Range, Lahaul,Bharmaur

46.	Mulari Jot	4,960	Lahaul
47.	Kugti Pass	4,961	Lahaul – Bharmaur
48.	Shipting	4,980	Bharmaur – Lahaul
49.	Taintu Ka Jot	5,000	Kullu – Kangra
50.	Sara Umga Pass	5,010	Kullu – Spiti
51.	Shakarof	5,022	Lahaul – Spiti
52.	Asha Gali	5,030	Kangra – Lahaul – Spiti
53.	Nalgaon Pass	5,030	Kinnaur – Gharwal
54.	Duggi Jot	5,060	Bharmaur – Lahaul
55.	Kamilaga Pass	5,151	Kinnaur – Gharwal
56.	Makori Jot	5,190	Kangra
57.	Lamkhaga Pass	5,284	Kinnaur – Gharwal

ENVIRONMENTAL CHALLENGES IN THE HIMACHAL HIMALAYA

"The Himalayas form the earth's highest mountain region, containing 9 of the 10 highest peaks in the world." A mountain that most people would recognize is Mount Everest. Like most mountains the Himalayas took millions of years to develop. Still today, the Himalayas are growing and changing. "The Himalayas forms three parallel zones: the Great Himalayas, the Middle Himalayas, and the Sub-Himalayas." One of the major problems with the Himalayas is deforestation. Most of the trees in the Sub-Himalayas have been cut for land and lumber. Even in the Middle Himalayas most of the trees are cut down. At least the trees that are accessible are cut down. Because of the deforestation, other problems have arisen. "Where increased demand for firewood, extensive tree trimming in order to feed livestock, and construction of roads in the border regions have increased the destruction rate of forests". Things like soil erosion and landslides are common now. One of the causes of landslides is the construction of roads. Constructing the roads involves blowing up chunks of the mountain to make a way for the road. This causes unbalanced rock structures. Thus, causing landslides.

Mountains are the spectacular creation of crustal deformation of the planet earth. The Himalayan range furnishes an outstanding example of this mode of formation. The Himalayas constitute the highest mountain system of the world. They are typically tectonic in origin, having been uplifted during tertiary times from the bed of the great Mediterranean sea, the 'TETHYS'. The Himalayas took probably several million years to attain their present height.

These uplift movements have not yet ceased for this region and it is still unstable and susceptible to earthquakes. During the slow process of mountain formation by the folding and upheaval of the rock beds, the old rivers keep very much to their own channels and hence are seen to cut across these mighty ranges. From the foothills the Himalayas rise rapidly Northwards to cover 8,000 mets. Within a short distance, the heights are covered with perpetual snow which feed the valley glacier, but the greater part of the Himalayas lies below the snow line and is dissected by fluvial erosion.

The Himalayas have exercised a great influence on the environmental conditions of India and the people living in it. It prevents the monsoon winds to cross over to Tibet and compels them to precipitate most of the moisture on the Indian side in the form of rain and snow. It has also acted as a formidable barrier range and prevented free migration of the fauna and flora of human culture across it. The complex geological history of these mighty mountains have contributed to the aggravating of the Earth's dynamic process of weathering, erosion, mass wastage, seismicity, vulcanicity etc. which affect and greatly modify the physiographic environment.

Crop husbandry, constituting 71 per cent of the working population, is mainly a subsistence level due to small size of land holdings, lack of irrigation facilities and low level of adoption of improved seeds and modern farming technology. However in irrigated valleys, cultivation of fruits, vegetables and other high value cash crops as in Himachal Pradesh and elsewhere has heralded a new era of economic development. Although Himachal Pradesh is today cited as a model of Hill development, the disproportionate development in different regions calls for a thorough introspection as to whether this growth is sustainable from the ecological view point or not.

The accelerated erosion of mountain slopes in the Himalayas is chiefly due to loss of protective vegetational cover which is estimated to be around 3.5 per cent against the desirable 60 per cent. Causes of deforestation include overgrazing of the natural grasslands, indiscriminate cultivation on steep slopes combined with poor agricultural practices and badly designed roads, felling of trees for domestic fuel and timber suppliers and livestock fodder etc. The incidence of grazing is 3 to 5 times of the supporting capacity. The construction of roads in the Himalayan terrain generates a vast quantity of debris. The movement of debris along the slopes of the mountains causes a great loss to the vegetation cover, blocks the vehicular traffic and dams the streams.

The rapid degradation of the Himalayan ecosystem is also posing a threat to the granary of the country located in the Indo-Gangetic basin. It is causing sporadic floods in one place and drought in other places. Conservation of the Himalayas means security of the *'food bowl'* of the country for meeting the demand of 1.25 billion population in the next millennium. Ecological problems in the mountains stem from the population increase whether it is the imbalancing of vegetational dynamics due to domestic or commercial needs or geo-disturbances accelerated by development activities. It is worthwhile to

examine the factors responsible for the ecological disaster brewing in the Himalayas so that strategies can be framed to check them.

It is for the people living in the plains to advocate the cause of mountain conservation or else their current property and their future will only turn into chapters of history. The buffer zones marked for domestic needs between cultivated lands and natural forests, have been badly degraded and people are now frequently trespassing the reserve forests. State forest departments should not be complacent with the percentage of forest area under their control. We need two-thirds of green cover in mountains as per our National Forest Policy 1988. Extraction of fuel wood from forests is an age old practice. In Himachal Pradesh alone, people are annually using 0.7 million cubic metres. At this pace we are not only miles away from the sustainable forest management but heading for a biological erosion.

The present demand for timber is 27 million cubic metres. TD rights are provided in Himachal Pradesh for meeting the domestic needs for construction of houses at nominal rates. These were fixed by the British at the end of 19th century, when the chargeable permit value was reasonably lower than the traded rate. Unfortunately, we are continuing with the same practice and plundering our wealth. This alone is not only a source of timber smuggling but also dissuading the people from participating in social forestry programme.

On an average, floods annually affect an area of about 8.0 million hectares of the Gangetic plain including some 3.5 million hectares of cropped land. The destruction of natural vegetable cover causes the loss to the top soil. It is virtually irreplaceable and takes nature 1,000 years to build 2.5 cm. top soil. Annual loss of top soil erosion in India is estimated to be around 20,000 crore.

Till now soil erosion was the major concern of the conservationists but with the advocation of bio-diversity, any erosion in genetic wealth has to be taken seriously. The manner in which the new trade of herbal collection has swelled in recent years is another serious issue. Drug plants are collected in an unscientific manner and forest floors are being swept by unscrupulous agencies. On the one hand, it is depletion of revenue and, on the other, this mismanaged trade is endangering proper growth of herbs. Many species have already reached the red list and many more are on the way. The setting up of a corporation of medicinal and aromatic plants seems to be the only plausible solution.

Uncontrolled grazing, forest fires and encroachments followed by illicit felling are some of the other factors responsible for the depletion of forest cover. According to a conservative estimate, in five to seven years time about 0.20 million hectare of the forest area in the Himalaya gets degraded and becomes ineffective to discharge its ameliorative function. A shift in land use pattern from traditional crops to horticulture crops is fast changing the scenario of hill agriculture. For example, in Himachal Himalayas where the total area under fruit farming was merely 792 hectare during 1950-51. It increased to 202 thousand hectare during 1997-98 and is continuously rising. Similarly,

production of fruits increased from 1200 MT during 1950-51 to 351 thousand metric tons in 1996-97. It is alleged that illicit encroachments of forests have also contributed towards this expansion. In the subsequent years there is continuous increase in the area as well as in production. The area under fruits in 2000-01 was 217 thousand hectares and production 428.03MT, in 2010-11 211 thousand hectares and production 372.82 MT and in 2013 the area went upto 1064 thousand hectare and production 828.31MT.

Without human intervention, soil erosion is usually very slow. But when unsuited land use patterns and farming techniques are adopted, the state of land deteriorates. In case correct crops, farming, forestry and other improved land use techniques are adopted, the erosion stops and the yield increases manifold. The rapid expansion of apple cultivation in Himachal Pradesh and tea cultivation in the East are cited as factors which have led to massive deforestation. This conflict between Ecology and Economy is undoubtedly a biotic manifestation in the otherwise fragile mountain ecosystem. The solution of these eco system issues is a prerequisite for attaining ecological stability.

An increase in population would naturally lead to rapid urbanization. According to an estimate, the construction of roads alone lead to displacing of 2650 million cubic metres of debris by landslides and rock falls in the Himalayan region. About 4,000 kms of roads constructed annually are accelerating hill slope instability, deforestation, soil erosion and pollution of water and air. Mining is another factor which is eroding hill slopes.

The environmental problems related to mining are pollution of water and air, land degradation, noise vibrations and extinction of rare and strategic mineral resources. The mining operations have eroded the hill sides, destroyed leaf mould-a valuable organic fertilizer-polluted seasonal streams and caused agricultural production to plummet by 50 per cent. A study undertaken around the Rajban cement factory Paonta showed that the agro production was reduced by 60 per cent. At one time, the lime stone dust particles from the quarries and factories in the Paonta valley was measured at 360 micrograms per cubic meter as against the safe level of 100.

Construction of dams over hill river to meet the ever increasing demand of hydel power generation and irrigation of the plains, has been another holocaust. These projects are causing the problems of flash floods, destruction of valleys and the problems of rehabilitation of the oustees. The problem of human rehabilitation are more social, psychological and cultural than technical.

The tragic incident of August 11, 1997 when Andhra river in district Shimla swept away the Chirgaon village and approximately 500 people were killed was the result of human interferences in the natural processes. In Himachal Pradesh natural hazards cast their shadow over human life. Each year valuable top soil erodes and gets washed away causing massive landslides, loss of human life and destruction of property.

It is difficult to prevent natural hazards but their intensity can be reduced by taking appropriate steps. In order to improve and regenerate degraded hill environment, scientific approach involving hazard zone mapping and banning engineering development activities in such zones, drainage control and dewatering measures, protection of slopes through vegetation, modification of slopes where necessary application of engineering technology and improved agronomic practices should be carried on priority basis.

The ecological balance can be maintained and improved by reforestation, checking the gully erosion, soil erosion, checking the legal and illegal felling, by checking the frequency of floods, proper land use methods and by building the bunds to control the surface runoff which in turn is responsible for soil erosion, deforestation and landslides. Both centre and state government should enact laws to stop cutting of the trees and installation of new cement factories, industries, stone crushers and thermal power plants in the hilly areas. These greatly accelerate the pollutants and disturb the ecological balance of the Himalayas. In the past years pollution has grown tremendously in Himachal Pradesh.

TACKLING CLIMATE CHANGE IN THE HIMALAYAS: The experts on Himalayan ecology advocate a complete switch over to green technology, stopping of carbon emission on snow and undertaking a comprehensive study of representative glaciers to mitigate climate change in the Himalayas. A long-term mitigation strategy, involving local communities, is needed to combat climate change in the Himalayas.

Since the winter temperature is rising in the Himalayas, there is an urgent need for reducing the "concentration of carbon soot particles over snow", emitted by the ever-increasing traffic in the Himalayas. "We need to extend the snow cover and the duration of the winters as long as possible," There is "an urgent need to take up a holistic study of representative glaciers in the region to understand their response to climate change. The Himalayas are a source of fresh surface water. "We need to pool in efforts to understand all aspects of cryosphere and its impact on humanity at large. This can be done by setting up an integrated institute of cryosphere in the country."

TREKKING ROUTES IN HIMACHAL PRADESH

Himachal is a part of the Lower Himalayas and this part makes India the ultimate trekking destination. Other than Himachal Pradesh the Himalayan regions provide several trekking routes such as Srinagar and Pahalgam being good starting points for the Kashmir Valley and beyond the Leh being the ideal starting point in Ladakh. The hill regions of Garhwal and Kumaun provide good treks to the source of the Ganga, Joshimath and the famous *Valley of Flowers* in Uttar Pradesh. Sikkim is excellent for trekking with Yuksam being the base camp for more treks in the Western part of the State. In West Bengal, the main trekking routes are from Darjeeling onwards to distant places like Phalut so on and so forth. And in Himachal Pradesh several treks commences

from Shimla, Dharmashala, and Dalhousie to numerous destinations.

Important Trekking Routes are:

—Shimla-Churdhar (via Rohru, Ranahat, Hripurdhar)
—Shimla to Churdhar via Fagu, Neripul, Pul Bahal)
—Tattapani (via Tara Devi and Chail)
—Shimla to Shali Peak
—Shimla to Rohru (via Hatkoti)
—Shimla to Mandi (via Tattapani)
—Shimla to Manali (via Jalori Pass)
—Shimla to Manali (via Bashleo Pass)
—Kulu-Manali
—Manali to Around Three Sacred Lakes
—Manali to Kalath (via Thanpari Tibba)
—Trek Four Passes and Two Valleys From Manali
—Manali to Leh (via Shingola and Padam)
—Manali to Bhrigu Lake
—Hanuman Tibba Circuit
—Manali to Bhanara
—Manali to Manikaran
—Manali to Shimla (Trekking Spiti Valley)
—Manali to Udaipur (via Gompa Trail)
—Chamba-Dalhousie
—Dalhousie to Manali (Over Sach Pass)
—Dalhousie to Jammu (Through Bhandal Valley)
—Chamba to Mani Mahesh (Chhari Yatra)
—Nahan to Naura (Through Wild Life Sanctuary)
—Nahan to Shimla (via Churdhar, Neripul)
—Nahan to Mussoorie (Uttrakhand)
—Nahan to Shimla (via Chail)
—Kalpa to Karchham (Kinner Kailash Parikarama, 'Circuit')

On 22 June 1999 the state government under its notification PER (AP-C) (19)-1/1 1999 declared following areas as difficult and inaccessible. Kinnaur, Lahaul-Spiti, Bharmaur, Pangi, Tissa and Mehla Block of Chmaba, Shillai and Sangrah of Sirmaur, Chotta Banghal and Bara Banghal of Kangra, Thunag, Karsog, Balichowki, Nehri, Drang and Seraj of Mandi district, Rohru, Chirgaon, Dodra Kwar and Rampur of Shimla district and Banjar, Anni and Nirmand of Kullu district were treated as inaccessible in the government record from placement and transfer point of view.

But after 7 years in 2008, the state government re-notified the inaccessible

areas under its notification no. PER (AP-B) B (7) 1/2008 section 8 as tribal and inaccessible. These are - Lahaul-Spiti, Kinnaur, Pangi, Bharmaur, Dodra Kwar, Pandra Bees pargana of Rampur, Kathwar Korga circle of Kamrau tehsil of Sirmaur, Bhalag, Bhalona, Sangle Patwar circle of Renuka tehsil, Kota pab area of Shillai, Khanyag Bagra patwar circle of Karsog, Garagushani, Mathyani, Ghanyar, Thachi, Baghi, Somgarh, Khelnai patwar circle of Balichowki sub- tehsil, Jharwar, Kutgarh, Grama, Devgarh, Trafila, Ropa, Rathag, Silah, Badawani, Hastpur, Dhamrohar and Bhatehar patwar circle of Paddar tehsil, Cheyuni, Kalipar, Mangarh, Thach Bagra, North and South Bagru of Thunag tehsil and Batwara patwar circle of Sundernagar tehsil of Mandi district included in this category.

The areas excluded were Chhota Banghal of Kangra and Chaupal and Chirgaon of Shimla because these became easily accessible with the extension of roads network and bus service.

D.P Sood Commission: On 13th June 2011, Himachal government setup D.P Sood Commission to look in to the benami land deals in the state from 2003 to March 2011. The commission was setup under the commission enquiry act 1952 sec. (3) sub. sec. (1). The one member commission looked into the violation of HP Land and Tenancy Reforms Act 1972, sec. 118. Later on the jurisdiction of Act was also extended to HP Apartment and Property Regulation Act 2005, and its clause pertaining to the violation of the legality of the essentiality certificate. The commission submitted its interim report on 28th March 2012 to the state chief secretary Ms. Rajwant Snadhu, 147 page report contained revolutionary recommendations. The final report was submitted on 29th May 2012, in which it was suggested to cancel 49 land deal and on 34 punitive action should be taken.

SMOKE FREE HIMACHAL

Himachal earned the distinction of becoming the first state in the country declared smoke free in 2013 with a compliance of 84.52 per cent, based on a scientific technical survey conducted as per international standards. However, the fact that 60 per cent of the youth in Himachal in the age group 20 to 34 years smoke, as compared to the national figure of 39.3 per cent, is a matter of grave concern. The fact that on overwhelming number of 21 per cent youth in the state, get hooked to smoking when they are still in school or college is even more worrisome.

As per a smoke-free compliance arrived at jointly by the Department of Community Medicine of the Indira Gandhi Medical College (IGMC) and the Population Research Centre at Himachal Pradesh University, Bilaspur followed by Shimla have a compliance percentage of 92.76 and 92.17 per cent. "To be declared a smoke free state, the compliance has to be above 80 per cent and the average for the entire state was worked out at 85.42 per cent." The compliance was found to be the highest in educational places at 93.14 per cent, followed by 91.10 in health institutions and 97.83 in offices with the

average for the state being 85.42 per cent.

As far as districts are concerned, Kangra with a low of 80.17 per cent has the worst compliance followed by Chamba being a close second at 80.30 per cent, Hamirpur at 80.86 per cent, Sirmaur at 81.06 per cent, and Una at 82.95 per cent. The urban areas of the state have a slightly better compliance with regard to nonsmoking at 51 per cent as compared to 49 per cent in rural areas. As per the compliance of different indicators under Section 4 of the cigarette and other Tobacco Products (Prohibition and Advertisement and Regulation of Trade and Commerce, Production, Supply and Distribution) Act, 2003, the non-availability of smoking aids like matchboxes and lighters stand at 94 per cent and status of display of no smoking signages at 71 per cent.

District rank as per compliance survey

District	Percentage	District	Percentage
Bilaspur	92.76	Una	82.95
Shimla	92.17	Sirmaur	81.06
Mandi	91.23	Hamirpur	80.8
Kullu	88.46	Chamba	80.30
Lahaul-Spiti	87.43	Kangra	80.17
Solan	85.19	HP (Average)	85.42

Biting Reality: Notwithstanding that HP is declared a smoke-free state, the harsh reality is that there is 83 per cent smoking within the confines of home. It affects 79 per cent passive or indirect smokers, who are women and children, often infants. As such, the thrust now should be on discouraging passive smoking so that it does not affect the health of nonsmokers.

2

THE PEOPLE

"Your time is limited, so don't waste it living someone else's life. Don't be trapped by dogma - which is living with the results of other people's thinking. Don't let the noise of others' opinions drown out your own inner voice. And most important, have the courage to follow your heart and intuition."

-Steve Jobs

The creation of Himachal Pradesh as a separate administrative entity was not a mere formality supported by the demand of economic development, but more of an ethical and cultural identity of the people occupying the region. From cultural point of view Himachal Pradesh can broadly be classified into two distinctive zones. One is inhabited by those tribes or semi-nomadic, semi-agricultural and semi-pastoral people living in the great Himalayas in the district of Lahaul-Spiti, Kinnaur, upper Shimla, upper Kullu, interior of Sirmaur, Pangi division of Chamba and remote parts of Kangra district. The people of these areas are admixture of the Indo-Aryan or Mongolian races. (These are Kinner of Kinnauras, Lahulas, Gaddis, Jads (Lambas,Khampas and Bhots or Bhods) Pangwalas and Swanglas).

The other is outer Himalayas or Shivaliks or mid-Himalayas. The people of this zone have much in common with those in the plains of Punjab except that hill-dwellers are fairer in complexion. The common habits and moorings of the people of Shivalik hills with that of the people of plains can be attributed to the fact, that there had and have been inter-migration of the people during medieval and later periods to these areas. Lower parts of Himachal Pradesh are easily accessible. The Brahmins and the Rajputs who migrated from the plains during the reign of Aurangzeb, when a great number of Hindus were persecuted. The Sikhs came and settled in Himachal Pradesh, when they were harassed and driven by the Mughals. The relations between Sikhs and Mughals have never been cordial in the history. In 1947, when India was partitioned Himachal Pradesh also got its share of displaced persons numbering 4,660 only. The society here is a unique blend of tribal and non-tribal; semi-civilized and civilized; pastoral and semi-industrial, backward and modernized and an identity of hills and plains culture. In the following pages an attempt has been made to present a lively picture of the history and cultural composition of various social groups found in Himachal Pradesh. In the past decades a number of changes have taken place in the social, cultural and economic life of the people, which cannot be compared with traditional social structure.

THE ANCIENT TRIBES

Quartzite implements discovered by 'Olaf Prufer' in Shivalik foothills near Nalagarh at the banks of the 'Sirsa river' in 1951 and 'B.B.Lal' in Kangra district at Dehra and Guler on the banks of the Beas and Ban Ganga in 1955 are fair reasons to believe, that life existed in this part of the world during the earliest periods of human evolution.

The following were the earliest inhabitants of the Himalayan region:

DASAS

The Shivalik hills are believed to have been inhabited during the pre-vedic period by the Dasas. *'Dasas'*, along with *'Panies'*, *'Asuras'* and *'Vratyas'* are supposed to be authors of the Indus valley civillisation. Chamuri, Dhuni, Pipru and Sushna were their powerful chiefs, who put up strong resistance to Aryan advancement. Later on, due to the constant efforts of Rishi Vishwamitra and Rishi Vashishta, Dasas were accepted into the Aryan fold.

KINNERS

The word Kinner originated from the two Sanskrit words; Kim+Nara, means what kind of strange persons are they? This question was raised on account of the fact that Kinner male do not have beard and moustache as abundantly grown in the case of male of other races. The look of Kinnaura is that of a *'half man* and *half horse'*, means the people with *'Ashwamukha'*. Rig veda has no reference to Kinners, but these became known soon after. There are references about them in 'the Mahabharata' and in the immortal epics of Kalidas. According to the legend, Pradumna, son of Lord Krishna was the earliest king of the Kinner.

It is believed that the 131st descendant of this dynasty is Raja Vir Bhadra Singh, six time Chief Minister of Himachal Pradesh. The Kinners are believed to have inhabited the inner Himalayan terrain right from the Ganges upto the Chandra Bhaga till Gupta period. Presently, the Kinner population is confined to Kinnaur district only. In his book 'Kumarasambhava', Kalidas has mentioned about them. The historical evidence of their Munda origin is available in the similarity of their grammar with that of the Mandari spoken by the aborigines of the 'Chhota Nagpur' area. This speaks of the amalgamation of the Munda aboriginal with the Tibetans in very early times.

KIRATAS

'Kaivartas' and 'Chandalas' have been mentioned as the low caste people in the history of Kashmir. The Bhairvi classic, 'Kiratarjuniya' is woven around the historical battle that took place between the Kirata King and Arjuna. Later on, Kiratas came to be known as 'Mavanas' or 'Mavies' in the region across the Jamuna and the Satluj. The Kirata's powerful king was Shambar, who fought against the Aryan King 'Divodas'. The Kiratas were a well 'organized' society with a law and order system. They lived in towns and built forts.

The Aryans who came to Himachal sometime around 3000-2500 B.C., crossed the 'Ravi' and reached the 'Beas valley', where they came face to face with the Kiratas, whose king ruled in the Lower Shivaliks from his stronghold near Baijnath. Rishi Bharadwaj was the advisor of the Aryan King Divodas. The war between Divodas and Shambar lasted for forty years and has been discussed in the Rig Veda by Rishi Vashishta and Vamdeva. In the end Kiratas had to suffer and face the defeat with the destruction of their Ninetynine forts. Shambar and his ally, Verchi were killed at a place named 'Udubraj'. The Aryans also defeated some minor kings, named Kirang, Parnya and Chumri. Divodas was succeeded by his son 'Sudas' and Bharadwaj by another illustrious leader Vashisht.

NAGAS

They inhabited the Himalayan region at one time in the history. They were worshippers of Nagas (Serpents). Their famous kings were Vasuki, Kali and Takshaka. Today also, in Himachal Pradesh there are many Naga temples. In the Hindu mythology there are eight nagas viz. Shesh, Takshaka, Vasuki, Vajara, Danshan, Kar Kotik, Kemmali, Sankhu and Kali. Of these Shesh Naga is the most significant and is believed to support the earth on his head. Naga cult, which is offspring of Shiva-Shakti cult, is still in vogue and there are not a few deities even now finding favour with Himalayan people. In Puranas, there are elaborate references to the Nagas and Nagas deities inhabiting the hills and the water springs.

There are a number of shrines dedicated to the Nagas. Some famous ones are : 'Nagchala' near Mandi town, 'Rewalsar lake' and 'Kamru Naga'. The most popular festival connected with the worship of the Naga devta is 'Naga Panchami' falling in the month of July. 'Mansa Devi' is said to be the goddess of Snakes. There is in Kashmir a ruined historical temple, 'Aba van', which in the past had been visited by a great number of snake-worshippers. In Kangra district there are some places such as 'Shibu-Ka-Than' (Nurpur), 'Saloh' (Palampur) and 'Tripal' (Kangra) where Naga-shrines known for curing the people of snake bite are situated. In Chamba district at Bharmaur, there is a temple of 'Kelang Naga' near the village Kugti.

KHASAS

The term Khasa is found in Puranic and epic Literature. Khasira of Nepal, Kasya of Kumaon and Garhwal, Khasa of Bhagvata Purana and Vayu Purana are people of the same ethnic stock. The ancient 'Khasdesh' was their homeland, situated between the North Western provinces and Nepal. In *'Brihat Samhita'* of Varahmihira, the Khasas were mentioned with Kulutas (inhabitants of Kullu region), Tanganas and Kashniras.

Today Khasas are distributed in Shimla, Sirmaur, parts of Kullu and Kinnaur districts of Himachal Pradesh and Tehri, Kumaon and Garhwal area of Uttrakhand. In Kinnaur, they call themselves *Khashiya* and associate themselves with the Rajputs. Manu also recognized Khasas with Kshatriyas.

They were considered very strong, who got supremacy over 'Dasa' and 'Kinners'. Their settlement extended from Eastern Turkistan over Kashmir to Nepal and Assam. They gave the name to Khagsar and Kashmir.

The famous philologist, Greiersson suggests that earlier known Indo-Aryans of the Himalayan tract were Khasas. Khasas at present represent both the Brahmin and Kshatriya part of the population. It is believed that Khasas were taken into the Aryan fold completely sometime in the past. Some historians have even called them Aryans, but according to the evidence in Indo-Aryan literature, they were denigraded to the position of *'Shudras'* as they did not observe the Aryan rites. The exact time of their entering Kashmir is also not known. There is no unanimity among historians regarding the relations between Khasas and Aryans.

Some say that they were defeated by the Aryans, while others opine that there was no war between the two, since they might have been their first cousins. But the fact is that the Aryans soon took to the plains leaving the remnants of the Kiratas, Kinners, Nagas, Yakshas and newly arrived Khasas to contend for power. Ultimately Khasas emerged victorious and the Kiratas and Kinners were pushed to the inaccessible areas, while Nagas and Yakshas were lost to history. In Jaunsar Bawar area of Uttrakhand (fomerly part of Uttar Pradesh) as well as Chopal and Shillai areas of Himachal Pradesh. Khas Brahmin are those Brahmins who entered matrimonial alliances with the Khasas.

DRESS: Khasa community does not have any particular dress, there are variations according to local conditions. In Kinnaur, the men and women use *gachi* (waist string) and *chhuba* (long coat) as well as *dohru* (warm sari), but in other areas thipuh (head scarf) is used by the women and men wear *achkan* with folds inside.

FOOD HABITS: Their staple food is wheat, rice, maize, barley and they use pulses such as rajmah, mah, moong, arhar, channa and all types of green vegetables. Khasas are non-vegetarian, consuming meat, fish, pork, eggs etc. They have a tendency towards local and non-local alcoholic drinks. Milk in not much in use, because of difficult terrain, there is scarcity of buffaloes and other milching animals. Special dishes are poltu, siddu etc. which are quite popular. Meat of goat, sheep and wild birds and animals is specially prepared and liked.

MARRIAGE SYSTEM: The Khasas have three types of marriage system i.e. *biyah, praino* and *gadar.* In biyah system, the marital relations are settled by the parents. Praino is a type of love marriage originated from the ancient term of *'pranay'* or love. In gadar types of marriage, the bride goes to the house of the bridegroom and the wedding ceremony is observed there. The marriage is dissolvable by mutual consent at any time. In some cases, the practice of marriage by force is also found. There is no tekwa or viyag system among the Khasas of Himachal Pradesh, but it was found among the Khasas

of Jaunsar Bawar, Tehri and Garhwal. According to it, the dead or an ailing incapacitated husband could be replaced by some other man to act as a hired husband to procreate a male child in the family.

RELIGION: The Khasas have the village god system. Almost every remarkable hill is considered the abode of some spirits. The village gods are the heads and protector of habitat. The *'gur'* (oracles) represent the spirits and village gods are made to dance in planquins made of wood. Sacrifices of goats and rams are made to village gods and other spirits. The worshippers of Pawasi Mahasu didn't use even milk in earlier days but now there is no such restrictions. The Mahasu cult is very prominent among the people of the community and other gods like Hatkoti Devi, Nag deities, Chureshwar, Dom, Chikhreshwar, Koteshwar etc. are also worshipped.

The script of the community in the past was *'Tankri'*, but they use Devnagari script now. The Khasa had a system of three fold worship – 'Ishta Devta' (the deity of the individual) the 'Griha Devta' (the deity of the household) and the 'Gram Devta' (the deity of the village). The same is prevalent in Himachal today.

COMMUNITY SYSTEM: The Khasas have Khoond (warrior groups). The groups act as distinct class. Mainly two types of Khoond of the community form the basis of subgroups. These are *'Shatha'* (sixty i.e.Kaurva group) and *'Pasha'* (five, i.e. Pandava group). Shatha and Pasha are further divided into subgroups of *Chhabishi* (i.e. 6x20), *Charbishi* (i.e.4x20), *Barabishi* (i.e. 12x20), *Pandrabishi* (i.e. 15x20) and so on. These subgroups show that availability of warrior young men for battle was the main criterion for those subgroups.

In the past, these subgroups used to supply warriors to 'the Ranas' or heads of the region on demand, so the 'Khoonds' were required to supply a particular number of soldier, which could be counted upto twenty only. The Khasa community has various gotras but the most common among these is Kashyap gotra. Thodo (martial bow and arrow game) is their common interest and they arrange this sport in open courtyards or grounds from time to time. The participants in thodo wear typical type of dress with rough and high heeled shoes and 'suthan' made of very coarse and rough cloth.

The Khasa is, by and large, a pastoral and peasant community. Among the 'Khoonds', head hunting had also been a practice in cases of mutual animosity. The ancestral property is divided among all the sons of the family but the eldest, and in some cases, the youngest son gets the additional share of a field and ancestral house. This is called *'jethong'* for the eldest brother and *'Kanishong'* for the youngest brother. The rituals related to birth, marriage and death are very important and observed with great intensity.

The Khasas also had the institutions such as head of the family, the head of clan and the head of the Panchayats. The Khasas of lower hills were closer to the Aryans than to the upper regions. That is why Khasas of lower hills have the institution of Purohit, while in upper regions non-Brahmnical order

is much in vogue. The Aryan conquerors, who left the hills to occupy plains maintained their contacts with Khasas through various rishies and sages, who visited Himalayas in the quest of peace and meditation. Being influential gurus of the powerful Aryan kings, their word was respected. Same is true today about *Pujari* and *Sadhus*. The famous Aryan Rishies, who were accorded the status of local gods were – Vashishta, Vyasa, Jamdagni, Parshuram etc.

The Khasas were democratic in nature. They organized themselves into families and villages and elected *'Mavi'* or *'Mavana'* meaning a strong person among themselves. The stronger 'Mavana' subdued the weaker one and used to annex his territory. Thus in this process the whole region was split into small units called the Mavanas and later on these areas developed into tribal republics known 'JANAPADA', in the Sanskrit literature.With the passage of time Khasa also came under the influence of new life pattern. Education, political and economic emancipation, all helped in the greater transformation.

The culture of the Khasas has been deeply influenced by their contacts with the *'Dums'*, whose cultural life resembles that of the many tribes of pre-Dravidian origin. The cultural life and religious beliefs of the Khasas do not resemble the Hindus of the plains, though they claim themselves Hindus. It may be because of their more proximity with aboriginal life of the hills. As against the Hindus of the plains, the Khasa remarry widows and have made divorce legal. Besides worshipping Hindu gods like Vishnu and Shiva, they do worship their own deities, demons and spirits, stones and weapons.

The religion of Khasas is a mixture of Hindu and tribal beliefs. Agriculture and horticulture is the chief occupation of the Khasas. But now-they are also coming under the influence of modern system and exposure, which has provided a new thrust to their outlook and life style. The Khasas are generally tall and handsome and have fair complexion, misty eyes, curly hairs and regular well cut features.

PISHACHAS

Pishachas, consumer of raw flesh, inhabited the North frontier and the adjoining Himalayan tract. The tribe known as *'Rakshas'* in Vedic times were also akin to the Pishachas.

YAKSHAS

In Mahabharta, there is a reference to the encounter between Yudhisthira and his brothers with a Yaksha. They were also known as the tree gods, endowned with mysterious super human powers. However, to ascribe a particular region to such a type of tribe is difficult. Every part of the Himalayan tract, has been providing shelter to almost every kind of tribe. Khasas were the only tribe to gain supremacy over the region extending from Kashmir upto Kumaon hills. In modern Himachal, Gujjars, Gaddis, Kinnaurs or Kinners, Lambas, Khampats and Bhots, Jads, Lahaulas, Pangwalas and Swanglas are the famous tribes. Tribes occupy forty percent of the total geographical area

of the state, while they constitute only 4.6 percent of the total population of the state at present.

MODERN TRIBES

The tribals in Himachal Pradesh are mostly engaged in semi agricultural activities; such as rearing of cows, sheep, goats, buffaloes etc., and ploughing small fields, which are their sources of sustenance. Agriculture, supplemented by animal husbandry and trade, is the main occupation of these tribes.

SWANGLA

The Swangla is a *scheduled tribe* exclusively living in the Pattan valley tract along the Chandra Bhaga in Lahaul-Spiti district. Like some other tribes, Swangla is a generic term, which includes both Brahmin and Rajputs. Different versions have been given about the origin of the Swanglas. According to the legend, when Taimur invaded this part of the country he drove the Buddhist out and occupied the territory and the people came to be known as Swangla from *'Swanl'*, the earlier name of the area. Another version says that they were mostly immigrants from Chamba, displaying Mediterranean features. This conjecture can be a possible justification in the light of Chamba being adjacent district to Lahaul-Spiti. According to yet another theory, these people have originally migrated from Sangla valley in Kinnaur, which was subjected to Tibetan subjugation. Swanglas are presently living wholly in this tract of the Lahaul-Spiti. Swanglas occupy the remote and inaccessible tract along the banks of Chandra Bhaga.

LANGUAGE: There are two types of languages spoken by the Swanglas. The first is *'Manchhad'* which is a mixture of Tibetan and Hindi and is spoken by the Brahmins, Rajputs and Swanglas. The other is *'Chinali'*, which is spoken by the Sipi and the Lohar. *'Bhoti'* is also prevalent, but is only spoken by the Bodh inhabitants of the valley. Another dialect known as *'Tinan'* or *'Tinent'* is spoken in Sissu area. Linguistic researches show that in the earliest times, the area was inhabited by an aboriginal tribe, in language and perhaps also in other habits they resemble the Munda speaking tribes of Bengal, Bihar and Central India. Hindi is a *Lingua Franca* with the outsiders. With the spread of education English and Hindi are commonly used by the literates.

FOOD HABITS: The staple food of the Swangla consists of wheat, beans, chapatti, rongi and pulses of masur. Millet baked bread *chilra* is also commonly taken. Rice is also taken, but not frequently. Salted buttered tea is very popular and is often taken at regular intervals. The Swanglas are basically non-vegetarian, and they take meat of sheep, goat, chicken and wild animals. The women cook and eat meat. The intake of non-vegetarian food increases in winters, nearly everyday. Milk in its pure form is taken by infants only.

The elders take milk in tea and its by product like curd. Fruits are not easily available, because of arctic climate. Edible roots and tubers which are locally available in the jungles or grown in the Kitchen garden are also

consumed. Vegetables are locally grown by almost all families in their kitchen gardens. Potato is widely grown in the area. 'Chhang' (local drink) is consumed almost daily by men. The Swangla women also take alcoholic drinks occasionally. This is usually distilled at home but sometimes purchased from the market. The excess of distillation takes place during social functions, such as at the birth of a new baby, marriage, fairs and festivals. The men also smoke *bidi* and hubble bubble (*Hukka and Jhajri*).

SOCIAL CUSTOMS: The Swangla tribe has got their own peculiar social hierarchical order and cultural traits, distinctive from the other inhabitants of the country. As the term Swangla is a generic term and is used for Brahmin, Rajput and Rana, living in the Pattan valley, the Brahmin are said to have come from Chamba to serve as official and family priests at religious functions in the temples and in the houses of Rana and Thakur. For that reason, the Swangla Brahmins are also called Pandit.

The other communities like Rathi, Hali, Lohar, Sipi and Chanal, though living in the valley, are not yet included in the term Swangla. The Brahmin occupy the top position on the hierarchical order, followed by Thakur and Rana. Besides these groups there are two other groups, the *'Garu'* and *'Mundro'* which are believed to have come up as a result of Rajput marrying a Bodh girl socially belonging to the lower strata.

MARRIAGE SYSTEM: Swanglas are endogamous, with everyone marrying within their own respective classes. Marriage outside one's own social order is not recognized, and all such persons are declared outcaste. Hypergamy is not recognized. Children of hypergamous union are known as *Mundro* and *Garu*, those marrying outside the social class lose their original Swangla status.

Marriage with father's sister's daughter, mother's sister's daughter and mother's brother's daughter is strictly prohibited. Marriage is also prohibited within three degrees of relationship both on the father's and mother's side. In the past, girl was generally used to be older than the boy. The boys were usually married at the age of 15, where as girls were between 20-25 years. But with the passage of time the trend has reversed with the boys getting married late than the girls.

Various forms of marriage system is prevalent among the Swanglas, out of which marriage by exchange existed in families of poor economic resources. The other forms of marriage are *'rusa-te-byah'* (elopement) exists where the boy and girl fall in love with each other. *'Kua-byah'* (Marriage by capture) is practised when the boy develops a liking for a married or unmarried girl, but the husband or parents are unwilling. In this case boy picks up the girl forcibly with the help of his friends and brings her to his house. *'Mazmi byah'* (ad hoc marriage) is a unique formal marriage, in which if the boy is unable to bear the marriage expenditure, sends his sister to bring the girl, and starts living with the girl.

The actual marriage is performed when the boy is ready to bear the

marriage expenditure. Swanglas used to practise *fraternal polyandry*; with the modification that one wife can't be shared by more than three brothers. If the number of brothers is more than three, then subsequent brothers (the fourth) within the family will get another wife for themselves. But now with the spread of education polyandry is giving way to monogamy. A husband, within the life time of his wife can marry again, in the event of the barreness of the first wife. Both junior levirate and sororate are practised.

Chheti (giving money to the bride) was prevalent in the community. But now neither demanded nor given or paid. Among Swanglas, the rules of residence are usually patrilocal, but recently there is tendency of setting up neo-local residence. In case where there is no male issue in the family, a son-in-law is invited to look after the property.

The marriage rituals are performed at the bride's place. In a polyandrous marriage, all brothers dress up in ceremonial attire and proceed in a marriage procession to the bride's house. Except for the elder brother, all other brothers return from mid way. On the eldest brother's reaching the girl's house, he is invited for a feast and a drink. Then bride's elder brother applies a mark on the forehead *(Tilak)* of the bride and the groom. With this the marriage ceremony comes to an end. On return of the bride to the groom's place, the bride becomes a common wife of all the brothers. The nuptial ceremony is performed in the groom's house.

BIRTH CUSTOMS: A son is preferred to a daughter especially if it happens to be the birth of the first child. Expectant mother is given enough rest. She is not allowed to go in open during 'solar' and 'lunar' eclipse, postnatal restrictions and observance of pollution is reported for 20 days. Six months after birth *'Chhati'* is observed. This ceremony is also known as *'annaprashana'* ceremony, wherein child is fed with cereal food for the first time. On completion of one year, the *Kratricti'* or *'Kramog'* (tonsure) ceremony is observed. This is usually performed by either the mother's brother or mother's father. *Nanched* (puberty rites) are observed for females among the Swanglas. On the onset of the menses, she is secluded for five days and is not allowed to come near the hearth. On the last day, the house is cleaned, and the girl is given a bath, and then she is allowed to enter the kitchen and performs religious rites.

DIVORCE: *Tsud-thvagchi* (divorce), a distorted form of the Bhoti word *Thagchod-pa* is recognized. Society approves divorce. The couple holds a thin thread that symbolizes the breaking of matrimonial bonds. The common grounds for divorce are strained relations, change of religion by either of the spouse and mutual consent. If the cause of divorce is infidelity of the wife, then her paramour will have to pay *'izzat'* money to her earlier husband. The bride's price in the event of divorce is known as izzat. In the case of divorce both husband and wife have equal rights. In the event of divorce the primary responsibility of bringing up the children rests with the father but in case the children being very young, the child may stay with mother.

There is no prohibition of the marriage of divorcee, widow and widower.

The woman in Swangla society has to play a very important and varied variety of roles. She carries out all economic activities in the agricultural fields, even ploughs, weeds and harvest the crop, and collects fodder not only for immediate use of the cattle, but also stacks it for use in winters. Women participate in all socio-religious activities. As polyandry was the prevalent form of marriage, polyandrous families existed in order to prevent the fragmentation of land. But now with the spread of education and diversified field of education, nuclear families are the increasing phenomenon.

DEATH CUSTOMS: The dead are cremated with the death rites performed by the eldest male member in the house. The bones and ashes are immersed in the river. The period of pollution is observed for 13 days, and then purification rites are observed. A widow puts on the deceased husband's clothes for eight days, which are considered the main days of mourning.

The property is inherited in the male line with all the sons inheriting the father's property equally. This is known as the law of *Pagwand.* In the event of a person dying issueless, his wife inherits the property for the life time. In case of there being no widow or male issue, the property is inherited by the daughters. The eldest son succeeds his father as head of the family, and after the death of the father, he takes all important decisions in the family affairs. If the daughter does not want to come back to her parents, the property passes on to the next collateral. A stepson succeeds his natural father and has no right to succeed his step father.

COMMUNITY COUNCIL: For maintaining social order and norms in the community, the Swanglas have a traditional council of their own headed by a *'Sehna'* (chief) and assisted by four other members by a voice vote. The office of the head is not hereditary. It is only judicious and socially capable person is appointed to the post. The case that comes before it are related to divorce, petty quarrels and thefts or breach of community rules. The decision of the council is final and binding on all. Sometimes fines in cash or kind are levied on the offender, and money is utilized towards defraying the expenditure on the panchayat. Although after independence, statutory panchayats have come up for the upliftment of village, yet for Swanglas their own traditional council are much more important.

RELIGION: Most of the Swanglas are professing 'HINDUISM'. While some of them have converted to 'BUDDHISM'. Those professing Hinduism propitiate their dead ancestors, as their family deities, and their blessings are invoked on all family festivals for the well being of the member. A separate room called 'man' is kept for worshipping ancestors. They also have a village god, who is represented by 'Nag Deota' or 'Devta' (Serpent deity). They also worship gods and goddesses of the wider Hindu pantheon. The two famous temples of the Swanglas are-Trilokinath and Markula (Marikula) at Udaipur. The Brahmin Swanglas also believe in ghosts and evil 'spirits'. Their main sacred centre is Manimahesh in Bharmaur tehsil of Chamba district. Those professing the Buddhist faith belong to the 'Gelugpa sect'. According to Buddhist doctrine

none can make a sacrifice of animals to please any Buddhist deity. Buddhists observe both Hindu and Buddhist rituals, with the only difference of 'Lama' officiating in place of the Pandit.

FAIRS AND FESTIVALS: The major fair is the Trilokinath fair celebrated by Swanglas in the month of August-September. The other festivals are almost same as are observed in other parts of the country like Shivratri, Holi, Ramnavami, Navratras, Diwali, Janmashtami and Dushehra which have a socio-religious significance. The Swanglas wear the same dress as others do in the valley.

OCCUPATION: The chief economic resources of the community have been and are land and agriculture. Land is jointly held by the family. Presently the Swanglas instead of devoting more land to the production of cereal crop, devotes it to the production of cash crops like potato and hops. But as the produce does not suffice for the year, they have to supplement their income by doing other jobs like working as labourers or in business (tea shops and Dhabas), small trading and other available jobs.

The cereal crop produce is barely sufficient for self-consumption. The cash crops potato and hops which are widely grown, do find a market outside the valley through local cooperative society on partly deferred payments. They purchase items of daily use from the local shops or for the entire year from Mandi, through cooperative member on cash payment, which they receive from the sale proceeds of cash crops. Now with the efforts of the state and central government, Swanglas have entered government jobs. Children above 10 years of age do help their parents in various household activities.

The working season in the valley is quite limited. All the members living in the village have access to common water resources, roads schools, crematorium, temple, houses and Panchayat Ghar. People are now also holding jobs in occupations like business, administration and other white collar professions.

SOCIAL TABOOS: A Swangla Brahmin would accept only *'Pucca'* food and water from a Rajput or Rana. The Lohar and Chanal can accept both *Kuchcha* and *Pucca* food from the hands of a Brahmin and Rajput. The Brahmin and the Rajput would traditionally not eat Kuchcha and Pucca food cooked in the house of Garu or Mundro, except the food cooked by a Brahmin. The concept of Sidha food does not exist. While smoking the 'hukka', the Brahmin and the Rajput can share the same pipe. But while sharing with a Chanal or Sipi, the nipple is removed. The system of ceremonial Kin exists, known as *mitr-bhai.* He is expected to behave in the same manner as a real kin.

In the past three decades, Swanglas have made good progress in various fields of life. The impact of tribal development plans is visible. Now they voluntarily adopt various programmes launched by the government, related to social, economic and political emancipations. Radio, Television and Telephones have made inroads into the life of common people. The expansion

of roads and postal network has added new dimensions to the life of the Swanglas of Pattan valley.

GADDIS

Gaddis of Himachal are world famous. The word 'Gaddi' is a generic name and under it are included Brahmins, Rajputs, Khatris, Thakurs and Rathis. Gaddis are inhabited in Bharmaur tehsil of Chamba district and parts of Kangra district. Some Gaddis are also found in Nurpur tehsil. Different opinions have been given by thinkers about their origin and defining the word *'gaddi'*.

The word *'gaddi'* seems to have been derived from the word *"Gaddar"* a Hindi term for shepherd or an ewe; - or from *'Gahar'*, is an alpine pasture grazed in autumn. Another group of people claims that Gaddis came to hilly areas when they fell victim to the atrocities of Mohammedans in their despotic rule. They settled in Bharmaur which is described as Kailash. Kailash is considered "Gaddi" connoting seat or throne of their God, lord Shiva. Those who entered the *"Gaddi"* of lord Shiva were known as Gaddis. Lord Shiva is the principal God of *Gaddis*. But the most agreed theory is that the word *'Gaddi'* has been derived from *"Gadar"* a Sanskrit word for sheep from which the word 'Gaddi' evolved. The word *"Gadhern"* or *"Gadaren"* thus means sheep country. The entire area is called *gadhern* where Gaddis are inhabited and Bharmaur is called the abode of Gaddis and the entire sub-tehsil is named as *gadhern* or *gadiyar* region.

There is no unanimity of the views from where Gaddis migrated to this hill state. But the Gaddis of Kangra district have come from Chamba district. The Gaddi Brahmins have a tradition that, their ancestors came from Delhi to Bharmaur in the reign of Raja Ajia Varman 780-800 A.D. Many of Rajputs are probably the descendants of invaders from the plains. The Gaddi Rajputs have the same tradition as the Gaddi Brahmins has to their original home. While the Gaddi Khatris say, that their ancestors fled from Lahore to escape persecution, probably at the time of the early Mohammaden invasions.

Their main reason for coming to this area might have been the inaccessibility of the area where fear of invaders was much less. The couplet 'UJRYA LAHORE TE VASYA BHARMAURE' (the ransack of the city of Lahore resulted in influx to Bharmaur) indicates the place of migration. Whatsoever be the place of migration, the date of their migration to this area is not definite. Different opinions have been expressed by people ranging from 8th century to 16th century or it may be spread over centuries.

Gaddis are very simple and honest. They are God fearing and crimes like murder, abduction and theft are very uncommon among them. They are hard working and keep concern with their job only. They stick to their word and are considered as good friends. Gaddi women are famous for their modesty and chastity. They are bright and cheerful, and some of them really look like queens of the mountains. Their beauty is the theme of many a hill-songs and even Raja Sansar Chand (1775-1823), the well known patron of Kangra

paintings, fell in love with 'Nokhu', a pretty Gaddi girl and made her his queen. The local people call Gaddis as *'Mitra'* means 'friends'. Chastity among Gaddi girls is higher than any other tribe of the Himalayas.

The girls are bashful and the boys are very strong in character. Gaddis are generally short statured as compared to the people of the plains, a fact which has been very wisely described in the 'Imperial Gazette of India' as to the influence of vigorous climate in killing of all but vigorous individuals. Verily they are healthy and stout, even ready to face the challenge of nature.

They are a very hard working class. Unmindful of happenings around the globe, they lead a simple life. Gaddis are very hospitable. A guest is taken in high spirits. Being religious minded they do not hurt the feelings of other people. They are very firm in their faiths and beliefs. Educated among them have not forgotten the values of life. They feel proud of being called *Gaddis.* Litigation is much less in this community. They fear courts and settle the disputes amicably. Due respect is paid to old persons in the society and family.

Gaddis are very conservative, stubborn and decry modulation. They are unsolicitors and it is difficult to convince Gaddis for a better change. They are magnanimous and commiserative by nature, yet would like to keep their culture un-eroded. Matrimonial relations with other people of the habitat are conspicuous by their absence. With few needs and simple habits the Gaddi leads an unsophisticated, quite happy and contended life, far away from the madding crowd. The dialect used by Gaddis is *'Western Pahari'* language of the Sanskrit Aryan families of Northern group. They can understand Hindi well but it is not spoken by them normally. They use their own dialect among themselves, whereas while talking to other people they talk in Pahari dialect. There is no script for this dialect.

Joint family system is not so common in the Gaddis. Now with the passage of time the institution of joint family is breaking up slowly and gradually. Being a patriarchal tribe, man is the sole decision making body except in exceptional cases where other members are also consulted. He is the owner of property. Women play the same role which is played by Indian women. Children support their parents in day-to-day pursuits besides their studies, if they are school going. In the case of death of father if the family is joint one, the eldest son becomes head of the family. The property is distributed among all children equally. Sheep and goat rearing was adopted by the *Gaddis* as their primary occupation. The cultivation was also adopted by many of the Gaddis along with sheep rearing. But some Gaddis started migrating from Bharmaur areas to lower hill and valley areas, due to following reasons: (a) shortage of fodder; (b) uncongenial climate in Bharmaur; (c) inadequate land for cultivation; and (d) less employment opportunities in Bhramaur area.

The religion of Gaddis is 'HINDUISM'. They are *'Shaiv'* and Lord Shiva is the principal God of the Gaddis. They believe that "Shiva's" blessings can remove mental illness, ailments, misfortunes, natural calamities and cast away ancestral punishments. Mentioning of 'Shiva' is found in all their religions

ceremonies. They consider themselves the children of Lord Shiva. Besides Shiva, they believe in so many other Gods which include *"Autar", "Kelang", "Gugga"* etc. 'Autar' is the spirit of an issueless person. 'Kelang' who is considered the king of all snakes is propitiated in the form of sickle called 'Darat' It is kept by a Gaddi while shepherding. 'Gugga' is associated with cattle and is considered the protector of cattle. It is worshipped by offering goat, whose blood is offered to it. Benevolent and Malevolent spirits are regarded as spiritual and invisible beings and each is propitiated before every undertaking or in times of difficulty. Gaddis believe in *'Rakshash', 'Yaksha', 'Jogini', 'Birs', 'Sidhs', 'Khetarpal' and 'Baital' or 'Bataloo'* (spirit of rivers, springs)

Gaddis also believe in *'Sati'* worshipping. There are a number of *Dheradies* (small temple) of Satis in the Kangra and Chamba district. Male and females keep on worshipping them throughout the year with seriousness and great regard. Gaddis believe in superstitions, whether good or bad. They cling to them in their traditional ways. The birth of a male child is considered necessary. They consider girls as property of some other house who go to their husband's house after marriage. Death is considered the will of Lord Shiva. Gaddis like other Hindus cremate the dead. The leper (one who is suffering from leprosy) is never cremated but is buried. They feel that cremation of Leper spreads disease of Leprosy and brings calamity.

Marriages are celebrated in Gaddi community with great enthusiasm like other communities in Himachal Pradesh. Marriage is must among Gaddis. The pre marriage and marriage ceremonies among Gaddis are very interesting, fascinating, elaborate and peculiar. Five types of marriages are prevalent among Gaddis. These are:

Elopement or Jhind Phunk or Brar Phuk marriage: If girl elopes with her lover without the consent of the parents they solemnize the marriage by burning a bush wood and going round the fire eight times, hand in hand or with bride's sheet tied to the boys girdle. No ritual is performed. Although it is a recognized one, yet not considered a healthy practice.

Jhanjrara: This marriage is by elopement, consent, agreement and mutual understanding among the relatives. When a women elopes with someone, the new husband fixes date and time for *'Jhanjrara'*. Neighbours and relatives are invited for the occasion. *Jhanjrara* takes place during the night and feast is also given. If former husband files a suit against the new then latter has to pay due compensation through local court or *'biradari panchayat'*. Jhanjrara with younger brother of the deceased soldier, if unmarried is performed without any complications. In this case war widow is entitled pension and all other concessions sanctioned by the government. The civil courts have recognized such marriages.

Ghar Jawantri: In this marriage boy has to work as a domestic servant in the house of his would-be father in law. But he is never made to work for the bride's relatives. The duration of work may be within the range of 2 to 8 years,

which is compulsory. But the marriage takes place only after the boy has retired from the service of the girl's parents. After marriage the couple stays at the boy's house. This is very rare and this type of marriage has not remained so relevant in Gaddis.

Batta-Satta (marriage by exchange): The boy gets his partner in exchange of his real sister or a cousin. This type of marriage is considered inferior to *'Dan Pun'* marriage.

Dan Pun marriage : This is the most common type of marriage. 'Dan-Pun' word stands for DAN-charity. Charam and PUN-PUNYA. Kanyadan takes place. Girl is given as a 'Dan' to her husband. This type of marriage has all social, religious and administrative sanctions. Caste taboos are also practised. A man should marry in one's caste. He can't marry person of the same sub-caste. It is positively forbidden to intermarry in the same *"Gotar".* Clean and unclean castes distinctions are very strict. Gaddis are monogamous. Polyandry is never practised by the Gaddis. The Gaddis not favour polygamy unless the wife is barren or dead. Such polygamy is permitted to the entire community. But the procedure of having two wives or two husbands at once is never heard of. The Gaddis are not bigamous.

Dowry system is prevalent among Gaddis. But dowry is never demanded and never insisted upon. Bride's father gives dowry in marriage. Whatever is given, the bridegroom's father receives it with great respect and satisfaction. The word divorce *(Talaq)* does not exist in the history of Gaddis. They use the terms like; (a) *Dua Ghar Kari leva ha* (has settled down with second husband); (b) *Chhari ditti he* (permitted his wife to settle down with someone else; and (c) Fargati di dethi ha (has allowed his wife according to some agreement to remarry). Generally such cases are decided by Birdadari Panchayats duly constituted.

FAIRS AND FESTIVALS: The festivals celebrated by Gaddis are common with those of other inhabitants of Kangra and Chamba district. These are:

(a) 'Baishakhi' or 'Bisu' (on the 1st of 'Vaishakh' month); (b) Minjar in the month of July; (c) Sair (on the 1st of Asuj (Sept-Oct) month); (d) Patroru Sagrand, is celebrated on 1st of Bhadon (August-September) (e) Mani-Mahesh Yatra; (August) (f) Lohri (in January); (g) Shivratri; (February) (h) Holi; (March) (i) Dushehra; and Janmashtmi.

Singing has an important place in social life of Gaddis. Their folk songs have survived through generations. They are simple and primitive utterances of the local people which depict their habits, customs, tradition, beauty, simplicity, humour, pathos, passions, love, culture, social life and religions.

As Gaddis have patriarchal society the caste of the child is determined on the basis of the caste of father. Untouchability is not very severe among the different castes of Gaddis. Though some castes are considered low but the only barrier is on their entering the houses of Brahmin, Rajput and Khatri Gaddis.

DRESS: The traditional dress of the Gaddi community is typical one and people of the community are easily distinguishable from other people of habitat by the curious and beautiful attire in which they are dressed. *'Chola'* and *'Dora'* are their popular traditional dress and is worn on most of the festivals and occasions by a vast section of the community. A few Gaddis engaged in agricultural and allied pursuit have started wearing *'Kurta'* (shirt) and *Pyjamas* (trousers), like other local people. *Dora* is the most important part of the dress of Gaddi men, women and children.

The maximum length of *'Dora'* of adult male is 60 mts. The adult female wear dora measuring about 50 mts. whereas the *'Dora'* worn by children ranges from 10 to 25 mts. Both cap and turban are used by male to cover head. The most common topi is *'Bushahri cap'* which is made of woollen piece of cloth. They stick *'Kalgi'* on the topi and keep flowers on their turbans specially during marriages and fairs. *'Chadaru'* is used by *gaddan* to cover the head. Gaddi mostly wear shoes made by local cobblers. This is rough looking but a durable shoe called *'Jutta'*.

Women prefer ornaments. The silver ornaments are more common than golden ones among Gaddi women. Gaddis are not very particular about their bath, sometime once a month or twice a month bath is taken. Women when wash the hair take the bath but are particular about their face. Gaddis take their food four times a day. The breakfast called *'Nuhari'* or *'Duteloo'* consists of bread either of maize or wheat which is taken with Dal or vegetable. Now tea is also very common. In the noon or *'Kallar'* the lunch and their dinner *'Baili'* or evening includes rice or bread of maize or wheat with Dal or vegetable. Gaddis are fond of drinking. They are unwilling to tell about *"Sur"* or *"Jhol"*, local liquors, but these drinks are common among them. In the paucity of space, informations about this tribal group inhabiting the Bharmaur and Kangra Palampur belt of Himachal Pradesh have been minimized. The Gaddis are *'semi-nomadic', 'semi pastoral' and 'semi agricultural' tribe.*

KHAMPA

Khampa are not the original inhabitants of Himachal Pradesh. They are believed to have migrated from Tibet. 'Kham' is the name of a state in Tibet and the people of that state are known as 'Khampa'. The Khampas constitute only microscopic minority of the population of the state. It is believed that they came to India about 100 years ago as itinerant traders from Tibet and moved in the upper part of the Himalayas, which they included in their annual nomadic beat. The Khampas, who stayed back in India, are referred to as *Gyakhar or Gyagar* (a Tibetan term for India), Khampas by their brethren across of Himalayas. Their families are scattered in Kullu, Chamba, Kinnaur and Lahaul-Spiti districts. Their population, according to 1981 census was 1,221 including Jads and Lambas and in 2001 it was nearly, 1850 only, (growth rate nearly 2.80 percent) that means 0.03 percent of the total population.

Khampas are known variously at different places. In Kullu valley they are

called as *'Bauddh'* and in some other parts, they are called as Tibtees. In Uttrakhand, they are called as *'Shah Khampa'* and distributed in Darma and Byans villages of Pithoragarh district, in Spiti division of Himachal Pradesh as *'Piti Khampa'*; in Kinnaur as *'Kunnu Khampa'*; in Kullu as *'Neondi Khampa'*; in Chamba as *'Thava Khampa'*; in Lahaul as *'Gharja Khampa'*. There is yet another section of Khampas, who are nomadic and are known as *'Nekhor Khampa'* which literally means, the people who came for pilgrimage.(ne means pilgrim places; Khor means journey). Khampa have been included in the category of scheduled tribes. The dialect spoken by the people among themselves is also known as Khampa. With others they speak in Hindi, and can also write, read and speak in English. Their traditional script is Tibetan, but nowadays, Devanagari is being used while communicating with outsiders.

The Khampa is a generic category which includes many territorial groupings as mentioned above. Though there are no perceptible restrictions on entering into matrimonial ties with any of the section of the Khampa, as all are treated equal, but economic status of the negotiating families is taken into consideration. In terms of local social hierarchy the Khampas rank at par with the other Rajput communities, with whom some of them have started entering into matrimonial ties. Among the Rajputs on the question of social equality and status the opinion is divided. Though in Spiti, Lahaul and Kinnaur people accept them at par, but in Kullu, Chamba and Shimla people do not regard them as equal in social matters.

The people of areas which have Buddhist dominance accept them on parity because of similar religious belief, but where Hinduism dominates, they are not treated at par. The Khampa community is divided into a number of exogamous class or sects which denote origin from a common ancestor. For establishing marriage ties, partrician should differ. Immediate relations of the mother's side are also avoided. Beyond this, other relations are hardly avoided. Endogamy is practised at the community level, irrespective of the territorial groupings. Family status is the only consideration. Village endogamy is also practised. By late there have been a few instances of a Khampa entering into matrimonial relationship with local higher caste Rajput families, but this is not a regular feature. Marriage with parallel or ortho-cousins are prohibited, but cross-cousin marriage find prevalence. Junior levirate and sororate are also practised. Normally marriages take place in early twenties and ideal age gap between husband and wife should be more than 3-4 years.

Khampa is a monogamous tribe. Polygamy is resorted to only in cases where the first wife has not been able to bear a child for the family. Till few decades back polyandry of fraternal type was the prevalent form of marriage, with only the brothers sharing a wife in common. But this has been replaced by monogamy. Marriages are generally fixed by a negotiator known as *'phaktum'*. The Khampa does not have any symbol of marriage. Dowry and the practice of bride price is not prevalent. Parents give gift to their daughters according to their status and capacity. The usual form of residence is patriological.

Divorce *(Jatsari-Jha-dal-va or Khatal-je-or- Kheje or Jha-cho-che)* is permitted when initiated by either of the parties with the consent of the community council. The grounds for divorce include adultery barrenness, infertility and maladjustment or maltreatment. The Panchyat decides on the payment of alimony, which usually is the return of gifts brought by the girl from her parent's house, plus, an amount in cash. In the case of divorce the infants remain the mother's responsibility but grown up children normally stay back with their father. Widow, widower and divorcee remarriage is permissible. In the recent past a spectacular change has occurred in the institution of marriage from polyandry to monogamy and from intercommunity marriages to intra-community marriages.

MARRIAGE CUSTOMS: The occasions of marriage *(phanktun)* is a simple ceremony. The bridegroom goes in a procession to the bride's house. Before reaching the bride's house he is stopped on his way by girl's friends who block the road by stones. The girls sing *'titmde-luh'* (question-answer song) whereby some questions are passed to the boy's side and if they answer correctively, they are given the way. They are held back once again, before entering the house, where again a set of questions are posed to them. The groom's father ties a *thodkar* (white turban) on the head of relatives. The bride and groom are then made to sit side by side and made feeding of *'desil'* (a sweet preparation of rice and curd) to each other, amidst chatting of verses from scriptures by the lama, marriage is declared solemnized. After the ceremony, the bride accompanies the groom and comes to his natal house, where the consummation of marriage takes place.

RELIGION: The Khampas believe in all the four sets of Lamaistic Buddhism, viz. *'Galuka', 'Ningma-pa', 'Sakya-pa' and 'Karguda-pa'.* They visit Buddhist monasteries, Gompas which function as religious teaching institutions. Their family deity is known as *'chhadna-Dorge'*, which is a famous Buddhist deity worshipped by all Buddhist people and every Khampa. Besides, there are many other deities in the shape of boulders, trees, caves, bushes etc., which are recognized by different names in different areas. In case of illness they often consult the lama who advises them to make Puja and read Buddhist Pragya Paramita Vajrachhedika, etc.

Almost every house possesses its own family deity represented by a stone slab or pillar, and on each slab or pillar bough of junipers are placed. They are worshipped with the smoke of Juniper leaves every day. Lamas, besides acting a sorcerer also act as sacredotal specialists, and officiate at the rituals connected with life-cycle at a Khampa house. The Khampa often go is on pilgrimage to Sarnath, Kushinagar, Nepal, Bodh Gaya, Rewalsar and visit monasteries in Lahaul-Spiti and Chango, which they consider as their sacred centre.

DRESS: The traditional dress of the Khampa consists of *Chhuba* (long gown, black in colour for male and brown for females), *banjug* (shirt) and *siring kingar* (cap). The men also wore along (ear ring made of gold, about two inches in diameter, with blue and red beads). In the recent past a clear change

has taken place in the mode of dress. At present the young men put on shirt, pants, suits, jeans whereas the old still prefer to put on their traditional dress.

FOOD HABITS: The staple food of the Khampa is chapatti, rice and pulses of Urad, Chana and Malka along with vegetables. Khampas are non-vegetarian, taking meat of goat and sheep, chicken, fish and eggs. The meat of Yak, Pork and Beef is still a taboo for them. They also take edible roots and tubers like *bhalku, linger, nokhi, chaiu and gucchhi* (mushrooms). Their earlier staple diet used to be thugpa and momo, but now they have changed to chapatti. Momo are cooked on festive occasions. Besides apples, apricots, plums which are widely grown, they also consume wild fruits, *jami, vami, aarvi and chuli* which are locally available in abundance.

SOCIAL RITUALS: The child is named by the Dalai Lama or Avtari Lama after consulting the sacred text and almanac. Raldak (tonsure) ceremony is observed before the child is two years of age, on a date decided by the lama. The hair is cut by the mother's brother or in his absence by the parents, and a feast is arranged on that occasion. The role of Lama in the birth and death ceremony is very intensive. The disposal of the dead is decided in consultation with the Lama. Generally the dead are cremated. Infants are kept in a wooden box and immersed in the river. Impurity lasts in the house for only a day, the next day lama is called and he performs purificatory rites. Rituals connected with death are also observed on the *chizik* (fourth day), *duzik* (seventh day), *shipchu sherku* (49th day) and *logar* (one year) when alms are given and prayers are offered for the peace of the departed soul.

The Khampas have the extended type of family. The parents avoid calling their daughter-in-law by name and vice versa. The daughter-in-law observes avoidance with her husband's elder male relatives and with all such relations in that line. Joking relationship also exists with wife's younger sister, wife's younger brother and all such relations in the line. The husband and wife use teknonymic terms to address each other. The property is inherited in the male line, with all sons sharing the parental property equally.

In the event of no male issue, the property is inherited by the daughter on the condition that the son-in-law agrees to stay with the in-laws. If the daughter also does not have any male issue, the property passes on to the collateral. A widow also has the right to enjoy the property for her lifetime, after which it devolves to the son, but does not have the right to sell, gift or mortgage the property. The Khampa women are enterprising, who assist not only their menfolk in economic activities, but also carry on the economic activities independently. They are seen working as hoteliers and shopkeepers, dealing mostly in foreign goods. These shops and restaurants are manned by the women while the men folk assist by getting them goods.

The Garja and Piti Khampa who are agriculturists are assisted by their womenfolk in agricultural operation, in almost all spheres except ploughing. Besides, they also bring fuel and fodder for animals. The social position of the Khampa women is high. They are the incharge of the house, and manage and

control the family affairs. Though the authority in the family is vested in the menfolk, but a decision on vital issues is invariably arrived at after consultation with wife. Though divorce is rare, yet at the time of divorce the gifts brought by the women at the time of marriage have to be returned along with a fine decided by the traditional council. Traditionally they were not allowed to hold any post in the council, but indirectly influenced the decision of the council through their husbands. Nowadays, however, they have their representation in the statutory panchayats, but are seldom able to give an independent decision. In religious spheres the women carry out their family rituals. Old women can be seen rotating turquoise beads in their hand, chanting the mantra of 'Lord Avalokiteshvara'.

The major fairs connected with the Khampas is the LOSAR (their New Year's Day) which is observed on the 24th or 25th of February according to their calendar and '*Galde Gamche*' which is observed in the month of May when prayers are offered and the day is devoted to the memory of the Buddha. Besides, prayers are also offered on the *panchami* (fifth day) and *dashmi* (tenth day) of each fortnight. In Spitii and Kinnaur the 'Goetr' and 'Ladarcha' fairs are held, in which the '*Khunu*' and the '*Piti Kampas*' take part.

The art forms of the Khampas are visible from their craft, especially in the weaving of carpets, on which they make exquisite designs. The most popular design with the people is that of a '*dragon*', which is made in dominant shades of red and black. The weaving is done by both the sexes, though there are more women involved in it. They are also skilled knitters and knit beautiful designs on sweaters and pullovers. Besides, they also weave *suktu*–a woollen shawl wrapped around the body, and *sukdan*–a woollen bed sheet mainly for self–use, whereas carpets are made for commercial purposes.

The Khampas have oral traditions. Certain songs in their local dialect sung on the occasion of marriage are called as *yanva* or *time luh*. The women also dance on festive or marriage occasions. The Khampas have strict commensal norms. They exchange both the *Kuchcha* and the, *Pucca* food from the Brahmin and Rajput, but do not accept *Kuchcha* from other communities except when it is cooked by a person of either a Brahmin or Rajput status. Other community people can however, accept both types of food from the Khampas.

The Khampas do not suffer from any sense of untouchability among their various territorial groupings. Previously, the Brahmin used to observe social distance by refraining from taking cooked food from them, but now this stigma has disappeared. In the urban situation no discrimination is observed even from amongst the communities such as Sippi and Lohar and water and food are freely accepted from them. Marital ties traditionally existed only amongst themselves, but now the Khampas have started entering into matrimonial relationship with other Rajput communities. The Khampas can enter temples without any discrimination and have access to common water resources and *panchayat ghar.*

Jajmani relationship exists with the communities who are in rural setting, like the Lohar and Beta, who render their traditional services, for which they receive a fixed amount of foodgrain at the harvest time. The modern linkages have brought the Khampa in contact with other communities, with whom they interact regularly in their business and hotel deals. The educated among them have also entered into professional or Government office. The illiterates come in contact with the other communities by working as labourers. Besides these, the Khampas also have symbolic relationship with other people. They render mutual help to each other in the construction of new houses, repairing of old ones, stacking of stones to form a protective wall around their fields and also render help at social functions.

OCCUPATION: The traditional occupation of the Khampas, while they were the Tibeten was sheep herding, they kept sheep and traded in wool. A little later when they stared trade with India, they left their traditional occupation and brought to India *pashmina* wool, sheep, goat, yak and other items laden on mules, and on return took carpets, moonga etc. But since Indo–China conflict and closing of the border, the traditional trade links with Tibet came to an end, which lead to their ending of nomadic life and settling down as agriculturists and orchardists. Some of them have opted for independent business such as shopkeeping and running of restaurants. They normally keep foreign goods in their ships, shops which they get from across the border.

The others are employed as labourers in road construction or in mule taming. The majority of the Garja and Piti Khampas own land and work on their own fields, but the Thava and Khunu Khampas are in trade and business. Children below 15 years of age do help their parents in field, household work, business etc. The Khampas are of very positive attitude, most of them are sending their children to schools and taking the benefits of various developmental schemes initiated for tribal development. They have no prejudice against family planning programmes. The Khampas of today's Himachal are very much at par with the people of lower Himachal in terms of development and social and political awakening.

The Khampas have a traditional council known as ***shuzam chungi*** which is headed by a '*GOVA*'. This council consists of five old and learned persons of the community who settle divorce and family disputes and penalize the guilty for breaking traditional norms. This council functions a model of quasi–judicial organ of tribal India, where male and female participate without distinction. Earlier only male members were allowed to dominate the proceedings. The Khampas' panchayat plays the role of a developmental agency as well as maintaining of law and order in the village.

PANGWAL

The Pangwals are the residents of Pangi valley of Chamba district. It is a generic name used for all the residents of Pangi valley, which include Brahmin, Rajput, Lohar, Hali, Badi and Chanal, but the Rajput population outnumbers

all the rest. The origin of the Pangwal is shrouded in mystery. However three unconfirmed versions are available which give only a faint idea of the origin of Pangwals. According to one version, it is said that from time immemorial the settlers of Lahaul and lower Chenab valley were faced with great difficulties because of heavy pressure on land and pastures. They were desperately in search of more good lands and green pastures to feed themselves and their cattle. These people finally migrated to Pangi, which had plenty of both. The Pangwals are said to be their descendants.

The second version is found in census of India, 1961 village census monograph on Kupha, Pasams, Tamoh and Malet (Singh 1961) because of the difficult terrain of the area, the authorities considered it the best place for sending criminals who were condemned to life long sentences. It is presumed that these children and grand children established different settlements and came to be collectively called *Pangwals*. To verify this version it is said that even today the traditional Pangwal topi (cap) which is widely worn in this part, has resemblance to the one generally provided to the prisoners.

According to the third version, which appears more plausible and historically correct is that, in the day of Muslim domination in India, certain Rajput nobles fearing persecution at the hands of Mughals, decided to send their families to a safer place, which was beyond the reach of marauding army of Mughal empire. Pangi was selected as the best place for this purpose. The families were dispatched along with security soldiers.

In the meantime most of the Rajputs who remained back, died in battles and many were seriously injured and could not join their families at Pangi. When all hopes of their warriors returning, vanished, the Rajput women ultimately married servants and soldiers. The Pangwals today are said to be their direct descendants. Pangi valley is an area of difficult and hazardous terrain. The area is mountainous and is subject to severe winter, heavy snowfall, strong icy winds and frequent avalanches, all of which are responsible for many landslides throughout the valley. The area has been declared a scheduled area and received adequate grants. A resident Commissioner has also been appointed in the area to look after the immediate demands of the people.

Pangwals have been declared *scheduled tribes* as per the government notification. The Brahmin and Rajput constitute the bulk of the scheduled tribe population of the Pangwals. Of the two, the Rajputs are more in number, but collectively account for approximately 16,000 people as per the 1991 census report. They mainly reside in Pangi tehsil of Chamba district, but a scattered population is also found in adjoining Lahaul and Kullu districts. According to 2011 census their population was 20693 persons.

FOOD HABITS: The Pangwal's staple food is *barley* and *alu* (Potato). But in lower region of Kullu and Chamba *Makki-ki-Roti* (maize chapatti) and *Kadhi* (कढ़ी) and on every second and third day wheat chapatti (फुल्का) and *chilra* (bread made of phullan) form their staple food. They are fond of pulses like *mah* (उड़द) and *rardengal*, which are mostly purchased from the market.

For vegetable, with herbs like Chhatrian, *bichubuti* and *guchhies* (mushroom) are plucked from jungle. Now with the technique of new agricultural methods, Pangwals have started growing vegetables like cabbage, cauliflower, carrot, potato, onion, capsicum and spinach during summer months. The Pangwals are basically non-vegetarians and take the meat of sheep, goat, *monal* (impeyar pheasant), *tarmol* (jungle goat), *Kasturia* (musk deer), pigeon, *Chaktir* (meisner) and *hen.*

During winter months, every household slays one or two goats and after skinning them, they hang them to be gradually consumed everyday, the Pangwals also have moderate consumption of fruits like *chir* (apricot), *chur* (apple), *miri* (hazelnut), *than* or *khor* (walnut) and *thangi* (carylus colume). Walnut oil and ghalit oil (extracted from seeds of apricot) form cooking medium, along with *desi ghee*, which is used in every house. Tea is also taken during winter months. Some households purchase tea leaves from the market, but most of them use *choga*–a local spice–and prepare salted buttered tea from it. Every household possesses a *choori* (a cross between Yak and Cow), the milk yield of which is very little and is mainly used for preparation of *lassi* and *curd. Arack* is consumed universally by both the sexes and is brewed from wheat or barley in every house. The Pangwal's festive food is *unes, maudaj, luchi, bakru, beer* and *Kuron.*

LANGUAGE: The language spoken by the people among themselves is *Pangwali*, but with other they speak in *Himachali.* They do not have their own script, but nowadays Devnagari script is commonly used with outsiders.

SOCIAL SYSTEM: The Pangwal Brahmin are divided into three sections, viz, *Gaur, Sungria* and *Kalia.* The Gaur Brahmin, traditionally earned their livelihood by collecting alms. They rank superior to other two groups. Next in the hierarchy rank are the Sungria Brahmin who perform sacredotal services and officiate at birth and marriage ceremonies. The Kalia Brahmins are considered the lowest among the three officiate only at mortuarites.

The main basis of the differentiation among the various section is occupational. Each of these section is further divided into exogamous section called *gotra.* The Gaur and Sungria, perceive their superiority over all other communities of the area, and the fact is also acknowledged by others. The Kalia Brahmin are considered a low community at par with other scheduled castes, though they are not scheduled caste. The community observes *varna system* and places it at the top of the varna order, which is acknowledged by others too.

The Rajput Pangwals have three main subdivisions, namely, *Rana, Thakur* and *Rathi.* Intermarriage among them is fairly common, though the Rathi are regarded inferior than the former two groups. They are further sub divided into a number of exogamous *gotra* and claim descent from *'Suryavanshi'* and *'Chandravanshi'* Rajput and place themselves among the Kshatriyas in the classical varna system. In the local hierarchy they are both numerically and socially a powerful group placed only ritually lower in status than the

Brahmins. However for all practical purposes the Rajput and the Brahmin Pangwals have both connubial and commensal relations with each other.

MARRIAGE SYSTEM: The Pangwals are endogamous in the sense that a Pangwal will always marry a Pangwal. Exogamy is maintained at the village and *gotra* level. *Junior levirate* and *sororate* are also practised. Traditionally marriage was prohibited between *Kin* upto three degrees on the father's side and five degrees on the mother's side; but now only seven generations on the father's side and three on the mothers side are avoided. The average age of marriage for boys and girls is 22–24 and 18–20 respectively. Among the various forms of acquiring mates, the most popular form of marriage is '*bari shadi*' (marriage by negotiation), other forms being '*pith–chuk*' or '*chori*' (marriage by capture), '*doghri*' (marriage by exchange) and '*topi lana*' (widow–remarriage).

The common symbols of marriage are *bulok* (nose ring), *fararu* (ear–ring), *lal chipper* (red shawl) and nasal ornaments like *laung, phulli* and *tikki*. Monogamy is the prevalent form of marriage. However, second marriage is resorted to only when the first wife is unable to give heir to the family. The residence is patrilocal, but in cases where there are no male issues in the family, the daughter's husband is invited to stay with in–laws, and the girl continues to stay in her parent's home. Such a resident son–in–law is called '*gharjawai*'. Earlier *retti* (bride–price) was in existence, but now this practice is more or less nonexistence. Dowry is not demanded but gifts to the daughter are made at the time of the marriage, which may consist of common agricultural implements, utensils, sheep and goats, quantity of which varies as per the economic status of the bride's family.

Marriage is first negotiated from the boy's side. The boy's father or uncle visits the prospective bride's house with a bottle of liquor and *sattu* and asks for the girl's hand. If the proposal is acceptable to them they accept the gifts brought from the boy's side. This is followed by *mangani (engagement)* and again the boy accompanied by a few of his relatives come and brings some more bottles of liquor and *sattu* and then ask for the time and date for marriage. At this time he may also bring some jewellery like *bange* (Bangles) for the girl. At the fixed day, the groom's party comes to the bride's place. The bride and groom are made to sit at a place where *puna* (sacred marking with flour) is made. Some *totus* (made of flour) are also placed around it. Two of these totus are given the shape of a cup and filled with honey and ghee.

The *mama* (maternal uncle) covers them with his hand and asks the bride and groom to eat them. The one who finishes it first is considered to be having an upper hand. The guests are entertained with wine and food. The groom accompanied by the bride and a few of her relatives leaves for this home. A lamb is sacrificed and meat is given to all. The same ceremonies are repeated at the groom's place also. After staying for one or two days, the bride's relatives return and the date of her visit to her parental home is also decided.

Marriage is performed in three stages, viz, *pillan* (engagement), *fekki*

(betrothal) and *chakki* (marriage). Vaisakha, Asadha, Kartika, Pausa, Magh and Phaugan are considered auspicious months for marriage. A Sungria Brahmin officiates at marriage. In the *pith–chuk* or *chori* type of marriage, if after the betrothal ceremony the marriage is deferred for two to three years for some reason, then the boy assisted by his trusted friends goes to the girl's house and after picking her up brings to the house. In the not too distant past even unmarried girls, not accepting the proposal were captured in the similar manner and then married. The marriage takes place at boy's house. This is not a very important event, for a Pangwal boy can flirt around with his fiancee after engagement, and her getting pregnant is not regarded as a matter of shame. The child is brought up and the boy fathers the child. Intercommunity marital exchanges take place among the Brahmins and the Rajputs, but not with other communities.

DIVORCE: Divorce (*chorde*) is recognised. There are two forms of divorce. In the first a paramour pays a certain sum *izzat* to the women for seeking release from her husband. In the second form the husband gives his consent for the divorce before the respectable men of the village and then breaks a dry stick in two pieces over his wife's head as a token of having broken the marriage alliance with her. The amount of compensation is decided by the *Panchayat* (a traditional council). The common ground of divorce are barrenness, infidelity and maladjustment. The money thus realized is kept either by the boy or his parents. It is customary that if the girl refuses to marry the person she is engaged to, the boy's side may demand not only the return of gifts, but all expenses incurred by them in addition to the penalty. However, in case the boy refuses to marry, there would be no return of gifts from either sides.

Remarriage of widow, widower and divorcee are permitted. *Topi lana* is the common term for widow remarriage and is permissible year after the death of her husband. The first right to claim the widow's hand rests with the deceased husband's brother, nephew or cousin who presents her *joji* in the presence of two respectable men of the community. Her taking of joji signifies acceptance. If another man wishes to marry the widow, he must seek her parent's and local council's consent and return the ornaments given to her by the deceased husband.

BIRTH CEREMONY: Prenatal restrictions are placed on the expectant mother. She is forbidden to take up heavy work. The houses remains *asudh* (impure) or *jooth* for nine days in case of birth of a male child and 12 days in the event of the birth of a female child. Purification ceremony takes place on the third, ninth or 12th day of birth, when the entire house is cleaned and the water of the holy Ganges is sprinkled all over., the birth of a son is an occasion of great rejoicing.

The *naamsanmskar* (naming ceremony) is held after the first, third, seventh on ninth month of the birth of a child. A small feast is given and the child is named by the father after looking into the almanac. *Shik–Vade* (tonsure eq.Mu) ceremony is held along with the naming ceremony or sometimes it is held

separately. In any case it is held before the first year, and can only be postponed for the third year if a *sukhna* (a wish kept in the name of deity for fulfilment) is kept for the tonsure to be done at the temple of a deity.

The first hair is cut by the maternal uncle, followed by father's brother and five other relatives. A goat is sacrificed at the occasion and its blood is sprinkled on the hair and on the child's shaved head. After this the tonsured hair is buried in the ground after keeping them in a basket, locally known as *Kilta*. On the third day, the child's head is again shaved off by the child's father leaving a *choti* (cue) on the occiput. *Janeu* (investiture) ceremony is held at the age of 10–14 years. The sacred thread is brought from Haridwar and kept by all families.

The child with sacred thread is expected to observe certain taboos throughout his lifetime viz, not to eat chicken or eggs, not to eat from the women during her menses, not to eat together with the members of other community and not to let *Janeu* to be touched to body when going for the call of nature. There is also restrictions on girls on cooking or participating in religious functions during her menses.

DEATH CEREMONY: The dead are cremated and pollution is observed for seven days. The Kalia Brahmin officiates at the mortuary rites. Children below the age of eight years are buried. The last rites are normally performed by the eldest male member of the family. In the event of the death of a male the house remains polluted for nine days, and in the case of a female for seven days. On the seventh day all the male family members get their heads shaved off. A lamb or a goat is sacrificed and its blood is sprinkled on all. At the time of funeral procession, bier is prepared by a Chanal known as *dwaru*, who also carries fire in a pot. The ashes and bones are collected and immersed in Chandra–Bhaga (Chenab) river. On the third, ninth, thirteenth of a month after the death, a *Kathi* or *Kirya* ceremony is observed. Pangwals put up a stone slab called *dhaj* in the memory of the dead in the courtyard of the house. These bear an inscription and are usually prepared by the Gaddi (shepherds). Pangwals worship their ancestors.

STATUS OF WOMEN: Women enjoy a fare amount of freedom in Pangwal community. They are virtually incharge of the domestic affairs. Pangwal women are beautiful, hard working, performing domestic chores as well as taking part in agricultural operations. Their economic potentialities as such are socially recognized. The women are an economic asset to the family. They also collect fuel and fodder. The social position of the women is also high in view of the fact that they have the freedom of leaving of their choice, who ultimately will have to pay the *mudda* or *izzat* to her husband.

In religions spheres, however they do not have any say. The fact that women can't worship their clan deity with the traditional family line is indicative of their low profile. They can't officiate as a priest in temples or perform sacredotal services at client's house. In political sphere women do not have major representation in the local or regional politics as such, but senior

women are invited when *Biradari* panchayat is convened to discuss some socially relevant issues. But in this traditional council they do not have any representation.

Pangwal community has joint family system. The elder male member heads the family and is given due respect. Paternal and filial affection and due regard as per status of the person is the basis of mutual relationship within the family. There is no strict observance of *purdha* (veil) and women have considerable freedom of movement and speech in the presence of elder male members of the husband's family. Joking relationship exist between husband and wife's younger relatives, both male and female. Husband, wife, father–in–law and daughter–in–law do not take each other's name, but refers to each other taknonymically.

RELIGIOUS LIFE: Pangwals are religious by nature. The Pangwal Brahmins belong to the *Vaishnava* and *Shaivite* sects. Every family has a deity. Besides worshipping the deities of the wider pantheon, they have more regard for the regional, village and clan deities. The village deities, Nag and Nagin, are propitiated by all members of the family for warding off the evil influences. The regional deity is Goddess Durga, who is worshipped and propitiated by sacrificing a goat. Their *pujaris* (sacred specialists) are Brahmin or Rajput who officiate at life cycle rituals and whose office is hereditary. They are also entitled to take away eatables and the left leg and the liver of the sacrificed animal. 'Durga' *and* Singhasni Mata' offered goats and brass bells as their *sukhna.* The famous sacred centres of the Pangwals are Kandwa Nag Tample at Mindhal, Sheetla Devi Shrine at Luj and Trilokinath temple and Masan Devi at Purthi. The Jatras (religious journeys) are very popular among Pangwals. Some important ones are Lwaan (celebrated in Magh or Phalgun), Union and Sainch (held in chaitra), Darkhan and Baria (held in Shravan) and Phool Jatra (held in the month of Kartika).

Some of the important festivals of the region are Tyane held in Asadh (August), Dikhrain in Savan and Parvach in Bhadon, all of which have socio–religious significance. The fair Masan Devi at *Purthi* is of special significance to the people and is celebrated by all the communities with lot of enthusiasm, fun and frolic. Pangwals do have belief in evil spirits, ghosts, magic, charms and amulets and take recourse to *Chela* whenever afflicted by any of these. The well known festivals of Pangwals are Sanitarian, Puranmashi, Shivratri, Sheel (observed on the amavasya of Phalgun or Chaitra), HISHOO (new year's day) and Miniach. The sacred centre of the community is the temple of lord Avalokiteshware at Trilokinath in Lahaul, which was sometimes back a part of Pangi. The Brahmins continue to have traditional ritual linkages with other communities. They render sacerdotal services at the house of their client for which they are paid a fixed quantity of coarse grains.

DRESS: Pangwals have their own peculiar dress, which provides them easy identity. The men's dress consist of *topi, kameej* or *chola, lekhar* (a long buttoned coat upto knee length), *majhir* (a black woollen cord which is wrapped around

the waist), *Chalar* or suthan (a cotton/woollen trousers, loose upto knees but tight below) and *pul* (locally prepared grass or straw shoes), while the women's dress consists of *Kameri* or *Choli joji* (a head dress colourfully embroidered with cotton and silk threads with a tail attached to it, which is tucked to the hair plait), *Chadru (dupatta), Kamarband, Chalan* or *Suthan* and a shoe made of grass or straw.

Inheritance is as per *pagwand* and *Chundavand*–their customary law of inheritance. In the former case, all the male offspring of a wife share the property equally, whereas in the latter case the property in the first instance is divided according to the number of wives and then their respective share is divided equally among their male children. In the event of there being no male issue in the family, she enjoys the property for her life time only. After the death of the father, the eldest male member will succeed to the authority of the family.

OCCUPATION: The mainstay of the Pangwal is agriculture supplemented by herding of sheep and goat. Traditionally, the natives of the Pangi valley had *hak–barden* (subsidiary rights) in forest which have now been restricted, but nevertheless are still practised on. Here they can collect dry and fallen branches of tress for their fuel needs, on free pastures in demarcated portions and free for house construction. The wool sheared from the sheep is usually kept for self consumption. Every family has a loom.

Weaving of woollen clothes, blankets is done regularly. The traditional rights over natural water still exist on which they can construct water mills.The land for agriculture is owned. They can construct water mills. The land for agriculture is owned individually by the family heads. Gaur Brahmin do not cultivate land themselves, and give the land on *adhi* (half). Bee keeping is also practised by every household, Pangwals also collect forest product and herbs like *zira* (carum carvi), *pateesh* (Acoritam chasmanthum emadii), *chora, guchhis* (morchella esulenta) and *mitha tilla.* Barring a few shops in the valley, no big market exists. The nearest market is located 60 km. away at Tarela. Earlier barter system was in existence, now it has been replaced by cash.

The Pangwals accept both *Kuchcha* and *Pucca* food from the Rajput. From Chanal and Lohar a Brahmin would accept *ghee, sattu* roasted potato, *sidha* and liquor if served in a *kanse ka bartan* (utensils made of bronze). They would however not sit on the same mat or wooden lank while eating, and would even not eat if their mat touched the mat of the Chanal or Lohar. However, there are no restrictions on the Chanal or Lohar entering the temple but if they bring a '*rota*' cooked in his house, the Brahmin would not touch nor offer it to the deity. This will have to be prepared by the person himself, but if he offers the flour and *ghee* to the *pujari,* he then prepares the '*rota*' and offers it to the deity. There are separate water sources for the Lohar, Chanal, Brahmin and the Rajput.

The traditional patron–client relationship exists with Chanal and Lohar. The Chanlas not only act as agricultural labourers in their fields but also remove

the dead cattle and act as carriers of marriage gifts at the time of marriage. They also carry an axe while leading the funeral procession. The Lohar and Badhi, on the other hand, repair and make the agricultural implements of common use. They are paid their dues in the harvesting season and also on ceremonial and festive occasions. New modern linkages have also developed owing to contact with outsiders, due to spread of literacy and due to people going out in search of employment opportunities. As a result, a few have been successful in securing jobs in Government offices and in white-collar professions. Political leadership has emerged at village and regional level.

Communication snags and difficult terrain has come in the way of proper development of the area. Schools have started functioning in the area since 1959, but no major breakthrough has been made in this field. Lesser employment opportunities and closed social system have made people more averse to change and modernity. Although people do take help from government hospitals and dispensaries, but they have more faith in their own traditional methods and *chelas*. The role of village council is predominantly higher to the district courts in the mind of the Pangwals, but at the same time they are not hostile to governmental efforts and programmes, meant for the greater emancipation of the people.

KINNER OR KANNAURA

The inhabitants of Kinnaur district are known as *Kinnaura, Kinara, Kanawara, Kannaura* or *Kinnaurese*. There are many tribes and castes in India which claim their origin from divine sources and the **'Kinners'** are one such tribe. The famous Sanskrit classic **'Amarkosa'** mentions many such people. The *Gandharvas, Yakshas, Vidyadhavas, Apsaras, Sidhas, Guhayakas, Kinners, Bhutasm, Pishachas, Rakshasas* etc. find mention in this classic. Thus Kinners as a race also find mention in the classical literature. In mythological and legendry accounts Kinners are described as a distinct race of demigods, somewhere between human being and gods. They are described in various forms. Some mention them halfman and half bird. Still other descriptions depict them with a human body and a horse's head.

According to '*Bhagwat Purana*', Kinner trace their origin from the shadow of Lord Brahma. Yet another legend says that they have sprung from the toe of Brahma along with the Yakshasa. But according to *Bhavricopnished*, Devi created them with Brahma, Vishnu, Maruta, Rudra, Gandharva and Apsara. In the Mahabharta, they have been grouped with the 'Gandharvas', while in 'Matasya-Purana' their kinship with Kirata and the Yakshasa has been focused.

The Encyclopedia of Religions and Ethics depicts the Kinners with horse's head and the Kimpurshas with human body. Probably such description led to the epithet of Kimpurshas meaning; '*what kind of* (Kim in Sanskrit) '*human beings*' (Purshas)? The word Kinner (किन्नर = किम + नरः) also means same thing. The Kinnaur district of present Himachal Pradesh is the abode of

Kinnauras. Whether the present inhabitants of Kinnaur may or may not be the descendants of the mythical Kinners but from the point of view of living in the high Himalayas they can claim to have that aura around them. The legendry account, however is sufficient evidence to establish the antiquity of the Kinner race and its past that goes back into prehistory.

The Kinnaura are a *scheduled tribe*. It may be pointed out that while the Kinnauras have been declared as a scheduled tribe, the *Chamang* (Lohar), *Domang* (Koli), *Badhi* and *Nagalu* living in the same area are scheduled castes. The community occupies valley which has mountainous topography, cold climate, dense forests, heavy snowfall and low rainfall.

Kinners find mention not only in Hindu's religious books, but also in Jains and Buddhist's scriptures. The Jain's religious books offer a classification of *'neun dev yoni's'* in which one category is that of Kinners. Similarly the classification given by Buddhist scriptures includes Kinners as one of the races. The brahmnical classification include many categories, and positively include the Kinners. Kinners who are now called Kannauras are also known as *'Khas'* or *'Khasia'*.

LANGUAGE: The Kinnaura speak Kinnauri dialect, which, according to *G.A. Grierson* comes under the Himalayan group of Tibeto–Burman family of languages. At present, the Kinnauras have Hindi as the second language. Besides, Bhoti is also spoken in upper Kinnaur. With the spread of modern education, English is also understood and spoken by educated Kinnauras.

Kinnaur is called as **'Khunu'** by Tibetans. *'Khunu'* or *'Kunu'* means a mountain in some Dravidian languages. Kinnaur has also been referred as 'Kurpa'. In Leh the area is called as 'Maon'. Mone of Maon have also been the names for Bushahr state. From the writings of many Indian scholars it becomes clear that there existed a tract inhabited by the Kinners in the High Himalayas West of the Kailash Mountain and Lake Mansarover. The folklore of the Kannauras contains many accounts that go back to the Mahabharta period. The five Pandava brothers, the heroes of the Mahabharta, are said to have passed a good part of their 12 years exile in Kinnaur. Countless Hindu scriptures have immortalized them. The frescoes of Ajanta which carry the pictures of the Kiratas, Kinners and Guhayakas have a great historical significance. Kalidas has also made mention about Kinners. In *Vayu Purana*, Kinners are said to be inhabitants of the Mahand mountains.

Ancient record and historical evidence, nonetheless, prove that the Kinners were one of the aboriginal inhabitants and they were amongst those tribes which were pushed to higher inaccessible mountains by the *Khas* or *Aryan* invaders. Thus, it is possible that the Aryans who could not closely and distinctly come across the Kinners during vedic period, find no mention in the Vedas. But at a later period the Aryans and the Kinners came in close contact with each other. Therefore in post vedic Aryan Literature we find mention about Kinners. The region falling between Kashmir and Nepal in the Western Himalayas was essentially the tract inhabited by the Kinner tribe.

The book *Vimanvathu* by 'Sutpitak' written in second or third century B.C. contains a verse which supports this view. 'Kimpurushwarsha' or 'Kimpurushvaratha' has also been the name of a Himalayan kingdom that existed in the ancient past. The Kinners are also referred to as '*Kimpurshas*' in ancient literature and it is no wonder that their habitat which extended over a large area in the past has now confined to the present district of Kinnaur.

Caste System: The Kinnauras belong to different ethnic groups. Among them the Rajputs (also known as *Kanet, Khas, Khasia* or *Khasa*) are the dominant group. Next comes '*Koli*'–*who* are weavers and artisans, leather workers and ploughmen (Hali), followed by the 'Lohar', 'Badhi and Nagalu', who are ironsmiths and silversmiths, carpenters and masons and basket makers respectively. The Brahmins are conspicuous by their absence from the social groupings. In general the Kinnauras have two broad categories i.e. Khasia and Beru. Beru is further subdivided into two subcategories.

(i) The *Domang* which includes the Lohar and the Badhi or ores and;

(ii) The *Chamang* which includes Nagalu; and the ethnic Rajputs inhabiting the upper part of Pooh subdivision, being Buddhists are called Jad or Zad. The Khasias or the Rajputs have three *Khel* (status groups) viz., Orang, Morang or Maorang and the Waza. These are endogamous status groups and are based on their hierarchical positions, and are found only in the Hindusim dominated areas. The *Khels* are subdivided into a number of lineages or *Khandans* which are original and immigrants. The latter are the families who came and settled in villages as wives or as *Makpa* (son–in–law) or came on migration.

The functional difference between them is that while the former can directly take part in social, economical, political and religious functions, the latter cannot. Some of the *Khandans* are further subdivided into *sub–Khandans*. The reasons for that subdivision are not known. Kinnaura society which although is quite ahead of primitive way of living, yet carries many age old traditions as compared to the one's prevailing in socioeconomically advanced areas. Some of their customs are better than the so called advanced customs of modern society.

In the Himalayan setup, intercommunity linkages are very important. The traditional economic linkages between the Kanet and Koli had been that of landlord and tenant. The *savarna* do not allow outcastes to enter the *sanctum–sanctorium* of the temple premises. The Rajputs accept food and water only from their own community, but they can accept tobacco, *bidi, cigarette, fruits* from Badhi, Lohar and Koli. Badhi can accept food, drinks and dry things from Kanet and Lohar and only dry things from Koli. The Lohar can accept food and drinks from Rajput and Badhi and dry thing from Koli. A Koli can however accept food from all except from the Nagalu, whereas Nagalu accept everything from other castes. Inter community marriages are not socially recognized. However, these restrictions are breaking down.

In Kinnaur, when ceremonial friendship occurs between a man and a

woman, it is called *jokheya*, and when it occurs between two women it is called *konech*. The friendship is established by exchanging garlands of fruits called *jokheya un or konech un*, on an auspicious day, and by exchanging food and home brewed wine.

It is expected of a ceremonial friends to help each other in the hour of need. Similarly, ceremonial brotherhood and sisterhood is also established within the same ethnic group and same status group, but not with the same *khandan*. This is known as *kokheya* or *dharambhai* and *rinkchje* or *dharma-bahin*. During one's distress, one's *kokheya* or *rinkchje* comes forward to help.

MARRIAGE CUSTOMS: Each *Khel* follows *Khel* endogamy. In earlier days, all these three status groups were strictly endogamous. The member of one group was allowed to marry other status groups. But with the passage of time inter khel marriages have started taking place. Now '*Orang*' and '*Morang*' can have matrimonial relations. Khandans are marriage regulating units. They are exogamous. Marriages between members of two sub–Khandans in also prohibited.

The members of superior *Khandan* prefer to marry in a superior Khandan and inferior into inferior. Marriage within seven generations of father and three generations of mother's Khandan are forbidden. The marriage age of the boy is from 16 to 30 years and 15 to 25 for girls. But till few decades back child marriages were prevalent. The study of marriage system prevalent in Kinner society will throw enough light on the fact that Kannaura tribe have prehistoric ancestral society.

Kinner Society practise four forms of marriages. These are:

COMMON ARRANGED MARRIAGE: Known as *'Janekang'* or *'Janetang'*.

LOVE MARRIAGE: Known as *'Damchalshish'* or *'benang hacchis'* or *'Damtangshish'* or *'Jushish'*.

MARRIAGE BY FORCEFUL OR CONSENTED CAPTURE: known as *'Darosh'* or *'Dubur'* or *'Nyamsha dapang'* or *'Nyamsha lemo'* or *'Ashish'* or *'Huchis'*.

ENTICING AWAY SOMEONE'S WIFE KNOWN AS HAR: Because of ten different dialects spoken in different parts of Kinnaur, different forms of marriage have different connotations.

Janekang or Janetang is a the most common, legal and widely practised marriage system by the Kinnauras. Under this form of marriage the father of the boy looks for a suitable match for his son. In many cases three girls are considered for this purpose. With three different flowers, one each for each girl, the father goes to the village deity for final approval. Devta approves one girl. The identity of other two girls is kept secret. This practice is followed by only extremely orthodox families. In other cases one particular girl is selected for this purpose. If the girl's parents show positive desire, two middle men known as *majomi* in local language are made to approach the parents of would-be bride. In Kinnaur maternal uncle invariably plays the role of a *majomi* and

have big say in matrimonial alliances.

The *majomi* goes to girl's parents with a bottle of liquor and some cash (according to the family's status) as a token of present in case the girl's parents agree to the proposed marriage. The bottle of liquor is essentially capped with butter. Butter is considered auspicious for prosperity and happy married life, in Kinnaur valley. On acceptance of proposal a gold ornament is presented to the girl's side as barni which binds the parents to a promise. On this occasion majomi are feasted with ghanti (local liquor) and festive food. Marriage date is fixed in consultation with the lama or grokch. With the exception of the ornament given at the time of barni, no other ornament is given, before actual marriage is solemnized. In case of marriage date is to be postponed, under unavoidable circumstances, a ritual known as *Jinsi* is performed by sending an ornament from the bride to the groom's house by *majomi* within the days of said month so as to dispel any evil influence.

In Janetang form of marriage, there is no limit on the size of marriage party. Nyotang Merang is a form of marriage slightly different from Janekang. In Nyotang Merang form of marriage only two persons go in marriage party. This is basically followed by poorer families. Nyotang Merang wedded couple can go for Janetang marriage at any time in case they become prosperous and ready to wear expenditure.

Damchalshish means to have real relations, in local language. It starts with love affair between a young boy and a girl and they elope to some unknown place. After sometime, finding favourable atmosphere, a boy brings the girl back to his parent's house for their consent for marriage and seek their help for starting negotiations with girl's parents. On finding no option, parents send majomi to girl's parents. The majomi takes a bottle of Ghanti (local liquor) capped with butter and some cash for *Izzat* money is also offered to the maternal uncle and some other near relatives of the girl. In case parents of the girl do not agree, then all the presents are brought back and boy and girl are accepted as husband and wife by the community.

In some rare cases parents have also brought back their daughter. If parents agree then marriage is performed as per the custom of the society. Similar to the 'Nyotang Merang' marriage, date is fixed even long after the incident of elopement and if instances are not wanting, then marriages are performed seven or eight years of the elopement during which time they may be having children. In this case girl comes to her parent's home just few days before the marriage, and before that she stays all along with her husband.

Darosh means to drag (dub dub) forcefully. In the primitive period, when there was no recognized marriage system, man used to capture woman forcefully for making sexual relations. Our mythological literature speaks about Rakshasas who did the same thing on many occasions. So much so that at a later stage matrimony achieved this way came to be known as *'Rakshasa Vivah'* i.e. demon type of marriage. It is fascinating to note that capturing a girl with the consent of the girl or her parents is not looked upon as a crime even now in

Kinner community. But this is permitted among the natives. Sometimes the boy and girl who have developed intimacy resort to this practice. Many times parents also inspire their children to go for such practice.

In some cases however, the girls are captured without their or their parent's consent. In some cases rivalry between two families to marry a particular girl, may also lead for Darosh, apprehending that other party may not lay their hand on the girl. The marriage by capture is practised by many communities in India. Kunchen form of marriage in Sikkim is exactly similar. **Ho, Santhal, Munda** and **Bhumji** tribes of Chhota Nagpur also practise marriage by capture. In fact, the parents of the girls in these societies deem it as an honour. They feel elevated, when it is made known in the public that such and such family has an eye on their daughter. They think that their daughter besides being attractive is being considered invaluable by someone.

In Darosh the would-be bridegroom, keeps a close watch on the daily routine of his would-be spouse. After careful observations he decides the date and venue of her capture along with his two three companions. In a case where girl agrees or her parents had their consent in it, darosh is only practised to dramatise the situation. In any case, it is the prerogative of the would-be bridegroom to touch the girl first, rest job is left to his companions. In all cases girl raises hue and cry but no one is supposed to interfere. If her struggle to escape succeeds, she can be proud of it. Ordinarily captors won't allow her to go easily. The girl is treated as honourable guest at boy's house and given delicious food. The women of the locality try to persuade her to give her consent to marriage, by accepting the proposal. They also narrate their own tales to generate confidence and faith in herself.

Once the girl gives her consent, the boy's parents send a *'majomi'* with all the formal offering to girl's parents, requesting for their pardon for the outrage committed by their son. In all cases, it is customary for the girl's parents to show their annoyance and resentment, but ultimately the majomis succeed in majority of the cases to bring them round. Remaining customs are the same as followed in the case of Janekang marriages. This type of marriage is quite often resorted to by the people belonging to lower Orungs who want to marry in families of higher Orungs so as to ensure their elevation in social hierarchy of the Orungs. But with the greater role of government administration in social sphere and fear of legal punishment, such marriages are vanishing from the Kannaura society.

In a case, where boy's parents are not in a position to undergo the expenditure to be incurred for Janetang type of marriage; then Lama or devta performs a simple ceremony known as *duniyomajo sharelala,* within a month of capture. According to this form, the girl goes to her parents, adorned in new clothes and ornaments accompanied by her husband, the majomis and two women. Some sweets full baskets for distribution in girl's parental village are also sent. Latter is known as *'stenranning'.* The groom bows on the feet of his mother-in-law and offers her some gifts both in cash and kind. The kind

includes necessarily garlands of edible pine fruit i.e. chilgoza and this offering is known as *'dolangchim'*. The boy then returns home and his wife returns after a few days. The day she departs *'nang'* ceremony is held. The member of girl's community gives her cash, utensils, clothes, ornaments etc. In such cases where girl agrees and parents disagree, the consent of the parent's is not desired at all. But this is to be remembered that unconsented girl is never forced for sexual relation by the boy. The girl who returns after rejecting all proposals is considered virgin and unaffected for matrimonial alliance.

Har is a form of love marriage. In this case the woman is essentially married and develops liking for some other married or unmarried man. In this form of marriage the women is first required to get divorced from her husband or husbands. The paramour has to pay *izzat* money to her husband or husbands. This amount is decided through mutual deliberations. Once the amount is paid the husband and wife catch hold of a dry 20 to 25 cm long twig of *Shur tree* in their right hands. They break it with jerk and the respective broken pieces are thrown backway. This ritual is known as *shing tag tag* i.e. breaking up a twig. It is said that till few years back they used to spit on each other in a contemptuous way. An issueless woman gets back her dowry articles or their price. If she has borne issues she gets back neither dowry nor children. The marriage system in Tibet, Sikkim and many polyandrous tracts find a close similarity in these customs.

The marriage ceremony is an elaborate affair. The day marriage is fixed the boy's side sends an ornament known as 'Fyayaz' to be hung on the forehead of the bride. All other ornaments are given to her only when she reaches her in-laws. In the olden days girls were not told about their marriage and it was kept as a guarded secret; but now they come to know about it immediately after the acceptance of the proposal. On the appointed day bridegroom, along with marriage party proceeds to his prospective in-laws.

It is customary to take more persons in this party. Women also accompany both the parties in this region. In poorer families bridegroom walks on foot to would-be-in-laws' house, while in well-to-do families the groom rides a well decked horse. Marriage party is welcomed by litting lamps and burning incenses. Then the party is feasted with *ghanti*, festive dishes of the valley, meat and butter. After the meals the exchanges of gifts take place. This ritual is known as *sening kunnu*. Mother-in-law is also greeted and offered with customary gifts of *dolangchin* also called as *nazrana* or *yume dalgonming* in different parts of Kinnaur. Thereafter, under the impact of intoxication, singing and dancing programmes continue. Next morning at the time of departure a group dance locally called *manchhang frolshimu*, is organized. On the conclusion of this dance the bride is led out of her house. At this time ladies from bride' side sing a very sad and pathetic song signifying that the girl is onward dead for her parents. The return journey is accompanied by the marriage party of the girl also.

To ward off the bride and bridegroom from evil spirits, on every bridge of

the rivulets a gasto lamb is sacrificed to appease the evil spirits dwelling at these spots. But now as a symbol, at many places coconut and a bottle of ghanti is offered at the bridges. The bridal procession is welcomed by the women outside the groom's village. Some rituals are performed by the mother-in-law of the bride before taking newly wedded couple inside the house. The returned marriage party is served with drinks and food which invariably includes meat.

The most important marriage ritual is the turban tying ceremony, which symbolizes the polyandrous marriages. All brothers sit in a row and the bride sits before them (this ceremony is known as *U-pagey* ceremony). The groom and bride are garlanded with *obal* (garland), made of locally available dry fruits. The maternal uncle of the groom then takes a piece of white cloth and ties *pagri* on the head of each brother. This indicates the marriage of all brothers with a common wife. In the evening *'bisyoshimig ceremony'* is performed. In this ceremony, those who accompanied the bride, offers gifts to her and depart. With this the marriage ceremony comes to an end. It may be mentioned that no vedic rites such as going round the fire etc. are performed in the solemnization of marriages in Kinnaur.

Hangrang valley, which is close to Tibet, has greatest impact of Tibetan culture. There the Darosh type of marriage is called as Namkuza and Janekang is known as Namaroza. Marriage party is called *Paghlen*. The ceremony of dolangchim is termed as Chhakpecha in Hangrang valley. The inhabitants of Hangrang valley seem to be purely Mongoloids and because of the reason the people of lower Kinnaur never entered into matrimonial alliances with them. The symbols of married women among the Hindu Kinnauras are ornaments, red mark on forehead and vermillion in the parting of the hair. Descent is reckoned in the male line. Unmarried children belong to their father's Khandan. After marriage the sons return to their father's Khandan but daughters accept their husband's Khandan. An adopted child usually gets the Khandan of the person who adopts him.

Though polyandry of the fraternal type is practised as a norm, monogamy is no less common. Monogamy is practised by those who are the only sons in the household, and those who left Kinnaur and settled outside. The same rules of marriages are also applicable to the scheduled caste population of the district. Polygamy is not popular among the Kinnauras. Very few cases of polygamy have been observed. This usually results in divorce, if the wife is barren, but while going in for the second marriage, the consent of the first wife is sought.

DIVORCE: Divorce is locally known as *shingtickashimig* or *thagchocha*, and is permitted by both the husband and wife. The divorce is usually demanded by the husband because the wife is quarrelsome, adulterous, or does not like to work or suffers from a contagious or incurable disease. And divorce is sought by the wife if the husband is unable to feed the wife or tortures her, is debauched or suffers from incurable contagious disease. The divorce proceedings are initiated by the aggrieved party in the Biradari or Gram Panchayat (village council), who after hearing them, makes them stand face to face, holding the

two ends of a *dingi* (small stick) and asking them to break it. The break of dingi signifies breaking of marital relations. There is no restriction on widow remarriage, provided the widow stays in the deceased husband's house for one year and none of the kin marry her during that time. If, however, she is pregnant at the time of her husband's death, she cannot remarry till she is breast-feeding the child.

Among the Kinnauras, virilocal residence is a common practice, wherein a wife after marriage moves to her husband or husband's house and shares the house with his relatives. Though in this polyandrous society husbands who are brothers, normally lead a peaceful life with their common wife, at times, inability of the wife to distribute her love equally to all husbands results in conflict. Also sometimes, when one brother brings a young wife, she by custom becomes the wife of all, the first wife gets jealous and then there is conflict. The cordial relationships in family are breaking up due to the tendency towards monogamous marriages and setting up of nuclear households.

Among the Kinnauras, the property, is inherited according to the *jathong* and *kanchhong* rules. Under this rule, before the partition actually takes place, a good part of agricultural land is given to the jathong (eldest) brother and the ancestral house to the *kanchhong* (youngest) brother, and thereafter the property is equally divided. The last wish of the dying man known as *tonglong* is usually honoured.

A widow in the absence of children can inherit the property but cannot sell it. After her death the property passes to the collaterals. Children of all the wives of a husband and with those whom he could have married share the property equally. Children born to a woman whom he cannot marry do not inherit the property. If a man has no son, property can be transferred to the daughters by making *hibba* (will) while he is living. After the daughter inherits the father's property but fails to have any issue, the property in that event will not be inherited by nearest kin of the son-in-law, but will be vested back with the nearest kin of the man.

BIRTH CUSTOMS: In the absence of Brahminical order, the rituals and ceremonies are dominated by Lama cult. Lama makes a charm and hangs around the neck of a pregnant woman, mostly written in Tibetan language on *bhojpatra* i.e. birth leaf. In almost all over Kinnaur the prospective mother is confined to 'Khudd' (cow shed) soon after she starts having labour pains. The indigenous midwife i.e. *'dai'* looks after the mother as well as the newly born baby. The cutting of naval cord and the disposal of placenta is her responsibility. The family where a child is born is deemed unclean and not allowed to participate in religious functions for a period ranging from seven to fifteen days. Even if unintentionally this tradition is violated, the family has to undergo *'Khepa'* (punishment) and is required to sanctify the *devta* by way of sacrificing a sheep or goat at the altar of the deity.

After the period of confinement *'Shudhi ceremony'* takes place. Cowdung is pasted on the floors and incensal herbs are burnt inside the house. Lama

names the child and sprinkles *charnamrit* (water mixed with so called nectar like water of an esteemed stream) in already cleansed and washed house. The child's horoscope is cast by the Lama and at this time he chants the song (sanctification) mantras. The well to do families celebrate this occasion and offers ghanti and eatables to the villagers. But no where in Kinnaur songs are sung on the birth of the child. In Ropa valley all families blessed with sons offer one goat collectively to the village deity on Ukhyang festival. There is no difference attached to the birth of a male or female child. Now with opening of more government hospitals and dispensaries, old customs, rituals and ceremonies are giving way to the modern means of medical aids.

DEATH CUSTOMS: As in the case of other customs, there is no similarity in death customs all over Kinnaur. The death customs observed are quite different in Lamaistic upper Kinnaur than those prevalent in Hinduistic lower Kinnaur. But the old customs such as *dubant* (drowning), *phukant* (burning), *bhakhant* (eating by vultures and birds etc.) are rapidly making way for cremation practice, which is invariably practised all over the country, except in case of infants, whose corpses are buried or sunk. Kinnauras not ready to discuss these customs elaborately with an outsider, fearing dishonour and loss of social respect in the eyes of outside world. The outsiders living in upper parts of the Kinnaur disclose that there have occurred instances even now in the recent past, when on the advice of the lama the dead body is cut to pieces and thrown to vultures, dogs and animals. May be that shortage of fuel wood forced people to opt for *'dubant'* and dearth of sufficient water in the nearby stream forced them for *'bhakhant'*.

In the upper Kinnaur valley, immediately after a death takes place Lama is called. He along with his co-partners start reciting narrations from the *pothee* (pothee is a book dealing with Buddhist scriptures). In Hangrang valley particularly the Lama recites 'PHOA' (Phoa is narration which is whispered in the ears of the dead body with the purpose of paving path to the heaven for the soul of the deceased person). On the arrival of the Lama the doors are closed and corpse is given bath in big vessel called as *Lam Kunyal*. Lama does pull the hair from the dead body's head and if few drops of blood comes out, this is considered as good omens for the family.

After bath, oil is applied on the body. Thereafter in a sitting posture body is taken to the cremation ground, which has already been fixed. Funeral procession is led by the Lama and musicians. A white banner known as 'OM KAFRA' held by two persons or lama is taken to the cremation ground. On completion of the half journey all people come back except those who are to cremate the body. At the cremation ground dead body is placed on *'dursa'* (pyre made of wood) and the same is lit by a close relative of the deceased. Next morning the ashes are collected and sent for immersion. Earlier it was thought very sacred to immerse the ashes in Manasarover lake.

Now with the sealing of international border, ashes are immersed at Rewalsar in Mandi district or in the Ganga at Haridwar. Those who can't

afford this ritual luxury, do the needful either in the Satluj or any other stream of the district.

The Khanma lama i.e. astrologer lama forecasts about the rebirth of the departed soul. The same evening, the bereaved members throw a mixed pudding prepared from loaves and pulses on the roofs of their houses, under the belief that through crows and other birds the food would reach the departed soul. This act is called *thuning.*

For thirteen days, the family members take simple food invariably bereft of meat dishes. The family remains in mourning for one year. During this period the family does not participate in singing and dancing ceremonies. After eight days *chhopta* ceremony is held. On this day the lama writes the name of the deceased on a piece of paper and tears it apart, to signify the end of all relations of the deceased with the world. After thirteen days *chhantyama ceremony* is held after which members of the bereaved family start taking normal food. On this occasion a feast is given to the villagers. The villagers are served with liquor and good food. After drinking and eating the villagers sing and dance. The whole purpose of this gathering is to make the bereaved family forget the sad event and start living a new and normal life. In some villages, at the top of the nearby hills stone pavements, called *Katangas* are erected in the memory of the departed soul. Death customs are observed in the similar manner with a little bit of variation all over the Kinnaur.

DRESS: The Kinnauras are very colourful in attire. Thepang popularly known as *Himachali cap* is a common dress of men and women in Kinnaur. The dresses used in Hangrang valley are clearly distinct from the dresses worn elsewhere in Kinnaur. *Chamru kurti* is an ordinary shirt worn by men. *Chhuba* is a long woollen cloak worn in winter. Chamu Sutan is woollen *pyjama* worn by men. Women use *dhori, choli, chhanli* and *gacchang.* Choli is akin to full sleeved blouse, Dhori is a type of woollen Sari with a girtle, Chhanli is a shawl wrapped around the shoulders with two ends fastened together near the breast by silver hook called *digra.*

In Hangrang valley Kinnauras prefer dark red or dark brown colour. Chutan akin to baby shawl is the dress of children in this valley. Ra Ghoya, (ordinary shirt) *golak or ghoye or yangluck or ligch* (woollen shawl), *Kera, Sutan* and *shew* are worn by Kinnaurese. While Kinnauras wear Ragu (ordinary shirt), Ghoya (Woollen cloak), Suluka (waist coat), Sutan (Woollen trouses), shew (cap) and Kera (woollen rope tied around waist). With the flow of money and exposure of Kinnauras to the world outside, traditional dresses are being replaced by modern wear, popular in the town and cities. Kinnaurese are very fond of ornaments. In olden days they used to go almost laden with silver ornaments. Thick bracelets, large ear rings, heavy silver chains, various kinds of beads and precious stones were the proud possessions of a Kinner dame. But Kinnaura men generally do not use ornaments. Some old people however wear earring known as *murki.*

RELIGION: Kinnaur is a place of curious existence of Hinduism and

Mahayanaist Buddhism. People embracing Buddhism belong to *Nyingmapa, Dukpa, Karyupta* and *Gelukpa* sects. On entering a Buddhist village, one finds a tomb and chorten or chosten in various directions of the village and also in individual houses, which are meant to ward off evil spirits. The centre for their religious activity is the *gompa* or *labrang* which is headed by a Lama. The central feature of Kinnauri Hinduism is its numerous *devta* or *devi*. In this district each household has a deity which is called *Kinshu* and the village deity is called *ghori*

The principal deity, the ghori, exercises his or her control over all the deities under that *ghori*. Similarly khunt which is formed of some *ghoris*, has a khunt devta or devi. The major deities are Maheshwar, Chandika, Badrinarayan and Dabla. The function of these deities is to ensure the welfare of their clientele and redressal of their sufferings. While *Kinshu* is worshipped in the corner of a room of every household, the other deities have their adobe in *santhong* (temple premises). There are 18 major deities of the Kinnauras who are said to be the progeny of Banasur and Hidimba.

The Kinnauras believe in spirits. **Bakharshuna, Banchis, Chous,** Khunkch are the spirits who reside in high altitude forests, deodar and kail trees, particular stones on a highway, and in cowsheds respectively. While the Khunkch does not harm unless put in trouble, the others harm anyone coming their way. **Churail,** the spirit of pregnant woman is warded off by wearing amulets and charms. Thatha ceremony is held every two to five years to ward off evil spirits. If a person is overpowered by a spirit, a shaman (oracle) is called. Buddhist erect village gate to ward off evil spirits.

FAIRS AND FESTIVALS: These are integral part of Kinnaura society. Mountains blocked isolation and severe winter with heavy snowfall, suspension of agricultural operation all these factors have contributed to the social awakening of a peculiar type among themselves resulting into communal recreation and amusement. In this god cult dominated land all fairs and festivals are ceremonised with a view to appease and worship gods and goddesses. Many such occasions are accompanied by community feasts. Their important festivals are : Ukhyang, Phaguli Dakreni, Deewal, Losar, Mahang, Sango, Khepa, Bal and Chota Deewal Shirken, Kanjyur, Zalma, Lama Zulka, Eratang Udavaning, Peetang, Puja, Chhayang, Kulma, Saura, Vaishkhang, Shivratri, Toshim or Toshing etc.

COMMUNITY COUNCIL: For maintaining law and order in the community, the Kinnauras have a traditional council called *char-bhai*. It consists of *char, halmandi* and *tokniya* besides a *mukhiya*. The post of mukhiya and char always belong to Rajput whereas that of *halmandi* and *tokniya* are filled by koli. This community council awards punishment to guilty, culprit or offender. Usually when a conflict occurs between two persons concerning economic, social, religious or other affairs, the case is referred to *charbhai*. In the caste council the village deity also performs a major role as judge through grokch. The verdict of the deity is final and supreme.

The guilty are punished with excommunication or are fined according to the severity of the crime. The Kinnauras follow unwritten code of conduct. Women never become the member of charbhai. Izzat money penalty is imposed for kidnapping, divorce, blame etc. If somebody gravely violates the tenets of society he is outcaste. This punishment locally known as *Tichig Michig* is awarded for grabbing of someone's immovable property, getting married in forbidden family or violating devta's direction. Chhetpa is a punishment awarded for not coming to deity's shrine or for coming late when summoned by the deity. Ti Darang Shishe is an exemplary punishment awarded to an incorrigible errant. The culprit is summoned to the shrine and deity in the presence of all villagers throws a shower of cold water on him out of the Krow (bowl kept in the shrine) of the devta and prays for his downfall at all levels.

The term of the office of *charbhai* is not defined. With the introduction of government laws on local self government, the traditional council are being replaced by statutory panchayats.

STATUS OF WOMEN: Women in Kinnaura polyandrous society forms pivot around which all other members of the family move. Based on her ingenuity and tactfulness she tries to please all her co-husbands and children. She is self-respecting and not to be tied down to unliked environment. The eldest married woman of the family is called as *goine* (means mistress of house), while the eldest man is known as *gortes* (master of the house). The *goine* is in control of the household and is also the treasurer of the family.

The women in Kinnaura society are the chief economic asset of the family. They practically do all the agricultural activity except ploughing, and collect fodder for the milching cattle, cook food and bring up children. Being common wife of all brothers she is greatly loved and cared by all. She has an equal right in the religious activities and works falling in exclusive jurisdiction of women are never interfered by men such as offering of collective prayer by the women of the village to devta if rains fail. Whereas men are given to excessive drinking, the women do all sorts of jobs. They not only look after the cooking of meals but have to tend wines which are used for making brandy and so to tobacco as well. The Kinnaura women who are very charming and attractive become haggard in no time because of heavy strain of all types of jobs. This is one of the reason that they look much older in appearance than in years.

Till few years back, women were hardly willing to participate in political activities, but now with the spread of education and through the efforts of governmental agencies more and more women are joining the mainstream enhancing their status and demand in social and political matters.

OCCUPATION: The Kinnauras have primarily been an agro-pastoral tribe. The traditional occupation of the Kinnauras had been agriculture, trade and sheep rearing but nowadays different kind of occupations like cultivation, sheep and goat rearing, spinning and mule-tethering are combined together.

The other important point is that while most of the male workers of all ethnic groups have more than one occupation, their females have only two

occupations – agricultural work and preparing woollen clothes. Very few inhabitants of Kinnaur are landless. Most of them own land though the acreage varies. The average landholding among the Rajput is higher than among the Kolis. Under the *shingmo* or *hala* system, the Koli cultivates the land and does all agricultural work of Rajput families, in lieu of which he gets a fixed amount of cereals.

The *jajmani* system among the Kinnauras is known as *bianana* system. It is the system of mutual cooperation between the Rajput and Koli, Lohar, Badhi and Nagalu. With the Kolis, they have bonu and sui bianana. Under the former, the Kolis are given wool to weave cloth, and in the latter cloth is given for stitching. In lieu of the services rendered, they get cereals and sometimes cash. Similar relations also exist with Ores, Domang and Chanal, where they are paid in cash or in cereals in lieu of the various services rendered by them.

Besides *bianan, bhoara* and *mokomokheyasimig* systems also coexist, in which under the former, all related persons are invited for economic pursuits and social affairs and under the latter one's neighbour (related or unrelated persons) are invited, and in lieu of the work they are served food. It is socially obligatory on the part of a person to render mutual help whenever called upon to do so. Prior to the closure of the border, trade was carried on with Tibet, which has since been stopped. Now the Kinnauras market their produce through Lavi fair and middlemen to Shimla and other places in the country. The Kinnauras are dexterous in the art of weaving, knitting and basket making. They however do not sell their woollen or basket products.

FOOD HABITS: The Kinnauras are non-vegetarian. They are also fond of *Chhang* and smoking tobacco. The staple food of Kinnaruas consists of *chapatti* of buckwheat and barley or maize with *rongi* or *mah*. Chapati of ogla and phapra (varieties of buckwheat) are also prepared. Potato is the staple vegetable. Fruits like apple, apricot, pear, grape peach and nuts are grown and are also consumed during the season.

This district of Himachal Pradesh may be most backward district in the whole of India, but there are numerous features of the human stuff living in this isolated land, which make it altogether a different composition. Integrity is a proud possession and intrinsic attribute of an average Kinnauras. They are brave, hardy, courteous, hospitable, honest and sincere people. They are acute and punctual, but liberal and unsuspecting. Every person is safe in Kinnaur.

The Kinnauras are respected for their honest dealings in their leading trading marts, the travellers held them in high esteem because of their tolerant disposition towards followers of all faiths. Theft and dacoity are unknown in this part of the world. An average Kinnaura can miss a meal or starve but he will never resort to stealing or other questionable means for getting his bread. Physical cleanliness has never been a strong point with an average Kinnaura. Probably, poverty, living conditions, physical environment etc. all have been factors for this negligence. Their woollen clothes are very dirty and they rarely

take bath. However, with the spread of education, health facilities and exposure to the modern means of transport and communication and spread of television, all have contributed to some sort of awareness for cleanliness and hygiene. By late, crimes have also been reported from Kinnaur district, tarnishing the age old reputation of its being crime free society.

LAHAULAS

The dwellers of Lahaul area are known as Lahaulas. The district of Lahaul-Spiti a unique sociological unit is one of the frontier districts of India in Himachal Pradesh. It is a barren, desolate and windswept region and lies at an average elevation of over 3500 mts. The people of Lahaul are a mixed race. They are mainly Buddhists and their dialect resembles Tibetan. At some point of history, Tibetan settlers came into the head of Bhaga valley and Spiti and poured into head of Chandra valley. Aryans and Semi-Aryans of different stock also came from West to South to the valley and started living there. Therefore, it seems that the present Lahaulas are the ultimate product of the amalgamation of these different races. But unlike the Lahaul valley, the Spitians are purely of Tibetan stock and no race of Hindu or Aryan blood is found there.

CASTE SYSTEM: Caste system is prevalent among Lahaulas. Their caste system, traditions and social structure is akin to the Pangwals. The Lahauls who inhabit both Lahaul and Spiti regions include some of the following castes, divided into two major categories. The upper classes consists of Rajputs, Brahmins, Thakurs and Rathis, while the lower class includes Halis, Bhots and Lohars. Lahaulas are endogamous and polyandrous. In Lahaul, there is arranged marriage (Tabhagston) as well as also theft *(Kumai Bhagston).* In the former case parents do arrange the marriage, whereas in latter case boy and girl are given freedom of choice. They do not permit marriages within three degrees of relationship both on father's and mother's side. Lahaulas have evolved from the cross breeding of Aryan and Mangolian racial types. The joint family system is mostly prevalent among Lahaulis. Except *gotsi* no other birth customs are observed.

DRESS: They wear white or brown coloured *Kattar* (a long loose Tibetan gown), while younger generation is wearing coat. *Tobri* (Kullu cap) is a common head gear and *Suthan* (warm tight trousers) is used to cover the lower parts of the body (legs). The Lahauli women adorn their dresses with ornaments on head and neck to look more attractive. The Lahauls are mostly non-vegetarians and do not consider any food or drink as tabooed. *Lugri* is a local name for a drink.

MARRIAGE SYSTEM: Lahaulas have their own marriage system. Negotiations for a betrothal are conducted by the father and the maternal uncle of the boy. They take a pot of *chang* and visit the parents of the girl they have picked out, and explain their intentions. The mother then goes to ask her daughter, and if she is agreeable to the proposal, her parents accept it and partake of the *chang.* A refusal to drink means a final rejection ofthe offer of marriage. The *chang* is, however, sent on two further occasions, and at the

third time of asking, the payment and acceptance of a rupee settles the matter, and the day is then arranged for.

The fetching away of the bride takes place at night. On arrival at the bride's house, the bridegroom, accompanied by eight or ten friends has a little encounter with the servants of the house, who will not let him in until he has paid them a fee. Once inside, the bridegroom unfolds his gifts. His *chang* is passed round, and all the bride's relatives receive part of the cake he has brought. This consists of roasted barley flour kneaded into a stiff dough with butter, and also a portion of the dried ribs of a sheep. Then the bride's dowry is presented. It may consist of up to eight or ten complete outfits of clothing, a sum of money, all the utensils required for her new home, a cow or a hybrid yak and a pony or two. The bridegroom then takes his bride to his home and on arrival they have to delay entering till the following ceremonies are gone through. As they are bound to bring some hidden evil with them from the road, the *lhapa*, or spirit medium, is engaged to counteract the evil influences of the demons (*shrinom*).

After invoking benevolence of the *lha* this man throws from the top of the house a live sheep before the wedding party waiting outside. The sacrifice is seized by the party and heart and liver are quickly torn out, cut up, and eaten raw, the pieces being scrambled for by all the friends present. The *lama*, meanwhile proceeds with reading the *chos* which are calculated to scare away the evil spirit: he has brought with him a small pot with a dougt effigy of the demon inside it, this he eventually breaks and kills the demon in the effigy. The party then enter the house and partake of the marriage feast, with such appetite as they may have left. There is no fixed age for marriage, but at present for boy it is 20 to 25 and girl 17 to 20 years.

As a rule matrimonial ties are not broken and divorces or separations are rare. If a marriage turns out childless, a second wife is taken, but the first wife retains the position of honour in the house, and the second has to do the outdoor work. If a man wants to divorce his wife, he has no claim on her dowry and has to pay her a sum of money, as it is fixed by elderman in the society. On the other hand, the wife who desires divorce has to pay that sum to her husband. A divorce is completed when the ceremony of *kudpa chadche* has been performed. The pair makes a thin thread of wool and hold it by the little finger and pull it apart, saying that from henceforth they will have no more to do with each other. They may then remarry. Polyandry is very general. Monogamy is however, the more usual form of married life, and there can be no doubt that woman is really respected in Lahul much more than any other society.

FOOD HABITS: The daily meals are usually three in number. Early in the morning pancakes made from buckwheat flour are eaten, and at midday porridge of barley flour mixed with dried buckwheat leaves. The evening meal consists of buckwheat cakes eaten with meat or soup when procurable or with curds. Wheat flour sometimes takes the place of buckwheat, and also on

high occasions, such as New Year and marriages, wheat is used for manufacture of beer (*chang*), the ferment used being called *phap*. Another sort of *chang* is brewed from rice and barley, and a kind of whisky is also distilled from barley which is drunk in its rawest form, and is never allowed time to mature. Cattle are not slaughtered nowadays except perhaps in some villages at the head of the Bhaga valley; but five or six sheep are killed in each house at the begining of the winter; the flesh dries, and will then keep good for any number of years; the older the meat, the greater the delicaty to the taste of a Lahaula. All the people of Lahaul will eat sheep that have died a natural death; and Dagis will eat dead cows and bullocks; but it is said that the Hesis will not. Vegetables are now cultivated all over the Lahaul Spiti except Khoksar, where it is very-very cold. Lahaul valley has also become famous for potatoe production.

OCCUPATION: The Lahaula does not stay at home to cultivate his crops and a large proportion of the population is absent whatever time of the year is considered. Before 1962, a very large section of the Lahaula population used to go to Tibet to purchase wool and pashmina and despatch on their own sheep and the latter are then sent back to Tibet for winter grazing. But now restrictions on international border has curtailed their activities. Now for business pusposes they go to Kullu, Kangra, Chamba, Jammu and Kashmir and many other parts of the country. Nearly all Lahaulas can knit stockings, and weaving is done in almost every home. The cloth is however very narrow and the wider and better stuff is all woven by immigrants from Upper Bushahr and Kinnaur. *Karru* (gentian), *patis* (aconite) and other roots are dug in the waste lands and profitably sold in Kullu and adjoining areas.

The Lahauls are honest, hospitable and peace loving. They are robust and quite healthy. Basically they are agriculturists but mule rearing, weaving and spinning occupations are also carried. Both Hinduism and Buddhism are the dominant religions in Lahaul and Spiti regions. Spiti area is predominantly Buddhist dominated. Even Hindus visit Buddhist monasteries and offer worship.

GUJJARS

The Gujjars are identified by General Cunningham with the Kushan or Yachi or Tochari, a tribe of the Eastern Tartars. About a centuries before Christ, their chief conquered Kabul and Peshawar, while his son Hema Kadbhises extended his sway over the whole of upper Punjab and the banks of the Yamuna as far down as Mathura and the Vindhayas. His successor, King Kanihska, the first Buddhist Indo-Seythian prince, annexed Kashmir to the Kingdom of Tochari (Bingley 1904 Rose, 1919; Negi. 1976). The probability of Gujjars being the descendants of the ancient 'Yachi' or 'Kushan' is suggested by the fact that besides Jat, they are the only numerous race of foreign origin in the North-Western part of the Indian subcontinent who are known to have been powerful during the early centuries of Christian era.

The origins of the Gujjars are still shrouded in mystery, but the majority of the scholars are of the view that these people migrated to India during the sixth century from Central Asia, from where communication with India was a regular feature along well-established trade routes. It is also said that they inhabited the Western part of India, where province Gujarat exists after their name. The Gujjar rulers founded the city Gujarat in Akbar's reign. Most of the historians believe that the Gujjars were a Rajput community.

The Gujjars are supposed to be the descendants of 'Huns' of Gurjaras. The first mention of the Gujjars in the historical records is found from 5th century onwards along with Huns. Their social intermixing with the people of Indian plains was a long drawn process of invasions, victories, suppression, loss of political power and absorption in Hindu society. It is very difficult to fix the exact date of this nomadic race's conversion to Islam.

The Hindu Gujjars of Himachal trace their origin from Yashoda, mother of lord Krishna. The Hindu Gujjars are found mostly in the district of Mandi, Kangra, Sirmaur Solan and Bilaspur, whereas Muslim Gujjars are dispersed in the districts of Chamba, Mandi, Bilaspur, Solan and Sirmaur. The Hindu Gujjars speak the dialect of the region. *'Devnagari'* is the script used in writing. The Muslim Gujjars speak Gujjari dialect amongst themselves, which is a mixture of Gujarati, Urdu and Dogri, but while conversing with others they use broken Hindi. Their script is *Perso-Arabic.*

FOOD HABITS: The Hindu Gujjars are usually vegetarian, and their diet depends upon the availability of cereals. They are occasional non-vegetarian and take meat of goat and chicken. Their staple diet consists of wheat or maize *chapatti, dal* of *urad* and gram, vegetables or milk products and curd. Milk and milk products occupy an important position in their normal menu for these are their own produce. They are occasional consumer of alcoholic drinks. Smoking is a common habit among men and women.

The Muslim Gujjars are mostly non-vegetarian, but mutton is consumed occasionally and on important occasions only due to lack of availability. Eating pork is a taboo. They do not eat beef or buffalo meat. Their staple food consists of maize, chapati, pulses of *urad, mah* and gram, roots and tubers and leafy vegetables. Preparations of milk products like *lassi* and *dahi*, also form a part of their daily diet. Taking alcoholic drink is a taboo as per the tenets of their religion, but a few do consume it. Smoking is a common habit among them. Special dishes are cooked for marriages and festive occasions. These are preparation of mutton, sweetened rice and *'dal'* of *'mah'* or *'chana'.*

SOCIAL CUSTOMS: The Hindu Gujjars are divided into a number of exogamous *gotra* like *Khatana, Chauhan, Gursi, Didhar, Bhumphal, Kalarya, Parswal, Malehria, Koli, Kautiya, Motte, Chaichi, Bhunch, Bargat, Kalas, Chhore, Ladi, Chai, Bajar* and *Baddhena.* These 'gotra' denote their ancestry and regulate marriage alliance. The Hindu Gujjars place themselves along with Kshatriya though other communities place them a grade lower.

MARRIAGE SYSTEM: Muslim Gujjars have two groups, Bhatariye and Bhanariye. These groups do not intermarry. They are further segmented into exogamous gotras, viz, Bhatti, Chandel, Chauhan, Banja, Lodha, Kasana, Bhensi, Chopra, Chichi, Khatana, Padha which indicate their Rajput clans. The prohibition against clan endogamy, a special feature of clan custom, is lacking these days, probably due to greater Islamization of the Gujjars, which permits marriages between cousins of all levels.

Socioeconomic conditions are always taken into account while settling marriages among Hindu Gujjars. Marriages take place now on adulthood. The common symbols of marriage for women are *koka, choori, tikka* and *bala*. After marriage, the residence is patrilocal.

The distinctive feature of Muslim Gujjars marriage is that consanguineous marriages take place. A boy can marry his cousin either on the father's or mother's side provided they have not in their infancy between suckling from the breast of the same mother. The marriages take place by *nikah* in which both the boy and girl agree to each other inconsideration of an agreed amount of *mehar* which has to be paid in the event of dissolution of marriage. Both junior levirate and junior sororate are permissible.

DIVORCE: Divorce is permissible among Hindus and Muslim Gujjars. Both widow and widower marriages are practised. Traditional joint family system is existing in both Gujjar communities. The elders in the family are given respect and regard. *Purdah* system is prevalent. Joking relationship exists. The family property runs along the male line. A daughter can claim the property of the father in the absence of a son. Under normal circumstances property is equally divided among the sons, with the widow having a right to maintenance.

The role of Gujjar women is very significant in both the communities. They are hard working and besides household chores, do other work like tending the cattle, making cowdung cakes, plastering the walls and floors of the house with cowdung and bringing portable water, fuel and fodder of the cow and buffaloes. The Muslim Gujjari milks the cow, makes *'ghee', 'panir', khoya* and other milk preparations and often also take them to the market. Gujjar women known as 'Gujjaris' in local language are tall with graceful figure and are very attractive. Marriage system among Hindu Gujjars is regulated as per Vedic rites and among Muslim Gujjars according to their own tradition as elsewhere in India.

OCCUPATION: The Hindu Gujjars lead a settled existence and practise agriculture. The majority of them are landowners. It is customary for each family to keep a cow, but the milk is only for self-consumption and not for sale because of the fact that they trace their origin from the famous Yaduvamsha to which lord Krishna belonged, whose fondness for cow herding is well known to all.

The majority of Muslim Gujjars are pastorals and they eke out their livelihood through the sale of milk and milk products. They have herds of

buffaloes with which they keep on migrating from low to high and high to low altitudes during summer and winter seasons in search of green pastures. The *'ghasia'* (pastoral land) at these altitudes are allotted to them by the Forest Department, which are owned by the government.

In Himachal Pradesh, the Gujjars are members of **'Parvatia Adim Jati Sevak Sangh'**, which was founded in 1956 to extend welfare activities among the tribes of the area. The various schemes initiated by the state and central governments for the welfare of tribes have started showing results in this community also. The Gujjaris are skilled in embroidery with coloured thread on caps and Jawahar jackets.

They also decorate the walls of their house by making flora and animal designs. The Gujjars have typical appearance. A Gujjar keeps beard and wears special type of turban. The Gujjars have their traditional *'bhaichara'* panchayats. The members of this panchayats are elected on the basis of age, experience and knowledge.

JADS

The Jads are Buddhist. They have occupied the area of Pangi and Chamba. Like Pangwals, they are a polyandrous and patrilineal tribe. Being dwellers of cold region they always prefer woollen clothes. They earn their income from agriculture and wool trade. Like other tribal groups, Jad women are also more hard-working than men. Marriage and divorce with some variation from civil society is recognized among Jads. Unmarried girls in the region are known as *'Jomo'*. The place of Lama (priest) is very high in the routine matters of the family.

Tribes in Himachal Pradesh are almost of similar habits and traits irrespective to their region or area. They are based on the need for protection, on ties of blood relationship and on the strength of a common religion. Some are *monogamous* (one husband one wife) while others are *polyandrous* (more than one husband) or both; a few tribes are *endogamous* (marrying within caste) but all are *patrilineal* (recognized through father or males alone) and *patrilocal* (a custom where wife goes to stay with husband's family). The division of labour beyond simple sex and age differentiation is almost nonexistent. The socialization of the young is carried in the family and the intimate relationship of day-to-day living. Caste system and untouchability is a common sight. Dowry system and bride price is prevalent.

They are superstitious and little educated. Crimes, such as murder, looting and arson are very very rare among tribes in Himachal Pradesh. The staple food consists of maize and wheat flour, local cereals (Dal), local vegetables, meat, milk products and fruits grown in the area. Tea is quite common. But Lahaulis take tea without Sugar and add butter and salt in. Smoking is a common habit among all sections of tribes both male and female. Home-brewed drink is taken frequently on both festive and sad occasions. Leaving aside few towns and district headquarters where the local people have come

into contact with educated and service class, the social set up of the tribals and other classes living in higher hills has not changed much. Their habits, manner and outlook is much different from those of lower parts.

Most of the people living in the upper Himalayas, form the tribal population of the state. Government in Himachal has been following the policy of assimilation towards tribes, rather than interference. It is also important for the administrators, scientists and other lot who go to work among tribals; to enter there with tribals touch. It is their responsibility to see that they get, in fact, a square deal and save them from the exploitation and cultural extinction.

In Himachal Pradesh we have a good number of castes people, who are representing the earliest settlers in the hills of western Himalaya. Some of them are discussed below:-

The prehistoric inhabitants of the hills are probably identified with the various scheduled castes and tribes, who form a substantial part of the contemporary society. In the preceding pages, we have discussed important tribes in the Pradesh. **The scheduled castes found in the state are : Kolis, Halis, Chamars, Dagis, Chanals, Dhakis (Turis), Baris, Rehars, Lohars, Hesis, Sipis, Bard, Bujru, Bhat, Khatik, Julaha, Kumhar, Nai, Sanshai, Saini, Teli etc.** Socially and economically they form the lowest rung of the society. Some of these fall in the categories of untouchables and as a social rule, not allowed to enter the kitchen or use same wells as used by higher castes. They are ordinarily short in stature and of dark complexion. It is possible that they came form the original stock of Kolarian (Kols) race which once inhabited the whole of the Western Himalayas. Politically they have not been very important, but agriculture of the region is greatly in their hands and they only perform the great deal of field work

They are of non-Aryan origin, but through inter-caste marriages, much social interfusion has been taking place. With the passage of time,many changes have appeared in appearance and characteristics of the people, which we may ascribe to the influence of Aryans on the social, cultural and ethnological character of the original inhabitants of the hills. *Kolis, Dumnas* and *Meghas* are the only castes having names with ethnological character, but many of the other castes are now distinguished by their occupational names which may also have sprung up from the same source as the Kolarian race. The people of these castes are mostly artisans and work as cobblers, basket makers, iron smith, carpenters, weavers, drummers and tailors. An attempt has been made in the following pages to discuss certain important caste groups in the state.

KOLI

Broadly the word Koli means the remote inhabitants of Kolarian region, but the term indicates some different meaning, when it is also used in practically the same sense as Dagi or Sippi in the hills. Many theories are prevalent regarding the origin of the Kolis. According to one popular version, they are believed to have sprung from abandoned Kanets who volunteered to

remove carcasses in the absence of Chamar when disease claimed the lives of large number of cattle. They are widely distributed throughout the state. In some Shivalik hills, the Kolis call themselves Kshatriya or new Rajput. *They are scheduled caste.*

The Kolis are generally known by different names in different parts of the state. In Chamba, the term 'Halis' is more common. In Kullu region, Koli, Dagi and Chanal means very nearly the same thing, but the term Koli is more common in Saraj, Shimla hills and Sirmaur, whereas Chanals largely inhabit Mandi, Kangra and Sirmaur. In Eastern Himalaya and Kangra, Barhai is known as Tarkhan (carpenter). He is a village wood worker. In Kinnaur Domang work as carpenters and blacksmiths (Lohars).

DRESS, DIET AND LANGUAGE: Their dress and dialect differ from region to region. They speak the wide variety of dialect which are broadly classed as Western Pahari or Himachali. In Kullu their women wear Suthan which is narrow at the ankle, choli (top) and a large shawl which is wrapped around. They also support thippu (scarf) to cover the head. Men wear a traditional suthan and jora (a flared shirt) but nowadays they have taken to pyjama/pant and shirt. They are known as Sippi in Lahaul and speak a dialect akin to Sanskrit and in other parts their speech is of Indo-Aryan family with admixture of vocabulary from Mundari and Tibeto-Burman.

Kolis are non-vegetarian. Their staple diet consists of wheat, maize, pulses of *mah* and *channa*, seasonal vegetables and moderate use of locally grown fruits. Men are fond of smoking and drinking locally brewed liquor namely *Lugari* and *Sur* (made of rice and barley). A rare among the women also take drinks. In some parts of Kullu valley the use of tobacco is prohibited, as according to popular belief, its practice angers the local deities. But now with the passage of time this belief is fading away and giving way to new habits. The Kolis, rank comparatively low in the regional caste hierarchy occupying a position lower than that of the Lohar, Bajgi, Barhi but slightly above that of the Chanal and Dumna. However their relative position differ from place to place. In the traditional *varna vyavastha* (caste hierarchy) they occupy a place at par with the Sudra.

MARRIAGE SYSTEM: Koli marriages are settled through negotiation outside the *'got'* of the father and mother side. Marriages by mutual consent and elopement are also given social sanction. In the past cross cousin marriage with the father's sister's children was allowed, but now it is considered improper. The usual age of marriage for girls and boys is between 18 to 20 and 20 to 24 years respectively.

Marriage consists of a number of rituals. After the *mangani* the actual marriage ceremony takes place at the bride's house. The practice of *Kanyadan* and *phera* do not exist. The binding part of marriage ritual is the ceremony in which the *goru* (priest) takes the sacred lamp five times around the couple in the name of water, cereal, deity dharach (metal plate), gugul and lastly sur (liquor). Another important ceremony takes place, when the bridegroom

returns to his place along with the bride-as soon as the couple reaches the place, a sheep is thrown from the balcony and instantly sacrificed.

The following day, another sheep is sacrificed but before that the goru sprinkles some water over its body and ear and asks whether the marriage would be a success or not. If the sheep flutters its ears, it is considered to be a good omen meaning thereby that the deity has given his blessings.

The common symbols of marriage are nose stud pin and red puranda. The bride lives patrilocal. Bride's price exists which is locally known as *randh.* Both divorce and remarriage of widow and widower are allowed and so are the practices of levirate and sororate. In the event of divorce and remarriage of a woman, her paramour has to first pay back *randh* or *reet* to her former husband.

BIRTH CUSTOMS: The birth of a son is especially felicitated. Purificatory rites are observed for the child and the mother. Pollution lasts for twelve days and on this day they worship the clan deity and the woman is deemed fit to resume normal activities. Sweets are distributed on this occasion and close relatives are also invited. Jattu (hair cutting ceremony) is usually performed for the boy. The maternal uncle cuts the hair and a priest officiates on the occasion. A sheep may also be sacrificed to mark the occasion.

DEATH CUSTOMS: Like other parts of the country, dead are cremated. The bones and ashes are collected on the third day. A death feast is given to all the *biradari* members. The *'dholi'* who beats the drum in the funeral march is given clothes and some personal belongings of the dead. The bones are immersed either in a nearby river or in the Ganga at Haridwar. Pollution is observed for three days. Ancestor worship also exists. A *'thar'* (raised platform) is constructed for those who die unnatural death. In the memory of departed soul a *chabutra* (platform) is constructed or a tree is planted.

FAMILY SYSTEM: Both nuclear and joint family system exist among the Kolis. All the sons equally share the ancestral property. Daughter, however, do not get any share unless there is absence of a male heir in the family. The interpersonal relationship with the members of the family is cordial and of avoidance and joking nature depends on the age, sex and kinship status of the respective members. Women play an important role in both domestic and economic spheres. Except for certain taboos women play an active part in religious matters. They maintain their socioeconomic relationship with other neighbouring communities. They have the traditional patron-client relationship locally known as *'puli'* with certain artisan communities, namely Lohar and Bard who make and repair iron implements and baskets respectively.

OCCUPATION: Kolis are landless and majority of them work as agricultural labourers or as share croppers. They also perform jobs as masons, carpenters, basket-makers, weavers, wool cleaners etc. Bonded labour does not exist, but child labour is prevalent. People of certain castes employ the Koli as agricultural labourers and give them a share from the produce on each harvest and also on festive occasion.

RELIGION: The Kolis are Hindu by faith and worship major gods and goddesses of the pantheon order, but have great respect for local god and goddesses and their village and clan deities. They do not undertake any auspicious work without the consent of a deity. Each region has its own deity which is held in great respect by every individual. The Kolis do not take planquins of major village gods on their shoulders, but in Kinnaur they are allowed to do so in case of junior deity when he is going on a long journey. Further *Kishnu* is considered to be their local deity and *Narain* is the regional deity, which is worshipped by all the members of the community. In some areas *Garha* Devta is also worshipped.

Socially, they are avoided for acceptance of water and food. Many castes, who come to attend their feasts are served food prepared separately by one of their own members. They also do not go inside the sanctum sanctorium of the temples. Earlier Kolis were not allowed to enter the houses of Rajputs and Brahmins.

COMMUNITY COUNCIL: Like any other traditional societies, the Kolis have their own council of elders to punish the guilty by either imposing cash fine or through social boycott. Now statutory panchayats have come to play an important role, but still divorce and domestic quarrels are settled by their own Biradari Panchayats. The interactional level of the Kolis has enlarged considerably owing to better and quicker means of transport and communications network. It is also due to spread of literacy and migration of people from rural areas to urban areas where new economic linkages have been established.

BARD

The name *Bard* is variously pronounced as *Barad, Barar, Burar* or *Berar* but its etymology is not clear. The origin and migration history of the community is not known, though this community is distributed in various districts viz, Bilaspur, Hamirpur, Kangra, Shimla, Solan and Kullu. Their population according to the 1971 Census was 2432. In 1981 their population was given as 2843 (for Barad) and 416 (for Barar, Burar/ Berar). In 2001, it was 3596 and 2011 census report put them at 4961. Their villages were used to be located on rough and rugged hilly terrain of the Shivaliks. They speak local dialects of western Pahari or Himachali like Kehluri (or Bilaspuri), Kangri and Kulvi. The script used is Devanagari in communicating both within and outside the community. They share the local dress and ornaments etc. A great deal of change has taken place in their hebitats now. The community is classified as scheduled caste.

FOOD HABITS: The Bards are occasional non-vegetarian in food habits and eat fish, eggs, birds like *titar* (partridge) and *jungli murga* (jungle fowl). The intake of non-vegetarian diet is, however, relatively occasional in comparison to vegetables, tubers and pulses. Their staple food is maize *roti* in winter and wheat in summer. Rice is usually eaten on festivals and festivities. The

fruit and milk intake is very low. Men are fond of alcoholic drinks, and country liquor is occasionally consumed by them, because it is not easier to afford it. Food taboos are observed on death and on certain festivals. Steadily they have also changed their food habits.

SOCIAL CUSTOMS: The Bards share the clans of the Rajputs, like Chandel, Pathania, Jammual, etc. and so claim a Kshatriya descent. But the community is well aware of its low social status and is *placed among the Shudra in the varna system.* They however, see themselves above the Chamars and do not eat with them except in religious gatherings.

MARRIAGE SYSTEM: The marriage rule is *got* or gotra (clan) and village exogamy and community endogamy. Marriages used to take place between 10 and 14 years for girls and between 12 and 16 years for boys till seventies of 20th century. But now in majority cases provisions of Hindu Marriage Act are followed. The common mode of acquiring mates has been *satta-batta* through negotiations. Monogamy is practised. *Bindi* (mark on forehead) and glass bangles are marriage symbols but not adhered to strictly. The newly wed girls generally wear a red suit (a kurta and salwar with a red shawl or dupatta). Bride's price used to exists in some cases, where the boy is illiterate/ or where there is no sister for exchange.

The amount is decided by the Biradari Panchayat. The residence of the bride is patrilocal. Divorce is rare and permissible in cases of maladjustment and cruelty. The children in such cases are the liability of either of the spouses as per decision of the Biradari Panchayat. Judicial sanction is preferred for divorce as the divorced women are ensured of the compensation. Widow marriage with a junior levirate is permissible. A widower can remarry a junior sororate or some other woman.

The marriage institution has witnessed changes in respect of an increase in marriage age, a decrease of the bride-price and to giving of dowry.

The Bard families are predominantly nuclear ones, where a son starts living separately. The *lari* (bride) avoids the husband's father, elder brother and other elderly males of the village and community. Joking relationship exists between *devar* and *bhabi, jija* and *sali* and *kuram* and *kurmani* (boy's and girl's parents). The eldest son is the successor of his father but property is inherited patrilineally as per the rules of male equigeniture. The changes in family pattern show decline of the joint-extended system.

Their women are economic assets to the concerned families but their social status is regarded as lower than that of the men. They used to go from door to door to sell the winnowing fans they make and earn a living. They also sing greeting songs and get alms. They collect fuel and fodder, fetch potable water and do all agricultural and other household jobs, but political activities and mechanisms of social control remains the men's domain.

BIRTH CUSTOMS: Pre-delivery restrictions on the expectant mother are observed. Postnatal delivery pollution, *sutak* is observed for 11 days and

purification occurs by *guntrala* ceremony by taking cow's urine. Naming and cereal-taking ceremonies are ignored. The *mundan* ceremony is performed by the mother's brother before the fifth year.

The marriage rituals are performed by the priest of the community and no Brahman priest and barber are employed. The elder sister's husband acts as the *nai*. The community priest used to be given one rupee and twenty-five paise for this purpose. Music is provided by band masters of the community. The clan deity is worshipped. Brief Vedic marriage rituals are performed. The bride and groom circumambulate the sacred fire and parents perform *kanyadan* and also give feast to the groom's party. At the groom's place the bride and groom circumambulate a pipal tree. The bride returns to her parents followed by the groom on the same day. The marriage is consummated with *muklawa* on the next day. In case the girl is below puberty, the muklawa takes place after her attaining the puberty.

DEATH CUSTOMS: The dead are cremated and ashes immersed in a river nearby. Death pollution is observed for 13 days. The *dan* is given to *dhian* (married daughter) and no Acharaj/Brahman is employed but a learned person from the community does the job. On the sixteenth day, a feast is given to the community.

OCCUPATION: Traditionally, the Bards were landless and lived on basketry as well as begging. But now they have got small landholdings. The land allotted to them is however, insufficient for their subsistence on agriculture and animal husbandry. So, they still survive on making mats and *chhaj* (winnowing fans). These are made of *surar/sirki/reed* (a kind of grass). The male members of the community seek daily-wage casual labour in road construction, forestry and sandstone quarries to supplement their income. Some also work as agricultural labourers with the village landlords. There is no bonded labour though children sometimes work as domestic aids. The community lacks persons in white-collar jobs and in business entrepreneurship. Market is located at a short distance and is of daily nature and is fully regulated. Dealings are both in cash and kinds by exchange of their produce.

COMMUNITY COUNCIL: The community has its own Biradari Panchayat whose headman or panch is elected through a voice vote. It settles domestic and social quarrels of the community and may, also punish a person by imposing cash fine or social boycott. It also ventures to uproot certain social evils and suggests changes in the living habits of the community. The general welfare programmes are taken up by the statutory village panchayat which also takes up cases not solved by the Biradari Panchayat. They may also go for other statutory measures for a solution of the economic disputes over land and water.

RELIGION: The Bards worship gods and goddesses of the Hindu pantheon. During the post-Independence period, many have taken to Radhaswami sect which emphasises little dependence on ritual and deities. They are iconoclasts who do not weep at the death of dear and near ones. They immerse the

ashes of the dead in the Beas river. Their marriage rituals are also not as elaborate as that of the Sanatanis.

They attend regular meetings called satsang of their guru at Beas in Punjab. Those who follow the Hindu Sanatna rules, propitiate family, village are propitiated as village and regional deities. Deot Sidh, Guga, Lakhdata and Nahar Singh are propitiated as village and regional deities. Devi Sohni is their Kulja (family/clan) deity.

FAIRS AND FESTIVALS: The sacred shrines of the regional deities are visited on annual fairs and festivals. The festivals like Holi, Diwali, Dussehra, Shivratri, Krishan Janamashtami, Ram Navmi, Rakashabandhan, Lohri and Baisakhi are celebrated by the community. Two local festivals of *'Chiran'* and *'Sair'* are also celebrated by them. The sacred specialists in their own or other communities are consulted for removing diseases caused by evil spirits.

There is a tradition of basketry and mat-weaving both as craft as well as the occupation of the community. The regional folksongs, tales, music and dances are shared. Women sing some *vadhai* songs (greeting songs) by offering a small pinch of green grass called *drub dena* on festive occasions. Recently, men have started forming a brass-band musical party to provide music on marriage occasions and earn their livelihood. *Bhajan* and *kirtan* of goddesses are also common folksongs. Gidha dance is performed by women on festive occasions.

SOCIAL TABOOS: The Bards have little ritualistic and social interactions with the upper castes. But they have occupational linkages with other communities in the form of supplying winnowing fans, working as labourers, etc., and they depend much upon seeking alms or begging. They also have little commensal norms with other communities, except with the Chamars with whom they may exchange *kachcha* and *pucca* food particularly during their Radhaswami Satsang. Their water resources are either separate or shared with the Chamars. Cremation grounds are usually separate but temples and other public places are common with the upper-caste Hindus.

The Bards have favourably responded to certain modern developmental programmes. They presently give school education to their children but up to secondary level. They have adopted modern methods of treatment, health and medicare but belief on traditional methods is still strong. Now, sterlization has been accepted as a family planning method but incentives, more than the spirit of the scheme, attract them. They have drinking water, electricity, roads and mass media facility accessible in the vicinity. They have received economic aids for house construction under the Integrated Rural Development Programme (IRDP) and availed of immunization under the Integrated Child Development Scheme (ICDS).

The facility of public distribution system is also availed of. Their energy resources are cowdung cakes, wood and straw. They are mainly self-employed in basketry and general labour but remain from hand-to-mouth and indebted

to the local shopkeepers and landlords. In the past decades, from the beginning of 21st century, rapid changes are taking place in Himachali set up, leading to inclusive development of all sections of the society.

CHAMAR

Chamar is a widely spread community of the traditional leather workers. They have been included in the category of *scheduled caste.* Chamars trace their origin from a legendry ancestor named Chano, who dragged and skinned the dead cow and so was excommunicated by his brother Bano. Chano (Chanoor) a great Tantric and Wrestler in the court of Kansa was defeated and killed by Lord Krishna. The Chamars worship Siddh Chano as their community deity in the name of *'Garha Devta'.* Chamars are spread all over the state and known by various names as Mochi, Ravidasi and Ramdasis.

In district Kangra those Ramdasis, who are abstaining from leather work call themselves 'Arya' as they are followers of Arya Samaj sect. Chamars in Himachal Pradesh are both Hindus and Sikhs. Some are the followers of *Nirankari panth,* while others of *Radhaswami.* Most of the Chamars of Himachal Pradesh are of local origin and do not recall their history of migration. Their main concentration is in the Kangra, Hamirpur, Mandi, Bilaspur, Solan and Shimla districts.

FOOD HABITS: Chamar community is non-vegetarian. Earlier a Chamar used to eat carrion, but now carrion is largely eaten of by vultures, crows and kites a few animals like sheep and goats. Their staple food is maize and wheat. Rice is eaten occasionally on festivals. Pulses like gram, urad, moong, masur, kulthi and peas and beans are taken along with roots and tubers and seasonal vegetables. The cooking medium is mustard oil, vegetable or desi ghee. Now on there is trend towards the decrease of non-vegetarian food like fish, egg and meat which are considered a luxury. Men take country liquor off and on. Women do not consume liquor. Milk and milk products are consumed regularly. Old men generally smoke loose tobacco in a locally made 'jhajri' (a pipeless earthern hubble-bubble), but young men usually smoke bidi and cigarettes.

DRESS: Men wear *Kurta* and *Pyjama* (trousers) or pants. The women wear *Kurti, Salwar* and a *Chadru.* Traditional ornaments like *chak, murki* or *laung* or *tili,* wristle or rings, anklets and tandira (necking) are also worn by their women. Most of these ornaments are made of silver. But now with growing sources of income gold is also frequently used. In the old princely days, a chamar was not supposed to live in a double-storeyed house, or wear gold ornaments, or enter the village or the courtyard of an upper caste Hindu without putting off his shoes and use only percussion instrumental music and not to engage a brass band at marriage. The bridegroom used to walk and not ride on a horse or planquin. But now with the introduction of 'Anti-Untouchability Act' and various other provisions made by the government such practices have been banned.

SOCIAL STRATIFICATION: The Chamar community has the followers of various sects. As mentioned above there are Ramdasi and Ravidasi chamars in district Kangra. The Ramdasi chamars or Aryas claim superiority over the Ravidasi. Differentiation also occurs at religious and occupational level. The Ramdasi Aryas have given up leather work whereas the Ravidasis continue to do it. Some Sikh Chamars have also given up leather work and claim superiority over those who are engaged in shoe making.

The clear cut social divisions are *'gots'* and *'als'* (lineages) which are numerous and act as exogamous limits to regulate marriages and indicate ancestry or descent. These are totemistic origins and named after place, plant and animal names etc. Some of the recorded clans are-*Labube, Bains, Janeagal, Bilpuj, Bhatti, Janjuhe, Daroch, Kaihal, Katoch, Gumre, Heer, Mahirye, Badgal, Satheal, Satralu, Kathala* etc. Some of these clans are shared with the Rajputs. Chamar community is considered at the lowest of social status performing only menial work. Traditionally they were known as sudra, the last among four varnas mentioned in the Hindu scriptures.

FAMILY AND MARRIAGE SYSTEM: The Chamars are endogamous and practise *got* and village exogamy but avoid consanguineous marriages. Junior levirate and sororate are allowed in case of death of either spouse. Child marriages were the order of the day till last decade of 20th century, but now with wider exposure and role played by social organizations child marriages have come to naught. Marriages usually occur through negotiation and through *batta satta*. In the olden days practice of bride price was prevalent. Now chamars follow the *Kanyadan* (marriage ritual of giving away the daughter in charity) pattern and give *daj dakhan* (dowry) which consists of household articles, ornaments and clothes. Monogamy is the order of the day but bigamy may occur if no issue or no male child is born to the first wife. The marriage symbols are *sindur* (vermilion) or *bindi* (mark put on forehead by women), glass bangles and *tili* (nose pin) or *koka*. The bride lives patrilocal. The *Gharjamai* (resident son-in-law) system also exists.

Divorce is socially recognized on grounds of maladjustment, impotency, chronic illness, cruelty etc. Now divorce occurs only through judicial approval. Either party can seek divorce. The divorcee, widow and widower can remarry. Children are the liability of the father. *Jahnjrara* (junior levirate) is a common practice in the event of widow remarriage. But a widower may or may not marry junior sororate. Spread of education has affected the family and marriage system. The family system of the Chamars is both nuclear and vertically extended joint family system. But now joint family is breaking up speedily. The inheritance is as per male equigeniture and the eldest son succeeds his father.

The status of women is normally inferior to that of men. They carry out all domestic duties, collect portable water, fuel and fodder and work in agricultural fields. They also contribute to family income in kind or cash by rendering menial services to village landlords and by acting as midwives. Inspite

of their playing very healthy role in the family's income, still they have somewhat inferior position to their counterpart men. They fully participate in social and religious ceremonies, but have little say in the mechanism of social control.

The life-cycle rituals are performed by chamar's own community priest or *padha*, who is also known as *masand*.

BIRTH CUSTOMS: Like in the case of women of other community, pre-delivery restrictions on the expectant mother do occur. Post delivery pollution called *'sutak'* is observed for 13 days but usually the mother is not treated as pure before a month is over. She takes cow's urine for purification. In the case of a male child birth a *'jatra'* is led to the clan or other deity. Naming and cereal-taking ceremonies are not observed. They used to name the child as per the name of the day, month, place etc. Mundan of the boy is the only childhood ritual performed by boy's mama in any odd year of birth usually before three years of age.

Marriage rituals are similar to those of the other Hindus of the area. They propitiate the clan deity and at bride's place the groom and bride circumambulate the sacred fire at the groom's place, they take rounds of and worship a bil or mango or daran (pomegranate) tree. The bride's parents give feast to the groom's party and the latter also reciprocate. The *Muklawa* (departure of the bride for the groom's house) now takes place on the next day of marriage.

The customs related to death are similar as practised by other Hindus of the area. The dead are cremated and their ashes are immersed in the Satluj or Beas river. Ancestor worship is observed during the pollution period, which lasts for 13 days. The priest perform *'havan'* and takes offerings or the same may be given to *'dhyan'* (married daughter). Annual and fourth annual death anniversaries are also observed to commemorate the dead. The Chamars speak the local dialect of the Western pahari, viz. Bilaspuri in Bilaspur and Kangri in Kangra and write in Devnagari script both within and outside the community.

OCCUPATION: Traditionally, the Chamars subsisted on leather work or shoe making. But nowadays, many have started to work in various menial jobs, casual labour, masonry, carpentry, etc. They also possess small land holdings and are engaged in agriculture and animal husbandry. With governmental efforts and reservation, a good number of male and females have joined government jobs and public sector enterprises as peon, clerks and officers. Children also help their parents by doing some menial services. Bonded labour is absent. The Chamars usually convey the death news of an upper caste Hindu to his relatives. This is called *Sunani*. Traditional patron-client relationship still exists in some cases, supplying shoes to farmers and getting their customary dues in the form of crops. The customary share in the harvest is called *Khalothi* and at the time of festival *tuhar*, whereas during various ceremonies *pariah* is given to them. Landlord-tenant and cultivator labour

and other symbolic relationship exist.

COMMUNITY COUNCIL: The chamars have their own informal community council consisting of village *sayane* (elders). They intervene in social disputes, marriage and divorce problems. Swearingin the name of their patron deity *'Garha'* whose place of worship is called *'than'* or *'thada'*, located in the village, usually resolve many socioeconomic disputes. Village panchayat and police are also approached now frequently by the people to get timely and legal remedy.

RELIGION: The community is mainly Hindu and follows Hinduism. Some Sikhs belong to Nirankari sect. *Siddh Chano* is of special reverence. His worship is also known as *dhaja.* Churma (sugar coated pieces of bread) and sacrifice of a sheep or goat or hen are used to remove the ill effects of its curse on the offender or the guilty. People of all communities in the village are scared of the anger of this deity. The other prominent deities of the Chamars are *Baba Balak Nath, Lakhdata Nahar Singh, Gugga* and various female deities like *Hari Devi, Nabha Devi, Santhoshi Mata, Jwalamukhi* and *Vaishno Devi.*

This community strongly believe in the diseases caused by supernatural powers of evil spirits and have oracles in the community or employ the ones from the other communities for removing their effects. *Khel* (swaying of head in an induced hypnotic trance by a Chela) is arranged for such purposes. The birthday of Guru Ram Das is observed.

Chamars celebrate various Hindu festivals like Lohri, Baishakhi, Janmashtami, Dushehra and Diwali. Regional Pahari folk songs, tales of love and dances are shared. 'SWANG' is a comedy play enacted by the member of the community. They accept *Kuchcha* and *Pucca* food and water from various communities, but can exchange *sidha* or *sukka* with other people. Traditional water sources are separate. Cremation grounds are also separate, but may visit the same religious shrines. They interact with the upper castes on festive occasions by rendering various services and getting good returns for the same.

In the past three decades through various programmes, government has tried to bring Chamars to the national mainstream. Education and Health facilities are liberally provided to them. That is how old life style is giving way to the modern outlook.

CHANAL

Chanal is a *scheduled caste* community spread all over the state. But their major concentration is in Kinnaur, Shimla, Kullu, Kangra and Chamba. The word Chanal seems to be derived from the Chandala whom all Sanskrit scholars describe as a begotten by a Sudra and a Brahmin. The chanals correspond regarding their occupation, rituals and customs closely to the Hali of the Chamba and Dagi and Koli of Kullu and Shimla. In district Kangra, Chanals are treated somewhat lower to the Kolis. Socially and economically, they are the weaker section of society. They occupy a position almost parallel to that of the Hali so much so that their identity is being merged with the latter. Socially

they occupy the position equivalent to that of the communities such as *Koli, Dagi, Bansi, Sanhai, Doom* and the like.

DRESS: Chanals also wear the same dress, as by their neighbouring population. Men wear shirt and pyjama, which are locally known as Suthan. Men often wear a jacket and a cap specially while going out. Women wear Salwar, Kurti and Chadru to cover their head.

FOOD HABITS: Chanals are non-vegetarian in their food habits, but desist from eating beef. They normally prefer meat of sheep and goat and occasionally that of jungle pond fish. Their staple food is wheat, maize, Kodra (which is grown in large quantity), pulses of mah and grass. Vegetables are integral part of their diet. Walnut and Walnut oil is also used.

Men are very fond of smoking *hukka* (indigenous hubble-bubble) and drinking home brewed liquor, which is mostly made of rice and barley and is known by different names such as *Lugari, Sur* and *Chakhati.* Chanal women do drink occasionally.

BIRTH CUSTOMS: Chanal's life cycle rituals commencing from birth to death are broadly in accordance with Hindu belief and practices. The birth of a male child is a time of joy and celebration. The mother has to follow certain restrictions after the birth of a child. It is believed that both mother and newly born child are vulnerable to evil influences in the first few weeks after the delivery. Purificatory rites are observed for both the mother and child on sixth, eleventh and twenty first day, when they are bathed and after that a woman is considered ritually clean to continue with her routine.

The child is also taken out of the house. The important ceremony following thereafter is *Jattlu* (cutting of hair) which is normally performed for the male child and maternal uncle first cuts the child's hair followed by other relatives.

MARRIAGE SYSTEM: Marriage is performed at the bride's residence. Before the marriage the boy's side has to approach the girl's father several times and each time they give a few bottles of liquor and some wheat bread. On the betrothal day, the boy brings in addition, a piece of jewellry, generally bangles for the bride. At this time, the date and day of marriage are also fixed. On the fixed day, the bridegroom along with marriage party comes to girl's house. Marriage party is received with respect and given welcome.

The couple takes four rounds of certain ritual objects and are considered married. *'Kanyadan'* does not exist. Then the marriage party returns. The maternal uncle acts as priest at the time of the marriage rituals. Similar ritual acts are performed at the bridegroom's place. Usually a he-goat is sacrificed and its meat is distributed among guests. The bride's relatives return after one or two days. Though it is true that the Chanals, Kolis, Dagis, Bansis, Sanhais and Dooms are parallel in ranking yet a Chanal of Mandi would not intermarry with a Dagi of Kullu.

Chanals maintain endogamy not only at the community level but also at territorial level. There are no further endogamous subdivisions of the Chanals,

but there are exogamous units called 'got' which are often the descent groupings and are named either after ancestor or place. Marriage is arranged through negotiation, mutual consent, batta-Satta and elopement. The initiative of marriage comes from the boy's side and is communicated to the girl's side by a middleman, who may be a common acquaintance or a distant relative. Bride's price is also settled on this occasion and if is acceptable to both the sides the marriage finally takes place.

In exchange marriages two families exchange brothers and sisters as spouse. This is locally known as *batta* (means exchange). This type of marriage is not much prevalent nowadays. In marriage by elopement the boy and girl desirous of living as husband and wife decide to meet at a common point from where they elope and stay for a few days at a friend's place. Initially there is opposition from girl's parents, but later on agree after persuasion by boy's parents. Finally girl's parents agree to the proposal. Marriages are monogamous, but in case of barrenness of the first wife, a second marriage may be contracted. Widow or widower remarriage is known as *'gadhoj'* and does not require elaborate marriage rituals. Generally a red *puranda* (hair band) is presented to the women in the presence of close relatives, who act as witness. Levirate and sororate are usually approved forms of marriage.

DIVORCE: In the matter of divorce both husband and wife have equal rights. In case the wife deserts the husband and marries another man, the brides price will have to be returned along with penalty fee by her paramour. The wife on the other hand may also demand compensation through panchayat and law courts from her husband, in case he deserts her. The common grounds for divorce are cruelty, mental or chronic physical sickness, adultery practice of witchcraft etc. Children are the responsibility of the father in the event of divorce and new husband on woman's remarriage after being widow.

DEATH CUSTOMS: The dead are cremated. Infants and people who dies of small pox and snake bite are buried. Pollution is observed for 13 days. An Acharaj, officiate at the time of death rites. Ashes and bones are immersed in the water and the death rites are performed after a month and subsequently every year during the fortnight specially marked to commemorate the ancestors. A funeral feast is given to the members of community known as biradari.

FAMILY SYSTEM: Joint family system was order of the day, but in the recent past nuclear family system is gaining round. The rules of residence are patrilocal and eldest male member exercises his authority as head of the family. The succession and inheritance is in the male line. Daughters do not have any claim on parental property except in the absence of a son. In such circumstances the father-in-law invites his son-in-law to stay with him and look after his property. This system is known as *'ghar javantri'*.

The relationship among all members of the family are based on love, respect and mutual cooperation. Both avoidance and joking relationships also exist which depends on age, sex and kinship status. There is no strict purdah system, but

women are expected to cover their head in the presence of senior members of the society.

STATUS OF WOMEN: Chanal women enjoy considerable freedom in their family management. They participate in all activities such as tending to cattle, bring fodder, fuel and water, working in agriculture fields with shoulder to shoulder to men. They are an economic asset. But inspite of all this, they have no right to inheritance and work as an independent authority, in the sale and purchase of property. In religious and social matter, she is made to pay second fiddle to the men. Final decision in the family and socio-religious matters is taken by male. The spread of education has not helped much in changing social position of the women.

OCCUPATION: Majority of chanals work as agricultural labourers for the high caste Brahmins and Rajputs in lieu of a certain share of the produce. In the past years this community was exploited both socially and economically. The higher castes also ask them to perform certain jobs such as carrying fuel, removing dead cattle and other such lowly manual works. At the time of death they carry fire in a pot and lead the funeral procession. They are also required to carry the luggage and gift item at the time of marriage. To keep family income growing, they also work as daily wage workers. Now with the spread of education and various schemes launched by the government, chanals have also occupied jobs in the public and government sectors.

RELIGION: Chanals follow the religion which is combination of both Hinduism and local beliefs and practices. Besides other gods and goddesses of the pantheon, Shiva is the presiding deity. There are also clan, village and regional deities which are duly propitiated from time to time. The propitiation of these deities in turn protects the people from the onslaught of natural hazards, epidemic etc. Faith in spirits and supernatural powers is also widespread and protection against the same is sought from exorcists called 'chela'. The Chanals have their own rich heritage of folk songs and dances, folktale and folklore, which differs from region to region.

COMMUNITY COUNCIL: To maintain social coheism, chanals have an informal community which plays a prominent role in solving the minor social, religious and economic issues. The community council lays stress on mutual reconciliation. Land dispute, loss of property and other criminal cases are taken care of by the statutory panchayats, which are playing an effective role at the grass root level since independence.

The Chanals maintain connubial and commensal norms with Hali, Bansi and Sanhai, who are treated almost at par with each other. Earlier each of these were endogamous but now intercommunity marriages are becoming a common feature. The Brahmin and Rajputs can't accept fried food and liquor from them. The Chanals on the other hand accept both *Kuchcha* and *Pucca* food from high castes. The various schemes launched by the government from time to time have brought quality changes in the life of Chanals.

BUJRU

The Bujru or Bhujroo/Bojhru/Bojru, is broadly regarded as a community of the *Dakaut Brahmans* who traditionally survived on the alms offered to propitiate inauspicious stars in Hindu astrology, the *Shani* (Saturn), *Rahu* and *Ketu*. The name Bujru is sometimes not liked especially by the educated or better-off members of the community, who consider themselves of the Agnihotri clan. Another synonym for the community is *Panda* in certain areas like Bilaspur. In Mandi district they are known by the name *Giani*. A respectable title as Panditji is often given to them. Some use Sharma or Agnihotri as surnames.

According to Rose (1919), the Bujrus were practitioners of black magic and not astrologers. But some Bujrus presently do practise astrology besides warding off the evil effects of the 'harsh stars' (inauspicious stars) by them. The etymology of the term Bujru comes from Hindi word *bujhna* meaning to read one's mind and to make predictions. This also speaks of their astrological or related traditional occupation. The etymology of the broad group Dakaut is from Dak, a saint from whom they trace their origin. *Dak Rishi or Garg Rishi* gave them a small percussion musical instrument also called, *dak*, a mini form of the well-known damru musical instrument of Lord Shiva. They have a belief that if the Dakaut seeks alms and offerings for the evil stars while beating the dak, they will not be inflicted with the ills and sufferings caused by these stars. The community sometimes also takes pride in warding off the sufferings of people caused by the evil stars and by the effects of lunar and solar eclipses.

Under different synonyms the community perceives its distribution at inter-regional level in the neighbouring state of Punjab as well. They perceive their spread almost in all districts except in Lahaul and Spiti and Kinnaur. Their major concentrations are, however, in districts of Kangra, Hamirpur, Una, Bilspur and Mandi. They are usually town or suburb dwellers. Some ethnographic information on the community is available in Rose (1919) and Ibbetson (1916). The community appears to have lived in the area particularly in Kangra for centuries and its members fail to recall their original home or place of migration.

LANGUAGE: They speak the regional dialects of the Himachali or western Pahari such as Kangri, Bilaspuri, etc. and communicate both within and outside the community in Devanagari script. Only priestly or alm-seeking males have some dress markers. They wear a white *kurta* and *dhoti* and put a *parna* on the shoulders or sometimes *safa* on head. They also make a *tilak* on the forehead. Women's dress is like that of the neighbouring communities—a *kurti*, *salwar* and *chadru/dupatta/chunni*. They wear golden and silver ear and nose studs/rings, necklaces, wristlets and anklets.

FOOD HABITS: Members of the community are occasional non-vegetarians though many of them are vegetarian to the extent of absention from

consumption of meat, fish and eggs. Liquor consumption is also an occasional habit restricted to some people on festive occasions. Staple food is wheat and maize supplemented by rice. Various kinds of pulses – *urad*, *masur*, *moong*, *peas*, *grams*, *beans*, etc., are consumed along with moderate consumption of roots, tubers and green vegetables. Preparations are often cooked in mustard oil and hydrogenated vegetable fat. Non-vegetarian foods and heeng (asafoetida) are taboo during death pollution. Festive food preparations are *kheer* and *halwa*, *seviyan*, *babru*, etc.

SOCIAL SYSTEM: They recall only a few *gotras*, such as *Kans*, *Gautam*, *Bats* or *Vats*, *Nags*, etc., and lack any social hierarchy. Gotra is used to regulate marriages and suggest ancestry from a particular ancestor. In regional hierarchy the Bujrus are treated below the agriculturist Brahmans and do not have any matrimonial alliance with them. They are at par with the Ard Popo, Masku etc. They are endogamous and practise *gotra* and village exogamy. Marriages occur through negotiation and occasionally through *batta-satta*, which was a common practice a few decades back. Marriages presently occur after adolescence/puberty and usually after the girl is 16 and boy is 20. A few decades back pre-puberty child marriages were practised, which was considered an appropriate age for *kanyadan*. A little dowry called *daj dan* is given in the form of domestic articles. Monogamy is now practised. Marriage symbols are *sindur*, ear and nose studs/rings and glass bangles. The bride lives patrilocally.

DIVORCE: Divorace is not permitted by the community but presently, either of the spouse can take a judicial course on grounds of maladjustment etc. Usually the woman seeks maintenance and children also become the father's liability. Divorcee remarriage may occur. Widow remarriage is usually not allowed and the women have to live a simple life. The widower can remarry a junior sororate or any other woman.

FAMILY SYSTEM: The family pattern is mostly nuclear, and vertically extended joint families are breaking up. Avoidance relation exists between *sauhra* and *nuh/bahuti/lari* and between *lari* and *jeth* and *nandoi*. Joking relationships are informal and similar to many other Hindu communities of the area. Property is inherited on male lines and equally by all sons on the father's death. The eldest son succeeds the father but the successor has little powers to command the joint family.The women are mostly confined to the domestic chores of fetching potable water and managing family expenditure, and participate in social and religious ceremonies. But they do not perform their traditional occupational rituals and do not seek alms. A few women are working as school teachers and contribute to the family income. Political spheres and mechanism of social control is not a woman's domain.

BIRTH CUSTOMS: They do not observe specific pre-delivery rituals, but restrictions may exist on the woman before and after delivery. The *sutak* or post-delivery pollution is maintained for 22 days. The purification ceremony called *panjap* or *gunt* is observed by taking water of the Ganges and cow's

urine when the woman takes bath. The naming is done as per the Zodiac sign at the birth of the child. The *khirpu* ceremony is observed after the eighth month. *Mundan or jamalu* ceremony is observed on odd years by the *mama* of the boy and the hair is offered to Balakrupia or other kul deity. Janeu ceremony is specifically observed during adolescence or before marriage. Vedic prescriptions are followed while performing this ceremony. A feast is also given to friends and relatives. Ear and nose piercing ceremonies may be observed during puberty or before marriage of the girl.

Detailed Sanatana rituals are observed on marriage which include *mehndi, batna* and *tel* ceremonies as the preparatory rituals. *Ved* and *lagan* takes place at bride's place when both *lara* and *lari* circumambulate the sacred fire and bride's parents perform *kanyadan* and give a feast to the bridegroom's party. Consummation of marriage occurs through *muklawa* ceremony on the following day of the marriage.

DEATH CUSTOMS: The dead are cremated and ashes are immersed in the Ganges at Hardwar. *Patak,* the death pollution gets over on the eleventh day when an Acharaj performs ancestor worship and seeks alms. The relatives and friends are feasted on the *solia* (sixteenth day) to open exchange of food with the family. Annual and fourth annual death rites are also observed called *barkhadi* and *chabarkhadi* respectively.

OCCUPATION: The community is landless and thrives on its traditional occupation of seeking *dan* of the evil stars, lunar and solar eclipses called *grahan dan,* birthday alms and *tola dan* offerred by people afflicted with bad effects of stars or serious diseases. The tola is the offerings in the form of iron objects, urad, til, mustard seeds, salt, oil and some coins or cash. Some also work as *jyotsi* (astrologers) and oracles. They sometimes also seek offerings in the name of the dead. Many also earn by way of petty general merchandize and a few are rehriwala or hawkers.

A few also run restaurants and sweet shops. Some persons are in Government jobs, in teaching and defence services. Dealings with local market is direct which is of daily nature and is fully regulated. They also sell their offerings to get cash or items of domestic consumption. Child and bonded labour does not exist.

There is no traditional community council but elders of the community resolve their social disputes and also define their clientele. Village or locality disputes are resolved by the Gram Panchayat or ward members of the Town Area Committee. The fear of local deities also helps in solving disputes.

RELIGION: The Bujrus believe in Hindu pantheon trinity Brahma, Vishnu/Narayana/Thakur, and Shiva. Local/regional deities of prominence are Sitala Mata, Baba Balak Nath and Guga. Some also propitiate Lakhdata and Nahar Singh. Jawalamukhi also evokes special reverence. Various local fairs and festivals are celebrated, namely Holi, Baisakhi, Sair, Lohri, Shivratri, Krishan Janmashtami, Diwali, etc. The Holi mela at Sujanpur is

famous. Sacred specialists are from within and outside the community for performing all life-cycle rituals. They follow oral traditions of the region; Kangri folksongs and folktales are sources of entertainment besides *bhajan, jagra* or *kirtan* of female deities. Community-specific art or craft are lacking though Bujru women know how to adorn their houses with wall and floor paintings. They also know knitting.

JAL CHAL (exchange of food and water) is limited to some communities in social gatherings. They may offer a *suchchi rasoi* to certain caste people. Putative Kinship may exist with many caste communities. They have traditional jajmani system with a Brahman priest who is offerred *sidha* known as *nasrawan* (rice, sugar and pulses). A *nai* is also sometimes permanently employed who officiates in festivals and festivities and on death rituals. They have emerged as petty shopkeepers and in teaching and defence services.

They have favourably responded to various modern developmental programmes. The literacy level has increased. Boys and girls do receive higher or college education and some receive post-graduate education as well. They use modern health and medicare methods but do have faith in and sometimes also use traditional methods. Family planning is favoured after two or three children in case a couple has a male child. Usually women get sterilized which is the main method of family control. They use/avail themselves of modern mass media (radio, TV, cinema, newspapers, etc.) facilities and all houses are electrified. They are linked with roads and in certain places also have railway links. Tap water is the major source of drinking water and sometimes stepwells are also in use. Energy sources are firewood, cowdung cakes and kerosene oil, and also use LPG and gobar gas. The Bujru community is part of modern India, where equal opportunities are given to all in the sphere of education, health, job, justice system etc.

HALI

The word Hali, means a person who earns his livelihood by hal (plough). They are believed to have come as servants in gift along with the princess of Delhi in marriage to Chamba, sometimes in the past. The Hali, Arya or Dhingra is mainly employed in field labour, either as farm servants or as tenants. Halis are predominantly found in district Chamba and the areas adjoining to Punjab. They have been classed as scheduled caste. Halis share their homestead with other communities, but in a separate locality, which is usually occupied by them. They converse among themselves in a Chambiali dialect whereas with others they converse in Hindustani. Their script among themselves is *Perso-Arabic*, and a few also know *Tankri*. With others Perso-Arabic and Devnagari scripts are used.

According to Rose (1919) the names Koli, Hali, Dagi and Chanal are used synonymously with a territorial differentiation to denote low caste in the hills. The term 'Koli' is used in Kullu and Kinnaur, 'Dagi' in upper part of Lahaul-Spiti, 'Chanal' in Kangra and Mandi and 'Hali' in Chamba. But this does not

hold good today, as each of the communities mentioned earlier maintains its respective identity.

FOOD HABITS: Halis are non-vegetarian. In the past, they used to eat the flesh of dead animals, the practice, which has been given up now. Presently, a section of them avoid taking meat of dead buffalo or cow, but others do take it. Their staple food is rice and rongi or mah with moderate consumption of vegetables, roots, tubers and fruits. Milk and its by-products are also consumed. They do take home brewed alcohol and smoke tobacco. The intake of liquor and non-vegetarian diets increases in winter months.

MARRIAGE SYSTEM: According to the bio-anthropological report, the community has a number of exogamous septs, viz. *Badhora, Badi, Basiusa, Chilkhwan, Dhulkhan, Ghahi, Ghelan, Jurgho, Kahan, Kardocha, Kharere, Khawal, Khripar, Kodhe, Marenu, Mahan, Pachran, Ramsan, Rihanu* and *Torain.* These help to regulate marriage alliances. Endogamy at the community level and exogamy at the septs level are practised for regulating marriages. Hypergamy meets with social approval. While setting marriages seven generations on the father's side are avoided, whereas four generations are avoided on the mother's side. Junior sororate and levirate are practised.

Till few years back child marriages were prevalent followed by gaona at the time of attaining puberty. But now marriages are performed at the age of 18 and 21 for girls and boys respectively. Mats are acquired by 'byah' and by 'service'. In the former case it is a usual form of the marriage, while in the latter case a son-in-law serves in the prospective bride's house for sometime and then marries her. Monogamy is practised, but bigamy is resorted to when first wife is unable to bear a child. Dori and bala are the traditional marriage symbols. Women also use vermilion.

Till few years back 'Malia' (bride price) was prevalent, consisting of 60 silver coins to be paid in cash, but now it has been replaced by *dahej* (dowry) which is usually in kind and includes utensils, clothes, agricultural equipments, *charkha* (spinning wheel), sheep, goat, cow or buffalo. The girl comes to stay with her husband after marriage, but if there are no sons, a ghar-jawai comes to stay with his wife's family.

Marriage ceremony takes place at the bride's residence by circumambulating the sacred fire seven times in a thatched canopy, amidst chanting of mantra by a *Bitlaha* (a degraded Brahmin) who conducts the ceremony. Nupital ceremony takes place at the bridegroom's house, but in the earlier days, the bride was first offered to the Laxmi Narayan deity.

Widow remarriage known as *Gadhoj* is permitted. It is a simple ceremony and is symbolized by gifting a *choli* and *dori* to the widow. In the event of a widower remarrying an unmarried girl, full marriage rites are observed. A widow even without performing *gadhoj,* can continue to live in the house and bear children, such children being called *chakhandu.*

DIVORCE: Divorce system is prevalent in the community, known as

Chhad-Chhada. Either of the party can seek divorce, with the approval of the panchayats, on grounds of cruelty, maladjustment, infidelity and chronic diseases. The compensation to the aggrieved party is settled on the merit of the case. Minor children are normally the responsibility of the mother, while grown up of the father.

BIRTH CEREMONY: The expectant mother is given proper rest in the period of pregnancy. She is not allowed to go alone to secluded places. Postnatal restriction on the mother does accur and pollution is observed for a period of twenty days. On the completion of ninety days of birth, the child is brought out of the house and shown the sun and moon. This is known as *akraran.* Six months after the birth, Khirpu ceremony and the christening ceremony are observed. At two and a half years or in the fifth year *Jattlu* (hair cutting) ceremony is observed, wherein boy's head is shaved off.

DEATH CEREMONY: The dead are cremated and death rites are performed by the eldest male member of the family. The bones and ashes are immersed in a river.

FAMILY SYSTEM: Traditionally Halis are living in joint family system. The eldest male member is the head of the family and commands greater respect and authority in the family. The relationship among family members are based on mutual love and respect. The husband and wife refer each other tecknonymically i.e. *Raju Ki Amma* and *Dinesh Ke Bapu.* Avoidance and joking relationship also exists.

The property is inherited according to the *mundaband* law of inheritance, where all male children inherit parent's property equally. Even the Chakhandu has the right to inheritance. Hallad (illegitimate children) have no right of inheritance. The position of women is low in the family inspite of her active role in socioeconomic matters. All household work, agricultural activities and various other field activities are performed by them. They participate in all social and religious activities.

RELIGION: They follow Hindu religion and are basically Shaivite. The Halis have family, clan and regional deities. Their family deities are ancestors, propitiated for the welfare of family members. Hali's regional deities are Chamunda Devi, Jalpa, Shakti and Sitala, who are also worshipped by all. Their main sacred centre is Manimahesh, the pilgrimage of which is must for salvation. The major fairs are Jatra and Minjar and the festivals are Basoa, Lohri, Diwali, Dushera and Shivratri. Their sacred specialists are *Bitlaha* officiate at life-cycle rituals and the *Chela* is from the Sippi community.

COMMUNITY COUNCIL: Halis have their own community council, traditionally known as *biradari panchayats.* It is headed by a *mukhta,* who is supported by three or five community members. This council deals with petty cases pertaining to marital discord and breach of community norms. The decision of the council is binding and shall be honored by all. On not honouring the decision, the guilty person is excommunicated or is fined usually in kind,

but occasionally a cash fine is also imposed if the crime is severe.

OCCUPATION: Hali's traditional occupations were to skin and tan dead animals, to remove carcasses, and to play music on marriages and other social and religious ceremonies. Currently a majority of them are depending on agriculture and government jobs, as a source of their livelihood. The children below the age of 15, both boys and girls, also attend to the cattle and work as farm labourers in other's fields where they are paid both in cash and kind.

The traditional intercommunity linkages exist while exchanging edible goods. No high caste *(Savarna)* people will accept *Kuchcha* or *Pucca* food from them. On the other hand, they accept all types of food from other castes. From a *chuhra* or a *sippi*, a Hali can accept only Pucca food. Intercommunity marriages are something unknown among Halis. Jajmani relationship exists with different communities, from whom they receive foodgrains at the time of harvest in lieu of their services. Halis are skilled in the art of weaving woollen pattu or gadru basically for their own use. They are also deft in the art of Chamba embroidery which is made over a rumal (a piece of cloth).

The folk tales and folk songs are shared with other communities of the region. In the past three decades, they have benefited greatly from the welfare programmes launched by the government. The old habits and rituals giving place to new ones and the process of modernization and industrialization has made a greater impact on their life.

HESI

The Hesis are the traditional vagrant minstrels, who used to subsist by playing a pipe *(shehnai)* and beating *dholak* or tamborium, and singing wedding greetings and folk songs. In district Kangra, they are called *'Hensi'*. The Hesis are considered an eighteenth caste on an odd caste. The Sanhai community also plays shehnai, but it is observed that the people consider the Hesi and the Sanhai belonging to the same community. Usually the community members feel pride in calling themselves Sanhai, which is a more respectable term than Hesi. According to one version the name Sanhai is given to the community, when they play shehnai on auspicious occasions or marriages, and the name Hesi is given to them when they play shehnai on death. Hesis have been given the inauspicious month of Chaitra of the Hindu calendar, which falls during March-April, called *'Hesion Ka Mahina'* (Hesis month) for begging.

In local parlance this month is also known as *'Dholru Ka Mahina'*. During this month they wander from place to place and play Shehnai and sing folk songs and in return get cereals. This community is similar to the Beda/Beta in Spiti, Toopri in Kullu and Bainsi in Chamba. They are largely found in Bilaspur, Hamirpur, Mandi, Kangra and Shimla districts.

They are classified among the scheduled castes in the state. They speak the regional dialects of the Western Pahari e.g. Kangri in Kangra, Bilaspuri in Bilaspur district, and write in Devnagari script within and outside the

community. They claim their descent from the Rajputs, but their claims have never been established and are placed among Sudras at par with the Chamar, Dumna and Julaha in the regional social hierarchy.

FOOD HABITS: Hesis staple food is wheat, rice, maize and pulses. Seasonal vegetables are consumed. They occasionally consume non-vegetarian diet, which includes eggs, fish, meat and sometimes pork. The cooking medium is vegetable oil, ghee and mustard oil. Milk and milk products are also consumed. Country made liquor known *Dessi* is also taken. Male smoke tobacco in indigenous *chilam* or *hukka* or *bidi* and cigarettes.

DRESS: The women traditionally wear a *Kurti,* a *ghagri* and *chadru* or *dupatta.* The men usually wear a Cap, *Kurta* and *Pyjama.* The women also wear silver ornaments of nose, ear, wrist and *anklet, murki, bali, choora* and *pajeb.*

MARRIAGE SYSTEM: Their marriages are regulated by the rules of community endogamy and clan *got* and village exogamy. Marriages mainly take place through negotiation, and exchange of sisters in common called *batta-satta.* Bride's price was prevalent till recent past, but now it has been stopped. Now parents follow 'Dharam punya' and 'Kanyadan' system. Earlier child marriages were very common, but now, adult marriages are followed. Marriage symbols such as sindur, tikka, glass bangles and nose pin are strictly adhered to.

The bride moves to settle at husband's parent's home. Junior levirate is resorted to for widow remarriage and a widower may marry junior sororate or somebody else. Divorce is socially approved, which is now normally settled through judicial approval. Both male and female have equal right on the issue of divorce. Both the divorcee can remarry. Children are the responsibility of father after divorce.

Hesis perform marriages as per Vedic rites. Worship of 'Kulja' (family deity) and 'oil' ceremonies are performed before the other major rituals, *'lagan'* (marriage ritual during circumambulation of the fire) and *'vedi'* which are observed at girl's place. The bride and groom circumambulate the sacred fire and in the end the parents of the bride give *'sankalap'* (Kanyadan) of the girl.

The marriage party is received with great respect and given food and sweets. After returning to groom's place pipal tree worshipping ceremony known as *'Brahmapuja'* (worship of lord Brahma) is performed. Under this tree dharma bhai of the lari (bride) and dharma bahin of the lara (bridegroom) are made by tying a mauli (red thread) on each other's wrist and giving some coins or rupees. Then in the evening, bride returns to her parent's home, followed by the visit of the groom and his assistant called *lajoru.* After performing certain rituals bride and groom return home,contact *'bauripuja'* (worshiping water place) after which she starts living with her husband.

DEATH RITES: The death rites followed by the Hesis are the same as followed by other Hindus. The dead are cremated and ashes are immersed in

the river Satluj in Bilaspur or in the Beas at Kaleshwar or Bhaleth in Kangra. Some do go to Haridwar and offer *'Pind dan'* to a Panda. Patak lasts for 13 days and ends with a havan by the community priest, who is also given some cash. The offerings are usually made to a *dhyan* (married daughter) of the family. Annual *barkhi* and *chabarkh* (after four years) death rites are also performed.

RELIGION: They are all Hindus and worship all Hindu gods and goddesses. Lakhman Sidh is propitiated by some as family/clan deity. Other local/regional deities like Baba Balak Nath, Lakhdata, Nahar Singh, Bharthri Sidh and Gugga are specially propitiated. The female deities worshipped are Pandwin Devi, Sohni Devi, Naina Devi, Jwalamukhi, Chintpurni, etc; whose shrines are visited on Navratras or on fulfilment of certain wishes.

Their famous festivals are Lohri, Holi, Baishakhi, Rakhri (Rakshabandhan), Guganavami, Navratras, Diwali, Shivratri, etc. The sacred specialists are from within and outside the community. The *'Chela'* (oracle) plays an important role in curing certain diseases caused by evil spirits.

OCCUPATION: The Hesis are traditionally village musicians, who earned their livelihood by this occupation and even today continuing with the same. Some persons have given up Shehnai and formed a brass band party which performs instrumental music on marriages. Most of them are landless and so working on daily wages on roads, forests and some are agricultural labourers. Some have also joined government jobs. The community plays the Shehnai, beats dholak (drum) and sings folk songs or light classical or Hindustani music. Both men and women sing songs of Shiva Parvati, Phulmu-Ranjhu, Mohan, Ram-Sita byah, Kunju, Chenchlo, Gambri and other popular songs. In district Kullu Hesis are the integral part of community music.

BIRTH CUSTOMS: Pre-delivery rituals are lacking, but restrictions both before and after delivery are imposed on expectant women. The birth pollution called *sutak* is observed for 13 days and the woman remains confined to a corner of the lower storey of the house and would not touch the meals of the family. *'Guntar'* (purificatory ritual of taking cow's urine) ceremony makes the woman and family pure from *Sutak*. This is an occasion of distributing sweets and organizing community feast. *Jattlu* and *Mundan* among boys is the main childhood ritual performed by the *mama* (maternal uncle) of the child or dharma bhai in any odd year before the child is five years of age. The hair is normally offered at the Kul devi temple.

FAMILY SYSTEM: As in the case of other communities joint family system is giving way to predominantly nuclear family. 'Purdah' system known as *Ghoond* (veil system) is followed. But in Kullu, Mandi and Shimla hills *ghoond* is not observed. Avoidance and joking relationships do exist. The property is inherited on male lines as per the rule of equigeniture. Women's status is at par with that of men for all practical purposes. They practically do all household work and also earn by rendering various services to village landlords. They widely participate in socio-religious ceremonies, but have very

little control on social mechanism. There is no community council and all disputes are referred to village panchayat. A great transformation has taken place in the community in the past years, where most of the people of community have given up their vagrant life, have settled and possess some landholdings. Education has made quality changes in the life of the people. Programmes like IRDP and special programmes for scheduled castes have made greater impact on their life.

BHARAI

The *Bharai* or *Bharyai* or *Paraihi* is a small Muslim community of traditional drumbeaters. Rose (1919) in his discription suggested the origin of the name from *hara bhara* (evergreen) or from a place Parahin in Multan or from *chauki bharna* (to keep a vigil) by the followers of the Sakhi Sarwar deity propitiated by the Bharais. But it seems more appropriate to trace the etymology of the name from Hindi word *badhai* (greetings and blessings) as the Bharais visit the households of their clients on ceremonial occasions and convey their greetings by singing songs and beating drums. Rose (1919) and Ibbetson (1916) considered the Bharais an occupational group or a spiritual brotherhood that comprises many caste components or subgroups, mainly the Rajput Bharai and the Jat Bharai.

The Bharais mainly inhabit the districts of Bilaspur, Kangra, Hamirpur and Mandi in the hills and dales of the Himalayan foothills experiencing warm and temperate climate, medium rainfall and low humidity. Pockets of thin forests may be seen in the seven hill ranges of the district Bilaspur drained by a network of seven streams, the tributaries of the major river the Satluj. A water reservoir named Govind Sagar which is the rich abode of fish has come up with the construction of the Bhakhra Nangal Dam and has contributed to reshaping the ecology of the area.

LANGUAGE: The Bharais may be identified from their typical insignia, viz., a *dhol* (drum) and a stick, a *khallar* (wallet) hanging around the neck by a string, and a *jagadhri* (tussel) on a long pole. Men wear a typical dress while beating drums, i.e., a white shirt and a *churidar pyjama* or *tamba,* a black jacket and a white turban along with a black seli (ribbon) of wool. They speak regional (Bilaspuri dialect of the Western Pahari and write in Devanagari script except in their socio-religious communications which may also be in Perso-Arabic script.

FOOD HABITS: Their staple food is maize and wheat supplemented by rice. Various pulses, gram, beans, etc. prepared in mustard oil or vegetable/ *desi ghee* are consumed. *Khajur* (date palm) is eaten during *roza* and other religious occasions. They are non-vegetarian in food habits and take *halal* meat but avoid beef. Men smoke bidi/cigarette or tobacco but do not take liqour. The Rajput and Jat sections of the Bharais are distinguished by their clan names, namely *Chauhan* and *Ghorwahe* (Rajput) and *Gill* (Jat).

The Jat clans may be more numerous among the Bharais as stated by

Rose (1919), and these include clans like *Dhillon, Deo, Rawal, Grewal, Mann, Randhawa, Jham, Karhi* and *Badecha.* There does not exist any social hierarchy in the two sections and both can intermarry. The clans simply indicate their descent or ancestry and lack matrimonial significance as the Bharais may marry within a *'got'.* They also intermarry with the Faqirs and the Raccn Muslims; usually they take daughters from the Faqirs. They rank above the *Mirasi* and the *Faqirs* but below the *Raeen* and the *Sunhak* (Chandel Muslim) in the regional Muslim social hierarchy.

Village exogamy is practised. They prefer marriages of cross-cousins, but avoid *dudh ka sak* (milk relationship). Pre-puberty marriages were quite common a few decades ago but presently post-puberty marriage are more common. Marriage occurs through negotiation but *batta-satta* may also occur. Monogamy is the common practice, though bigamy may also occur. Glass bangles and nose-pin/stud are considered symobls of marriage. Mehar is paid at the time of marriage and ranges between Rs. 500 and Rs. 1500. Dowry in the form of household articles is also given. The bride lives patrilocally. Junior sororate, junior levirate, widower, widow remarriages may occur as per Islamic sanctions after *iddat.* Permission also exists for a divorcee's remarriage.

FAMILY SYSTEM: The family pattern of the *Bharais* is traditionally vertically extended, but nuclear families are on the increase. There exists avoidance relationship between *lari* and *sauhra* and *jeth.* Joking relationship are informal and are similar to those in many Hindu communities of the area. Inheritance is as per the rules of male equigeniture and succession goes to the eldest son. Junior members are obliged to pay respects to the elders but conflicts may arise on property matters.

The families appear to be well interlinked on the occasions of festivals and sorrow. Women participate in domestic as well as agricultural and animal husbandry pursuits. They collect fuel and fodder and fetch potable water. They also partake in social rituals and religious ceremonies but do not play any role in political matters and mechanisms of social control. They also lack the power of decision-making and are placed lower than men in social status.

Life-cycle rituals are observed as per the Islamic tenents. Pre-natal and post-natal restrictions are observed. Birth pollution maintain for 40 days. Naming, cereal-taking, mundan (tonsure) and aqiqa ceremonies are ignored. The sunnat or khatna (male circumcision) is the main childhood ritual performed by a Nai or *Julaha* or an *Abdal* who is offered a brass or steel plate, a hen and some cash which may range from Rs. 25 to Rs. 200. The community is given a *nyaz* (feast). *Nikah* is the marriage ritual when a maulvi takes *kaul karar* (consent) of the boy and the girl three times and the marriage is then contracted. The parents of the bride feast the bridegroom's party and the latter also reciprocate the same to the *laddhar* (persons accompanying the bride) at their place. *Muklawa* occurs on the day following the marriage.

DEATH CUSTOMS: Death rituals are also observed as per the Islamic prescriptions. The dead are buried and death pollution is maintained for 40

days and ancestor worship is observed on the third, seventh, tenth, twentieth, thirtieth and fortieth day known as *chaliha*. A *Faqir* is given alms, and a ceremonial feast is given to the gathered relatives.

OCCUPATION: The Bharais are settled agriculturists and are also involved in animal husbandry. They still maintain their traditional occupation of drum-beating and get *lag* (customary dues) particularly during the *chhinj* (wrestling) and cattle fairs. They are skilled in the cattle trade. Due to paucity of land to subsist on they also seek daily-wage casual labour. A few persons are in the government as electricians and forest- rangers and in the army. Some are also petty shopkeepers. Links with the market are direct and of daily nature. Dealings are in cash. Child labour exists.

COMMUNITY COUNCIL: The Bharais' disputes are resolved in the community council and in the Islamic committee which is elected by a voice vote. The latter generally takes up more serious problems like marriage and also seeks to acquaint people of the Islamic tenets. Village disputes are resolved by the elders of the village or by the statutory Gram Panchayat which generally performs the developmental and welfare activities in the village, and is empowered to put a cash fine on the guilty in disputes over lands and water. They propitiate *Sakhi Sarwar* as their patron deity.

In addition, like Hindus, they also propitiate the local village and regional deities, namely *Lakhdata, Baba, Balak Nath, Nahar Singh* and *Guga*. They have a specific role of beating drums during *Chhinj* fairs, frequently arranged in the name of *Lakhdata* every year in the area. Generally two festivals, viz., *Id* and *Bakrid* are celebrated with zeal but they also have reverence and celebrate various local Hindu festivals like *Lohri, Basoa* (Baisakhi), *Sair* and *Chiran*. They have traditional magic-cum-medicine men in the community, but the *maulvi* who performs life-cycle rituals is from the Faqir community. Like the Faqir the Bharais (men) also perform an ordinary *dhamal dance* while beating drums. Various Pahari including Bilaspuri and Kangri folksongs are sung and regional folktales and folklores are shared.

The commensal norms in terms of exchange of food (both *kachcha* and *pucca*), traditionally exist with the Muslim communities. Usually Hindu *botis* (cooks) prepare meals for Hindus in social gatherings. Marital linkages may occur with the Faqir. Putative kinship may occur with Hindus as well. Burial places are separate and located outside the village. They usually visit religious shrines of all regional deities. There is no discrimination in respect of an access to various public places. Traditional water sources are common but the Bharais would not touch the water pot of an upper caste Hindu. The members are engaged as shopkeepers or businessmen, persons in the defence services, etc.

Modern developmental programmes have made an impact in the spheres of literacy, health, etc. Children usually receive secondary school education, though due to economic reasons or lack of interest, boys do not receive higher education. Higher education is not favoured socially for girls. Indigenous methods are still favoured though modern system of medicare is fully used.

Modern family planning methods, predominantly vasectomy, are followed and people do not favour more than three or four children, though a male child is still desired even at the risk of having more children. Electricity and modern mass media (radio and TV) and communication facilities are available. Piped water for drinking is available but traditional sources like *bauri* are still used quite often when piped-water supply becomes irregular and inadequate. Rainwater is the chief source of irrigation. People use chemical fertilizers. Fuel sources are wood LPG and cowdung cakes. There is no community-specific programme for rural employment/development but general facilities under IRDP and child development programme including immunization exist. The facility of public distribution system through fair price shops is available. Bharai are slow respondcut to the call of modernization. The community is least interested in political participation. They rather follow the traditional hierarchy.

SIPPI

The Sippis are scheduled caste and one of the indigenous communities of the hills, found chiefly in Chamba and Lahaul-Spiti districts of Himachal Pradesh. They are neither aware of *'Varna vyavastha'* nor do they place themselves in it. Rose, describes them as a "weaver of the Gaddi tribe", found in Bharmaur Wizarat of the Chamba state and virtually the same as Hali. The status of Hali ascribed to them by Rose, has been disputed by them. The Sippis live at high altitude in hilly terrain, where the climate is extremely cold and winter months are prolonged with heavy snowfall. They live in homogeneous nucleated villages. The community occupies the lowest place in social hierarchy and this fact is admitted by all.

LANGUAGE: There is a touch of Sanskrit in their dialect. They speak Gadiali amongst themselves, whereas with others they speak in Pahari/ Himachali. Most of them are illiterate, but those who have got education use Devnagari script.

FOOD HABITS: The community is non-vegetarian, but eating beef and buffalo meat is completely prohibited. Their staple food is *makki-di-roti* and *ain-da-sag*. Rongi and masur are also used along with roti and rice. Vegetables and edible roots are also used. They smoke tobacco and drink homemade alcoholic drink *lugri*. Some do purchase liquor from the market. In winter the intake of non-vegetarian diet increases. The use of milk is limited to tea only. The community is endogamous and is further divided into a number of exogamous gotras viz. *Bamari, Baumettu, Bhamere, Dilwar, Dubni, Katte, Khaschi, Nagatwar, Pulan* and *Sachal*.

MARRIAGE SYSTEM: At the time of contracting marriages three generations on father's side and one generation on mother's side are avoided. There is no hierarchy among the *'gotras'*, the differentiation occurs on social and territorial basis. Hypergamy is permitted. A few decades back child marriages were practised, but now they have been replaced by adult marriages. Various forms of marriages are: marriage by negotiation, *byah or dharma*

puna is the most common type, *batta-satta* (exchange), by service or *ghar jawantri* and *jind phunk* (elopement). Monogamy is the general rule. Occasionally polygamy is also practised, when the first wife is unable to give a family heir. Junior and senior levirate and junior sororate are allowed. The marriage is a simple ceremony and is performed at the bride's residence, with the feast being given by her father. Marriage is performed by circumambulation around the fire seven times, with the bridal knot having been tied to the apparel of both the bride and the groom. The consummation of marriage however takes place at the groom's residence.

The traditional system of *reet* or *lag* has now been replaced by dowry, which is not demanded, but depends on the economic status of the family. *Chhadi* (divorce) is permissible on the grounds of extra marital relations, maladjustment and inability to feed the wife. Compensation is paid by the erring party, but children however are the responsibility of the father. *Khewat* (divorcee remarriage) and quadani (widow remarriage with unmarried brother of the deceased husband) are also allowed. However, if a widow remarries a married brother, it is known as *balu-jharara*. Widower remarriage is also permitted. The residence is patrilocal.

BIRTH CUSTOMS: Pre-delivery rituals are observed. The expectent woman worships the goddess Kali for the child to be born. Her movements are restricted, and is not allowed to go outside the house after dusk or visit dreadful sights or crematorium. *Sutak* is observed for 13 days, during which she is not allowed to do any work. *Sugru* ceremony for naming and for the first cereal-feeding is observed six months after the birth of the child.

DEATH CUSTOMS: Dead are cremated and last rites are performed by the eldest male member of the house. The bones and ashes are immersed in the river. *Patak* (pollution) is observed for 13 days. *Barkhi* and *Chaubarkhi* are also observed.

RELIGION: The Sippis prefer Hinduism, with a strong emphasis on the Shakti and Shiva cults. They believe in 'autar' (issuless ancestors) and spirits, which are appeased and worshipped for the well being of village community in general and the family in particular. Kailung or Kailu Bir is the demon responsible for abortions. The spirit associated with soil-Khetr Pal-is propitiated for a good yield and Banbir for curing illness. Water sources are considered by them as abode of Nag Devta. Their regional deity is 'CHAMUNDA DEVI'.

The Chela is from the community and is a worshipper of Shiva. It is believed that a Chela during Khel (hypnotic trance) gets possessed by the presiding deity. The Chelas are consulted in all odd times. However at family rituals, the purohit only officiates. The community has been influenced by the Arya Samaj and Nirankari movements.

STATUS OF WOMEN: The family is vertically extended type. Eldest male is the head of the family. Property is inherited according to the mundaband law of inheritance, wherein male equigeniture is followed. The women have

no right of inheritance, but has right of maintenance. Her status is regarded low but she is an indispensable part of their economic life, for she carries out all agricultural operations, in and outside the household. She also works as part-time labourer in road making and road cleaning. She participates in all walks of life, but has no decision-making powers or role in the mechanism of social control.

OCCUPATION: Their major economic activity is agriculture. They also hold land of the others on share cropping basis. A few of the Sippis even today have continued their traditional occupation of skinning and making a long rope of sheep hair. Weaving of *gardu, pattu* and of *dora* is done by every person of the community.

COMMUNITY COUNCIL: Bhaichara panchayat plays an important role in maintaining social norm. The members of this panchayat are elected on voice-vote. The guilty is punished by social boycott and cash and kind fine. Though statutory panchayat does exist, yet *bhaichara panchayat* has greater hold on the community.

Their important fairs are-the Sui Fair, Bharmaur Jatra, Manimahesh fair and Minjar fair. The important festivals are Biswa, Baishakhi, Chinnj, Janmashtami, Diwali, Lohri, Shivratri, Holi and Dholru. People participate in these fairs with great enthusiasm. The community plays drums at social and festive occasions whereas some also excel in playing the Shehnai. The community accepts water, *Kuchcha* and *Pucca* food from all the Savarna (higher castes) communities. They would also accept sidha from all communities. Traditionally, no savarna would accept anything from a Sippi, but this is not so now.

RIHARA

Known variously as *Rihara, Rehar* or *Ruhara,* are a scheduled caste. Often Rihara and Rehar are confused as one but they are two different communities. According to Ibbetson, the Rehar or Rihara appears to be closely allied to the Dumna. In Shimla district Rehars earn their livelihood by making *Kirri* (Kilta basket) and removing cowdung, and are regarded as equal in ritual status to Doom. Whereas the Rehars are primarily engaged in silversmithy and tinsmithy. In the absence of any ethnographic records, people considered them an indigenous population. The Riharas inhabit the hill terrain of Bharmaur of Chamba district. They speak the *Gadiali dialect* among themselves and with locals, but with outsiders converse in Hindustani. The literate among them use Devnagari and Perso-Arabic scripts. Their dress resembles that of the Gaddi.

FOOD HABITS: Their staple food consists of wheat or maize *chapatti,* rice, *rongi,* beans, pulses like *masur* and *mah* with occasional consumption of vegetables, edible roots and tubers. The Riharas are basically non-vegetarian, but beef and buffalo meats are taboo for them. Milk is taken by infants; adults take tea, curd and lassi. They are also fond of alcoholic drinks which are brewed locally. Women also take liquor on festive occasions. Traditionally, people also

smoke bidi, cigarettes and tobacco, though their indigenous pipe. Special foods like sweet dishes *madara* are part of the festivities. Now rice and vegetables are also consumed frequently.

MARRIAGE SYSTEM: The Riharas practise endogamy at the community level. Hypergamy is practised from amongst the panchamas. Junior levirate and sororate are also permissible. Mates are acquired in adulthood by negotiation, exchange of sisters, service or elopement. In the olden days child marriage was a common thing. Reet was also paid in the past, now that has been replaced by dowry in cash and kind. The marriage symbols are *nath, laung* and *paranda*. The residence after marriage is patrilocal, except in cases where the bride's family has no sons. In such a case *Ghar Jawantri* system is followed. The marriage is a simple ceremony and is performed by circumambulation and Kanyadan at the bride's house where a marriage feast is given to marriage party.

Chhad-chhada (divorce) is permissible by either party on grounds of adultery and maladjustment with social approval, which also decrees compensation to the aggrieved. In the case of wife leaving her husband her paramour has to return the reet or marriage expenses to the former husband. Children are the responsibility of former husband. Widow, widower and divorcee remarriage is permissible.

FAMILY SYSTEM: Families, traditionally were of vertically extended type, are tending to be nuclear with the diversification of occupations. The inheritance is as per male equigeniture following the *'chundaband'* and *'mundaband'* law of inheritance and the succession is patrilineal. The women could inherit only in the absence of male children. Women are not considered equal to men, but they prove an asset for economic prosperity and household chores.

BIRTH CUSTOMS: The expectant mother worships the goddess Kali for the well-being of the child. She is not supposed to go out after the dusk. Sutak is observed for 13 days. Suru (first cereal-feeding) and christening is done together in the sixth month, which is followed by Jattlu before one year.

DEATH CUSTOMS: The dead are cremated and the mortal remains are immersed in the river. The infants and those dying of dangerous contagious diseases are usually buried. *Patak* (pollution) is observed for 14 days and mortuary rituals are performed on the tenth, twelfth and fourteenth day, after third month and sixth month. Annual rite known as *barkhi* and in the fourth year *Chaubarkhi* is performed.

The Riharas perceive their position at the low level and ranks along with the Sippi, Koli, Badhi and Hali, and this fact is acknowledged by people of other castes.

COMMUNITY COUNCIL: They have their own community council known as *Bhaichara Panchayat* that helps in maintaining law and order. The offenders of the traditional norms and those found guilty of adultery and theft are punished by excommunication or by cash fine. The members of this council

are nominated on the basis of their experience and ability to deliver judgement. Now traditional bodies are being replaced by statutory panchayats.

RELIGION: The Riharas prefer Hinduism. They worship family clan, village and community deity. They also have belief in the other deities of the wider pantheon order. Purohit belonging to Brahmin community officiate at life cycle rituals and the exorcists are from the Sippi community, who deal in protection from evil spirits. Their major fairs are Sui mela, Bharmauri jatra, Minjar fair and festivals like Biswa, Baishakhi, Chhinj which are of socio-religious importance.

OCCUPATION: Their major economic resource had traditionally been land along with the business of gold, silver and tinsmithy. The majority are land owners and agriculturists. Some of them are sharecroppers, with gold, silver and tinsmithy taking second position. A few are also working as casual and unskilled labourers. Children below 15 years also assist their parents in the household work. Since the areas of their habitation have been identified as a backward region, a good number of them have also joined government services.

TABOOS: The Riharas can accept both *Kuchcha* and *Pucca* food from the Brahmin, Rajput etc., whereas the latter would accept only the Pucca food, if cooked by a person of the latter community. The latter share their hukka with a Rihara, outside the house, but he would remove nari (nipple) from the pipe. The Sippis are regarded as superior to the Riharas. Though intercommunity marriages within the community are strictly restricted, occasional marriages amongst the Panchama is resorted to because of the loosening of community ties. Traditionally, the Riharas have had access of sharing common water resources. They visit the precinct of the temples. They share crematorium with the Sippi only. *Jajmani* (patron-client relationship) system existed between the Riharas and other people. The recent entry of the community people in the diversified fields of occupations, has resulted in their establishing new modes of relationship and commensuality and had influenced their behavioural pattern.

TURI

Turis also known as *'Dhakis'* or *Bajgi'* are agriculturists, but their main occupation is music and dancing. They are also known as 'Dayal' in the Kiran area of Chaupal tehsil of Shimla district, where their women are famous for the black magic they perform. Their main concentration is *trans-Giri* tract of Sirmaur district, but are also scattered in the adjoining Shimla district, where they have adopted a new name 'nai'. Turis are scheduled caste. In return of their services to the *Yajmans*, they get *Khaltha* (foodgrains or anything for their services). They speak the language of the area they inhabit. Sirmauri is the commonly spoken language among themselves, whereas with others, Hindustani is spoken.

FOOD HABITS: Turis are non-vegetarian and they take the meat of

goat, fish, chicken and pork. Beef, buffalo and meat of sheep and *minda* (ram) is strictly prohibited. Their staple food is wheat *chapatti, kodra, cholai, kangni, chinei* (all millets) rice, pulses of beans, gram, urad, moong and local vegetables. Both men and women take alcohol, which is mostly home brewed. Smoking of tobacco, bidis and cigarettes is also fairly common for both the sexes. On special occasions i.e. fairs and festivals, liquor is a must with non-vegetarian food. Sidkes (steam baked bread), *babroo, putanda, anklu, chule, tasmai* etc. are the favourite dishes.

MARRIAGE SYSTEM: Turis are divided into exogamous gotras which denote their ancestry. The chief function of these gotras is to regulate marriages. The community is endogamous. They however practise gotra exogamy in which only self-gotra is avoided. Hypogamy is practised though they can't take a bride from higher communities, a Kanet can take a Turi woman as his wife. Junior and senior levirate and junior sororate are also a common practice among them. The marriageable age is ranging from 7 to 15 for girls and 20 and above for boys. A Toori boy can marry only a Toori girl, but a Toori girl can marry outside the community.

Various forms of marriages are prevalent among them. The most common is 'marriage by negotiation', which is settled by the parents. Other forms of marriages are *'batta-satta', 'jhanjrara'* and marriage by *har* which was once very widely practised, but now is on decline. Monogamy is the prevalent form of marriage, but in the case of childlessness, second marriage may also take place. *Bishthai* or *bishti* or *reet* or *dheri* (bride-price) is prevalent. Besides bride price, gifts in kind are also given to the girl as per the economic condition of the family. The rule of residence is patrilocal but in the absence of a male heir, a son-in-law may be asked to stay with his in laws.

Divorce is permissible on grounds of infidelity or maladjustment. In case of infidelity on the part of wife, the bride's price has to be returned to the husband by the wife's paramour. In case of divorce the consent of the Biradari panchayat is essential. Since women are more in demand in the community as well as outside the community, divorce proceedings are normally initiated by them though, it can be sought by either of the partners. *'Dingta chorna'* (breaking of the straw) or *'peeth jharna'* (sweeping of back with hands) are symbolic terms for breaking matrimonial alliance after which both the partners are free to enter into fresh wedlock. Widow, widower or divorcee remarriage is permissible.

A gradual change in the institution of marriage is visible among Turis. Marriage symbols which were earlier nonexistent have found a place among Turi women. The marriage ceremony used to be a simple affair. The boy's father paid the bride's price and took girl home and marriage was recognized by feeding the community members. Now seven *pheras* are also taken.

The community is considered low in the regional social hierarchy owing to their taking part in mortuary rites, thereby defiling their status. They are ranked lower than 'Lohar', but higher than the 'Chuhra' and 'Chamar'.

Nowadays many have taken up the occupation of the barber and prefer to call themselves Nai, who are in the middle social order. Such Turis consider themselves higher than the Lohars. Turis are aware of *'varna vyavastha'* and consider themselves along with the Sudra. But some of them have started calling themselves Kshatriya, and using 'Singh' as their surname.

BIRTH CUSTOMS: The birth of a first child especially if it is a boy, is greatly rejoiced over. The expecting mother is not allowed to go near water sources or in the forest at night; for it is believed the evil spirits may overpower the lady, which will be harmful for the foetus. Post delivery rituals are observed on the sixth day of the birth, when the child is brought out from confinement and is given a bath. The Namkaran takes place on this day. Dasuthan (birth purificatory bath, after 10 days) is observed on the eleventh day, when a *'havan'* is performed by pandit and on this occasion, the *nana-nani* or *mamas* play an important role. They are obliged to bring gur and ghee for this occasion. As long as a woman has not given birth to a child, she is considered impure during her menses, but once she becomes a mother her menstruation is disregarded and she can participate in all household works.

DEATH CUSTOMS: Persons who die natural death are cremated. Those who die of cholera, small pox or snakebite, are buried because they are supposed to be under the direct influence of the deities, who rule these diseases. Infants are also buried. In the event of a pregnant woman dying, her abdomen is cut open by her husband and the child is taken out. While the woman is cremated the child is buried. The peculiar custom of cremation is that instead of wood, chir leaves and makki roots are used for burning the body. The eldest male member performs the last rites. In the case of wife, the last rites are performed by the husband. Pollution is observed for 13 days, when a *'mrityu bhoj'* (funeral feast) is given to the friends and relatives. To mourn the death consanguine relations shave off their beards.

RELIGION: The Turis are chiefly the worshipper of Shakti and the inhabitants of the *trans-giri* tract of Sirmaur district have great faith in Shirgul (Shiva) and those in Shimla district worship Mahasu Devta. Parshuram is Kuldevta (clan deity) and his representation is taken to Renuka, on the day of Renuka fair, given a bath in the tank and brought back. They also have faith in village Deota called *'Khera'* and is represented by flat platform infront of big banyan or pipal tree. This devta is known as protector of the life of villagers from all evils and bad effects.

Turi's sacred centres are Renuka and Pinol (Uttrakhand). In the past they used to have no priest, but now to perform various rituals they have started employing Brahmin Priest. Their main fair is Bissu-ka-mela, which is held on the first Baisakh to mark the new year and also to celebrate the harvesting of crop. The other fair is Haryali-Ka-Mela, which is held in the month of August. Turi's main festivals are Navratras, Basant Panchami and Makar Sankranti. Budhi Diwali is celebrated 30 days after the Nai Diwali of the Hindus. Similarly, festival of lights, *Holach* or *Chireloi* is celebrated during monsoon, in which

people dance around an *agnikund* of wooden logs, which is lighted by burning deodar wood.

OCCUPATION: The traditional occupation of the Turis was blowing of a long trumpet or cholera horn at weddings, but later they also took to playing drums. Their women acted as midwives (Dai). Besides, they also blew turi ahead of the funeral procession and took the funeral shroud and got fees in proportion to the means of the deceased. The community was traditionally landless, but today they have been provided with some land by the government under the *'nautor'* (a scheme initiated by the government for distribution of land to the landless) scheme, working as share croppers and also in government sector. The women are involved in the art of weaving and knitting purely for domestic use. The Turis have jajmani relationship with Koli, Dom, Chamar, Badi and Lohar, who are paid a fixed amount of foodgrains at the time of harvest.

COMMUNITY COUNCIL: For disputes arising out of breaking social norms, the elders of the community gather and solve the dispute. Now with the setting up of statutory panchayats the hold of elders council is waning away. The community shares regional/oral traditions which are carried from generation to generation, in the form of folk tales and folklore, 'Rasa' dance is a very popular dance among the community members.

The Turis have traditional linkages with all the communities of the neighbourhood. The Brahmin and Rajput will not eat *Kuchcha* or *Pucca* food with the Dhaki, but can share the same *hukka*. The Turis would not accept any type of food cooked in the house of Chamar, Chuhra or Koli unless their food has been separately cooked by a Brahmin or Rajput for them. Now with greater exposure to the outside world, spread of education and governmental efforts, a great deal of change has taken place in the life style of the Turis.

ACHARAJ

The etymology of the name is from word *'Acharya'* meaning teacher, and Acharya is also used as a synonym as well as title for the Acharaj or Charaj. The Acharaj are the Brahmin who seek *dan* (offerings) in the name of dead by performing death rites-Kirya-Karam for various Hindu communities. The Acharya while performing ancestor worship make links with the departed soul through chanting Sanskrit *shlokas* and methods of worship of the *preta* (spirit of the dead). A legend goes that the community originated from the panch (five) Gaur and panch Dravida Brahmin, because they accepted 'dan' within thirteen days of the death of a person and this 'dan' was considered polluted; and as such they were excommunicated and grew into a separate community, the Acharaj. A section of the Acharaj who performs the death rites of the dead in the community itself is called 'Mahacharaj' or *'Parcharaj'*, who is also known as 'Mahabrahamin' or Brahmin of Brahmins.

The Acharaj live in small numbers in almost all the districts of Himachal Pradesh. They speak local dialects, as per their areas. They are vegetarian in

their food habits.

DRESS: Men wear white dress, a *Kurta* and *dhoti* with a *parna* (piece of red cloth) on the shoulders while performing ancestor worship. The dress of women is shirt, salwar and a dupatta or chadru (shawl), traditional ornaments are golden 'chak' on head, 'murki' (nose ring), 'laung' or 'tili' (nose studs), silver 'mahel', 'gajra' or 'kangan' (wristlet), 'tore' or 'jhanjar' (anklets) etc.

SOCIAL SYSTEM: The Acharaj also have various *gotras* like Brahmins, such as Sandil, Modgil, Bhardwaj etc. The institution of marriage in the community is similar to that of other Brahmins and Rajputs. The community is endogamous and practises gotra and village exogamy. Earlier child marriages were very common and the marriage of a girl before attainment of puberty was considered a *'dan'* called *'kanyadan'*. Kanyadan is still followed formally but now age of marriage has gone up. Marriages occur through negotiation but a few decades back *'batta-satta'* (exchange sisters) marriages were quite common. Monogamy is the rule. The bride lives patrilocal. Widow remarriage or levirate marriages are not practised but a widower may remarry a junior sororate.

FAMILY SYSTEM: The family pattern is both nuclear as well as vertically extended joint system. The inheritance is on male lines and as per equigeniture rule, succession goes to the eldest son. The life cycle rituals of the community are similar to those of the other categories of Brahmins. The marriage rituals are observed as per the Hindu Sanatana tenets and performed by their own community priest. The dead are cremated and the ashes and bones are immersed in the Ganga at Haridwar and *'pind dan'* is offered to the panda.

OCCUPATION: The Acharaj community is largely landless and thrives on the traditional occupation of seeking offerings on death. Now educated are employed in government and private jobs. The community's social control is maintained by its own Acharya Sabha (council) which has its headquarters at Sundernagar (Mandi district). It has its office bearers and a pradhan (president). The expenses of the council are met by the people. The community follows Sanatana Dharam and are involved in socio religious movements of their own. They have different family or clan deities like Nahar Singh, Sohni Devi, Naina Devi and Ghagas Devi, which are also local and village deities. The deities are – Gugga, Lakhadata, Balaknath etc. They accept Kuchcha and Pucca food from the upper caste Hindus. They serve suchi rasoi cooked by a Brahmin or a Rajput to the upper caste Hindus.

BHAT

Traditionally the Bhats were genealogists and while rulers moved from one place to the other or when they marched towards battle-fields, they followed the troops narrating family histories and heroic deeds of the rulers. The community is identified locally as well as at the regional level. The historical accounts show that they migrated to their present habitat. In Sirmaur, they are found distributed in the trans-Giri and cis-Giri tracts. They are scattered

in other parts of the state also.

LANGUAGE: Among themselves the Bhats speak in *pahari* dialect and use Devanagari script for writing. The Bhats are non-vegetarian and their womenfolk also take fish, meat and eggs. Their staple food is wheat and maize but those who can afford take rice also. They take pulses like *urd, moong, Kulthi,* and *masur.* Mustard and vegetable oils are used as cooking media. They take roots and tubers with varieties of seasonal vegetables. The consumption of fruit is moderate. They use alcoholic drinks as well.

SOCIAL SYSTEM: The Bhats call themselves *'Brahmans'* but the latter do not endorse it, as the former follow the Karewa system. Their customs and rites differ from those of the Brahmans. The Bhats recognise gotra. The Khel is smaller group and is the regulatory mechanism for contracting matrimonial alliances. They do not have hierarchical differences but their status is maintained with their education, economic condition and occupational position. Some of them do write their surname as 'Bhat' but nowadays they have started writing 'Sharma' instead. The community is aware of the varna system and they consider themselves Brahmans of the highest order in the varna system.

MARRIAGE SYSTEM: The Bhats are endogamous, they *permit marriage within the same gotra* also. But marriage within the *Khel* (nearest relations) is prohibited. Marital age varies between 20 and 25 years for boys and 15 and 20 years for girls. Life mates are acquired through negotiation and the Bhat are mostly monogamous. Their married women use *sindur* and nose-stud as marriage symbols. They do not have any tradition of dowry or bride-price but nowadays the parents of boys have started demanding dowry according to the education, occupation and economic position of the boy. They follow the rule of patrilocal residence for the bride. Both husband and wife have the right to divorce in case of maladjustment and can remarry. Children can live either with the mother or the father after divorce. Widow and widower remarriages are permissible. One can marry the wife's younger sister and also the elder bother's widow. There is no apparent change in the marriage rules except increase in the marital age.

In the rural areas vertically and horizontally extended family types are available but in the urban areas nuclear families are on the increase. In a family, the younger brother's wife maintains *purdah* (veil) in front of the husband's elder brother and other senior male members. One can Joke with the elder brother's wife (Bhavi) and also with the wife of younger brothers and sisters *(Debar and Nanad).* The sons inherit paternal property but the eldest male member of the family succeeds to the headship of the family. The women of Bhat families involved in agriculture do not contribute much to agricultural activities. They however collect fuel water and look after domestic animals. The women control family expenditure but they cannot take independent decisions as they do not have an equal status with men. They take part in social, religious and in some cases in economic activities.

The time of birth is noted for preparation of the *Kundli* (horoscope). The

name of a child is given by the family priest in accordance with the stars in the horoscope. On the name- giving ceremony, walnut or a mixture of seasam and rice with sugar is served. Mundan sanskar is held at the age of three and child is given some cereals at the age of six months. *Janeu* ceremony is performed between 7 to 11 years of age, but some prefer to perform this ceremony at the time of marriage. The bridegroom goes to the bride's house with his friends and relatives at the time of marriage. After the death, the Bhats observe pollution for 13 days and cremate their dead. Due to hardship, economic stringencies and fast life-style, the rituals are getting curtailed.

OCCUPATION: The Bhats' main occupation is cultivation. A few are also engaged as priests. They have a direct link with the daily market and their transaction is in cash. They lack a community council, though in villages statutory panchayats exist and these are heterogenous in composition.

RELIGION: The Bhats follow Sanatana religion. They have family deities, and also worship village and regional deities. Sacred specialists are from the same community. Haridwar, Vaishnodevi, Jawalamukhi, Kedarnath, Badrinath, etc., are the sacred centres, which these people visit occasionally. They observe the festivals of Bissu, Diwali, Holi, Shivratri, etc. They have oral traditions, which tell us about their migration and their glorious activities in their leisure time.

They accept water from almost all communities. They accept *Kachcha* and *pucca food* from the rajputs but they do not take Kachcha food from the Vaishyas and other lower castes. They accept sidha from the Chamar, Julaha, etc communities. The Bhats also participate in all the village festivals, sometimes as a priest or sometime as a member of the area. as they are one of the affluent communities in the area, and also politically and economically very much advanced. They are engaged in white- collar jobs; many of them are engaged in teaching services in colleges and schools. Their children are becoming engineers, lawyers and doctors and have now started practising. Many of their boys are engaged in defence services.

The Bhats are very much aware of the need for their children's education. They allow their boys and girls to go to schools. Many of their boys complete their education from colleges and universities. They use both traditional and modern medicines. Their attitudes towards family planning is positive. People hesitate to go in for sterilization but they use other methods for family planning without any hesitation. Drinking water is now available within the locality. Though the Himachal Government has started various programmes for the self employment, the Bhats have not benefited much from them.

In the rural areas they engage themselves in agricultural work. Communication in general has improved all weather roads, both metalled and unmetalled exist in the area. The people listen to radio and see television programmes. They also visit cinema and the video shows. Economically well-off families use electricity for lighting. For cooking purposes they mainly use fuelwood and kerosene oil, but nowadays in the urban centres some people

use cooking gas. For irrigation they have to wait for rains and in some areas cultivators use stream water. Bhats being the product of somewhat higher strata are more prone to new and changing life style. They eagerly follow, what is adopted by Brahmans and Rajputs.

BATTAHRA

In Punjabi etymology the word battarha is derived from *batta*, meaning stone, as occupationally they are the stone-workers or dressers/breakers. They are commonly known as 'Mistri or 'Raj' (masons) and in the profession of stonework they are similar to the *'Thawins"* of the hills. They also call themselves as 'Jammuliye Rajput' in Kangra district, who came to the area from Jammu during an earthquake that rocked the area in 1905. In district Kangra, a locality called Battarha Mohalla is there in Dharamshala popularizing the name of the community. This community chiefly lives in Kangra, Mandi and Chamba district.

LANGUAGE: They speak Western pahari. Men wear a *Kurta* and *Pyjama* or pant and women wear a *Kurta* and *Salwar* and *Chunni* or *dupatta*. Women wear ornaments of nose, koka/tilli, ear rings, bracelet and bangles. The Battarhas are non-vegetarian in food habits and eggs, fish and meat are occasionally consumed. They recognize only small social units called *'got'* (clan) which regulate marriage alliances and denote ancestry/descent. These clans are like those of the Rajputs of the area viz. Atar, Jaggi, Jammual, Chauhan and Pathania. These may also be used as surname by some. They claim Kshatriya status, but in Rajput social hierarchy they are placed quite low.

SOCIAL SYSTEM: The Battahras are endogamous and regulate marriages by rules of *'got'* (clan) and village exogamy. The marriages are negotiated. Exchange of sisters is not allowed socially. Monogamy is practised. Widow remarriage is not approved of socially but a widower may remarry a junior sororate or other women. The bride lives patrilocal. The Battarhas live in the nuclear as well as vertically extended joint families. The inheritance of paternal property occurs on male lines by the rule of male-equigeniture and the eldest son succeeds the father. The life cycle rituals are performed as per the rites of Sanatana Dharam by a Brahmin purohit.

COMMUNITY COUNCIL: The social disputes are settled by the Battahras own community people, the 'sayane' (elders). The Battahra are Hindus and worship gods and goddesses of the Hindu pantheon. The Vishwakarma day is celebrated with great zeal on the day following Diwali, when they observe rest and worship their tools. The community is not involved in any socio-religious movements. They are treated at par with the Rajputs and the Brahmins in exchange of Kuchcha and Pucca food and water, except in some areas. The Battarhas are landless and traditionally thrive on the occupation of masonry or stonework.

KHATIK

The Khatik, a scheduled caste is spread all over the State, except the

high altitude areas like Bharmaur, Pangi, Kinnaur, Kullu and Lahaul-Spit. The word '*Khatik*' seems to be a derivative of Sanskrit *khattika*, which means a '*butcher*' or '*hunter*'. The Khatiks are believed to be migrants from Punjab and also from Uttar Pradesh, who came to the hills in search of livelihood and started selling meat and acting as butchers. According to a myth, "Brahma assigned to them a goat's skin, the bark of trees and lac so they graze cattle, dye the skin of goats and deer, and tan hides with bark and lac" (Rose 1914; 500). The total population of the Khatiks was 449 according to the 1981 Census, 654 in 1991 and 807 in 2001. They speak Punjabi and Chambiali among themselves, whereas with others they converse in Hindustani. Among themselves, they use Persian as the script and with others they use Devanagari.

FOOD HABITS: The Khatiks are non-vegetarian. They take almost all kinds of meat like that of sheep, goat, fish, chicken and ghurral, but do not take meat of cow or buffalo. Since pork is not available in the higher hills, it is not taken but there is no social taboo for taking it. Their staple food consists of *chapati, dal of mah* or *masur*, vegetables and meat. Rice is occasionally taken. Vegetables and fruits are used in moderate quantity. Edible roots and tubers are also moderately taken. Milk is taken by adults in tea, but children, old and invalid persons, however, do take milk. They also use milk products like *ghee* and *dahi*. Alcoholic drinks are also taken by menfolk occasionally. They smoke cigarette and bidi, loose tobacco is also taken in the indigenous pipe called *hookah*. *Pan* are also chewed by some. Special foods like *madra* and other sweet dishes are cooked on festive occasions, whereas non-vegetarian food and other delicacies of meat and fish are avoided on solemn occasions. On day of religious festivals also, non-vegetarian food is avoided.

RELIGION: The Khatiks are divided into two religious groupings, the Hindu Khatik and the muslim Khatik (who are also known as *Kasai*). There is no social interaction between the two groups. It is believed that at one time they might have been one and the same community, but at some point of time some of them got converted to Islam. The Hindu Khatiks are divided into three subcastes: *Chik, Buchar* and *Sunkhar*. The Chiks make sup (winnowing fans and the Buchars sell mutton but not beef and the Sunkhars sell fruits and vegetables. The Buchars are further sub-divided into two endogamous subdivisions - *Mehra* and *Badi*. Each of these has a number of exogamous gots, the function of which is to regulate marriage. The basis of differentiation of the major groups is religious, whereas that of the sub-group is occupational, and that of the sub-sub groups is social

The Khatiks, of late have started using 'Singh' as their surname. This is being used to uplift their social position and is a step in the direction of Rajputization in order to identify themselves with the Rajputs. Though the community perceives its superiority in the social hierarchy and ranks itself along with the Kshatriyas, the locals place them low down in the order because of their association with the unclean occupation of butchery. A Khatik can enter into matrimonial alliances with a Hali or other such communities

of the area. Though in terms of varna, the community places itself at the second highest level, i.e., *Kshatriya*, but other communities see them along with *panchma* and rank them only superior to *Chamar* and *Chuhra*. Crook (1896) however mentions numerous sub-divisions of the Hindu and 7 sub-divisions of the Muslim branch of Khatiks.

MARRIAGE SYSTEM: Marriages are performed normally within the community and among one's own religious groupings. Endogamy also exists at the sub-caste level, but at the *got* level exogamy prevails. Hypergamy is prevalent and the boys of the community are allowed to marry girls of other castes. Hypogamous union results in excommunication. Consanguineous marriages are prohibited, but junior levirate and sororate are allowed. At one time child marriages were performed at the age of 10 or 12 years, with the consummation of marriage taking place on the girl attaining puberty. But now-a-days, marriages are performed with girls getting married at 17 or 18 and boys at 22 years or so.

Marriages are performed by *byah, batta-satta*, or at times when the boy is unable to pay the bride price, by serving in his prospective in laws' house for seven years, and thus compensating for the bride price. They also had a custom of paying *mamla* (bride price) in cash to the bride's parents but today this has been replaced by dowry. Dowry is not demanded and depends on the economic status of the family and is usually in kind.

Monogamy is the rule but in the event of the first wife being unable to bear a male child, polygamy, not necessarily of the sororal type, is resorted to. The usual form of residence is patrilocal, but in exceptional cases, when the family has no male child the *jamai* is invited to stay with the bride's parents. Earlier, the women had only marriage symbol of putting vermilion in the parting of the hair but this is not strictly adhered to these days. Divorce is permissible with sociojudicial approval, and the proceedings can be initiated by either of the aggrieved parties.

The common grounds of divorce are infidelity, impotency or maladjustment. Divorce compensation is paid to the aggrieved party, which normally is the return of bride price or actual marriage expenses. This is known as *mamla de-dena*, and the amount is decided by the panchayat of the community. The children of divorced parents are the liability of the father, but should a child accompany the mother, he loses the right in the father's property.

Widow remarriage can take place both in and outside the family but in the event of her marrying outside, she loses her right in the property and has to return the expenses. So as a first preference usually a deceased hushand's younger brother whether married or unmarried is preferred. Even if she does not marry the husband's younger brother, the widow can continue to live in the family and have illicit relations. Children of such relations are called *chakhandu* or *hallad* and have a right of inheritance to the property, and such children are regarded as children of the deceased husband. widower and divorcee remarriage are also permissible.

FAMILY SYSTEM: The family is of vertically extended type in which all the married sons along with their children and unmarried sons and daughters share the same hearth. As a result of this, there is a feeling of mutual love, dependence and respect within the family. The eldest male member who is also the head of the family commands greater respect and his decision in family matters is final. A situation of conflict or confrontation rarely comes up, since due importance is given to all members of the family. If a situation of confrontation comes up, it usually relates to restraining the freedom of youngsters. Avoidance is observed between a daughter-in law and with all her husband's elder relatives and all such relations in that line.

The daughter invariably covers her head or face when she is face to face with the elders and also avoids talking. Similarly joking relationships exist between a man and his wife's younger sisters and brothers and that between a wife and her husband's younger brother and sisters. Traditionally, the husband and wife were forbidden to take each other's name but nowadays they freely address each other by name.

The property is equally inherited by all the male children. Girls do not have any share in their father's property as they are believed to have taken their share at the time of their marriage. However, at times when there is no male issue, *ghar jamai* is invited to live with the girl's parents, that the girl inherits the property of the father.

But in the event of her also having no sons, the property returns and passes on to the collaterals. A widow has the right to enjoy her deceased husband's property for her lifetime, provided she stays back in the family. However, if she remarries outside the family she loses her right. If a widow takes her children along with her, they also loose their share in the ancestral property; but in the event of her remarriage, if the new husband accepts the child, he can inherit the stepfather's property.

STATUS OF WOMEN: The women continue to enjoy equal status with their menfolk. They contribute to family income indirectly, doing all the houshold chores and managing the affairs of the family. Since all the Khatik families live in urban locales they do not have to go for collection of fuel. The educated womenfolk also join Government service and private organization, work as teachers, and contribute to the family income. They also take part in social and religious festivals. They also take part in political activities, which is limited to the casting of votes. Khatik women do not have any role in social control.

BIRTH CUSTOMS: The enceinte mother worships the *kuldevta* to invoke his blessings for the welfare and safe delivery of the child. Pre-delivery restrictions also exist on the mother, and she is not allowed to go out alone at night, or watch a dreadful scence, or see a sun or moon in eclipse, as these sights are believed to harm the foetus. Post-natal pollution exists for 12 days. Six months after the birth, the ceremony for first cereal-feeding and naming of the child is observed. A pandit suggests the name after consulting the horoscope and almanac. *Jattu* or mundan ceremony is observed for boys at 2½, 3

or 5 years after the birth. The child's head is ceremonially shaved off keeping a *pagga* (cue) on the occiput. Marriage ceremony is observed at the bride's residence with a feast being served by the bride's parents. The marriage is solemnized by circumambulating five times a pitcher under a canopy, with the apparels of the boy and the girl tied by *jaul* (bridal knot). Prior to this, *pai-pujji* is performed by the bride's parents where they touch and wash the feet of both the bride and the groom.

DEATH CUSTOMS: The dead are cremated, but those whose *jattu* ceremony has not been performed are buried. The pyre is lit by the eldest male member. Pollution continues for nine days, after which purificatory ceremony is observed. Every year in honour of the dead person, food and delicacies to the liking of the deceased are offered in *pitri-paksha.*

OCCUPATION: The Khatiks are engaged in the business of slaughtering sheep and goat and selling their meat. Some are however also involved in tanning skins. As a subsidiary means of occupation, they have taken up jobs in Government and private organizations; some have also qualified for the teaching profession. The Khatiks are totally dependent on the market for their daily needs. Sheep and goat are purchased from the locals against deferred cash payment.

COMMUNITY COUNCIL: The Khatiks have their own *Biradari-panchayat,* which is headed by a Chaudhary. The office of Chaudhary is not hereditary; he is elected by general consensus along with the *panch,* who assist the Chaudhary, in dispensing justice. The cases that come up before the panchayat relate to family disputes, adultery, elopement and disrespect for traditional norms. In earlier times, the orders of the Chaudhary used to be enforced but this practice has now ceased, and a fine in cash is imposed which is utilized for defraying the expenses of panchayat. Sometimes excommunication is resorted to but the excommunicated are readmitted on paying a fine. The statutory panchayats have come up after Independence for maintaining social control and planning and implementing welfare activities. For inter-community disputes people still rely on their traditional panchayats more than on the statutory ones.

RELIGION: The Hindu Khatiks are followers of Nanakpanthi Sikh sect, yet they observe none of the Sikh tenets. The community worships *Bhairon, Maldeota* and *Sidh Masani* also known as *Mata Masani.* Every family has a family deity known as *Kuldeota* who is worshipped and propitiated for the welfare of the family. Village and regional deities do not exist, but gods and goddesses of the Hindu pantheon like *Rama, Hanuman, Krishna, Durga* and *Chamunda* are worshipped. Their sacred centres are Haridwar, Manimahesh and Mata Vaishno Devi. Gaur Brahmans are their purohit who perform puja and all life-cycle rituals. For warding off evil spirits, the exorcists are invited. The Khatik's major fairs are Minjar, Sui Mela and Bharmaur Jatra and the festivals being *Baisakhi, Lohri, Holi* and *Diwali.* All of these fairs and festivals have socioreligious significance, which is recalled by reciting stories at the

time of performing the rituals attached to them.

Change of religion has taken place among the Khatiks, as a result of which a section of the community got converted to Islam. Socioreligious movements also did take place among the Hindu Khatiks, whereby they got converted and started believing in the *Nanakpanthi* sect. However, the prechange practices still survive.

The Khatik women make colourful diagrams on floors at festivities. They also do embroidery on cloth with silk and gold threads which they have learnt in recent times. They sing songs prevalent in the region at social occasions and also dance within the four walls of their houses purely for amusement. Folklore and tales are same as those of the region.

No *savarna* cast would traditionally accept water or *kachcha* or *pucca* food from a Khatik. But a Khatik would accept all kinds of food from the *savarna*. The Khatiks would also not accept *kachcha* food prepared by a *Chamar, Dum, Pasi* or *Dhobi*, but can exchange *pucca* food with these castes. Traditionally intercommunity marriages were prohibited, but the Khatik could take a girl from the *Panchams* like *Hali*. Putative kinship can be established with a person of equal social status, but who is not related, and such relations are expected to perform duties as a real kin.

In the hill communities since the caste ties are not that rigid as in the plains, these communities did not have any restriction on the sharing of water from common water resources. But restrictions did exist on their entry in the houses of the *savarna* or temples in some cases. *Jajmani* relationship also never existed in this community.

Their education, and consequently better employment has resulted in the emergence of political leadership at the local level, and a couple of them are now holding elected posts in the municipality. They are also taking part in all social and religious functions. Employer-worker relationships have also come up as a result of their taking up varied occupations in addition to their traditional ones, Since the people are economically well-off they have been able to secure brides and grooms from other castes.

The impact of various developmental programmes, especially literacy drive and free education on the Khatik community has been substantial. Almost the entire Khatik community of Chamba is literate. The boys and girls both study up to the post-graduate level. Their interest in sending their children to school is further activated by the fact that they are provided with free schooling and scholarships.

Though for small ailments the Khatiks still rely on their traditional home-made remedies, but in case of disease not getting cured they resort to allopathic medicine, which is readily available to them since they are living in townships. Attitude of the community people towards family planning is also favourable, and they now have smaller families with two or three children. As for the modern methods of family planning they use all other methods other

than sterilization.

Drinking water is available through pipes. The people of the community have also been provided with employment under Integrated Rural Development Schemes and also under reserved quota for scheduled castes. A few of them have also secured loans from blocks and banks under self-employment schemes and have started poultry farming. The localities of the Khatiks are well connected with media and communication system. Electricity is available and is availed of. Firewood and kerosene oil are the usual fuel resources. Irrigation and use of chemical fertilizers and pesticides is not applicable to the people, as the community is not involved in agriculture. Under the nutrition programmes, the mid-day meal scheme is availed of by school-going children.

Mother-infant care and immunization facility are provided through Integrated Child Development Scheme. These services are availed of by expectant and nursing mothers and children between 0-5 age groups. Facilities of ration, kerosene and cloth at subsidized rates are available through Government fair price shops. Savings and investment facilities are available and are also availed of as the people are economically well-off. Like any other caste group khatiks are also passing through the process of change and upward in class hierarchy. Khatik boys and girls are opting for love marriages, leading to the greater social mobilisation.

LOHARS *(Blacksmith)*

The Lohar is one of the village menials, receiving customary dues in the form of a share of the produce, in return for which he makes and mends all the iron implements of agriculture, the materials being provided by the husbandman. The state list has included the Lohar among the *scheduled castes*, but not the Tarkhan / Badhai. They speak local dialect of Pahari and write in Devnagari script both within and outside the community.

FOOD HABITS: In general Lohars are vegetarian but occasionally do take non-vegetarian diet. *Chhah* is a common milk product and rice cooked in it called *jhol* is frequently consumed by the poor. Likewise *mahani* (cooked juice of raw mangoes) and Khatyai or Kurhi (fried raw mangoes) are consumed in summer season but are a more frequent part of diet of poor.

SOCIAL SYSTEM: In the regional social hierarchy the position of the Lohar is different in different regions. In the lower region, they are treated as *'savarna sudra'* like the Kumhar and are synonymous with the 'Tarkhan' or 'Badhai'. They enjoy this status in Sirmaur and Shimla districts also. But in Kullu district, the Lohars are considered 'asavarna sudra' equivalent to Dagi, who have taken up ironsmithy, whereas the Tarkhan or Badhai is at par with the Kanet. In Spiti the community performing ironsmithy is known as *'Zon'* or *'Zobo'* and occupies an intermediate social position between a Chazang and Hensi / Hesi / Betu.

The community has *'got'* and *'al'* which serves to regulate matrimony and suggest ancestry or descent. The institution of marriage is governed by the rule of

community endogamy and village exogamy. Monogamy is practised and marriage occurs through negotiation. The bride lives patrilocal. The family pattern is both nuclear and vertically extended type. The Lohars observe vedic rites in their life-cycle rituals. The death rites are similar to those of other Hindus of the area. The Lohars follow Hinduism. There is no formal community council, but the *Sayane* of the Lohar usually resolve social disputes.

SUNAR (*Goldsmith*)

Sunar is the jeweller of the village. He is also, to a great extent, a moneylender, taking ornaments in pawns and making cash advances upon them. *'Soni'* and *'Kapila'* are also synonyms for this community though other synonyms such as *'Jargar'* or *'Zargar'* are also used elsewhere. They have two main subgroups namely the *'Tank'* or *'Tonk'* and *'Mair'*, of which the former are mostly of Khatri origin and the latter of Rajput ancestry. In the higher hills of Shimla district, they are also called *'Bharira'*.

Sunar are distributed all over the state. The community is identified by its occupation. These people have come to the state from the outside, mostly from Punjab during the past and have been living here for centuries but fail to recall their migration history. They speak local dialect and write in Devnagari script both within and outside the community. The older men can read and write in Urdu. They share the food habits of the area. They usually distinguish themselves into gotras like *Saul, Kaplash, Handa, Varma, Mehta, Soni* etc which serves to regulate marriages and denote ancestry/descent. In the regional social hierarchy, the Sunar rank at par with the Khatri and claim Kshatriya or Vaishya varna status. The clan names are usually used as surnames.

'Soni' is more common surname. The institution of marriage is similar to that of other Hindus. The community is generally endogamous but marriage with Khatris of equivalent economic status also exists. Clan / gotra and village exogamy is maintained. Monogamy is the usual practice. The family pattern is both nuclear and vertically extended. The inheritance of paternal property occurs as per the rule of male equigeniture and the eldest son succeeds his father. Life cycle rituals are observed as per the Sanatana Dharam but followers of the Radhaswamy mission do not observe elaborate Vedic rituals. The dead are cremated and the ashes are immersed in the Ganges at Haridwar or in the Beas river by Radhaswamis.

THATHERA (*Metal Worker*)

Thathera is the man who makes the vessels of brass, copper and other mixed metals. The word seems to be merely the name of an occupation. According to Rose, Kasera is one who makes the vessels and a Thathera sells them. But in most of the areas distinction does not exist. They make vessels mainly of brass, bronze and copper but sometimes also of iron. The term 'Kasera' is probably derived from Kansa meaning bronze. The Kasera is a homogeneous caste, an offshoot of the higher mercantile caste, separated from the parental group by adopting a special profession. They trace their origin from the

hundred-armed Arjuna Sahastraarjuna among the Kshatriyas.

SOCIAL SYSTEM: The community is classified among the *scheduled castes*. They write both in Devnagari and Gurumukhi scripts and speak Hindi and Punjabi. The community is divided into different exogamous *got/gotra* viz. Wadhavan, Mehta, Uppal, Chadha, Anand and Varma. These clans denote ancestry and regulate matrimonial alliances among themselves. In the varna system they place themselves among the Kshatriyas and this social position is not denied by other communities.

MARRIAGE SYSTEM: Marriages take place by the rule of community endogamy. Clan exogamy is strictly adhered one may marry in the same village if suitable mates are available. Monogamy is practised. The family pattern is mainly nuclear. The ancestral property is inherited in male lines, by all sons equally.

The life cycle rituals are observed as per the Hindu and Sikh tenets in the two sections of the community. Marriage rituals are observed as per the Sanatana / Arya Samaj prescriptions among the Hindus and by Anand Karaj as per the Guru Granth Sahib among the Sikhs. The death rites of the Thathiras are similar to those among the other Hindu and Sikh communities. The dead are cremated and the ashes are immersed in the Ganges at Haridwar or in the Beas in Kangra.

OCCUPATION: The Thathiras are mostly landless and subsist on its traditional occupation of vessel-making. The *sayane* of the community often solve their community disputes, but there is no formal council. The Hindu Thathiras propitiate various family / clan and local deities like Baba Achlechar, Viswa Karma and Kartik rishi in particular. The Sikh group among Thathiras worships at Gurudwara Kandh Sahib at marriages. They also worship other Sikh Gurus. Kali and Bajreshwari Devi are of special reverence to both Hindus and Sikhs. Modern Development programmes have started making impact on the life of Thatheras now. They have started changing their occupation and mode of life.

JULAHA

The *Julaha/Kabir panthi/Koer* are weavers. The word is literally derived from the Persian '*Julah*' meaning a ball of thread (Rose, 1919). A similar etymology of the name is suggested from Hindi *Jala* or *jali*, which means a network of threads. Common synonyms for the community are *Julaha* and *Kabirpanthi* or *Kabirvanshi* as they often associate themselves with and follow the preachings of a well-known Hindu saint, Kabir. According to traditional belief Kabir was an abandoned child of a Brahman widow and was brought up by a Julaha couple having no child. Koer is referred to as another synonym or a subgroup of the community. The history of their origin is not known but ethnographic descrtiption of the community is available in literature. The community has been categorized among the Scheduled Castes. According to the 1981 Census their population was 102,838 in 1991 128730,

and in 2001 162473. The community is also identified at the national level and in Himachal Pradesh they perceive their distribution at the regional/ inter-regional level. The major concentration of the community is in *Kangra, Bilaspur, Mandi, Shimla, Solan* and *Hamirpur* districts. They live in different altitudes in the hilly terrain and villages under variable climate.

SOCIAL SYSTEM: The community has assimilated the culture of the region it occupies. In Bilaspur they speak within and outside the community the *Kehluri* or *Bilaspuri* dialect of the western Pahari, having Devanagari script. In the past the dialect was written in *Tankri script.* Men wear a *kurta,* and *pyjama,* but young ones wear pants. A turban called *safa* is worn by older men on festive or marriage occasions. The women wear *kurti, salwar* or *suthan* and a *chadru* or *dupatta.* Traditional ornaments were *chak, bali, laung/tilli, murki, har* of silver, *chura* or *gajra* and *paijeb.* Most of these ornaments are not in use at present. The old and traditional ornaments have given place to new and stylish one. Now ladies prefer stylish and light weight ornaments.

FOOD HABITS: The *Julahas* are occasional non-vegetarian in food habits and consume eggs, fish and meat. The staple foods are like that of other people of the area. Maize commonly eaten, more during winters, and is supplemented by rice. What is eaten more during the summer months and its products like *babru* and *putande* are eaten with milk, *desi ghee* and sugar on festive occasions. *Halwa* and *seviyan* are also other festive preparations. various types of pulses-*moong, urd, masur, kulthi,* and peas and beans-along with roots and tubers are frequently consumed.

Various vegetables and mustard leaves (sag) are also eaten. The cooking medium is mustard oil or vegetable ghee and sometimes desi ghee. Food taboos are normally lacking but non-vegetarian foods are not eaten during death pollution. Fruit intake is occasional and seasonal. Milk or milk products like *lassi* or *mattha* and *jhol* are consumed frequently. Some who have entered the Radhaswami sect of Hinduism do not take non-vegetarian food. The men occasionally consume country liquor except the followers of the Radhaswami sect. The women ordinarily do not take alcohol but at times may do so.

The *Julahe* and the *Kabirpanthi* or *Julaha/ Koer* may be considered broad social divisions but social hierarchy is not observed. The community usually recognizes small exogamous units called *'got'* like *Tiamlu, Janeogal, Bhatti, Jubliani, Dod Jubliani, Gautam, Dhiane, Ralot, Bhoor Chhathwaru,* etc. These regulate marriage alliances and indicate descent. The radhaswami sect tries to create a little religious differentiation but has little impact on other social institutions. The community perceives its low social position in the region among the Sudra varna. But they place themselves higher than the *Chamar* and the *dumna.* Rose (1919) indicated that there were Julaha Chamar or Chamar Julaha who adopted the occupation of weaving. But such a distinction is not known in the study conducted in Bilaspur, Hamirpur and Kangra. That reference could be an aberation.

MARRIAGE SYSTEM: The institution of marriage among the Julahas is similar to that among other Hindus. The community is endogamous and practises *got* and village exogamy and no consanguinity is seen. Marriages commonly occur through negotiation by parents and relatives. Earlier, child marriage was prevalent and bride price was also taken. But now the age of girls for marriage has gone up and normally is not below 16 or 17 years. For boys it is usually above 20 years. *Batta-Satta* was more common in the past which relieved the family of the burden of the bride price. Presently such marriages do occur but are uncommon and *dharam-punya* marriages are more common in which the parents of the girls perform their *kanyadan* and do not take anything from the boy or his parents, but in turn give some dowry or *daj/dahej* in the form of household articles, clothes and ornaments. Earlier, *daj* was also a common practice along with the bride price and some well-off parents also used to give a buffalo/sheep/ goat in daj.

The symbol of marriage like *sindur*, glass bangles and *koka/tilli* and sometimes *nath* are observed. The bride lives patrilocally. The community traditioally approves widow and widower remarriage. A widow is usually married as junior levirate and the ceremony is called *jhanjrara* or *chadar-dalna* and ends with a *bhati* (small feast). A widower marries either a junior sororate or any other girl. Divorce is usually looked down upon but in certain circumstances of maladjustments and cruelty to the wife, the community approves of divorce. Presently, however it becomes viable only through legal sanctions in the civil courts and either of the spouse can divorce on these grounds. The man has to pay compensation or maintenance to his spouse and is also responsible for maintaining the children. Divorcees can remarry.

FAMILY SYSTEM: Traditionally the community lives in vertically extended joint families but presently this system has considerably broken down and given rise in nuclear families. Usually sons do not get separated as long as the father is alive or all of them are not married, but a large family may break up on property matters or other domestic quarrels over routine matters like division of domestic work. In joint families avoidance and joking relations similar to those in many Hindus of the region are seen.

The *lari* (bride) covers her face from her *saurah, jeth, nandoi* and other elderly male members of the village. Joking relationships exist between *devar* and *bhabi, jija* and *sali, jija* and *sala* and *nanad* and *bhabi.* The inheritance is as per the rule of male equigeniture and the eldest son succeeds his father. While dividing the parental property the eldest son has the first choice to pick up his share. The daughters lack the right to inherit father's property.

STATUS OF WOMEN: The status of women, however remains almost equal to that of men they participate in various economic actitivies and contribute to the family income by weaving and rendering menial services to village landlords. They perform all domestic duties, bring potable water, fuel and fodder participate in agricultural and animal husbandry duties and in various social and religious ceremonies and also control family expenditure.

Their participation in the mechanism of social control and political sphere is, however little as compared to men.

The life-cycle rituals are performed by their own community priest as per the Hindu scriptures. Pre-delivery rituals are lacking but restrictions on women during pregnancy and after delivery are imposed. Sutak is observed for 13 days and the woman remains confined to a corner of the lower storey of the house.

The pollution ends with a *guntrala* ceremony. A son's birth is rejoiced by distributing germinated grams and sugar and by women singing *ranjhunana.* The child's mother's father brings *Kangnu* (wrist ornament made of silver) and *jhaggu* (shirt) and *topu* (cap). The christening and cereal taking ceremonies are usually not observed. *Jatlu or mundan* of the male child is the only childhood ceremony and is performed by the *mama* (maternal uncle) of the child on any odd year of the birth. On this day *kulja* is also worshipped. A *Jatra* may also be led to the shrine of a local/ regional deity on fulfilment of the wish for the birth of a son.

The marriage rituals are also similar to other Hindus. The *jija* acts as a *Nai.* The *lagan* and *vedi* are the major marriage rituals performed at the bride's place when the bride and groom circumambulate the sacred fire and the bride's parents perform *kanyadan/ sankalap.* They also feast the party of the groom. At the bridegroom's place the *lara* and *lari* worship a *pipal tree* and circumambulate it. They also tie a white thread round it and pour water. Kinship-based friendships of the bride and groom are also made under the pipal tree. The marriage ends with music and dance, and a feast is given to the gathered relatives and friends. The *muklawa* of the bride occurs on the next day when the couple start living together.

DEATH CUSTOMS: The death rituals are also similar to those of other Hindus. The dead are cremated and their ashes are immersed in the Ganges or Beas rivers and *patak* is observed for 13 days and various death rituals are performed. On the thirteenth day a purification *havan* is performed by the community priest who also seeks *dan* in the name of the dead. Annual *(Barshi)* and fourth annual *(Chaubarshi)* death rites are observed. The followers of the Radhaswami sect do not observe elaborate death rituals and instead arrange a simple satsang.

OCCUPATION: Traditionally the *Julahas* subsist on weaving but presently most of them have given up this occupation. Some however, have become modernized and use electrically operated looms. Besides, they have acquired small landholdings and practise agriculture and animal husbandry to supplement their income. Some people till the land of the village landlords on contract or sharecrop basis. Many seek daily wage casual labour in house construction, roads and forest. A few persons are also in Government services as peons, chowkidar, clerks, teachers, junior engineers and electricians, and some are in the army as well. Some persons have also taken up masonry, tailoring and some have petty shops. The links with market are direct which is

fully regulated. Because of their education, they are the benificiary as job reservations.

COMMUNITY COUNCIL: The community has its Biradari Panchayat which is however not organized. Generally the elders of the community resolve their social disputes regardings marriage and divorce. Village disputes over land and water are taken up by the members of the statutory Gram Panchayat which also performs the usual activities of welfare and development. Usually legal channels are used for disputes over land. Julahas are politically concious caste group as reflected in their participation in panchayats election.

RELIGION: The *Julahas* are Hindus by religion, following the *Sanatan, Kabirpanth* or *Radhswami* sects. The followers of the Radhaswamis frequently visit their shrine at Beas in Punjab. The Sanatani propitiate various family or clan deities, village and regional deities. The *Ton Bharari, Guga, Gugri, Balak Nath* and *Asapoori* (at Palampur) are family/clan deities. Other regional deities frequently propitiated are *Nahar Singh, Lakhdata, Naina Devi, Vaishno Devi, Santoshi Mata* and *Jawalamukhi.* Hindu festivals like *Lohri, Baisakhi, Diwali,* etc are celebrated. Various religious shrines are visited on annual fairs. The sacred specialists are within the communities and the chela of other communities are also consulted quite often for treatment of certain deseases supposed to be caused by the evil spirits. They share various folk oral traditions of the area.

The community is known for performing a comedy play called *swang.* They also sing and play *damru* and bronze plate in *Guga Mandli* during Guga Navmi festival, and participate at night in the traditional *chandrauli* folksong and dance in which one man acts as a woman and dances while other men sing and play on percussion instruments. The community has weaving as its art and craft.

They accept *kachcha* and *pucca* food and water from the many Hindu castes. The Julahas also traditionally do not accept food and water from the *chamar* and *Dumna* except *sidha* or *suchchi rasoi.* Water sources likewise are shared or are separate. The habits of cleanliness has brought this community closer to the *swarna jatis.*

They have members in business, teaching engineering and defence services. Political leadership has emerged at the local and village panchyat level. Modern development programmes have made an impact on the community. Formal education level has increased. The girls generally used to study up to primary or secondary school level. Boys in general receive secondary school education; a few of them go to colleges. The main reasons for drop out were economic and social especially in cases of girls, who are seen more as liabilities and are married off as early as possible.

In respect of health and medicare, both modern as well as traditional methods are fovoured. As modern medicare is costlier, they quite often use indigenous methods and traditional spiritual specialists. Presently, they feel

the compulsion of restricting their family size due to economic reasons and favour sterilization, although they want at least one son even at the cost of more daughters. Drinking water is available near their houses through pipes but the traditional sources of water like springs and *bauris* are still used as the pipe-water supply is largely inadequate.

The Julahas have provisions for Integrated Rural Development Programme (IRDP) as are applicable for the scheduled castes in general. They get 50 per cent subsidies on purchase of chemical fertilizers, animals and crop threshers under special programmes like Antyodaya. They are self-employed as well as employed in Government. Their houses have electric connections and many also avail themselves of the modern mass media facilities like radio and television. Road communications and postal services are also present in their vicinity. Their energy resources are largely traditional like firewood and cowdung cakes. Some nutritional programmes like mid-day meal and immunization for small children are availed. Mostly people fovour savings in banks and post offices and are not dependent on local moneylenders or shopkeepers, though some still depend on these traditional sources. Among scheduled castes, Julaha is the only caste which has wider acceptance among *swarna* castes. In the town and cities life, caste identity is dying fast.

KUMHAR

The Kumhar are the traditional potters of the country who make earthen pots. The name Kumhar is derived from the sanskrit word *kumbhakar* meaning earthen pot or pitcher maker. They are variously pronounced as *Ghumahar, Ghamiar*, etc., and bear a common title '*Prajapati*' meaning the lord of the people of the world (Rose, 1919, Ibbetson, 1916, Crooke 1896, etc). This title has a link with the legendary origin of the community according to which one of Brahma's sons succeeded in preserving fresh sugarcane in an earthen pitcher and as a mark of respect to him, his descendents were titled as Prajapati or Kumhar. This is a *swarna caste*. The Kumhar's are widely distributed in the State in almost all districts in the hills and dales in different climates, but prefer warm and temperate climate suitable for their work relating to making earthen pots. The community is identified mainly from its traditional occupation.

LANGUAGE: They speak regional dialects of western Pahari or Himachali. Men wear *kurta* and *pyjama* or trousers and elderly persons prefer *safa* as their head-dress. Women wear *kurta* and *salwar* and put on a *dupatta* or *chunni*. They wear golden *tili* or *murki* now replaced by *nath*. Earrings and necklace are also worn.

FOOD HABITS: The Kumhars share the dietary habits of the area. The common staple food during winter is maize supplemented by rice, and during most of the summer season wheat is consumed. Various types of pulses like *urad, moong, kulthi, masur, grams* peas and beans are taken along with seasonal vegetables, roots and tubers. The cooking medium is mustard oil or vegetable or desi ghee. Milk and milk products are consumed frequently. Fruit

intake is occasional and seasonal. Festive foods are *halwa, kheer, seviyan* and other wheat and rice products like *babru* and *ankali* of rice floor. They are occasional non-vegetarians except those who follow the Radhaswami sect. Men consume country liquor occasionally. They smoke *bidi* or cigarettes or loose tabacco in an indigenous pipe called *hukpra* or *kali* or jhajri.

SOCIAL SYSTEM: The Kumhars are segmented into small units called *got* and *al.* these social units serve to regulate matrimonial alliances and denote ancestry or descent. Some of their gots are *sandil, Kashab* and *Bharapdariye.* Although some people follow the Radhaswami sect, yet this differentiation has not emerged to the extent of creating a social hierarchy. They perceive a middle position in the Hindu varna hierarchy and are considered savarna and treated at par with the Lohar and Nai.

MARRIAGE SYSTEM: The institution of marriage is similar to that in many other Hindu castes. Marriages occur within the community as per the rules of *got* and village exogamy. They take place at present on attaining maturity but earlier prepuberty child marriages were common and bride-price also existed. Batta-satta was also a common practice. But presently they follow *dharam punya* marriages and perform *kanyadan* and give some *daj dan* to daughters. Monogamy is practised. Bigamy is socially permitted in case the first wife is barren or bears no male child. Marriage symbols observed strictly are *sindur* or a *bindi,* glass bangles and a nose and ear ornament.

The bride lives patrilocally with the husband's parents. Widow remarriages occur only in cases of young and childless widows. Junior levirate is accepted. But, presently this old custom is disliked by younger persons. A widower can remarry a junior sororate or otherwise. Divorce usually does-not occur nor is liked socially but either of the spouse can dissolve marriage through judicial approval on grounds of maladjustment, cruelty and impotency. The husband in such cases bears the maintenance cost of the divorced wife and is also liable to support the children. Both the divorcees may remarry. The marriage institution is witnessing changes in respect of the age of marriage, rejection of bride price and acceptance of dowry.

FAMILY SYSTEM: The family pattern of the Kumhars was predominantly vertically extended type till the recent past. But now joint families normally break up after the marriage of all the sons or when the father dies. Avoidance relationships are strong in the joint. families. The *lari* covers her face from male elders of the family and community and touches the feet of her *saurah, jeth, nandoi* and other elderly male members of the village. Joking relationships are similar to many other Hindu communities of the region. These may occur between *devar* and *bhabi* and *jija* and *sali.* The family members are obliged to respect their elders. The inheritance is on male lines as per the rule of male equigeniture and the eldest son succeeds the father, However, conflicts in the family may arise on matters related to property and disobedience of elders by juniors.

STATUS OF WOMEN: The status of women in the Kumhar commu-

nity is practically equal to that of men. They participate in economic activities i.e., pottery work, where the work involves bringing clay, making pots as well as selling the products door to door in the villages. Women do all domestic jobs, including fetching potable water, collecting fuel and fodder, participating in animal husbandry and working in the agricultural fields. They also render various services to village zamidars and contribute to family income. They participate in social and religious ceremonies but have little role in the mechanisms of social control and political activities. But they contribute towards domestic decision-making and regulation of family expenditure.

The life-cycle rituals of the Kumhars are like those of other Hindu communities of the area. Pre-delivery rituals have lost significance and are not observed, but restrictions on mother before and after delivery are prevalent. Post delivery pollution is maintained for 13 days when a purification ceremony called *guntrala* is observed. A male child's birth is rejoiced by singing *ranjhunana* by village women who are given sweetened germinated grams.

The child's *nana* brings *jaghu or rhagu-topu* and *kangnu.* Name giving and cereal taking ceremonies are usually ignored but some arrange a meal for small children called kanya or kanjak (girls) and *bhatu bulana* (boys). *Jatlu* or mundan of the boy is the major childhood ritual. It is performed by the *mama* of the child and kulja is propitiated and a feast is arranged.

The marriage rituals are performed by a Brahman priest as per the Vedic tenets. Various rituals like *sand, samuhat, mehndi* and *oil ceremony* are observed before the actual marriage rituals, called *ved* and *lagan.* These rituals are performed at the bride's place when the *lara* and *lari* circumambulate the sacred fire. The parents of the bride perform *sankalap* or *kanyadan* and offer some *daj dan* and give a feast. At the bridegroom's place a major ritual is *andrera* and pipal or Brahma puja. In tree worship both the bride and groom circumambulate the sacred tree and tie a white thread around it. Putative Kinship-based friends of the bride and groom are also made at this time who tie a mauli, red thread on each other's wrist and embrace each other.

The marriage ends with music and dance. Muklawa occurs on the following auspicious day when door worship, pitcher worship and bauri worship is observed by the young couple and they touch the feet of elders and seek bessings. The wedding crown or *sehra* is offered to *Lakhdata*, a local deity visited on Thursday. *Lari* does not stay with her mother-in law during the month of first *Kala mahina* (Bhadrapada) falling during July-August and the first delivery takes palce at maternal home.

DEATH CUSTOMS: Death rituals are also observed as per the Hindu tenets. The sons shave off their head hair on the death of their parents. The dead are cremated and ashes are immersed in the Ganges at Haridwar by the eldest son who performs pinddan. An Acharaj performs ancestor worship and seeks alms and the family priest performs purification *havan* and gets his dues. Gathered relatives are offered a meal. Annual *barkhi* and fourth annual *chabarkh* death rites are also observed and *pitr* are commemorated every year.

OCCUPATION: The Kumhars mainly thrive on their traditional occupation of pottery. They also possess small landholdings and do agricultural work and animal husbandry. Some persons seek casual labour as well as agricultural labour or all land on contract or sharecrop basis. Many persons are in government jobs in various cadres including teaching, engineering, medical profession, police and army services. Some are in private jobs also. Many have abandoned the pot making occupation. The links with market are direct and the market is of daily nature and is fully regulated. Child labour exists. Dealings are generally in cash but they also sell their produce for cereals.

COMMUNITY COUNCIL: The community has its Biradari Panchayat but it is usually less functional though it occasionally deals with social problems related to marriage and divorce. This council also raises the voice of the community for seeking aid from Government for the purchase of latest equipment for pot-making and allotment of suitable pieces of land for digging clay as they face difficulties in getting suitable clay for pot-making. Economic disputes are resolved by the village *sayane* (elder people) or members of the statutory Gram Panchayat which also does the usual acts of social welfare and development. Serious disputes are taken to civil courts.

RELIGION: The Kumhars are Hindus and propitiate gods and goddesses of the wider pantheon order. *Godria Sidh*, Baba *Balak Nath* and other local deities are propitiated from time to time. Other local and regional deities of special reverence are *Lakhdata*, *Nahar Singh* and *Guga*. To propitiate Lakhdata, *chhinj* is arranged and *guga* is specially propitiated for eight days following the Rakshabandan festival and Guga fairs are arranged at various places. Nahar singh, The whistling deity stays on pipal trees and can be invited through various excorcist media. The spirit is considered to be a great benefector of the worshipper and benevolent god for all.

The followers of the Radhaswami sect have little belief in deities and visit the shrine of their guru at Beas in Punjab quite frequently. Various Hindu festivals of socioeconomic and socioreligious importance that are celebrated are lohri, Baisakhi, Holi, Chiran, Sair, Rakhri, ramnavmi, Guganavmi and Diwali. On the Barlaj day following Diwali they propitiate Vishwakarma by worshipping chak and observe fast and do not make pots for three days. Their sacred specialists are from other communities like Brahmans as priests, Nai for performing certain marriage rituals and chela for curing diseases of supernatural origins.

The folksongs, tales lore and music and dances of the region are shared. Among the famous traditional regional folksongs are Mohan, Gambri, Ranjhu-phulmu, Balo-Mahia and Kunju-Chenchlo. Gererally, dholak is used for bhajan and other folksongs. Usually young girls participate in folk dances like *'gidda'*. Pottery is both an occupation and a craft of the community in addition the women know knitting.

The Kumhars are considered *savarna* or *anderke* for having exchange of *kachcha* and *pucca* food and water with the certain Hindus. They tradition-

ally have no exchange of *kachcha* and *pucca* food and water with the *Chamar, Julaha, Dumna, Hesi,* etc. but many sometimes accept a *suchchi rasoi* cooked by a Brahman or Rajput cook. Wsater sources are likewise shared with only certain Hindus. Their cremation grounds are on the bank of a stream or *choe* and may be overlapping with those of other communities. Temples and other public places are common. Putative kinship-based friendship may occur with other communities.

The community has traditional *jajmani* links with many communities and the members seek their customary dues on each crop for providing services of pottery to their clients. The share to the Kumhar given at the time of harvest is called *khalothi.* They have this relationship with a Brahman priest. Nai, Lohar, and Chamar, besides others, mostly on exchange basis . Ceremonial visits are also paid by the Kumhar to their clients on festive and marriage occasions to give earthen pots, especially during Diwali to collect tyohar or festival share from them. They have members in business, teaching engineering and medical professions and in police and army services. Political leadership has emerged at the local gram Panchayat level.

The modern developmental programmes have made considerable impact on the community. Formal education is favoured for both the sexes up to the secondary school level. In the sphere of health and medicare, they favour both modern as well as indigenous methods as the case may be. The family planning method usually adopted is sterilization, mainly tubectomy. But the desire for at least one or two sons is still strong in the community even at the cost of many daughters.

Their houses are electrified and they avail themselves of modern mass media, communication and postal facilities. Drinking water is available through taps but the traditional sources like springs and *bauris* are still used as the water supply through taps is inadequate. Energy sources are firewood, cowdung cakes and sometimes coal and kerosene oil. They have facilities under Integrated Rural Development Programme (IRDP) and take benefits according to their requirements. Immunization is the main facility availed of under ICDS programmes for children. Facility of public distribution system is availed of like others. Kumhar community was poverty stricken earlier, but now they have made in roads to various and varied occuption to strengthen their economic position.

NAI (Barber)

The Nai is a well-known community of barbers. They are also known as *Hajam* among Muslims and regard themselves as *Kuleen Brahman* among Hindus. The name may have been derived from the Sanskrit word '*napika*', one who cleans the nails, or from the word *nakhun* (nails). Its etymology is also suggested from the word *nahna* meaning "not to refuse" or the persons-at-will who would not refuse to act (Rose, 1919). The Nai used to carry the messages of their jajman so they came to be regarded as a "*persons-at-will*". Some also sug-

gest that the community' name has been derived from the Hindi word *nyai* or *nyaee*, meaning justice or judge, as the barber was considered to be a good judge in solving a dispute. The Nai is honoured on ceremonial occasions of marriage and death as Raja (a king) and his wife (Nain) as Rani (queen).

He is also addressed on these occasions as Daroga. He plays an important role in negotiating marriages for his patrons, acts their messenger to invite people to assemble on ceremonies. He acts as a personal advisor and/or attendent to the bridegroom and also decorates him on marriage and the *Nain* does the same to the bride. He plays on a large curbed (S-shaped brass/bronze pipe called *ransinga* (war trumpet) producing a loud musical sound considered auspicious while the marriage procession proceeds. For rendering all these services and shaving off the facial, head and armpit hair of his patrons he gets his *lag* (dues) on the ceremonial occasions as well as a share in each crop. Some ethnographic accounts are available on the community in old literature (for example, Ibbetson, 1881; Rose, 1919; Crooke, 1896).

SOCIAL SYSTEM: The community perceives a wider inter-regional distribution and is found all over the country. In the State they are distributed in almost all districts but their areawise population is not known. They live in varied ecological zones. They occupy the hills and dales of the Himalayan foothills with a warm and temperate climate, low humidity and medium annual rainfall. Thin patches of forests exist on hill ranges. Their habitats are located near the villages of other communities. They are the integral part of Himachali social fabric.

The Nais share the language, dress and ornaments of the area. Usually a country Nai may be identified from a short distance by his tool kit of scissors, razers, combs, soap, brushes, a mirror and cup. Older men used to wear a cap, a *kurta* and a *janghia* (half trousers) but the younger men wear a *pyjama* or pants but no cap. Women's dress is *kurti, salwar,* or *suthan* and a *chadru* or *dhattu* in the higher hills of Shimla and Mandi. The traditional ornaments of the women are a cup-shaped or conical golden/silver chak on head or occiput, ear and nose-stud, pins, rings, *har* or *besar,* necklace) *gajra* or *choora* of silver and *pajeb* or *jhanjar.* They speak the local dialects, e.g., Bilaspuri, of the Pahari and *write in Devanagari* script both within and outside the community.

FOOD HABITS: The Nais share the food habits of the region. The major staple food is maize, followed by wheat and rice. Various types of pulses—*urad, moong, masur, kulthi,* peas and beans, grams, etc., are frequently consumed. Roots and tubers and various other green vegetables are also consumed frequently. Fruit intake is moderate and seasonal. Local fruits—mango, banana, guava, papaya, peach, apple, mulberry, berries, figs, etc.—are also consumed. Milk and milk products find place in their daily diet.

The cooking medium is mustard oil or *desi ghee,* but these days vegetable ghee is also used. Non-vegetarian foods like fish, eggs and meat are also =consumed, but only occasionally. Festive food preparations are *kheer* and *halwa, bhalle, babru, seviyan, khichri, ankli* and *ankloo.* Food tabooes exist. Non-

vegetarian foods are not consumed during festivals of socioreligious significance and during the death pollution. Men occasionally take country liquor and sometimes some women may also drink. Men smoke bidi/cigarette and loose tobacco in an indigenous pipe called *hukka/hukkri/kali* and *jhajri*. But the followers of Radhaswami sect avoid non-vegetarian foods.

SOCIAL SYSTEM: The Nais have several *got/gotra* and clans. Among the gotra, the common ones are *Kasab/Kashyap, Bhardwaj* and *Kaundal*. Several Rajput clans are distinguished which are also used as surnames by younger, educated persons, viz., *Jaswal, Jammual, Patial, Chandel, Katoch* and others like Kapoor and Gangotiya. The *gotra* and clans are used as the indicators of descent or ancestry from a particular lineage and are used as exogamous units to regulate matrimonial alliances. The Nai claim *Kshatriya* descent and also a status of this varna in the regional social hierarchy.

MARRIAGE SYSTEM: For marriage the Nais observe community endogamy and village and gotra exogamy. Marriages are settled through negotiation and exchange of sisters also occurs. Presently the age at marriage is above 16 years for girls and around 20 years for boys. Earlier child marriages were common and some also used to take bride price called *take lena*. But presently this custom has totally changed or reversed and has given way to dowry given in the form of household articles, clothes and ornaments. Currently some also demand cash or costly items. Monogamy is practised but a man is allowed to acquire another wife in case he gets no male issue from the first one.

Symbols of marriage are *sindur* or a *bindi*, glass bangles and nose and ear ornaments. The bride lives patrilocally. Widow remarriages are not practised but a widower can remarry any girl or a junior sororate. Divorce also has no social sanction, but recently, men and women have sought divorce on grounds of maladjustment or on another legal grounds as per the judicial approval. In such cases, the father is liable to support the children and he pays compensation to the woman. Either of the divorcees may remarry. The main changes in the institution of marriage are an increase in age at marriage and dowry and a liberal attitude towards the remarriage of young widows and dissolution of marriage.

FAMILY SYSTEM: The family pattern is vertically joint extended. The sons usually do not separate as long as the father is alive. But families may break up if there are more sons having more children as the differences usually come up on various family matters; unequal distribution of labour; troubling of the daughter-in-law by her mother-in-law and *nanad* and a similar attitude of *jethani* towards *devrani*. Also, sometimes the parents are more inclined towards a particular son and property may not be distributed fairly. All these factors plus sons employed outside hometown who take their families with them have contributed to the breaking of joint families. The juniors are supposed to obey and respect their elders. Avoidance relationships exist in the joint families.

The *lari* covers her face in the presence fo her *saurah, jeth, nandoi* and

elderly male members of the village. Joking relations are not very formal but exist between *devar-bhabi, jija-sali* and *nanan-bharjai.* The property is normally distributed as per the rule of male equigeniture. The eldest son succeeds the father. Since 1980s a great deal of change has taken place in the social and family system of Nai, due to spread of education.

STATUS OF WOMEN: The status of women remains low and they do not seek employment or do not contribute to family income except that they seek their ceremonial dues from their patrons at the time of marriage. They also lack powers of social control and participation in political activities. But they do all household chores and participate in agricultural and animal husbandry work, collect fuel and fodder and fetch potable water. They take part in social and religious ceremonies. They do not have decision-making powers in vital matters but regulate family expenditure. With passage of time and increasing trend of nuclear family women's role and status has improved.

The *Nais* follow *Sanatana* rituals in their life-cycle but some rituals have lost significance or are ignored, viz., pre-delivery rituals, *annaprashan* ceremony and adolescent rituals. Pre-delivery and post natal restrictions exist on the mother and post-delivery pollution called *sutak* lasts for 40 days, though purification occurs on the thirteenth day by taking *gunor guntar.* Delivery at home is performed on the ground floor and in an inner room of the house. On the thirteenth day a feast may be given if a son is born and sugar and germinated grams (called *shakar chhole*) are distributed.

The village ladies sing *ranjhunana* songs. The *nankiye* (mother's parents) bring *jhaggu-topu* and *kangnu* for the child. Name is given by consulting a Brahman priest but the poor ignore this ceremony. The main childhood ritual is *mundan* or *jatlu* of the son performed by the *mama* of the child on any odd year of birth before five years of age. A feast may be given to young children of the neighbourhood. *Janeu* is put on at the time of marriage. So many customs have now taken modern tone and taste.

The pre-marriage rituals are *sagai/mangni* in which some ceremonial rupees/ornaments and cloths are given to the boy and the girl by the opposite parties and sweets are exchanged and marriage is fixed. On the marriage day *sand* and *samuhat* ceremonies occur in which *batna* of turmeric and *ghee* are massaged on the body of the boy and girl and *mehndi* is applied on hands and feet. The elder daughter's husband acts as their Nai. The family propitiates its *kul devi.* The marriage rituals are performed by a Brahman priest at the bride's place as per the Vedic rites. Major rituals are *lagan* and *ved* in which the bride and bridegroom circumambulate the sacred fire. Finally, the parents and uncles and aunts of the bride perform the *kanyadan* ritual. A feast is given by the bride's parents to the groom's party. At the groom's place, the first ritual is *andrera* (entry in the new house) which occurs at an auspicious hour when the bride enters the house of the groom.

The other major ritual is a tree worship. The bride and groom circumambulate a pipal tree. The bride's brother helps her to take rounds of the tree and

a white cotton thread is tied round it. Putative kinship-based friendships of the bride and groom are also made at this time. The marriage ends with music and dance and a *dham* (recreation) to the gathered relatives and friends. *Muklawa* occurs on the next day.

DEATH CUSTOMS: The dead are cremated and their ashes are immersed in the Ganges at Haridwar and *pind dan* is given to a Panda. The death pollution lasts for 13 days and the story of the Garud Purana is read out by the family priest on every night during the pollution period and an earthen pot is kept lighted day and night. The *Acharaj* officiates to perform ancestor worship and seeks offerings. The family priest performs a purification *havan*. Gathered relatives are given a ceremonial feast.

The married daughters bring caps or napkins and cover the heads of their brothers. The sixteenth day is called *solia*; a ceremonial feast is given to the community. *Barkhi* (yearly) and *chabarkh* (four yearly) are observed and ceremonial feasts are given and offerings are made to the priest. The Radhaswamis, however, avoid these Vedic rituals and arrange a simple religious gathering for *satsang* and pay a visit to the Beas shrine in Amritsar and make offerings there.

OCCUPATION: The *Nais* traditionally thrived on their customary dues from their patrons on ceremonies and at each harvest. They also run barber shops and modernized saloons and beauty parlours in the towns and suburbs. They supplement their income by practising agriculture and animal husbandry as they also own some land. Many persons in the community are presently employed in Government departments on various posts holding white-collar jobs, teachers, junior engineers, military personnel, etc. The links with the market are direct and the market is of daily nature and is fully regulated and dealings are in cash. There is child labour in the community. Young boys usually start assisting their father in barbery.

COMMUNITY COUNCIL: The Nais have their formal community council still active at present and has its regional headquarters in Hamirpur district. It is officiated by a president and a secretary and annual subscription of Rs. 12 per household is charged. The office-bearers are elected by voice vote for an indefinite period till they enjoy the confidence of the community. Only men are members of this council. The council works for improving the social and economical conditions of the community, encourages literacy and discourages unwanted marriage and death expenditure. It also solves social disputes and problems of marriage and divorce. The council also aspires for attaining a Backward Class to Scheduled Caste status for Nais. The statutory Gram Panchayat takes up the usual village problems and solves disputes over land and water. But serious disputes involving violence are dealt by the police and legal course is adopted. With the passage of time traditional and customary bodies are paving way for modern social institutions.

RELIGION: The *Nai* worship Hindu gods and goddesses. The family/clan deities are different at different places and are usually the same as they

are also village, local and regional deities. Of special reverence are *Bharthri Sidh, Baba Balak Nath, Guga, Lakhdata, Mahasu,* and *Nar Singh* among the male deities, and *Hari Devi, Naina Devi, Nabhi Devi, Jawalamukhi, Chintpurni, Hateshwari, Vaishno Devi, Santoshi Mata,* etc. among the female deities. Their shrines are visited from time to time on fulfilment of a wish and/ or during annual fairs and festivities and especially during the *Navratras.* Sacred specialists are from within and outside the community and they believe that troubles or diseases are caused by local deities called *khot* or *dosh* and by evil spirits like *bhoot, pret, churel, jogni, betal, masan* and *bansheera* etc. These are t ated by the *chela.* Various Hindu festivals of socioeconomic and socioreligious importance are celebrated like *Lohri, Basoa* (Baisakhi), *Nauhle, Sair, Chiran, Rakhri, Guga Navmi, Ram Navmi, Shivratri, Diwali, Jagre,* etc. The festival of Sair is of special significance to the Nai community. They make an idol of Saraswati goddess from fruits and flowers and carry it in a basket to show to their clients at night and seek offerings.

Specific art and crafts are lacking but the Nain makes a wall painting called Kamdev, worshipped by the bride and groom at the marriage of their clients. Regional Pahari folksongs and tales shared are Puran Bhagat, Narsi Seth, excerpts from Ramayana and Mahabharta, Kunju-Chenchlo, Ranjhu-Phulmu, Gambri, Mohan and bhajan, kirtan and *bhetan* of female deities particularly of Jawalamukhi. Popular musical instruments used are dholak, harmonium, dantar, khartal, khanjar, tongs and bells. Simple dances and gidda by young girls are popular. The Nai is noted for his good humour and wits.

They traditionally share and exchange *Kachcha* and *pucca* food and water with the *savarna* but not with the *Chamar, Julaha, Dumna* and *Hesi* as well as the *Faqir, teli, sunhak, Bharyai, Mirasi,* etc. From the latter they may only accept a *sukha bartan* or a *suchchi rasoi.* Traditional water sources are shared with different communities. The Nais have ceremonial roles in marriage, death and other festivals as mentioned earlier. Receiving and rendering of economic and social services exist. There are persons in business, holding white-collar jobs, in teaching, engineering and defence services. Political leadership has developed at the Gram Panchayat level. Modern developmental programmes have made considerable impact in different spheres.

The literacy level of the Nai has gone up and both boys and girls receive at least secondary school education, though higher/ college education is not much favoured for the girls due to social reasons and sometimes due to economic reasons, as well as due to the fact that colleges are far-off. Their self-employment as barbers does not encourage more education for boys as well. The modern health and medical care facilities are availed of but indigenous methods are also used. Family planning is favoured and modern methods especially sterilization are adopted. But desire for at least one son is still socially felt even at the cost of a large family.

Electricity is available in every household and modern mass media (radio and TV) facilities are either availed of or are accessible in the neighbourhood.

Road communication has also reached most of the villages and postal and telegraph facilities are available at a short distance. Drinking water is available through pipelines but traditional water resources like springs and step - wells are also in use during scarcity/inadequacy of piped water supply. Fuel resources are firewood, cowdung cakes and sometimes kerosene oil. General provisions exist under IRDP but seldom availed of. The impact af modernnization is so much on social life, that functions and role of Nai has reduced considerally in an occasions like birth, marriage, death etc. The home service provider Nai has been replaced by modern beauty saloon.

SANHAI

The word *Sanhai* means the one who plays a piped instrument *shehnai* (clarionet). during ceremonies, religious festivals and in temples. Regarding the migration and history of the community nothing concrete is available. They have been inhabiting the region since time immemorial. The Sanhai is a *scheduled caste.* According to the 1981 Census there were 1,675 Sanhais. In 1991 2093 and in 2001 the population increased to 3129.

LANGUAGE: The people speak pahari which is a common dialect spoken throughout the state with little variation and modification. With oustsiders they can converse in broken Hindi and those who are literate can read or write in Devanagari. The old script of the people of Himachal in general used to be *Tankari,* but the script is hardly in use now and has been replaced by Perso-Arabic and Devanagari. They wear a narrow pyjama, shirt, waist coat and Himachali cap or may alternatively use a turban. The women wear salwar and kamez.

FOOD HABITS: The staple diet of the Sanhais consists of maize, wheat and mah. They are non-vegetarian and take the meat of goat, fish and chicken. Eating the meat of buffalo and cow is considered taboo. The men are fond of smoking *hukka* and *bidi.* Drinking is quite common among the men, both old and young, and is almost a regular feature, but women may take it only on certain festive occasions or on ceremonies like marriage. Among the non-alcoholic beverages, tea is quite popular and is taken by persons of all age groups. Milk is given to the infants. Seasonal vegetables and locally available varieties of fruits such as apple, apricot and plum are consumed moderately.

SOCIAL SYSTEM: The *Sanhais* have a number of exogamous gotras, each claiming its descent from a common ancestor. The function of the gotra is to regulate and prohibit marriage within close kins, related either through blood or through marriage.

The community ranks low in the hierarchical grading of the castes and they admit that they occupy a similar position as being occupied by the *Hali, Koli, Bainsi* and *Chanal.* In fact, recently there has been a growing tendency to merge their ranks with a numerically stronger group, the Halis who have gained support in local politics and in the region. Very minor differentiations exist only with regard to the occupational specialization of the respective

groups. The Bainsis for instance, play the flute while the Sanhais play the shehnai, a pipe instrument. There have now also been marriage exchanges among these groups and nowadays, the social discrimination they were being subjected to, at the hands of the castes like Brahman, Rana, Rathi and Mahajan is far less than was the case till seventh decade of 20th century. The Sanhais rank themselves higher than castes like *Chuhre, Chamar* and *Dumna.*

MARRIAGE SYSTEM: Among the Sanhai marriage is strictly avoided among consanguineal kin i,e., avoiding marriages within the gotra of self mother's and preferably mother's mother. Marriages are settled through negotiation but exchange marriages are also quite in vogue. The other form of marriage which is less practised is marriage by service and is known by the term *ghar javantri.* In this system the prospective bridegroom has to serve in the house of his in laws for a specific number of years, before he can finally claim the hands of his daughter. The usual marriage age for boys and girls is between 19 and 20 and 16 and 18 years respectively. Bride price is slowly giving way to dowry. Dowry consists of some gifts of utensils or clothes for the bride and the bridegroom and it should not be confused with the system as it is normally taken to be. Bride price is still practised by the poorer sections of the community.

Remarriage of widow and widower is allowed and a widow normally marries her deceased husband's younger brother by *ghadoj* a form of marriage which does not entail any elaborate rituals. Marriage is solemnized in the presence of close relatives of both sides. The woman is offered a red *ribbon, puranda,* Both levirate and sororate are practised but this is not imposed on the widow/widower.

DIVORCE: Divorce can be resorted to by both men as well as women. If a woman wants to marry outside the family she may do so, provided her new husband pays compensation money to her former husband. Children may stay with either mother or father. In the former cases, they lose all share in their father's property but on the other hand, if they continue to live with their father they enjoy all the benefits. Normally children are the responsibility of the father but in case of very small children the mother takes them along but the children may be claimed back by the father once they grow up. A second marriage in the lifetime of the first wife can be resorted to on the grounds of barrenness of the first wife but this does not necessitate divorcing her. On the contrary the second marriage takes place with the consent of the first wife.

FAMILY SYSTEM: Joint family system still finds its place in their social structure but nuclear families are also increasing side by side. Inter personal relation among the members fall largely within the normative framework of the joint family system. *Purdah* which is observed by the women in the presence of the father-in law and elder brother-in law is limited to partly covering their heads. Relation with the younger members of the family and peer-group members are of joking type.

The inheritance of property is on the patrilineal line with the sons receiv-

ing an equal share. However, the eldest son is given an additional share for paying the debt of his father. If a person has four sons then the property would be divided into five parts, the fifth part being termed as *jiyuk* and belongs to the parents. This share is given to the eldest son after the death of the father. A son born to a widow after the death of the husband is called *chakhandu* and is entitled to a share provided the widow continues to live with the family of her deceased husband. A daughter may be entitled to property only in the absence of a son.

STATUS OF WOMEN: The women do not enjoy socioeconomic status at par with that of their men counterparts. Their economic potential and substantial contribution to the domestic income is recognized. They are not allowed to exercise their independent control on property and economic issues despite working hard. They not only look after the house but also bring potable water and fuel, attend to the animals and have a major role in agricultural operations. Except ploughing, the women take the major burden of the agricultural task. Despite all this, she is not given any representation in the local Jati Panchayat and has no freedom to exercise her economic will. Her political role is limited to the casting of votes.

The life-cycle rituals connected with birth marriage and death are observed much in the same fashion as is prevalent in the rest of Himachal Pradesh. Immediately prior to the birth of the child the woman is separated to a room. Post birth pollution is observed for 21 days and purificatory rites are observed on the sixth and are eleventh day. *Jatlu* ceremony is observed in the first, third or fifth year whenever it is convenient for the family. The maternal uncle first cuts the hair followed by other relatives. The barbar also receives his due share on this occasion.

MARRIAGE SYSTEM: Marriage consists of a number of rituals which are observed at the bride's and bridegroom's house but the binding part of the marriage is the giving of the daughter's hand to the boy amidst the chanting of *mantra* and circumambulating around the sacred fire by the couple four times. This is known as lavan lai. This happens in the regular marrige ceremony which is known as *byah* or *lagan*. There are other forms of marriages which are prevalent and involve considerably fewer rituals. A divorce remarriage is known as *jhanjrara* and consists of a simple ceremony. The bridegroom presents the bride with a pair of new clothes and an ornament in the presence of some close relatives of both sides. Similarly, marriage by elopement and widow's remarriage, namely *gadhoj* or *sarguddi*, are also a simple affair.

DEATH CUSTOMS: The dead are cremated but infants are buried. The important death rites are observed on the seventh, tenth and thirteenth day. A funeral feast is given to the relatives and members of biradari. An Acharaj is called to perform death rites. Ancestor worship is observed.

OCCUPATION: Traditionally the sanhais play the musical instrument at the temple and marriages as well as on festivals such as Minjar and Bishu. When they play the instrument during funeral processions, they are known

as Hesi. They were better off during the times of princely states and got the protection from the Rajas of all princely states. Some were provided land as an additional source of livelihood. The economic condition of the people was also good since there were more opportunities for them where they could easily get more money and could demand extra renumeration on festive occasions from their patrons. Nowadays, with the growing popularity of the modern musical band and other instruments, the importance of their traditional instrument is fast decreasing, giving them less and less work opportunities.

In order to eke out a living, the Sanhais now resort to other occupations such as labour, both in agriculture and otherwise. They are also petty shopkeepers. As a renumeration for their services at the temple, they are given a room to stay together with a paltry sum of Rs. 200/- per month as salary. This is far from sufficient and people lament that they should be provided with a reasonable salary from the temple trust for their services. Since they are to play at many temples twice during the day, both in the morning and evening, they cannot take up a full-time occupation elsewhere. Child labour in the family was also present owing to their poverty and deprivation.

COMMUNITY COUNCIL: The Sanhais have their own caste council for the proper maintenance of the customary laws. All matters relating to elopement, abduction, divorce, intercaste alliances and even theft, are referred to their own *jati* Panchayats for effective solution. If the accused is found guilty, he is reprimanded for it. The punishment can vary from giving a simple public apology to a cash fine and even excommunication depending on the gravity of the offence. Since the inception of the panchayati Raj system and the courts of laws, people now have an alternative course of seeking justice. However, such instances are very few and most of the time matters are amicably sorted out at their own *biradari* level.

RELIGION: The Sanhais are devout Hindus and Lord Shiva is their principal deity. Since they have been mostly associated with temple service, they are more religiously inclined and consider it their utmost duty to offer their regular service to the deities at the temples. Besides they have great faith in the regional deities which they propitiate from time to time. They take an active part in all the major fairs and festivals of the area, namely Minjhar and Sui ka-mela, which are the major annual features of state's cultural life. Besides, *Lohri* and *Bihu* are also very important festivals.

The practice of untouchability and caste-based distinctions are not as visible as they are among the castes groups living in the plains. Restrictions are seen with regard to commensality and castes like Brahman, Rana and Rajput traditionaly do not dine with the Sanhais. They can, in special circumstances, accept *pucca* food only if prepared by members of certain castes and served in separate utensils. The Sanhais are otherwise free to enter the same temple premises or to draw water from common resources. The Sanhais on the whole maintain socioeconomic ties with castes like *Bainsi, Hali* and *Chanal*, and nowadays marriages are also taking place amongst them.

The development aspects and its impact are common to the region as a whole. Since they are included in the scheduled castes, they are provided subsidy and loan facilities like other scheduled castes of the area. Never-the-less, these special provisions and allocation are limited to the few who can exert some pressure and pursue the matter. The loan seekers often get disappointed because of the cumbersome procedure involved in procuring the loan. Sanhais are the very important part of cultural life of the state. The pleasantness of their shehnai is loved on all occassions, becaused of its cool and serene nature.

SAINI

The *Sainis* are "the market gardener caste of the Hindus in the eastern districts, corresponding to the *Mali* of Jamuna zone and *Araíns* or *Baghwan* of the rest of the provinces" (Rose 1914:346). Rose further states that though they appear to be the subdivision of the Mali, some of the higher tribes of the same caste would not intermarry with them.

In Jalandhar district of Punjab they even claim a rajput status which is probably doubtful. About the etymology of the Saini, the word is derived from the word *rasaini* or *rasai* meaning skill and since the people did such wonders with land that they are surpassed by none in industry and ability and hence the word Saini (Rose op. cit.) The community is distributed principally in the districts of Hamirpur, Bilaspur, Kangra, Shimla and Sirmaur, According to the sources, they came during the reign of Maharaja Ranjit Singh from the Chanjowal village in Hoshiarpur district of Punjab. It seems quite probable that during the reshufling and reorganization of the undivided State of Punjab into Himachal Pradesh they shifted to this part and were incorporated in the Population of Himachal Pradesh. **Sainis are scheduled caste.**

LANGUAGE: The dialect of the people is Punjabi mixed with Hindi and Urdu. Many of the members of the old generation also know Persian. The scripts used by the people are Devanagari, Perso-Arabic and Gurmukhi. Those who have attained formal education make use of English as well. With outsiders they use a dialect which is a mixture of Punjabi, Hindi and Urdu. There is no distinct dress, adornment, or head gear which can distinguish them from the rest of the people of the region. The older generation of men wear *pyjama* and *shirt*. The women wear *salwar* and *kameez* along with *chadar* to cover their head. Young married women observe *purdah* in the presence of elder male member of their husband's family.

FOOD HABITS: The staple diet of the people consists of maize and wheat *chapati* and pulses. Rice consumption is considerably less. They are non-vegetarian and occasionally take meat of goat, rabbit and chicken. The men are fond of smoking and drinking. The drinks are purchased from the market. The women do not smoke or drink. Betel-chewing is not a common habit.

Among the non-alcoholic beverages, tea is most popular and is made use of extensively by all men, women and children. Milk just for drinking becomes quite expensive and is consumed by those who have their own dair-

ies. Roots and tubers, seasonal vegetables and fruits are also consumed to a moderate extent. There has been no significant change in the daily food habits of the people, except for the intake of non-vegetarian items which has considerably reduced owing to its high cost.

SOCIAL SYSTEM: The Sainis are similar if not identical to the *Malis* and the *Arains*. It appears, as has been mentioned by Rose (1914), that they are perhaps a subdivision or an offshoot of the Mali. Among the Sainis, there are Sikh also. Both Hindu and Sikh sections may intermarry. The Sainis have been divided into number of gotras like *Mehra, Masute, Chere, Ghugani, Tambar, Badwal.* Rose (op. cit.) cites many more names such as *Salahri, Bhanga, Bhela, Bhundi, Boli, Cheran, Daule, Cheri, Ghalar, Giddhe, Kolote, Mulana* and *Sugge*. The functional utility of this exogamous unit is to regulate marriage between the kin of paternal and maternal sides. The community can be placed in the middle stratum of the social hierarchy. The exact placement, the classical *varna* order is not clear, but judging by the people's self-perception and by the perception of others, they seem to be a part of the wide variety which comprises the *Sudra*. In Jalandhar, the community claims a much higher status and they rank themselves close to the Rajputs.

MARRIAGE SYSTEM: Marriages are settled through negotiation and the proposal of the marriage can be initiated from either side, which is purely a matter of convenience. Marriage would be settled leaving the gotra of father, mother and mother's mother. Previously, a match could be selected from within the village itself, but nowadays village exogamy is the rule owing to the simple fact that members of the community inhabiting the village are mostly related to each other and also because there is a strong sentiment of fraternity which binds all the girls and boys of the village in common bond of a brother and sister relationship. The tradition of village exogamy is prevalent almost all over the state.

The usual age of marriage for girls and boys is between 20-23 and 24-25 respectively. A decade or so earlier, even child marriages in the age group of five to ten were also performed, in which case a second ceremony known as *muklawa* was performed at a later date when the girl actually came of age as attaining puberty. With the enforcement of legislation banning child marriages and also partly due to social awakening, child marriages have been largely replaced by adult marriages. The residence after marriage is patrilocal. The common symbols for married women are vermilion mark in the parting of the hair, glass bangles and toe-rings. The practice of bride price and dowry is not present but gifts in the form of utensils, clothes and jewellery are voluntarily given to the daughter by the parents and no demand in the form of either cash or kind is made as a pre-condition to marriage.

Both divorce and remarriage of widow and widower are permitted. Junior and senior levirate and junior sororate are also practised. Divorce, though infrequent, can be granted on exceptional grounds of adultery, impotency, frigidity, mental sickness or due to the practice of witchcraft. If the wife is

barren, a second marriage is possible with the consent of the first wife but this does not call for divorce. A woman on being widowed or divorced can remarry a person of her choice from within the community and in such cases the children born from previous wedlock are the responsiblility of the father. In the event the wife is divorced by the husband, the community panchayat can levy penalty of post-divorce maintenance on the husband.

FAMILY SYSTEM: The traditional structure of the joint family still finds a lot of social support despite the fact that nuclear families are also coming up. The relations within the joint household are by and large based on mutual cooperation and interdependence, especially in times of need countering the bitterness caused by petty quarrels and difference arising out of domestic issues. The women observe *purdah* in the presence of the father-in-law, husband's elder brothers and with all those men who are elder to the husband in age and relation, whereas relations with peer group members and those with husband's younger brother and that of the husband with wife's younger sister and brother are of joking type.

STATUS OF WOMEN: Women do not enjoy the same socioeconomic freedom as has been accorded to men. The women contribute to the family income besides doing household chores, but ironically they do not wield any significant control on the economy of the house. In household affairs, they do have considerable autonomy. Women take active part in family rituals and festivals. But their political will is highly constrained for they hardly know their surroundings to express any independent view. With social awakening women have started taking advantage of political patronage granted to them by the legislation in the form of reservation of seats in local bodies.

The rites-de-passage as observed from time to time and are broadly in tune with Hindu religious beliefs. The post-birth pollution is observed and a woman who has delivered the child is not allowed to cook or touch the utensils or draw water unless she has undergone the purificatory bath on the eleventh day and subsequently, after a month. Thereafter, she is reckoned physically and ritually clean to undertake normal routine work. *Annaprashan* is observed by giving sweet pudding to the child, which formally initiates the child into a cereal diet. At this time the child's paternal aunt brings some clothes and sweets for the child. The *mundan* ceremony is performed only for the male child. It is done within the first year of birth or can be deferred till the third, fifth or seventh year.

Marriage involves a series of rites performed from time to time, starting with betrothal, locally known as *sagai*. On this occasion the groom's father, brother or uncle visits the girl's house and offers her some clothes or a piece of jewellery. Thereafter on a pre decided day, the groom's party, consisting of his near and dear ones, relatives and friends, leave for the bride's house. On reaching there they are welcomed by the girl's parents. All the important marriage rituals consisting of *kanyadan* and *phera* are performed amidst the chanting of *Vedic mantras* by the priests of both the sides. This is followed by a ceremony

known as *doli* which marks the departure of the bride from her home to that of her husband.

DEATH CUSTOMS: The sainis cremate their dead. However, children below 10 years of age and also those who die of small pox are buried. The death pollution lasts for 13 days, followed by community feeding on the the sixteenth day when another important death rite known as *pagri* ri *rasam* is performed. On this day, a white cloth for *pagri* is brought customarily by the maternal uncle and is tied to the eldest son of the deceased signifying both transfer of authority and responsibility.

It is customary that the eldest son performs the last rites of his father, Earlier all the cognates of the deceased used to get their head and moustaches shaved off as a mark of respect to the dead and also signifying solidarity of the blood kinship, but nowadays the practice of shaving off the head is being dropped. Ancestor worship known as *shradha* is also observed anually during the fortnight especially dedicated to the commemoration of the dead, which falls in the month of September-October. This is known as *pitr paksha* and these days are considered solemn and in a way inauspicious as no marriage or tonsure or similar auspicious activities can take place during this period. People refrain from purchasing new clothes or utensils during *pitr-paksha.*

OCCUPATION: Traditionally the *sainis* have been practising market gardening in addition to farming. Presently,a majority of them are landowner and cultivate their own fields. Those families which did not have any land have now received land under nautor scheme (distributing land for the landless) under the Twenty point Economic Programme. They also receive subsidy from the Block office for manure and seeds. In addition to agriculture, many of them have opened their own shops, and business. Some have secured job in military and Government.

There are some shops of general merchandise in the village. The fully developed town market is also within the reach of the people. Commodities are purchased against cash, but barter is also practised to some extent. The children up to the age of 15 are held back from their studies to assist their parents.

As a mechanism of social control the Sainis have the formal statutory panchayats. All cases of social disputes are brought to the notice of the Gram Panchayat which can levy fines in cash as compensation for the loss. The fine money thus realized is put to the welfare of the village, for instance in building the village roads. There is no *biradari* council of the Sainis but some purely domestic issues like family quarrels and cases of marital discord are discussed by the senior members of the Saini *biradari* and reconciliation is mostly reached. In case the matters are not sorted out at this level, they are then referred to Gram Panchayat, and if it also fails to reach any amicable solution the same are taken to the courts of law for final settlement.

RELIGION: The Sainis are Hindu by faith. Besides the major gods and

goddesses of the larger pantheon, they worship the regional deities, such as Nag Devta and Baba Gorakhnath. Sunday is the day which is allocated to the worship of Nag Devta. They also worship the *pipal* tree on the first Tuesday in the month of *Jaistha* (May-June). Incidentally. Nag Devta and pipal are closely linked with Lord Shiva. Baba Gorakhnath and his great disciple Raja Bhartari Chandra are also held in high esteem.

A fair is held on Makar Sankranti day at the village Chanjowal (a place of their original habitation) in Hoshiarpur district of Punjab. They go every year to participate in the fair and glorify the saintly and divine qualities of their mythological heroes namely, Baba Gorakhnath and Bhartari Chandra. Besides, they visit the famous shrine of Deot Sidh which is situated on way from Una to Hamirpur. People also profess with in magic spells and evil spirits and in the event of a person being afflicted by some chronic disease they seek the help of *sayana* and *bhagat* who are specialists in warding off the evil designs of the maligned spirits.

They share their songs, folklore and folktales and dances with other communities of the region.

The traditional *Jajmani* system which is locally being referred to as *seppi* exists only with *Tarkhan* and *Lohars* who repair their agricultural implements, and *in lieu* of the service rendered, they give them one maund of grain on each harvest viz *rabi* and *kharif*. Earlier, seppi existed with other communities such as *Dhobi, Chamar* and *Nai*, A Brahman who comes to perform marriage rituals or any family ritual is paid either in cash or kind (usually grains). A Brahman accepts *sidha* or if the food is cooked by a Brahman and also served by a Brahman then it may be acceptable to the Brahman.

The Rajputs accept *pucca* food and that too if prepared separately. Communities like *Tarkhan, Lohar, Jat, Bazigar* and *chimbe* accept *pucca* food from them. The Sainis, on the other hand do not accept anything, either *pucca* or *kachcha*, from the *Chamar, Chuhra* and *Dumna*. On Social occasions demanding cooperation, all the communities inhabiting the village show examplery sense of comradeship and brotherhood.

Under the Government-launched schemes of Integrated Rural Development Programme and Employment Guarantee Scheme, many of them have reveived loans and subsidies. Under the Employment Guarantee scheme, an educated youth can procure a loan up to Rs. 25,000 with subsidy and at 4 per cent rate of interest. Some of the beneficiaries under this scheme have been able to open their own shops which have substantially increased their income resources. Besides, they can get loan for agricultural purpose, or buying bullocks and agricultural implements.

In the field of education and literacy, the Sainis show favourable and positive attitude. The younger generation is more keen to pursue education even at high levels. Young girls are also sent to schools and at least they view education as the most effective means of upward mobility.

Regarding health and family welfare, the facility through primary health centre and also by way of hospitals (at the district headquarters) is available to them. The family planning programmes launched by the Government has done extensive propaganda and advertising and arranged family planning camps from village and village to as a result people have accepted the small family norm of two children. Besides, the scheme for immunization of the mother and child is availed of. Sainis are one of the most upmoving scheduled caste community of the state in all walks of life including education Job, business etc.

DUMNA

The Dumna are found in Chamba, Kangra and Shimla hills. In Chamba, they are called by the name of Dum. Their working material is bamboo. They make sieves, winnowing pans, fans, matting, baskets, screens, grass rope and string, furniture and other articles made of bamboo. Rehar or Rihara, another caste closely allied to Dumna, is found in Kangra and Shimla hills, they are called herdsman. They are said to make the trinkets of the brass metal, worn by the Gaddi women. They furnish the music at Gaddi weddings and other celebrations. 'Sippi' is a weaver of Gaddi tribe.

TELI

The Teli is an occupational group, consisting of both Hindus and Muslims. Muslims Telis are larger in number. They are listed as the scheduled caste. The combined population of the two groups of the Telis was 3,768 in Himachal Pradesh according to 1981 census. In 1991 it was 5639 and in 2001 6964. The history relating to their origin and migration is not known.

LANGUAGE: The Telis are scattered practically in all the districts of the State. In Chamba they speak Chambiali-a dialect spoken in Chamba district while in other disticts other local dialects are spoken. The script used is Perso-Arbic which is the script of the whole region. Those who are literate can read or write in Hindi (Devanagari). They share regional dress pattern.

FOOD HABITS: The Telis are non-vegetarian. Eating of pork is taboo. Their staple diet consists of *chapati* of maize or wheat rice, *mah* along with moderate consumption of vegetables, roots and tubers which are usually cooked in mustard oil. Locally grown fruits are also taken seasonally. Taking of alcoholic drinks is widesprad among the men. These drinks are sometimes locally brewed but mostly purchased from the market. Smoking bidi and *hukka* is also quite popular among the men. Chewing of pan is not so common but tobacoo and betelnut are chewed by both men and women alike. Tea is most commonly taken.

They are moslty Sheikh and Pathan. Intermarriage among other groups of Muslims can take place but the Sayyad Muslims would not marry their daugthers with Telis. The Sayyad can however, take a daughter from them in marriage. As per the version of the local people, the Telis were originally Hindus but some were later converted to IsIam. Some of the practices also speak

of their Hindu origin. For instance, unlike Muslims, they refrain from parallel-cousin marriage. Marriage can take place with father's sister's children and mother's brother's children but not with mother's sister's children.

MARRIAGE SYSTEM: The marriages are settled through negotiation and offer of marriage must necessarily come from the boy's side. Exchange marriage can also take place. When the marriage is settled the amount of *mehar* to be paid to the wife is also settled. The amount is normally paid to the wife in the event of the dessolution of marriage. This amount can vary from person to person depending upon the social status of the family. Dowry in the form of clothes and jewellery and items of domestic use is also given to the daugther at the time of marriage. Both divorce and remarriage of widow and widower are allowed. As per the law of Islam, man can marry four times, provided he has the consent of the first wife. But in practice this is not so and monogamy largely prevails. Divorce can be sought on grounds of adultery, mental sickness, practice of witchcraft and sorcery and cruelty.

A widow can marry her husband's younger brother but can also marry outside her husband's family if she so wishes. A man can also take his wife's younger sister after her death. In the event of divorce, the amount of *mehar* is to be paid to the wife and then only the formalities of divorce can be completed. If a widow marries outside the family she does not get a share in her husband's property, but her offspring from the first marriage are entitled to a share from their father's property.

FAMILY SYSTEM: Joint families still hold good among the Telis, but nuclear families are also coming up gradually due to rifts arising out the paucity of space, unequal Division of labour in the extended household and also the unequal earnings of the individual members within a household. *Purdah* is observed by women in the presence of their father-in-law and husband's elder brothers and other male relatives elder to the husband, but with the younger ones and peer group members joking relationship exists. The eldest male member is the head of the household, but the authority and respect the members of the older generation wielded in the past is gradually declining.

Inheritance of property and succession is in the male line. The sons get an equal share in father's property. Nevertheless, son who looks after the aged parents is likely to receive some extra share. In the absence of a male issue a daughter may inherit the same.

STATUS OF WOMEN: The women do not enjoy the same socioeconomic status as the men. Economically also they are dependent on men. The women take part in agricultural operations but they refrain from working in other's field. They take active part in rituals and festivals. Socially and politically they are not aware of their rights.

SOCIAL TABOOS: The life-cycle rituals are broadly the same as observed by other Muslim communities but the regional influence is profound. After birth a number of ceremonies are held from time to time. As soon as the child is born, a knowledgeable person from among the *biradari* or a *maulvi* is

called to whisper the sacred lines from the holy Quran in the child's ears.

The child and the mother are given their first purificatory bath on the fifth and subsequently on tenth, twenty-first and fortieth day. Thereafter, she and the child are free from all impurities. The first feeding of cereal food to the child is held at the age of six months and is locally known as *khirpo*. The child is given some rice pudding to gradually initiate him to cereal diet. The first shaving of the head is known as *Jatlu* and is normally performed for boys.

Marriage, known as *nikah* is performed as per Muslim rites. Prior to marriage the most important ceremony is *mehndi* which is performed on both the sides, in which *henna* is applied to both the bride and the bridegroom by their sisters and sister in-law. Marriage songs are sung on this occasion and the sister-in-law and sister are suitably rewarded. The actual marriage ceremony takes place at the bride's residence and *maulvi* presides over it. The *nikahnama* mentioning the amount of *mehar* is read out and the marriage is solemnized.

DEATH CUSTOMS: Death rites are also observed as per Muslim religious practices. They bury their dead. On the seventh day, known as *sata*, clothes and certain personal belongings of the dead are distributed to the poor. The mourning period lasts for 40 days, during which simple food is cooked. When the husband dies, the widow does not go out of the house for three months and 10 days. This is known as *iddat*. After a year, the *maulvi* is called to read the holy text for the peace of the dead.

OCCUPATION: The Telis are an occupational caste of *oil pressers* but nowadays, most of them practise agriculture and also cultivate the land of others on sharecrop basis or on payment of wages. Some have also gone out and taken up jobs in order to supplement their earnings. Some however still continue their ageold traditional calling and side by side supplement it with other part-time or full-time occupations like service, labour and business.

The Telis earlier had the *jajmani* relationship with other castes, but gradually such relations are being replaced by modern economic relations based on the principle of *quid pro quo*. The traditional *jajmani* system persists with the *Nai* and the *Dhobi*. There are town market for the supply of goods. There are few permanent shops in the village which cater to the daily requirements of the people.

COMMUNITY COUNCIL: The *Telis* have their own *biradari* councils which take up the issues of divorce and compensation claims, and also deal with cases of elopement, adultery, rape and petty theft. In case a settlement is not reached, the party can approach the courts of law. Gererally efforts are to sort their problems within themselves, but if the matter goes beyond, other alternatives are resorted to. The nature of punishment is usually in the form of a feast given to the *biradari*.

The Telis follow the Muslims religious beliefs and practices and have faith in *pirs* and *mazar* and every *pir* has his special day in a week. They propitiate them by lighting an earthen lamp, chirag. It would be interesing to mention

that the Telis, though Muslim by faith, also take part in certain Hindu festivals like the famous Minjar Yatra. Also the nomenclature used for many of their life-cycle rituals is the same as used by the local Hindu population.

The women do the famous Chamba embroidery the speciality of which lies in the fact that the stitches look just the same on the reverse side also. Besides. they have a rich heritage of music, folk songs and dance which they share regionally. The traditional obligatory nature of relationships is gradually giving way to modern economic relationships. However on secular occasions both Hindus and Muslims participate together.

The Telis belong to the *scheduled caste* category and therefore get the facility of loans and subsidy from the state Government. Many of them are benefited by these welfare programmes. The facilities of electricity water transport and communication system exists. The people express their satisfaction at the infrastructural changes which have considerably changed the lifestyle. In matters of education, their children get freeships. Primary health centres exist in most of the villages. But less equipped with medical and paramedical staff and dispensaries. As such people choose to go out in search of jobs and better economic prospects. Like any other community of the state Teli have been getting equal opportunity to have the benifits of education, health, jobs and political participation. In the process, they have equally benefited from Government schemes, which are invariably made for all, irrespective of caste, religion or regional affiliation.

GHIRATH

The Girath, Ghirth, Ghrit or Chowdhary come next to the Brahmin and Rajput as a predominant Hindu community in the North-Western part of Himachal Pradesh i.e. Kangra, Hamirpur, Una and Bilaspur districts. Etymologically, Ghirath is derived from *'ghrita'* or *'ghee'* as per legend Shiva made them out of *ghee*. They are said to be the most tireless people and very industrious and successful cultivators. They have two main sub-groups-the Bhatti (after hal bahna, i.e. ploughing) and chohang in Punjab.

The Ghirath is a local name and its origin from ghee reveals their traditional occupation of animal husbandry and farming. However some community men claim their origin from a saint known as *Ghrit Rishi* and also associate themselves with Kauravas of Mahabharata fame. Some researchers do mention about their references in the Vedas and Puranic scriptures. Although Ghirath claim their descent from Rajput or Kshatriya, yet like many other communities their origin is concealing in mystery. The community is critical about its name and status etc. Their mahasabha wants to call the community with the name of *Ghrit* and not the *Ghirath;* as they are known in local conversation and references.

LANGUAGE: They seem to be very remote inhabitants of the soil along with the Khasa. They speak regional dialects like Kangri and Bilaspuri also known as Kahluri among themselves and with the neighbouring people and

write in Devnagari script. Men wear *Kurta* and *Pyjama* (trouser or pant) and women wear *Kurti, Salwar* and *Chadru* (Dupatta).

FOOD HABITS: Their staple food is maize, wheat and rice. Various types of pulses-Kulthi, moong, masur, pees, arhar, urad, grams and beans are eaten. They also take non-vegetarian diet such as fish, eggs, meat of goat and sheep. But majority of them prefer vegetarian diet. Milk and milk products are consumed in large quantities. Men sometimes are fond of country liquor (Desi Sharab) purchased from the local market. But in the recent past English wine has also become quite popular. Fruit and vegetables are eaten moderately.

On the festivals, special foods are prepared. The festive foods are *Khichri* on lohri, *ankil/ankloo* and Babroo on Diwali/Dushehra, *babroo* and *Kheer* on Baishakhi and Nauhle, *seviyan* on Sair as special preparations. Food taboos are observed on certain occasions such as fasts, death pollution and festivals. There is a mention of eight large subdivision of Ghirath-namely Kaundal, Bharadwaj, Bhattlu, Badial, Pathari, Chhabru, Reru and Chhora. Most of their sections carry the names of animals, plants, colours, different occupations and are potemistic in origin.

SOCIAL SYSTEM: The Girths are endogamous, but in some cases, there are cases of intermarriage with some other communities. Village and *'got'* (gotra) exogamy is maintained. Their matrimonial alliances are fixed through negotiation by a negotiator known as *robara* or *rabaru*. The exchange of sisters called *batta-satta* was quite common in the recent past and bride price called *brina* was in existence in case no sister existed in the family for exchange.

The exchange marriages are now mainly found in the poor and resourceless families or where the boys and girls are illiterate. In cases where man marries a second time, called dhuwaju, bride price is also taken, but being a social taboo, it is taken secretly. Dowry has become almost regular feature now and the girl is offered in dan. Now the bride price is only exception. Monogamy is the rule, but a second wife is desired in case of no children (infertility), without divorcing the first wife. In that case the status of the first wife remains that of a *bari* (elder one) and she carries equal and even higher respect than the second wife. Sindur, glass bangles, bindi (kumkum) and nose ring/pin and bridal finger ring are symbols of a married woman. The residence of the married girl is patrilocal. Widow remarriage is permitted, but not held in high esteem, a brief ritual called jhanjrara or Chadardalna is performed. Divorce is permissible in cases of impotency either of sex, cruelty, insanity and maladjustment.

Children in such cases may live either with father or with mother. In the recent past under the impact of new life culture divorce cases are dragged to the court of law and woman receive alimony and man is also responsible for the children. During the pre-independence period child marriages were very frequent among the Ghiraths, but now post puberty/adult marriages are performed.

FAMILY SYSTEM: Till few decades back joint family was a common feature, but now they have nuclear as well as vertically extended families. The

inheritance is patrilineal and as per the male equigeniture the division of property is by *Chundaband* system, when man has two wives; succession is patrilineal and the eldest son succeeds the father. Joking relations are seen between devar and bhabi, jija and Sali, jija and sala and naned and bhabi. The avoidance relationship of lari with *saurah, jeth* and *nandoi* are often exist.

STATUS OF WOMEN: The Ghirath women participate in various economic activities, including casual/daily-wage agricultural labour and as maidservants, midwives etc. They perform the usual domestic duties, collect fuel and fodder, fetch potable water and participate in various social, ritual and religious activities. They play lesser role in the domain of social control and political sphere.

The marriage is performed as per the Sanatan Dharma rituals by a Brahmin (purohit). It commences with sand and samuhat followed by mehandi and oil ceremony called tel-talwai. At the bride's house marriage rituals like *lagan, ved* and *Kanyadan* are performed and the bride and groom circumambulate the sacred fire. The bride's parents arrange a feast for the groom's party. At the bridegroom's place, both bride and groom worship pipal (the holy fig tree) and some worship a daran tree and circumambulate it. The Muklawa ceremony takes place on the next day after marriage. The Lari (bride) does not live with her Saas (mother-in-law) during first Kala Mahina (Bhadon).

BIRTH CUSTOMS: Post-delivery pollution called sutak is observed for 13 days and purification occurs by taking Cow's urine on the seventh and thirteenth day called *gunt* or *guntrala* or *guntralena*. Christening ceremony is not observed but a Brahmin priest suggests the name after consulting the horoscope. The mundane (head shaving) is performed for boys in odd years after birth by the mother's brother *i.e. mama* (maternal uncle). The hair of the eldest son is cut at the shrine of a regional deity like Balakrupia (in Kangra district) or Deot Sidh (in Hamirpur district) by affluent families/ or regular devotees.

DEATH CUSTOMS: Death rituals are performed by a Purohit and an Acharaj as per the Sanatan Dharm. The dead are cremated and their ashes are immersed in the Ganges at Haridwar (in Uttrakhand) or at Beas in Kangra district. On father's death the sons and nephews shave off their heads. Ancestor worship is observed during the patak. The Acharaj performs the death rites on the thirteenth day and seeks offerings in the name of the dead. This is followed by a community meal. The annual death rite is called *barkhi* which is performed by a *Barkhu* or Maku. The last death rite is known as Chabarakh performed in the fourth year.

OCCUPATION: The Ghiraths are basically an agricultural community. Agriculture and animal husbandry are the major occupations of the Ghiraths, and they are also variously employed as agricultural labourer. They are especially noted for their industrious nature. This revealed from the popular saying, घिरथ बच्चा जम पाया, डाल बसूट कम पाया (meaning when a Ghirath is born, all the bushes in the field are scared of being uprooted). They have assimilated all

types of labours. There is no landless and bonded labour in the community. Child labour is prevalent in the community. Ghirath children also work in agricultural fields and homes of Brahmins / Rajputs or big Landlords.

They also find employment in hotels, motels, cooking dhabas and canteens in various neighbouring states and within the state. They also till land for big landlords on contract or on share cropping and/or daily wages. But in the recent past, the community has also adopted various occupations and sought employment in trade, industries, government jobs, banks etc. The Ghiraths have been included in the list of other backward community (OBC) for the official records. *This is the largest OBC community in the state.*

RELIGION: The community being the integral part of Hindu religious fold, they propitiate the same Hindu pantheon gods and goddesses in various local forms. Almost every family has a separate space inside or outside the house where some stones along with an earthen pot are kept and the Jathere (ancestors) are worshipped. The village or local male deities are: Balakrupia, Deoth Sidh (Hamirpur), Gugga and Lakhdata (Bilaspur), Kaleshwar Mahadev (Kangra) etc. Among the female deities the commonly propitiated are the Jawalamukhi, Brajeshwari Mata and Chamunda Devi in Kangra district, Vaishno Devi (J&K), Naina Devi (Bilaspur) and Chintpurni (Una). Their holy shrines are visited by pilgrims from time to time especially during annual fairs. Their sacred specialists are from other communities. A Brahmin purohit officiate at marriage and death, an Acharaj and a Barkhu on death.

The Chela is commonly consulted for warding off bhoot (ghost) and other evil spirits. The Chela performs a Khel in which the person affected with evil spirits narrates his sufferings. Socio-religious movements have affected the community recently as some people have joined the Radhaswamy, Buddhist and Nirankari missions.

In the past decades, the community has become politically active. The Akhil Bhartiya Kshatriya Ghrit, Chahang and Batti Mahasabha is actively engaged in the welfare of the community. In the state politics, this community has been playing an effective role in deciding the fate of political parties. The Ghirths are very caste conscious, especially in the areas, where government has extended reservation to them. They avail themselves of modern facilities in respect of education, health, family welfare, drinking water, mass-media and communication, electricity, irrigation, use of chemical fertilizers and insecticides, banking and public distribution system. In the caste dominated political system, the Ghirath community has emerged as the most powerful caste oriented political force in Kangra, Hamirpur and Una.

Social hierarchy in Himachal Pradesh, as elsewhere in India, has got a big setback in the modern period. With the spread of education, communication media, greater exposure and vertical and horizontal mobility, the new generation among scheduled castes of indigenous stock such as Kolis, Dagis, Chanals etc. has started discarding the ancestral profession and is shifting to agriculture, horticulture, industry, employment etc.

KHASHAS ELEMENT IN HIMACHAL

The second and most important element of the population in Himachal Pradesh is their 'Khashas' complex. The Khashas originally are from the Aryan tribe of central Asia which entered Western Himalayas through the North-West even before the hymns of Rig Veda were composed. Khashas were without caste and class distinction. But with the passage of time and influence from outside, a number of castes, sub-castes and clans were developed.

The Kanets are one among such important sections of Khashas. They are identified with the Kunindas or Kulindas of ancient Sanskrit classics. They were occupying the whole sub-Himalayan tract from the Indus to the Brahmaputra but later on driven back to the interior of the hills by the advancing waves of immigrants. The Kanets are divided into several sub-castes or *'Khels'*. Some of the caste names are said to indicate the place form which their ancestors had come and others indicate the name of the founder of the household. *Kanets* are tall, look strong and active, and generally have handsome figures. Many of their women have fine eyes, with a mild and gentle expression on the face.

The finest of these men are found in Kullu and Shimla hills. Allied with the Kanets are the *Rathis* and *Thakurs*. The former are mostly found in Kangra and Chamba and the latter throughout the state and comprise more than half of the total high caste population. But Rathis and Thakurs were certainly anterior to the Brahmins and Rajputs who came from the plains at a later period and it can be safely concluded that the oldest strata among them descended either directly or by the half-blood, from the early Aryan colonists of these hills. In later stages, intermarriages, intrusion and horizontal mobility of the castes resulted in the change of equations of the numerical strength of a caste.

The reason of the high population of Rajputs, may be that many Rathis have assumed the name Thakur in some parts of the hills, and the two names were regarded almost synonymous. Thakurs are strong and robust of frame and prefer to join the armed forces, while Rathis are essentially an agricultural class and are mostly found in Kangra and Chamba regions. The Rathis and Girths constitute the two great cultivating tribes of Kangra, Hamirpur and Una districts. They fill much of the same position there as do the Kanets in the Eastern parts of Himachal Pradesh. The Rathis are a robust and handsome race. Their features are regular, well defined, fair complexion, honest, not unacquainted with the use of arms and devoted to agriculture.

The Rao, like Kanets, also sprang from the Khasas, but Cunnigham opines that they were a branch of Kanets.

Brahmins and Rajputs entered the racial arena of Himachal Pradesh very late. They migrated from the Indian plains from time to time. There are different theories of the migration of these people from the plains. According to the one opinion, they entered the hills as adventurers or at times in search

of security from foreign aggression, which was a common feature in the medieval period. The other important theory is that because of the location of holy places in the Himalayas, people from plains used to visit them and ultimately made it their permanent habitat.

BRAHMIN

The Brahmin form one of the largest social groups in India. According to Baines (1893) the original place of the Brahmins was the upper Gangetic region from where they migrated to all parts of the country. According to B.N.Saraswati (1977) "the Brahmin settled in the regions North of the Vindhyas are called *'Gaudas'* and those in the South the *'Dravidas'*. These groups are further subdivided on a territorial basis. Thus, there are *pancha* (five) Gaudas and pancha Dravidas. To the former belong (1) the Gauda (whose original home was Haryana), (2) the Kanya Kubja (whose original home was Kannauj in the central Doab), (3) the Saraswat (whose original settlement was on the bank of the Saraswati river), (4) the Maithil (who settled in a territory called Mithila in North Bihar) and (5) the Utkala (who lived in Utkal region of Orissa). Among the pancha Dravidas are (1) Maharashtra (of the Maharashtra state), (2) Gurjar (of Gujarat), (3) Karnataka (of Karntaka state), Telangana (of Andhra Pradesh) and (5) the Dravida (of Tamil Nadu). These divisions were further expanded by a number of subgroup in each section on the basis of territorial activities and geographical considerations etc.

The Brahmins have their *'gotra'* associated with various rishis of ancient times. They consider themselves descendants of seven rishi ancestors, namely Gautama, Bharadwaj, Jamadagni, Vasistha, Kashyapa, Attri and Agastya. In each gotra, there are a number of *'gana'* and *'parivaras'*.

In Himachal Pradesh Brahmins are spread all over the state except Kinnaur and Spiti. In Lahaul, Swanglas are Brahimns and prefer to retain their identity as such. This tribal group is concentrated mainly in the lower parts of Manchand area of the region. The Swangla claim to have come from various parts of the Northern region such as Kishtwar in Jammu and Kashmir, Kullu, Chamba, Mandi etc.

Among various groups of Brahmin in Himachal Pradesh Gaddi, Purohit, Nagarkotia, Bhateru and Bhojki have been mentioned as the leading ones by some scholars. But this description is not true, because there are number of other groups also. The famous Brahmin gotras are-Saraswat, Gauda, Bhardwaj, Kashyap, Kaushal, Vashistha, Pathak, Sukla, Awasthi, Upadhyaya, Vatsyayan, Sankhyayan, Vatsa, Gautam, Parashar, Garga, Sandilya, Attri, Vatsya, Mudgil, Upamanya and so on.

It is a common belief that the Brahmins of this region migrated from the plains from time to time, and as such, sections representing almost all Brahmin clans can be found settled in various parts of the state. According to B.N.Saraswat, "In Himachal Pradesh, the Nagarkotia and the Bhateru Brahmins have their separate identity from the immigrant Saraswat and

Gauda. The Nagarkotia Brahmins derive their name from Nagarkot, the ancient name of Kangra district. Originally, Raja Dharam Chand (1528-63) of Kangra settled 13 families, viz. Pandit, Miar, Rehna (Rana), Panj Karna, Nag, Purohit, Bedibirch, Sotri Bipp, Dicchit (Dixit), Awasti, Upada and Achari.

The Bhateru Brahmins are subdivided into two classes, *pakka* and Kuchcha, each having a number of clans. The pakka Bhaterus have the following clans: Dind, Dokru, Sintu, Polialu, Rukki, Pawar, Awasti, Chitu, Kharappa, Nag and Misr Kathu. The Kuchcha Bhaterus on the other hand have Tugnet, Ghabru, Sughe, Chapal, Chathwan, Awasti Khar Ganji, Awasti Tharknu, Awasti Uprial, Nag Gosalu, Mali, Misr, Achari Pothiar, Pandit Baiswal and Ghogre. From the name of the clans and family titles it appears that these two groups have their origins in Kannuaj Brahmins, who with the passage of time got intermingled with local population.

The three types of Brahmins prominently found in Kangra region are: *Nagarkotia, Bhateru* and *Halbaha.* In addition to these three, the fourth one is of the *Dogras*, who are said to have immigrants from Duggar area of Jammu and Kashmir. It is said that prior to the regime of Raja Ram Chand, all Brahmin groups were considered of equal status in the society. In order to ward off inauspicious starts of his son Dharam Chand, the ruler, invited 13 Brahmins all over the country who conducted a special yagna.

The Brahmin who conducted the ritual were later honoured by being placed highest in the hierarchy of caste. He allowed them grants and they ultimately settled in Kangra. The Bhaterus were next to the Nagarkotias and the remaining agriculturist Brahmins were lowest in the social hierarchy of the race. The clans of Nagrkotia Brahmins are-Bharadwaj, Gautam, Prashar, Vashistha, Kaundinya etc. The Clans are found in Bhaterus and Halbahas also.

For centuries together the Nagarkotias maintained their superiority and did not allow their daughters to be married to the Bhaterus and the Halbhas, but girls from Bhateru clan were wedded to Nagarkotia boys. But now such considerations are fading away. It is interesting to note that like other groups of Nagarkotia, Bhateru and Halbaha Brahmins, there is one clan known as *'Nag'* among Nagarkotias and Bhaterus. This clan has three subgroups, namely *Pundrik, Kharapa* and *Gosalu.* It is said that these clans initiated the cult of snake god worship in Kangra. Pundrik were those Brahmins who worshipped snake god of the same name and Kharpas worshipped Cobra, a dangerous and furious type of snake, whereas Gosalu worshipped wild and harmless varieties of snakes. The Pundrik clan falls under the Nagarkotias but Kharapa and Gosalu are Bhateru class. The Awasthi or Aosti clan is found among all the three categories.

The *Dixit* are the guru of Katoch family and the Brahmin of the *Rajanak* clan are the guru of Guler rulers. In the Kangra region, the Bhateru Brahmins are of nine categories. They are Kuchcha and Pucca types. Raja Dharam Chand, for the sake of smooth working, desired that Pucca Bhaterus could marry their daughters among Nagarkotias. Pucca Bhateru clans are (i) Ghabroo,

(ii) Chachyal, (iii) Chhadwan, (iv) Tugnet, (v) Sughe Aosti, (vi) Garh Gajanoo, (vii) Awasthi-Chetu, (viii) Mishr Kathu and, (ix) Nag Gosalu, Nine Kuchcha Bhateru clans are: (i) Bhadwan, (ii) Badaswal, (iii) Lade, (iv) Mishra, (v) Mali Pandit Bhangaliye, (vi) Kore, (vii) Deh Kwal, (viii) Gurhekharwal and (ix) Drohwal.

The Kuchcha and Pucca Bhateru clans were united during the regime of Raja Bhim Chand and now there are marital relations among them. The term Bhateru is derived from word 'Bhat' or Brahmins associated with performing the job of a purohit. Those Brahmins who helped Dharam Chand to conduct Brahmayajna were later designated as Bhaterus. Kuchcha and Pucca Bhaterus are from Vats, Bharadwaj, Prashar, Gautam, Sukyan, Sankhyan, Yatukaran, Neetal and Vyaghraped gotras. Among them are Maital, Balmik, Kaushal and Vashishtha gotras also.

According to a legend, the *Saroch padha clan* at the time of Mahabharata, when raja Janmejaja arranged a sacrificial ritual to wipe out snakes and destroyed seven Kula of Ashtakuli snakes, the last Kula king Takshaka, requested a Brahmin of this clan to save his life. The Brahmin held the piece of wood on which Takshaka was being put in the havan kund and saved his life. Because of the holding the Saroo (the spoon of wood used for pouring Ghee in the ritualistic fire) the clan was named as Saroch. The people of this clan do not fear the snakes till this day.

The Halbaha or Halbahu Brahmins are peasant agriculturist and do not know the Karma of the jati. Among the clans of Halbahas are Mohal, Koudin, Attri, Garg, Kaushal, Bharadwaj, Gautam, Upmanyu, Bachhyan, Vashishta, Angiras gotra and the subgroups are Kulhal, Suryal, Jaix, Patake, Puryane, Sarda, Kashyap, Kuheriye, Kulpahate, Tiwari, Nunguyal, Nagehru, Chohlu, Modgil, Dangmar, Harwal, Jangle, Muchale, Joysi, Dinyal, Skohiye, Dhangwal, Tugnet, Bharde, Khiryal, Durochjurohiye, Darohlu, Kusaryal Prashar, Rakre, Reharu, Mehte, Bhagsotre, Panjwal, Basantru etc.

According to an estimate, there are about 500 subgroups including various clans of all the three categories of Brahmins out of which 12 categories are of Nagarkotias, about 40 sub groups are of Bhaterus and the rest of Halbahas.

There are some other groups of Brahmins in the Kangra region. One prominent among them is-Mahabrahmin or Acharaj. The Acharajs are the progeny of Dronacharya and they conduct last rites of the dead. They also belong to Bharadwaj, Modgil and Prashar class. They have only four subgroup.

The Gujarati Brahmins are of Gar, Kaushalya and Bharadwaj gotra. Garg Brahmins of this category associate themselves with lord Parshuram, and thus they are also called Parshuramiye. The Gujarati Brahmin are known as Masku, as they take donations in the name of dead every month. The difference between Masku and Acharaj is that Acharaj conducts rites soon after the death of a person and comes to the family till the day of purification, but Masku start coming to the family one month after death and continue getting eatables

and other things from family for one year or so.

Dakaut is another community of Brahmins. They are also known as Bujhroos. They are said to be the progeny of Garg Rishi. According to a legend, the Garg Rishi, the son of Brahma, was worried about having a son to continue his clan. In a dream he saw that his wife ate some mysterious fruit and became pregnant. When he enquired from her in the morning, she confirmed that she was given a fruit by some spirit and she took it at night. Later on a son was born to her.

In his lineage one Varahmihiracharya Rishi gave a blessing to a lady of some other caste, who satisfied her desire to have a son. The son born to her was named Duk. These days the Duks or the Bujhroos get the donations made in the name of Rahu and Ketu, especially at the time of solar and lunar eclipses. The people of this community are called Dakot and are largely found in Kangra, Hamirpur, Una, Bilaspur, Mandi and other areas. They are considered inferior by the high caste Brahmins.

In district Kullu, Nirmand area, there are various types of Brahmins as Bhat, Gaur, Bhojaki (Bhogji), who are called Shukla. Bhojakis are found in Naina Devi, Chamunda Devi, Jwalamukhi, Chintpurni and in some other areas. They are worshippers (pujaris) of temples. The Pandas, are Brahmins, who accept alms and donations, are also found in the Nirmand area. The Parshurami Brahmins are those who claim their descent from Lord Parshuram. *'Kriyeshtoo'* Brahmins are a subgroup of worshipper Brahmins. The Parshurami Brahmins of Nirmand area are different from the Acharaj Brahmins, who also claim their descent from Parshuram.

LANGUAGE: The language spoken by the community all over the state is Hindi and Western Pahari. The script in earlier days was Tankri and Sanskrit. These days Hindi is the common language and Devnagri is used as the script. A Brahmin is expected to know Sanskrit but in villages Sanskrit is the monopoly of the purohit and other educated people especially Shastris.

DRESS: The purohits prefer to wear *'dhoti'* as a mark of identity of their caste, but other members of the group wear Kurta pyjama, suthan and cap. There is no special dress for women and they wear what other women of the region wear.

FOOD HABITS: The community is basically vegetarian, but according to climatic conditions some are non-vegetarian also. The staple food of Brahmins is rice, wheat, cereals and maize. Women usually do not take meat. Alcoholic consumption is not a regular feature in the community.

FAMILY SYSTEM: The Brahmins believe in joint family system and preach this pattern of family to their jajmans, In jajmani they are dependent on the offerings of the jajmans, who give them foodgrains called *nasrawan* and money when Brahmins visit their houses. They almost observe all the 16 Sanskaras mentioned in the Hindu scriptures but the Halbaha Brahmins are not very particular about the Sanskaras other than mundan, yagyopavit, vivah,

shradh, mrityu and asthi parwah etc.

DEATH CUSTOMS: The dead are cremated and ashes are immersed at Haridwar, Pehowa and Prayag. The Brahmin of Chamba go to Mattan (Martand) in Kashmir and perform immersion ceremony there. After the death of a member of the family, the house is considered polluted for 16 days i.e. upto *solia*. On the 10th day after the death, a ceremony to wash clothes (*Kapde dhone*) is performed and on 10th and 11th day Kriya is performed. On this day Acharaj takes the offerings made to the departed soul. On the completion of one year 'barkhi' and in the fourth year 'Chabarkhi' is performed.

BIRTH CUSTOMS: After the birth of a child pollution is observed till the ceremony of taking of panjap or guntrala. It is usually held eight days after the birth of a child. Ladies sing *'ranchunjne'* (songs related to birth) and community feast is arranged.

MARRIAGE CUSTOMS: The Brahmins do not prefer to marry outside their caste, though barriers of hierarchy among class are speedily fading away. The custom of *'batta satta'* is prevalent among the Halbaha Brahmins. Divorce is not very common and very rare instances of it are reported. Marriages are arranged only through negotiations by the parents of the boy and the girl. Dowry is not demanded, but parents of the girl may give dowry according to their capacity.

The women observe fasts on pious days like the full moon day, Shivratri, Ahoi Ashtami, Karwa Chauth, Navratras and during specific days of the week. The community has no Biradari council to keep social control on members of the society. The members of this caste write Sharma, Pandit and name of their class before or after their names.

The traditional theory of caste rigidity has been challenged in the modern period. Now there is very little difference made among various groups of the same caste. There is fusion of functions, groups and subgroups of the same caste. Brahmins today of all subgroups and class perform all those functions, which were till few decades back were the prerogatives of the highest among the Brahmins.

The primary function of the Brahmin caste is to perform various religious and ceremonial rituals. At the birth of a child, the Brahmin is called to note the time of birth and prepare the horoscope of the child. He also decides the date and the time for 'Chothi' and 'Barah'. He also fixes the day and time for 'Mundan' ceremony. At the time of marriage, the Brahmin performs the marriage rituals and recites 'mantras'. At the time of death, he is called to perform the last rites. If he finds some ill omens, he also tells the methods to get rid of the evil days in future. In return for his services, the Brahmin gets payment both in cash and kind. Generally, the landlords do not pay cash but pay a part of crops during harvesting. The Brahmins continue to perform their traditional services even today for all the upper castes.

RAJPUT

The Rajput, one of the erstwhile principal warrior and ruling communities of Himachal Pradesh, "are said to be Brahmin by original stock" according to Rose (1914). This community has an exceedingly complicated organization based on the two principles of natural descent and social status independent of that descent. In vedic literature the term *'raja-putra'* meant *'son of king'. Later* on original meaning was lost and the terms came to mean *'a land owner'* (Bahadur 1978). The Rajputs infact look upon Rajputana as their place of origin, but the various legends are vague and do not confirm as to who the earliest Rajput was.

According to an account given in the Phulkian states Gazetteer, "the Rajputs are divided into three 'bans' (races) i.e. *'Surya-bansi* (Solar), *'Chandra-bansi'* (lunar) and *'Agni-kul'* or 'Baragh-bansi' (fire)." Each bans is divided into Khamps, each 'Khamp' into 'Nakhs' and each Nakh, it is said into gots (Bahadur). These three divisions of solar, lunar and agni Rajputs were subsequently changed to sections and subdivisions and further into numerous clans and sects of which 36 were called royal and singled out for special distinction on account of their power and number.

The Rajputs form the largest part of the population of the state. The main clans of the Rajputs are Katoch, Rathore, Sen, Parmar or Panwar, Chandel, Bhatti, Gehlote or Sisodia, Chauhan, Tanwar or Tomar etc. Rajputs in the hills are descendants from the ruling families founded centuries ago by the adventurer princes from the Indian plains. With the increase in the size of the family, some members moved away to other far off places and acquired a new name, identified with the name of the estate. Thus among the Katoches are Gulerias of Guler, Jaswals of Jaswans and Dadwals of Datarpur. Similarly, the Chandels of Kahlur-Bilaspur are known as Kahluria.

The Sens of Suket are Suketia and of Mandi, Mandiyal; Panwar or Parmar and Tanwar or Tomar are mostly found in Solan, Sirmaur and a few in Kangra. Sisodia are sparsely distributed in Tharoch and Dhadi areas of Shimla district. The Rajputs of Jubbal, Rawingarh and Balsan are Rathores, Pathania, whose clan name is Tanwar or Tomar and are confined to Nurpur area of Kangra district. Bhatti Rajputs are found in and around Nahan.

Besides, there are *Dhatwal, Patial, Minhas, Jasrotia, Jinderosia, Jarial, Jamwal, Mankotia* etc. These clans migrated from the Jammu hills and settled in the Kangra valley and the areas adjoining to Jammu. Another class of Rajputs who enjoy great distinction in the hills comes from the descendants of ancient chiefs or Ranas, whose title and tenure is said to have preceded that of the Rajas themselves. The Rajputs of all these noble houses are distinguished by the honourable title of 'Mian'. It is said that the title of mian was conferred on them by a Mughal Emperor for their commendable courage and services rendered to the imperial throne. The Rajputs fall into an upper and a lower class. The higher caste Rajputs are those who owned land, but never cultivated,

while lower caste are those who are called halbaha or the ploughers. However, there is a sea change in the traditional life style of the Rajputs. The Rajputs prefer to join defence forces and other occupations. They are indifferent cultivators, extravagant and indolent by nature.

They speak the dialect of the area which they inhabit, but with the outsiders they speak in Hindustani. Their traditional script was *Tankri* which is now a days known only to handful of persons and they use either 'Persio-Arabic' script or 'Devnagari'.

The members of the community do not have any distinctive mark or dress other than the dress prevalent in the area. The community is non-vegetarian. They take meat of goats, sheep, monal and jungle goat. Their staple diet consists of wheat, makki, rice, pulses of mah, moong, rajmah and vegetables. Alcoholic drinks are used by men, whereas women generally avoid these. Restrictions exist relating the intake of certain food during the period of death in a family. During such an event spices, especially turmeric and asafoetida are not used and mutton is also not taken.

The Rajputs are divided into six status groups, including *Raja, Mian, Rajput* and *Thakur* which include first grade and second grade Ranas and Rathis. 'Mian' literally means *'prince'*, Thakur *'baron'* and Rana 'chief are simple titles denoting status or rank. The status depends basically on the strictness with which certain social rules are observed e.g. Mian should not plough; their women should observe strict purdah, should not practise hypogamy and widow remarriage and accept bride-price and should not smoke except among themselves.

A Thakur may plough and may also take a wife from a Rathi. The Rathis practise widow remarriage and that distinguishes them from the Rajput. They also accept bride price and are in this respect only on the level with the Thakurs of the second grade. Each of these status groups are divided into steps, which are territorial designations to denote from where they hail.

The Rajput claim superiority over all other communities of the region and place itself in the Kshatriya order of the varna system.

Marriage System: The community is endogamous, but village and *'al'* exogamy is practised. Hypergamous unions are permitted and so is junior sororate, but levirate and consanguineous marriages are prohibited. Though monogamy is a practice, but polygamy is also practised by a few well-off families, who sometimes keep two or three wives simultaneously, this signified their status. The prevalent form of marriage is acquiring a partner by negotiation. The residence of the bride is patrilocal.

Divorce as such was not socially approved. Widow remarriage was prohibited but widower remarriage was practised. The Rajput family is patrilineal and is vertically extended. The eldest male member is the head of the family. The property is inherited according to the rule of male equigeniture. Interfamily ties are best observed between various relatives on occasions of

joy and sorrow, when all join together.

BIRTH CUSTOMS: The child's birth especially that of the first child is an event of great rejoicing. *'Athmasa'* rite is observed at the commencement of the eighth month of pregnancy. She must not go near the dead body, nor cross a stream in the evening, for these are considered to bring evil influences on the child. The period of birth pollution is 13 days and is called *'sutak'* or *'chhoot'*. During the period of sutak mother is not allowed to move out of her house. A Brahmin priest prepares the horoscope of child.

The first feeding of cereal, *'Khirpu'* or *'Anaprasana'* is observed in the 6th month after the birth. Naming ceremony is performed on the child's attaining the age of nine months. Tonsure ceremony is observed only for boys between the age of three to five years. The thread ceremony *(Janeu)* for boys only takes place between the fifteenth and sixteenth years.

DEATH CUSTOMS: The dead are cremated and last rites are performed by the eldest male member. The children below the age of five years are either buried or 'jal pravah' (thrown into the deep flowing water) is performed. On the fourth day 'asthi-sanchaya' and the *'chaturdhik shradh'* is performed. On the 10th day heads of all the affinities (close blood relations) are shaved off. On the eleventh day *'Kirya Karam'* is performed. The *'barah'* is performed on the 12th day, whereas *brahma-bhoj* is given on the thirteenth day, when food and alms is given to thirteen Brahmins. Monthly death anniversary *'shradh'* and *'barsi'* ceremonies are also performed. The recurring anniversary *khiabi* and *'chaubarsi'* are also performed.

Occupation: Their primary economic resource was land, as a majority of them were the owners of small principalities and held sole rights over the natural resources of the area whether it be water, forest or land. They did not till the land themselves but got it tilled on *'begar'* or by agricultural labourers. But since independence after land reforms, their large chunks of lands have been reduced substantially. Now most of the individuals, particularly, the younger generation have taken to other professions like service, horticulture, trade, cottage industries, poultry farming and other self-employment schemes.

The Rajputs follow the Sanatana Dharam. They worship the vedic gods like Surya, Agni and Indra and also the trinity Brahma, Vishnu and Mahesh. The worship of goddess Kali, Bhawani or Durga and other forms of Shakti also find place in their religion. Kailu Bir, Gugga and Mahasu are also worshipped. Their sacred centres are Haridwar and Devi Durga shrines in Himachal like Naina Devi, Chamunda Devi, Chintpurni, Jawalaji and Bhima Kali. At Bhima-Kali temple at one time the *narmedh yagya* (human sacrifice) was performed by the ruling Rajput families, but now the practice has been discontinued; instead a goat or sheep is sacrificed to propitiate the deities and spirits. They take part in all fairs and festivals of the area.

A Rajput would accept all types of food from a Brahmin and from their own brethren, but from other Hindu communities they will accept only Pucca

food except from certain communities like Chamar, Chuhra, Barwala etc. from whom they accept only Sidha. All communities can accept all types of food from the Rajputs.

RANGAR

The Rangar or *Ranghar* are generally Muslim Rajputs, though a few Hindu Rangars also exist. According to Col. Tod the word is derived from Rana. Rose (1916:322) says that the term is somewhat contemptuous and is applied in the eastern and south eastern Punjab to any Muhammedan Rajput- at least by the Hindus. If a Hindu Chauhan Rajput turns Muhammedan, he would still be a Chauhan Rajput, but his Hindu Kinsmen would also dub him as Rangar". According to yet another account of dubious authority, "the original issues of the Rajput mothers and Muhammedan fathers were styled *ranghars* and they intermarry".

According to Crooke (1896), "the Bhatti or Jaiswar Rajputs of Bulandshahr (in Uttar Pradesh) claim descent from Raja Dilip, son of Jaswant Rao of Nanamau near Bithur in the Kanpur district. He is said to have two sons named Bhatti and Ranghar. The descendants of the latter were converted at the time of Sultan Qutub-ud-din and Ala-ud-din Khilji, and were called ranghars after their eponymous ancestor".

Further, according to Sir H.M. Elliot, many of the Kankauiya and Naigauiya Ahirs were converted to Islam and are known as Ranghars (Crooke, 1896:228). But one thing is certain that the Rangars were originally Hindu Rajputs, who got converted to Islam as is further testified by Blunt (1931:203) who writes: "The Ranghars were Bhatti Rajputs, converted in the reign of Qutub-ud-din (1206-1210) and Ala-ud din Khilji (1295-1315)". The Ranghar of Himachal Pradesh claim that they emigrated from Haryana and settled in the adjoining parts of Himachal after clearing forest patches.

LANGUAGE: The language spoken by the people amongst themselves is Haryanvi whereas with others it is Hindustani. Their script is *perso-Arabic* while communicating within their community, and Devanagari when communicating with others.

FOOD HABITS: They are non-vegetarians but do not eat beef, buffalo meat and pork. They take the meat of pigeon, rabbit chicken and goat. Due to the high cost of non-vegetarian food, they are switching over to vegetarian food. Their staple diet consists of maize, wheat and rice and pulses of gram and *masur*. Vegetables, roots and tubers are included in their regular diet which are cooked in the mustard oil, *til oil* and *toriya*. Animal fat is also used occasionally. Milk and milk products are consumed by all. Alcoholic drinks from the market are occasionally taken by men. The men and women are very fond of betel, betel nuts, tobacco and also smoke *hukka*. The men smoke cigarettes and bidis.

Special food like *seviyan* and goat meat are cooked on festive occasions, but the cooking of non-vegetarian food is prohibited during the 40 day period

of mourning.

SOCIAL SYSTEM: The community has two broad sections. viz, the Hindu Rangar and the Muslim Rangar, on the basis of religion. Each of the two divisions are further sub-divided into a number of exogamous gotras, which indicate that the Muslim Rangars were Hindu Rajputs once. Though the Muslim Rangars would recall only four gotras viz., *Chauhan, Tomar, Pundir* and *Tauni*, they think of many more. These gotras denote their descent and have no social hierarchy. Among the Muslims they consider their superiority over other neighbouring communities and rank in the order. *Rangar, Rawat, Teli, Julaha Raeen, Bharai, Banjara* and *Pinja*, and this is acknowledged by other Muslims too. Though aware of the varna system, they do not place themselves in it. Their Hindu brethren, however, place themselves along with the Kshatriyas. As a result of the change of their religion they have dropped the surname 'Singh', but prefer to use Chaudhary as a prefix to their names.

The Rangars are endogamous at the community and religious levels. Exogamy is practised by the Hindu Rangars at the *gotra* level, but among the Muslims only village exogamy is observed. Preference is given to parallel and cross-cousins. Junior sororate and junior and senior levirate are also practised. Earlier child marriages were performed at the age of eight to ten years, but the return of the bride to the groom's place was deferred till the girl came of age. Presently, abult marriages are performed and the *muklawa* is symbolically performed at the time of marriage.

MARRIAGE SYSTEM: The most prevalent form of marriage is monogamy but if the first wife is unable to give an heir to the family, a second marriage is resorted to with the consent of the first wife. Two real sisters cannot be married simultaneously, but can be married after the death of the first wife. Marriage is performed by negotiation and is called *nikah*. Mehar of Rs. 32.25 originally and a silver coin is fixed by their *Anjuman*. Which has to be formally accepted by the bride at the time of *nikah* and paid on demand or on the annulment of marriage. Dowry in kind is also given by the bride's parents. The residence after marriage is *patrilocal*.

DIVORCE: Talaq takes place by uttering the word thrice in the presence of two witnesses, thereafter it is documented. The common grounds for divorce are adultery or maladjustment. In the event of divorce the *mehar* amount is to be prepaid and the return of the dowry depends on the merit of the case. Only the husband has right to divorce. The children are also the liability of the husband, but in case of infants, they are allowed to accompany the mother, who is compensated for the upbringing of the child but has to return the child to his/ her father when he/she grows up.

Widow, widower and divorcce remarriages are permissible and are solemnized in the same manner as regular marriages. The widow and divorcee wife can, however, remarry only after the expiry of *iddat*.

FAMILY SYSTEM: The Rangar family is of the vertically extended type

with all the male relative of the father's side living under the same roof and sharing the same hearth. Now with the diversification of occupation and the people moving out of the their village, there is an increase in nuclear families. The interpersonal relations within the family are that of love and respect for the elders and love for the younger. The eldest male member of the family is the head and is obeyed and held in veneration. Paternal and filial affection and due regard as per status is, the basis of mutual relationship. Avoidance is observed between the wife and the husband's elder relatives for the initial one year, after which it is not observed. Joking relationship exists between husband and wife's younger relatives. The husband and wife address each other teknonymically.

The property is inherited by the sons. In the event of multiplicity of wives, the property is divided first among wives and then their respective share is equally divided among their sons. The property, however, remains undivided in the lifetime of the wife who has usufructuary rights. In the event of no son, some families prefer to transfer the property in their daughter's name, whereas in some cases it passes on to the collaterals. The succession is in the male line. The interfamily linkages are best seen at the time of joy and sorrow within the family when they come to help each other.

STATUS OF WOMEN: The economic status of a Rangar woman is equal to that of a man, as she shares the agricultural activities. Some also work as a gricultural labourers in others' fields to supplement the family income. They also carry out all the household activities, right from bringing fuel and fodder to cooking food and looking after the young ones besides scores of other household chores. However, their social status is lower than that of the men, and they do not enjoy the same freedom as males. Only the man has a right to divorce. Similarly in case of a widow or divorcee, women have to observe a three month thirteen day period of *iddat* before she can remarry. The women also do not have any right to the inheritance of property but a widow only has a usufructuary rights. Restriction on the movement also exist during the period of *iddat.*

The political and religious status of women is comparatively low than that of the men. Though a woman has the right to perform all family rituals and observe festivals at home; but she has no right to visit a mosque or a religious congregation. In the political field she has only the right to exercise her franchise but not to contest the elections. She also cannot take part in the Anjuman affairs.

BIRTH CUSTOMS: Post-natal restrictions and pollution are observed. A purificatory bath is given to the child and mother on the sixth tenth,twentieth and fortieth day. On the birth of the child a maulvi whispers *azan* in the child's ear. The Kid is named on the *aqiqa* which is performed on the sixth day. At this time two goats are sacrificed and the child's head is shaved off. The maternal relatives have an important role to play as they bring clothes, cash and milk on the occasion, *Sunnat* is performed before the age of ten years by a

Muslim Nai. Before the ceremony the child is taken to the mosque and the tomb. In recognition of his services the Nai is given a *chadar* or a blanket and cash ranging between Rs. 20-30. This is an elaborate ceremony and is celebrated on the same scale as marriage.

For *nikah* a fixed amount of mehar is agreed upon by the bride in the presence of a *maulvi* and two *gawahs* (witness) after which the *nikahnama* is signed and copy of it is given to the girl's parents, boy and the maulvi. More often, the *nikah* is performed at the bride's residence or at the mosque. Nikah is preceded by a series of rituals from betrothal to *mehndi.*

DEATH CUSTOMS: The dead are buried and the pollution lasts up to the third day of death. On this day sayings from the holy scripture are recited by the maulvi and 15Kg of black gram and sweets are distributed among the funeral processionists, barkuninde (grave digger) and the faqir who bathes the corpse. Daswa and Chaliswan rites are also performed when fateha are recited at the grave of the deceased and also on each death annivarsary.

OCCUPATION: The traditional occupation of the community has been agriculture and majority of them are landowning families. They continue this till date. A few families have also taken to animal husbandry. Those who have less land have taken to sharecropping. The landless families work as agricultural labourers or other kinds of labour. The educated among them have taken to teaching, medical profession, military and paramilitary forces and other white-collar jobs in Government and private organizations.

The community is dependent on the local regulated daily market. In the village, barter also forms a medium of exchange with the vendors and local shopkeepers at times. Children below the age of 15 render a helping hand in agricultural activities in their free hours. They also work as agricultural labourers and earn cash wages. A substantial change in their economic activity has been seen since independence. Due to fragmentation of landholdings, people have taken to other occupations, so what was their primary source of livelihood has stepped down to the secondary positon.

COMMUNITY COUNCIL: The community has an Anjuman for the prevention of any infringement traditional norms. This is adjudicated by the elders of the communnity who are elected by a voice vote. The cases that come up before the Anjuman are related to adultery, divorce, maladjustment or disrespect of traditional norms. The offender is penalized in cash or kind. The fines thus realised are utilised for defraying the expenditure of the Anjuman, maintenance and maintaining of mosque or religious institutions. Along with the Anjuman, the statutory council also exists viz, the Gram Panchayats, which look after the planning and development of welfare activities and maintenance of law and order respectively.

Most of the Rangars belong to the sunni sect. They venerate their *Pirs like Sheikh, Mais,* and *Sabir Shah* for invoking their blessings and for fulfilment of wishes. They also have faith in *Khera,* the village deity who is propitiated for

the welfare of the village. They also pray to the *Bure Shah* and *Marn Sidh* for fulfilment of their wish and Lakhdata and Salmat Ali for the welfare of their cattle. Their major sacred centres are the Sindaura, Kaliar and Ajmer. Their sacred specialists are from other communities who officiate at all life-cycle rituals.

FAIRS AND FESTIVALS: The major fairs are *urs* at the tomb of their revered Pir at Sindaura and Kaliar in Haryana. Their festivals are *Id, Bakrid, Shaberat* and *Sasaid.* All these fairs and festivals have socioreligious significance and all take part in them with great zeal and fervour. Though a change of religion has occurred in the community no pre-change practices survive among them.

STATUS OF WOMEN: The Ranghar women are well versed in the art of painting. They make floral and geometric patterns with mehndi on the inside and outside of palm as well as on the upper part of the feet. This is a must for the bride at the time of *nikah* and is also applied by other young girls. The bride and the young ladies of the family also anoint their feet with *alta* (red colour). Besides, they are also skilled in cloth embroidery which is done only for domestic purposes. The women of the community also sing and dance within the four walls of the house on social occasions.

The community has free exchange of all types of food with Muslims, irrespective of occupation. From the Chuhra and Chamar, they accept sidha food. The Muslims can eat in a Hindu house but not in the same receptacles. The Hindu accept pucca food if cooked by a Brahman or a Rajput oustside the house. Ritual kinship can be established with a person of other Muslim community, who is expected to carry out all rights and obligations as are expected of a real kin. The traditional patron-client relationship exists with serving communities like the Muslim Nai, Muslim Lohar, Muslim Badhi, maulvi and Faqir, who receive a fixed quantity of grains at harvest. They also receive gifts in cash and kinds from their clients on festive and social events.

The people who have meagre landholdings have entered into economic relations with other landlords as share-croppers or as cultivator-labourer. Others who have entered into business, teachings and other white-collar professions, and have left the villages, have witnessed loosening in the rigidity of traditional commensal ties with other communities.

The attitude of the community towards the various development programmes on the whole has been favourable. Education and literacy do not find favour with girls as they are not sent to regular schools other than religious institutions, but with boys they are favourable as they are sent for college and higher education. The family welfare programme finds favour with younger generations. They use modern method of contraception and prefer to have at least three children. They avail themselves of the medical facilities provided by the Government but they also use their homemade remedies simultaneously.

The Ranghars have been benefited by the Government employment scheme under Integrated Rural Development Programme, and have also availed themselves of the loan facilities under the Educated Employment Scheme and set up shops. Drinking water is available through wells and tubewells. Electricity is available and so are media and communication facilities. The villages are connected by metalled roads public transport facilities and people avail themselves of the mass media facilities like radio, television and cinema, which are shown to them through extension agencies. Firewood is the main fuel though LPG and kerosene are also used. Irrigation facilities in some areas are available through *sinchai pariyojna,* and people use both organic, inorganic manure and insecticides. Mid-day meal is availed of by the school-going children and immunization and nutrition are also available to the expectant and Nursing mothers and also to the infants. Rangars are the part of that Great Himachali traditions and culture, to which other swarna communities are. Their speed of development is co-equal to all rising sections of the society.

RATHI

The word *'Rathi'* is derived from the Sanskrit word *'rashtra'* but according to the people, it is derived from *'Rathor'* as they are believed to have fled from 'Rajputana' during the time of Aurangzeb. They are mainly an agricultural class and are distributed throughout the Chamba, Shimla, Sirmaur and Kangra.

LANGUAGE: Their traditional script is known as *'Tankri'* but their children can read and write *Devnagari script.* The Rathi is treated as Rajput, but in the Bharmaur valley of Chamba they are included among scheduled tribes.

FOOD HABITS: The Rathis are non-vegetarian. They take meat, fish and egg. Their staple food is maize, wheat and rice. They consume all types of vegetables and pulses. Men and women enjoy *hukka.* While the old people confine themselves to smoking tobacco, the younger generation is fond of bidi and cigarettes. Alcoholic drinks are very common among Rathis.

The Rathis have numerous gotras which are non-hierarchical. Though Rathis claim themselves to be Rajputs but the other neighbouring communities do not give them full Rajput status. Other Rajputs do not give their daughters to the Rathis but can accept their daughters as brides. This gives them an opportunity of status mobility. There is a popular saying that *'Chaauthi pirhi Rathin Ki Rani bani jai'.* In the fourth generation a Rathi woman becomes a rani (Rajputs). In the varna order, Rathis put themselves in second position to the Kshatriya.

MARRIAGE SYSTEM: The Rathis are an endogamous group. Gotra exogamy regulates their marriage alliances. In exceptional circumstances polygamy is allowed. Relatives of both sides plan an important role in negotiating marriage alliance. When both parties have agreed to the marriage, an auspicious day is fixed for betrothal. Bride price and dowry system does not exist. The family in which divorce occurs is socially looked down upon. Widow

remarriage used to be practised earlier and this practice separates them from the other Rajputs. Marriage by negotiation and marriage by batta-satta are accepted by the Rathis. After negotiation, an engagement ceremony is held at the girl's parents house. *Tel-batna* ceremony is held on both the sides. All marriage rituals take place at bride's house. The bride and the groom go around the sacred fire seven times. For the consummate of marriage they perform *'madhu chandrima'* at the groom's residence.

BIRTH CUSTOMS: A pregnant woman is not allowed to go near the cremation ground and she is not supposed to carry heavy loads. Delivery takes place in a room on the ground floor and is helped by an elderly woman who is well versed in such work. There is celebration all around when first son is born. *Sutak* or pollution period is observed for five days in case of boy, and three days in case of girl. The mother and the women who help in the delivery are not allowed to touch food prepared for others. For purification they use cow dung and urine and sprinkle it over the articles which are not washable.

DEATH CUSTOMS: Children below five years of age and persons dying of leprosy and small pox are buried, while others are cremated. Relatives carry the *'astu'* (ashes) to Haridwar, for immersion in the Ganges. The mourners sleep on the floor. The *'dasapindi'* is held on the tenth day after the death. On the thirteenth day called *'sog'*, the deceased's relations, on the wife's side come to the house. A goat is killed and a feast is given to the relatives and friends, which marks the end of pollution. Pinds are offered in the memory of deceased after three months, six months, nine months and after a year and then after four years.

FAMILY SYSTEM: Most of the Rathi families are nuclear. There are a few joint families, which are both vertically and horizontally extended. The interpersonal relations are cordial. To the Rathi the daughters are other's wealth and not entitled to inherit the father's property. However, the life of the Rathis is not strong without the active cooperation of the women. Women do all types of work related to farming except ploughing. The Rathis earn their livelihood by agriculture and by rearing sheep and goats. The men plough their fields and the women perform hoeing, weeding, harvesting and thrashing. The fields are scattered and terrace cultivation is common.

The Rathis, if they face any dispute, settle it with the help of some old relatives and friends amicably. The Gram Panchayat exists in the village. The villagers take part in polling for electing pradhan and uppradhan. They believe in god and goddesses of Hindu pantheon and celebrate all fairs and festivals of the area.

The high caste Hindus, other than Brahmins and Rajputs are: *Khatris* (Banjahi, Malhotra, Handa, Saini, Kapoor etc). *Kaisthas, Mahajans, Bohras, Soods, Karars* etc. who migrated to the hills during the Muslim invasion of North India. These are mercantile classes. Physically, they hold the whole commerce of Himachal Pradesh in their hands. Numerically, the most important group among these classes is that of the Khatris. Khatris are mostly

concentrated in Mandi, Chamba and Kangra.

MAHAJAN

The Mahajan literally means *"the great folk"* are also known as *Shah* or *Shahukar*, because of their involvement in the money lending practices. Three main castes from the Mahajan Community are *Baniya, Kayastha* and *Khatri*. Among the Baniya it is the Bohra group and not the Aggarwal which comes in the folk of Mahajan community in Kangra. The Bohras and the Kayasthas or Kayath were collectively known as *'Karar'* or *'Kirar'* and the same is also used as a synonym for the community by the outsiders. Locally 'Karar' stands for an "unbendable person' as is also noted from a popular saying *'the karar always keeps his leg up'*. But this name is not respectable among the Mahajans. Many persons do use Mahajan as suffixed surname. Mahajans in Himachal Pradesh are mainly concentrated in Kangra, Hamirpur, Bilaspur, Chamba and urban centres like Mandi, Kullu, Solan and Shimla. The community is mainly confined to the towns and is engaged in business activities. They are one of the prosperous communities of the state.

LANGUAGE: They speak local dialects of the Western Pahari, viz., Kangri and Bilaspuri and write in Devnagari script among themselves or with their neighbours. With outsiders they may also speak in Hindi, Punjabi and English. Old people know Urdu, which was their official language for maintaining credit accounts of the people.

DRESS: In the past men used to wear a *kurta, dhoti* and a *safa (headgear)*. Now men wear shirt and trousers and the women wear kurti and *salwar* along with a Punjabi *chunni/dupatta*.

FOOD HABITS: The staple food of the Mahajan is wheat, maize and rice. They share food and food habits of the region. Quite a few of them are non-vegetarian and also consume liquor purchased from the market. But many of them are Arya Samajis and so abstain from taking non-vegetarian food and liquor. A few of them are pure vegetarians and may even avoid onion and garlic. Various types of pulses are consumed, viz., urad, moong, kulthi, masur, peas, gram and beans along with different seasonal vegetables. Festive foods are kheer, halwa, seviyan, babroo, bhalle, ankli etc. Maize roti and sag is also popular during winter. Food taboos are observed on death occasions. Male members smoke cigarette, bidi and loose tobacco in an indigenous pipe called *hukka* or *koli*.

FAMILY SYSTEM: The family pattern is predominantly nuclear at present and the married sons, when running their separate enterprises may establish separate households. Among the Mahajans certain sections viz., Gupta and Bohra (Baniya), Diwan (Khatri) and Kayastha are regarded somewhat socially superior, may be because of their richness. Otherwise there is no clear cut social hierarchy. The community is further divided into many sections viz., Kathyale, Drabre, Dhankan, Suan, Phally, Malwan, Mehta, Chhapre, Puwari, Guleriye etc. who are basically of totemistic origins. They also have few gotra divisions, two of which known to the informants are, Kashyap and

Wahil gotra. Mahajans consider Sood community inferior to them even though at times the latter excel in business enterprises.

MARRIAGE SYSTEM: The Mahajans are not strictly endogamous. The Baniya group marries in itself, so do the Kayastha and the Khatri. But sometimes they may intermarry and also marry outside the community with the Soods and with the other Khatris not falling in the Mahajan fold.

The Pre-marriage rituals are *sagai, tika* and *thaka.* The marriage rituals are observed as per Sanatana Dharam or Arya Samaj rituals. The boy and girl circumambulate the sacred fire and the parents of the bride perform *'Kanyadan'.* The parents of the bride give feast to the marriage party. At the groom's place, the first ritual is *'andrera'* (entry into the house). The other main ritual is *pipal puja.* The marriage ends with *dham* (recreation) given by bridegroom's parents. The *'Muklawa'* ceremony occurs on the following day.

Marriages take place through negotiation. Neither exchange marriages nor bride price exists among Mahajans. But dowry is quite prevalent and it is given in cash, kind and in the form of gold and silver ornaments. Monogamy is a common practice, though the man may marry again in case the first wife is unable to produce any or a male child. The prominent marriage symbol is *sindur* which may be substituted in routine by a bindi, a nose and ear ornaments of gold. The bride lives patrilocal.

Widow remarriage usually does not occur, but is allowed socially in case of young widows. Usually junior levirate is not practised in such cases, but is not ruled out. A widower may remarry a junior sororate or any other woman. Divorce is socially disapproved.

Older women observe avoidance relationship, but with women's education this is disappearing. Avoidance may be seen between *nuh/lari* (daughter-in-law) and the *saurah* (father-in-law) and *jeth* (brother-in-law). The rule of male equigeniture is followed for inheriting paternal property and the eldest son succeeds the father.

BIRTH CEREMONY: Pre-delivery rituals are ignored but postnatal and prenatal, restrictions, are observed. Birth pollution is called *'sutak'* which is observed for 16 days and purification occurs by a *'guntrala'* ceremony. Community feast is arranged on this occasion and ladies sing songs. 'Namkaran' (naming ceremony) takes place only after consultation with Brahmin. Some people also observe *annaprashan* ceremony, but many ignore it. 'Mundan' (hair cutting) is the important ritual during childhood performed by mama (maternal uncle) of the child. *'Janeu'* (sacred thread investiture ceremony) among boys and *'Karan bedhan'* (ear piercing) among girls are ceremonies, observed at the time of marriage.

DEATH CUSTOMS: The dead are cremated and the ashes are collected on the same day or third day. The bones and ashes are immersed in the Ganges at Haridwar or in Beas river. The *'patak'* lasts for 13 days, when the *'Kirya'* is performed by the Acharaj and ancestor worship is observed. Dan and food is

given to the Brahmin and purification havan is performed by the family priest. Annual death rite, barkhi is preformed by a Mahka, who seeks the alms. Fourth annual chabarkhi, death rite is also observed to commemorate the dead.

RELIGION: The Mahajans are Hindus and worship Hindu pantheon gods and goddesses along with various family/clan, village/local and regional deities. The *'jathere'* (ancestors or men of reverence from the lineage) are worshipped as family deities on birth, marriage and other festive occasions. Baba Balak Nath is a family, clan as well as local/village and regional deity. Lakhdata, Gugga and Nahar Singh are also worshipped. Various festivals celebrated by the community are Lohri, Baishakhi, Chirnu, Rakhi, Sair, Ramnavami, Nag Panchami, Janmashtami, Dushehra, Diwali etc.

OCCUPATION: The Mahajans are essentially a nonagricultural community. They thrive mainly on business entrepreneurship and money lending. But not many persons are in government jobs. Labour is lacking in the community. The traditional *'jajmani'* (Patron-client) relationship is retained to some extent with Brahmin, priests and barbers. Modern intercommunity linkages exist in terms of persons in business entrepreneurship, in teaching, medical and engineering professions, as advocates and in defence services.

Like other communities in the region, this community is also passing through a period of change. (Traditional values, mores and rituals are making ways to the modern systems.)

SOOD

Sood constitute an important group of the traditional traders and shop keepers like the Bania, Khatri and Mahajan. They are also called a community of traders and clerks. The name Sood or Sud is derived from the Punjabi word Sood or Sud meaning *'interest acquired on the principal amount by the money lenders.'* There is reference to a legend in some books, according to which a person took a debt from a Bania but was unable to return the interest on it. In lieu of interest he offered his daughter to the Bania. Such offering was known as Sood-those that came by way of interest. 'Karar' is also used as synonym for Sood, which means 'hard people' who would not spare interest. The more respectable title used for them are Lala, Shah and Babu.

In Punjab two broad groups of Sood are *'Uchandia'* (Sood of the hills) and *'Newandia'* (Sood of the plains) almost equivalent to Kihara or Dasa Bania and the Gola/Daghla/Chichar or Gata Bania. In Himachal Pradesh also there are two broad groups known as the *'Palmu Sood'* and the *'Jaswal Sood'*. Their main concentration is in district Kangra followed by Hamirpur. Una, Bilaspur, Shimla, Chamba, Mandi, Kullu, Sirmaur and Solan districts. According to Rose (1914) the Soods have 52 gotras, including Augarh, Baddhu and Baggha. But they are not aware of all such gotras and recall some like *Wahi, God, Bhagra, Patoee, Kodel, Kalander, Chimre, Butel, Bante, Chab, Takarpy, Bagle, Mahdudiye, Parkhoee, Maggwaloh and Gupta.*

LANGUAGE: They speak regional dialects of Pahari or Himachali e.g.

Kangri, Bilaspuri etc. and use Devnagari script. In the past their official language for trade was Urdu with Tankri script, but now they use Hindi frequently.

FOOD HABITS: Their staple food is wheat, rice and maize along with different type of pulses like urad, moong, arhar, moth, kulthi, chhole (gram) and green vegetables. Soods are occasionally non-vegetarian, some affluent families consume meat, fish and eggs along with liquor. Their dietary habits are changing from non-vegetarian to vegetarian food due to religious/sectarian influence of Arya Samaj and Radhaswami mission. Milk products are their favourite. Their festival foods are *halwa* and *kheer, dahi* and *bhalle, ankli* (of rice flour), *seviyan* etc. Non-vegetarian items are strictly prohibited on birth, death, fasts and religious occasions.

DRESS: In the olden days men used to wear a white *kurta*, a *chooridar pyjama* and a *safa*. Women dress is Kurta and Salwar with dupatta/chunni. They used to wear a chak on head, *har* or *Kantha, bali, besar,* (nath) *tilli, bali, pajeb* and *gajra/kara* as ornaments. These ornaments were made of both gold and silver.

MARRIAGE SYSTEM: The gotras are used to regulate exogamous marriage and many also use them as surnames. In varna order they place themselves in the middle, in the Vaishya varna. The social position of the community is below Bania and Mahajan though their riches sometimes surpass these communities. The Soods are endogamous, though there are spordic cases of marriage with the Mahajan, Khatri etc. In the past the girls were married at prepuberty, but now normally 20 years is the minimum marriageable age. Marriage normally takes place through negotiation and occasionally through exchange of sisters called *batta satta,* when suitable mates are available in two families.

Monogamy is in practice and only in rare cases of childlessness, can a man go for second wife with the consent of first wife. Marriage symbols are sindur, glass bangles, bindi on forehead, ear and nose ornaments.

Bride price is not taken and 'Kanyadan' is performed. Sagai, thakha and ring wearing are the betrothal ceremonies. The usual vedic rituals are performed by a Brahmin priest at the Bride's place like *'ved'* and *'agni' phere* when the bride and groom circumambulate the sacred fire. The bride's parents perform Kanyadaan and give a feast. Muklawa occurs on the next day and marriage is consummated. Dowry is given in both cash and kind and sometimes also demanded. Divorce is not socially approved, but some cases here there have also been reported. Widow and divorcee remarriage are allowed. Junior sororate may occur with the consent of the girl.

BIRTH CUSTOMS: Expectant mother is given proper attention. Birth pollution called Sutak is maintained for 13 days. Sudhi (purification) is observed by taking *punjap* that includes Ganges water and cow's urine. Naming *(Nam Karan)* ceremony is performed with the consent of the Brahmin priest. *Khirpu*

(first cereal feeding ceremony) is observed in the sixth month and feast is offered to children. *Mundane/ Jamalu* ceremony is observed in an odd year; and is performed by *mama* or *nana/nani* of the boy. The hair is offered to clan or *Kuldevi*, '*Kaan Chhedan*' (ear piercing) ceremony is observed for young girls on Gauntri day following Lohri festival and sweets are distributed. The *Janeu* ceremony (sacred thread investiture ceremony) occurs at the time of marriage.

DEATH RITUALS: The dead are cremated and their ashes are immersed in the Ganges at Haridwar and *pind dan* is made to a *panda.* Death pollution, called *Patak* is observed for 16 days. An Acharaj officiates to perform ancestral worship and seeks offerings. The Arya Samajis usually finish all death rituals with the *uthala* (ritual marking end of patak) ceremony within a week.

FAMILY SYSTEM: The vertically extended families are not giving way to nuclear families. An avoidance relationship of *bahuti* (daughter-in-law) exists with her *saurah* (father-in-law), *jeth* and *nandoi.* Property is inherited by all sons equally, but sometimes the elder brother gets a little more share called *jathunda* (rules of inheritance in which eldest brother gets a little bit more). In rural society, Sood women have role in agriculture, animal husbandry and fetching portable water. Now they have started taking up government jobs and also taking part in active politics.

Hindus follow Sanatana, Arya Samaj and Radhaswami sects, they also worship family or clan deities like *jathore* (ancestors) for whom a space is allotted in the courtyard. Bajreshwari Devi, Darshmata etc. are also worshiped as *Kul Devi,* besides Ashapuri, Baba Balak Nath, Chamunda, Garhi Wali Mata, Balakrupi, Chintpurni, Jawalamukhi, Gugga etc. Lakhdata is propitiated as '*Jakh*' which safeguards their milking buffaloes.

Sood celebrate various Hindu festivals like Lohri, Baishakhi, Holi, Sair, Chirnu, Dushera, Diwali, Shivratri, Nag Panchami, Krishan Janmashtami, Rakhi etc. Their main fairs are Bhikh Shah, Lidwar, Dari, Halir and Dushehra etc. They share Kangri or Pahari folk songs, tales, music and dances. Their community council called '*Sood Sabha*' plays an important role in resolving socio/economic problems.

OCCUPATION: The Soods are essentially mercantile but some people possess landholding for horticulture and agricultural purposes. Some also have tea estates as individual properties. Their mercantile activities are ranging from shopkeeping to industries. Soods are dynamic, They have responded to the modern developmental programmes.

The majority of the population of the State is Hindus, but Buddhists, Jains, Sikhs, Muslims and Christians also live with respect here. Himachal Pradesh is the best example of mutual cooperation, religious tolerance, cultural harmony and presentation of human values. The Hindus, who constitute nearly 95 percent of the population are very accommodating, cooperative and tolerant towards other communities. The people of all groups enjoy perfect-freedom to pursue their own way of life, customs, conventions and beliefs here.

In Himachal Pradesh, nearly 90 percent (2001 census) of the population lives in villages. Except for a few towns, there is hardly any urban life. The people live in the villages consisting of a few hamlets doted over the fields. The villages are found wherever an area of arable-land exists, sufficient to support a few families. Each village stands in the midst of its own area of cultivation.

In the hills, the concepts of home, village, family, and community are different from those in the plains. Here the home is a small dwelling place of one or two rooms where man and animal coexist; a village, a couple of hamlets on the hillside with small terraced fields around; a family is a well-knit unit working without division of labour. Villages have a picturesque setting. They are situated in valleys, on terraces, or on spur-tops, at sites free from high winds or landslips and near a water source. Other considerations are hill routes and religious centres. The houses are generally square or rectangular in shape. The favourite aspects are towards the East or West, facing the rising or setting sun, but this feature is often disregarded.

The houses are built to provide shelter to the peasant, his family, animals, pets and for storing grains and agricultural implements. Houses are generally built with local material. Now in the rural area also houses are being built as per the modern requirements, such wide open Kitchen, latrine/ toilets, use of cement and hard bricks, drawing room, guest room etc. Local material has been replaced by marble tiles, bricks etc. brought from far off areas.

In the sphere of social relations, important features are, joint family system and strong village affinities. These people are a close knit community and are ever willing to cooperate with their fellow villagers and share their problems. Most people earn their living through farming. Mostly, there are terraced cultivable fields in the altitudinal zone. The farmers love taking their cattle out into the jungle for grazing and singing there merrily to the music of a flute. The villagers attach a great importance to brotherhood. Most jobs are done on a cooperative level in the village and so they cost very little or nothing. The labourers are feasted on the completion of the job. The people of all groups are highly caste-conscious. When arranging wedding-matches, the caste and '*Gotra*' is given importance.

The people of Himachal love colour. Their dress patterns follow the local climate. Their caps also indicate the region they come from. The people of all groups are very fond of ornaments. Their food habits are simple and changing from region to region. A traditional meal consists of boiled rice, roti, curried dal, butter, milk and vegetables. In the hills, roti made of barely or corn is popular. The Kangra people eat more rice in their diet.

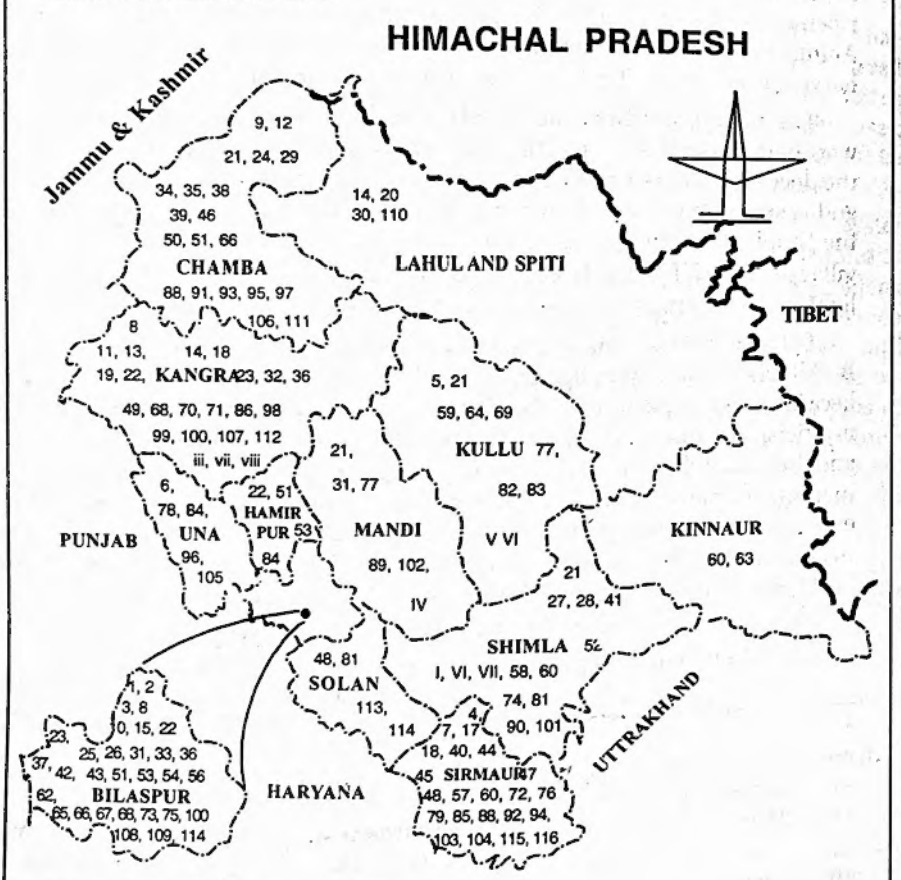
The people are deeply religious and God fearing, but their religious practices are different from area to area and sects to sects, which has already been discussed in this chapter . In Himachal Pradesh there are six important religious communities; *the Hindus, the Muslim, the Christians, the Sikhs and the Jains.* In the percentage share first position is occupied by Hindus, second Muslims (concentrated in Chamba, Kangra and Sirmaur Districts), third by

Sikhs (concentrated in Kangra, Shimla, Mandi and Sirmaur), fourth the Buddhists (concentrated in Lahaul-Spiti, Kinnaur and Kullu districts, fifth and sixth position is occupied by Christians and Jains respectively, scattered all over the state. The state is dotted all over with temples belonging to various Hindu religious sects, mosques and Gurudwaras.

Though many Hindus of the region worship Rama and Krishna with great reverence, their *presiding deity is Shiva.* The Kailash peak is regarded to be the adobe of Lord Shiva. To the children of the mountains, the '*Himalayas are the gods*'. Besides these well known Hindu deities, the people worship the godlings or the village deities, the *Deotas, the Rishis, the Munis, the Siddhas, the Pandavas, the hilltops, the trees, the Jogins or wood fairies, the Kali, the Shakti, the Nagas* and even a host of devils and deities of the aborigines.

The village gods are carried in planquins, on a number of occasions, to places of religious interest or village fairs. The water courses, the sprouting seeds, the ripening corn ear are all incharge of separate spirits who are duly propitiated. Animal sacrifice is a universal practice performed at weddings, funerals, festivals, harvest time, or on the beginning of the ploughing or thanks giving.

The people perform the rituals associated with the *dev-sanskar* (people who have passed away) with care, otherwise they believe that the spirits of the deceased will not rest in peace and could haunt and harm them. The village god is supposed to watch over the destiny of the village. Whenever in trouble, the people go to the deities to seek their guidance and help. The Muslims in the villages follow Pir Lakh Data and are called '*Shaikhs*'. They also pray and light earthen lamps at the shrines of other saints.



Lamaistic Buddhism is practised in the trans-Himalayan areas. Most of the Buddhists of the region belong to the third school of Buddhism, Vajrayana that became most important in the Himalayas. Lamaistic Buddhism assimilates the mysticism of the Vajrayana with the magic and devil-worship of the 'Tantras' and the cult of the 'Shakti', 'Tara'. The Lama (priest) guides the people in spiritual matters, foretells events, determines lucky and unlucky days, practises medicine, exercises evil spirits, performmagic and regulates the destiny of the living and the dead. The Christians are adherents of the Church of England, the Church of St. Michael, the Archangel, the Church of St. Xavier, the Union Church etc. The Sikhs have their own Gurudwaras, where they go and perform *aradas* (prayer).

Below, we are giving a list of the communities found in Himachal Pradesh.

1. Abdal	2. Acharaj	3. Ard Popo
4. Atishbaz	5. Badhai	6. Bairagi
7. Bangali	8. Banjara	9. Bansi
10. Bard	11. Battarha	12. Batwal
13. Bazigar	14. Beda (Bodh)	15. Bharai
16. Bharare	17. Bhat	18. Bhisti
19. Bhojki	20. Bodh	21. Brahmin

22. Bujru
23. Chamar
24. Chanal
25. Chandel Rajput
26. Chhimba/Dhobi
27. Chinese
28. Christian
29. Chuhra/Balmiki
30. Dagi
31. Dagoli
32. Darain
33. Daule
34. Dhogri
35. Dosali
36. Dumna/Bhanjr
37. Faqir
38. Gaddi Brahmin
39. Gaddi Rajput
40. Gaderiya
41. Gaur Brahmin
42. Ghai
43. Ghirath
44. Gurkha
45. Gosain
46. Gujarati Brahmin
47. Gujjar (Hindu)
48. Gujjar (Muslim)
49. Hadi
50. Hali
51. Hesi
52. Jain
53. Jat
54. Jheewar
55. Jogi
56. Julaha
57. Kanghigir
58. Kayastha
59. Khampa
60. Khasa

DEMOGRAPHIC PROFILE 2001 CENSUS

The population of the state increased from 9,83,367 in 1951 to 13,51,144 in 1961; 34,60,434 in 1971, to 42,80,815 in 1981, and 51,70,877 in 1991. The urban population continued to show upward trend from 6.99% in 1971 to 8.69%in 1991 when there was no change in the total area of the state. The decade from 1981 to 1991 showed increase of 1.08% in the urban population. The decadal increase was less than the national decadal growth in population. The decadal growth of the country has been 24.80% (1961-71), 24.66% (1971-81) and 23.50% (1981-91). The population of the state has been 0.31 of the population of India in 1961; 0.63% in 1971; 0.64% in 1981 and 0.61% in 1991.

Density of population per square km was 51 persons in 1961. It was 62 in 1971 (58 rural and 1554 urban) and 77 in 1981 (71 rural and 1537 urban). It increased to 93 in 1991 (58 rural and 1665 urban). On the basis of 1991 census final results, Himachal Pradesh stood at 51,70,877 population, out of that 26,17, 467 were males which constitute 50.62 percent, and 25,53,410 were females that constitute 49.38 percent. The population of Himachal Pradesh accounted for 0.61 percent of the total population of the country. During the decade 1981-91, the population of Himachal Pradesh registered an increase of 8,90,059 persons Thus, yielding a growth rate of 20.79 percent against 23.71 percent registered during the preceding decade 1971-81.

The district-wise population of Himachal Pradesh during 1991 census stood as Chamba -3,93,286 persons (7.60 percent) Kangra - 11,74,072 (22.71), Hamirpur - 3,69,128 (7.14), Una -3,78,269 (7.32), Bilaspur - 2,,95,387 (5.71), Mandi - 7,76,372 (15.01), Kullu - 3,02,432 (5.85), Lahaul and Spiti - 31,294 (0.61), Shimla - 6,17,404 (11.94), Solan - 3,82,268 (7.39), Sirmaur - 3,79,,695 (7.34) and Kinnaur - 71.270 (1.38).

The district Kangra was ranking top among districts in population size followed by Mandi and Shimla districts while Lahaul-Spiti district remained the smallest and followed by second smallest Kinnaur district. The highest growth rate had been registered 26.68 percent in district Kullu followed by Chamba district (26.46), Solan (26.01) Sirmaur (23.72) and Shimla (20.84). The only district where negative growth (-)2.51 registered was Lahaul-Spiti. The population of Shimla town increased to 1,10,307 persons out of that 63,661 were males and 46, 699 females. Sex ratio in Shimla town was 734 women per 1,000 males. It had total 84.77 percent literates highest in the state.

According to 2001 census final figures, the total population of Himachal Pradesh was 60,77,900 (50.8 percent males and 49.2 percent females) had 0.59 percent of the country's population. The population of the state increased by 17.54 percent since 1991 census. The Kangra district had the highest population (13,39,030) which was 22.03 percent of the total population of the state, while Lahaul & Spiti had the lowest population (33,224 persons) which come out to be 0.55 percent of the total population of the state. The total increase in population from 1991-2001 was 9,07,023 persons. The highest growth rate was recorded in Solan district i.e. 30.94 percent, where as Lahaul-Spiti had lowest growth rate of 6.17 percent.

Density of Population : The density of population was 77 in 1981 that went up to 93 persons per sq km in 1991. Highest density of populationwas registered in respect of Hamirpur district (330), while lowest recorded in Lahaul and Spiti district, that was, 2 persons. The second lowest density of population was in district Kinnaur having 11 persons. Bilaspur and Una district stood 2nd and 3rd (253 and 246) respectively in respect of higher density of population after district Hamirpur.

Sex Ratio :The sex ratio in the state has improved since 1951. It was 915 (1951), 923 (1961), 958 (1971), 973 (1981) and 976 (1991). The sex ratio has been above national average from 1971 to 1991. In 1981 census the female population per 1,000 males was 973 for the State, which had gone up to 976 in 1991 census. This does not appear very ideal as far as whole of the State is concerned. Hamirpur district was at the top with regard to sex ratio of 1,105 females per 1,000 males followed by Kangra 1,024, Una 1,017, Mandi 1,013 and Bilaspur 1,002. Whereas Lahaul and Spiti district with 817 and Kinnaur 856 continued the lowest with regard to sex ratio. *The most shocking outcome of 2001 census was decrease in sex ratio from 976 females per thousand in 1991 to 968 in 2001.* In rural

areas it was 989 females, while urban it was 795 females for every one thousand male. The difference of 194 points between rural and urban sex ratio is simply because of large migration of male members of family from rural to urban areas for jobs and other activities.

According to 2001 census Hamirpur has highest sex ratio of 1099 female after one thousand male, followed by Kangra (1,025), Mandi (1,013), Una (997) and Bilaspur (990). In the remaining 7 districts, sex ratio was below the state average. Lahaul and Spiti district had the lowest sex ratio of 802 females with Solan (852), Kinnaur (852) and Shimla (896) occupying other lowest positions.

Decadel Variation in Population since 1901 : The population increased steadily since 1911 to 1951 in short. Afterwards during 1951-61 decade the population of the State increased by 17.87 percent, whereas the growth rate climaxed to 23.71 percent in 1981 census. However, during 1991 census, the growth rate receded to 20.79 percent. Analysis of data reveals that in 1991 census the districts of Hamirpur (16.17), Una (19.17), Lahaul and Spiti [(-)2.51] and Kinnaur (19.69) registered a lower growth rate as compared to the whole of the State. Except for. 1961 census, the growth rate of Lahaul and Spiti district has been less than the State growth. In 1961 census, the district has returned the highest growth rate in the State and that was due to its creation. In 2001 census the total growth in population was 17.54 percent which was nearly 2.5 percent less than 1991 census. The increasing stress on population control measures showing positive results all over the state. The district of Kinnaur and Lahaul-Spiti having growth rate in single digit i.e. 9.91 and 6.17 percent respectively.

Literacy : During 1991 census the literacy percentage in Himachal Pradesh increased to 63.86 from 51.17 in 1981 census. Out of the total population of 51,70,877 as many as 27,65,409 persons were recorded as literates and out of that males constitute 16,48,011 (75.36) and females were 11,17,398 (52.13) percent. It may, however, be made clear that children in the age group between 0-6 were treated as illiterates in 1991 census. The district of Mandi (62.74), Kullu (54.82), Lahaul-Spiti (56.82), Solan (63.30), Sirmaur (51.62), Kinnaur (58.82) and Chamba (44.70) had registered less than the State's average (63.86) while remaining districts have registered higher literacy percentage than the State average.

According to 2001 census Himachal had 40,41,621 literates comprising 22,78,386 males and 17,63,235 females. Of these 35,67,456 literates belong to rural areas and 4,74,165 literates to urban areas. Among the districts, the highest literacy was recorded in Hamirpur district where the proportion of literates comes to 82.5 percent as per 2001 census. The next position was occupied by Una with 80.4 percent literates and was closely followed by Kangra (80.1 percent) and Shimla (79.1 percent). The lowest literacy rate of 62.9 percent was recorded in Chamba district while Sirmaur district occupie second lowest position with 70.4 percent literates.

The data of literacy at tehsil/sub-tehsil level reveals that Shimla urban tehsil had highest proportion of 92.0 percent literates. Solan tehsil with 85.1 percent literates stood at second place and was closely followed by Shimla rural (84.4 percent), Hamirpur (84.1 percent) and Bharwain (83.5 percent). 47 tehsils and sub-tehsils out of 109 tehsils, the literacy rate was above the state average figure of 76.5 percent. The lowest rate of literacy among tehsils/sub-tehsils found in Churah (49.2 percent) and was followed by Shillai (56.2 percent). Renuka (56.6 percent), Bhalai (56.7 percent), Multhan (56.9 percent) and Dodra-Kwar (57.2 percent).

Male Literacy : The proportion of male literates in the state come to 85.3 percent as a whole. Hamirpur district was at the top with 90.2 percent male literacy and was followed by Una (87.7 percent) and Kangra (87.5 percent). The lowest rate of literacy was recorded in Chamba with 76.4 percent male literates. Sirmaur district comes next to it having 79.4 percent male literates. In brief, except these two districts male literacy rate was above 80 percent in remaining 10 districts.

Female Literacy : At state level, female literacy rate stood at 67.4 percent as per 2001 census. Among the districts, the highest female literacy of 75.7 percent had been recorded in Hamirpur which was closely followed by Una (73.2 percent) and Kangra (73.0 percent). In fact these districts were not only leading in female literacy but also in male as will as in total literacy in the state. The proportion of female literates was lowest in the district of Chamba (48.8 percent), Sirmaur (60.4 percent) and Lahaul & Spiti (60.7 percent).

Gender Gap In Literacy : The gap between male and female literacy in the state was 17.9 percent as a whole as per 2001 census. This gap in literacy was much wider in some of the districts. Chamba district had highest gap of 27.6 percent in the state. This difference in rate of male and female literacy was 23.1 percent in Kullu district occupying second rank and was followed by Lahaul & Spiti with 22.1 percent. Even in highly literate districts of Hamirpur, Una and Kangra, this gender gap in literacy was quite high. All these three districts have equal gap of 14.5 percent in male and female literacy.

Literacy rate in rural and urban areas : In rural areas of the state, the proportion of total literates was 75.1 percent as per 2001 census. This proportion varies between 60.6 percent in Chamba and 81.9 percent in Hamirpur district. The literacy among rural male population was quite high which comes to 84.5 percent in the state. More than three-fourth of rural males population was literate in all districts. The highest proportion of 90.0 percent male literates was recorded in Hamirpur district while lowest rate of 74.9 percent was registered in Chamba district.

Female literacy rate in the state was 65.7 percent and it varies between 45.9 percent in Chamba and 75.0 percent in Hamirpur district. There was much gap in the literacy rate of male and female population in all districts.

At state level, this gender gap in the literacy workrd out 18.8 points while highest of 28.9 percent recorded in the rural areas of Chamba district.

Literacy In Urban Areas : Himachal Pradesh is least urbanized state having only 9.8 percent population living in the urban areas but had high literacy rate of 88.9 percent literates excluding the age group of 0-6 years as per 2001 census. The proportion of urban male literates is quite high which worked out 92.0 percent while female literacy rate stood at 85.0 percent yielding gender gap in literacy of 7.0 points which was quite low as compared to rural areas. Urban areas of Shimla (91.8 percent) and Mandi (90.5 percent) districts had very high literacy rate.

The lowest literacy rate of 82.1 percent recorded among the urban population of Una district. Percentage of Male and female literates was also lowest in this district. The proportion of male literates in this district comes 86.6 percent and that of their counterparts worked out 77.2 percent. The gender gap in literacy was lowest in Shimla (4.9 percent) and highest in Una (9.3 percent) district.

Change In Literacy During 1991-2001 (District level) : As already mentioned, the literacy rate increased from 63.9 percent in 1991 to 76.5 percent in 2001 a was gain of 12.6 percent during this decade. Among the districts the highest change in literacy took place in Sirmaur district where percentage of literates roses to 70.4 percent in 2001 from 51.6 in percent 1991 showing gain of 18.8 percent. The lowest gain of 7.6 percent was recorded in Hamirpur district and literacy rate in this district increased from 74.9 to 82.5 percent during 1991-2001. The gain in the proportion of male literacy was 9.9 percent whereas female literacy shows a gain of 15.3 percent during this decade.

Scheduled Castes Population

The total population of the state as per 2001 Census stood at 60,77900 persons out of which 15,02,170 persons belonged to the Scheduled Castes population. This Scheduled Castes population constitute 24.7 percent of the total population of the state. In 1991 Census, total Scheduled Castes population was 13,10,296 persons constituting 25.3 percent of the total population. There was slight decline of 0.6 percent in the proportion of Scheduled Castes population though numerically Scheduled Castes population was increased by 1,91,874 persons during 1991-2001.

At district level, the highest proportion of 29.6 percent Scheduled Castes population was reported from Sirmaur district in 2001 Census against 31.3 percent in Solan district and was ranking at first place in 1991 Census. Both these districts recorded decline in the proportion of Scheduled Castes population between 1991 and 2001. In Solan, the proportion came down to 28.1 percent in 2001 from 31.3 percent in 1991 while in Sirmaur it was 30.2 percent in 1991 resulting net decrease of 0.6 percent. The highest decrease in the proportion of Scheduled Castes population was observed in the Kinnaur

district where this proportion declined from 26.9 percent in 1991 to 9.7 percent in 2001 Census. It is mainly due to the fact that Scheduled Castes inhabitants of this district preferred themselves to return as Scheduled Tribes rather than Scheduled Castes during 2001 Census. On account of this, the population of this segment continued to swing from one census to other in tribal belt of the State.

The lowest proportion of 7.8 percent of Scheduled Castes was recorded in tribal district of Lahaul & Spiti and was closely followed by Kinnaur (9.7) and Chamba (20.0) district in 2001 Census. The districts had high percentage of Scheduled Castes were Mandi (29.0), Kullu (28.3), Solan (28.1) and Bilaspur (25.4).

Decadel Growth of Scheduled Castes from 1981-2001 : The population of Scheduled Castes was 10,53,938 in 1981 which rose to 13,10,296 in 1991 showing increase of 24.32 percent during this period in the state. In subsequent decade of 1991-2001, this population increased to 15,02,170 in 2001 Census resulting the growth of 14.64 percent. This declining trend in the growth rate of Scheduled Castes was visible in all districts of the state. However, in Kinnaur district where growth rate of Scheduled Castes was 202.53 percent in 1991 declined negatively by (-)60.19 percent as per 2001 Census. Similarly, growth rate of 207.61 percent was observed in Lahaul & Spiti during 1981-91 which came down to 17.13 percent in the subsequent decade of 1991-2001.

The population of Scheduled Castes and Scheduled Tribes in these districts continued to swing from one Census to other due to the reason the Scheduled Castes inhabitants of these districts used to change their preference either for Scheduled Castes or Scheduled Tribes. The growth rate of Scheduled Castes in remaining districts during 1991-2001 varied between 23.33 percent in Kullu and 12.49 percent in Kangra.

Distribution of Scheduled Castes Population : Of the 15,02,170 Scheduled Castes of the State, 18.6 percent or 2,79,540 Scheduled Castes were recorded in Kangra district and was followed by Mandi with 17.4 percent (2,61,233), Shimla with 12.6 percent (1,88,787), 9.4 percent (1,40,642) in Solan and 9.0 percent (1,35,774) in Sirmaur district. These four districts account for 54.4 percent of the total Scheduled Castes in the State. Lahaul &Spiti has lowest number of 2,605 Scheduled Castes constituting 0.2 percent of the total Scheduled Castes and is followed by another tribal district of Kinnaur (0.5 percent), Bilaspur (5.8), Chamba (6.1), Hamirpur (6.5), Una (6.7) and Kullu (7.2 percent).

Sex ratio of Scheduled Castes : The sex ratio among the Scheduled Castes was 967 females per 1000 males in 1991 which rose by one point to 968 in 2001 Census in the State. Lahaul & Spiti district had lowest sex ratio in 2001 Census by returning 880 females against 832 females in 1991 Census showing improvement by 48 points. Hamirpur had the highest sex ratio of 1,022 in 2001 Census and females were excess of males in 1991 as

well as in 2001 Census. Kangra district also has high sex ratio in the Scheduled Castes population with 1009 females in 1991 which slightly declined to 999 females in 2001 Census.

Literacy Rate of Scheduled Castes : The proportion of Scheduled Castes literates to total Schedule Castes population excluding age-group 0-6 was 53.2 percent in 1991 which rose to 70.3 percent in 2001 Census resulting increase of 17.1 percent during the decade in the State. During the decade of 1991-2001, much improvement has took place in literacy of Scheduled Castes. At district level, Chamba district was at bottom with 36.9 percent literates in 1991 and this rate increased to 58.5 percent in 2001 Census but continued to occupy the last position among districts during 2001.

The highest proportion of Scheduled Castes literates of 68.5 percent was registered in Hamirpur district in 1991 which rose to 79.1 percent in 2001 and was again ranking at first place among districts. The proportion of literates was above 70 percent in eight districts except Chamba (58.5), Kullu (64.9), Mandi (68.6) and Sirmaur (63.6) whereas in 1991 Census there was not even single district having 70.0 percent literates.

Male Literacy in Scheduled Castes : The proportion of male Scheduled Castes literates was 65.0 percent in 1991 which rose to 80.0 percent in 2001 Census. The highest percentage of 86.4 male literates returned by Hamirpur closely followed by Lahaul & Spiti (86.2) and Kangra (82.8) in 2001. Chamba district had the lowest proportion of 71.4 percent male literates and second lowest position was claimed by Sirmaur with 72.4 percent. In remaining districts, more than three fourths of males were literates excluding the age groupo-6 as per 2001 Census. This proportion of male literates was low in 1991 in district and the variation was between 50.5 percent in Chamba and 77.3 percent in Hamirpur district.

Female Literacy In Scheduled Castes : The female literacy was quite low as compared to male literacy among the Scheduled Castes. The proportion of female literates was only 41.0 percent in 1991 which rose to 60.4 percent in 2001 in the State. The gender gap in literacy was 24 points as per 1991 Census which narrowed down to 19.6 points during 2001. The highest percentage of 72.2 female literates was returned by Hamirpur while lowest proportion of 45.0 percent female literates were found in Chamba district 2001 Census. The literacy status of females did greatly improved during 1991-2001.

Work Participation Rate of Scheduled Castes : The proportion of total workers among Scheduled Castes was 43.4 percent in 1991 Census which increased to 48.9 percent according to 2001 Census in the State. The percentage of total workers varied between 43.3 in Kangra and 59.3 percent in Lahaul & Spiti district. All districts show increase in percentage of total workers during 1991-2001 while in Lahaul & Spiti it fell down to 59.3 percent in 2001 from 62.1 percent in 1991 Census.

Main and Marginal Workers : The proportion of main workers in Scheduled Castes declined by 3.8 points from 35.0 percent in 1991 to 31.2 percent during 2001 Census. Though there was decline in the proportion of main workers yet marginal workers doubled during 1991-2001 resulting increase in the percentage of total workers. The percentage of marginal workers was 8.5 percent in 1991 which rose sharply to 17.7 percent in 2001 Census in the State. The percentage of main workers was the highest in Lahaul & Spiti which come to 53.1 percent in 2001 while lowest value of 23.4 percent was recorded in Kangra district. Chamba district had highest percentage of 22.7 marginal workers and Lahaul & Spiti was at the bottom of all districts with 6.1 percent of marginal workers.

Scheduled Tribes Population

The Scheduled Tribes population of the state as per 2001 Census was 2,44,587 persons forming 4.0 percent of the total population. The highest proportion of 73.0 percent tribal population, returned from Lahaul & Spiti and was followed by Kinnaur (71.8) and Chamba (25.5). The small proportion of tribal population was returned by Kullu (3.0 percent), Bilaspur (2.7), Sirmaur (1.3) and Mandi (1.2). In remaining districts, this proportion was almost negligible. During 1991-2001, most of districts except Kinnaur show minor decline in the proportion of Scheduled Tribes. The proportion of Scheduled Tribes was 53.6 percent in Kinnaur during 1991 which rose to 71.8 percent in 2001 Census.

Growth of Scheduled Tribes during 1981-2001 : The population of Scheduled Tribes was 1,97,263 in 1981 Census which rose to 2,18,349 in 1991 and 2,44,587 in 2001 Census. The growth rate of Scheduled Tribes was 10.69 during 1981-91 which rose to 12.02 percent in subsequent decade of 1991-2001 in the state, as a whole.

The highest growth rate of 44.63 percent was returned by Lahaul-Spiti followed by Kinnaur where population of Tribes had grown by 42.06 percent during 1991-2001. Bilaspur and Mandi had moderate growth rate of 14.99 and 12.18 percent respectively. However districts of Kangra, Hamirpur, Una, Sirmaur and Shimla had negative growth of Scheduled Tribes population but these districts have small population of Scheduled Tribes which usually fluctuates from one decade to other.

Distribution of Scheduled Tribes Population : According to 2001 census of the total Scheduled Tribes population of the State, 48.1 percent tribal population is distributed in Chamba district followed by Kinnaur (23.0 percent), Lahaul & Spiti (9.9), Kullu (4.6), Mandi (4.3), Bilaspur (3.8), Sirmaur (2.4), Shimla (1.7) and Solan (1.4). Una, Kangra and Hamirpur districts have almost negligible proportion of tribal population.

Sex Ratio of Scheduled Tribes : The sex ratio among Scheduled Tribes was better than Scheduled Castes. The sex ratio was 981 females per 1,000 males in Scheduled Tribes population in 1991 which further rose to 996

females in 2001 Census. The tribal district of Kinnaur had the highest sex ratio of 1,040 females in 2001 against 1,082 in 1991 Census and was closely followed by Lahaul & Spiti with 1,022 and 1,028 in 1991 and 2001 respectively. Chamba district also has significantly high sex ratio of 983 females in 1991 which further rose to 998 females in 2001 Census slightly below the parity line.

The sex ratio among tribal population was also high in Kullu (1,004) followed by Mandi (991) and improved in both districts during 1991-2001. There was decline in the sex-ratio of Solan, Shimla and Sirmaur districts and their values are far below the equality point. The districts of Una, Hamirpur and Kangra with small tribal population reflect very low sex ratio in both census.

Literacy Rate of Scheduled Tribes Population : The proportion of literates to total Scheduled Tribes population excluding 0-6 population was 47.1 percent in 1991 Census which rose to 65.5 percent yielding net change of 18.4 points during the decade in the state. This literacy rate among the Scheduled Tribes is quite low as compared to literacy rate of Scheduled castes. All districts show increase in the proportion of Scheduled Tribes literates except Kangra where literacy rate declined. The literacy rate in these districts varied between 46.7 percent in Una and 87.0 percent in Shimla district as per 2001 Census.

Male Literacy rate of Scheduled Tribes : Male literacy rate increased from 62.7 percent in 1991 to 77.7 percent in 2001 Census. At district level, male literacy of 2001 Census shows variation between 91.2 in Shimla and 45.9 percent in Una district. The pattern of change in male literacy during 1991-2001 was the same as discussed in total literacy rate.

Female Literacy rate of Scheduled Tribes : Literacy in female tribal population was very low and gender gap in literacy was still very high which come to 24.4 points as per 2001 Census. The percentage of female literates was only 31.2 in 1991 which rose sharply to 53.3 percent in 2001 which is still far behind the male literacy rate of 77.7 percent.

In districts, this rate varies between 40.7 percent in Sirmaur and 81.7 percent in Shimla district. During 1991-2001, all district except Hamirpur reflected improvement in female literacy. The percentage of female literates in Hamirpur was 71.4 in 1991 which fell down to 46.9 percent as per 2001 Census. But Hamirpur had very small number of tribal population and demographic features of this population by and large was influenced by migration from other areas.

Work Participation of Scheduled Tribes : The work participation rate of Scheduled Tribes was better than that of 48.9 percent workers of Scheduled Castes. The percentage of Scheduled Tribes workers increased from 49.6 in 1991 to 54.6 percent in 2001 Census. The proportion of Scheduled Tribes workers was highest in Una (66.7 percent) followed by

Kinnaur (60.2), Lahaul & Spiti (58.0). The lowest percentage of 37.9 was recorded in Kangra and 41.0 percent each in Sirmaur and Shimla districts.

Main and Marginal Workers : The proportion of main workers among tribal population worked out 37.0 percent in 2001 showing slight improvement from 36.8 percent in 1991 in the state. Main workers vary between 52.8 percent in Lahaul & Spiti and 26.2 percent in Mandi district during 2001 Census. On the other hand, the proportion of Marginal workers works out 17.6 percent in the state which varies between 29.0 percent in Solan and only 0.6 percent in Hamirpur district. But Hamirpur district had quite high percentage of 40.0 in main workers among the tribal population.

Although State achieved tremendous development since 1984, but an overall careful study shows that only about 50 percent of people had so far been benefited by road construction and other developmental programs in all sectors, which means that still the opportunity for development of potential for economic growth was being denied to the remaining 50 percent of the population who are or have become even poorer.

Fresh Survey For OBCs : So far 48 communities were listed in the OBC category with a population of 9.27 lakh. The government had constituted the OBC Commission to advise it on reservation in government service. At present 12 percent reservation was being given in direct recruitment to class I and II posts and 18 percent in class III and IV categories. Welfare of the OBCs was the top agenda of the government and it had already constituted OBC Development and Finance Corporation to provide liberal loans at low rate of interest through nationalized banks.

RELIGION BASED SURVEY

India being a secular country has followers of many religions. In Himchal Pradesh the highest proportion is that of the Hindus, i.e. 96.08% (1971), 95.77% (1981) and 95.90% (1991) followed by Muslims 1.45% (1971), 1.63% (1981) and 1.72% (1991), Buddhists 1.04% (1971), 1.23%(1981) and 1.24% (1991), Christians 0.10% (1971), 0.09% (1981) and 0.09% (1991), Sikhs 1.30% (1971), 1.22% (1981) and 1.01% (1991). There were 0.02% people who stated no religion. The proportion of religions other than the above was very negligible.

Hindus constitute the majority in the state with nearly 58 lakh Hindus out of 61 lakh people who have been registered as followers of one or the other faith(2001 census). There were 75,859 Buddhists. Kangra has the maximum number of Hindus (13,01,544) followed by Mandi (8,85,097) and Shimla (7,04,150).

Una district had the highest Sikh community with 23,372 Sikhs out of 72,355 Sikhs in the state. Lahaul and Spiti had the highest number of Buddhist population (19,537).

Religion	1991	2001	Percent Increase
Hindus	49,58,560	58,00,222	17%
Muslims	89,134	1,19,512	34%
Sikhs	52,050	72,355	39%
Buddhists	64,081	75,859	18%

DEMOGRAPHIC PROFILE 2011 CENSUS

The pupulation of the state was 68,64,602 as on 1st March, 2011 (00.00 hrs.). Out of this, 34,81,873 were males and 33,82,729 females. The proportion of male population is 50.67 per cent and that of female 49.29 per cent. During the decade of 2001-2011, the population of Himachal Pradesh increased by 7,86,702 persons, thus, yielding a growth rate of 12.94 per cent as against 17.54 per cent in the preceding decade. The population of the state constitutes 0.57 per cent of India's population and ranks 21st position amongst all states and union territories of the country.

Kangra district ranks first among the districts with population of 15,17,075 persons accounting for 22 per cent of the total population of the state in 2011

census. About half of population was concentrated in district Kangra, Mandi and Shimla. The rank of districts according to size of population has undergone few changes during 2001-2011. Sirmaur and Una districts which have improved its position to fifth and sixth place as against sixth and seventh place in 2001 census. Chamba district moved down to seventh position in 2011 census against the fifth place in 2001 census.

Statement givenbelow shows the ranking of districts by population size in 2001 and 2011 Census:

Table -1

Ranking of Districts by Population Size, 2001 and 2011

Rank in 2011	District	Per cent to Population 2011	total population of the State 2011	Per cent to Population 2001	total population of State 2001	Rank in 2001
1	2	3	4	5	6	7
1	Kangra	15,10,075	21.98	13,39,030	22.03	1
2	Mandi	9,99,777	14.58	9,01,344	14.83	2
3	Shimla	8,14,010	11.86	7,22,502	11.89	3
4	Solan	5,80,320	8.41	5,00,557	8.24	4
5	Sirmaur	5,29,855	7.73	4,58,593	7.54	6
6	Una	5,21,173	7.60	4,48,273	7.37	7
7	Chamba	5,19,080	7.57	4,60,887	7.58	5
8	Hamirpur	4,54,768	6.63	4,12,700	6.79	8
9	Kullu	4,37,903	6.38	3,81,571	6.28	9
10	Bilaspur	3,81,956	5.57	3,40,885	5.61	10
11	Kinnaur	84,121	1.23	78,334	1.29	11
12	Lahaul & Spiti	31,564	0.46	33,224,	0.55	12

Trend in Sex Ratio: Sex ratio is important demographic indicator and is defined as number of females per 1,000 males. 2011 Census shows sex ratio of 972 females per 1,000 males against 968 females in 2001 Census (Table-3). The position of sex ratio in the state in 2011 Census is comparatively good than sex ratio of 940 females in the country. The sex ratio has been rising steadily since 1901 when it was 884 females per 1,000 males and crossed the mark of 900 females in 1951 Census. Afterwards it continued to fluctuate between 912 in 1951 and the maximum value of 976 females in 1991 Census which could be termed as an ideal ratio in the state. In 2001 and 2011 Census sex ratio has slightly come down 968 & 972 females per 1,000 males respectively in the state.

The pattern of sex ratio in the districts is almost the similar as reflected in the state average except the districts of Lahul & Spiti and Kannaur where sex ratio continued to decline and fluctuate since 1961 Census due to selective migration. During the period of 1901-2011 the lowest value of sex ratio of 767 females was recorded in Lahaul & Spiti in 1981 census and 802 females recorded

in 2001 census. In 2001 census there were three districts having sex ratio above the parity line (1,000 females per 1,000 males) and highest sex ratio was returned by Hamirpur (1,099 females) followed by Kangra (1,025) and Mandi (1,013) district. In six districts, the sex ratio was below the state average figures of 968 females per 1,000 males.

In 2001 census, the lowest sex ratio of 802 females per 1,000 males has been registered in Lahul & Spiti district. In 2011 census, Hamirpur district again retains its top position and has returned sex ratio of the 1,096 females per 1,000 males. The lowest sex ratio of 818 females per 1,000 males has been registered in Kinnaur district. In 2001 census, the sex ratio was below 900 females per 1,000 males in four district viz. Lahual & Spiti (802), Solan (852), Shimla (896) and Kinnaur (857). But in present census of 2011, Lahul & Spiti and Shimla districts marginally improved its sex ratio and has risen to 93 and 915females per 1,000 males respectively and Kinnaur district, this sex ratio has fallen from 857 females in 2001 to 819 females in 2011 census.

The statement reveals that Hamirpur and Kangra districts maintain their first and second ranks in both censuses of 2001 and 2011 though the value of sex ratio has slightly improved during the period. Una district has been relegated to 6th position in 2011 census against the 4th rank in 2001 census and its position is taken by Chamba district in 2011 census. Bilaspur, Kullu, Shimla and Solan district continue to keep their ranks intact in both censuses despite the fact that sex ratio has declined in Bilaspur from 990 femals in 2001 to 981 females in 2011. There is much improvement in sex ratio in Lahaul & Spiti district in 2011 census. As a result of this, the position has changed from 12th to 8th in 2011 census. There is decrease in sex ratio in Kinnaur (819) district in 2011 and it occupies 12th position among the districts in 2011 census.

Statement – 2 as given below shows the ranking of districts in terms of sex ratio in both censuses of 2001 and 2011

Table -2

Ranking of Districts by Sex Ratio, 2001 and 2011

Rank in 2011	District	Sex-ratio (Number of Females per 1,000 Males) 2011	2001	Rank in 2001
1	2	3	4	5
1	Hamirpur	1,095	1,099	1
2	Kangra	1,012	1,025	2
3	Mandi	1,007	1,013	3

8	Lahul & Spiti	903	802	12
9	Shimla	915	896	9

10	Sirmaur	918	901	8
11	Solan	880	852	11
12	Kinnaur	819	857	10

Percentage decadal variation since 1901 for State and District

The population of Himachal Pradesh was 19,20,294 persons in 1901 which rose to 68,64,602 in 2011 showing an absolute increase of 4.94 millions during the period of 1901-2011. In terms of percentage, this population has grown by 257.06 per cent during this period (1901-2011). Table–2 gives percentage variation in population since 1901 for the state and districts. The population of the state declined by (-) 1.22 per cent during the decade of 1901-11 and since then it continued to increase gradually till 1951. In succeeding decades it grew at faster rate with a little fluctuation in the population growth. The decade of 1911-21 recorded growth of 1.65 per cent which rose to 5.23 per cent during 1921-31.

The population of the state grew by 11.54 per cent during 1931-41 but in decade of 1941-51, the growth rate sharply decreased to 5.42 per cent. In subsequent decades, the increase in population was considerably high and the decade of 1971-81 shows the highest growth rate of 23.71 per cent. There is declining trend in the growth of population in the state as growth rate of population declined to 20.79 per cent during 1981-91 and 17.54 per cent during 1991-2001. This rate has further slipped to 12.94 per cent during 2001-2011. The growth rate of 12.94 per cent in Himachal Pradesh is low as compared to all India's average of 17.64 per cent during 2001-2011. However, the lowest negative decadal growth of (-) 0.47 per cent among all States and Union territories in the state of Nagaland during 2001-2011.

Further analysis at district level reveals that negative growth in population was recorded during the decade of 1901-11 in the district of Kangra, Hamirpur and Una to the tune of 1.95 per cent and incidently these districts constituted erstwhile Kangra district prior to re-organisation of states. Besides these, Solan and Shimla districts recorded negative growth rate of 20.73 and 2.80 per cent respectively. There was increase of 1.65 per cent in the population of the state in 1911-21 decade yet marginal decline in the population of Lahaul & Spiti, Kullu and Kinnaur was observed during the decade of 1911-21 while the decade of 1921-31 shows decrease in district Solan to the extent of 5.71 per cent.

In subsequent decades, the trend in decadal variations continued to conform to the state pattern except in the decade of 1981-91 when the population of Lahaul & Spiti declined (-)2.51 per cent. During the decade of 2001-2011, population of Lahul & Spiti district declined (-5.00 per cent). Una district shows the highest variation of 16.26 per cent which is followed by 15.93 per cent in Solan district. The other districts which shows higher growth rate than the state average of 12.94 per cent are Kullu (14.76 per cent) and sirmaur (15.54 per cent).

The lowest provisional growth rate of (-5.10 per cent) in Lahaul & Spiti

district which is followed by Kinnaur (7.39 percent), Hamirpur (10.19 per cent), Mandi (10.92 per cent), Bilaspur (12.05 per cent), Kangra (12.77 per cent), Chamba (12.63 per cent) and Shimla (12.67 per cent) districts. The preceding decade of 1991-2001 shows four districts Viz. Kullu, Una, Solan and Sirmaur where growth of pupulation was above the state average (17.54 per cent) against two districts in 2011 census.

Density of Population

The density of population reflects the ratio between population and land. The density of population in the state is 123 persons per Km^2 in 2011 census against 109 persons per Km^2 in 2001 census. Thus there is net addition of 14 persons per Km^2 in the state during the decade of 2001-2011. The density of population in the state of Himachal Pradesh is quite low if it is compared with all India average of 382 persons per Km^2.

The highest density of population is recorded in Hamirpur district, where it is 407 persons per Km^2 and is followed by Una (338), Bilaspur (327), Solan (300), Kangra (263), Mandi (253), Sirmaur (188), Shimla (159), Chamba (80), Kullu (80), Kinnaur (13) and Lahaul & Spiti (2). The lowest density of 2 persons per Km^2 is recorded in Lahaul & Spiti district though this district is biggest in terms of area in the state but distribution of population is very sparse.

Table -3

Ranking of Districts by Population Density, 2001 and 2011

Rank in 2011	District	Population Density 2011	Population Density 2001	Rank in 2001
1	2	3	4	5
1	Hamirpur	407	369	1
2	Una	338	291	3
3	Bilaspur	327	292	2
4	Solan	300	259	4
5	Kangra	263	233	5
6	Mandi	253	228	6
7	Sirmaur	188	162	7
8	Shimla	159	141	8
9	Chamba	80	71	9
10	Kullu	80	69	10
11	Kinnaur	13	12	11
12	Lahul & Spiti	2	2	12

Statement–3 shows the ranking of districts in terms of density of population in 2001-2011 censuses.

Hamirpur, Una and Bilaspur districts occupy first three positions in 2011 census. Una district has improved its rank to second position replacing Bilaspur district to third position while in remaining districts, there is no change in the ranking during 2001-2011.

Literacy

Children below 7 years of age have been treated illiterate, even if he or she may be able to read and write with understanding. Of the total population 68,64,602 in the state, 51,04,506 persons have been recorded literates in 2011 census. These literates are 27,91,542 males and 2,31,2964 females. The percentage of literates to the total population excluding the children below 7 years of age comes to 83.78 per cent in the state. The proportion of literates has increased from 76.48 per cent in 2001 census to 82.80 per cent in 2011. The proportion of total literates in the state is more than all India's average of 74.04 per cent literates in 2011 census.

Table -4

Literacy Rate 1951-2011 Himachal Pradesh

Year	Persons	Males	Females
1	2	3	4
1951	NA	NA	NA
1961	NA	NA	NA
1971	31.96	43.19	20.20
1981	42.48	53.19	31.46
1991	63.86	75.36	52.13
2001	76.48	85.35	67.42
2011	82.80	89.53	75.93

Note : Literacy rates for 1951, 1961 and 1971 related to pupulation aged five years and above. the rates for the year 1981 to 2011 related to the population aged seven years and above. N.A. (Not available.)

Table–4 given depicts the data at district level of total population, Pupulation in age group 0-6 years, number of literates and percentage of literates. The highest percentage of literates is recorded in Hamirpur district where this proportion of literates comes to 88.95 per cent and is closely followed by Una (86.53 per cent) and Kangra (85.67 per cent) district.

The other district having literacy rate above the state average of 82.80 per cent are Shimla (83.64 per cent), Bilaspur (84.59 per cent) & Solan (83.68 per cent). In remaining Six districts, the literacy rate is below the state average. The lowest proporation of 72.17 per cent literates was shown by Chamba district and was followed by Lahul & Spiti (76.81 per cent), Sirmaur (78.80 per cent), Kullu (79.40 per cent), Kinnaur (80.00 per cent) and Mandi (81.53 per cent) districts. The literacy among the male population was 89.53 per cent of the total males excluding the chidren of 0-6 years age group in 2011 census. The literacy among the female population was still behind and it is 75.93 per cent in the state.

The female literacy in district, Chamba continues to be at bottom having the 61.67 per cent female literates whereas in all other districts, this poportion is above 65.00 per cent. The percentage of female literates to total females

excluding the age group of 0-6 years is above the state average of 75.93 per cent in Kangra, Hamirpur, Una, Bilaspur, Solan and Shimla districts. The districts which fall below the state average are Chamba, Lahul & Spiti, Kullu, Mandi, Sirmaur and Kinnaur.

The state of Himachal Pradesh has made tremendous progress in the field of literacy during the last three decades. The percentage of literacy which was only 31.96 per cent (excluding age group of 0-4 years) in 1971 rose to 42.48 per cent (excluding age group of 0-6 years) in 1981 census. However, the increase in the proportion of literates in earlier decades is not much but in subsequent decades the literarcy rate grew rapidly.

The proportion of literates which was 63.86 per cent in 1991 census rose to 82.80 per cent in 2011 census. The proportion of male literates has almost doubled from 43.19 (excluding age group 0-4) per cent in 1971 to 89.53 (excluding 0-6 age group) per cent in 2011 census. The percentage of female literates which was 20.23 (excluding 0-4 age group) in 1971 has risen to 75.93 per cent (excluding 0-6 age group) in 2011 census showing more than three fold increase in the literacy of females.

Table–5 given in this population depicts the data literacy rates by sex for state and district 2001-2011. The proportion of literates in the state as well as in districts has increased considerably during the decade 2001-2011. The percentage of total literates excluding 0-6 age group was 76.48 per cent in 2001 which has risen to 82.80 per cent in 2011 thus, resulting in net increase in the proportion of literates by 6.32 per cent during 2001-2011. All districts in the state show improvement in literacy in 2011 census over 2001 census of varying order.

Table -5

Ranking of Districts by Literacy Rate and Sex: 2011

Himachal Pradesh

Rank	Persons		Males		Females	
	District	Literacy%	District	Literacy %	District	Literacy%
1	2	3	4	5	6	7
1	Hamirpur	88.15	Hamirpur	94.36	Hamirpur	82.62
2	Una	86.53	Una	91.89	Una	81.11
3	Kangra	85.67	Kangra	91.49	Kangra	80.02
4	Bilaspur	84.59	Bilaspur	91.16	Bilaspur	77.97
5	Solan	83.68	Mandi	89.56	Solan	76.97
6	Shimla	83.64	Solan	89.56	Shimla	77.13
7	Mandi	81.53	Shimla	89.59	Mandi	73.66
8	Kinnaur	80.00	Kullu	87.39	Sirmaur	71.36
9	Kullu	79.40	Kinnaur	87.27	Kinnaur	70.96
10	Sirmaur	78.80	Lahul & Spiti	85.69	Kullu	70.91
11	Lahaul & Spiti	76.81	Sirmaur	85.61	Lahaul & Spiti	66.84
12	Chamba	72.17	Chamba	82.59	Chamba	61.67

As regards the male literacy percentage of male literates has increased from 85.35 per cent to 89.53 per cent yielding an increase of 4.18 per cent in the proportion of male literates. During 2001-2011, female literacy rate has changed from 67.42 per cent in 2001 to 75.93 per cent in 2011 census showing a net increase of 8.15 per cent in the proportion of female literates.

Among the districts, the highest literacy was recorded in Hamirpur district where the proportion of literates comes to 88.15 per cent as per 2011 census. The next position is occupied by Una with 86.53 per cent literates and is closely followed by Kangra 85.67 per cent, Bilaspur (84.59per cent), Solan (83.68), Shimla (83.64 per cent), Mandi (81.53 per cent), Kinnaur (80.77 per cent), Kullu (80.40 per cent), Sirmaur (78.80,98 per cent), Lahaul & Spiti (76.81 per cent) and Chamba (72.17 per cent).

Table -6 Distribution of Population, Decadal Growth Rate, Sex-Ratio and Population Density

District Code	State/ District	Population 2011			Percentage decadal growth rate of population		Sex Ratio (Number of Females per 1000 Males)		Population density per sq. km.	
		Persons	Males	Females	1991-2001	2001-2011	2001	2011	2001	2011
1	2	3	4	5	6	7	8	9	10	11
	Himachal Pradesh	68,64,602	34,81,873	33,81,729	+17.54	+12.94	968	972	109	123

12	Kinnaur	84,298	46,364	37,934	7,987	4,090	3,897	61,639	37,356	24,283	80.77	88.37	71.34

Note : *1. Literates exclude children in the age group 0.6 years that were by definition treated as illiterate in the Census of India 2011. 2. Literacy rate is the percentage of literates to total population aged 7 years and above.*

Kangra (80.62 per cent). Bilaspur (78.90 per cent), Solan (78.02 per cent), Shimla (77.97 per cent), Mandi (73.66 per cent), Sirmaur (71.36 per cent), Kinnaur (70.96 per cent), Kullu (71.91 per cent), Lahaul & Spiti (66.84 per cent) and Chamba 61.67 per cent).

Table–6 given here depicts the data at district level proportion of child population in the age group of 0-6 years to total population 2001 to 2011. The proportion of 0-6 year's age group to total population has been declined during the decade 2001-2011 at state and districts level. This proportion was 13.05 per cent in 2001 in Himachal Pradesh which declined to 11.14 per cent in 2011 census. This trend is visible in all districts of the state. The highest proportion of 13.38 per cent child proportion has been recorded in Chamba and is followed by Sirmaur with 12.82 per cent while the lowest of 9.47 per cent is found in Kinnaur district.

POOR GENDER RATIO

Female foeticide seems to be gaining ground in the state as the "five most populous and most literate districts bordering Punjab, which also have the highest gender ratio as per the 2011 Census, face an adverse child gender ratio in the age group of 0-6 years". This has sounded alarm bells in the state. This alarming trend came to light in the HP Census Report, 2011. Seized of the adverse child gender ratio issue.

Table -8

Child Sex Ratio for State and Districts : 2001-2011

District Code	State/ District	Child Sex ratio in age group 0-6 years (Number of females per 1,000 males) 2001	2011
1	2		
	Himachal Pradesh	**896**	**906**
01	Chamba	955	950
02	Kangra	836	873
03	Lahul & Spiti	961	1,013
04	Kullu	960	962
05	Mandi	918	913
06	Hamirpur	850	881
07	Una	837	870
08	Bilaspur	882	893
09	Solan	900	899
10	Sirmaur	934	931
11	Shimla	929	922
12	Kinnaur	979	853

Note : For calculation of sex ratio, others have been considered as males.

The five major districts that present a dismal child gender ratio are Una (870 female per 1,000 males), the lowest in the state, Kangra (873), which is also the most populated, followed by Hamirpur (881), Bilaspur (893) and Solan

Table -9

11	Shimla	853	881	842	886	867	875	852	869	878	894	896	915
12	Kinnaur	911	935	922	941	910	1070	969	887	885	856	857	819

Note : 1. For calculation of sex ratio, others have been considered as males.

2. N.A. – Not Available

(899). These district border Punjab, which has an adverse child gender ratio at 846, and private diagnostic labs flourish in these districts. Tribal district of Lahaul-Spiti and Kinnaur, where the diagnostic facilities are controlled by the government lead the child gender ratio. Lahaul-Spiti has 1,013 females, while Kinnaur has 953 per 1,000 males. Kinnaur has, interestingly, the lowest gender ratio in the state in 2011, 818 females per 1,000 males. Another highlight in the child gender ratio is that the lower literate districts have done better in the child gender ratio- Kullu (962), Chamba (950) and Sirmaur (931) followed by Shimla (922) and Mandi (913), which have combined literacy rates of 84.55 per cent, respectively.

More worrisome is the fact that the top three districts in gender ratio- Hamirpur (1,095) Kangra (1,012) and Mandi (1,007)- in the 2011 -Census faces the adverse child gender ratio. These three districts form over 49 per cent of the state population. Though child sex ratio in Mandi district is better than state average of 906, but it stands less than the national average of 914 females per 1,000 males in the 0-6 year age group. This depressing trend in child gender ratio is a serious concern as the government has launched over 12 schemes, including the most recent scheme *"Beti Hai Anmol"*, free education for the girl child and check female foeticide, under the PNDT Act to change the mindset in favour of the girl child. But these schemes seemed to have bowed before the predominant mindset that still governs the state literate population.

The final Census data has brought out an overall improvement in sex ratio in the state from 968 in 2001 to 972 over a decade, but a declining trend in the rural areas is a cause of concern. While the sex ratio in urban areas increased from 795 to 853, it came down marginally from 989 to 986 in the rural areas. Thus, the overall improvement has been only because of the leap from 795 to 853 in the urban areas. There is a decline in six of the 12 districts, with Kinnaur registering the maximum decrease from 857 to 819. The other districts with the declining trend are Una (997 to 976), Bilaspur (990 to 981), Mandi (1,013 to 1,007), Hamirpur (1,099 to 1,095) and Kangra (1,025 to 1,012).

However, a redeeming feature is that the child sex ratio has improved significantly in eight of the 12 districts and the decline has been marginal in Chamba (995 to 953), Mandi (918 to 916), Shimla (929 to 925) and Sirmaur (934 to 928). In the border district of Una, it improved from 837 to 875 and Kangra from 836 to 876, which is a positive sign. The final head count came to 68,64,602 with a decadal growth of 12.9 per cent (2001-11) as against 17.5 per cent during 1991-2001.

The growth rate of females (13.1 per cent) is higher than males (12.8 per cent) in the state which is also a trend at the national level. The density of population has doubled from 62 persons per sq km in 1971 to 123 persons per sq km in 2011. Among the districts, the highest decadal growth in population has been recorded in Una (16.3 per cent) and the lowest in Lahul-Spiti (-5.0

per cent), while districts like Una 16.3 per cent, Solan 15.9 percent and Sirmaur 15.5 per cent have recorded population growth of above 15 per cent.

More than 90 per cent (61,76,050) people live in rural areas in 17,882 inhabited villages out of the total 20,690 revenue villages. The rest are uninhabited. Sirmaur district has the highest scheduled Caste population (30.3 per cent), followed by Mandi (29.4 per cent), Solan (28.4 per cent), Kullu (28 per cent) and Shimla (26.5 per cent). The literacy rate has shot up from 76.5 in 2001 to 82.8 in 2011 with male literacy rate increasing from 85.3 to 89.5 and female literacy rate from 67.4 to 75.9.

SAVING GIRL CHILD

Efforts have been made to arrest female foeticide with partial success. Besides launching a scheme to track pregnant women to prevent female foeticide, the *'Beti Anmol Hai'* scheme provides Rs 10,000 for up to two girls born to a women. The *Maitri Sewa Yojna* provides free institutional delivery to all women in government health institutions, along with pre and postnatal care. On discharge, women get Rs 700 in rural areas and Rs 600 in urban. There is also reservation of one seat in the various courses in Himachal Pradesh University for girls who are the only child of the parents.

Himachali people are simple, straightforward, hard working, deeply religious, honest, truthful, frugal, gentle, good humoured, faithful in their dealings with other people and submissive to authority. Crime is almost negligible. But in the past, areas adjoining to Punjab, Haryana and Jammu have been experiencing crimes fairly and frequently. Thefts, dacoity, murder, bride-burning etc. are now common in these areas. But in general, the people are simple, extremely festive, a bit shy and superstitious. The hill women work harder than the men folk and are robust. They are beautiful, modest and known for their sweet voice.

Himachal Pradesh Scheduled Castes and Scheduled Tribes Development Corporation

Himachal Pradesh Scheduled Castes and Scheduled Tribes Development Corporation was initially set-up with the primary objective of upliftment of the members belonging to scheduled castes. Subsequently, the corporation extended its activities to include the scheduled tribes population from the year 1994-95. The share in capital participation of the state government and government of India released through state accounts is 49 percent and 51 percent respectively.

Functions of the Corporations : It helps in promoting, planning and assisting programmes of agricultural development, animal husbandry, marketing, processing, supply and storage of agricultural produce, setting up of small-scale and village industries and such other trade, business activities that may enable the members of scheduled castes and scheduled tribes community to earn a better living and help them to improve their living

standard. The main function of the corporation remains to act as a co-ordinating agency between the government departments, banks and beneficiaries. The corporation remains to act as a co-ordinating agency between the government development departments, banks and beneficiaries. The corporation arranges financial assistance in the shape of loans through the banks to the individual beneficiaries and to the scheduled castes and scheduled tribes organizations.

AREA AND LANGUAGE

Language is a constituent element of civilization. It raised man from a savage state to the place which he was capable of reaching. Man could not become man except by language. Language is one of the most marked and conspicuous as well as fundamental characteristics of the faculties of man. Besides Hindi, Urdu, English and Punjabi, the people of Himachal Pradesh have various dialects of their own, some of which are only understood to their own group, area or tribe, The common language of Himachal is known as 'Himachali Pahari'. The languages of the region are mostly Sanskrit in origin and are chiefly a mixture of Sanskrit, Urdu, Pahari a patois (rural language) of the hills, with an infusion of Tibetan words (the last is almost true in case of dialects spoken in Lahaul and Spiti region). While the census report of 1881 gives the name **'Pahari'** the language used from Sirmaur on the one hand to Kangra and Bhadrawah in Kahsmir on the other. Dr. Grierson called it 'Western Pahari' (the Aryan Language spoken in region extending from Jaunsar Bawar tract of Dehra Dun to Bhadrawah), '*Eastern Pahari*' and '*Central Pahari*' is spoken in Nepal and Garhwal and Kumaon respectively. In the past, Pahari language used various scripts like the *Persian, Kachi* and *Tankri*. But now uses only '*Devanagri script*'. Pahari can't be called a branch of Punjabi. Because the Punjabi script is '*Lhanda*' or '*Gurmukhi*', while Pahari was never written in these scripts as the old records testify. Pahari had its own independent status and this disproves the suggestions that it was a dialect of Punjabi. The following are the languages and dialects spoken in different parts of Himachal Pradesh:

S. No. Area	Language spoken
1. LAHAUL & SPITI	Lahauli (Sub–dialects are Gari (Bunam), Patari (Manchati), Trinani (Tinan), Tod Rangloi, Shipi and Lohar. In Spiti pure '*Tibetan*' is spoken)
2. KINNAUR	Kinnauri (Sub–dialects are '*Sunnami*', '*Chitkul*' and '*Rakdamme*'). *Rahul Sankritayan* described it as 'Hamkadaya Hamsakad'.
3. CHAMBA	Chambyali (four dialects are '*Bharamauri* in Bharmaur region, '*Bhatiyali*' in Bhatiyat, '*Churahi*' in Churah, and '*Pangwali*' in Pangi area).
4. KULLU	Kullui (Sub–dialects are '*outer Siraji*', '*Inner Siraji* and '*Sainji*').
5. KANGRA, HAMIRPUR, UNA, JOGINDER– NAGAR, GHUMARWIN AND

SARKAGHAT	Kangari (sub-dialects are *Shivalike, Kandi* and *Palampuri, 'Gaddi'* is spoken by the inhabitants of the range which divides Kangra from Chamba. In Kangra Sub-division *'Dogri'* and *'Punjabi'* are also quite popular.
6. BILASPUR	Kahluri (also known as *'Bilaspuri'*). 'Hinduri' (*Nalagarhi*) in and around the area of Nalagarh.
7. MANDI	Mandiyali in Mandi and Suketi in Suket
8. SOLAN	Bhaghati (Sub-dialects are *'Kumbari'* and *'Arkiki'*).
9. SIRMAUR	Sirmauri (two forms of dialect are *'Giripari'* and *'Giritari'*).
10. SHIMLA & SOLAN	Mahasuvi (It has six branches-Hinduri, Shimla, Sirji, Baradi, Saura Choli, Kirani and Kochi); Keonthali, Kotgarhi, Jubbali and Bhaghati are also part of it.

The people of the different parts of Himachal speak different languages. These differences in the language of the people had served to limit intergroup communication and perpetuate social isolation in the feudal past. But since the emergence of Himachal Pradesh as a separate entity and merger of Punjab hill areas with it, there have been serious efforts to evolve a common language of communication. Development of *'Himachali Pahari'* and intensive use of *'Hindi'* all over the Pradesh has helped in a great deal in removing cultural barrier and serving the cause of mutual goodwill and unification. The position of *'Himachali Pahari'* may well be compared with some languages recognised in the constitution such as *'Sindi'* (spoken by refugees scattered all over India). Konkani (spoken by the people of Maharashtra, Goa and Gujarat and Nepali (by the people inhabiting Darjeling area of West Bengal and scattered elsewhere). Contrary to this, Himachali Pahari is spoken by compact block of population, residing in the area of 55,673 sq. km. and throughout the centuries it has been the medium of expression of over 68 lakh of people. Why Himachali Pahari should not then find mention in the eighth schedule of the constitution among the other recognized languages of the Indian Union.?

LITERATURE

Only those who are acquainted with its folklore and literature would be able to value the richness and cultural in-depth of the Pahari language (dialects). Ballads will have to be noticed profoundly in the folklore of the Pradesh. These were mostly composed by uneducated wise men and were meant for popular audiences. These are sung by the traditional singers known as *Naths* and *Jogis* who with the accompaniment of *Hurki* or *Tambourine* sing the ballads and then translate these to the audiences. Their origin as well as continuation were always vocal, with numerous alterations on account of slips of memory, local adaptation and taste, prejudices, additions and omissions, etc. from generation to generation. They relate stories of two kinds, mythological and historical. The most popular among these are ballads of *Gugga*, Bharatihari, as a *Hinduan*, Hari *Hinduan*, *Ramayana*, *Sadhratha* and *Pandmayan*. Besides ballades, folk songs are also melodious and rhythmic, which have inherent folk tradition. The subject-matter and theme of most of

these songs are chivalry, village gossip, sacrifices, seasons, prayers and love.

They are sung in solo, choruses and as duets in different parts of the Pradesh. For example Suhi is sung in praise of Naina Devi from Chamba who sacrificed herself and was instrumental in bringing water to Chamba town. Kunjadi or Kunjava is such another famous folk song of Chamba. In Mandi, most prominent are *Chhinj* and *Chhanjoti*. The *Panj–Pahara* and *Devku* are the famous types of the Chhinj songs of Mandi. Kangra folk songs have love as their main theme. The *Gangi* and *Mohan* are the popular compositions of Bilaspur. Gangi is also prevalent in upper Shimla hills.

In Sirmaur, Shimla hills, Kullu and some areas of Mandi, *Laman, Jhuri, Har* and *Natti* are exciting and quite hilarious songs. *Jhuris* are couplets with mostly conjugal love or social satire as their main theme. Both *Jhuris* and *Lamans* are sung much more in open space, some time in shrilling and chocked sound especially when men and women are either going or returning to their homes either from jungles with their cattle, sheep and goats or from their agricultural fields. The Natti and Har both are exposures to the prevailing social practices and character of the local people. The folk tales, folk proverbs, riddles along with folk songs are also part of folk literature of Himachal Pradesh. These are great source of happiness and entertainment in farms, fields, high pastures, in fairs and festivals, sung and uttered freely and gaily with or without local traditional orchestra.

3

Social Life and Customs In Himachal Pradesh

"Hearken unto me, ye children of immorality all ye who once dwelt in abodes divine, I have known the supreme person, the one whose light shines forth from beyond the darkness."

–[Upanishad]

In these solemn, sublime and prophetic words the Rishi in the Upanishad voices the call from India's soul. It is a call upon all humanity to arise and awake to the heavenly vision without which life has no meaning. It is this vision which has ever been a source of inspiration to India for all that she has made and made continuously for ages. It is this vision again which has always motivated her desire to share with others the fruits of all her cultural enterprises.

A complete idea about the nature of the people, their habits, traits and identity can be acquired only from cultural history of the inhabitants. *In the modern world, distances have reduced and become shorter, Which has led for tremendous cultural agglomeration, integration and acculturation. Himachal Pradesh is one of the few provinces and units of Indian Union, Which have come little under the impact of the outside world for a long time.* But this can be said, without hesitation, that areas adjoining to Punjab and Haryana and increasing industrial development scenario, have put a great deal of strain on the cultural identity of the Pradesh and its people. *The life and outlook of the people of Himachal Pradesh are largely conditioned by its climate, flora and fauna. In keeping with the beauty of nature, the men are handsome, generally tall, with sharp, well cut features. The women, particularly of certain areas, have a beauty and charm of their own.* People of Himachal are very fanciful. But there is a diversity of dress and language in the state. According to 1961 census, 210 languages and dialects are spoken in Himachal Pradesh. But through all this diversity runs a consciousness of a common culture and a common destiny. The vast majority of the people of Himachal are Hindus with a sprinkling of Buddhists, Sikhs, Jains, Muslims and Christians.

The percentage of scheduled castes and tribes of the total population according to 1981 census was 23.7 and 5.3 respectively while according to 1991 census it was 25.34 and 4.22 respectively. According to 2001 census scheduled caste were 16.64 percent of the total population and scheduled tribes 5.87 percent. In 2011 the scheduled castes were 28.45 and scheduled tribes 6.45. But there is hardly and cultural disparity between the scheduled castes and other Hindus. They worship the same gods and goddesses, believe in same

myths and legends and follow the same rituals with minor variations on ceremonial occasions. Even among these scheduled tribes who practise Hinduism in one form or another, the same holds true. *In spite of local differences in customs and in the life style of inhabitants, the area is part of all Indian cultural way of life. The inhabitants carry out orthodox rituals of births, marriages and death with priests belonging to the Brahman caste. All this is in continuation of Sanskritic culture and people's procured social values.* Himachal society is divided into castes and sub–castes. But there are nonexisting conflicts between them. Castes depend upon each other, since division is on the basis of functions performed by the group.

Temple architecture has a predominantly higher place in the use of cultural advancement. These are evidence of people's traditional religiosity. **H.C.** Saraswat writes *"that there are temples to good gods, temples to evil ones, sometimes even to a notorious demon To each temple is attached a legend, giving the story of its origin and to the devout a faith in its sanctity, which down the centuries has remained unshaken".* **Laxmi Narayan, Shiva and Shakti are most popular deities.** At the same time, there is no single house and village, which do not have its own separate deity. Muslims, Christians and Buddhists have their own places of worshipping. Although there is mixed group of races, but **'Khasha'** is the strongest element in Himachal Pradesh.

According to 2001 census there were 95.43 percent Hindus with decadel growth of 16.97 (1991-2001), Muslims 1.97 with decadel growth 34.08, Sikhs 1.19 percent with decadel growth rate 39.01, Christians constituting 0.13 with decadel growth rate 73.33 and Buddhist 1.25 percent with decadel growth rate of 18.38 percent.

SOCIAL CUSTOMS

MARRIAGE CUSTOMS

Marriage is an important ceremony in Himachal Pradesh. The parents and also the closer elder relatives begin to look around for suitable matches as soon as the child comes of age. Sometimes, a middle man is used as a match–marker, known variously as, **'Roovary', 'Dhamu'** or **'Mazomi'** and **'Rivara'**. The first step in a marriage ceremony is the *betrothal.* In Himachal, the initiative is usually taken by the boy's male relatives. While in the plains, it is the responsibility of the family of the girl to make the initial contacts. This difference in approach seems to be due to financial obligations of either party. In Himachal, the boy's father pays to the girl's father for defraying expenses of the marriage, which is a nominal, payment and called *'Dheir'*, but reverse is the case in the plains, where girl's family must give a gift (dowry) to the family of the boy. When the match is settled, the ritual gift called *'Tika'* is sent. In Himachal. two kinds of betrothals are in practice. The system generally observed in the upper classes is called *'Barni'.*

The other form called *'Sagai'* or *'Sotha'* is adopted by the folks of the middle class and the low class. On behalf of the boy's father, a priest or a

relative takes a few ornaments and a rupee or two to the girl's parents. This offering is called 'SOTHA'. In Chamba, it is called *'Bandha Dena'* and in the remoter parts of Mandi, this is known as *'Barina'*. The other system of betrothal is called *'batta–satta' (exchange)*, which is a sort of bargain, a man getting a wife in return for a sister or cousin given away in marriage to the wife's brother or cousin. On this occasion, ritual songs are sung and sweets are distributed. In the tribal areas, both the parties exchange *'Chhang'* (rice wine) and close relatives are invited to participate in the ceremony. In some areas during the various festivals, gifts of jewellery and cloths are sent to the betrothed, known as *'Chharmi Nata'* in Kinnaur and the *'Tihar'* in elsewhere.

There is still another system of betrothal known as *'Batta Satta'* or *'Atta Satta Ka Nata'*, or marriage by inter exchange. By this system, a father promises his daughter's hands to a boy whose father under obligation is to marry his daughter to a boy of some third man in whom the former is interested and who in turn promises his daughter's hand to the son of the first man. Sometimes more relatives are involved and there are five or more links in the chain of this type of marriage. A breach of one's promise invalidates the whole arrangement. It is mostly common among agrarian people in the interior of the Pradesh.

Religion has predominant place in the marriage ceremony. The date for the wedding is set, in consultation with the priest and in some places the permission of the deities is also sought. Customarily, all the preparations for the wedding are to be kept secret from the bride. *If once a betrothal has been settled, it is hardly possible to cancel it and if one of the parties backs out, it must pay to the other all the expenses incurred in connection with the ceremony.*

Marriage rules in the hills are not very definite or strict as in the plains. Certain forms of relationships are, however, regarded as prohibited. High caste people marry with in their own caste *(endogamy)* but not within their own *Gotra*. Under the usage and customs, no two persons tracing their common ascendancy through their father within seven degree of ascendancy can at all marry among themselves, while on the mother's side, the restrictions extend upto fifth degree. *The Hindus are the only civilized people in the world whose marriage laws are based on the principle of exogamy.* Among the *'Brahmins'* and *'Vaishyas'*, the name of the exogamous unit is known as *'Gotra'*. Among the Rajputs, the name is *'Nukh'*, while among the lower castes, it is known as *'Kul'*.

Marriages without group members are prohibited. Even today, inter caste marriages are not encouraged. A 'Brahman' can marry only a Brahman and not only that, he can marry only a Brahman of his own sub–caste. However, today endogamous attitudes have somewhat relaxed and softened and we sometimes hear of an inter caste marriage, but that is not common as yet. A marriage between Brahman and Rajput or Vaishya or Rajput and Vaishya is somewhat accepted, but a marriage with *'Shudra'* by any of the three high castes, i.e. Brahmin, Rajput and Vaishya is not socially approved.

Marriage customs such as *'Anakang'* and *'Notting Feerang'* of Kinnaur and *'Mode'* and *'Kwachi'* of Lahaul–Spiti are unknown in the plains. Except in Lahual area, the bride and groom are carried in planquins. The girl touches her father's feet at the time of departure. People in Kinnaur follow polyandrous *(fraternal)* and Matriarchal system, where all brothers are looked upon as common fathers to the children and eldest is known as *'Teg Bawal'* and the youngest as *'Gota Bawal'*.

In the lower areas of the state, customs like *'Samuhat', 'Shanti' 'Lagna', 'Vedika', 'Vida', 'Andaron'* (Andaron–the entry of the bride into her new household) and *Duiragaman* are commonly followed, which are quite prevalent in Punjab and performed through Vedic methods. Till few years back, a maid (barber's wife or pachekan) used to accompany the bride temporarily from her father's house to help her settle down in the midst of her new family. The day the bride enters the new household, a special *'Havan' (Byah Luad)* is performed under the guidance of the family priest. In Lahaul area, when the groom departs with bride, the girl friends of the bride take promise from the groom that he will take proper care of their friend and then after bride and groom are allowed to go.

The *'Feroni'* (the ritual return of the bride after her first visit from her father's house) ceremony is of great joy and happiness. At the time of wedding, the *'Suhagi jewellery'* (denoting a girl's married status) is presented by maternal uncle (Mama) and the rest is given by the parents of the bride and the groom. The groom's family presents gift in the presence of all to exhibit their financial status. This is known as *Sagrand* among the people of lower hills.

When the wedding party reaches the village of bride, it is welcomed by bride's kith and kins (ceremony known as *Milni*). Then after that other programmes start. In the plains, the bride's brother presents the groom with a *'Dhoti'* and a *'Ring'* and ushers him to the place where the marriage ceremony is to take place. In the district of Kinnaur, the bride's father presents the groom *with a 'white turban'* and ties a *'sword or a dagger'* to his waist band to indicated the starting of the ceremonies. Presentation of wine cups at such occasion is a common sight in the tribal areas. The types of marriages practised in Himachal Pradesh are:

(a) Polyandry: This form of marriages are prevalent mostly in district *Kinnaur, Lahaul–Spiti* and *interior parts of Chamba*. In this system, the elder of the brothers in a family marries and the women becomes the common wife of all the brothers. This is known as *fraternal polyandry*. Practicers of polyandry give following arguments in its favour:

Inherited from Pandavas;

Legacy of the original tribal culture of the area;

It ensures non–fragmentation of the people's none two large holdings in land;

Property remains intact from generation to generation;

Because of the nature of their avocations, the menfolk have to be away from their homes for long periods and it is necessary that a woman should have more than one husband to take care of her requirements and Percentage of the females is much less. So this is the only way to cope with this problem.

With the growing contacts to outside world, polyandrous form of marriage has started diminishing. The educated females are dead against this practice.

(b) Polygamy: In some areas, we do come across instances of polygamy too, i.e. *a man marrying more than one women at a time.* But vast majority of people in Himachal follow the practice of *'monogamy'.*

Marriages take different forms depending on the social status, economic circumstances of the parties to the marriage and local customs. Arrange marriage is the commonest form. Modernization has its impact on the social life too and parents have started consulting boy and girl on the delicate subject of marriage. The ceremonies and rejoicing that follow are an extended affair which continues for many days.

(c) Love marriage and Widow remarriages are permissible, except in the higher castes. Now with the spread of Education and easy contacts between young people love marriages are taking place.

(d) Reet Marriage which takes place when an already married woman wants to leave her husband and marry another man. The husband charges *'Reet money'* from the husband–to–be and allows her to go with the man of her choice.

In Himachal Pradesh, three kinds of marriage ceremony are practised. First **'BIAH'** or regular marriage *in accordance with the 'Shastras'.* This form of marriage may be termed as **'Brahma marriage'**, in which father or guardian of the girl does not receive any consideration from the bridegroom for giving the girl in marriage. This is the superior form of marriage and largely practised in Himachal Pradesh, need no further details.

The other forms called **'Jhanjhrara'** and **'Gaddar'** or **'Paraina'** designate informal marriages. Jhanjhrara is *not the orthodox Brahmnical marriage.* It is in fact solemnized without the *'Saptpadi'.* i.e. taking seven steps by the bride and groom jointly round the consecrated fire. In the *'Jhanjhrara'* and *'Gaddar'* or *'Paraina'* forms of marriage, no religious ceremonies are performed. These are mainly popular among low caste people.

JHINDPHOOK OR JARAR PHUKI (bush burning) is a peculiar form of marriage among the tribes of Kangra and Chamba. This marriage takes place *without the approval of parents.* The man and woman set fire to some bush wood in the jungle and walk around it seven times, hand in hand, which completes the marriage. It is resorted to by the people of many tribes but being a *'runaway'* marriage, it is regarded with disfavour.

DAROSH, DAB DHAB, is a tribal system prevalent in Kinnaur. In this, a girl is *forcibly dragged away* from a fair ground of a festival meeting. She pretends to scream, scratch, bite and show annoyance, but the boy holding to

her does not relent his hold, Immediately thereafter, the boy's father deputes two men to see the girl's parents, to seek their apology for the outrage committed by his son. They try to bring over girl's father. He then asks them to make amends in terms of money is called *'Izzat'* and it varies from Rs. 100/– to Rs. 500/–, paid then and there. Within the month, after this settlement. the boy along with his relatives and two women escort the girl back to her house.

On this occasion, three to four baskets of fried cakes are taken for distribution and the boy offers, as a mark of respect, *'Reumalang'* (Chilgoza, dried apricots and Chulli garlands) to his mother–in–law and other elderly women in the family. Cash, according to one's capacity is also given. This ceremony is called *'Sten rannik'*. Then the groom, leaving his wife with her parents, comes back. After few days, she is brought back to her in–laws either by her father or brother and on this occasion she is presented with some ornaments, utensils and clothes by her parents.

DAM–CHALSHISH, in this type of marriage the *lovers elope together* and the boy's father sends the *'Mazomi'* (matchmaker) to the girls' house and tries to bring them around by presenting some gifts. They agree, then a ritual marriage follows. In this system, as the girl departs from her home, sad tunes are played and the son–in–law presents the mother of the bride with a sum of five hundred rupees as *'Masore'* or the price of her milk.

HARI OR HAR, in this. when a *boy kidnaps a girl or a girl elopes with her fiancee.* it is called *har.* The occasion for such a happening is either a fair or when the girl has gone to attend some marriage in the neighbourhood. When a woman. who is dissatisfied with her husband, goes and begins to live with another man is also called *'Har'*. Har is considered illegal among higher castes. In the case of a maiden, dispute is settled by paying some amount to girl's family, while in the case of a married woman, her new husband has to settle it with previous one by offering him a price acceptable to him. Such marriages are known as *'Jhanjhra' or 'Jhanjhrara'*. Mostly rituals re-performed much later when the woman has settled down with the new husband. *This custom is much popular among 'Gaddis'.* The special *'pooja'* offered on this occasion is known as *Nuala* to Lord Shiva. In Kinnaur region, *'har'* is called *'Dubdub'* or *'Kuchis'* or *'Khutu Kima'*.

The Gaddis perform the marriage ceremony twice. First comes the *Jooth Pana,* when the groom's party goes to the girl's house (who is usually a minor 8–10 years of age) and breaks a lump of jaggery in the girl's name and girl's family smears them with red colour. Then, after five or ten years, real marriage takes place. *There is no system of veil or dowry among Gaddis.* The people of Lahaul are polyandrous. whereas the peoples in Pangi are monogamous. *In Pangi, at the time of the marriage, the groom's younger brother presents the bride's mother with a silver rupee. This gives him the right of second husband over the bride but she is not to be shared by more than two brothers.* Widow remarriage is a common sight among tribal communities. The higher castes

do not allow the widows to remarry but the lower castes do. When a widow leaves her husband's house and moves in with someone else, she is known as *'Ghar Karna'* (taking another house). Among the lower castes also young widows are generally encouraged to get remarry as society has changed a lot in the past three decades.

DIVORCE SYSTEM

The Hindu Shastras regarded marriage as a bond never indissoluble in life. The wife was to worship her husband as a god. To Hindu law, there was no such thing as divorce. The custom of divorce, however, existed among the lower castes. **The Hindu Marriage Act, 1955** has recognised the right of a Hindu woman to divorce her husband. Among the rural folk woman do occasionally leaves one husband to go and settle with another, but the higher castes frown on promiscuity. The *'Reet'* system of divorce is applicable to *'Jhanjhrara'* and *'gaddar'* marriage. When the relations between a wife and her husband become unsustainable, the married girl returns to her parental home and refuse to go back to her husband. If her father is prepared to reimburse to the first husband, the expenses of marriage and a rupee called *'Chhed Karai'* marriage is considered dissolved, without and formal divorce. The girl also returns all the ornaments and clothes given to her by her former husband and all the ties are snapped.

Divorce law known as **'Dehri', 'Hari'** or **'Har'** among some tribal communities is held above all courts of law. *In this, people seeking divorce takes a twig of Shur wood and snap it in front of witnesses and throw it behind them.* In Lahaul area, the pair prepares *'a thin thread of wood'* and holds it by the little finger and pulls it apart. In some villages, the couple must break a *'Sal leaf'* into two in the presence of fellow–villagers. In this way, divorce is believed to have effected. The new marriage takes place on a suitable day. The new groom does not go to the bride's house, rather she accompanies the party sent for by the groom's side. Kanets and some low caste tribes of certain areas of Himachal hills follow this custom. No dowry is given. In Shimla hills, widow remarriage is called *'Karewa'*. In Kangra and Chamba regions, widow remarriage is called *'Jhanjhrara'* or *'Gudani'* and also *'Cholidori'*.

Polyandry, polygamy, divorce and promiscuity are unknown among higher castes. Since independence, due to spread of literacy, cases of informal divorces have decreased and love marriages through the courts of law have increased.

The Dehri (Monuments) outside most villages are reminders of the system of *'Sati'* in which the widow burnt herself on the funeral pyre of her husband. But now since long time, there has been no incidence of *'SATI'* in Himachal Pradesh. Women in Himachal Pradesh have independent and are enjoying high social status unlike their counterparts elsewhere in the country. She has a status of better–half in reality and commands a place of honour in the hill society.

FUNERAL CUSTOMS

Religion remains a dominant factor in the life of a man from birth till death. Funeral customs in Hiamchal Pradesh are in no way different than performed in other areas of Northern India. From time immemorial burning method is used to dispose of the dead bodies. Somehow the customs associated with death are quite strange and interesting in Himachal Pradesh. As death approaches, the sick man's body is lowered on the ground which is smeared with fresh cow–dung. His head must point to the north as soon as death occurs and 'Conchsells' (शंख) are blown. *The blowing of conchshells is a signal for the relative to burst out crying and to reach at the house of the deceased.* It is considered inauspicious to die on a bed.

After the death has occurred, mustard oil or linseed oil lamp with a cotton wick is lit and placed in a corner of the room and covered with a woven grass basket or an earthen pitcher, with its head upside down and a hole on the top, sufficient to throw oxygen in to keep the lamp burning. This lamp symbolizes the dead man. The mourners come and sit in this room and the ritual mourning is done here. The dead body is laid on plantain leaves (केले के पत्ते) in the courtyard, bathed and then placed in a wooden coffin or upon a bier and covered with colourful sheet and taken to the cremation ground.

On the way, procession stops at a few places where some stones and leaves are placed in the name of the dead man. After reaching the half way, a ceremony known as *'Adhmargi'* is performed; there the body is laid down for a few minutes. So long as the dead body lies within the house, no food can be cooked therein. After this, for a month, the close relatives observe *patak* during this period the use of things like meat, fish, garlic, onions, asafoetida is taboo.

Before consigning the body to the flames, a *'Pind dan'* (ritual feeding of balls made of cooked rice, sesame seeds and curds to the birds and elements in the name of the died one) is performed. It is considered favourable to add fuel wood *(Lakri Pana)* to the pyre. On the third day, the bones and ashes are immersed in holy place like Haridwar, Rewalsar or Mansarover. For ten days, house observs a mourning period. The close relatives have their heads shaven and the widow removes her marriage jewellery. On tenth day, clothes are washed *(Kapad Dhulai)* and the holy 'Garud Purana' is recited by a *Purohit* or *Charjee* or a charj (a special class that recites scriptures in houses when death has occurred). If one dies an untimely death, a special ritual called *'Sapindi'* is performed.

At the end of the mourning period, i.e. ten days, a ceremony known as *'Kriya Karma'* (a religious rite for the peace of the departed soul) is performed and immediately after this, in one to five days period, another ceremony is performed known as *'Solaha'* (food arranged for the relatives, friends and villagers). On the day of *'Kriya Karma'*, either the daughter's or the son's father–in–law *(Kudam)* brings food items cooked with asafoetida and feeds it to the bereaved family, after this taboo is lifted. Then after each year, an annual

'Sharaddha' is performed to commemorate the dead one. After four years, a *'Chatur Varshik'* (Chauvarsha) is done. On these occasions, Brahmins and family relatives are invited and feasted.

It is only in Kinnaur where three forms of customs were performed regarding the death of a person and his cremation, as–

(a) **Dubant:** Drowning the dead body in the nearby river;

(b) **Bhakhant:** Throwing the dead body in open fields and let it be eaten by vultures and birds; and

(c) **Phukant:** Burning the dead.

Now only **phukant custom** is most widely practised to dispose of the dead in Kinnaur district too. The followers of other religion than Hindus, generally follow the same methods as by their brethren elsewhere.

In Kinnaur, when someone dies, all villagers get together at his house at night. This custom is known as *'Drum Rating'*. The dead body is then bathed in a large vessel called *'Lam Kunyal'* and then wrapped up in a white shroud. Dr. Gautam Sharma Vyathit has made an elaborate discussion on these ceremonies in his book *'Folklore of Himachal Pradesh'*. After wrapping the body, it is carried by two persons to the cremation ground on a plank. The legs of the body are turned behind at the knees with the help of wooden pegs. It is believed that if the legs are straight, an evil spirit might enter the body. When the funeral procession leaves the house, a piece of bread stuffed with *'Dal'* is thrown on the roof top for the crows, who, it is believed, can communicate with the dead.

In the cremation ground, Lama (priest) holds the head of the body by the hair and recites prayer (Foa) in his ears, thrice. He recites some *'Mantras'* and during this, it is considered auspicious if a drop of blood becomes visible on the forehead of the dead one. For seven weeks, the Lama comes to the dead man's house to recite the sacred text *(Chhos)*. At the end of seven weeks period, the **Lama and Jomo** (an unmarried girl who becomes ascetic) read the text together and are then fed by the family of the dead man. On the third day, after death, the *'Chholya ceremony'* and on the thirteenth day, *Damkochang* - a ceremony like *Kriya ceremony* of the people living in the plains—is performed. Those who go to collect the ashes the next day, often leave a stone or a little flag upon the hill top in the name of the dead one. On the fifteenth day, the Lama performs a *'Havan'* (offerings made to the holy fire). A year after the death, the Lama performs the *Fulayach (or the Dalhyang)* ceremony, at which he gets food and clothes in the name of the dead.

People in the **Lahaul valley** have their own distinctive ceremonies. If an old man dies, till the Lama arrives at the house, no one may touch the dead body. The Lama whispers an invocation into the dead man's soul in his ear and ask it to leave the body—this is called *'Fuhan'*. After this, dead body is seated on a metal or wooden chair in corner and a lamp is lit with butter in front of it. The body is kept in the house for two or more days as per the status

of the family, then it is cremated.

The Lama recites prayers, Cry and conch shells are blown. Two men, one with a conch shell and another with flag, follow the funeral procession. At the cremation ground, the shroud is torn into five pieces, four of which are hung upon the four corners of the funeral pyre and the fifth is placed on the forehead of the dead one. On the next day, the ashes are collected and immersed in the river Chandrabhaga by the family members. In the Spiti valley when someone dies, the *'Jhanvar'* (witch doctor) is called to find out whether the body should be burnt, buried or cut into pieces and thrown upon hill tops for the wild animals to consume. All communities in the Spiti valley follow the orders of the Jhanvar.

At cremation ground clothes and ornaments are removed, the shroud (कफन) is torn into five pieces, four of which are tied to sticks as flags on the four corners of the pyre and fifth is placed over the head of the body. With Lama's pouring ghee, barley, mustard, rice and incense, chants the mantras just before the body is consumed by the flames. Next morning drums are beaten and four bier carriers collect the ashes and then the Head Lama making its effigy chant the prayer 3 to 8 days depending on the status of the family. Then effigy is put on a pony and the funeral sets off to the confluence of Chandra and Bhaga rivers at Tandi for immersion. Throughout one man holds an umbrella over effigy. After the death an offering of butter is made to the God Trilokinath. Sometime when medicine and sorcery have failed and death is certain a *sham* funeral is arranged.

In this, life size effigy is made on a wooden frame plastered round with barley dough. It is painted and dressed with the clothes and ornaments of the sick person. The effigy is cut in pieces and solemnly cremated. Then professional wailer wails shouting that sick person has already died years ago. But alas! The angel of death cannot be deceived by child's play! Thus, mostly two funerals take place, the one *'sham'* followed by a real one, both however very expensive. From the above description, it is clear that people of different areas have their own customs and ceremonies related to dead and its cremation.

BIRTH CEREMONY

Birth ceremony in Himachal are very picturesque with quite quaint local touch. At the time of child birth, the mother is housed in a separate room and usually in the lower storey of the house. This is to protect her from the cold and high wind of the hills. In the tribal areas, she is often lodged in a cattle manor *(Gohad)*. There are no professional midwives, but any of several experienced village women of any caste can assist at the birth. The other elderly women of the household are also present on this occasion. The *umbilical cord* is cut by the midwife holding on to a silver rupee coin or a silver ornament. After delivery, the infant is bathed and wrapped in a clean cloth. Then the mother also takes bath.

The first twenty days (in some cases only ten days) are called *'Sootak'*

and during this period, the family observes all religious rituals. During this period, no one accepts food and drink from the hands of newly become mother, except the people of low caste. Some other important ceremonies connected with child birth are the first sighting of the baby by the father and first feeding of the tonic *'Ghutti'* to the infant. It is believed that the child imbibes the temperament of the person who gives him/her first dose of *Ghutti*. So usually a good natured member of the family is selected to administer Ghutti to the child. After the Sootak period (customary period of mother's pollution) is over, the cleansing up ceremony takes place, presided over usually by a Brahmin or a Buddhist priest (Lama). *A mixture of curd, sugar, cow's urine, milk and Gangajal is sprinkled over all the clothes in the house and is tasted by all the young and the old members of the family.* A spoon of the same is sipped by the mother. This act signifies her purification.

The well to do celebrate the occasion with great fanfare. They call the ceremony **'GOONTAR'** and on this occasion special *'Sund'* (sweet cookies) is made from dry fruits and distributed among the close relatives and villagers. After the *Goontar* ceremony is over, the mother along with the newborn goes to the family's living room. Usually in the initial months, for about a year or six months, mothers avoid taking infant to distant places till some auspicious day, as fixed by the astrologer.

In Himachal Pradesh, as observed by Mian Govardhan Singh, a husband refrains from killing an animal with his own hands during his wife's pregnancy, but he may eat meat. A pregnant woman must not go to a place on fire, nor to a stream, forest or any other place not frequented by men. She is not to see the face of a dead person. On religious occasions, when the husband and the wife sit together to perform various ceremonies in which a knot is generally tied, it is not done if the woman is with child. Her old ornaments are not melted to form other ornaments during her pregnancy and she is also prohibited for having a look at a solar or lunar eclipse. *The occasion of a girl child's birth is not celebrated with great joy. However, girls are given high respect and at the time of Navratras, special pooja is offered to the young girls and at the time of festivals and fairs, she is given special gifts of clothing and sweets.*

The birth of a son is a great occasion in the villages. The birth of a male child is announced by distributing *'Mura'* made of sugar lumps or parched grains among friends and relatives on the day of the birth. People light lamps and the women from the neighbourhood come and sing songs of joy and congratulations *(Sohar Badhaiyan)* (दूर्वा). The mother is treated with great reverence and all the visiting women are fed sweets and given money. The relatives and friends congratulate the father of the boy and offer him *'turf leaves'* with one rupee. The father keeps the turf leaves and returns the rupee with double the amount. This custom is called *'Badhai'*. In the Kinnaur area, the well to do bring the planquins of the gods within their house after a male child is delivered and feast the villagers on rich food and liquor. This custom is known as *'Shukud'*. At this time, a goat may be sacrificed. In the larger part

of the state, on the birth of a male child and in the case of a maiden delivery, a messenger with turf leaves and one rupee is sent to the houses of the maternal uncles of the newly born to announce the happy news. In return, the maternal uncles send gifts of *ghee, pancakes* and *clothes* for the baby.

Among the Brahmins. ***the Namkaran*** (the naming of the infant), ***'Chudakaran'*** (first snipping off his locks), ***Annaprashan*** (the first tasting of cereals by the baby) are all performed with great joy. In some areas in Solan, the infant is taken to a water fall and lodged near it for the first three days. Getting a horoscope cast for the child is also must (usually by the priest). People make special efforts to propitiate the evil stars in child's horoscope. Often people hang little silver or copper ***'Jantar'*** (amulets) around the child's neck to ward off the bad effect of evil stars. Children born in the ***Gandmool hour*** are considered unlucky and are often gifted away ritually as soon as they are born. Making of the horoscope is also important from marriage point of view. Marriages cannot be settled before the horoscopes of the couples are matched properly.

For the naming ceremony, the first letter of the name is ascertained by the family priest from the child's horoscope. In the lower castes, boys are often named after either the day or month of their birth. For example, we come across names such as Manglu (from *Mangal,* Tuesday), Budhias (from *Budhwar,* Wednesday), Braistia (from *Brihaspati,* Thursday), Chatia Ram (from *Chet,* March–April months) etc. The general suffixes to one's name may be Ram, Lal, Das, Chand, Singh, etc.; and these may also be after renowned caste, ancestor, etc. For example, the Negis found in Kinnaur district and Bodna village of Chopal and some areas of Jubbal in district Shimla are mainly Rajputs while Pantas, Jathraik, Madhaik, Nagraik, Barthatas, Gazatas, Banchaik and Frangraik (after an ancestor Frangi) are surnames irrespective of caste after an ancestor.

But the situation with regard to another type of surnames established by one's caste is quite confusing as many of these surnames like Thakur, Rathor, Tomar, Parmar, Chauhan and even Sharmas are now being used by the erstwhile lower castes and sub–castes without adhering to their own true descendents or family backgrounds. Although such names are adopted by the lower castes to uplift their social position yet they never shun their original caste identity while taking befit of government facilities such as reservation and financial help.

The first hair cutting ceremony of the child takes place in the third, fifth or seventh year after the birth. It is an occasion of great religious significance. This is called Jatloo. It is customary in the Pradesh to offer the hair cut at this ceremony at the shrine of a goddess or in the temple of 'Shiva' or the shrine of *'Kulja'* or holy river to receive blessings for the child and prevent its sacred first hair from being defiled. Some time, the hair clippings are placed along with some cow dung, milk and two coins in a piece of cloth or in a metal container to be offered later on at an appropriate time.

DRESS

The majority of the population of Himachal is that of Hindus, but Buddhists, Jains, Sikhs, Muslims and Christians also have respectable place here. People professing different faiths and pursuing their own way of life, customs, conventions and beliefs form unique example of mutual cooperation and acceptance. There are no communal clashes in Himachal Pradesh. Respect for each other's religion and status can be seen all over the Pradesh. The people of Himachal are the most delightfully colourful in the world. Cleanliness and progress is the habit of the people. They are humorous and good looking. Most beautiful women with chiselled features are found in Himachal Pradesh.

Dress too reflects cultural mode of the inhabitants. In India, almost every region has its own identity revealed through the dress and wearing. Mode of the dress is also dictated by climate, traditions, influence of adjoining areas and the fashions brought in by the Government Officials posted to an area and the local lad returning from his stint of work in other lands. Impact of westernization is clearly visible now on people's dresses. Spread of education and industrialisation has added new dimensions to the outlook and clothing choice of the traditional looking people. May be slow but change in taste, style and choice is discernible. While younger generation have started wearing coat, pants and trousers, the older like to put on traditional cap or turban with *Kamarbund* (worn around the waist) almost a universal item throughout the state. The dresses in the hills are conditioned after their climate, much of which calls for woolen garments.

As a result sheep–breeding is one of the main occupations here and spinning and weaving a community functions. Spinning is such an occupation of the hill people as to which they will resort whenever their hands are free. During close months of the winter, when hill people are spared from agricultural work, are confined to their hamlets, spinning is their usual occupation.

We find historical evidence of the type of dress that was prevalent in this part of the land through paintings, wood–crafts, stone–images, folk songs, icons etc. Good number of stone and wooden temple art throw light on the dresses of people in Himachal. The barsailla stone slabs are of particular interest as memorial of dead Rajas and their concubines constructed in Mandi. The Pahari paintings also give us the knowledge of the dresses prevalent with the rulers as well as common people in those days.

The accounts of the travellers, such as Vigne, Alexander, Jacamount, Moorcraft, Forester and in recent times by Lady Chetwode have described the dresses of hill people at large. Through folk songs like *'Gangi'* which is sung is areas of Bilaspur, Mandi, Shimla and Sirmaur carries a definite note of women dress. In areas of Mandi and Bilaspur, *'Chhori'* and endearing name given to a girl is another song where the heroine sets out with a pitcher to fetch water with a colourful dazzling sheet of cloth *(dupatta)* dyed in colours.

Till a decade back, women had come little under the impact of outside

dresses. But now *sari* is too much in evidence. While traditional *'Kameez'*, *'Kurta'* and *'Salwar'* cut in a distinctive Himachal style, continue to be popular with *'Dupatta'*, *'Dathu'* or *'Scarf'* over the head. During chilling days, women like to put on coat or waist coat. Flap cap made of woolen is also preferred during winter. Men use woolen shirts with long coats and sometimes sleeveless woolen jacket on the top of the coat. Come to Himachal in winter and it is time to wrap a traditional Kinnauri or Kullu shawl, with a crown of the famed Himachali cap perhaps with a small bunch of *'tikema'* flowers tucked in its brim. Clad your feet in geometrically patterned multi-coloured socks and gloves, originating from Lahaul, introduced by the Moravian missionaries more than a century ago.

In contrast to the bleak and barren cold-weather environs, the winter wear of the Pahari people is extremely colourful. In fact, Himachal's breathtaking natural beauty with hues of cobalt from the skies, green from conifers, yellow from the sun and from mustard fields, brown and ochre from the earth and white from waters have permeated the consciousness of the Himachal and have induced the people into weaving highly artistic colourful woolens that are a perfect blend of both beauty and utility. These are much more than a winter-style statement meant to ward off cold and biting winds. For in them, lies the story of an unbroken culture. The intense cold, together with near inaccessibility to their snowbound remote villages have led the people of Himachal to develop a largely self-supporting economy. Over the years, weaving as traditional family work or as an occupation has developed into a fine art.

Himachali woolens are indeed a visual treat. The immense variety includes shawls, topis (caps), patoos (homespun local tweed), dohrus (woolen saris that are fastened with two silver pins called bhoomni), lohiyas, pyjamas, mufflers, jackets, stoles, moja (socks), zomba or pichaya (woolen shoes), chhauli (blankets), gudmas, carpets etc.

Himachal's Kullu valley is renowned for its shawls. Interestingly, these owe their origin to Kinnaur. Initially the designs of Kullu and Kangra were in checks. Later when the Kullu weavers 'liberated' themselves from the shadow of Kinnaur, they adopted designs of stripes, leaves and flowers and today, even hill-capes are being woven on the 'pallus' of shawls. However, Kinnauri weavers continue to retain their distinctive individuality because of the inaccessibility of this remote area. Very few are aware that the regular Kinnauri shawl which is two meters in length and one in breadth originated as the result of an experiment in 1974, when the Himachal Pradesh state Handloom Corporation designed shawls with pattern borrowed from traditional Kinnauri *pattoos* and *dohrus*. This proved to be a great success. Today, they are woven at centres Kalpa, Nichar, Rekong Peo and Jhangi in Kinnaur district.

A prized piece for a connoisseur, the Kinnauri shawl's sheer mystic appeal lies in its angular geometrical patterns comprising of pyramids, triangles, rectangles, squares and stripes. As compared to Kullu's shawls, these are marked

with a complete absence of floral patterns. Interestingly, history reveals that Cummings compared Kinnauri women to Scottish and Algerian ones on account of their woolens raiment especially after seeing the former sporting the *shawl* and *dohru* held together by their unusual brooch.

Over the years, weaving has developed into an industry. In some places like Kullu it has changed the region's economy. In 1944, the Bhutti Weavers Cooperative Society (Bhuttico) was formed at Shamshi near Bhunter, around eight kilometers from Kullu. Tourists stop to shop at its showroom with the office and factory which is right on the bustling National Highway and retails a high quality of Himachali woolen and addition to newly evolved garments like suits, jackets and stoles that have also been infused with the Himachali tradition. Before this, locals used to weave mostly items for local dresses.

Kinnauri and Kullu shawls, pasham, dohrus and pattoos were once sent to Tibet and were also bartered and are now sold at the famed Lavi Mela, which is held after Diwali at Rampur and is considered the greatest fair of the inner Himalaya. Don't forget the *pullans* (grass shoes), worn both indoors and out, being warm in winter but cool in summer. Made from grass, the top is of twisted hemp with wonderful geometric designs. Called *'zomba'* in Kinnaur, these have thick soles to enable one to walk on dry ice. Perhaps the most artistic ones are from Pangi, with soles made of goat or sheep skin. Appreciated worldwide, whether worn straight or with a slant, Himachali caps are donned by both men and women as an integral part of local dress and it is customary to honour guests with them.

Jurkhi resembling *achkan, waist coat, kurta* and *woolen pyjamas* are other popular dresses. *'Doru'*, which is wrapped round the body like a sari, is used in Kinnaur and in Chamba district, full sleeved blouse and a shawl dropped over the shoulders and held together in front by silver hooks is a popular dress. Material used in most of these dresses is locally made. Otherwise too, Himachal has name in *shawl making, sweaters and other woolen clothes.* The people of Himachal Pradesh weave woolen clothes, generally throughout the year. One can see an educated Himachali in Western dress but menfolk like their traditional clothes. The *'Chola'* gathered around the waist by a black rope is worn in many lines. This is made of wool and called *'Dora'*. In this waistband are tucked, a *'Kulhari'* (axe) a *'Bansuri'* (flute) and often a *'Drat'* (sickle).

A Kinner can be recognised by a special type of a cap called *'Pang'*. Outside Kinnaur, it is known as a *'Bushahri cap'*. It is a head dress of men and women. On some special occasion, people tuck flowers in their caps which add to their beauty. A Kinner women wears woolen sari, *full sleeved blouse Choli* and an indigenous *Chhanli*. In Kangra and Chamba, cotton gown of a special pattern is common and is called *'Luanchari'*. To give new and charming look to clothes, many other material is also used everywhere in the State. The hill people use *'Deshi juta'* as foot wear. *Chamba chappal* is very famous in the State. With the spread of exposure media, changes have taken place in the life style of the people. In many parts, traditional patterns are

giving way to modern and articulated life style.

Some of the well known old and new dresses found favour with the people of the state are:

Turban and Cap: While turban is a dress of *'better off'* and high placed persons, the cap is used by commoner. Turban was quite popular in the past, now on its way to disappearance. Woolen caps which are circular in shape are quite popular outside the state too, with the name of Himachali cap. Two famous designs of caps are; *'Kullu topi'* and *'Bushahri topi'.*

Jhaggi (women garment, Mandi, Kullu and Rampur Bushahr): It is a woolen garment long enough, to reach the knees, combined with trousers of the same material. Jhaggi is tied with a *'gachi'* or *a woolen rope around the waist.*

Choli covers the breast of woman, which appears along with *'dupatta', 'ghagra'* and *'suthan'.* Choli was a popular garment in the past, made with great skill, finely embroidered and fitted with the pieces of colored glasses, porcelain and beads.

Ghagra and Suthan (Petticoat and long trousers): The dress, now the relic of the past, has been popular with the Mandi women. Dupatta or shawl is thrown on the head and body to make this a complete dress.

Dhattu is a piece of cloth square in size and is used as head wear by most of the women is rural areas of Himachal Pradesh. Dhattus are in various colours.

Kurta and Blanket is a quite popular dress used in the upper areas of the state.

Anga is a type of overgarment reaching to the knees, had been quite popular among the menfolk in Mandi and Kangra district. Anga also stands for Choli (or bodice meant for covering the breast). Now this garment is not much in use.

Chapkan (Rohru tehsil of Shimla and Pabbar valley) is a type of frock used along with trousers, angu, gachi and Pahari cap by men only.

Chopta or Chhupta is a gown touching the knees with V–shape neck cut, is used by both men and women in Rampur, Kotkhai, Kotgarh and Kumharsain areas of Shimla district.

Pishwaz is a type of coloured gown made of very fine muslin. This was a dress common in both Mandi and Chamba. Waist coat for breast and dupatta for head respectively are other components which go along with pishwaj or pashwaj. It was another name of *'ghagra'* or *'cholu'* having a short bodice reaching to the waist and below it the skirts fall away in numerous folds.

Cholu: An ordinary dress of male in the Kangra valley consisted of a cap, kurti or a cholu. Cholu was longer garment reaching to the knees. Kacch or short breeches (garment fitting around the waist and below the knees) along with cholu has now disappeared.

Chuba (male dress in the upper areas of district Shimla and Kinnaur): Other dresses that go along with *chuba* are gachi, trousers, coat, shirt, waist coat and *chadaru*, i.e. blanket. Round cap of black colour is a much preferred dress for head wear. The women of Pabbar valley in Kinnaur and Rohru tehsil of Shimla do use *'Chuba'*, a type of frock.

Reshta (women dress in Rohru tehsil of Shimla district) is a long gown touching the anklets. With a tight– fitting for the breast and back, it is a loose garment with plaits downwards.

Pattu (blanket) is a uniform and multipurpose garment all over the state. It is a woolen sheet of homespun texture woven in chessboard style. In winter it is used as a wrapper around the body. The pattu is also used for carrying things of household. Pattu wearing flowers, is called *phooldar pattu*. The *phool–work* is also known as *'Bushashri dhari'* and it seems that it was Rampur Bushahr which first introduced the designs and flowers on the plain blanket sheet. The simplest patterns to appear on *'pattus'* are that of check and chessboard type.

The check pattern is locally called *'Lungi dhari'* and it appears in different colours, viz., yellow, green, white or red on the ground which is natural brown or black and also sometimes orange or green. The pattu's cost depends upon the width of its border varying in size from half–an–inch to three inches. This border pattern appears in a combination of *dharis* and are known as *'mothra'*. There are numerous type of pattus. Small checks pattus are known as *'Mahin Chitru'* (mahin means small or fine), the other is *'ulta–sulta'* implying right and reverse, pattu black in colour and thick in stuff is known as *'Dhumkuru'* meaning literally smoke work, a type of pattu named after its comb like pattern is called as *'Kanghu'*. There is another type of pattu to which is attached lengthwise separately woven *phool–work*

As regards the motif to appear on the two main stripes of the pattu, a few names are well known–*Gulab* (rose), *Danedar* (dotted), *Lahria* (wavelike), *Chabi* (Key), *Sirki* (stairs), *Mandir* (temple) and *Chinidiwar* (the wall of China), *tipu* (drop), *Tara* (star), *Guddi* (doll), *Chiria* (bird), *Sade Kiru* (simple insect or snake), *Bulbul Chashme* (nightingale's eye), Ganesh (elephant–headed god) and *Jura hua Ganesh* (joint ganesh). The fringes to appear on the two ends are known as *'Chulku'*.

Patti is tweed with short width and is used for making coats, waist coat, chola (long coat) and pyjamas both for men and women.

Rumal: Himachalis are very fond of embroidered handkerchiefs. *Chamba rumals* have been marked for their craftsmanship in embroidery. The art work on Chamba rumal is a type of miniature paintings. Chamba Rumal has been favoured in the Mughal darbar and also preserved in the museums in India and abroad.

Sadari is a jacket used by both male and females in Kotgarh and Kumharsain areas of Shimla district.

Gachi is a simple white sheet of cloth used by females over *'chapta'* or *chhupta'* around their waists.

Namda is prepared from wool by beating it and not by weaving on looms. Namda is a good substitute for durry (दरी) but it is not recommended for rough use.

Loia (used by menfolk of Sirmaur district) is a woolen gown, supported on the shoulders and hangs down over the back. The sleeves of the *loia* are seldom worn though no *loia* is ever without them. *Loia* is a word derived from *lio* meaning a woolen or pashmina blanket or sheet. *The Himachal Pradesh University has adopted, loia and Pahari cap and its academic robes which are used by degree holders at the time of convocation.*

Gudma is so warm as to serve the purpose of a quilt. It is made from *biang* wool. Biang wool is produced only in Tibet and Kashmir. After 1962 Indo–China conflict, Kashmir is the only source to procure it. Some garments worn by males and females of the state are similar to those used elsewhere in northern India.

Male dresses: *Kurta, Pyjama, Shirt, Trousers* etc.

Female dresses: *Sarees, Kameej, Salwar, Dupatta, Scarf, Chureedar pyjamee* etc.

Pollans (पोले) (used in Kullu, Mandi, Shimla, Sirmaur, Chamba and part of Kinnaur and Lahaul–Spiti) is a foot wears used both for indoor and outdoor purposes. When indoors they are used like slippers and when outdoors they are used like shoes. The sole of the *'pollan'* is made of *bhang fibre* and is quite tough for wear and tear. The upper part is made of same fibre and also of goat–hair called *'sheli'*. There is also fashion to use Marina or wool fibre in multicolours. Such pollans are very popular in all parts of the state. These foot wears are not used in the latrines and bathrooms to save them from getting wet and spoiled.

Shawls in Himachal Pradesh can be seen in two type viz. plain and designed. From the material point of view, there are shawls which are woven from home spun yarn and there are also shawls which are a product of imported yarn called 'RUFFLE'. Colour selection and combination in the designed shawls presents the variegated work of art and craft. Plain shawls of pashmina are termed as *'loi'* in Kullu valley. Pashmina shawl is a costly thing but wool shawl is a thing of commoner. The patterns and motifs, that appear on shawls are generally known as *'phool'* which means flowers. The patterns and motifs are infact much derived from various flowers, birds and insects and appear in stylish forms.

The Kinner ladies have folds of their shawl on their back while in Kullu these folds can be seen on the front. In Chamba district particularly 'Pangi' and 'Tissa' areas, women wear shawls in a different style. They wear shawls upto the waist giving appearance of a *Loongi.* The shawl which is check in design is tied at the waist with a gachi. In Lahual–Spiti, the shawls are

town, *'Bhutnath', 'Trilokinath', 'Panchvaktra'* and *'Ardhnareeshwar'* are the most famous. Built in *Shikhara style*, these shrines are considered the finest monuments of ancient art and architecture.

Madho Rai is the presiding deity of Mandi since the days of Surya Sen who ruled the state from 1664 to 1679. He had no heir. All his 18 sons died in his lifetime. A broken man, he got disillusioned with the mundane world and vested all powers on Madho Rai. The silver image of Lord Vishnu bears an inscription in Sanskrit which eulogises Madho Rai as destroyer of rivals. It also carries the initials of the goldsmith, Bhima, who made it in 1648. Madho Rai is still revered. Pooja and other rituals are performed in keeping with the traditions of the princely times. The Raja's role is now played by the Governor or the Chief Minister. God Kamru Nag arrives here on the eve of Shivratri and is given a reception at the shrine of Madho Rai in a traditional manner. Other devtas are also received by the chairman and members of the *'mela'* committee.

A grand *'shobha yatra'* headed by Madho Rai winds its way to the venue of the mela– the sprawling Paddal Ground. Officials and the elite of the town wearing coloured turbans, contingents of police, home guards and NCC, mounted police and the galaxy of *'devtas'* accompany the *'shobha yatra'*. The blend of the police and Home Guard band and the hill orchestra is an added attraction. Thousands of people line the route to have a glimps of the procession. Shivratri owes its origin to the birth of the present Mandi town built by King Ajber Sen in 1526. Earlier, Mandi town was on the right bank of the Beas now known as *'Purani Mandi'*.

The idol now worshipped in the popular shrine of Bhutnath had been installed by King Ajber Sen, who laid the foundation of present town at the same time. A big congregation of people along with devtas was invited from all parts of the kingdom to celebrate the birth of the new town on the auspicious *'Shivratiparva'*. Though centuries have rolled on, Shivratri is being celebrated as before. The festival concludes with a *'Jagrata'* i.e. *overnight vigil* where the gods and their devotees both participate. Before the gods leave *'Mandi town'*, they are offered sheets of silken cloth besides fruits and incense. The state government has also fixed nazrana to each local god as per their status and position.

Bhunda, Shant and Bhoj: These festivals are celebrated like the *'Kumbha Mela'* after every twelve years or when enough money has been saved. Bhunda festival is connected with **'Parshuram'**, but some connect it with the cult of **'Kali the goddess'**. This festival is celebrated in upper Shimla Hills, Kullu and Mandi. Bhunda is the *'old Narmedi Yagya* and the customs and rites are the same. On all these festivals, sacrifices are made to please God or village deity. The deity in whose name the festival is being celebrated invites the neighbouring households gods and goddesses. All participants are fed from the temple treasure house. People sing and dance throughout the day and night for three to four days.

Halda: The Halda festival is celebrated especially by the people of Chandra

and Bhaga Valley in December–January in Lahaul and Spiti district. It is like a Diwali festival for them. Though it is a festival of light, no lamps or candles are lighted except the two or three persons from every household carry burning sticks of pencil, thin cedar in their hand to be piled together to make a bonfire and later to be ceremoniously thrown towards the villages of Gushal and Kardang.

Nawala: Gaddis of Kangra, Chamba, Mandi and Kullu celebrate this festival, when a household individually collects enough money for celebration. Nawala, in fact, is a thanks giving ceremony to Lord Shiva, who is worshipped at the time of misfortune and calamity. In some cases, special arrangements are made to perform *pooja* (worshipping). Devotional songs in praise of Lord Shiva are sung throughout the night.

FAIRS IN HIMACHAL PRADESH

Fairs in Himachal Pradesh have very positive role to play in social life. It is in fact with different outlook that people here celebrate and participate in the fairs. Himachal is a land of *'Devi'* and *'Devtas'* and most of the fairs are of mythological nature. But to keep on rhythm in various walks of life, fairs have occupied predominant role and acquired varied dimensions, such as; trade, agricultural, seasonal and fairs connected with festivals etc. So intensive the fairs have become, that people of all shades and interests participate in large numbers. There is hardly any village where no fair is held. There is almost continuous succession of fairs.

There are 20 State National and International level Fairs or Festivals recognised by the Government at present in Himachal Pradesh. They are the famous Dushehra of Kullu and Summer Festival of Shimla (cultural), both of international fame, besides, Shivratri of Mandi, Minjar of Chamba, Holi of Sujanpur Tira, Lavi of Rampur Bushahr (trade, Manimahesh yatra of Chamba (religious), Chaichu fair of Rewalsar (religious), Kaleshwar fair near Jwalamukhi (religious), Summer Festival of Dharamshala (cultural), Nalwari of Bilaspur (trade), Renuka of Sirmuar (religious) Traditional Tribal Divas Fair of Keylong (Independence Day), Winter Carnival Manali (winter fair), Salooni fair Solan (cultural), Ladarcha fair at Kaza (religious and cultural), Rohru fair, Rohru (religious and cultural) and Nalwar, Sundernagar (trade fair). There are 11 District level fairs in the Pradesh. There are the Winter Fair of Una (cultural), Pouri Fair Trilokinath (Lahaul), Tribal Fulaich Fair of Ribba (religious), Kinnaur, Shivratri of Kathgarh, Kangra (religious), Dushehra of Sarahan, Shimla (religious), Nagini Fair of Nurpur (religious), Winter festival, Hamirpur (cultural), Fag Mela Rampur (cultural) Baishakhi of Jawali, Nurpur (religious), Mela Joginder Nagar (cultural) and Baishakhi of Rajgarh, Sirmaur (religious fair).

They have an educational, social as well as religious character. These serve the needs of social integration not only for economic sustenance but also for cultural survival. The Bishu festival is also celebrated in Kerala as a

New Year's Day. It is in these fairs and festivals that the great artistic tradition of the Pradesh is revealed, revised and continued to be a growing vibrant phenomenon. Two important traits of festivity and devotional exuberance are Primarily found in these festivals. Most of these fairs, of course religious but still there are seasonal, mythical, community and trade fairs also. Besides seeking blessings of the local deity during these fairs, marriages are settled, matches are made, things of the local artisans and the produce of the farmers change hands. Men and women come to these fairs dressed in their choicest colourful clothes especially stitched for this occasion. They usually sit on hillsides in rows on raised terraces to watch dances, animal fight, wrestling and the famous Thoda (archery) game, feats of skill and stamina that go on endlessly entertaining the assembled colourful audience. After thorough investigation, it has now been established that some of the festivals are derived from the sectarian Hinduism after the migration of the Rajputs during 7th century to 15th century from the Indian plains.

Generally, the fairs are held at such a time when the people are free from their household engagements. Fairs give them an opportunity to purchase and sell needed articles. Traders from far and near join these festivals to display articles like clothes, wool, pashmina, furs, leather, hides and skins, pottery, metal ware, jewellery, ornaments, fruits, vegetables and many other local products coming from the homes and fields of the ruralites. Shops of hosiery and cosmetics, tobacco, cigarettes and toys are also displayed. *Following are the important fairs:*

BAISHAKHI (Bishu, Bisoa): This fair is held at various places in the State. People carry village deity with music procession from one place to another. In upper hills, people perform *'Mala dance'* by joining hands to form a large circle. During day time, some games like archery and wrestling are also played. This festival is more popular in lower hills.

MINJAR FAIR: Minjar (Maize flowers) is the fair celebrated in district CHAMBA at a place *'Chaugan'* in Chamba town. This festival is held in the month of August (on second Sunday). It continues for a week. Maize flowers, a coconut, a rupee or a smaller coin, a fruit and a few paddy tentacles are offered to *'Varuna'*, the God of rains, in the river Ravi. A procession starts from *'Akhand Chandi'* Palace and terminates at the river bank. After the Minjars are floated, people distribute sweets and scents. During the celebrations, feasts and musical concerts are organized at various places in the town. Raja of Chamba used to organize this festival earlier, but now Municipal Committee has taken all related responsibilities. *Minjar fair has been given the status of a state fair.*

It is difficult to say, when the fair first started, but the present form of the fair is attributed to Raja Sahil Varman, who ruled the state in the 10th century A.D. As legend has it that the Ravi had its course through the place now known as Chaugan. On the one side stands the shrine of *'Rani Champavati'* and on the other is the famous *'Hari Rai temple'*. A sage who was staying in the

Champavati shrine used to swim across the river Ravi to visit Hari Rai temple. To make the *Darshan* of Hari Rai easily available to the sage and to the people, Raja Sahil Verman arranged a week long Yajna religious sacrifice and oblation and Lord Varuna, was prayed for changing the river course. The lord obliged and changed its course. Since then a week long fair is organized. The Minjar fair is also associated with the victory of Raja Pratap Varman of Chamba against a Kangra ruler.

NAINA DEVI FAIR: This fair is held in the month of August, at Naina Devi temple, in district Bilaspur, which is eight kiloMetres from the Gangual Power House. This is the most delightful fair in district BILASPUR.

KULLU DUSHEHRA: KULLU Dushehra mirrors Himachal culture in its entirely. It throws light on the life, love of dance and music of the people in this region. To see the colourful Himachal at one place, Kullu Dushehra is the right place. Dushehra in Kullu starts on the *'Vijay Dasmi'* day and continues for seven days. Although Dushehra is celebrated all over the country, but in Kullu, starts it has its own distinctive glamour. The famous idol of *'Raghunathji'* which is carried from its fixed place in *'Dhaulpur Maidan'* to another spot across the *'maidan'* was brought from Ayodhya In July 1651 A.D. by one Damodar Dass and installed in Kullu by Raja Jagat Singh. The pulling of ropes is regarded sacred by the local people.

On this pious occasion, people bring local gods to Kullu and take out a large procession to pay homage and respect to Raghunathji. The festival starts only with the arrival of 'Hidimba Devi' from Manali, who is received by the Kullu Raja, outside the town and brought to the Raghunathji temple. This festival can't start unless powerful goddess Hidimba, known as the *patron deity*(कुलदेवी) of Kullu Raja, arrives from Manali. People from Punjab, Haryana, Delhi and Uttar Pradesh throng to enjoy Kullu Dushehra. This occasion is a great opportunity for hill people for singing and dancing. This fair provides ample scope for social, cultural and economic flourishment. The festival continues for a week. Kullu's location on famous trade route has added new dimensions to the fair.

The festival concludes with the burning of *'Lanka'*. The chariot of Raghunathji is taken near the bank of river Beas on the last day of festival, where a pile of wood and grass is set on fire, which symbolizes the burning of Lanka and is followed by the sacrifice of chosen animals. A buffalo, cock, fish, goat and crab are sacrificed. The chariot of Raghunathji is brought back to its original place, its temple in Sultanpur. It is an international fair. Dance troupes from many parts of the country and abroad participate, in this international festival and add more colours to the already colourful occasion.

As many as 16 "devtas" out of the 31 from the Anni and Nirmand areas of outer Seraj, who used to participate in the Kullu Dushehra festival earlier, have stopped participating in the festivities due to "paucity of funds", says a survey on "devis and devtas" of Kullu published by the Himachal Pradesh Academy of Art and Culture, 2011. Undeterred by anti-animal sacrifice

activists, the organiser of Kullu Dushehra continued the practice of animal sacrifice. The five animals which are sacrificed-buffalo, a fish, a crab, a cock, a lamb and two symbolic sacrifices. Sunni and Dharamshala Dushehra were given the status of district level fair on 23rd September 2014, by the state cabinet.

Baijnath town never Celebrates Dushehra: Dushehra is celebrated with great fervour across the country . However, in Baijnath town in Kangra district, 60 km from Dharamshala, people do not burn the effigy of Ravna, symbol of evil. Even the markets remain closed both in Baijnath and Paprola. A strong belief that celebrating the festival will bring the wrath of Lord Shiva on them keeps residents of the town away from burning the effigies of Ravna his brother Kumbhakaran and son Meghnath as per the tradition on Dushehra. Ravna was a great devotee of Lord Shiva.

According to a version, some people in the town tried to celebrate Dushehra about a decade ago (last decade of 20th century) by burning the effigy of Ravna. However, all of them died before next Dushehra. People took it as the wrath of Lord Shiva and nobody dared to celebrate the festival again. The belief of people that keeps them away from the festival is also associated with the famous Shiva temple located in the town. As per the legend, it is believed that during the *Treta yug,* Ravna to have invincible powers worshipped Lord Shiva in the Kailash mountains. He even offered his 10 heads in the *hawan kund.* Impressed by his extraordinary deed, Lord Shiva not only restored his heads, but also bestowed him with powers of invincibility and immortality.

Ravna also requested Lord Shiva to accompany him to Lanka. Shiva consented to his request and converted himself into a ling. Shiva asked him to carry the ling and told him that he should not place the *ling* down on the ground on his way. Ravna started moving in the southern direction and reached Baijnath where he felt the need to answer nature's call. On seeing a shepherd, Ravna handed him the *ling* and went to relieve himself. On finding the *ling* very heavy, the shepherd kept the *ling* on the ground and the *ling* got stuck there. Another interesting thing about Baijnath is that there is no shop of goldsmiths. However nobody knows the reason for it. The Baijnath temple is believed to be constructed in 1204 AD by two merchants *Ahuka* and *Manyuka.* Two inscription on the porch of the temple indicate that it existed even before the present one was constructed. The structure is now under the protection of the Archaeological Survey of India.

LAVI: This fair is held in the month of October–November every year at RAMPUR–BUSHAHR. The word 'Lavi', is derived from the word 'Loe' which in local parlance means a sheet of woollen cloth. Another meaning of Lavi is *shearing of the sheep.* Lavi fair, as the past accounts run, took place twice, in the months of June and November, which are suited to shearing of sheep, thus making available the wool in abundance. But now it is held only once in a year. In ancient times, Tibet and Kinnaur had good trade relations and Lavi fair is the outcome of business interest of both sides. People from other areas

in general and tribal belt in particular participate in this fair with horse, mules, pashminas, colts, yaks, chilgoza, namdas, pattis, woolens, raw semi-finished wool and other dry fruits produced in the state are brought for selling. Lavi fair is almost three hundred years old and now provided with status of international fair. In the upper hills, this is the last fair before the on-setting of winter. It is in fact the biggest trade fair of the hills in the country. During day times, hectic trade activities are witnessed all over the town. At night, folk dances and music around small bonfires are organized. It continues for three days. Until 1962 the traders from Kinnaur and Rampur Bushahr had their business contacts with Tibet from where wool, pashmina and other commodities used to come in bulk, but the Chinese aggression that year put everything out of gear.

RENUKA FAIR: This fair is celebrated in the month of November for six days. Renuka fair starts ten days after the Diwali festival. The legend goes that Parshuram, the youngest son of mother Renuka, used to visit his mother every year. The fair commemorates the annual meeting of Parshuram and Renuka. The place where fair is held, mother Renuka and her husband Rishi Jamdagani used to live. According to another version the sage Jamdagani was murdered by one named Saharrarjuna. Renuka was a devoted wife. Struck by the incident, she jumped into the lake, thus putting an end to her life. The lake was named after Renuka, who assumed the status of goddess after the great sacrifice. Parshuram is believed to be the *sixth incarnation of Lord Vishnu.* In an impressive procession, many idols of Parshuram are taken in planquins to Parshuram Temple situated on the hill top.

Renuka fair in tehsil Pachhad is one of the most important cultural events. It provides business exposure to the local people. In the recent past, it has become a great centre of attraction for people of all walks of life Renuka fair is a prominent fair in district SIRMAUR.

One can see glimpses of hill culture at the fair. Rural people market their produce of walnuts; dried and wet ginger etc. Folk dance, magic show, Kariyala plays, thoda dance, wrestling bouts, fire works, police and home guard's band display, developmental exhibitions, cinema shows and bhajan-kirtans are other attractions of the week long fair. Renuka is easily approachable from Solan and Rajgarh. While from Shillai, Dehradun and Paonta Sahib one reaches it via Sataun. From Yamunanagar, or Jagadhri, Saharanpur, Ambala and Chandigarh the National Fossil Park falls on the way at Kala Amb. All these routes converge at Renuka lake. Earlier it was a state fair. Renuka Fair was declared International fair in October 2011 by the state government. The other international fairs are Kullu Dushehra, Rampur Lavi fair and Mandi Shivratri.

THE SHIVRATRI FAIR: This fair is held in the month of February on Shivratri day in MANDI. Shiva is the chief deity of Himachal people. This fair continues for a week, with great fun and frolic. On this occasion, people bring hundreds of Gods and Goddesses in their *'Raths'.* Devotees carry them on

shoulders amidst melodious religious songs. People pay their homage to Lord Shiva at famous temple of *'Bhut Nath'* in Mandi town.

The Bhutnath temple was built by Raja Ajbar Sen when he founded the present Mandi town in the 16th century. History records that Raja Suraj Sen (1637–64 A.D.) had no heir to succeed him and Raj Madhav, a form of Vishnu, was installed as the State deity and administration of the State was pledged to Him. The Raja then ruled the State as the representative of the deity only to ward off subsequently the possibility to become an autocrat or a despot. A week long programme of fun and great entertainments begins where the hill folk exhibit their talents in the shape of colourful dances, songs, music, dramas and skits. The festivities conclude with a *Jagrata,* that is, overnight vigil, when ultimately Devtas predict main events of the year and the people are warned against impending danger to their lives as well as properties, etc. In the end, as a mark of reverence and having inherent deep religious belief and devotion all gods and goddesses are presented with a plain silken cloth *(chadars),* covering their *Rathas* along with fruits and incense, etc. Then these gods leave the town after paying their homage to Lord Shiva for their respective abodes only to meet again next year.

On the last day of celebration, people are warned against impending changes in their lives, property or the like. The tunes of departure played on hill bands, leave behind a very sad atmosphere for a day or two. It is an international fair.

HOLI FAIR: It is held in the month of March every year in district Hamirpur at SUJANPUR. This fair has also been accorded the status of a state fair. It exhibits traditional limelight of Holi, the festival of colours. People from all over Himachal come to participate in it. A week long fair provides wholesome entertainment through various games, songs, dances, folk dramas and skits performed by local artists. Business activities are also in full swing throughout the week.

CHINTPURNI FAIR: The fair of Chintpurni, locally known as *Mata-da–Mela* (fair of the Mother goddess), is held in the village Chintpurni near Bharwain (a Hill Station on Hoshiarpur–Kangra road in Una district). According to one legend a certain Mai Das had the first *darshan* of the Mother goddess who appeared to him as a girl and asked him to perform the Pooja (worship) of the *Pindi* (idol) of the Mother. Henceforth generation after generation, the mother has promised to ward off the worldly worries and anxieties of those worshipping her. On the 8th day during *navratras* the offering of *Karaha* (sweet halwa prasad) and *Chhattar* are made by the devotees. The ceremony of *Mundon* for children is also performed by devotees.

THE NALWARI FAIR: Nalwari Fair's (Bilaspur Nalwari) idea was conceived by *'W. Goldstein'*, the Superintendent of Shimla Hill States in 1889. The idea was motivated by a shortage of the good breed cattle, especially bullocks, which are so important for good agriculture and are a prominent feature of the economy of the hilly terrain. In the beginning, people from

Nalagarh, Una, Hoshiarpur, Ropar and adjoining areas of Punjab and Uttar Pradesh used to participate and bring bullocks of good breed. But now fair has gathered local touch in total. Now it has become more a business opportunity event. This fair is held in the month of March every year. It has been declared a state fair now. Nalwari of Sundernager district Mandi, Jahu and Gasota of district Hamirpur are also very famous.

SISSU FAIR: Sissu is a common fair celebrated all over the Buddhist Himalayas. Its main attraction is always a masked dance but because of a part of monastic rituals, it is always staged inside the monastery on the attached courtyard. The fair is celebrated on different dates at different places. At Sissur Gompa it is held in June, at Gemur Gompa in July and at Mani Gompa of Gondhla in August.

Excluding the above–mentioned fairs, some other important fairs do take place in Himachal Pradesh. They are as follows:

BHARMAUR JATRA FAIR: District Chamba in the month of August.

SKODI FAIR: Skodi a *Sati* fair is held at Dohg village, adjoining to Joginder Nagar from 26th to 28th of *Chaitra* (April) every year for three days. The fair is held in honour of a woman who had performed *Sati* there. No temple is there, but a heap of stones is indicative of the fair to be held on a dry spot in the centre of the *'Skodi Khad'*. Hence it is called Skodi fair also. The agriculturist *Labanas* do all the work regarding its management. Besides, shops of general merchandise, potter's shops, sweet–shops, the wrestling matches are also the main attractions of this fair.

CHHATRARI JATRA FAIR: District Chamba in the month of September.

SUI FAIR: Chamba town– in the month of April. (This fair is exclusively for women). There is a temple of 'Naina Devi', where women gather and worship the Devi. Naina Devi was the queen of Raja Sahil Varman. This temple has been constructed at a place where she had sacrificed herself to bring water to Chamba town. This temple is on *'Shahmadar hill'*, at the back of Chamba town.

TARADEVI FAIR: The Durga Devi's temple of Taradevi is located on the ridge of the mountain about 8 km. away from Shimla town. It is here that the fair is held on Ashtami in *navratras* of Asawin (Sept.-Oct.). This is called *Durga Ashtami*. The legends about the construction of this temple are generally in vogue. But one thing is sure that by giving vision to Raja of Junga the goddess made Raja to construct this temple for her. At the time of fair, villagers of all castes from pargana Kalanchi, Kasumpti, Kasata, Kalahung and other nearby villages usually come to see the fair.

It is said that during Raja's regime the Junga Raja uses to sacrifice one male buffalo in the name of the Durga. During fair several shops are put up to sell sweets, bangles, balloons and allied materials. A wooden *jhula* is also fixed sometimes for entertainment. In the Northern slope a Shiva temple is located. To reach the temple the path gradually meandering passes along the mountain.

richly adorned with floral and geometrical designs which are square in size and are put on the back. In Kinnaur shawl is called *'dhohru'* and it is tied at the waist with a *gachi*. While shawl gives an idea of a small length and width, *dhohru* which literally means double, is a blanket big in size. The shawls, that ladies wear in Kullu, are called *'pattu'*. This Kullu shawl (pattu) is mostly in check.

Except for few towns, there is hardly any urban life in the hills. The people live mostly in the villages consisting of a few hamlets dotted over the fields. According to 1991 census report, 4.5 lakh people were living in urban areas. Shimla is the most urbanized district of Himachal Pradesh with 1,26,132 urban population. But trend like other parts of the country is favour of urbanism. The decade growth rate of population in urban centre from 1971–81 was 34.76 and from 1981–91 it was 37.80 in Himachal Pradesh and total urban area in square kilometer was 315.4 in the State. In the census report of 1991, the trend of urbanism is clearly visible. According to 2001 census 5,95,581 people were living in the urban areas i.e. 9.80 of the total population. The decadel population growth in urban population from 1991-2001 was 32.59. The census report of 2011 shows some reversal trend as urban population in 2011 was 6,88,552 with decadel growth from 2001-11 was 15.16 and constituting only 10 percent of the total population.

The young generation has brought a fundamental change in their dressing habits using tight trousers and fashionable shirts. Because of several modern facilities such as easy traveling, communication, schooling, computer and especially television booming etc.; the use of dresses and their pattern have gone a sea change to the very interior of the State. As a matter of fact very soon there seems no interior remained in Himachal Pradesh.

The holding of pageant such as miss Himachal and Dance Himachal Dance have added new dimension to the dressing sense of the people.

ORNAMENTS AND JEWELLERY

Precious or cheap, love for ornaments and jewellery is a universal phenomenon, though it may vary from place to place, nation to nation and tribe to tribe. The use of precious metals and stones for ornaments started probably when man left his wandering habits and preferred to settle at a place and took to agriculture. The ornaments and jewellery were well sought for and were collected and preserved for good and bad times. The ancient scriptures such as *the Ramayana, the Mahabharta* etc. carry elaborate descriptions as to the gold and silver ornaments. How extensive and variegated was the use of ornaments in the past is depicted through the excavation took place at *Mohenjodaro* and *Harappa* (now in Pakistan) and old temples like *Ajanta–Ellora caves, Khajuraho, Konark, Bhuvaneshwars, Bharhut, Sanchi* etc. The term ornament means an object which is worn with a view to adorning oneself. The decoration, that are worked on the ornaments, are taken both from flora and fauna of the country. Jewellery stands collectively for jewels and art of

making them. In the primitive times the use of strange or rare stones, tooth, bones and other objects was very common. These objects are still very popular with the people who are still wedded to the primitive culture and ultra modern way of life.

There are different kinds of jewellery and ornaments for different age groups, but married woman has greater choice in the quality and quantity. Ornaments and jewellery for a married woman is a sign of *Suhag*–happy marital order and it is only the demise of her husband which deprives her of their use for the rest of her life. There are ornaments which are of daily use to the woman, others related only to the special occasions. In the urban areas these ornaments are in gold and are light wear, but as we pass on into the remoter parts, they appear heavier and bolder and mostly in silver. Not only women, but when a child takes birth and grows by a few days he is adorned with small silver bangles *(Kanganu)*, anklets and amulets. Around his waist is tied a *'tagari'* with hollow beads of silver attached to it.

After some years when *'Karan–bedh'* ceremony is held, the ears of the child are pierced and small rings are put into them. In the case of girls, when her nose is pierced a gold ring *(Balu or tili)* is put into it. At the time of marriage, the bride is given a variety of ornaments by her parents and in–laws. Some of the ornaments are symbol of *'Suhag'* and parents must arrange them for their daughters. These items are *'Chak'* for head, *'Churi'* or *'Chura'* (bangles) for the wrist, rings for the fingers and *tili or balu* for the nose. In the interior of Himachal Pradesh women can be seen wearing ornaments and jewellery weighing as mush as ten kilograms and as less as two. A woman with a dozen of earrings, armful of bangles, heavy load of necklaces, *longs* and *Kundis* in the nose, *chak* over the head is still a common sight in a village fair or festival.

The women in Himachal love jewellery. A hill women has an instinctive desire for ornaments. The more the number of ornaments, the better off a person is considered to be economically. The Himalayan ornaments and jewellery have two characteristics about them. Gold being a rare metal, the Himalayan women satisfy their craze with silver and other less costly metals. Secondly, the use of heavy ornaments and jewellery with bold designs, excepting a few light gold ornaments, all ornaments are made of silver. The parts of body for which ornaments are commonly made are the head, forehead, ears, nose, neck, arms, wrists, fingers, ankles and toes. The ornaments worn by Himachali women are:

'Chaunk' or 'Chak' ornament fastened on the head (Silver as well as of Gold). This is very popular among the mature women and young ladies. With the incoming of urban fashions and tastes, it has disappeared from the low lying areas, while the women of upper regions have retained their liking for it. There are great variety so far as the shape, size and designs are concerned.

Chiri a silver ornament fastened to the hair by a chain. In some parts of the hills, it is called *'dora'*, while elsewhere in India, *'Shrinagrpatti'*. It is also called *'mong'* or *'mang–tikka'*, which is suggestive of the place the ornament

occupies. Chiri has, as its components, two wire strips, star-shaped pieces of metal linked with each other and small *'pipal leaves'* or drop hung along the lower edge.

'Chip' Silver ornament clipped in the hair.

'Phers' are four to five small earrings worn in each ear. The ornament carries intricate decorative work on it. A pair of such rings weighs between 15 to 30 grams.

'Balis' are golden earrings.

'Jhumkas' are earrings and also known as *Karanphul*. The ornament has two parts, the plaque and the pendant the latter taking the shape of a bell. When the ornament is without the bell, it is known as *'dhodhu'* or *'dedi Jumka'*. In some areas it is known as *"pharloc'* or *'gokharu'*. The ornament in geometrical designs, known as *'Kanta'* or *'Kanti'*.

'Braga' is bigger than *'bala'* has two round pearls and a conical turquoise in between.

'Dandi' is a simple ear ring with half of its portion covered with coiled thin wire. When the drops are put on the ring in place of the coiled wire, it is called *'Dandi Boronwali'*.

'Dhodku Jhumkas' ear ornaments.

'Bundes' are tops of smaller size available in many designs.

'Litkani' is a sort of Bunde with the main body triangular.

'Gol' is an earring favourite among Gujjars belles. It is fairly large in size and has tinsels and hollow beads attached to it along with a wire-knit chain.

'Chalik' or 'Kante' are ear ornaments of silver.

'Kanbali' is an earring of bigger size.

'Kan-phul' is a bunch of silver flowers. In some places it is known as *'pharloc'* or *'gokharu'*. The ornaments has two parts, the plaque and the pendant, the latter taking the shape of a bell.

'Koka' is a small gold knob, weighing only a gram or two. It carries a *thewa* – small shining glass or jewel – on its head, followed by a hollow pin to which another pin is fitted from inside the nose. Koka finds favour with young ladies both married and unmarried all over the state. Being smaller in size it is used casually.

'Phuli' is a nose ornament and is worn like a *tili* or *Koka*. It is generally star shaped with a *'nug'* or 'jewel' in the centre. While the face of the phuli may appear in the gold, the back that is a small pin is in silver.

'Laung' is a gold studded nose top. The ornament takes its name from clove. It takes its shape after a round disc with convex form. The disc is sometimes studded with a nug in the centre. The ornament weighs between five to ten grams. It is quite popular in Mandi Bilaspur district.

'Balu' is a large nose ring studded with some cheap imitation. It is also called *'besar'*, is sometimes so heavy as 40 grams and so big as ten centimeters in diameter. The big ring is supported with a small chain fitted somewhere in the hair. Due to size, it is used only on some special occasions.

'Tili' is a small nose top weighing only a gram or so. It is the most popular ornament of daily use. Weighing only a few grams the tili of the ear does not differ much from that of the nose, but very few ladies have liking for it as for this part of the body bold ornaments with some beautiful designs are preferred.

'Baluk' is a golden ornament for nose, which can be seen hanging from the centre of the nose. Since baluk for nose is big in size, the ornament that is preferred by the rural women folk for day–to–day is *'nath'*, which has a small ring. Nath is usually made with simple designs while intricate designs are preferred for baluks.

In the necklace category–*Jo–mala, Champa Kali, Chauki, Kapoori Mala, Chandan Har, Kantha, Ralu, Manj, Dodmala, Nodi* etc. are quite popular.

In the garland category, there are some simple ornaments made of coins. The silver coins had been preferred in the earliest, but now other coins have also found favour. In Mandi district, it is known as *'Chhota har'* or *Kandu, Hamel, Mahel* and *Paoli* are other names by which ornament is known elsewhere in the state. Generally this type of necklace consists of coins of uniform denomination, but it is not a binding feature of design. In Kinnaur this is known by the name of *bitri, daroli* or *chandramalang*, studded with the beads of *moonga* (coral) or *pheroza* (turquoise).

'Kantha' or 'Kanthi' is an ornament with silver beads tied to a thread, worn round the neck and weigh about 50 grams. It is also called as *mala, kandhri* or *upalka.* When the beads are threaded into several silver strings and triangular plaques and added at each end, the necklace is known as *Kach, Patkachong or kachong.* This Kantha is heavier than an ordinary mala.

'Chandrahar' has several chains made of star shaped units and have at their ends triangular plaques with fine enamel work thereon. This ornament is also not much in use now.

'Locket' or 'Ranihar' is an ornament for neck which is quite favourite among town ladies. It has no fixed design. But every design finds favour with women folk. Ranihar is largely weigh heavy and is the ornament of rich ladies only.

'Tandeera' or 'Hansi' or 'Hanseeri' a neck ornament made of solid metal with circumference between 35 to 50 centimeters. It is different from hanging pendants. Its central half is thicker than the other half which has knobs on its two ends.

'Singi' worn mainly with an objective to bring in good luck and keep the malignant spirits away. It is a pipe shaped ornament with a bend in the centre and is sometimes hung with drops downwards.

'Dhol' is a neck ornament, with a cylindrical shape. It has at its ends

oval hooks meant for the thread by which it hangs down. While Dhol is a favourite of rural women, the pendant liked by the urban women is 'nam' and it is generally made in gold. It has a plaque in the shape of a betel leaf which is tied with a multicoloured thread. In the tribal areas same ornaments are made in silver metal.

Popular and widely used bracelets are: Nalians, Toke, Bangas, Kangrus, Gajru and Maridoo.

'Bang' or 'Churi' is the commonest wear of the wrist. Bang is favoured by the women of all age groups. It is a simple ring of gold or silver wire, the upper surface getting impression of some design.

'Band' is wider, thicker and heavier than the ordinary bangles. Usually it is made in silver metal. When the band appears with clusters of drops attached to it near the edge, it is known as *'pariband chhankangani'* or 'ghungrooal'. The largest in this category is Chura, about 12 to 15 centimeters long and weighing between 300–350 grams. in silver.

'Mundris' are gold ring. Ring is generally called *'anguthi'* and is most popular with both sexes. In Kinnaur, it is called *'Lakshap'*. It weighs between five to ten grams In the lower middle hills it is called by such as *'mundari'*, *'mundi'* or *'chhap'*.

'Ghumkrus' are copper anklets.

'Jhanjar' is a pair of large hollow rings which are thick in the centre but are narrowed down towards ends. The ends are given the shape of a star. A small bits of stones are put inside the ornament and one can hear the jingling sound with every movement of the feet.

'Tora' is also an anklet. It is a chain like *'pajeb'* but has no drops attached to it.

'Pajeb' are silver anklets. Weighing about a quarter of a kilogram. Has a great variety and known by popular names as *'Shakuntala Chain'*, *'Gulshan patti'* and *'Phulu'*. The ornamental chain has on its lower edge a number of small and large drops which serve the same purpose as the *Jhanjar*.

'Anguthari' is a silver ring for toe and *'Anguthare'* is a silver ring for big toe. The other ornaments for the toes are *Chhalla*, which includes *Bichhu*, *Phullu*, *Guthara* etc.

The ornaments like *'tabiz'*, *'tillis'*, *'pazeb'* and *'chanki'* are influenced by the Mughal style. Most of the Pahari jewellery is influenced by the surrounding environment too. Women display jewellery and ornaments at special occasions like marriage, birth ceremony and religious fairs and festivals. As would be evident from the above description, the hill folk have as much a fervour for ornaments and jewellery as they have for singing and dancing. While love for ornaments and jewellery may show some sings of decline in urbanized areas, the hills and mountains have fair chances of retaining it. The hill people are in great number turning to horticulture and will have few chances of migration.

The stationary and sumptuous life may not call for giving up the use of ornaments and jewellery. With greater outdoor activities, the women have started using light weight fancy ornaments to avoid snatching, theft etc.

FOLK DANCES AND DRAMA

The folk culture, i.e. art, dances, drama etc., not only provide wholesome entertainment to the involved parties, but it is a reflection of the social standard, its originality and usefulness. It is believed that folk dances have their origin in the harvest festivals and the rituals of the earliest time, when gods were invoked through music and dance. The people of Himachal, have reason to be proud of their rich cultural traditions, which they have preserved for ages despite the outside interference and intrusion. People regard the folk dances as an essential and integral part of their life and believe in their magical effects. These are, however, not restricted to festivals and fairs, but are performed at all community functions or gathering–a marriage, childbirth or the worshipping of a god. *All people irrespective of their social position, economic status, caste, creed, sect or sex, partake in communal dancing. The women are as enthusiastic and free in the matter of dancing, as the men and so freely take part in mixed dances. The virtues that ensure from the joy and happiness of such a community, inculcate in the individual strength of character.*

There are both solo and group dances. The solo dance is usually performed in the open, but during the bad weather or night, it can be held under shade or in a big room. In the group dances, hundreds of people take part. Such dances are only performed in the open spacious places; like courtyard of a temple or fields. On special occasions, dancers put on their typical costumes. The general style of dance consists of movements and steps, backward and forward, in a circle formed by the adjacent dancers, holding the hands of each other, or the dancers are divided in two opposing groups. One of the beautiful features of the tribal life in Trans–Himalayan region with unflinching Buddhist faith, is its colourful dances, which may conveniently be seen divided into two groups. One is folk dance with many types varying according to the types of assemblage, steps, rhythm and beat. The second is a ritual masked dance in monasteries called *'chham'* dance (devil dance). Some of the important dances of Himachal Pradesh are the following:

(a) The Demon *(Rakshasa)* Dance or Chhamb (Kinnaur area): This dance form is performed with *'demons'* masks numbering three, five, seven or nine. *Chhamb is quite similar to the Punjabi Bhangra.* Dressed in their demon costumes and masks, the dancers look quite awesome. All in the group follow the footsteps of leader who is known as *'Ghure'*. This is also known as *'Lama Devi dance'*. The sacred masked dance locally known as 'Chhamb' is performed only by the Lamas in the monasteries before a large number of spectators on some festive occasion. Since masks are more or less those of the devils, it is called devil dance. These masks are made after many imaginative figures of monsters, dragons, beasts, devil, imps, spirits and

skeletons. According to one belief the object of putting on masks of absurd appearance is to give an idea to the spectators of the types of dreaded monsters who are met by the soul after it quits the earthly plane. Another belief is that the Lamas put on these masks to combat malignant spirits. The figures with demoniac appearances are the horrifying defenders of religion and also stand for and *'Tantrik Buddhism'*.

(b) The Kayang (Kinnaur district): In this dance, men and women form a semicircle with a musician in the centre. The dance goes on for hours. There are there types of Kayang dance, i.e., 'The Naga Kayang' (which copies the movement of a snake), 'The Herki Kayang' (faster in tempo and danced to a romantic song) and *'The Shuna Kayang'* (combined both slow and fast movements).

(c) The Bakayang (Kinnaur district): In this dance, there are two or three rows of dancer facing each other and in both there are forward and backwards steps. This dance is mostly performed by women.

(d) The Banyangchu (Kinnaur district): This is generally a male dance. It is a free style dance on any selected tune. Women sometimes provide vocal music from outside.

(e) The Jataru Kayang (Kinnaur district): This dance is performed generally at festivals. This is a group dance and is connected with songs sung at the ceremonial moments.

(f) The Chohara Dance (Kinnaur and Mahasu area): This dance is performed at all important festivals. Both men and women participate in it.

(g) The Shand and Shabu Dances (Lahaul area): These are two dances of Buddhists of the area, performed in the memory of Buddha. *Shand means song of prayer for Buddha.* The Shabu dance is danced at festivals and depicts the beliefs and feelings of the people in this area. These dances are performed on a set time, linked to local religious festivals. On the eve of 'New Year' a dance is acted by the Lamas in the courtyard of a monastery belonging to sect of *'Yellow Hats'*. The villagers are allowed to witness the show and they take it not as an entertainment but with all religious passions. The sect *'Yellow Hats'*, was founded by *Tasong-Kha-pa* (1357-1419 A.D), who is held by the *Gelugpas* (Yellow Hats) as an emanation of Manjushri; and *Vajra Bhairava*, called 'Dorje Jik-Che' in Tibetan, is its chief protector.

(h) Lang-dar-ma (an evil king dance): This is well known masked dance lasting several hours, featuring the murder of the evil king Lang-dar-ma. The history of Tibet records that 'Ral-pa-cen', who ruled from 815-835 A.D. was a true Buddhist. He built many monasteries, followed and preached Indian Buddhism and propagated it through art and literature. In 817 A.D. Buddhism was severely attacked by the Lang-dar-ma, the elder brother of Ral-pa-cen. Buddhist monks were persecuted. The king Ral-pa-cen was also murdered by his opponents and power was seized by the evil king. In 836 A.D. persecution was put to an end when the evil king Lang-

dar–ma was murdered by one of the Buddhists. This is a dance drama. 'BLACK HAT' dance and 'RED TIGER' dance are of pre–Buddhist origin.

(i) **The Jhanjar Dance** (Chamba Valley): In this dance, both males and females participate. The beginning is very slow, but gradually rises to an exciting climax; in between groups interchange their positions. The Jhanjar Dance is performed on every festive occasion.

(j) **The Japro Dance** (In Hangrang Valley of Kinnaur): Japro dance is performed by both male and female on the occasion of fairs and festivals.

The other important dance performed in the Kinnaur region are: Shon, Gyukshon, Katakapa, Shabra, Shumgyak, Yando–Mando, Rekshung, Yulba, Lushen, Tali–lamo, Tinger, Laka–Kurchi–Cheja and Mon–Shou.

(k) **The Dodra Kawar Dance** (Mahasu area): In this dance both people and the gods of Dodra Kawar dance to the tune of music.

(l) **The Nati** (Kullu, Sirmaur, Mandi, Shimla and Chamba areas): The Nati is not a dance for a professional, but it is open for people of all age groups. It is actually like the classical Kathak dance and embraces a number of dances like *Dheeli, Dekhi, Feh, Bakholi, Kahika, Dahari, Lahauli, Chambiyali, Banthada* and *Loodi*. In Kullu, it is known as *Siraj Nati*. It is slow–moving dance form of *Lasya variety* and often lasts through three or four days and nights. The dancers generally put on traditional costume and ornaments. *'Nati'* collectively means the vocal lyric, the instrumental music, the dancing steps and the bodily movements all attuned to rhythm. There is hardly any fair where Nati characterized by folk tunes wave like appearance, graceful dane–steps and slow movements of the body, does not become one of its highlights. The dance is started with a few persons who make a crescent form by joining hands crossed on the back of each other.

The orchestra sitting in the centre, generally consists of two *dhols* (barren shaped drums), two *Nagaras* (bowl shaped drums) two *Karnals* (long trumpets) and one *Shehnai*. At the beginning of the *'Nati'* the dancers move slowly but later gain momentum with the rising crescendo of the music. Sometimes men and women in the *'Nati'* sing in groups. A line is sung is chorus by the men folk and this is then followed by the women. Another method is dialogues between the two groups. There are different types of *Nati* which the various areas of Himachal Pradesh have adopted. The *Natis* named after places such as the *'Kullu nati', 'Bushahri Nati', 'Mandi Nati'* are too broad a base to connote any distinct types. It is only when a troupe goes out to join some celebrations, it assumes the name of the place it comes from. There are such type of natis at *'bazuband', 'ludi', 'phetighir'* and *'janujangh'*. They are all suggestive of some typical physical gestures and formation. There are certain *natis* such as *Lari* (bride), *Shawni* and *Lilima which* are very famous one.

(m) **The Jhoori, Gi and Rasa Dances** (Sirmaur and adjoining areas): The *Jhoor, Thadair, Rasa, Gi, Nati, Swang, Tegi, Draudi* and *Padua* dances

have special place in the cultural life of the people. *Gi* is danced to questions and answers in musical tone. In the Dhadair dance, hold aloft weapon like bows, arrows, knives or sticks and yell as they move towards their imaginary adversaries. The *'Swang Tegi'* dance is danced during the Diwali festival. This is a free dance and dancers use tiger masks carved out of wood. *'Dharvedi'* and *'Drondi'* are religious dances.

(n) The Burah Dance (Sirmaur district); This dance is performed by a group of ten to fifteen person. The Ballads sung are dedicated to some heroic deeds in a battle won in the bygone age and to the dear ones lost in the battle.

(o) The Keekali and Bhangra (areas bordering on Punjab): Keekali dacne is of young girls and is danced playfully in two. The girls hold hands crosswise and rotate fast on their toes, singing songs. The Bhangra is a male dance. It is popular in Kangra, Hamirpur and Una districts. The *Gidda* is also widely performed by ladies in these districts.

(p) The Kullu Valley Dances: The dances of Kullu consist of various types, viz., *Kharait, Philli, Ludi, Banthda, Basahri, Lahauli, Ujagjama* and *Chandhgebrikar*. All these dances are collectively known there as *'Nati'*. The Nati is primarily meant for amateurs, who have no audience in view and who exclusively dance for their own pleasure and satisfaction. Both men and women participate in all those dances mentioned above.

(q) Folk Drama: The Himachal people have also developed their own distinctive folk drama culture. These are commonly performed during winter all over the Pradesh, when people have leisure after the hectic months of harvesting and sowing.

The most popular types of the hill folk dramas are: ***Banthara*** (Mandi region), ***Jhanki and Hanter*** (Dramas of Chamba), ***Kariyala and Swang*** (Bilaspur, Solan and Shimla Hills).

(R) The Bura and Sih (Jubbal and Rohru Valleys of Shimla Hills): This is the name of *'ballet and opera'* in language. It has become biggest source of entertainment and recreation for the local people. The tales are unwritten and handed down from generation to generation by word of mouth.

THE MUSICAL INSTRUMENTS

Slowly but surely musical instruments are coming under the influences of modern changes. The true colour of musical instruments can be best seen in the tribal areas. The following types of instruments are found in Himachal Pradesh:

(a) Wind Instruments: *'Ranasingha', 'Karnal', 'Turhi' (Bugle), 'Flute'* or *'Bishudi', 'Algoja'* (twin flutes), *'Shehnai'* or *'Peepni'*.

Bansuri or Flute: The bamboo flute is an important instrument in Indian classical music, and developed independently of the Western flute. The Hindu God Lord Krishna is traditionally considered a master of the bamboo flute. The Indian flutes are very simple compared to the Western counter-

parts; they are made of bamboo and are keyless. Two main varieties of Indian flutes are currently used. The first, the *Bansuri*, has six finger holes and one embouchure hole, and is used predominantly in the Hindustani music of Northern India. The second, the *Venu or Pullanguzhal*, has eight finger holes, and is played predominantly in the Carnatic music of Southern India. Presently, the eight-holed flute with cross-fingering technique is common among many Carnatic flutists. Prior to this, the South Indian flute had only seven finger holes, with the fingering standard developed by Sharaba Shastri, of the Palladam school, at the beginning of the 20th century. Flute is used in Himachal Pradesh by either amateur for fun or at some musical concert. This instrument is quite popular among *gaddi* tribes.

Shehnai: The *shehnai, shehnai, shenai or mangal vadya* is a double reed oboe, common in India, Pakistan, Bangladesh and Iran, made out of wood, with a metal flare bell at the end. Its sound is thought to create and maintain a sense of auspiciousness and sanctity and, as a result, is widely used during marriages, processions, and in temples, although it is also played in concerts. Shenai is similar to South India's *nadaswaram*. This tubular instrument gradually broadens towards the lower end. It usually has between six and nine holes. It employs one set of quadruple reeds, making it a quadruple reed woodwind. By controlling the breath, various tunes can be played on it.

Another instrument 'Been' is played at wedding and on auspicious occasions. Some ancient musical instruments like *'Kindari'* in Mahasu area and *'Granyang'* and *'Jamang'* can be heard in Lahaul–Spiti areas. A musical instrument used invariably in 'Liturgical' ceremonies and deserving special mention is 'Kangdum' also known as 'Kangling'. It is made of thigh bone of human being extracted of the corpse. Thigh bone is decorated with silver and bronze work, before it is finally consecrated. Thigh bone of woman, who dies in pregnancy, is more valued as the instrument made of it is believed to produce a sound that is effective for conjuring the benevolent spirits. The thigh bone of a good and auspicious women (Khanduma) is seldom missed. The issue of good omen woman is decided by a learned Lama.

(b) Stringed Instruments: *'Ektara', 'Kindari Devatara', 'Granyang'* or *'Robab', 'Sarangi', 'Jumang', 'Ruman'* and *'Rumals'* are commonly used in lower and upper areas of the Pradesh.

Sarangi : The sarangi is a bowed, short-necked string instrument from South Asia which is used in Hindustani classical music. It is said to resemble the sound of the human voice the most– able to imitate vocal ornaments such as gamaks (shakes) and meends (sliding movements). Carved from a single block of tun (red cedar) wood, the sarangi has a boxlike shape with three hollow chambers: *pet* (stomach), *chaati* (chest) and *magaj* (brain). It is usually around 2 feet (0.61 m) long and around 6 inches (150 mm) wide though it can vary as there are smaller as well as larger variant sarangis as well.

(c) Percussion Instruments: 'Jhanjh' (large cymbals), 'Manjira' (small cymbals), 'Chimta' (tongs), 'Ghanta' (gongs), 'Ghariyal' (large

gongs), 'Thali' (platter), etc.

Manjīrà: The manjīrà (manjeera) is a traditional percussion instrument of Bhārta i.e. India. In its simplest form, it is a pair of small hand cymbals. It is also known as *manjeera, taal, jālra, khartàl* or *kartàl, Gini*. They often accompany folk or devotional music. It is used in various religious ceremonies of the state, especially bhajans. The manjira is an ancient instrument. Pictures of it have been found in temples dating back to the earliest times. Manjira are usually made of bronze, brass, copper zinc or Bell metal and connected with a copper cord which passes through holes in their centre. They produce a rhythmic tinkling sound when struck together. The sound's pitch varies according to their size, weight and the material of their construction. A player can also adjust the timbre by varying the point of contact while *playing*.

Larger version of manjira, Taal. The manjira can also consist of a wooden frame with two long straight handles that connect to each other with two short wooden handles; the open space between the long handles has a wooden separator that separates two rows of three brass cymbal. There are also small cymbals fixed into wood blocks forming another type of instrument also known as khartal.

Chimta: Chimta literally means tongs. Over time it has evolved into a traditional percussion instrument of South Asia by the permanent addition of small brass jingles. This instrument is often used in popular Punjabi folk songs, Bhangra music and the Sikh religious music known as Gurbani Kirtan. The player of the chimta is able to produce a chiming sound if he holds the joint of the instrument in one hand and strikes the two sides of the chimta together. The jingles are made of metal and thus it produces a metallic sound and helps to keep up the beat of the song. In Bhangra music or at weddings it is often combined with Dhol and Bhangra dancers. In Himachal Chimta is used along with other musical instruments at the time of religious functions, particularly while singing *bhajans*.

(d) **Bells:** *Ghunghru* (bells), *Kikatha Murchang* (a stringed instrument played with a bow with a bell), Wooden Cashtanets *(kahdtal)* and bells.

In Himachal, a variety of drums are used with the name such as—*Dhol, Dholku, Nagara, Dammama, Damanghat, Nagrath, Gajju, Doru, Hudak and Dhaunsa*. Among Gaddis, small round drums known as *'Dafale'* are played at weddings. In the plains, large drums known as *'Tamak'* are played at fairs. People belonging to the *'Bharai community'* perform the ritual playing of this drum at the fair.

Dhol: The dhol is played using two wooden sticks, usually made out of bamboo and cane wood. The stick used to play the bass side of the instrument, known as the *dagga* in Punjabi, is thick (roughly about 10 mm in diameter) and is bent in a quarter-circular arc on the end that strikes the instrument. The other stick, known as tihli, is much thinner and flexible and used to play the higher note end of the instrument. The *dhol* is slung over the neck of the

player with a strap usually made up of woven cotton. The surface of the wooden barrel is in some cases decorated with engraved patterns and sometimes paint. In the pre-Partition era, dozens of rhythms were played on the Punjabi dhol, which corresponded to specific functions. However, with the decline or disappearance of some cultural practices, recent generations of dhol-players have become unfamiliar with many of these. At the same time, the growth of folkloric staged bhangra dance in Punjab inspired the creation of many new rhythms particular to that dance.

In Himachal Pradesh dhol is quite popular all over the state. It is widely used at marriages, wrestling grounds, recreations etc. The above–mentioned instruments are played according to the importance of occasion. Training of instrumental music in Himachal Pradesh passes from generation to generation. in the absence of any formal training institute.

FESTIVALS IN HIMACHAL

Himachal in fact can be termed as a *'mini India'*. Here people of different racial stocks have come together and mingled in the main stream of national life, to make this land a composite of different cultures. Festivals enliven social life and unite the people by bringing them together in joyful celebration of significant events and in shared remembrance of a common past. All the fairs and festivals celebrated in Himachal are the result of cultural values, economic needs and time, which have been realized by the inhabitants from time to time and later given the shape of tradition. Bulk of the population in Himachal Pradesh consists of Hindus. That is why festivals and fairs here have direct origin in religion and in the myths and legends of popular faith. Himachal has innumerable fairs and festivals and to Himachalis any opportunity for celebration is welcome.

It ranges from ordinary village fair arranged in obeisance of Local deity to big state level fair of Dushehra of Kullu, Shivratri of Mandi and Lavi of Rampur, which attract thousands of people. With the passage of time celebration, appreciation and participation in the functions have become cultural and national habit of the people here. The colourful fairs and festivals of Himachal Pradesh provide healthy recreation and marketing places for its people.

In the day of festival, people in Himachal generally keep themselves free from routine work. They cook special food, must bath, wear neat and clean clothes and worship at the temple with traditional identity. Songs and dance are common feature on such occasion. For them, even a small event is big enough to be celebrated. There are many fairs held throughout the year and one can watch the colourful hill people at their joyous best. *Following are the important festivals of Himachal Pradesh:*

Chet (Dholru) is the first month of the lunar year and first day of the month is celebrated with a belief to bring happiness and prosperity. In many parts of the state, people of *'Dhaki'* or *'Turi'* or *'Shehnai caste'* go from village to village singing and dancing. This festival is known as *'Chatrali' in Kullu* and

'Dholru' in Bharmaur area of Chamba district. In district Kangra, Hamirpur and Bilaspur, first day of Chet month holds special importance.

Navratras are celebrated with great interest in the new Himachal and by town people of old Himachal too. But *'Durga Ashtami'* is of great importance all over the state. People visit nearest Durga temple to offer prayer during Navratras. Navratras are observed twice a year. All Shaktipeeths are visited by people during navratras.

Baishakhi (*Bisowa* in Kangra, (*Bissue* in Shimla Hills) and (*Lisshoo* in Pangi - Chamba): This festival is generally celebrated on 13th of April. Preparation for the festival starts much earlier. The houses are white washed. People take holy dip either at Haridwar near Har-Ki-Pauri, Tattapani near Shimla, Banganga in Kangra Valley, Markanda in Bilaspur and those who can't go far away, take bath early in the morning at nearby well, rivulet or ghat. During day time Baishakhi fair is held at many places with traditional gaiety and attraction. Women's participation in large number add special colour to the festive mood of the people.

Haryali (*Shegtsum* in Lahaul), (*Dhakhrain* in Jubbal and Kinnaur) & (*Haryali* in Kangra and Sirmaur): This festival is celebrated on the 1st Sawan (16th July). Few days before the festival, seeds of five to seven kinds of grains are sown together in small basket full of earth by any member of the family near the place of the household deities. Stems are offered to household deity and are also placed on the upper frame of the door. Farmers do not yoke oxen on this day. Blood sucking insects like *'lice', 'bugs', 'flees'* etc, are burnt with cowdung balls. This is a common belief of the People that insect burnt on 1st of Shrawan (Sawan), keep cattle free from the scourage of the insects. In disitrict Mandi, Bilaspur, Hamirpur, Una and Kangra this festival is called as *'Cheeren-di-Saaji'*.

People in Kinnaur district garland village deity with wild flowers. Dancing and singings is a common practice during the festival. In Lahaul area, *'sattu flour'* with butter on its mounds is offered by people to *'Gephan'* or *'Guru Ghantal'* by throwing them in the air.

Rakhi is celebrated all over Himachal Pradesh. In Bilaspur, it is known as *'Rakhrunya'; 'Salunnu'* in Mandi and Sirmaur and *'Rakhpunya'* in Shimla Hills. In new Himachal area, it is called *'Rakhri'*. It is celebrated on the full moon in Shrwan, when sister ties sacred thread round the wrist of her brother and seek protection and affection in exchange. Brother too gives her either money or sweets or some other gift.

Chrewal: It is also known as *'Prithvi pooja'* in some places celebrated on the first of *'Bhadon'* (middle of August). This continues for full one month. The farmers do not yoke oxen during this month. In Kullu, this festival is known as *'Bhadranjo'*, which means the festival held in Bhadon. In Chamba, it is called *'Pathroru'*. It is a festival of flowers here. This is an occasion of great celebration, particularly for girls who dance on this day.

Jagra: It is a rite offered to any village deity. This is commemorated each year on the fourth day of the bright phase of the moon. Generally the festival is held at night in the month of September. *'Mahasu Devta'* is worshipped in upper Shimla hills, Kinnaur and Sirmaur regions of the State. During the day, the priest and followers sing religious songs in praise of their deity. 'BIRSU' song is sung in praise of Devta. Singing and dancing is the common feature of the festival.

Phulech: This festival is celebrated in the month of *'Bhadon'* or in the beginning of *'Asauj'* only in Kinnaur region. People from each household proceed towards hill tops to collect flowers, which are offered to village deity and afterwards these flower garlands are distributed among the people. Priest makes forecasts about crops and changes in seasons etc. Priest's words are taken for granted by local people.

Sair: It is celebrated in the month of September in new Himachal. This is a *'Bara–din'* of the hillmen. In many areas, barbers (Nai) show mirrors to villages who give him rewards. Rich food is prepared on the first day of the month and people worship their local deity for prosperous future.

Jidjed is a religious festival, takes place in the month of October at 'Thang–gyud monastery'. In the month of October a similar festival called *'Guitor'* is held in the monasteries at 'Kee', 'Tabo', Dankar' and 'Pin Spiti' subdivision. The main attraction is *'masked dance'* performed at all the monasteries with the objective to protect people from diseases and epidemics and to ensure health, happiness and all–round prosperity.

Dushehra: Celebration of Dushehra is in an way different in Himahcal Pradesh than plains. It is celebrated in the month of September/October. On *'Dashmi'* (10th day of celebration), people make a bonfire of effigies of Ravna, Kumbhkarna and Meghnatha. It symbolizes victory of good over evil. **Dushehra of Kullu is famous all over the world.**

Diwali: Diwali is the festival related to Lord Rama's returning home after killing Ravna. It is celebrated in the month of October–November. The festival is locally known as *'Diali'*, or *'Bari Diali'*. People in Kullu celebrate Diwali in a different way. They sing 'Ramayana' and 'Mahabharta' in their local dialect. Meanwhile, a fight between the gods and the demons is enacted. In Lahaul, it is called *'Kaojala'* and celebrated in the month of *'Magha'*. People of the village carry *'Mashal'* (light) and throw them at a particular place. Every one throws leaves of *'deodar tree'* in the name of *'Gephan'* and *'Bajreshwari Devi'* in the fire. It is interesting to note that the Lahaulas of Pattan valley celebrate Diwali not on the day when it is celebrated elsewhere in India. As against, *'amavasya'*, the all dark night, it takes place on full moon night and the main feature of celebration is illuminations by lighting small sticks of firewood. A similar festival of lights and illuminations known as *'Halda'* is celebrated in *'Gohar'* and *'Gondhla valleys'* in Lahaul. But date for this festival in not fixed, it can be observed at any time in the month of February.

Lohri: In some areas, it is called *'Maghi'* or *'Saza'*. It is celebrated on the 1st of Magh (mid January). People celebrate it more as a continuation of the season of festivals. After finishing agricultural activities, they feast and celebrate and avail themselves of the time to meet their relatives. This festival continues for eight days. On eighth day, people make get together and show social solidarity. Dance and music goes on for the whole night. Lohri festival is equally popular in Punjab and Haryana.

The trend of celebrating lohri festival for the girl child started in the recent past in Punjab and some parts of Himachal as measure against female foeticide. However, Paragpur a heritage village located in Kangra district has the tradition of celebrating the festival for the girl child for the past over three centuries. According to historical facts, the principality of Jaswan state started celebrating Lohari in Paragpur in the late 16th Century or early 17th century. It was celebrated for princess 'Parag Dei' of Jaswan state, Who is remembered by villagers for organizing resistance against the marauding gangs of invaders to the area. Though centuries have passed since the incident happened, villagers have continued the tradition of celebrating lohri in commemoration of the late princess. Some historians believe that it might be the first incident of celebration of Lohri for a girl child (princess Parag) in the entire North India. The government has given the Lohri festival in Paragpur the status of a *state festival.*

The core area of Paragpur village is notified as a heritage village and nearby Garli village as a heritage zone. The state through a notification issued on December 9,1997, classified Paragpur as a heritage zone. Members of the Sood community are dominating population in the village. At the time when Shimla was the summer capital of the British, Sood community from Paragpur owned half of it. Soods are still a dominating community in Shimla. They have however, retained a bond with their roots in Paragpur. The community organizes a meet every year in the Paragpur village when members of the community from across the country come and participate in it. Paragpur has retained the essence of a heritage village as it has old shops, cobbled streets, ornamental village tanks and mud-plastered slate-roofed houses.

Promoters of the Judges court, a country hotel being run in the village, have played a significant role in maintaining the original identity of the area and promoting it as a heritage site. The hotel is spread in a 12 acre area and has a century old structure that has the mixture of Indian and British architecture. The structure was brought by Justice Sir Jai Lal in 1918. His family members are now maintaining the property and running it as a country hotel in a remote village of Kangra district. The first state level Lohri festival was celebrated at Heritage Village Pragpur on 13 January 2010.

Gochi; This festival is organised in *'Gumrang Kothi'* (Keylong) and adjoining areas, falling sometime in January or February. Date for the celebrations is decided by the *'Lamas'* on the basis of their astrological calculation. This festival is celebrated jointly by all the families, where male

child was born in the preceding year.

Lossar: The Lossar festival is celebrated in the entire tribal belt of Himachal Pradesh and in the Tibetan colonies at Manali, Shimla, Dharamshala, Solan and Baijnath. The old Buddhist shrine, celebrating Padamasambhava's marriage with a local Princess at Rewalsar in Mandi district also emerges as a pivotal attraction for these religious celebrations. This festival means a beginning of a New Year and is held in the last week of February. Yak dance is also one of the folk and religious dances performed in the courtyard of the Monastery on a festive occasion. One can witness a *Chhaam* , dance, various mask dances and dramas reminiscent of the post Buddhist culture with traditional orchestra. During religious ceremonies connected with various Buddhist festivals in Lahaul and Spiti the incantation of mantras accompanied by bell–ringing (drill) and *Do–rje* are indispensable.

Shivratri: It is celebrated in the month of February. This festival is celebrated individually. Himachal is known as *'Dev Bhumi'* and 'MONT KAILASH' abode of God, lies here. The Western part of India is influenced by the mythology of Lord Shiva. This festival is given the greatest importance even in temples. Some people keep fast on this day. Images of Lord *'Shiva'* and *'Parvati'* are made from cow dung or earth soil for worshipping. Songs in praise of *'Shiva'* and *'Parvati'* are sung. Two bushes called *'Paja'* and *'Karangora'* branches are fixed on the upper door frame of each house on this day. This act is done to keep the evil spirits and witches at bay. This is the festival of great significance in the life of hill people.

In the Western Himalayas Shivratri of *'Mandi'* ranks above all. It is with the melodious din of the hill orchestra that the gods and goddesses on their wheelless chariots, carried on the shoulders of their devotees, throng to the town of Mandi to pay their homage to the great god Shiva. This is an occasion of an annual meeting of the gods with Lord Shiva and amongst themselves. Mandi town on the Shivratri Day is tastefully decorated and thousands of hill folk arrive in their traditional dresses and participate in the fair.

Mandi observes Shivratri in a different way. Perhaps it is the only place where the week–long celebrations are held in keeping with centuries–old traditions. These are at times extended up to 10 days. For the hill folk living in high–altitude villages in Mandi and Kullu districts, Shivratri is an occasion for great rejoicing and ecstasy. As over 100 hill gods converge on the town's sprawling Paddal Ground with thousands of devotees in their best multicoloured garments. The hills resound with the musical instruments of the highlanders. The vales reverberate with folk songs. Many songs have been composed on Shivratri.

The former rulers of Mandi state were devotees of Lord Shiva and celebrated Shivratri in royal grandeur. The official machinery was pressed into service to make it a big event. On becoming Chief Minister, Mr. Vir Bhadra Singh restored the traditional glory to Shivratri by first declaring it a state fair and then elevating it to international status. Of many Shiva temples in the

Standing near the temple one gets a fascinating clear view of Shimla. A lot of tourists do visit it for its scenic beauty and worship of the famous mother goddess.

GUGGA FAIR: Gugga worship is another form of snake cult. The deity is considered effective particularly in cases of snake bite. Gugga worshipping is much prevalent in district Kangra, Hamirpur, Una, Bilaspur and Mandi. In a Gugga temple the idols of *Gorakhnath, Machhendra–Nath, Narsingh, Bhairon, Hanuman, Sirkhand, Kailu, Fatta, Gugri* and *Ghoga* are also housed. The Gugga figuring in long ballads current in Rajasthan, Punjab and Himachal Pradesh was a valiant hero riding a horse. He is believed to have fought and won many battles. In his last battle, he is credited with having fought even when he lost his head. The miracle meant a victory for Gugga and he was later accepted as a deity gifted with unusual powers.

The story of Gugga runs, that a Rajput King named Dev Raj married two sisters named *'Bachla'* and *'Kachal'*. For a very long time they had no children. One day *'Bachla'*, the elder one visited the shrine of *'Gorakhnath'* a living saint of the period. He asked her to come next morning for a boon. Hearing about the promised boon. *'Kachla'* lost no time and in the guise of her sister visited the Baba, next morning. The Baba gave her fruit to eat which she hurriedly took. When *'Bachla'* visited the Baba, he was taken aback. However he gave another fruit to her. *'Bachla'* ate half of the fruit and half she gave to the mare she was riding. The fruits had their results. Kachla got a daughter named *'Gugri'* and Bachla a son named *'Gugga'*. The mare also had a foal. The heroic exploits of Gugga are sung by devotees of different castes from the day of *'Raksha Bandhan'* to that of *'Gugga Naumi'*. The Gugga fair of Gehrwin village of district BILASPUR and Balokhar of Hamirpur district are very famous.

JWALAMUKHI FAIR: The Jwalamukhi fair is held twice a year during *navratras* for worship of Durga goddess. It is the most important fair in the Kangra Valley. People come with red silken flags *(dhwaja)* to greet the Mother Goddess. The fair is attributed to the worship of that Eternal Flame which is coming out of earth spontaneously and perpetually. Even the eminent Mughal Emperor Akbar is said to have made a pilgrimage to Jwalaji and after failing to extinguish the Eternal Flame by Pouring water on it, offered *Chhattar* (canopy) of gold weighing about 40 kg. but the goddess changed it into iron metal to annihilate his pride. Akbar thus had to relent, as the historical song goes, Akbar travelled from Delhi to Jwalaji barefooted to pay his respects.

DAL FAIR: District Kangra at Dharamshala in the month of August.

PANCH BHISHAM FESTIVAL :Thousands of pilgrims from within and outside the country visit the Jayanti Mata temple in the Kangra town in connection with the five -day festival of Panch Bhisham. The pilgrims start climbing the hill from wee hours of morning on the first day of the festival and reach the temple reciting Vedic hymns, singing bhajanas and chanting "Jai Mata Di". It is celebrated as the marriage of Tulsi and Saligram and also to remember the great warrior and guru of the Pandavas. Guru

Bhishampitama lay on a bed of arrows during the Mahabharta during these five days.

The famous Kangra. Fort, which has been a witness to the victories and defeats during the Muslim rule, is on one side of the Manji river and on the other side in top of the hill is an ancient temple of Mata Jayanti. The pilgrims are provided with *langer prasad* by a philanthropist families on all the five days of the festival.

GASOTA FAIR: District Hamirpur at a place known as Gasota, in the month of May.

The fair of Hatkoti (in Jubbal of Shimla district) takes place during the *navratras* when people assemble from far and near and worship Durga. Almost all the rituals performed are similar to those in Kangra *'Devi temples'*. Similar worships and congregations in the shape of a fair are also held at many other places like Durga temple at Kiari (Kot–khai in Shimla district), Bhimakali temple at Sarahan (Rampur Bushahr), Bala Sundri Devi temple at Trilokpur in Sirmaur, Durga temple of Sherai Koti (3081 m) 38 km. from Rampur Bushahr. The Dal fair takes place in upper Dharamshala in Kangra district during August or September. Most of the Ghirths and Gurkhas are seen participating in this fair enthusiastically.

NALWARI FAIR: District Kullu, at Manali in the month of May.

DUNGRI FAIR: District Kullu, at Manali in the month of May.

MANALI WINTER CARNIVAL NATIONAL FESTIVAL: Chief Minister Prem Kumar Dhumal upgraded the five-day-long Manali Winter Carnival to a national -level festival and made a fervent appeal to residents and tourists to pool in their efforts to make the "valley of gods pollution-free". The Manali winter carnival is held in December - January every year.

GHUND FAIR: The fair at Ghund is held in the month of *Ashadha* (June–July). It is about 20 km. From Theog and about 12 km. from Deha. Ghund was once the Capital of Small Ghund State. Two temples of Devta Mahasu and Shirgul are situated there in whose honour the fair is held. The game of archery is the famous sport of this fair. Like so many other fairs of Shimla hills it also has few shops keeping locally made products, which are also one of the main attractions especially among youth. The arrangements of boarding and lodging of invited parties in the fair are made turn by turn by the villages namely Balaut, Kora Barot, Charen, Dariura, Gadhiari, Ghund, Kathewag, Numnaa, Pargair, Paru, Shalowa and Thim.

SARHI JATRA FAIR: District Kullu, at place Naggar in the month of May.

BANJAR MELA AND BHUIN MELA FAIR: District Kullu, in the month of May and June.

MARKANDA FAIR: District Bilaspur at a place Markanda in the month of April.

SOLAN MELA: Solan Mela is held in the last week of June, for three days. This fair is celebrated even before the present Solan town was founded in honour of the goddess *'Shulini'* whose temple is situated in the nearby village *"Solan Gaon"*. It is believed that Solan town is named after this goddess. In olden days people from Baghat and Sirmaur States used to participate in it, but with the passing of time people from far off places have also started joining it. It attracts traders, sweet sellers, general merchants and other shopkeepers to make brisk business. The fair starts with a procession carrying *'Shulini'* goddess to *Durga* temple in the heart of the Solan town.

The highlights of the fair are dancing, singing and wrestling. But in recent time a subtle change by way of inclusion of cultural programmes, government exhibitions and other entertainments has replaced much of what used to be in the past.

SARI FAIR: District Solan at town 'Arki' in the month of July. (This fair is famous for the bull fighting).

BUFFALO FAIR: In district Shimla at village Kufri near Mashobra, in the month of September.

SIPI FAIR: In district Shimla near Mashobra, in the month of May.

PURAG FAIR: The fair of Purag in Kot Khai area is held either from 9th to 11th or from 11th to 13th Baishakh (April) in honour of the Mahadev Devta, who is carried in *Kamahli*, a silver pot, to river Giri to bathe ceremoniously and is then brought back. To celebrate the fair some delicious food is sent to the sister's and daughter's houses. On this auspicious occasion other deities like Nag Devta of Ghunda and Chaitra villages and Dum Devta of Nehra are also invited. The *Mela* and *Diyali* dances are performed in gay mood in honour of these deities. And number of dishes are prepared and guests are invited. The villagers look after the guests and in the end Devtas are carried back in the *palkis* (planquins) to their respective abodes. But with the passage of time the traditional ceremonies and mirth have disappeared and modern sophistication instead seems to have crept in. Because of modern entertainments the people are losing interest in the fair reducing it to merely a religious ritual.

PATHER–KA–KHEL FAIR: District Shimla at village Halog, in the month of October and November. In this fair, people divide themselves into two parties and each throws stones on one another.

ROHRU JATAR FAIR: District Shimla at Rohru town, in the month of April.

THE FIRST JAGANATH YATRA was taken out in Shimla town on 27th October 2012. Later on Hamirpur and Nahan town also organiged Jaganath Yatra.

JORNA FAIR: The fair *'Bishu of Jorna'* (Pul Bahal) in Chopal is held on 14th and 15th of Baishakh, (April) every year. It is celebrated in honour of Devta Shirgul on an open hill a furlong away from the venue of the temple at Jorna village. Sweets, fruits and toy shops along with *'Jhula'* entertainment

are some of the main attractions. Archery (Thodo) is played and invited parties dance with traditional orchestra. Thana, Jorna, Cheyog and Lehat villages look after the boarding and lodging arrangements of invited guests *(khunds)*.

RAMPURI JATAR FAIR: District Shimla at village Rampuri near Jubbal town, in the month of July.

THALOG FAIR: The Thalog fair (Bishu) is held at the end of Baishakha, in Pargana Jakholi of Chaupal. It is 3 km. away from Chamba located on Shimla–Chaupal road. It is celebrated on a dry open hill and attracts large gathering from Pargana Bahal, Bargaon, Chanju, Hambal, Pundar, Shantha, Khagna, Chaupal, Nerwa and even from Theog and Shimla. It is held in the honour of Devta Rahatna whose temples are located at Thalog and Jabna. The Shirgul Devta of Jorna is the presiding guest deity in this fair, without whom, as per legend, people may invite wrath of the deity. The game of archery, numerous sweet shops and *Jhula* are the main attractions like other fairs. It is believed that if Devtas are offended it rains nonstop and spoils the gaiety of the fair as punishment.

TRILOKPUR FAIR: In district Sirmaur at village Trilokpur near Nahan town, in the month of September.

PHUL YATRA FAIR: Phul Yatra fair of Pangi is held at Killar in *Asoj* (Sept–Oct.) every year. It denotes the start of a closing season in this snow bound Valley. Offerings are made to local goddess, in whose honour it is celebrated. The tribal people enjoy, sing, dance and drink in gay mood forgetting everything else for the time being. This annual feature of the Pangwals keeps them culturally united. In Kinnaur and Lahaul–Spiti some annual fairs are held which have left deep impression on the community life of the tribals. One of the main features of these fairs is folk dances. The Divine strife is their main theme. The dancers wear variety of masks as per traditions. The lion dance is considered finest of all these.

SAYAR: It is a famous fair observed in the month of September at a number of places such as *Bakloh* (Kangra), *Karsog* (Mandi) and *Subathu* (Shimla). *The main attraction is the sacrifice of a buffalo–bull.* The animal is symbolic of the demon which the goddess Mahisasurmardani Killed. It is a show of Chivalry and strength for young men. Fairs and festivals in a land provide social attachment and cultural association to the people of various shades and colours. To the people of Himachal, there is only one ray of hope in their hard life-the prospects of fun whole heartedly, as and when a fair is held or festival is observed. The cultural life of Himachal Pradesh provides a composite cultural traits and social harmony to the greater society of India.

MALANA AND JAMLU DEVTA

The isolated village of Malana in Kullu Valley is located on the hill top of Parvati Valley at the height of about 2743 m (9000 feet) above the msl on the other side of Chandar Khani Pass. Even today the village is quite introvert, isolated and without exposition to the outside world. It is quite sovereign and

conservative in its religious, socio–economic and administrative set–up although considered to be the oldest democracy of the world where its inhabitants participate in their village administration without accepting any outside interference irrespective of vast changes in the political as well as socio–economic life of the people in the State and the country as a whole.

JAMLU DEVTA

He is the divine ruler of the village known locally, Jamlu whose original name was Rishi Jamdagni. All the inhabitants of Malana, under his jurisdiction entertain profound, blind and superstitious belief and hardly dare to disobey him. Consequently they are backward, conservative and limited to their own selves even at the dawn of the 21st century.

Of course, due to the absence of historical evidence, it is difficult to, ascertain the origin of Malana. However, as per local villagers version, its origin is narrated thus: In the very ancient times a Rakashasa (devil) named Danu inhabited this area. The Jamdagni Rishi (now the Jamlu Devta) came from Batant in Spiti Valley and first settled at Hamta in the Naggar Valley of Kullu district and, subsequently shifted to Malana. He had confrontation with Danu Rakashasa in which the latter was defeated. As a result he transferred his estate to Jamdagni Rishi but pleaded to keep alive something significant to remember him and his rule in that area.

The Rishi accepted the request and assured him that the people at Malana would speak his language till the village exists and therefore the language which people speak since then is not intelligible to outsiders. In the past nothing was known about this village till a hunter is said to have reached the village in course of hunting and this village was explored. Since the outsiders could not understand the language of this village they ultimately named it 'Malana' which means "to join", that is, the village has joined others outside its periphery.

The total geographical area of the village according to revenue papers is about 679 hectares. The average snowfall ranges from 5 feet to 10 feet. The village is located in such a unique situation that it is not visible, although from other place it is situated on a hill. The comparative remoteness of Kullu Valley has helped people to maintain their distinctive cultural heritage besides nourishing it with an atmosphere of spiritual peace that no visitor fails to notice and longs to retain it.

THE CULT OF SHIRGUL (SHRIGUL), BIJAT AND MAHASU DEVTAS

The two cults, those of Shirgul and Mahasu appear to be derivatives of Shaivism. But their origin and acceptance is limited to Shimla hills only. The renowned home of this God Shirgul is on the Chur peak, which is visible from Shimla, However, Sirmaur area is the main worshipper of Shirgul other than the areas in erstwhile Jubbal State. The Shirgul or Sargul the name may probably be a corruption of "Sri Guru" initially derived fancifully from *'sard'*

(cold) has special power over cold and therefore, according to one account, is propitiated by a fair in order to save people from cold and jaundice. Subtly this idea appears to have connection with the following version of the Shirgul legend. Shirgul made expeditions to Delhi in quest of the colossal vessels of brass which the Mohammedans had taken away.

On his return his mother's sister–in–law brought him *sattu* (porridge) to eat. As he had no water, miraculously it gushed out near Shaya a village in the *Kari pargana* of Sirmaur when he was about to eat the sattu, suddenly he saw some insects in it and abandoned eating it. The Shirgul saved his kinsmen from the snake and went again to Delhi. He killed number of Turks single–handed, but suddenly seeing a stone tied to a banyan tree, he knew this signal of distress was sent by his wife through the servant (bhur) named Chooru. Shirgul returned at once and found that all the members of Chooru's family, except his wife, had been converted into one body by the serpents and even today any branched stone is supposed to be Chooru's family and is much venerated by the local people. There is another Shirgul legend variant of special interest to mention here. In the *Dwapra Yuga* the Lord Krishna killed several *Rakshasas*. Some of them, however, begged pardon and so the compassionate Lord bade them dwell in the Northern hills without harming anybody. The order was obeyed except by one who was living at Chawkhat about 7 miles away from Churdhar.

At the beginning of *Kaliyuga* he started harassing everybody. Yet another demon Neshira also plundered the subjects of one Bhokru, Chief of Shadga (Sirmaur). The *Asur* leaving near Choor also attacked areas in the States of Jubbal, Tharoch, Balsan, Theog, Ghund etc. Bhokru fled to Kashmir giving his kingdom in the hands of his minister Devi Ram. At this time people prayed for Divine intervention. After 12 years' religious meditation, Bhokru and his queen were directed by a celestial voice to perform Aswamedha Yajana (havan) and they would give birth to two sons. Accordingly the queen gave birth to Shirgul and Chandeshwar and it is said when they were 12 and 9½ years old, the Raja Bhokru during this pilgrimage to Haridwar died and the queen succumbed to her grief at his death three days later. While going to Haridwar Shirgul Maharaj crossed Choor peak which made a great impression on his mind and he resolved to make over his kingdom to his younger brother and to take up his abode on the Choor peak. On his return he met Chooru a Shivas devotee on Choor went to Shadga where he parted with some area (Nabula village) for his brother and rest of the territory was given to Devi Ram as its regent.

During Mohammaden rule once when Shirgul was at Delhi bathing in the Yamuna, a butcher passed by driving a cow for slaughter. Shirgul pleaded to leave the cow but in vain, finally he cut him into two pieces. The emperor sent to arrest him, but he killed all soldiers. Thereupon the emperor wanted himself to see such a daring person. When emperor saw him kissed his feet and promised no to kill cow in the presence of a Hindu in future and so Shirgul forgave him. When he came to know from Chooru about the plundering of

Choor by a demon he miraculously created a horse named "Shanalwi" or "Shaviani" and mounted on it reached Choor via Buriya (near Jagadhari), Sirmaur, Shadga, Bhil–Khari and reached Kalabagh (North of Chur). He recited some incantations and threw some grains of rice on the horse's back thereby conditioned it permanently into a stone, even today it stands on the spot to be witnessed.

Next day the demon was killed with a single stone by Shirgul. Staying at Choor Shirgul sent for Devi Ram (his Minister) and his two sons from Shadga and divided his kingdom among them. Thus he gave Devi Ram the village of Karli (probably in addition to Shadga), to his elder son Rabbu he gave Jorna (pargana Bahal), Jakholi (both in Jubbal State), Balsan, Theog, Ghund and Ratesh States and Pajohta pargana of Sirmaur, to younger son Chhinu he gave Sarahan (Chopal areas) including the parganas of Hambal, Chaita, Chandlog, Chandana, Satotha, Payontra, Newal, Shak, Chanju, Bargaon, Shantha, Tharoch and Jaunsar. The Shirgul temple at Choor was built by Devi Ram and his two sons, while the younger brother (of Shirgul) built the bowli (a water tank) which had no water source until Shirgul filled it.

After a reign of 150 years, giving instructions to all the three rulers to have his image installed and carry it wherever they go, Shirgul disappeared with Chooru who became later Chooru Bir or Pir, while Shrigul was called Shrigul Deota or Devta. After two centuries of rule the descendants of Rabbu and Chhinu greatly multiplied. Those of them from Jorna migrated to Manal (Bharmaur area) in Sirmaur, there with Raja of Sirmaur's other land for constructing of Shrigul temple was given, while Chhinu's descendants settled in Deona (Sirmaur) where they too built the temple. The old capitals of Jorna, Sarahan (Jubbal State) and Shadga (Sirmaur state) are with Deona to this day, the centres at which the grains *(Dhinakra)* collected on behalf of the Shrigul and stored. A full *patha* collections of grains from every household is prevalent under the jurisdiction of Shrigul Devta a sort of *nazrana.*

The descendants of Rabbu and Chhinu took Shrigul's image from Sarahan or Jorna to their own villages either privately to have blessings or on *dhiankra* (on tour to collect nazrana in the shape of grains or money). Some 20 to 50 *kardars* (officials), *begaris* (laboures), *bajigars* (player of drums etc.) and *pujaris* accompany the God and they receive their fixed share in proportion to the type of offering is made. For example if a gold coin is offered to Shrigul, in that case the person concerned must give *kardars* Rs. 6, *musicians* Rs. 12 and *Pujaris* and *Bhandari* Rs. 25 as per fixed norms. Anyone who refuses to offer the *dhiankra* is believed to have invited the wrath of the deity and would certainly meet ill luck.

The Shrigul devta like many other hill deities exercises civil and criminal jurisdiction too. Anyone doing wrong under his jurisdiction has to carry Shrigul to Haridwar, Kedar or Badrinath and for petty offence a gold coin etc. has to be offered. Oaths in the temples at Sarahan and Jorna are made when truth is not evident. Then within 3 to 6 months God's punishment would arrive in the shape of some visible calamity in case one makes false oath.

SHRIGUL TEMPLES OF MANAL

As per following legend the Shrigul temple at Manal was built by Ulga and Jojra *(Dewas)*. In order to spread his mission, Shrigul made an effigy. It, along with some lamps, was placed in a basin left floating on the Jalal river in the month of Bhadon. It reached Shakhal village in Pachhad area of Sirmaur. There a Rajput of the Sapala family (snake charmer) of Chanalag saw it. Struck with amazement, with his mantras he challenged it thus saying if a demon go on floating, but if a deity–then come to the bank. So it floated to the bank and he took it to his home. Later it was revealed that the image was that of Shrigul and he (Rajputs) was ignorant of the mode of worship and that it needs to be taken to Bakhuta where it was duly worshipped and hence a *Dewa* namely Bidan brought it to Manal by stealing it. A fair is held on Hariali an any three days of Sawan at Gelyon in Nahra area which is at a little distance from Manal. The temple contains 12 images of Shrigul, all placed on wooden shelves *(gambar)* in the wall and the principal of these are the idol brought by Bidan. It is clothed in *masru* or silk cloth with a piece of broadcloth studded with 100 rupees and 11 gold *mohras* round its neck.

SHRIGUL TEMPLES AT DEONA AND BANDAL

The temple at Deona (Dabona) and Bandal are similar to the one at Manal. Each has a traditional Bhandari who looks after Devta affairs (in charge of a storeroom). From Manal and Deona temples the second class of images of Shrigul are taken by the worshippers for the performance of a *Jagra* or *Shant* while first class image is allowed from Bandal only. Besides there are Shrigul temple at Jamna (Bhoj Mast), Naoni Village (in tehsil Nahan), Sanglathan and Jaitak. There is a Shrigul temple at Jorna (Bahal Pargana). A fair in honour of the deity is held in the month of Baisakh (April) arranged by Dewas of Jorna and Cheyog, *Pujaras* or Thana and Bhayila and Rajputs of Lehat villages.

BIJAT

With the cut of Shrigul is connected dual god Bijat and his sister Bijai. The legend of Bijat, the lightning god is connected with that of Shrigul tells that when the Asur Agyasur (the demons who were hostile to Gods) assailed the Choor peak and the temple of Shrigul thereon, the Shakti of God fell upon them in the form of lightning *(Biij)*, as a result an image fell to earth at Sarahan (adjoining at the base of Choor in Jubbal State) and at that place a temple was built for the image which was placed along with other images, in it. From Sarahan, it is said, a *Dewa* (the ancestor of the present *Dewas* of Deona), brought a stone idol of Bijat to Deona and at present it is the principal image in the temple and is considered to possess the high divine power. There are in total 27 other images, all in brass placed hierarchically according to their powers. The fairs in honour of Bijat are held in the month of Baisakh (April) annually at Deona and Sarahan and every third and fourth year in Chokar, Sanej and Andheri villages. The *Dewzas* of Deona have brought the brass image of Bijat to Bandal and have built a temple there. There are now 52 images of Bijat (of brass) at Bandal temple with human faces.

BIJAT AND HIS SISTER BIJAI

Bijai as a goddess has seven storeyed temple at Batroli, the image of brass has a woman's face. The ritual resembles that of Shrigul, but held no fair. Closely connected with the cult of Bijat is that of the Goddess Ghatriali, who has a temple at Panjahan in Renuka of Sirmaur, that of Bijat at Batrol. The legend regarding temple of Bijat avers that a certain Kanet Chieftain, Bija by name of Tahawa village reached his house safely along with the three images each of Bijat, Bijai and Ghatriali goddess brought from Jamlog. But Bija's eighteenth companion looked back as he should have not and perished. As a grace of Bijat, he found his granary over flowing by the next morning. Then Bijat took possession of one man (Gur or Gharneta) who nodded his head saying he was Bijat the God and could not remain in Tathwa, as he does not wish to stay with his sister, so accordingly Bijat was sent to Sarahan (Jubbal State now in Chaupal), where it still remains.

The image of goddess Bijai was brought to Kandi, as it fell to the men of Kandi and is now at Batrol of Dasakna Bhoj, while Ghatriali remained at Tathwa and her temple was established at Panjahan in Thakri Bhoj. This happened when people of Tathwa multiplied and separated and some of them settled at Kandi. Every year Bijat gives his sister Bijai a rupee for sweetmeats and whenever either of them goes to visit the other, the host entertains the guest. Bijat always gives Bijai twice as much as she gives him.

MAHASU DEVTA

MAHASU (AS IN SIRMAUR)

The headquarters of this God (Mahasu) is at Sion, village in Renuka tehsil, where he has temple on a hillock, at the foot of which flows the Giri. The god is kept there on a wooden shelf *(gambar)*. There is one large brass idol and several smaller ones shaped like a man's bust. Among these on the left, the second placed is held by the god namely Sirmauri, who is God of Sirmaur, but he has no temple of his own. With these idols there is also an image of Devi Shimlasan. All other idols than Sirmauri God and Shimlasan Devi represent Mahasu. The temple of Mahasu is opened for worship only on Sunday, Wednesday and on Sankrant. Worship style is similar as in Shrigul's temple i.e at 11 a.m. and at sunset. The devotees who own buffaloes generally offer milk on the day of worship.

If there is a death (mitak or patak) or birth (sutak) in the family of *Dewa*, the temple must be closed for 20 days when no *Dewa* and *Jatri* is allowed to enter the temple. Since the Dewa and *Pujari* must not sleep with their wives on the day of worship or two previous days, hence, only two days, are fixed for worship. Morning worship is called *dhup dina* and the evening *sandhia*. Once Mahasu appeared in a dream and directed the ancestor of the present *Dewa* to go to Giri to seek and then build a temple for him. Accordingly the *Dewa* found in Giri a big idol of Mahasu (Jalasan) and also built the temple. During

Jagra (reception given in honour of the deity). *Deota* is taken out of the temple. But if displeased he becomes so heavy that even 4-5 persons cannot remove it. The one who is possessed answers all questions and show superior powers in curious ways and explains the cause of the displeasure of the devta and then the guilty makes vows, whereupon the devta gets pleased and makes it self light and movable. The procession returns from the stream after the water sprinkled on the devta, to the temple, where in honour of the deity dancing continues till morning. A good dinner (Jagra) is served on behalf of devta's possession .

MAHASU (IN THE SHIMLA HILLS)

Mahasu is a hill or a village near Shimla (in upper Shimla area) named or given name by or because of *Devta* Mahasu. The headquarters of his worship is at Anel. The legend about devta Mahasu goes as: Between Tons and Pabbar rivers dwelt a race of evil spirits ruled by their chief Kirmat Danu. Twice a year he claimed a victim from each hamlet in his jurisdiction. In Madrat village where demons held their sports lived two pious Brahmins whom God had given seven sons. Six, had already been slain and seventh turn was expected. His aged parents waited in dread, when before sacrifice the wife became possessed and started uttering 'Mahasu–Mahasu of Kashmir will save our child'. Her husband Una Bhat could not make anything out of it. Still in trance she revealed that in Kashmir there reigned a mighty god Mahasu who could save their son. The old father started his journey to Hatkoti to meet a Brahmin who had visited Mahasu earlier as was revealed by a neighbour. But Pundit Nag of Hatkoti scoffed at the idea of going to Kashmir, but helpless as he was, ultimately blessed the old man to go. Miraculously he found himself by the side of a tank beneath whose water the great Mahasu dwelt in Kashmir.

He saw first his wazir Chekury and then appeared a golden image of Mahasu that he clutched tightly to his breast pouring out a pitiful appeal. Mahasu promised surely to save his son and accordingly appeared, as had been advised, on the sixth Sunday out of five furrows ploughed by a plough of solid silver with a share of pure gold and having put it a pair of bullocks whose necks have never borne the yoke loosen well (each of the six day a portion of the land). From first came Bhotu, next Pabasi afterward Bashik and Chaldu. All these brothers are called by the common affix of Mahasu. And from the fifth furrow appeared their heavenly mother along with countless army, officers, ministers etc. Ultimately Kirmat Danu was caught at Niwara in the Dhadi state and they hacked him up to pieces upon a rock, which to this day bears marks of many sword cuts.

For a misadventure had marred to some extent the glory of their enterprise. It would be remembered that Mahasu had pledged his word to Una Bhat that he would arrive on the 7th Sunday, but either in impatience or through a miscalculation of the date the god arrived a week ahead. Thus the mother and the Mahasu (sons) were waiting buried underneath the earth, for Una Bhat to plough (as instructed at Kashmir) he drove his plough where upon three members of the divine family of Mahasu were injured by its blade, Bhotu,

damaged his leg and became lame, Pabasi cut his ear and Bashik's vision was obscured having damaged his eyes. The fault was not of Brahmin. So Bhotu rested his injured leg within his temple at Anel and hence he exercises sway around its precincts. A portion of Garhwal state fell to Pabasi's lot and spends a year in turn at each of his six divine seats (pithas).

To Bashik, he was allotted part of the tract comprising British Garhawal where though defective eye sight journeys in successive years to the four main centres of his worship. Chaldu, being fit was granted though no territory, as long as he observed his brother's rights, he was free to exercise dominion wherever he could find devotees. It is he who was venerated as Mahasu in the Shimla hill States. Twelve years on end he spends in wandering amongst his subjects and every house must give then Rs. 1-8 to his ministers. He is to be offered instruments of music, ornaments of silver, grains to feed his jatris (devotees). People feel relieved after the touring season is over; the god (Mahasu) too can spend an equal period at ease within his shrine, which was built in adjoining village where lived the Bhotu Mahasu.

The Chaldu Mahasu is revered or dreaded as the case may be in many villages in Bushahr state too, however, the people of State tell different stories of his advent in those parts. Whatever may be the case, the Devta Mahasu is accepted and revered in many parts of upper Shimla hills, especially in Balson and Kot–Khai areas. Since the last decade of 20th century, Himachal's traditional society has got influenced very much by the world outside. Now there are many customs, beliefs and traditions which have lost in oblivion and more and more people are getting intoxicated to ape culture of western world. Religious rites have become as formal observations and respect for cultural ethos reducing with passing of every single day. Modern life style has added to the decay of social values, family ties, social cohesiveness and character attributes.

The cohesiveness of the society could not only be maintained by fairs, festivals and common rituals of its inhabitants but also the responsible behaviour and responsiveness of all of those, who are constituting the society. In the materialistic world, social values are deteriorating very fast, leading to disintegration of family in particular and society in general. To discourage this trend, Himachal Pradesh government took an initiative in 2001, to strengthen family relations by legal binding and making earning hands more responsible.

Maintenance of Parents and Dependents Bill 2001: In 2001, Himachal Pradesh Government under the headship of Prem Kumar Dhumal passed parents and dependents bill fulfilling the purpose of article 38 and 41 of the constitution, which reads that it is *in public interest that the public assistance in case of old age, sickness and disablement and in other cases of undeserved want should be secured.*

Himachal state became the first state of Indian Union to curtail such activities. The preamble of the act reads that where as, tendency to neglect the aged and infirm parents and dependents is increasing day by day and there is apparent need to compel young generation to perform their moral obligation,

which they owe to the society in respect of their families and aged and infirm parents, so that they are not left beggared and destituted on the scrap heap of the society and thereby driven to the life of vagrancy for their subsistence.

This act is applicable to the whole of Himachal Pradesh territory and apply to all domiciled Himachalies except Muslims.

In this act following categories have been included-

" Child includes a child born out of extra marital relationship, adopted and step child, below the age of 18 years, dependents includes, parents and grand parents, so long as they are unable to maintain themselves or unable to obtain maintenance in the case of grand parents, from their sons and daughters;

Wife so long as she does not remarry;

Son or the predeceased son, so long as he is minor and unable to obtain maintenance in the case of grandson from his fathers or mother's estate;

Unmarried daughter or unmarried daughter of the predeceased son so long as she remains unmarried;

Provided and to the extent that she is unable to obtain maintenance in case of a grand daughter from her father's and mother's estate;

Widowed daughter provided that and to the extent that she is unable to obtain maintenance-

- *from the estate of her husband; or*
- *from her son or daughter, if any or his or her estate; or*
- *from her father-in-law or her grand father or the estate of either of them;*

- any widow of the son or of the son of the predeceased son, so long as she does not remarry; provided and to the extent that she is unable to obtain maintenance from the estate of her husband or from her son or daughter, if any or his or her estate; or in the case of a grandson's widow, also from her father-in-law's estate;

Son born out of extramarital relationship, so long he remains minor and daughter born out of extramarital relationship, so long she remains minor;

This is expected that this act would be able to reinfuse the sense of responsibility among social constituents and make society more cohesive and reliable for all those who need social care and protection. For positive result of this act, along with legal provisions social awareness is equally important, to discourage the trend of nuclear and solitary life pleasures.

4

Art And Architecture In Himachal

"Man has been called a 'tool-using animal' and no doubt all progress of culture is due to the increased use of tools and implements in the conquest of nature to make life happier and more comfortable. The material history of man, is an account of the progress from a 'tool less state' to the present state of complicated machinery".

The art of Himachal has grown out of its cultural strains and religious beliefs. It represents many sided realities of the hill man's life. Various cultural streams have enriched the art forms of Himachal in the wake of numerous migrations. A large majority of people in Himachal Pradesh are Hindus. But their Hinduism is quite different from that practised by the people of plains. Each village has its own separate deity, besides faith in the traditional gods of the Hindu pantheon. The early inhabitants of Himachal Pradesh professed some form of Shaivism. But it can't be established conclusively, whether Shiva worship was taken from Mohanjodaro culture or was of local origin. It was probably about 3000 B.C. that the art of the region began to take shape around the fertility symbol of the divine yogi of the Himalaya, the Shiva prototype of the Indus Valley civilization. Shiva is called by different names such as– Mahasu, Mani Mahesh, Ruldung, Baijnath and others.

Mauryan (Ashoka) art: Mauryan art encompasses the arts produced during the period of the Mauryan Empire (4th to 2nd century BCE), which was the first empire to rule over most of the Indian subcontinent. It represented an important transition in Indian art from use of wood to stone. It was a royal art patronized by Mauryan kings especially Ashoka. Pillars, Stupas, caves are the most prominent examples. While the period marked a second transition to use of brick and stone, wood was still the material of choice. Kautilya in the Arthashastra advises the use of brick and stone for their durability. Yet he devotes a large section to safeguards to be taken against conflagrations in wooden buildings indicating their popularity.

Megasthenes mentions that the capital city of Pataliputra was encircled by a massive timber-palisade, pierced by loopholes through which archers could shoot. It had sixty-four gates and 570 towers. According to Strabo, the gilded pillars of the palace were adorned with golden vines and silver birds. The palace stood in an extensive park studded with fish ponds. It was furnished with a great variety of ornamental trees and shrubs. Excavations carried out by Spooner and Waddell have brought to light remains of huge

wooden buildings at Bulandibagh and Kumrahar, both near Patna. The remains of one of the buildings, an 80 pillared hall at Kumrahar are of particular significance. Out of 80 stone columns, that once stood on a wooden platform and supported a wooden roof, Spooner was able to discover the entire lower part of at least one in almost perfect conditions. It is more or less similar to an Ashokan pillar, smooth, polished and made of grey Chunar sandstone. Many stupas like those at Sanchi, Sarnath and probably Amaravati were originally built as brick and masonry mounds during the reign of Ashoka. Unfortunately they were renovated many times, which leaves us with hardly a clue of the original structures.

This period marked an imaginative and impressive step forward in Indian stone sculpture; much previous sculpture was probably in wood and has not survived. The elaborately carved animal capitals surviving on from some Pillars of Ashoka are the best known works, and among the finest, above all the Lion Capital of Ashoka from Sarnath that is now the National Emblem of India. Coomaraswamy distinguishes between court art and a more popular art during the Mauryan period. Court art is represented by the pillars and their capitals. Popular art is represented by the works of the local sculptors like chauri (whisk)-bearer from Didarganj.

These pillars were carved in two types of stone. Some were of the spotted red and white sandstone from the region of Mathura, the others of buff-coloured fine grained hard sandstone usually with small black spots quarried in the Chunar near Varanasi. The uniformity of style in the pillar capitals suggests that they were all sculpted by craftsmen from the same region. It would therefore seem, that stone transported from Mathura and Chunar to the various sites where the pillars have been found and here the stone was cut and carved by craftsmen. They were given a fine polish characteristic of Mauryan sculpture. These pillars were mainly erected in the Gangetic plains. They were inscribed with edicts of Ashoka on Dhamma or righteousness. The animal capital as a finely carved lifelike representation. Noteworthy are the lion capital of Sarnath, the bull capital of Rampurva and the lion capital of Laurya Nandangarh. Much speculation has been made about the similarity between these capitals and Achaemenid works

The work of local sculptors illustrates the popular art of the Mauryan period. This consisted of sculpture which probably was not commissioned by the emperor. The patrons of the popular art were the local governors and the more well-to-do subjects. It is represented by figures such as the female figure of Besnagar, the male figure of Parkham and the whisk-bearer from Didarganj (although its age is debated). Technically they are fashioned with less skill than the pillar capitals. They express a considerable earthiness and physical vitality. The stone elephant at Dhauli was also probably carved by local craftsmen and not by the special craftsmen who were responsible for the animal capitals. The image of the elephant emerging from the rock is a most impressive one, and its purpose was probably to draw attention to the inscription nearby.

Terracotta objects of various sizes have been found at Mauryan sites. A continuation of the tradition of making mother-goddesses in clay, which dates back to the prehistoric period is revealed by the discovery of these objects at Mauryan levels during the excavations at Ahicchatra. They are found more commonly from Pataliputra to Taxila. Many have stylized forms and technically they are more accomplished, in that they have a well-defined shape and clear ornamenation. Some appear to have been made from moulds, yet there is little duplication. Terracotas from Taxila consists of primitive idols, votive reliefs with deities, toys dice, ornaments and beads. Among the ornaments were round medallions, similar to the bullae worn by Roman boys. Ringstones, probably associated with a fertility cult have also been found in some quantity. Terracotta images of folk gods and goddesses which have been found having an earthy charm.

Under the great Mauryan emperor 'Ashoka', art forms tended more and more towards *"realism"* and eventually manifested in **'Buddhist art form'**. Buddhist art of the plains began to infiltrate the hills during Kushanas period, as evident from the ruins of a ***'stupa at Chetru'*** near Kangra. After the collapse of Kushana kingdom a new sect called ***'Lakulpashuputra'*** (related to ascetic Pashupati) was founded at ***'Maruta Math'***, Udaipur in Chamba–Lahaul and Gurughantal in Lahaul–Spiti.

Gupta Art: According to many historians, the Gupta dynasty was a Vaishya dynasty. Historian Ram Sharan Sharma asserts that the Vaishya Guptas "appeared as a reaction against oppressive rulers". A.S. Altekar, a historian and archaeologist, who has written several books on Gupta coinage, also regarded the caste of the Guptas as Vaishya on the basis of the ancient Indian texts on law, which prescribe the name-ending with Gupta for a member of the Vaishya caste. According to historian Michael C. Brannigan, the rise of the Gupta Empire was one of the most prominent violations of the caste system in ancient India.

There are contradictory theories regarding the original homeland of the Guptas. According to H.C Raychoudhuri the Guptas originated from the Varendri region which is now part of Rangpur and Rajshahi Division of Bangladesh. D.C Ganguly on the other hand considers the surrounding region of Murshidabad as the original home of the Guptas. Fa Hien was the first of the pilgrims who visited India during the reign of Gupta emperor Chandragupta II. He started his journey from China in 399 C.E and reached India in 405 C.E. During his stay in India up to 411 C.E, he went on a pilgrimage to Mathura, Kanauj, Kapilavastu, Kushinagar, Vaishali, Pataliputra, Kashi and Rajgriha and made careful observations about the empire's conditions. Fa Xian was pleased with the mildness of administration.

The Penal Code was mild and offences were punished by fines only. From his accounts, the Gupta Empire was a prosperous period, until the Rome-China trade axis was broken with the fall of the Han dynasty, the Guptas' did indeed prosper. The Gupta period is generally regarded as a classic peak of

north Indian art for all the major religious groups. Although painting was evidently widespread, the surviving works are almost all religious sculpture. The period saw the emergence of the iconic carved stone deity in Hindu art, as well as the Buddha figure and Jain tirthankara figures, these last often on a very large scale. The two great centres of sculpture were Mathura and Gandhara, the latter the centre of Greco-Buddhist art. Both exported sculpture to other parts of northern India. Unlike the preceding Kushan Empire there was no artistic depiction of the monarchs, even in the very fine Guptan coinage, with the exception of some coins of the Western Satraps, or influenced by them.

The most famous remaining monuments in a broadly Guptan style, the caves at Ajanta, Elephanta, and Ellora (respectively Buddhist, Hindu, and mixed including Jain) were in fact produced under later dynasties, but largely reflect the monumentality and balance of Guptan style. Ajanta contains by far the most important survivals of painting from this and the surrounding periods, showing a mature style which had probably had a long development, mainly in painting palaces.

The Hindu Udayagiri Caves actually record connections with the dynasty and its ministers, and the Dashavatara Temple at Deogarh is a major temple, one of the earliest to survive, with important sculpture. The Gupta art flourished in the Himalayan region, particularly in the Shivalik hills, for the first time in the 6th–8th century onwards. In the upper parts, namely in Lahaul–Spiti, the local art seems to have been much influenced by the development in Tibet and the personality of *'Padamsambhava'* has important place in its development.

Pala Art: The Pala Empire was a Buddhist imperial power in Classical South Asia. It is named after its ruling dynasty, all of whose rulers bore names ending with the suffix -Pala (meaning "protector" in Bengali). The kingdom was centered around present-day Bangladesh, East India and Nepal.

The Palas ushered in a period of stability and prosperity in the Bengal-Bihar region. They were the followers of the *Mahayana and Vajrayana* schools of Buddhism. They created many outstanding temples and works of art, including the Somapura Mahavihara, a UNESCO World Heritage Site. The renowned universities of **Nalanda and Vikramashila** flourished under their patronage. The commercial and cultural influence of the Palas reached far and wide, with trade networks and intellectual contacts spanning across the Himalayas to Southeast Asia. The Arabs recorded them as the most benevolent rulers in India. Gopala, the first ruler from the dynasty, came to power during the 750s in a landmark election by regional chieftains.

The empire reached its peak under his successors Dharmapala and Devapala, who fought with the Rashtrakutas and the Gurjara-Pratiharas for the control of Kannauj. The death of Devapala ended the period of ascendancy of the Pala Empire, and several independent dynasties and kingdoms emerged during this

time. The Pala rule was temporarily rejuvenated, first by Mahipala I and then by Ramapala. Subsequently, the Pala power declined, and they were dethroned by the Senas. The Palas were the last major Buddhist dynasty to rule in South Asia. The Pala school of sculptural art is recognised as a distinct phase of the Indian art, and is noted for the artistic genius of the Bengal sculptors. It is influenced by the Gupta art.

The Palas built a number of monasteries and other sacred structures. The Somapura Mahavihara in present-day Bangladesh is a World Heritage Site. It is a monastery with 21 acre (85,000 m^2) complex has 177 cells, numerous stupas, temples and a number of other ancillary buildings. The gigantic structures of other Viharas, including Vikramshila, Odantapuri, and Jagaddala are the other masterpieces of the Palas. These mammoth structures were mistaken by the forces of Bakhtiar Khilji as fortified castles and were demolished. The art of Bihar and Bengal during the Pala and Sena dynasties influenced the art of Nepal, Burma, Sri Lanka and Java.

The 'Kashmiri style of art', entered the later 7th century A.D., under Maru Varman of Bharmaur, who was contemporary of 'Lalitaditya Muktapida' ruler of Kashmir. Pala art did influence the art of the region, but its consolidation was rather gradual. The other style to influence local art was Chauhan, Parmara, Rathore and Chandel communities variety. The divided Himalayan region among small rulers, lacked centralised patronage to art. With the amalgamation of various style, an indigenous art style developed, based on indigenous resources, later came to be known as the *'Pahari style'* in sculpture. The art of Himachal Pradesh can broadly be classified into three groups. The indigenous 'Khasa art', the 'Indo–Aryan Art' and the 'Indo–Tibetan art'. The most ancient art and architecture of Himachal Pradesh is in *'Khasa style'* and the basic material used is WOOD.

INDIGENOUS KHASA ART

Most ancient architecture of Himachal Pradesh is in local style and the base material used is wood. The copper and silver coins of Audumbaras (2nd century B.C.) have a *Dhawaja* (royal flag), a *Trishul* (trident) and a *Battle Axe* (kulhari or talwar) depicted on it. It is the earliest example of this style which ascertains the existence of shaivite temples in those olden days. The vast number of temples scattered all over the middle belt of Himachal Himalayas are all in deodar wood.

INDO–ARYAN ART

The term Indo–Aryan art refers to the major tradition of art in India. It matured during the period of Guptas and flourished mainly in the Indo–Gangetic belt. Next to Hindu age came the Rajput age and after the death of Harsha in 647 A.D., Rajputs began to play a prominent part in the art and history of Northern India and their period comprised five and a half centuries between the death of Harsha and the emerging of the Muslims at the close of

the 12th century. In this period, Rajput kingdoms rose and fell and Northern India remained turbulent. Some of the dignified Empires like those of Yaso Verman of Kannauj, Gurjara Pratiharas who rose in the 8th century and ruled from Kannauj up to 10th century and Pala kings of Bengal and Bihar, who controlled Bengal and Bihar in the 9th and 10th centuries and Rashtrakutas from the South are important. There were many Empires besides who in their hey–days penetrated upto the Himalayas and appointed their kith and kins to look after their conquests.

In this process the artists and artisans also migrated with them to areas comprising now the present Himachal Pradesh. Thus, the Rajputs were partly responsible for the introduction of the post–Gupta art forms in this region. With the passing of time, the original inhabitants took over this art from the immigrants and executed it in the form of beautiful temple architecture, sculptures and many other forms of art still found all over the Pradesh. Hence, Indo–Aryan art style which was purely local and because it could have been shaped only in Himachal Pradesh and nowhere else, exists now in the shape of temple art, sculptures and paintings. The Indo–Aryan art bloomed in Himachal Pradesh from 8th to 13th century A.D.

INDO–TIBETAN ART

This art style flourished in Kinnaur, Lahaul and Spiti, the trans–Himalayan regions of Himachal Pradesh. The influence of Buddhism in these areas came to be known the Vajrayana (the school of Thunderbolt) and it is to be distinguished from the two major sects of Buddhism, the Hinayana and the Mahayana. The Vajrayana was characterized by its inspired use of elaborate sets of symbols, many of them in the shapes of named gods and goddesses who are invoked in public functions. They would help in personal spiritual advancement and also to perform magic. The Buddhism with its art style survived in Tibet and exists in Lahaul–Spiti and Kinnaur regions of Himachal Pradesh. It also exists in Himalayan areas of Ladakh, Nepal, Bhutan and Sikkim.

Tibetan art refers to the art of Tibet. For more than a thousand years, Tibetan artists have played a key role in the cultural life of Tibet. From designs for painted furniture to elaborate murals in religious buildings, their efforts have permeated virtually every facet of life on the Tibetan plateau. The vast majority of surviving art works created before the mid-20th century are dedicated to the depiction of religious subjects, for the most part being distemper on cloth or murals. They were commissioned by religious establishments or by pious individuals for use within the practice of Tibetan Buddhism and were manufactured in large workshops by uncredited artists.

The art of Tibet may be studied in terms of influences which have contributed to it over the centuries, from other Chinese, Nepalese, Indian, and sacred styles. As Mahayana Buddhism emerged as a separate school in the 4th century BC it emphasized the role of bodhisattvas, compassionate beings who forego their personal escape to *Nirvana* in order to assist others. From an

early time various bodhisattvas were also subjects of statuary art. Tibetan Buddhism, as an offspring of Mahayana Buddhism, inherited this tradition. But the additional dominating presence of the *Vajrayana* (or Buddhist tantra) may have had an overriding importance in the artistic culture.

A common bodhisattva depicted in Tibetan art is the deity Chenrezig (Avalokitesvara), often portrayed as a thousand-armed saint with an eye in the middle of each hand, representing the all-seeing compassionate one who hears our requests. This deity can also be understood as a Yidam, or 'meditation Buddha' for Vajrayana practice. More specifically, Tibetan Buddhism contains Tantric Buddhism, also known as Vajrayana Buddhism for its common symbolism of the *vajra*, the diamond thunderbolt (known in Tibetan as the dorje). Most of the typical Tibetan Buddhist art can be seen as part of the practice of tantra. Vajrayana techniques incorporate many visualizations/imaginations during meditation, and most of the elaborate tantric art can be seen as aids to these visualizations; from representations of meditational deities (yidams) to mandalas and all kinds of ritual implements.

A surprising aspect of Tantric Buddhism is the common representation of wrathful deities, often depicted with angry faces, circles of flame, or with the skulls of the dead. These images represent the Protectors (Sanskrit dharmapala) and their fearsome bearing belies their true compassionate nature. Actually their wrath represents their dedication to the protection of the dharma teaching as well as to the protection of the specific tantric practices to prevent corruption or disruption of the practice. They are most importantly used as wrathful psychological aspects that can be used to conquer the negative attitudes of the practitioner.

The indigenous shamanistic religion of the Himalayas is known as Bön. Bon contributes a pantheon of local tutelary deities to Tibetan art. In Tibetan temples (known as lhakhang), statues of the Buddha or Padmasambhava are often paired with statues of the tutelary deity of the district who often appears angry or dark. These gods once inflicted harm and sickness on the local citizens but after the arrival of Padmasambhava these negative forces have been subdued and now must serve Buddha.

TEMPLE ARCHITECTURE

Perpetual flames and snow, abundance of sandstone and deodar wood, heavy rains in certain areas and yet no rain in others, settlement of half a dozen socio–religious and ethnic groups with gaps of centuries in between founding of principalities by Rajput adventurers from Rajasthan, contact with the Mughal Durbar, Vaishnava revival in the art of the eighteenth and nineteenth centuries, Nadir Shah's invasion of Delhi in 1739 which pushed some master painters from there to the patronage of the hill chieftains, spells of Kashmiri rule in the eighth and eleventh centuries in some of its Western parts, contiguity to Tibet, Maharaja Ranjit Singh' devotion for Jwalamukhi and Kangra temple, deification of dead ancestors and personification of natural

forces have resulted in rich diversity in temple forms, functions and decorations in Himachal Pradesh.

BAJAURA TEMPLE : (District Kullu) A Mahisasur-Mardani on Lord Shiva Temple at a place known Bajaura is found. It belongs to the late 10th century A.D. This reflects *'Pala Art'* influence. This Basheswar Mahadev temple at Bajaura has been rated as one of the finest monuments of the Western Himalayas and a unique example of the later Gupta tradition. The striking features of this small temple are the composition, the strength and the carvings.

JWALAMUKHI TEMPLE (District Kangra): Jwalamukhi is a famous temple of district Kangra, of the goddess Jwalamukhi –*with flaming mouth.* The great Mughal emperor Akbar had visited this place to test its originality. Jwalamukhi is one of the fifty one Mahashakti Pithas. The legend goes that after Dakasha–Yagna–Bhanga, Shiva placed the burnt dead body of Sati on his shoulders and started wandering about in a state of madness. To save the world from the destructive wrath of Shiva, Vishnu started cutting the limbs of the dead Parvati one by one and the places where they fell became sacred centres of Shakti worship. The tongue of Sati fell at the place where the temple of Jwalamukhi is situated. The flames that come out of the openings in the earth's surface at the place are regarded the manifestations of the fallen tongue of Sati and are worshipped as Jwalamukhi Devi (Goddess from whose mouth flames come out). There is no idol inside the temple. The dome of the temple was got gilded by Maharaja Ranjit Singh in 1813 and Kanwar Naunihal Singh presented carved silver doors to it in 1840. Chief fairs at Jwalamukhi are Chaitra and Asuj Navratras.

BAJRESHWARI TEMPLE (District Kangra): This is one of the most famous temples in district Kangra. Mahmud of Ghazni destroyed the temple and built a mosque on its ruins. But soon after it was restored.

MONOLITHIC TEMPLES (MASRUR TEMPLE District Kangra): These are earliest specimen of *'Nagara'* design. These shrine which have been cut out of the rocks belong to eighth century built by Kashmir Raja Lalitaditya. 'MASRUR' temples are a group of fifteen shrines. The main shrine known as 'Thakurdwara' contains the stone image of Rama, Lakshmana and Sita. But this temple was originally dedicated to Shiva. Masrur temples are known as *'Ellora of Himachal Pradesh'.*

STRUCTURE: Structurally, the temple–complex belongs to the rock–cut technique of the *Nagara style* of Indian architecture. After surveying the whole rock and preparing the plan of the temples to be built, the architects made two parallel transverse cuttings 11 to 18 feet wide and then quarried a 160 feet long and 105 feet wide piece out of it. Care was taken that the highest point of the rock should be in the centre of this piece so as to be shaped into the main shrine. The whole structure was to revolve round this main shrine which was to be the highest, the biggest and the central part of it.

The others were merely to act as side–pieces to enhance its grandeur and effect. In front of the monument to the North is a rectangular tank 155 feet by 85 scooped out of the same rock. To understand the structural features of the complex, the best way is to begin with the main shrine. When built it was a

complete *'vimana'* in the early *Nagara style*. It had the *'ardha-mandapa'* (portice), the *Jagmohana* (audience chamber), the *'garbha griha'* (sanctum cella) and the *'shikhara'* with its final members–*' the Amalaka'* and 'the kalasha'. The height of the shrine from base to the top of the *'shikhara'* was 80 feet. Of the portice pillars 11.6" and of the Jagmohana pillars about 20 feet. Today both *'ardhamandapa'* and *'Jagmohana'* are gone, only the bases of the pillars of the former and a portion of a pillar of the latter remain.

The *'shikhara'* is fifteen feet less and without the *'amalaka'* and the 'kalasha'. After crossing through the open courts which formerly formed the *'ardhamandapa'* and *'Jagamohana'*, we reach the doorway. It is a high door with the lower half destroyed. The remaining upper half is luxuriously carved. It leads to the *'garbha griha'* which is 13 feet square and 16 feet high. Its walls are uncarved, but the ceiling contains a big lotus in the centre and smaller ones around it. At the centre of the cella is a raised platform, a part of the original rock–on which stone images of Rama Sita and Laxmana rest. The cella is topped by the shikhara referred to above.

On either side of the central shrine in line with it stood shrines, four on the right and four on the left (flanking shrines). They included the frontal corner shrine, of course. Coming back to the spot where the *'ardha-manadapa'* stood or where the *'Garuda'* stands today, we find the ruined remains of a shrine on either side of it (side shrine). In line with them, stood two shrines, one to the East and the other to the West, in front of the Eastern and Western ends of the monument. These temples were separated from the main rock (unattached end temples). The one to the West partly stands and the lintel of its door face to the North is exceptionally well carved.

At each corner of the monument, there was a shrine (corner shrines). Out of them only the South–Eastern chamber partly exists. This completes the survey of the ground level. From either side of the *Jagmohana* of the main shrine, stairs had been excavated to lead to the flat roof of the monument. The staircase on the right has disappeared, whereas its counterpart on the left stand precariously. Each of the staircase was canopied by a *'shikhara'*. The flat roof is about 160 feet long and 45 feet wide. From it shoots up the shikharas of the main and the extant attendant shrines.

Gopuram like structures also exist "on each side of the temple between each of the corner and staircase spires". They were four in number. To sum up and repeat, the temple–complex, when intact, consisted of 15 shrine (the main shrine, six flanking shrine, four corner shrines, two side shrines and two unattached end shrines), two shikhara–covered staircases, the flat roof with thirteen putting out shikharas and four Gopurams. The Nandi pavilion has not been traced.

SCULPTURE: Sculpturally, the monument belongs to a mature, but not an elaborate period of Indian plastic ornamentation. In it sculpture is subordinate to structure, whereas in the Kailashas at Ellora sculpture dominates structure. Every carvable space–the shikhara faces, niches, door

jambs, door lintels with their architraves, friezes and cornices, ceilings, pillars from plinths to capitals–has been moulded into leafy traceries, floral motifs, geometrical designs and animal and divine figures. Carved little consisting of broken animal and divine figures and sliced off shikhara faces and temple parts is everywhere inside the compound of the monument.

Our evaluation of the work depends upon what is extant. The tapering faces of the shikharas of the unattached end temples were ornamented with the horse shoe pattern. The facing heads on the sunk medallions of the trefoil pediments of the main shikhara exhibit almost perfect roundness of their classical counterparts. The remains of the *'ardha mandapa'* and *'Jagmohana'* pillars of the main shrine testify to their classical proportions. Their plinths are ornamented with lozenge–shaped designs, trouses with floral forms, shafts are classical in form and circular with octagonal endings and the capitals are shaped in the pot and foliage manner. These capitals are, according to Percy Brown *"elaborate in designs and finishing, fully representing the characteristic of their period"*. Each *jamb* of the main doorway has five parallel bands, resembling exquisite filigree work, running over it.

The lotus–covered ceiling of the cella has been mentioned above. The lintel of the main doorway depicts the coronation ceremony of the Shiva. Nine sitting divinities with Shiva in the centre are flanked by attendants waving *chowries* over them. *Winged ganas'* are shown about to place a crown on Shiva's head. The lintels of other shrines also show seated divinities. One has Laxmi as the central figure and the other Ganesha.

Iconography has the images of **Shiva, Vishnu, Ganesha, Indra, Skandha, Durga, Shaktis, Vajravarahi** and others including attendants. Animals are represented by tigers, gees and rams and the like.

Though today the cella contains stone images of Rama, Sita and Laxmana and the main shrine is called **'Thakurdwara'** (a place of Vaishnava worship), these images are a recent introduction. Some eighty years ago the object of worship was a small metal image. The presence of Shiva at the centre of gods in the carvings of the lintel of the doorway of the main shrine shows that originally it was a place of Shiva worship.

Before dealing with the questions of its builders and the time of its construction, it is important to discuss the rock–cut technique and the place this temple–cut style started in the reign of the Pallava king Narsingha Varman I Mahamalla (630–668 A.D.) during the first half of the seventh century when the Rathas of Mammalapuram (near the sea beach, 32 miles South of Madras) were carved out of a free standing rock. It reached its climax in the Kailasha temples at Ellora which were taken in hand during the reign of the Rashtrakuta King Dantidurga (753–756 A.D.) and finished during that of Krishna I (758–773 A.D.). Though rock–cut caves are common in South India, yet temple cut out of free standing rocks, known to archaeologists and art critics, are only four in number–*'Rathas of Mammalapuram', 'Kailashas at Ellora', 'temple–complex at Masrur in Kangra'* and the *'Dharmnatha temple at*

Dhamnar', 65 miles to the South–East of Jhalra Patan in Rajashtan.

The Rathas and the Kailashas are built in the Dravidian style, whereas the Masrur and Dhamnar are in the Nagara style. Masrur beats its Nagara rival in situation, size and execution. *The Masrur complex has 15 temples,* the Dhamnar has only 8. At Masrur the central shrine is surrounded by temples not separate from it, but at Dhamnar the smaller ones are entirely separated from the main one. Carvings and ornamentation at Masrur are of a much superior order than at Dhamnar and the length of the latter is one–third of the former. The Dhamnar group has been built in a pit–like hollow, whereas the Masrur group is on top of a 2500 feet high hill range. One looks below, the other looks up. One depresses, the other elates.

In point of situation, Masrur beats the other two also. Ellora Kailasha are built in a pit a hundred feet deep and the Mammalapuram Pathans lie on a beach on level with the sea. It beats all the other three in the number of constituent units also–it has fifteen, Dhamnar and Mammalapuram have eight each and Ellora has two. However, Kailasha at Ellora is a supreme creation, one of the wonders of the world.

Rock–cut style is much more difficult than the structural one. In the latter, the artist shapes the material as he likes, whereas in the former the material determines the way the artist should move. This limitation makes an artistic creation out of rock a most difficult task and the ability with which the remote artists of the seventh and eighth centuries carried out their purpose is almost superhuman.

WHO BUILT IT?

Like every big thing in these hills, the construction of this monument has also been attributed to the Pandavas. The story goes that they started constructing it during a six month long night. Concurrently an oil–presser and his wife also started pressing oil with the oilseed stock sufficient for such a night. They finished their stock and the women finding the night still not over, lighted a lamp and went out to guess its remaining duration. Taking the light of the lamp as a ray of the dawn, the Pandavas ran away with the work half finished. This was the thirteenth year of their exile and they had to keep themselves hidden from view during the day for fear of being discovered.

The broken down condition of the temples is brought out as the proof of this belief. The oil–presser, his wife, the press and the crushing rod were all changed into stone. The shaft of the pillar and the pillar–plinth lying inside the Jagmohana are stated to be the crushing rod and the oil–press respectively. A similar story is told about the Baijnath temple also. There a Gaddi women is substituted for the oil presser's wife. So ends the legend of its construction.

That the temples are not the work of local sculptors and architects is proved by the absence of any known temple–building tradition prior to the 8th century in these hills. The fact that the temple has been built by hands fully conversant with the early Nagara style and the rock–cut technique and that the conception

and execution is so mature and sure, make the handling of the material by the local learners of the 8th century an impossibility. Therefore, the only surmise is that it was built by a professional and traditional temple–building guild from Orissa or Deccan, the members of which were masters of both the Nagara and Dravidian styles and also of the structural and rock–hewn techniques. The presence of *'Dravida Gopurams'* and the flat roof prove their knowledge of the Dravida mode.

The insertion of outside material like the pillars in the Jagmohana of the central shrine at places where the parent rock was of a poor texture or unsuitable shows their mastery of the structural style as well. That companies of temple–builders used to move from place to place getting temple–building assignments is clear from the case of **"Salats"** (hereditary temple builders) who were invited to build temples from place to place, in Western India. Since all rock–cut temples belong to one single period it can be assumed that all the four rock–cut monument described above, were built by hereditary guilds.

The honour of discovering the temples at Masrur for archaeologists and other goes to **Mr. H.L. Shuttleworth** who brought it to their notice in 1913. The reason for such a late discovery is that its earlier mentions in 1875 and 1891 did not refer to its rock–cut nature and disposed it off only casually. The temple complex remained safe from iconoclastic fury due to its inaccessibility and remoteness and from the 1905 earthquake due to its being of rock. It has been beaten by rain and mauled by wind during the last twelve centuries and the rain water has been almost wholly responsible for its wearing away.

WHEN BUILT?

Without any inscriptional or documentary evidence, the only source to date the temple is its style and sculpture. Structurally, it contained all the essentials of a Nagara temple when built, meaning thereby that it is of a later date than the 6th and 7th centuries when the Nagara temple were still on their way to acquire their essential characteristics. That it is far removed from the elaborateness in design and shape and ornamentation from temples like the Lingraja at Bhuvaneshwar or Kandariya Mahadeo at Khajuraho and conforms to the early types like the Parameshwra at Bhuvaneshwar, fixes it from 8th to 10th centuries. That all the rock–cut temples were built in 7th and 8th centuries and no such temple of a later century has so for been discovered, proves that it belongs to the 8th century, that it is the first Nagara temple in these hills and that Baijnath and Bajaura are of a later date. Baijnath is of the 13th and Bajaura of the 11th century also proves the same.

The aim of a Nagara temple is to convey the soaring urge of the human soul towards the universal spirit. The higher, the bigger is the temple, the greater is the intensity of the urge it reveals. And when the temple happens to be a rock–cut one and a magnificent height and then lying on a high spot, the effect is definitely sublime. The man–made out–shooting *shikharas* of the temple are parallel to the pinnacles of the snowy range and in a way appear to

be challenging them. The Northern view of the temple complex resembles the photographic South–West view of the 'Angkor Vat' and also of the Barabudur. The flanking *shikharas* rise gradually and symmetrically towards the central one to themselves into it. They look like tidal waves on a full moon night rising to kiss the moon or the river–nymphs outstretching themselves towards Krishna dancing on the hood of the *'Kaliya Nag'* or the myriad souls running into the mouth of the Lord as found in *'the Geeta'*. They pool their effect into that of the main *shikhara* to symbolize Krishna's– *" Everything tends to me, oh Arjuna"*.

The monument passes the classical canons of *'saundariya'*, *'lavanaya'* and *'auchitya'*. Ishwara Sanhita defines *saundariya* as harmony of proportions and *lavanaya* as inner expression. By *auchitya* is meant propriety in the choice of the theme and also in its expression through the medium chosen. Saundariya needs are satisfied by the symmetry of the shrine, shikharas, gopurams, carvings and above all the harmonious rise in the elevation of the flanking shikhras towards the main member. Lavanaya which rises out of saundariya and consists in the ennobling total effect is expressed by the self–effacing and dedicatory passion of each of the flanking shikharas to heighten the fundamental emotion represented by the principal piece. Ananda Coomaraswamy quotes Sahitya Darpana (Dance of Shiva) to define poetry as "a sentence ensouled by *'rasa'* (flavour)" It is this *rasa* or rapture created by the concentrated effect of everything merging into the main discipline which gives the *lavanaya* quality to the monument.

The auchitya *attribute* is fulfilled by the uplifting theme of thanking the creator and the desire to rise upto his level and its equally grand external translation in a living rock. Aesthetic wonder (called 'Chamtakara' by Jagannatha) is no less.

BAIJNATH TEMPLE (District Kangra): It is dedicated to Vaidyanath (Shiva). The Baijnath in earlier times was known as *'Kirgram'*, the famous capital of Kiratas. This fact is borne out by the Sanskrita inscription in Sharda script on the stone slabs found in the temple. This temple was built by two wealthy brothers of Kiragrama, viz. *'Manyuka'* and *'Ahuka'* who were sons of Siddha. The temple has much in resemblance with the famous Orissa temples so far as the design and form are concerned. The temple has the main image of a *'Linga'* enshrined in the *'garbhagriha'* measuring 8 square inside and surmounted by a spire in the Shikhara style. It was built in 1204 A.D. and was renovated by Raja Sansar Chand in the 19th century. 36 km. East of Kangra stands the famous *Vaidyanath Shiva* temple at Baijnath situated at the foothills of snow clad Dhauladhars.

The temple has a pyramid–shaped roof. Two and a half meter square from inside and 5½ mtr. square from outside, the temple is surmounted by a conical spire. Four artistic big pillars support the roof of the mandapa, thus dividing the ceiling into beautiful compartments of a fine order. The moulding of the temple is all classical, but it bears lovely layers of Hindu ornamentation. The

very colour of concrete used here sparkles and shines giving it a distinct look.

Cunnigham and Fergusson say that this temple underwent a change at the hands of the Katoch ruler Raja Sansar Chand. But Sir Aurel Stein doesn't agree. The latter says that this Katoch ruler got nothing done except the renovation work. The images of the river goddess and that of the Sun god wearing a jacket still prove that no change had been made in this antique art and architecture of ancient Kangra.

The strong and sturdy built of the temple shows the rare expertise of ancient Kangra artisans. Legend reveals that Ravana had offered his nine heads to Lord Shiva here, but they were all revived when he was going to offer the tenth one. Pleased Shiva had blessed him with a rare Shivalinga, which the former had advised Ravana not to place anywhere before he reached Lanka. But feeling an intense urge to urinate, Ravana had to place it on the earth where it grew so heavy that he could never lift it after that. The same Shivalings now adorn this famous Shiva Temple.

TRILOKPUR TEMPLE: This is near Kotla in district Kangra. In the ancient time, this village was called Trilokinath. This temple is dedicated to Lord Shiva. The river flowing nearby is called 'Totla' river and its source of origin is known as 'Jamula Parbat'. Nearby this temple, is a Buddhist temple, Radha–Krishna temple and a Gurudwara built by Sikh commander Lahna Singh.

BHADRAKLI TEMPLE (KANGRA DISTRICT) : A leaning temple located in the Sarah area of Kangra district has been restored by INTACH (Indian National Trust for Art and Cultural Heritage) under the aegis of the state government. The nearly 400 -year -old temple of a local deity, Bhadrakli got damaged during an earthquake that devastated Kangra valley in 1905. The temple got tilted on its foundation and since then it had been lying in that position for over 100 year without any major damage. The services of artisans from Orissa were hired for the reconstruction. Each stone of the temple was dismantled and numbered so that it could be put back at the same place during the reconstruction. After dismantling the upper structure, the foundation of the temple was dug up to 6 ft. The construction material from a local mine was used so that the originality of the structure could be maintained. In the Kangra Valley, there are many other worth mentioning temples, such as Lakshmi Narayan, Ambika Devi, Shitala Mata and Indershwar temples in Kangra town.

LAKSHMI NARAYAN TEMPLE (Chamba): It is a group of six temples in a row. The principal temple is dedicated to Narayan. The temple contains a marble image of Lakshmi Nath. It was built by Sahil Varman (A.D. 920–940). A brass image of *'Gauri Shankar'* in one of the shrines was installed by Yugankar, son of Sahil Varman.

CHAMBA'S BRONZE ART: Unknown to many, bronze sculpture art has been flourishing in a small pocket in Chamba district of Himachal. The

art has been preserved by Dhadiar community of Chamba and passed since generations. "Chamba is the only district in the entire north region where even ancient temples have metal sculptures. The art of bronze sculptures was patronized by Meru Verman, the king who ruled the area in 6th century AD. Almost all temples at Bharmaur have bronze sculptures. Due to remoteness of the area, the sculptures have remained safe from smugglers. Just one sculpture was stolen from the temple. However, it was recovered and put back in temple. Now artists do not make sculptors for fun, because the cost of bronze has gone up many times so the work is taken on order only.

PANCHAVAKTRA TEMPLE (Mandi): This temple belongs to *'Panchanna Shiva'*. It was built sometime in the 14th century A.D. This temple quite resembles Trilokinath, is situated at a very picturesque site formed by the confluence of the river Beas and its tributary Suketi. Lord Shiva is the chief deity who has five faces and ten arms.

TRILOKPUR TEMPLE: It was built in A.D 1573 by Raja Dip Parkash. Trilokpur is a place of great religious importance. The temple of the *'Mahamaya Bala Sundri'* is quite famous and attracts lakhs of pilgrims from all over Northern India. A fair at this place is held twice a year when a large number of devotees visit this temple and pay their respect to the goddess.The temple of goddess Bala Sundari, another form of goddess Durga, stands on a hillock. On the Eastern side is the temple of *'Laya Devi'*, the goddess of dissolution. Another temple of Lord Shiva has been erected in the middle of the ancient tank. The temple of Bala Sundari stands inside an enclosure. The old building architecture was in the tune with the surrounding area used to give a feeling of devotion has now given place to a huge concrete structure. It has invited much criticism as a result. Old priceless murals and paintings on the walls of the temple have been covered and destroyed with the coatings of thick paints.

Inside the temple is sanctum where "PINDI" of the goddess (symbol of universal Shakti) is grounded since the time of inception of the temple. There are 84 bells tied together at the entrance of the temple. The goddess is also known as "Chaurasi ghanto wali Devi". Twice in a year during Chaitra and Ashwin *navratras* two fortnightly fairs are held at Trilokpur visited by thousands of devotees from Haryana, Punjab, Chandigarh and Himachal Pradesh. A constant flow of pilgrims continue throughout the year.

Another legend has it that about 400 years ago businessman established a grocery shop near the site of the temple. He used to bring articles of daily use from far–off places to sell them on barter system. Once he brought rock salt from Deoband town in U.P. Though he sold rock salt beyond the purchased quantity, there was still much in the stocks. One night he had a vision of the goddess in the form of a girl who told him that she was goddess Bala Sundri and that he should construct a temple there. That is how a small temple of the goddess came up at this place.

OLD TEMPLES: Some temples located around Paonta Sahib. The 'Patalian Jyotrilinga' temple is said to have been worshipped by Maharishi

Patanjali, a disciple of Maharishi Vyas–the author of epic **'Mahabharta'**. **'Shiva temple'** at Shivpuri, 8 kms. from Paonta Sahib **'Bhadrakali temple'** and **'Tirgarhi Gurudwara'** at Bhangani and **'Gangvaha Tirth'** across the Yamuna where Gopalji crossed over the Yamuna bank to please rishi Gautam, the husband of legendary, Sati Ahilya. On the Himachal side of Yamuna bank near *'Gangvaha Tirth'* is **Rampur Ghat**, which legend associates with the crossing of river Yamuna by lord Ram in a boat. At the Paonta Sahib, to the right of Yamuna bridge, stands **'Dei–ka–Mandir'**, constructed about a century ago by the sister of then raja of Sirmaur to propitiate 'Lord Ram', the family deity of the *'Suryavamshi'* Sirmauri rulers.

GAYATRI TEMPLE: On the left bank of the Renuka lake, there are three Ashrams run by *'Sadhu's*. Gayatri temple has a 1.60 meter high *'Panch Mukhi Ma Gayatri Marble statue'*, marble idols of Ganpati, Lord Vishnu, Lord Shiva, Lord Brahama and Lord Indra have also been installed. This temple was built recently by **Sri 1008 'Mahatma Payara Nanda Brahmachari'**. The temple has been dedicated to 'Sri Ma Gayatri' *the mother of Vedas,* the treasure of Hindu wisdom.

JAGANNATH TEMPLE: This was built by Raja Budh Parkash of Sirmaur in A.D. 1681. idols from temples all over the city are carried in procession and floated in the temple tank in salutation to the lord Jagannath on the occasion of *'Sawan Dwadashi'* festival. This is celebrated at the end of Monsoon.

THE MATH: The main temple at Renuka, *'the Math'* was constructed by the invading Gurkhas in 1814. The temple houses the image of Renuka Devi, Parshuram's mother.

BIJLI MAHADEV TEMPLE: Bijli Mahadev Temple is located 14 kms. from Kullu across the Beas river at an altitude of 2,460 meters, one of the most striking temples in the whole of the valley of gods and Goddesses. A 60 feet (20 m) high staff of Bijli Mahadev shrine glisten like a silver needle in the sun. The Bijli Mahadev temple is believed to be Lord Shiva's celestial home situated on a wide plateau, the temple overlooks the confluence of the rivers Beas and Parbati far below.

Even though Kullu valley is known as the valley of the gods, the temple of Bijli Mahadev stands apart in its scenic beauty and architectural style. The name Bijli Mahadev is derived from *'bijli'* meaning *lightning* and *'Mahadev'* another name for *Lord Shiva.* This is because ever since it has been built, the *'Shivlinga'* within the temple is struck every year by lightning which strikes its spire. As a result, the shivlinga is smashed into smitherens and later the priests collect each bit of the shivlinga and join it with butter.

A remarkable feature is that the shivlinga regains its original shape, only to be struck by lightning the next year. This temple, built entirely of stone and wood, has a 60 ft.–high staff to the North. This staff is said to bring blessings to earth from the heaven. Another feature of the temple is exquisitely carved

wooden deodar columns inside the temple which are of snakes. Legend has it that whosoever collects water from the confluence of the Beas and the Parbati and treks up to the temple to bathe the Shivlinga, would be granted any wish made by him. In 1500 A.D. Raja Sidh Pal came to settle here and undertook this arduous task. The result was that he regained his lost kingdom–Kullu. Even though pilgrims and tourists throng this temple throughout the year, the period 16 July to 16 August is considered the most auspicious especially Saturdays, Sundays and Mondays.

VAISHNO DEVI TEMPLE: A few km. from Dhaulpur in Kullu, small cave enshrines an image of goddess Vaishno Devi.

HIDIMBA TEMPLE: Located at Manali in district, Kullu. This is the centre of chief interest, historically and archeologically, 'the Doongri temple' dedicated to the goddess Hidimba, the wife of Bhim of the Mahabharta fame. It has a four tiered pagoda shaped roof and the doorway is carved with legendary figures and symbols. The whole temple is made of wood. It was built by Raja Bahadur Singh of Kullu in 1553 A.D. In the month of May every year a festival is held there.

BHUTNATH TEMPLE: It is situated in the midst of the town Mandi, is the most frequented shrine. Raja Ajber Sen with the construction of this temple founded the new township of Mandi, earlier being on the right bank of the river Beas. This temple has the usual features of a Shikhara type, such as a small porch and a cella surmounted by a spire. Another temple of *'Shikhara style'* is dedicated to the god 'ARDHANARISHWAR'– the idol which has on its right half the image of Shiva and on the left that of Parbati.

MARICH HAVAN KUND: Located in district Shimla, Kumarsain area near Dholaseri, Marich Devta's temple. The havan kund of this temple is unique, due to its panchmukha shape, was reopened after 900 years on 22nd February 2005. Puja was performed as per local tradition and 16 kinds of fruits were offered as satwik sacrifice.

Besides these, there are many other temples of various kinds such as– 'Mrikula Devi' (Kali Devi) temple, founded by Kashmir King Ananta's queen Surya Mati, who was a princess of Kangra, 'Mateshwari Devi and Shiva temple' at Hatkoti in district Shimla. 'Mahasu and Shiva temples' at Deora in Jubbal, district Shimla. The 'Prashar temple' of Mandi, built by Raja Ban Sen in 1346 A.D. 'Maheshwara temple' at Sungra and 'Chagoan temple' in Kinnaur district; 'Manu temple' at Shanshar (in Kullu) is believed to be the only temple of Manu in India; 'Tripura–Sundari' temple at Naggar (in Kullu district); 'Triyugi Narayan' temple at Dyar and 'Adi Brahma temple' at Kokhan in Kullu district. 'Magru Mahadev' temple (Mandi), 'Dakhni Mahadev' (Nirmand, Kullu) and 'Manan temple' (in Shimla hills). 'Surya temple' at Nirath near Rampur–Bushahr, 'Chintpurni temple' in Una district, 'Baba–Balaknath temple' (Deot Sidh) Hamirpur district, 'Gasota Mahadev temple' in Hamirpur district and 'Naina Devi Temple' at Bilaspur.

CHINTPURNI: Chintpurni is a major pilgrimage center and one of the Shakti Peethas in Hmachal Pradesh. The Chintpurni shakti peeth (Chhinnamastika shakti peeth) is located in Una district, surrounded by the western Himalaya in the north and east in the smaller Shiwalik (or Shivalik) range bordering the state of Punjab. The *Chintpurni Shakti Peeth* is dedicated to the temple of Chinnamastika Devi or Chinnamasta Devi. Chhinnamasta or Chinnamastika temple is one of the 7 major and 51 total Shakti Peethas. Here, Chhinnamasta is interpreted as the severed-headed one as well as the foreheaded-one. When Lord Vishnu cut up the body of Sati into 51 pieces so that Lord Shiva would calm down and stop his *Tandava*, the pieces were scattered over various places in the Indian subcontinent. It is believed that parts of Sati's Forehead fell at this place and is thus considered one of the most important of the 51 Shakti Peethas.

According to Markandeya Purana, goddess Chandi defeated the demons after a fierce battle but two of her yogini emanations (Jaya and Vijaya) were still thirsty for more blood. Goddess Chandi cut off her own head to quench Jaya and Vijaya's thirst for more blood. She is usually shown holding her own severed head in her hand, drinking one stream of blood spurting from the arteries in her neck, while at her side are two naked yoginis, each of whom drinks another stream of blood.

Chhinnamasta, the headless goddess, is the Great Cosmic Power who helps the sincere and devoted yogi to dissolve his or her mind, including all the preconceived ideas, attachments and habits into the Pure Divine Consciousness. Cutting off the head suggests the separation of the mind from the body, that is the freedom of the consciousness from the material confines of the physical body. According to Puranic traditions, Chhinnamastika Devi will be protected by Shiva - Rudra Mahadev in the four directions. There are four Shiva temples - Kaleshwar Mahadev in the east, Narayhana Mahadev in the west, Muchkund Mahadev in the north and Shiva Bari in the south - which are nearly equidistant from Chintpurni. This also confirms Chintpurni as the abode of Chhinnamastika Devi.

BABA BALAK NATH: Baba Balak Nath or Sidh Baba Balak Nath is a Hindu deity worshipped in Punjab and Himachal Pradesh. His shrine is known as "Deotsidh". It is 45 Kilometers from "Hamirpur", Himachal Pradesh and is on the border of Hamirpur and Bilaspur districts of Himachal Pradesh. Baba Balak Nath Temple is situated at the village of "Chakmoh" in the district of Hamirpur on the hill top, in a natural cave/ *"Gufa"* carved in the hills, considered to be the abode of Baba. An Idol-Image of Baba is placed in the cave. The devotees offer Sweet Indian Flour Bread"Roti" (a bread made of raw sugar/ "Gur" Jaggery mixed with wheat flour and cooked in Pure Ghee) at the altar of Baba. Goats are also offered to Baba as a gesture for his love. Goats are not slaughtered though; rather they are being fed and taken care of. The entry of women devotees is prohibited in the cave. However, there is a raised platform just opposite to the cave from where the women can have Darshan of the

Babaji's Idol. Just 6 (six) kiloMetres ahead of the "Deot-Sidh" Temple, there is a small town named "Shahtalai" where Babaji is said to have practised penance. The ancient name of this place was Changertalai. Baba Balak Nath's worship and grazing Mata Ratno's cattle, later returning her *roti* (bread) and *chach (butter milk)*, of *Chach*-it got famous by the name of Chahtalai which later turned to Shahtalai, where Baba is said to have practiced Dhyana Yoga (meditation).

Baba Balak Nath is believed to be a Reincarnation of Lord Kartikeya son of Lord Shiva and Goddess Parvati, born Sat-Yuga (Time Frame in Hindu Scriptures) to annihilate demon Tarkasur. Dear to Goddess Ganga and came on the Earthly Abode as the son of a Pandit (Name Prefix for Brahmins) Vishnu and Lakshmi, in Kathiawad Junagadh, Gujarat. The childless couple was granted a baby-boy as a Boon by Lord Shiva and Goddess Parvati for the meditation and medicated prayers performed by the couple, at Girnar. The boy was named 'Dev'. Dev later on became completely devoted to 'Bhagvad devotion'. He got his formal education in Kashi here he mastered and recited Vedas. Back in Junagadh, He meditated on Lord Shiva. On a matter of marriage proposal, He left home to attain eternity and *'Parma Sidhi'*. Under the guidance of Guru Dattatreya, he learnt and attained mastership in concept of *'Sidhas'*. On attaining the *'Sidha'*, Dev became popularly known as BABA BALAK NATH.

K.C SHARMA COMMITTEE: On 3rd July 2008, Himachal government set up a committee to report on the status of temples controlled and uncontrolled by the government. The committee had one member secretary Pt. Prem Prasad and Mr. K.C Sharma as chairman. The report was submitted on 20th July 2009. The committee recommended that out of 45 temples were under the control of state government, 25 should be kept in government control and remaining 20 should be de-notified. The other recommendations were-

-Removal of encroachment from temple area;

- Orientation program me for priests;
- Every priest should have complete knowledge of temple's history and *pujan;*
- Close circuit camera should be fitted in all temples from security point of view;
- Composition of a *"Dharamsthal Parishad"* for the supervision of temple's functioning ; and
- Uniform rules for the workers of all temples.

BUDDHIST SCULPTURE

In the district of Lahaul–Spiti and Kinnaur, there is strong impact of Buddhism. That is why most of the Buddhist sculptures are found in the monasteries of Lahaul–Spiti. The part of the Himalayas (Ladakh, Jammu & Kashmir, Lahaul–Spiti and Kinnaur) which borders Tibet is quite under the influence of *'Lamaistic Buddhism'* (Northern Buddhism). The architecture

here is quite different, from what we understand by the hill architecture. The roofs here are flat, walls have marked inward slope and are made of sun–dried bricks or simple stones, unlike the timber bonded stones. The monasteries found in the Himalayas are of three types. ***Tak–Phu*** (monastery lies in a cave), ***Gompa*** (which is suggestive of a solitary place) and third is ***'La–Khang'*** (temple near some village). It is also called *'da–Khang'* or *'Tsugla–Khang'* which means an academy or a meeting room.

The monasteries in Kinnaur, Lahaul and Spiti differ radically from one at Rewalsar. The former are flat–roofed, while the latter is in the pagoda style with tiered roofs. But from inside both have rooms and corridors and the walls are decorated with frescoes painted in the traditional Tibetan style with themes taken from the Lamaistic lore. *'Thankas'* are also seen hanging against the walls. The *'chapel'* is situated in the centre. The Buddhist priest Padama Sambhava (750–800 A.D.) along with two eminent scholars from Nalanda, viz, 'Shantarakshita' and 'Tamalashila', is credited with introducing in Tibet the Lamaistic order that was known as *'Vajrayan'*. In the Nako monastery his foot prints on rock are held as a sacred record of his visit. The main images which are generally installed in the monasteries are that of–**Buddha, Padma Sambhava, Avalokiteshwara, Vajrapani and Manjushri.** (Last three are the family protectors, which have been very popular with the Buddhists). Some of the well known monasteries located in Himachal Pradesh are discussed below.

MRIKULA DEVI: This is situated about 54 kms. from Keylong at Udaipur. The ancient name of *'Udaipur'* was 'Moorgul' or 'Mrikul'. There is a common belief among the people that this temple was designed by same architect, who designed *'Hidimba temple'* of Manali for Raja Bahadur Singh of Kullu. This temple was built by Raja Ajay Varman of Kashmir.

TRILOKINATH TEMPLE: This beautiful temple is situated five kilometers from Udaipur at Village 'Tunde' in district Lahaul–Spiti. Now this place is famous by the name of Trilokinath. Archaeologists believe that this temple represents Kashmiri–Kannauj art which flourished during the period of Raja Lalitaditya of Kashmir (725–756 A.D.). There are so many presumptions that this Shiva Temple was transformed into Buddhist shrine but according to Goetz, its present image of Avalokiteshwara– Trilokinath can't be earlier than that of 12th century. Whatever fact may be, this temple is sacred to both Buddhists and Hindus alike. In the centre of the compound is a stone image of Bull–Nandi. The silver idol of Kali in her aspect as Mahisasur Mardani was installed by 'Thakur Himpala' in 1569–70.

The statue was cast by one 'Panjamanka Jinaka' from Bhaderwah. The statue head is too big and her crown resembles the ceremonial head gear of a Tibetan Lama. The enclosing frame suggests, brass idols of the 15th and 16th century from Rajasthan, top of it–the backs of early Mughal period. Some people believe that this temple is the work of the same craftsman who built the famous Hidimba temple at Manali for Raja Bahadur Singh of Kullu. Historically this theory sounds plausible because Pratap Singh was the son–

in–law and close friend and ally of Bahadur Singh. There is striking similarity between many figures and other details of the later wood carvings of the Hidimba Devi temple. This, is the last wooden temple in the tradition of the early 8th century. Every year in the month of August, *'Pauri festival'* is celebrated for three days. Hindus and Buddhists both offer prayers to get the blessings of Trilokinath.

GURU GHANTAL GOMPA (3020 mts): This Buddhist temple is situated 4 km. above the confluence of Chandra and Bhaga in village *'Tupchiling'* (in Lahaul). The Avalokiteshwara–a marble head sculpture belongs to 8th century A.D. It has been consecrated by Guru Padamsambhav. This temple got the name Guru Ghantal because, at this place, one of the 84 sidhas of Buddhists had been performing *'tapasya'*. This is a fully wooden temple. *An annual fair is held here in the month of June called* "Ghantal festival" *in which Lamas* and Thakurs participate together. There is also an idol dedicated to Bajreshwari Devi in the Gompa.

GEMUR MONASTERY: The beautiful sculpture of *'Marichi Vajravarahi'* belongs to 11th–12th centuries A.D., located in Lahaul. The figure of the goddess is lovely and sophisticated. It is in Kashmiri style (in Lahaul). It is 18 km. from Keylong in *'Bhaga Valley'* where devil dance is held during July in the Gompa.

SASHUR GOMPA: This Buddhist temple was built in the 17th century by *'Deva Gyatso'* (in Lahaul). During June/July this monastery attracts lots of visitors when Lamas perform devil dance. It belongs to *red hat sect* and is located among blue pines. This gompa has a fifteen feet *'Tankha'* an invaluable wall painting depicting all 84 *sidhas* of Buddhism.

KARDANG GOMPA (In Lahaul): It is situated in the village Kardang at 15,000 feet high *'Rangch peak'*. It was erected around A.D. 900. Kardang is the largest Gompa popular throughout the region. It was in ruins uptil 1912 when 'Lama Norbu' of Khardang renovated it. With colourful frescoes and murals, it has an enormous prayer drum containing strips of paper upon which the sacred mantra *'Om Mani Padme Hum'* is inscribed a million times. The library here contains largest collection of 'Kangyur' and 'Tangyur'. Nuns and Lamas enjoy equality; Lamas can marry and generally they stay with their families during Summer and work in fields only to return in winter. Its founder Lama Norbu died in 1952 and his mortal remains, silver Chityal stupa are preserved in the Gompa. The store here has large collection of musical instruments, dresses, tankhas and other articles. In the Khardang village is another small gompa of Lama Gozzangwa and outside the gompa are rock carvings and two big Chortens.

TAYUL GOMPA: This was built in the 17th century by a Lama of *'Tibet Khan'* area, named *'Lama Sarjan Rinchain'*. He belonged to Gompa Dugma community. This gompa above the village of *'Satingri'* has 5 meters tall statue of 'Padma Sambhava' and his two manifestations as *'Singhmukha'* and *'Vajravarashi'*. The library here houses 101 volumes of *'Kangyur'* and *'Tankhas'*

depicting the life of Lord Buddha. Tayul gompa written in Tibetan as Tayul– means chosen place. This monastery houses a hundred million *'mani'* wheel by turning the minds of sentiment beings open to the compassion of the lord. This mani wheel is reputed to be *"self turning"* on auspicious occasions. According to the Lamas this wheel last turned on its own in 1986. After almost hundred years of its construction a Ladakhi *'Tulku Tashi Tanphel'* of Tagna monastery renovated and extended by building of this gompa. The walls have been decorated with murals, added images referred above and brought in the *'Narthang'* edition of the *'Kangyur'* from Tibet.

TABO MONASTERY: It is the seat of one of the most famous Buddhist monasteries–'Sherlang', 'Duang', 'Chamba Chibbo', 'Domlang Gompas' regarded by many as only next to the 'Tholong Gompa' in Tibet. The 10th century Tabo monastery houses more than 30 lamas, large number of scriptures and pieces of art, wall paintings–tankhas and stucco. This monastery was built by a Western Tibet ruler named 'Ye–Sashoad' around the year 996 A.D., with the inspiration from a Buddhist scholar 'Rinchen Jango'. Tabo monastery is definitely the oldest and archeologically the most important monastery of Spiti. 46 long years were taken in its completion by the workmen who had come from Kashmir, Kullu and Swat alike far off and different places.

The wall frescoes of the monastery is comparable in their antiquity and quality to those of 'Ajanta caves', hence the popular epithet which this monastery has earned. 'Chhamb' is organised in this monastery every year in the month of October. Tabo is known as the Ajanta of the Himalayas. It is serving eastern side population of Spiti. North of this monastery, there are several caves, where it is said, monks used to meditate. These caves are being renovated and preserved by Archaeological department of India. On 12th July 1983, his holiness 14th Dalai Lama 'Tenjing Gytso' inaugurated new Buddhist temple there. Tabo celebrated 1000th year of its foundation in 1996. Seeing temples in each village, besides community temple, there should not be any hesitation in calling Himachal Pradesh 'DEV BHUMI'. Shiva and Shakti are common deity, worshipped all over Himachal, with different names and images.

THE HILL ARCHITECTURE

The Himalayas in the past ages have developed its own distinctive architectural style. This type came into prominence where extensive and dense forests were available. So by hill architecture one should understand the stone and wood structure with a square or rectangular plan and a roof with a concave appearance or superimposed pyramidical roofs, one on the top of the other. The temples with such style lie scattered all over the upper areas of Garhwal, Kumaon, Chamba, Kullu, Mandi and Shimla. The wood carvings in these structures are of great sculptural merit. The wood used in the temples and also houses, which together make a hill architecture, is the Cedars Deodar, locally known as Keloo, is a very valuable timber because it does not show easy signs of decay and is also not prone to the attacks of insects. The life span

of a tree of this pine species extends over a thousand years. The two prominent types of hill architecture based on roof as the style are discussed below:

THE PENT–ROOFED STRUCTURE: These constructions with a pent–roof are simple in structure, the only things required by way of material is stone and wood. Stone is used as is available. The use of wood in the walls is a bit surprising for an outsider. The wood is laid in horizontal position. Apart from its own use, the wood is also made to serve the purpose of cement. It is along the length of the wall that a beam is kept on the outside and another on the inside. The space between is filled with simple stones. There is no use of cement, lime, mud or any other adhesive. The structure thus constructed are extraordinarily durable.

The architecture that developed along the lower hills (Shivalik hills) where Hinduism is a predominant faith, is a simple rectangular construction consisting of a cella raised on square plinth of heavy timber and covered with a sloping roof of slates or shingles. The roof extends over the covered *'verandah'* which serves the purpose of *'Pradakashina'* (i.e. circumambulatory) round the shrine. Carvings on the doors, the pillars and the ceiling is a common feature. Some of the shrines which are truly representing the pent–roof structure, generally covered with slates or shingles are: Bijli Mahadev (Kullu district), Shirgul (Sirmaur district), Hatkoti (district Shimla), Lakshna Devi (Bharmaur), Shakti Devi (Chhatrari in Chamba district) and Kali Devi (at Mrikula in Chamba district). The beauty and uniqueness of Chamba temples is, thorough use of wood, wood carvings and housing fine metal images.

THE PAGODA STYLE: In the pagoda style, the diminishing roofs rise one above the other and the top one, unlike the squarish two, is round which is like the shape of a funnel. The pagoda style shrines are not much in number in Himachal Pradesh as compared to the pent–roofs style. Some of the well known temples of Pagoda style are: Hidimba Devi or Dungari (at Manali in Kullu district), Tripura Sundari (at Naggar in Kullu district), Bijli Mahadev (Kullu district), Triyug Narayan (at Dayar, opposite Bajaura, Kullu district), Adi Brahma (at Khokan, district Kullu), Prashar and Chhatri (Mandi district) and Sungara Maheshwara (Sungara, district Kinnaur). Outside Himachal Pradesh pagoda style is found in Kashmir, Nepal and Burma (now Mayanmar).

THE DOMED TEMPLES: This style is the direct outcome of the Mughal and the Sikh rule. The shrines built in the 18th and 19th centuries by local rulers are representing the domed style. Some of the important shrines belonging to this category are–Jawalamukhi (Kangra district), Chintpurni (Una district), Kameshwar (Mandi) and Tarna temple (Mandi).

THE FLAT–ROOFED TEMPLE OF KANGRA VALLEY: In this category shrines have ordinary walls in mud and lime plaster and the remarkable paintings executed in the traditional *pahari style* round the Ramayana and Mahabharta. Famous among this category includes, the shrine of Narbadeshwar Sujanpur–Tira (Hamirpur district), Ramgopal (Damtal in Kangra), Brajraj Swami etc.

PAINTING

Himachal Pradesh is internationally known for its painting. The origin of the *'Pahari school of painting'* has been subject to a great debate and discussion among art historians. But, whatever it is, the excellence achieved by Pahari painters can be attributed to the seclude hills, comparatively undisturbed condition therein, peace, natural environments, religious mould of life and security and patronage provided to them by the hill chieftains. There are 35 old styles, which flourished in Himachal such as–*the Mandi Kalam, the Kangra Kalam the Kullu Kalam, the Bilaspur Kalam, the Arki Kalam.*

There is clear evidence of local school of painting existing in the hills, before the intrusion of Mughal style. In the initial stages, 'Raja Kirpal Pal of Basholi' (situated in adjoining to Jummu & Kashmir) (1678–94), Raja Chattar Singh of Chamba (1664–90) and rulers of Kahlur and Baghal, who were descendants of the Chandellas of Bundelkhand played a great role in patronizing the art of painting. Himachali painting can broadly be classified as; first *miniature painting*–drawn on stiff handmade paper; second, wall painting–practised in the temples and the palaces of nobles. *Wall paintings* from Rang Mahal, Chamba and Sultanpur palace, Kullu have a great name and have found place in the National Museum, Delhi. Third, *manuscript paintings*–during 18th and 19th centuries, various manuscripts were written. The most popular were *'the Ramayana', 'the Mahabharta'* and the' Bhagvata *Purana'.*

SCHOOLS OF PAINTING

(a) BASHOLI SCHOOL: *This is the earliest known Hill School of painting in the region.* This school came into prominence from the time of Raja Kirpal Pal (1678–94) of Basholi. This cast its influence in the 18th and 19th century on the art of Punjab hills too. The vigour and simplicity of colour add to the beauty and charm of Basholi painting. Colours have been used symbolically–red for love, yellow for spring and blue for the fertile rains and clouds. The central inspiration of the painting is *'VAISHNAVISM'.* Vishnu in his incarnation as Lord Krishna predominates, in the painting of Basholi. The *'Nayak–Nayika'* pictures show intensity of love.

(b) KANGRA SCHOOL: The Kangra School of painting had its roots in *'Guler'.* It is during the reign of Raja Goverdhan Chand (1745–73 A.D.) of Guler, the second phase of Pahari painting began. But Guler was soon absorbed by Kangra, Although Guler style came under the influence of Mughal style, but it developed in local traditions, environments, religious beliefs and life style. Raja Sansar Chand of Kangra (A.D. 1775–1823) who had visualized a big Hindu hill state, patronized Kangra Kalam. The main characteristics of the technique of the Kangra paintings are; delicate lines, charm of colours and ornamentation.

The central theme of Kangra painting was *Lord Krishna and his beloved Radha.* Krishna Leela forms one of the basic features of Kangra painting. Maharaja

Sansar Chand was a devotee of 'Sri Krishna' and the *'Bhagvata Purana'* had been his *'Family Bible'*. The full-fledged development of the Kangra School is said to have taken place at 'Sujanpur Tira', where Sansar Chand commissioned the painting from Bhagvata Purana, Gita Govinda, Mahabharata, Baramasa, Satsai (of Bihari Lal) and Rasikpriya (of Keshavdas) etc.

(c) **ARKI SCHOOL:** Arki was capital of the State *'Baghal'* in Shimla Hills. The Basholi school of painting exercised influence over Arki school too. But soon, Kangra style was adopted. The paintings at Arki deal with Krishna legend, Shiv–Parbati strips and Nayak–Nayika themes of *'Rasikpriya'* of Keshavdas. During the reign of Rana Mehar Chand (1727–43) and Rana Bhup Chand (1743–78), it was Basholi Kalam; but later on Raja Jagat Singh, Raja Shiv Saran Singh and Kishan Singh of *'Baghal'* helped the Kangra Kalam to flourish in the state.

(d) **CHAMBA PAINTING:** The early painting of Chamba was also in the rugged Basholi Kalam. Later on, it was also influenced by Kangra Kalam. Painting got the royal patronage in Chamba for the first time during the reign of Raja Udai Singh. The subject matter of most of the Chamba paintings was Vishnu in his two incarnations–*Rama* and *Krishna.* In the later part of 18th century, Nikka was master–artist of Chamba paintings.

CHAMBA RUMAL

The description of Pahari painting and cultural heritage of the Himalayas will remain incomplete, if no mention is made to the 'Chamba Rumal'. In fact, Chamba Rumal is a generic name for a particular type of embroidery done on cloth pieces by household women in different parts of the state and the Jammu region as well. Painting was as much an art as it was a fashion. So how could then women folk lag behind who emulated the male skill with brush and translated it into embroidery. Sooner cloth substituted the paper; the needle, the brush and threads, the colours and pigments.

The name *'Rumal'* means handkerchief. But these were not used to be kept in pocket. Generally meant for covering the gifts placed on metal and bamboo trays and baskets on any special occasion such as birthday, wedding, festival or fair. One of the finest specimens of this art depicting the battle of Kurukshetra was presented by Raja Gopal Singh of Chamba to the British Resident in the 19th century and it is now in the Victoria and Albert Museum, London.

The shape of the *'Rumal'* is varied; with square and oblong shapes, they ranged from a small to a bed–sheet length. White *'khaddar cloth'* as the base and untwisted, unspun raw silk threads in various hues consisted the material used in the Rumals. Double satin stitch technique is deployed, which gives similar expression to the Rumal on its both sides. Besides the handkerchief, the other products of this craft included *wall hangings, hand–fans, dice–board, the bodices, the cushion* and *pillow covers, caps, fans* (pakkhi) and many other things.

It is in the beginning of the 20th century that Raja Sir Bhuri Singh of

Chamba (1904–1919) had arranged for producing such embroidered cloth and took them to Delhi on the occasions of the Darbars held in the years 1907 and 1911. This was most probably the first general appreciation of these embroidered cloth pieces and thus Chamba earned the name related to this craft. In Mandi, Suket and Bilaspur states, the type of embroidery more popular was different from the type of embroidery of the Chamba Rumals. The end of the 19th century saw the decline in the style of Chamba Rumal embroidery. A renewed interest was created in this craft by Dr. J.P. Vogal and Raja Sir Bhuri Singh. There is an oblong shape Rumal produced most probably in the second decade of 20th century, present in the collection of the 'Bhuri Singh Museum'.

The most favoured subjects are–Ras–Leela, Radha Krishana, Shiv-Parbati, Ganesha with his *'Ridhi'* and *'Sidhi'* and secular themes such as marriage ceremony, hunting and Nayak–Nayika bhed etc., find expression in the Rumal, which follows the tenets of Pahari miniature painting. After independence, Himachal Pradesh Handicrafts and Handloom Corporation paid attention to this artistic activity. A training–cum–production centre for Chamba Rumals was opened in Chamba. 'Smt. Mahesi Devi', who received the National Award for master craftsmen in the year 1965 and 'Shri Prem Lal', a descendant of a famous Gujarati painter's family at Chamba, were appointed as the instructors in embroidery and designer department in the first instance. Various schemes have been launched by the State Government to help in the preservation of this artistic glory of Himachal Pradesh. On 31st October 2008 Chamba rumal was declared World Heritage by UNESCO. This was in recognition of its unique embroidery and delicate colour combination.

PAINTERS IN HIMACHAL

There is nothing known about the painters of early period. It is only in the 17th century A.D., from where we get some idea about the famous painters of the time. During the reign of King Raj Singh of Chamba (1765–94), a contemporary of Sansar Chand, an artist called 'Nikka' depicted high mark in the Chamba style. In the 17th century, 'Pandit Seu' of Pahari School, did a great service to the art of Guler. He had two sons, 'Manaku' and 'Nainsukh'. Both brothers inherited the art of painting from father, Pandit Seu. Younger brother Nainsukh was an employee of Raja Balwant Singh since A.D. 1743. Manaku (Manak) also achieved greatness in the art of painting. He is considered one of the great masters of Pahari miniature painting, during the reign of Raja Sansar Chand of Kangra.

It is now fairly certain that the 'Sat Sai Series', the Lambagraon Baramasa and the Rangmala are the hand made of 'FATTU', the eldest son of Manak. The Srimad Bhagvata Purana is probably the work of 'Kishan Lal' (Kaushala), another son of Manak, while Godhu, a nephew of Manak, may also have been associated with these works. Kishan Lal and Godhu were Sansar Chand's atelier incharge.

The earliest painting in Mandi style depicts King Keshav Sen of Mandi (1595 A.D.). During the reign of King Samar Sen, an artist **'Guler Baksh'**, was sent from Mandi to Guler for training. The coronation of King Preetam Singh to the throne of Kullu provided necessary impetus to the growth of Kullu style (in 1667 A.D.). **'Sajanu'** was famous painter of that period. Most of the wall paintings of the Akhand Chandi palace and Laxmi Narayan temple at Chamba are handmade of **'Durga'** and **'Mian Tara Singh'** during 1748–1764 A.D. The other famous wall painters were **'Mohammadi', 'Gahiyaram'** and **'Goverdhan Kayastha'.**

In the modern period, a great work has been done by **'Nicholas Roerich'** (Known as Maharishi), a Russian, whose son **'Sveteslav Roerich'** married the beauty queen of Indian Cinema **'Devika Rani'.** He portrayed about 7000 canvass on the Himalayas. **'Norah Richards, 'B.C. Sanyal'** and **'Sardar Shobha Singh'** all have done a commendable service to enrich Pahari painting. 'Sohni Mahiwal' is an excellent work of Sardar Shobha Singh. An old artist of Kangra, School, **'Guru Chandulal Raina'** was doing supervising work of Kangra School till his health allowed him. *There is an art gallery by the name of Sardar Sobha Singh at village* **'Andretta'** *in Kangra district, housing excellent works of the period.*

Famous families of Chamba, who acquired name in the art of painting and spread far and wide, are following:

(a) **Mangu,** a *tarkhan Manikanth by caste* was first in the family in Chamba to expose to the art of painting. He was followed by his son Chhabia and Chhabia by Ghamandi. He had two sons Ugaru and Bansia. Bansia's three sons Arjan, Ramdayal and Issar, Ramdayal had three sons, Harbhaj , Jawahar and Sohnu. Issar, Bansia's son, had a son, Durga. He had two sons Manganu and Gopala. Jawahar's son was Kanthu and Sohnu's Motiram. Motiram had three sons; Sridhar, Pratap Chand and Paras Ram. Gopala had two sons; Hoshiara and Hira Ram. Hira Ram had four sons; Mahesh Das, Mehar Dutt, Bhagwan Das and Ram Chand.

(b) **Banwari,** *tarkhan Chitehre by caste,* was the first according to family record in the field of painting. He was followed by his son Kanga and Kanga by Uttam. Uttam had two sons. Kishna and Jawala. Jawala had only son Phagu. Kishan, the elder brother had three sons; Molak, Kundan and Labha. Kundan, the second among three brothers, had two sons; Pharju and Gidu. Gidu had two sons Nathu and Nandu. Nathu, the elder one, had three sons Rama, Gauri and Mirchu. Labha, descendant of Kishan, was followed by son Ganga, grandson Bilu and great grandsons Prem Lal and Chuni Lal. Rama, son of Nathu, had two heirs, Hushiaru and Basdev; while Gauri had Chandi and Lal Udho. Prem Lal son of Bilu had three sons; Ami Chand , Hans Raj and Parakash Chand . Chuni Lal, younger brother of Prem Lal, had only son Gurcharan.

(c) **Ghali,** *a tarkhan by caste living in Chamba town,* was followed by

Jindu. Jindu had four descendants; Nathu, Fattu, Gorakhu and Sarup. Gorakhu and Sarup had one son each, Nathu and Gangadas. They were followed by their son Mahesh and Gurdas respectively.

(d) Another painter of Chamba town, **Mukund**, *tarkhan Gujarati by Caste*, had two sons Gokal and Govind. Govind had four sons; Nanda, Kesho, Lal and Chakru. But nothing is known about the descendants of four brothers. On the other side, Gokal had two sons; Dees and Rangila. Dees followed by son Kripala and grandson Laharu. Laharu had three sons; Thakaru, Dholu and Punnu. Punnu had two sons, Dalpat and Chandan. Attra was descendant of Chandan and Murlia of Dholu.

(e) **Gunjaru**, represented by the painter family of *'Chair'* in Chamba. This family was old native of Guler and later on settled at Bandi. It *represented tarkhan Chitrere caste*. He was followed by son Kuku and grandson Fauju. Fauju had four descendents; Purkhu, Uttam, Lalman and Ramji. Purkhu followed by Ugar and Uttam by Bardu, Maru and Jawalu. Ramji, the youngest son of Fauju, followed by Jawala. Jawala's five descendants were Khemdi, Sidhu, Ganesha, Musaddi and Nandu. Siddhu followed by Syama and Sardha and Nandu by Gidu and Sridhar.

H.P. State Handloom and Handicrafts Weavers Apex Cooperative Society Ltd

The Himachal Pradesh State Handloom and Handicrafts Weavers Apex Cooperative Society Ltd. (HIMBUNKAR) came into being in the year 1984. The main objective of this organization was to provide a forum to artisans of handicrafts and handloom as well as primary cooperative societies in the state. HIMBUNKAR aims at keeping the traditions in line with the latest market trends. Nearly 253 primary cooperative societies of the artisans, craftsmen and weavers spread across the state (mostly situated in rural areas) are its members. As many as 89 of these primary societies are organized and managed by women. The field of handloom and handicrafts in Himachal Pradesh is quite vast. The constituent societies of HIMBUNKAR are engaged in manufacturing ladies and gents shawls (woolen, angora and pashmina), mufflers, stoles, jackets, long cloth, patti, tweeds and elegant ready-to-wear garments, classic Tibetan carpets, leather sandals and shoes with typical embroidery on velvet, Chamba handkerchiefs, jute items, pottery, woodcraft, metal crafts and ornaments in traditional designs.

HIMBUNKAR facilitates the member societies by providing raw material, improved designs, modernized tools, appliance, technical know-how as well as latest, trends and techniques. It also helps in undertaking marketing of their handloom and handicrafts products through its retail shops / mobile van and by participating in various national and state level exhibitions and fairs. HIMBUNKAR also organizes exhibitions within and outside the state on its own.

5

STATUS OF WOMEN

"In all countries good care is taken to preserve the chastity of women. Behind this attempt of every society to preserve the chastity of women is seen the hand of nature. The tendency of nature is to multiply the population, and the chastity of women helps that tendency. Therefore, in being more anxious about the purity of women than of men, every society is only assisting nature in the fulfilment of her purpose."

- Swami Vivekananda

In a society like that of India having thousand years of cultural traditions, the social status of women is resultant of an enormous variety of social conditions and multiplicity of factors. Since long, women, not only in India but all over the world, had been a subject of suppression, neglect and demoralization lot in the society. Indian society is a male–dominated society in which women are treated as a material things. They have been exploited and denied equal place as men in the society. Her right place has been considered to be the home were she should attend the kitchen work and considered fit for only producing and rearing up children. However, with the advent of independence, a change in their role and status got accelerated. The women got opportunities to raise their voice against exploitation and discrimination on the basis of sex which hindered their progress and automatically social status.

To ascertain the real position of women in society, one shall have to go back to history. In ancient India, women enjoyed a very high status in the society. *'Rig Veda'* and *'Upanishad'* accorded the highest social status to the women of those days. They had full freedom, equal social, political and religious rights and regularly participated in religious ceremonies. No *'Yajna'* could be performed by a husband without the participation of his wife. Manu says, *"Where women are honoured, the gods are pleased, but where they are not honoured, no sacred rite yields any reward".* (यत्र नारी पूज्यते, रमन्ते तत्र देवता).

In ancient time, society was patriarchal and monogamous. The birth of a girl was generally an unwelcome event, but once the temporary feeling of disappointment was over, the family took keen interest for her well-being and happiness. *Goddess of fortune was regarded as residing in the person of unmarried daughter.* As regards education, Vedic study was common and fairly widespread. They could study religious scriptures, Vedas and philosophy. They were authors, scholars and also composed hymns. Among the authors and scholars to whose memory a daily tribute of respect enjoined to are, Sulbha

Maitreyi, Vedava Prathileye and Gargi. By the end of Rigvedic period, the women came to occupy lower status. It is due to certain historical factors. In order to maintain the purity of Aryans race from Dravidians, a number of restrictions were imposed on the women's freedom. The woman was no more an emancipated personality but became a slave of man. The socialising forces of women's position to the Indo–Aryan society disappeared. Man made laws and his viewpoints decided her fate. In Gupta period with the revival of Brahmanism, greater restrictions were put on women.

Further, the invasion on India by foreigners, to the establishment of British authority in the second half of 18th century, witnessed deterioration of women's position in India. It was because of the breakdown of social institutions, the upsetting of traditional political structure, the vast migration of people and economic depression and undefined social status of life, Rigorous seclusion of women became the rule as a result of the imitation of the system of *'Purdah'* which the Muslims enforced and a sense of fear arising from the lack of general security. *Illiteracy, early marriage, Sati Pratha were main factors that deteriorated the status of women to a lowest ebb.* Female education on the mass scale was vanished. Marriage age of a girl was fixed and custom of *'Sati'* established.

Position of widows in the Hindu society was very pitiable and were largely prohibited from remarrying. Such women passed their lives amidst tremendous sufferings. In ancient times, women were invested with the right to remarry after the death of their husbands. But gradually restrictions were imposed on remarriage of widows. In *'Manu Samhita', remarriage was considered a matter of great dishonour and infidelity.* The custom of Sati was practiced with severity. No doubt, there were certain social factors which encouraged the wide prevalence of this practice. The death of a man deprived his wife of all her worldly pleasures and was treated very inhumanly by the society and passed her days in worse conditions than that of a slave.

Her life was restricted by numerous social taboos. Therefore, it was better for a widow to burn herself with the body of husband than to live a miserable, shameful and frustrated life. Therefore, the position of women, during medieval period, deteriorated to such an extent that she had hardly any right worth the name and without any right of knowledge, she was steeped in ignorance and prejudice. Social prejudice against her was so firmly established that she had hardly any opportunity, freedom or right to self–expression and development.

On the advent of the 18th century, situation underwent a change. As the society was much more settled and not subjected tc the pressure of continuous invasion, the position of women underwent no further deterioration. The advent of the British marked an entirely new phase in Indian society. The various socio–religious reform movements such as *'Arya, Samaj', 'Brahma Samaj',* gave an impetus to this awakening. Ishwar Chand Vidya Sagar, Raja Ram Mohan Roy, Swami Vivekanand, Swami Dayanand, Jotiba Phule, Sir Syed Ahmed Khan, Justice M.G. Ranade etc. started movements to put an

end to the inhuman practices, customs and traditions and emphasized the need of women's education and widow remarriage. A number of Acts were passed to put an end to some evil practices like 'Sati'. Women plunged into India's struggle for independence and distinguished themselves in various roles, the prominent were like Rani Laxmi Bai, Sarojini Naidu, Aruna Asaf Ali, Sucheta Kriplani, Kasturba Gandhi, Annie Besant, Indira Gandhi, Madam Bhikaji Cama, J.M. Sengupta etc.

In 20th century, the earnest endeavours on the part of social reformers, educationists and political leaders gave new concept to the status of women. With the independence of the country, women came into their own as equal partner with men. The constitution of Independent India prohibits any discrimination against any citizen on grounds of religion, race, caste, colour and sex. Not only that, by the Directive Principles of the Constitution part IV, the state is required to endeavour to secure for citizens a uniform civil code throughout the territory of India. To remedy this inequality, four Acts–*the Special Marriage Bill* (1872), *the Hindu Marriage Bill* (1955), *the Hindu Succession Bill* (1956) and *the Adoption & Maintenance Bill* (1956) have been passed by the Parliament.

The education and economic independence added to the political consciousness and awakening which brought about tremendous changes. The recognition of the rights of equality, new socio–economic epoch, education and ideological revolution were the cause of the emancipation of women. These factors encouraged women to play an increasingly effective role in public affairs. Traditionally women's occupational status has always been closely associated with the family and homes. In recent times, educational, political, economic and social changes in her role which was hitherto restricted to that of a house wife, have infused a new sense of confidence. Nowadays, there is no job to which they cannot aspire. More and more educated women are taking up new occupational roles.

The overall analysis under various states reveal the position of women in India. A better position of the women is still an uphill task ahead to bring the status of women at par with men in the society. The change experienced by her life pointed out the problems which Indian womanhood has been confronted with and the new type of dangers which have been threatening to thwart realization of their real equality. The employment of women outside home has added to their duties and functions. They have to perform new dual functions–one in the home of a traditional mother–wife role and another outside the home.

In spite of our government policy declaration for the progress of women towards equality, the government has failed to implement it. An analysis of the statistical data shows Indian social situation to the distressing trends to the dark old days as far as the living conditions and the plight of large masses of Indian women are concerned. In many fields such as sex–ratio, literacy, education, employment and political participations, women are still far behind

than men. The status to which women are being reduced in India today can be clearly and definitely studied in the number of women as compared to men in total population of the country, i.e., the sex ratio.

SEX RATIO: The average sex ratio in India has been generally adverse to women. The number of women per 1,000 men has not been encouraging over the decades. According to the census of 1991, the national average sex ratio was 929 which had declined by seven points from 1981. In 2001 it went up six points upto 933 and up by seven point upto 940 in 2011. An analysis of the state–wise Sex-ratio, Andhra Pradesh , Tamil Nadu, Daman & Diu and Lakshwadeep shows sex–ratio above the national average. However, the sex–ratio in Himachal Pradesh shows a constantly increasing trend from 1941 onwards.

In Himachal, the sex ratio has been above the national average, 976 according to 1991 census. As compared to the figure of the 1981 census, the literacy rate has increased from 37.92 to 52.13, while the national average of females were 29.75 (1981) to 39.42 (1991). The district wise variation in sex ratio in Himachal Pradesh is very ranging from 717 in Lahaul-Spiti to 1,105 in Hamirpur. Districts with sex ratio above 1,000 ware highly localized in Hamirpur, Una, Kangra, Mandi and Bilaspur. In the past decades Himachal Pradesh has shown a very high growth in literacy sector. In 2001, the literacy rate for women in Himachal was 67.04 point, while at all India level it was 54.16. In 2011 in Himachal it went up to 76.60 point and at all India level 65.46, a huge gap of 11 percent was visible, which reflect the changing demographic profile of Himachal Pradesh.

The female population also has variation in rural and urban areas. The female population in rural area is higher at 49.72 percent as compared to 44.28 percent in urban areas. The reason that more women reside in rural area for looking after their agriculture and allied pursuits, whereas more male population reside in the urban areas for their services, business and other profession.

The expectation of life for females at the time of birth is higher than that of males. According to 1981 census, the expectation of life at birth estimated 54.1 years for males and 54.7 for females, based on 1980 SRS mortality rates. The female life expectancy would continue to improve faster than that of males. 1986-91 projected values of expectation of life at birth for males was 58.1 while for females 59.1. Birth rate, death rate and infant mortality rate are all lower in Himachal Pradesh as compared to all India level.

There has been marked improvement in the female infant mortality rate. The decline in male infant mortality rate was 28, the corresponding figure of female infant was 34 (during the period 1972–74). According to 1981 census, the growth rate of +23.71 and in 1991+19.39, the birth rate 31.5 (33.9), death rate 11.1 (12.5) and mortality 71(110). This indicates that the women of Himachal Pradesh are more educated and health conscious and have better health and maternity facilities. According to the census report of 2001, it was shocking that sex ratio deceased to 968 from 976 in 1991. In rural areas it

was 989 females, while urban it was 795 females for every one thousand male. The difference of 194 points between rural and urban sex ratio was simply because of large migration of male members of family from rural to urban areas for job and other activities. At the state level the gender gap in literacy in 2001 worked out 16.8 points while highest of 28.9 percent was recorded in the rural areas of Chamba district.

The status of women in Himachal has to be taken in wholistic way to really assess their progress. So it is equally important to study the position of women in Scheduled Caste and Tribes communities. The sex ratio among scheduled caste as per 1991 census was 967 which marginally went up to 968 in 2001 and 970 in 2011. The female literacy was quite low as compared to male literacy among Scheduled Caste. The proportion of female literates was only 41.0 percent in 1991 which rose to 60.4 percent in 2001. The gender gap in literacy was 24 points as per 1991 census which narrowed down to 19.6 points during 2001. As per 2011 census the female literacy further rose to 65.9 percent, which ultimately narrowed the gap further with male literacy rate of scheduled castes.

The sex ratio among scheduled tribes is still better than scheduled castes. The sex ratio was 981 females per 1000 males in scheduled tribes population in 1991, which further rose to 996 females in 2001 census. But in 2011 census the female number has been recorded quite low i.e. 896 female against 1000 male. Literacy in female tribal population was very low and gender gap in literacy was still very high which comes to 24.4 points as per 2001 census. The percentage of female literates was only 31.2 in 1991, which rose sharply to 53.3 percent in 2001 and 64.9 percent in 2011. *(Note: Figure in bracket are showing national average)*

In so far as literacy rate is concerned, female literacy rate is comparatively good in Himachal Pradesh than of all India rate. The literacy rate of females was lower upto 1961 census. According to the 1991 census, the female literacy rate of 52.13 percent increased further as compared to 1981 census that was 31.46 percent. The all India literacy rate was 52.2 percent in 1991 and 31.46 percent in 1981. According to the 1997 survey (data released in 1999) the All Indian Literacy Rate increased to 62 percent. However, as compared to male literacy rate of 75.36 percent female rate was very low, i.e. 52.13 percent in Himachal Pradesh. As per the data issued by NSS (1997 survey, data released in 1999) Himachal Pradesh occupy the 7th position with 77 percent and Mizoram ranking at 1st with 95 percent. In Himachal Pradesh, highest percentage of literacy was among the lowest age group of 15–19 years. In adult education, the position of women was much better than men.

Like other developing countries, in India the work participation rate of women has not been very high. But in the recent time, there has been clear tendency on the part of women to undertake paid work job outside the home. Himachal Pradesh is one of the states with a fairly high percentage of women employment, 18.8 percent, as compared to 48.8 percent among men. Even

the adjacent states of Punjab and Haryana had lower employment of women; Punjab 2.7 and Haryana 4.69 percent only. But as compared to special category states, Himachal Pradesh women's work participation was quite lower to Meghalaya (35.29), Nagaland (42.15), Sikkim (34.69) and Manipur (34.59) by the end of 1991–92. The employment rate for urban Himachal Women according to 1981 census, was higher than the all India urban women, 9.53 percent as compared to 7.57 percent.

The areas where women have been employed more are in teaching alone constitute 30.93 percent. Social workers, nurses, doctors, employed in organized sectors, public and private are only 29.90 percent. The political participation of women in various elected bodies all over the Himachal Pradesh was very low. In Himachal Pradesh Vidhan Sabha, there were only six women out of 68 members and 29 women Pradhans out of 2,922 Panchayati Pradhans (1999). The largest number of women are engaged in agriculture and labour work (50.03 percent). The work participation of women in district Kangra, Hamirpur, Una, Shimla and Mandi is steadily increasing due to the exposure to the modern education and access to modern means of development such as radio, T.V. newspaper etc. The participation which was considered as a matter of composition is getting legitimate recognition.

According to the census of 2001, out of the total registered workers 2992461, the female were 1305803 nearly 44 percent of the total work force. This shows very high growth rate of female workers as compared to previous census data. With increasing educational facilities and wide exposure to the modern world, Himachali women prefer to go out for job, that is why according to 2011 census the female work force has gone upto 15,16,049 out of the total registered force of 35,59,422; constituting 42.60 percent of total work force.

As far as traditional and cultural values are concerned, no independent status for women has been recognised by Indian society. For assessing their status, various factors like marriage, birth, dowry custom and bride price, pattern of relations between wife and husband's kinship group, multiplicity of spouses, divorces, separation, widowhood and remarriage are to be examined. Social structure describes their status as mother, wife and daughter. Marriage is the destiny of a women. Parents used to feel an anxiety to get her marry as early as possible. Thus, it had become a custom to get girls married at an early age.

In Himachal Pradesh, the percentage of married in lower age of 15–19 years was 31.54 percent whereas the All India level 43.44 percent till 1996-97. Both in rural and urban areas, the average age of married women was 16.8 years in H.P. as against 17.4 years for all India women. But contrary to this, in Himachal the average age of married women of urban areas was higher. 18.5 years, than urban women at all India level 17.4 years. The survey report of 2011-12 reveals that married women age in Himachal has gone up considerably. In rural areas it was 21.3 years and in urban centers 23.1 years. The delay in marriage both in rural and urban areas could be attributed to

growing literacy, delay in getting employment and increasing cost of living. There are number of socio-economic factors responsible for growing age of marriageable girls.

A close examination reveals that rites and rituals of Hindu marriage stress male primacy and superiority. The marriage ceremonies as *'Kanyadan'*, is the implicit belief that bride givers are lower than bride takers, hence marriage automatically establishes the lower status of women.

In recent times, the custom of giving dowry has assumed all the characteristics of market transactions. The custom of dowry is on the increase all over India and has penetrated among lower castes and communities and also regions which did not practice it earlier. As a result, the practice of killing female child to death soon after the birth or female infanticide came into practice. It is also increasing day-by-day. This is also a reason that the occasion of a girl child birth is not celebrated with joy as a son but a day of mournment, what so ever she is respected as *'Devi'* or *'goddess'*. The cases of bride burning or suicide by the brides have increased to the apex. These crimes are most prevalent in Uttar Pradesh, Punjab, Rajasthan and Gujarat, but Himachal Pradesh has less number of such cases.

The society of Himachal Pradesh is a blend of tribal and non-tribal civilized and semi-civilized. Therefore, the tribal women have a wide freedom. But they are bound strictly by traditions and social taboos. Polyandry is confined to tribal people of Kinnaur, Lahaul-Spiti, Shimla and Sirmaur. Marriages used to be settled at an early age. There are instances of matches being settled, while the babies are not yet born based on assumption that one will be a boy and another girl. In Himachal Pradesh also, the occasion of girl child's birth not used to be celebrated with joy, while the birth of a son is a great occasion and rejoicing in the village and mother treated with great reverence.

The condition of widows in our country have continued to be the blackest and shameful blots on our society even now. The restrictions on widows as regards the use of cosmetics, wearing colourful clothes, jewellery, participation in social functions are found in every society. In Himachal, all higher castes do not allow the widow to remarry but lower castes do. In some cases of polyandry, when husband dies, the wife as the property passes to the next brother. In some cases, after the death of the older brother, the younger one marries the widow. Sometimes, the widow leaves her husband's house and move with someone else. In Pangi, a widow may remarry, but such marriages are not held in high esteem.

But among the higher castes, even if widowed young, she must suffer her widowhood till her dying day but may not remarry. Not only this, the *'Dehri'* monuments outside most of the villages are reminder of the prevalence of the system of *'Sati'*. As regards the right to divorce, tribal women are not generally subjected to early marriage. She is married when she is matured and if her marriage is a failure, she has right to divorce. Tribal women do occasionally leave one husband to go and settle with another, but higher caste

occasionally leave one husband to go and settle with another, but higher caste frown on promiscuity. Some tribal communities have a divorce law also known as *Dehi, Hari* or *Har*, which is held above all the courts of law. Due to the spread of literacy, economic independence and awakening against male, mental and physical torture, the cases of divorce have increased in higher classes. Mostly women divorce on personal rather than financial causes.

The higher castes also follow a custom of *Purdah*. To approach the elders with a bared head is considered inauspicious. They must not utter the name of older relatives, must not sit on a seat higher than the one occupied by the elders of the family, serving the in-laws are her daily routine. If woman foregoes any of her duties, she is heavily criticized.

The law of inheritance differs from area to area but all the areas follow the Hindu system of a joint family based on ties of blood, thus authority passes directly from the father to the son. The Indian Act regarding the distribution of property 1956 is followed everywhere in Himachal. According to this Act, the father's property is equally distributed among the brothers and sisters. But the father usually wills his property to the sons because to him the sons take care and serve him well.

In the absence of son, daughter inherits the property of the father. In case the girl is unmarried, she can marry but her husband has to live with her and look after the property of his wife. It is a strange matter of India's progress that after decades of Independence, women are still not safe. They are molested, assaulted and discriminated. At home, they are even worse off, as in many poor homes they are reduced to become slavish drudges. In the family, they are maltreated, sometimes beaten by their men, sometimes their in-laws burn them alive for inadequate dowries. Whatever little gains women had earned during freedom struggle are wiped out by adverse socio-economic and political forces.

The women in Himachal Pradesh work side by side with men in agriculture and their role is as important in the fields as at home. In the agricultural operation, women are constantly at work, breaking earth, transplanting, weeding, reaping, threshing, pounding or carrying head loads of fodder, firewood, manure, water, grain, flour, rock and clay. They perform all types of difficult work with great care and tenacity, though are of lesser strength to men. After the household chores are over, women are mostly away from their homes, most of the day, collecting grass, leaves of firewood or tending animals in the forests. On moonlit nights at harvest time, they usually work in the fields after meals till past midnight.

During winter and rainy seasons, when there is little work in the fields, they are busy with spinning, weaving, knitting and mats and baskets making. In some areas they do help men in knitting and mats and baskets making. In some areas they do help men in chopping wood. In horticulture, besides the pruning and plucking, she is also mainly responsible for grading and packing of apples and other fruits. The rearing of animals, milking of cows and

by hill women. Most of the animal husbandry work is done by women. It is the women who tends the animals in the forests and at home, collection of dung of cattle, dumping it and later carrying it to the field to be used as manure. Cleaning of the cattleshed, plastering of house with cow–dung and taking care of the sick animals also fall to her share of work.

Besides the work associated with animal husbandry, horticulture and agriculture, she works very hard at home. Children have to be brought up and taken care of, food for the family has to be cooked and even carried to the men working in the fields. Women in Himachal Pradesh. Particularly in rural areas work like a machine. The inequitable division of labour among men and women here is surprising. The role of women in the above mentioned activities has become so fixed and customary that she never protests against it and keeps on doing all sorts of work with cheerfulness and freedom. According to a report women in Himachal work minimum 15 hours daily. Although Himachali society is agrarian, yet 90 percent work in the fields is done by women and men contribute only 10 percent.

In the household work such as in kitchen cooking food, fodder for animals, arrangement of drinking water etc. 90 percent work is done by women. In rearing of animals, their contribution is 50 percent. Women in Himachal has participation on a large scale in social and economic life. By the end of 2010 there were nearly 15 lakh employed women in one or other form in the state, 23 percent women were either earning equal or more to their husband. But the sad part of the story is that out of these employed women 43 percent of women in Himachal are anaemic, 19 percent have never gone to school and 52 percent are victim of either sexual or physical violence.

Being one of the first states in the country to have made 50 per cent reservation for women in the Panchayati Raj institutions and urban local bodies, the state Government in 2008 took several steps that have helped women, especially the destitute and single. The percentage of elected women representatives in Himachal is at an all-time high of 58 per cent. They may yet be trying to find their feet in their new role as "pradhans", but the increasing number of self-help groups run by women is an indication of their empowerment. As per the latest census figures, the number of women in Himachal is 33.82 lakh. There is also 33 per cent reservation for women in cooperative societies.

The list of schemes for women's empowerment is long. *'Mata Shabri'* schemes include the *'Jivan Shiri Bima Yojna'*, in which up to Rs. 75,000 is given on the death of *anganwari* workers and helpers. Under the *'Matri Shakti Bima Yojna'* for BPL women, the insurance amount has been enhanced four times. A Mata Shabri scheme for SC women provides 50 per cent subsidy on LPG connection and stove. New schemes launched by the BJP led government in 2008-09 included the Mukhyamantri Kanyadan Scheme, in which Rs 11,001 is given at the marriage of daughters of widows, divorcees and destitute women. Under a widow remarriage Scheme, Rs 10,000 is given at marriage

women. Under a widow remarriage Scheme, Rs 10,000 is given at marriage and another Rs 15,000 as fixed deposit for five years. The Mother Teresa Ashaya Maitri Sambhal Yojna provides Rs 2,000 each for two children of widows, divorcees or other destitute women annually. The government has also extended health coverage and separate ration cards to single women. To recognise the role and importance of women in society, State Government in 2014, decided to make ration card by the name of women head of the family.

On 30th October 2013, aimed at making itself accessible to women even while sitting in the confines of their homes , whether in a town or village, the State Commission for Women will reach out to those in need by extending facility of on-line complaints. This step was taken after knowing well that internet facility is there now all over the state. Many harassed women, both working as well as housewives, seek help of the commission in their fight for justice.

All the above observations conclude that the status of women, particularly in India, has always been considerably depressed. This section of society i.e., half of the total population forms as important a human resource as its counterpart men and can contribute significantly to all the fields of development of the society. Still an uphill task is ahead to bring the status of women at par with men in employment, education and political participation. Traditionally, women have remained far behind men in availing educational opportunities because of various social and other basic obligations, despite the fact that women possess similar ability as men. But discrimination is largely the result of social values, which places the women in secondary position and under the subjugation of men.

The following table shows the trend of the past hundred years in the status of women in Himachal Pradesh and at All India level.

SEX RATIO & LITERACY RATE OF FEMALES 1901–2011

Year Himachal	Sex Ratio All India	Females Himachal	Females All India	Literacy
1	2	3	4	5
1901	884	963	0.24	0.7
1911	889	954	0.23	1.3
1921	890	945	0.32	1.8
1931	897	940	0.53	2.6
1941	890	935	-	-
1951	912	946	2.49	8.86
1961	938	941	9.50	15.36
1971	958	930	20.23	21.97
1981	973	934	37.72	29.76
1991	976	927	52.13	39.29
2001	968	933	67.4	54.16
2011	974	940	76.66	65.46

Women in the Politics of Himachal Pradesh

Although Constitution of India has guaranteed equal opportunities and rights to women at par with men, yet political power is still a male monopoly and a distant dream for common Indian women. The active participation of women in governance processes has remained restricted to a smaller number of elite women and not to the common Indian womenfolk. Women are hardly making a progress into politics and their participation in politics at the state and national levels has been appallingly low. If we look at the representation of women in Parliament, we find that in 13th, and 14th lok Sabha, there 52 women members while in the 15th Lok Sabha had only 59 women members which was mere 10.86 percent of the total strength of 543. The number of women MPs elected to the 15th Lok Sabha was the highest since independence. This figure shames the largest democracy of the world despite the fact that women constitute nearly half of the citizenry and voting strength.

It has taken more than five decades for the percentage of women members in the House to move-up partially from a mere 4.9 percent in the first Lok Sabha in 1952 to 10.86 percent in 15th Lok Sabha in 2009, a figure that is far below than the average of around 15 percent in the countries which have elected legislatures. In the 2014 Lok Sabha, 61 women got elected to Lok Sabha which means that there are 11 percent female and 89 percent male members. In this election Congress gave tickets to 60 women and BJP to 38 women. The three leading parties Congress (I) BJP and APP combined gave ticket to 1325 candidates, out of that 157 were women, nearly 12 percent.

As per the latest survey of Indian Institute of Public Opinion, the countries like Sweden (40.4%), Norway (39.4 percent), Finland (33.5 percent), Denmark (33.0 percent), Holland (31.3 percent), Newzealand (26.2 percent), Germany (26.2 percent), Spain (24.6 percent), China (21.0 percent), Switzerland (21.0 percent), Canada (18.0 percent), Australia (15.5 percent), Mexico (14.2 percent), USA (11.7 percent), Russia (10.2 percent), Britain (9.5 percent), Bangladesh (9.1 percent), etc. have better representation of women in their legislatures than India.

Similarly, the representation of women in the decision making positions has been significantly quite low in India. Since the first Lok Sabha (1952), a very few women have reached the highest level of authority. Till date (2014) , there have been only one woman Prime Minister, 15 women cabinet ministers, 57 Ministers of State and 23 Deputy Ministers. Further, women were generally given 'soft' portfolios like health welfare, culture, education, women and child development, etc. and are excluded from the key ministries like Commerce, Defence, Home, Finance, Foreign Affairs, Railways, etc. In the new ministry formed in 2014, some solid portfolios have been given to women ministers.

In Himachal Pradesh there is , a unicameral legislature consisting of 68 members. Out of the total sixty-eight legislative assembly constituencies,

sixteen are reserved for scheduled castes and three for the scheduled tribes. The state has four seats including one reserved for scheduled castes in the Lok Sabha and three seats in the Rajya Sabha. Since its formation, in 1948 this hill state has crossed many milestones. The actual momentum of growth and development mainly picked up only after the State attained statehood in 1971. The metamorphosis of Himachal Pradesh from a backward hill state to one of the most developed states in the country has been truly remarkable. As per India Today Report 'State of the States' (2013), Himachal Pradesh was ranked best in investment, primary education and health. Himachal is the first State to achieve universalization of primary education and 100 percent literacy-faster than Kerala.

There is a significant participation of women in various fields like education, occupation, employment, etc. in the past few decades in the State. Women have been holding important positions in various capacities in the State like Governor, Ministers, members of Parliament, Chief Justice, State Election Commissioner, Chief Secretary, Additional Chief Secretary, Principal Secretary, Divisional Commissioner, Secretary, Additional Secretary, Chief Accountant General, Superintendent of Police (Crime), Director of Health, Director of Education, etc. Besides this, women have been holding important positions in various other departments of the government in the State. But they are still marginal in politics. Women are not getting adequate representation in the Parliament, State Legislature and other decision-making bodies. A strong women's political activism is still not visible on the part of the Himachali women. Like India, gender bias has always been there in the politics of the State. The politics is dominated by men and they want to retain their monopoly on it.

Here we will make an attempt to analyse the nature and extent of women's participation in politics in the State of Himachal Pradesh and to know the main factors which are responsible for relegating them to the secondary position in politics. Further, some measures have also been suggested to bring women to the centre-stage of the politics of the hill state. Although not much in numbers, yet Himachali women remained an integral part of the national freedom movement and various Praja Mandal Movements. Some prominent women activists who took active part in these movements were Durga Bai Arya and Mera Ben in Una, Lalita Kumari, popularly known as Rani Kheragarhi in Mandi; Raj Kumari Amrit Kaur, a disciple of Mahatma Gandhi in Shimla; Norah Richard wife of Phillip Richard; Sarla Sharma, Susheela and Ram Rakhi, a niece of Pahari Gandhi Baba Kanshi Ram in Kangra; Dev Vati in Theog (Shimla); Sunhari Devi, Sakno Devi and a Harijan Women Almo Devi in Sirmaur, etc.

Thus, women remained on the fore front of freedom movement in the State but their number was very small. It may be mentioned here that the women who took active part in these movements were either from royal families or were wive or daughter or relatives of some revolutionaries. However,

the general women folk remained indifferent towards the freedom struggle in the Hill State of Himachal Pradesh.

After independence, Women's participation in politics has increased and improved in the State. But, the impact is more visible in voting than in other political activities. Elections to the State Legislative Assembly were first held in 1952 when Himachal Pradesh became a Part 'C' State of the Indian Union. After the dissolution of the Assembly on October 31, 1956, next elections for the Territorial Council which replaced the Assembly were held in 1957 and 1962. After the revival of the Assembly on July 1, 1963, elections have been held at regular intervals in 1967, 1972, 1977, 1982, 1985, 1990, 1993, 1998, 2003 in 2007 and 2012. Till today, 14 elections have been held in Himachal Pradesh.

In a democracy, voting determines the sovereign will of the people. It is the "right to vote" by which the people vote a government in and out. Voting is the means for choosing leaders for determining who shall govern. Participation of voters at the time of election indicates their involvement in the political process. In a country like India, most of the citizens participate in governmental affairs only through voting. The voting is the most common mode of political participation among the women. The number of women voters has been almost equal to the men voters and sometimes even more in different elections to the H.P. State Legislative Assembly. Table 1 shows the participation of women in voting during the different Assembly elections from 1972 onwards in Himachal Pradesh.

Table 1

Participation of Women in voting in Different H.P. Legislative Assembly Elections (1972-2012)

Year	Voters (in lakhs) Voting			Percentage			Diff. in Men & Women Voting %
	Total	Men	Women	Total	Men	Women	
1972	18.05	-	-	49.95	-	-	-
1977	19.97	10.27	9.70	58.57	62.16	54.76	- 7.40
1982*	22.12	11.02	11.10	71.06	73.29	68.85	- 4.44
1985*	23.52	11.73	11.84	70.36	71.91	68.83	- 3.08
1990	30.58	15.47	15.11	67.73	69.48	65.97	- 3.51
1993	32.67	16.43	16.24	71.72	72.21	71.21	- 1.00
1998**	36.28	18.27	18.01	71.23	70.24	72.23	+ 1.99
2003**	41.01	20.81	20.20	74.51	73.14	75.92	+ 2.78
2007**	46.04	23.36	22.68	71.61	69.67	74.55	+ 4.88
2012**	46.08	16.4	17.2	73.51	70.93	77.05	+6.12

Note : Data before 1972 are not available. The voting percentage of men and women (2007) does not include postal votes as the sex-wise break-up of 21,483 postal votes polled is not available

** More women voters than men.*

*** More voting percentage of women than men.*

Source: Reports on General Elections to Himachal Pradesh State Legislative Assembly from 1972 to 2012, Chief Electoral Officer and Financial Commissioner, Government of Himachal Pradesh, Shimla-9.

The above table brings out that there was not much difference in the number of men and women voters in different Assembly elections in the State. In 1982 and 1985, women voters were even more than men voters. The data in the table also show that voting percentage of women has increased in the past elections. In the last four Assembly elections of 1998, 2001, 2007 and 2012, the trend shows that women have exercised their franchise more than that of men.

This indicates that due to the higher literacy among the women in the State, 68.08 percent in 2001 and 76.60 in 2011, they know very well the value of their votes. They are conscious about their voting right. The increase in voting percentage of women indicates that their interest in politics is increasing and this increasing participation of women in voting may be considered as a sign of strengthening of political democracy in the hill state. The increase in the voting percentage of women in different elections may also be attributed to the fact that the women representatives in PRIs and Municipalities, and other women political activists are mobilizing the women voters to take active part in voting during the elections.

Although, women as voters are playing a very important and decisive role in the formation of governments in the State, yet their representation in the State Legislature, Parliament and decision making bodies has been very disappointing. Women's representation in the State Legislative Assembly Territorial Council remained appallingly low before 1972. Women who have been the members of the State Legislative Assembly, Territorial Council before 1972 are: Umavati, Satyavati Dang, Devindra Kumari, was elected to Himachal Pradesh Legislative Assembly from Geharwin constituency after the integration of Part 'C' State of Bilaspur with Himachal Pradesh in 1954.

Satyavati Dang was nominated to the Territorial Council (1957-1962), Devindra Kumari was elected to the Territorial Council/Legislative Assembly from Chamba constituency (1962-67) and Subhadra Amin Chand remained a nominated member of Territorial Council/Legislative Assembly (1962-67). Sarla Sharma became member of Himachal Pradesh Legislative Assembly after the Re-organization of the State of Punjab on 1st November 1966 from Barsar constituency. There was no woman member in the State Legislature from 1967 to 1971.

The table 2 shows that the representation of women in the State Legislative Assembly has been very small in comparison to men. Their number never exceeded 7 (10.29 percent) and that was in 1998. In 1972, soon after Himachal Pradesh attained Statehood, 5 (7.35 percent) women entered the Legislative Assembly. In 1977, there was only one woman representative in the State Assembly. After that, except in 1998 their representation in the State Legislative Assembly revolved around 3 (4.41 percent) to 5 (7.35 percent). In 1972, four women namely Sarla Sharma (Kutlehar), Chandresh Kumari (Bamsan), Lata Thakur (Lahaul Spiti) and Padma (Bhatiyat) contested the Assembly elections and interestingly, all the four women won.

Table 2

Representation of Women in H.P. Legislative Assembly (1972-2012)

Year	Total Seats	Total Candidates	Women Candidates	(%age to the Total)	Seats Won by Women	(%age to the Total Seats)	Party-Wise Distribution of Winning Women Contestants			
							INC	JP	BJP	JDT
1972	68	55		(7.35)*	5	-	-		-	
1977	68	330	09	(2.72)	1	(1.47)	-	1	-	-
1982	68	441	09	(2.04)	3	(4.41)	2	1	-	-
1985	68	294	08	(2.72)	3	(4.41)	3	-	-	-
1990	68	454	17	(3.74)	4	(5.88)	1	-	2	1
1993	68	416	16	(3.85)	4	(5.88)	4	-	-	-
1998	68	369	25	(6.78)	7	(10.29)	4	-	3	-
2003	68	408	31	(7.60)	4	(5.88)	4	-	-	-
2007	68	336	25	(7.44)	5	(7.35)	1	-	4	-
2012	68	459	34	(7.40)	3	(4.41)	2	-	1	-

** One Woman member was elected in the bye-election.*

Source: Reports on General Elections to Himachal Pradesh State Legislative Assembly from 1972 to 2012, Chief Electoral Officer and Financial Commissioner, Govt. of H.P., Shimla-9.

Note: In 1980 Indian National Congress was renamed by Ms. Indira Gandhi as Congress (Indira).

After the death of a Congress MLA, Lal Chand Stokes, his wife Vidya Stokes was elected to Vidhan Sabha in a bye-election in 1974 from Theog constituency. In 1977, nine women contested the election but only one woman (Shyama Sharma) got elected. There were three women each in 1982 (Vidya Stokes (Theog), Chandresh Kumari (Thural) and Shyama Sharma (Nahan) and 1985 (Vidya Stokes (Theog), Viplov Thakur (Jaswan) and Asha Kumari (Banikhet) who were elected to the Vidhan Sabha.

In 1990 elections, four women (Shyama Sharma (Nahan), Vidya Stokes (Theog), Leela Sharma (Gopalpur) and Sushma Sharma (Chintpuni) were elected to the State Assembly whereas in the next elections of 1993, the number again was reduced to three Viplov Thakur (Jaswan), Asha Kumari Banikhet, Anita Verma (Hamirpur) and Major Krishna Mohini (Solan). In a bye-election of 1994, one more woman (Anita Verma) was elected from Hamirpur Assembly constituency.

Women's performance was the best ever in 1998 Assembly Elections, when in all seven women were elected, four on the Congress ticket (Vidya Stokes, Viplov Thakur, Asha Kumari and Krishna Mohini, and three on the BJP ticket (Urmil Thakur, Sarveen Chaudhary and Nirmla Devi) but one of the members, Krishna Mohini was unseated by the Supreme Court Judgement in 1999. In 2003 Assembly Elections, again four women of the Congress Party remained successful (Vidya Stokes, Asha Kumari, Anita Verma and Chandresh Kumari). In 2007, five women (Vidya Stokes of the Congress Party, and Sarveen Chaudnary, Urmil Thakur, Renu Chadha and Vinod Kumari Chandel

of the BJP) were elected to the State Legislative Assembly. In 2012 Vidhan Sabha only three women got elected; Asha Kumari (Dalhousie), and Vidya Stokes (Theog) on Congress (I) ticket and Sarveen Chaudhary (Shahpur) on BJP ticket.

The above statistics present a very disappointing picture of women's representation in the Himachal Pradesh Legislative Assembly. From 1972-2012, women have been elected on 36 seats and only 19 women have been elected against these 36 seats. Some women representatives have been elected more than once. Vidya Stokes has been elected for seven times; Asha Kumari for five; Viplov Thakur, Shyama Sharma Sarveen Chaudhary and Chandresh Kuamri for three times each; Anita Verma, Krishna Mohini, Urmil Thakur have been elected for two times each whereas Nirmal Devi, Leela Sharma, Sarla Sharma, Sushma Sharma, Padma, Lata Thakur, Renu Chaddha and Vinod Kumari Chandel have been elected once.

One of the reasons for the low representation of women in the H.P. Legislative Assembly is that there has always been a very small number of women contestants. Table 2 shows that upto 1985, there has been only five to nine women constants. In 1990, there number increased to 17 (3.74 percent) which further got increased to 25 (6.78 percent) and 31 (7.60 percent) in 1998 and 2003 elections respectively. Again the number of women contestants decreased to 25 (7.44 percent) in 2007 Assembly elections despite the loud demands made by the Women's frontal organizations of the two main political parties of the State i.e. the BJP and the Congress for fielding women candidates at least on 33 percent of the total seats.

In 2012 there were 34 women candidates but only three could won the election, two from Congress Ms. Vidya Stokes and Ms. Asha Kumari and from BJP it was Ms. Sarveen Chaudhary. This time women voted in a very high percentage i.e 77.05 percent but they could get only 4.41 percent of the total seats in the Vidhan Sabha. It is rather a disappointing and discouraging number of women contestants in comparison to their voting strength. The political parties seem very reluctant to field women candidates and a very few women are put up by them as candidates in the elections. Though, some women contested elections as independent candidates but they never won any seat. Thus, contesting election still remains a male prerogative.

WOMEN IN THE STATE COUNCIL OF MINISTERS

Like Legislative Assembly, women's representation in the Council of Ministers also remained very low in the State. There was no woman in the Council of Ministers from 1952 to 1971 and there has been a very few women ministers from 1972 to 2012. Sarla Sharma and Shyama Sharma remained Ministers of State in 1972 and 1977 respectively. Chandresh Kumari was made Deputy Minister in 1977 and Minister of State in 1984. In 1985, Vidya Stokes was appointed as *first woman Speaker* of the State and she also remained the

Leader of Opposition from 1990 to 1992 and 2007 onwards. Leela Sharma was made Parliamentary Secretary in 1990. In 1995, after the expansion of Council of Minister, Asha Kumari and Viplov Thakur were inducted as Minister of State and Anita Verma was made Parliamentary Secretary. In 1998, two women, Urmil Thakur and Sarveen Chaudhary were made Parliamentary Secretaries.

In 2003, in the Virbhadra Government, for the first time three women were appointed as Cabinet Ministers. They were Vidya Stokes, Asha Kumari and Chandresh Kumari. But, later on Asha Kumari had to resign due to a judicial case lying in the Hon'ble Court and Chandresh Kumari had to lose the ministry due to the down sizing of the Council of Ministers to 15 per cent of the total number of members of the State Legislative Assembly according to the 91st Constitutional Amendment Act of 2003. In 2005, Anita Verma was made Parliamentary Secretary and was dropped after four months. In this way, the representation of women again got reduced to one in the eleven members Council of Ministers. In the (BJP) Dhumal Government of 2007, only one woman, Sarveen Chaudhary included in the Council of Ministers as a Cabinet Minister. While Urmila Thakur was made Parliamentary Secretary. After 2012 Vidhan Sabha election Vidya Stokes was made cabinet minister and no other women member could find place in the state cabinet.

WOMEN'S REPRESENTATION IN THE PARLIAMENT

Like State Legislative Assembly, women's representation in the Parliament also remained appallingly low from Himachal Pradesh. From 1952 till date, only three women were elected to the Lok Sabha from the State. In the first Lok Sabha General Elections of 1952, Raj Kumari Amrit Kaur was elected from Mandi- Mahashu Parliamentary constituency from the State on the Congress Party ticket. She was also included in the Central Council of Ministers as a Health Minister with a Cabinet rank. She was the only woman member of the Lok Sabha so far from the State who remained a minister in the centre. After that till 1980, five elections were held to Lok Sabha, but no woman could reach to the Lok Sabha from the State. Chandresh Kumari was elected from Kangra Parliamentary Constituency in 1984 and Pratibha Singh, wife of Chief Minister, Virbhadra Singh was elected to Lok Sabha from Mandi Parliamentary Constituency in 2004 and 2013. All these three women elected to the Lok Sabha so far belonged to the Congress Party. Women's representation in the Rajya Sabha from Himachal Pradesh is comparatively good than the Lok Sabha. Leela Devi Mahajan (1956-62) of Mandi was the first woman to represent the State in the Rajya Sabha.

After that, Satyawati Dang (1968-74), a prominent politician of the State; Mohinder Kaur (1964-67 and 1978-84); Usha Malhotra (1980-86) Chandresh Kumari (1996-2002) Viplov Thakur (2006-12) and Vimla Kashyap (2010-

16) remained members of the Rajya Sabha. Further, Viplov Thakur got an opportunity to become the member of the Rajya Sabha second time in 2014. Chandresh Kumari, is the only woman in Himachal Pradesh who has got an opportunity to be a member of both the houses of Parliament i.e. Lok Sabha and Rajya Sabha as well as the State Legislative Assembly. She also remained a Cabinet and Deputy Minister in the State Cabinet. At the national level party politics, she also remained the President of All India Mahila Congress. In 2009 Lok Sabha election, Chandresh Kumari contested from Jodhpur in Rajasthan and entered in the Lok Sabha on Congress (I) ticket and was inducted in the union cabinet, remained minister from 2009-2014.

In 2014 Lok Sabha Election women voted (65.83%) more than men (64.55%). In Hamirpur constituency their voting percentage was highest (71.73%), while men's share only 69.61 percent. In Kangra, women voted 67.32 percent and men 62.00, in Shimla constituency women were 61.46 and men 67.16, in Mandi Lok Sabha seat also women were a little behind with 62.05 percent than men's 65.10 percent. In Himachal Pradesh women are positively expressing their political will and wisdom.

WOMEN IN LOCAL SELF GOVERNMENT

The 73rd and 74th Constitutional Amendment Acts (1993) are a revolutionary landmark in the history of women's participation in politics in India. These amendment Acts have provided 33 percent reservation of seats for women in the Panchayati Raj Institutions (PRIs) and Municipalities. This has laid down a strong foundation for women's participation in decision making at the grass-roots level. These amendments have worked as a breakthrough towards ensuring equal access and more participation of women in the political power structure.

The Panchayati Raj Institutions and Municipalities are playing a very significant role in the process of enhancing women's participation in public life at the local levels. In consonance of the 73rd and 74th Constitutional Amendment Acts, Himachal Pradesh Government has also passed its Panchayati Raj and Municipalities Acts in 1994 and first elections to the Panchayati Raj Institutions and Municipalities according to this new Act were held in December 1995. Till date, four general elections have held to the Panchayat at village level and Urban Local bodies in the State in the years 1995, 2000, 2005 and 2010.

In the year 2005 concluded panchayat elections, in total there were 23582 seats of all category, out of these 8478 were captured by women. In that more than 33 percent of panchayat pradhan were women, 36 percent of block development samiti (out of 74) and 33 percent of Zila Parishad were also won by women. At that time there were 3037 village panchayat, 74 panchayat samiti (BDC) and 12 Zila Parishad. In these bodies women got elected to more seats, than allotted to them, like 1016 women were elected Pradhan, 6728 Ward (Village) Panch, 27 BDC Chairman, 562 BDC members and 4

Zila Parishad Chairman and 57 Zila Parishad members. Out of these elected women, 77 percent were from farmers families, and out of that 93 percent were married. The survey report reveals that 19 percent of the elected women jumped to politics by their own, 7 percent were backed by their husbands and 8 percent with the initiative of society, husband and other family members.

The latest amendment to panchayati Raj Act (2008) provided 50 percent reservation of seats for women in Panchayat at village level and urban local bodies which is a historical step for the political empowerment of women in this hill state. In 2010, the elections to Panchayats at village level and urban local bodies were held as per the provisions laid down in the Himachal Pradesh Panchayati Raj Amendment Act, 2008 vide which 50 percent seats were reserved for women in Panchyatas at village level and urban local bodies .

The experiment of 50 percent reservation of seats for women in Panchayats at village level and urban local bodies has been successful in the State. Before 1995, women's representation in Panchayats at village level and Municipalities was maximum upto two women in all the bodies. After 1995, it has increased to minimum 33 percent and now 50 percent since 2010 elections to the Panchyatas at village level and urban local bodies. The representation of women in these institutions has shown an increasing trend. In the last four elections to the Panchayats at village level and urban local bodies , women have been elected even from the unreserved seats and their representation has been more than the fixed quota allotted to them.

In order to ensure equal participation and representation of women in Panchayats at village level and Municipalities, the government of Himachal Pradesh has taken an important step in this direction. The State Assembly has passed unanimously the Himachal Pradesh Panchayati Raj (Amendment) Bill, 2008 on April 8, 2008, raising the reservation limit for women in Panchayats at village level from the existing 33 percent to 50 percent.

It also passed the Himachal Pradesh Municipal Corporation (Amendment) Bill, 2008, and Himachal Pradesh Municipal (Amendment) Bill, 2008 to provide 50 percent reservation for women in place of the existing 33 percent in Municipal Corporation, other municipalities and urban local bodies. These historic amendments were brought about by the government so as to enhance participation of women in politics at the grass- roots level. This step was taken by BJP Government led by Prem Kumar Dhumal, to ensure greater participation of women at grass root leval politics which with passage of time will train them for higher level political arena.

RESERVATION IN PANCHAYAT BODIES: On 25th November 2010, the state government released the roaster of reservation in panchayat bodies i.e. village panchayat, panchayat samities (BDC) and zila parishad. According to new scheme 1622 post of panchayat pradhan were reserved for women (50% of the total), 193 for SC, ST, OBC and 1458 in the non reserved category. Total posts were 3273. In the Panchayat Samiti, 828 posts for women, 198 for SC, ST and OBC and 630 post unreserved (total seats 1656). In the category of

ward members 9705 seats were reserved for women, 2329 for SC/ST and OBC and 7377 were open seats. Total seats of ward member were 19411.

For the Zila Parishad, 125 were reserved for women 30 seats for SC, ST and OBC and 96 unreserved. Total seats of zila parishad were 251. In 2010 panchayat elections 50 percent seats were reserved for women. In this election 111 panchayat were elected unopposed. For 3085 post of panchayat pradhan, 13868 candidates were in the contest, for ward member total post were 19411 and contestants were 36688, for 1651 seats of panchayat samiti (BDC) there were 6363 candidates and for 240 seats of zila parishad 1109 candidates contested. (Seats *and candidates of unopposed panchayats are not included.)*

However, occupying formal positions of power is not enough. That does not make one necessarily powerful. The real test of power is one's ability to influence decision-making in a public action affecting the community. It has been observed that though the representation of women in PRIs and Municipalities has increased but the situation of reservation could not make much difference in leadership in these bodies. Their leadership and effective participation in decision-making process is still far behind than the men. It is found that many elected women in Panchayats and Municipalities are only leaders in name and the real authority is possessed either by the male family members or the male members of these bodies. Women members, at large are ignorant of governance. But, gradually they are learning to assert themselves, using their power for the good of the community and are showing achievements.

Women seem to be on the path of political empowerment at the grass-roots level, although at a slower pace. Although, the 73rd and 74th Constitutional Amendment Acts have provided access to women to take part in politics at the grass-roots level in the State, yet their representation in the Parliament and State Assembly is woefully poor. Women are at a great disadvantage in power politics in the State. Their participation in politics and various other decision-making bodies is still marginal despite the fact that significant changes have taken place in the hill society. With a few exceptions women have remained outside the domain of power and political authority. The handful of women who have managed to make their way into the political system of the State have been able to do so because of their political patronage, high social or familial status. They come from affluent, politically active and well-connected families. The visible faces in the politics of Himachal Pradesh either belong to royal families or are wives, widows, daughters or daughters-in-law of prominent politicians. In other words, we may say that the 'Bibi-Beti-Bahu' syndrome is in operation to a great extent and the general womenfolk is kept away from the politics. But with in creasing awareness among girl students at college and university level and emergence of new educated and untraditional political class, there are all expectations, that women will have their due share and all expectations that women will have their due share and role in the state and national politics.

WHAT CAUSES LOW PARTICIPATION IN POLITICS ?

The trend and obstacles, which are prevalent in other parts of the country, are also there is Himachal Pradesh. There are many factors which are responsible for the low participation of women in the politics of the State. As a matter of fact, the various socio-cultural, economic and political factors obstruct women from taking part in politics. Himachali women have to encounter many obstacles because of traditions, prejudices and social conditions of the hill society. Social traditions look women as a part of the household, not as a part of the public life. Politics till few years back was still regarded as Men's affairs and political life was generally considered to be a masculine activity. The male dominating society of ours is generally reluctant to accept women as decision-makers. The power is generally enjoyed by men in every field and at every layer of the society. As politics is mainly concerned with power , so naturally women are kept out of it.

This is an irony that women can become the President, Prime Minister, Governors, Chief Ministers, conquer the Mount Everest, travel in the space, bear the administrative and judicial responsibilities, work in police and army, but the doors of politics are still narrow for them. This is because most of these political posts were occupied by women who had links with higher strata of the society. Most women themselves are also unwilling to join politics. There is a role perception among women that certain things are not worth doing for them and politics is one of them. The traditional and conservative outlook of women confines them to the domestic chores. Further, the engagements of women in household chores, child care, family responsibilities, and agricultural activities burden them extremely and refrain them from participating in the political activities because of lack of time.

The political parties in the past were also reluctant to field the women candidates in the elections because of their perception that women have less prospects of winning the seats. The political parties do not want to give tickets to women despite the loud promises they make with regard to allotting party tickets to the women in the elections from time to time. They do not do justice with women while distributing the tickets. Surprisingly, about 50 percent of women's population also do not compel the political parties to field more women candidates from their side. The political parties make excuse of winnability criteria while allotting tickets to women. Further, it is also interesting to note that while all the political parties in principle support the Constitutional Amendments for 33 percent reservation for women in the Parliament and State Legislatures but no party has so far come forward to nominate this percentage of women for elections to the Lok Sabha and State Legislative Assemblies.

In the recent past, a lot of hue and cry is being made over 'Women's Reservation Bill' by the different sections of the society including the various political parties, but nobody seems to be honest in this respect. The vari-

ous other reasons which discourage the women from participating in politics, mainly include – the criminalization of politics, lack of safety and security, lack of incentives, illiteracy, ignorance, lack political awareness and exposure to the outer world, lack of self-confidence, lack of time and resources at the disposal of the women. One more reason that slowed the participation of women in politics is its being full time job which is harder for women due to their other responsibilitties. Less participation should not be taken as gender discrimination.

HOW TO ENHANCE PARTICIPATION ?

Keeping in view the low participation of women in politics, the question now arises that what should be done to enhance the women's participation in politics. In order to enhance women's participation in politics, at the very outset, it is necessary to overcome the various hurdles that come in the way of their participation in politics. The spread of education, political awareness, competence, willingness, self- confidence and motivation among the women, and the encouragement and support from the family, society and political parties will help in bringing women in the mainstream of political arena.

No efforts of the government for the political equality and empowerment of women can be either effective or adequate unless women themselves become conscious and aware about their political rights and duties. Women, on their own should also develop a positive attitude towards politics. Women should not confine themselves to the four walls of their houses but should come out of their domestic and traditional role assignments and spare time to take part in politics. The spread of education among women can play a very vital role in bringing about desirable behavioural changes among the women and make them well equipped in terms of knowledge, awareness, skill, self-confidence and capacity to deal with different problems. Women's participation in politics to a great extent is influenced by their families. If women get the support and co-operation of their families, they will participate in politics with great enthusiasm and vigour. Hence, the family support and co-operation is necessary for enhancing participation of women in politics.

Further, political parties must encourage women to take part in political activities by providing them important offices in the party hierarchies, allotting them party tickets to contest the elections and if elected they must be encouraged by giving them important portfolios in the government and various other decision making bodies. There is a need for political parties to promote the candidature of more and more women. It should be made mandatory for every political party to field atleast 33 percent women candidates in the elections to the Parliament and State Legislatures. The political parties will have to increase their efforts to nominate women for winnable seats and not be contented to have female candidates as token of a commitment to gender equality. Further, reservation of seats for women in the Parliament,

State legislatures and various other decision- making bodies as in the case of PRIs and municipalities should be effectively adopted and implemented. If women can be given opportunities to show their leadership abilities and capabilities in the PRIs and Municipal bodies, why can not they be given representation in the Parliament and State legislatures through reservation.

The reservation would be an enabling step for women's political empowerment. However, reservation is just a means towards equality and not an end in itself. Mere reservation will not solve the problem unless and until women are given commensurate powers to function effectively. It is also essential to discard criminalization of politics by taking stern action against the culprits. In our male dominated patriarchal society, sometimes, it has been seen that women political activists and even the elected women representatives become the victim of sexual abuse, exploitation, violence and harassment. The women should feel themselves secure and safe in all spheres including the politics. Unless and until, the fear of dirty politics from the minds of women is removed, their active participation in politics will not be possible. To train women for bigger political responsibility, there should be orientation and seminars for local bodies women representatives from time to time.

Empowerment of Women In Himachal

Women in Himachal Pradesh have been involved in activities outside their homes. They work in fields, rear animals and are also engaged in small and cottage industries. Besides, they are also holding jobs in government offices as well as in private sector. All these factors have contributed to their economic status, freedom of movement, mobility, decision making power, and social recognition. In spite of all this, women face gender related disparities as is normally seen elsewhere. Their activity profile, quality education, concerns of heath, work participation rate, attitude towards girl child, under nutrition and other stereotypes. However, availability of tap water, electricity, LP Gas connections, and SHG movement etc. has reduced the drudgery. MGNREGA has also added to their economic status.

The socio-economic status of women in Himachal Pradesh is as under:-

MALE-FEMALE RATIO: Demographic presentation of Male-Female Ratio in Himachal Pradesh based on population census is given in the following table:-

Table -1

Demographic data on Male-Female Population.

Item	Unit	1971 Census	1981 Census	1991 Census	2001 Census	2011 Census
1	2	3	4	5	6	7
1. Population						
Total	Lakh Persons	34.60	42.80	51.70	60.77	68.64
Male	Lakh Persons	17.67	21.70	26.17	30.88	34.82
Female	Lakh Persons	16.93	21.10	25.53	29.89	33.83

2. Decennial Growth of Population	%	23.04	23.71	20.79	17.53	12.81
3. Sex Ratio	Females Per 1000 Males	958	973	976	968	972

It is revealed from the table that Himachal Pradesh has shown an upward trend in sex-ratio during decades from 1971-91. However, in the decade of 1991-2001, sex ratio has dropped from 976 to 968 which has serious socio-economic implications. This drop out in the sex-ratio is mainly attributed to the adoption of two child norms by the couples which has resulted in favouring one sex over other. However, as per census 2011, Himachal Pradesh has again shown an upward trend in the sex ratio which is now 972, which is a healthy sign.

Child sex ratio is a powerful indicator of social attitude. In Himachal Pradesh, Child sex ratio has shown an improvement during 2011 census as compared to 2001. It is 906 in 2011 as compared to 896 in 2001. At the national level, the trend has shown a decline in child sex ratio i.e. 927 to 914 during the period of 2001 – 2011. Lahaul-Spiti District in Himachal Pradesh has recorded the highest child sex ratio through out the country i.e. 1013. However, Himachal Pradesh is one of the 10 States with lowest child sex ratio (Haryana-830, Punjab- 864, J & K-859, Delhi – 866, Maharashtra – 883, Rajasthan-883, Gujarat-886, Uttar Pradesh – 899, Himachal-906 and Madhya Pradesh-912). The Government is aware of the importance of child sex ratio and has launched many schemes to improve the status.

EDUCATION AND LITERACY: Literacy and education is an important tool for economic growth and effective decision making which ultimately results in empowerment of the women. Quality of life and human development attainments invariably are high in the countries, which have invested heavily in education. In a country, which is in transition phase and is increasingly recognized as knowledge economy in the global market, education to women becomes of paramount importance. The male female literacy data in respect of Himachal Pradesh is given in the following table:-

Table-2

Male-Female Literacy Percentage-Census (1971-2011)

Item	Unit	1971	1981	1991	2001	2011
1	2	3	4	5	6	7
1. Literacy %						
Total	%	31.96	42.48	63.86	76.50	82.80
Male	%	43.20	53.19	75.36	85.30	89.53
Female	%	20.20	31.46	52.13	67.40	75.93

It is revealed from the table that overall literacy percentage according to 2011 Census is 82.80 %. It has recorded 50.84 % increase within a period of 40 years between the period 1971 to 2011. Whereas, male literacy rate has shown an increase of 46.33%, female literacy has recorded an unprecedented increase of 55.73%. Despite sharp increase in female literacy, it is still far

below the male literacy percentage. However, it has helped women in attaining economic empowerment and checking decline in sex ratio.

WORK FORCE PARTICIPATION: Human Development is viewed as composite of indices, namely socioeconomic empowerment, health, education etc. Economic empowerment of women can be gauged by measuring their participation in the work, nature of work, role and responsibility at work place as also the remuneration received in turn thereof. Since per capita income continued to be important indicator of economic well being, but due to data constraints on per-capita income of women, it is not possible to estimate the income of women separately. The following table depicts the participation of women in the work force on the basis of 2001-2011 Census:-

Table-3

Details of Work Force - 2001-2011 Census

Sr. No.	Item	Unit	2001 Census	2011 Census
1		2	3	4
1.	**Population**	Lakh Persons	60.77	68.64
2.	**Main Workers**	Lakh Persons	19.64	35.59
a)	Male	Lakh Persons	13.34	20.43
b)	Female	Lakh Persons	6.30	15.16
3.	**Marginal Workers**	Lakh Persons	10.29	21.81
a)	Male	Lakh Persons	3.53	17.36
b)	Female	Lakh Persons	6.76	26.39
4.	**Non-Workers**	Lakh Persons	30.85	48.15
a)	Male	Lakh Persons	14.01	41.31
b)	Female	Lakh Persons	16.84	55.18

It is revealed from the above table that among main workers, females constituted 32.8% whereas in marginal workers it accounted for 65.80%. It speaks of higher involvement of males in full time work and that of females in seasonal work. Females account for 54.68% as non-workers which indicates that the traditional trend of engaging women in non-remunerative domestic chores still has its strong hold on our society. This also indicates that despite recording impressive growth in over all female literacy, quality female education is still lacking. As a result, their proportion in main workers' category is very low. It also speaks of less opportunities in choice of work. Decadal work participation (1991-2001) data is analyzed as under:-

Table-4

Work Participation Rate by Sex, 1991-2001 (% to Population)

Item	1991 Census			2001 Census		
	Total Workers (male + female) % age to total population	% age of male workers to male population	% age of female workers to female population	Total workers (male + female) %age to total population	% age of male workers to male population	% age of female workers to female population
1.	2.	3.	4.	5.	6.	7.
Total	42.8	50.6	34.8	49.2	54.6	43.7

The above table shows work participation rate by sex among total popu-

lation in 1991 and 2001 Census. The work participation rate for 2001 census has been recorded as 49.2 % of total population as against 39.1% at national level. In 1991 Census, it was just 42.8%, thus showing a net increase of 6.4 points. The sex wise work participation rate of the state among males stands at 54.6% in 2001 as against 50.6% in 1991 census. Among the females, it came to 43.7% in 2001 from 34.8% in 1991 Census. Though an increase in work participation rate has been noticed for both the sexes in 2001 census as against 1991 census, but work participation rate of females has shown a significant increase of 8.9 points in comparison to that of males which has shown an increase of 4 points only. According to 2011 census, out of the total work force, the share of women was 44.82 percent, main workers 18.43 percent and marginal workers 26.39 percent.

WOMEN AND HEALTH:- WHO defines health as "State of complete physical, mental, social and spiritual well being and not merely the absence of diseases and infirmity". The fundamental determination of health apart from the genetic constitution is nutrition, environment and life-style. The health of any rural Indian society is directly linked to its value system, cultural traditions, socio-economic setup and political organization. Each of these has a profound influence on the health of an individual or community.

The links between health and economic prosperity of the society are well known. Low nutritional intake and subsequently poor health has its linkages with low levels of income, along with social and cultural norms. Health improvement can accelerate economic growth. Therefore, investment in health, nutrition and other areas impacting women has been kept in view while planning accessibility and delivery of health services. Himachal Pradesh compares favorably with rest of India in terms of health indicators, particularly those indicating status of women. Himachal Pradesh is passing through the demographic transition and the trends in fertility given in table No. 5 below, demonstrate it well:-

Table-5

Total Fertility Rates

Year	Himachal Pradesh	India
1981-83	4.0	4.5
1991-93	3.0	3.6
1997-99	2.4	3.2
2006	2.0	2.8
2007	1.9	2.7
2008	1.9	2.6
2009	1.9	2.6
2011	1.8	2.5

Source: Deptt. of Health & Family Welfare, HP Govt.

During the period from 1991 to 2006, Total Fertility Rate for Himachal Pradesh has declined sharply as compared to the decline in the TFR of India.

Crude Birth Rate (CBR) for Himachal Pradesh has shown steady decline

and is well below the national average of 25.4. According to SRS estimates for the year 2011, CBR in Himachal Pradesh stands at 16.5. The trend in birth rate is as under:-

Table-6

Birth Rates

Year	1980	1985	1990	1995	2000	2005	2007	2008	2009	2010	2011
Rate	32.1	30.2	27.4	25.2	22.1	20.0	17.4	17.7	17.2	16.9	16.5

Source: SRS Estimates and Deptt. of Health & Family Welfare, HP Govt.

In 1980, the CBR was 32.1 and thereafter it has declined continuously. There appears to be no problem in achieving the target of 15 by the year 2020. Death rate was 7.1 percent in 2001 came down to 6.7 percent in 2011 survey report.

Infant Mortality Rate (IMR) for the state, according to SRS figures is 45, still there is gap in Males and Females ratio. It clearly shows disparity in terms of preference for male child. The sex-wise infant mortality rates are as under:-

Table-7

Infant Mortality Rates

Year		1985	1990	1995	2000	2006	2007	2008	2009	2010	2011
Rate	Male	77	62	68	57	45	45	43	44	35	36
	Female	92	75	56	45	55	49	45	45	47	39

Source: SRS Estimates, Deptt. of Health & Family Welfare, HP Govt.

It is noteworthy that decline in female infant mortality over the years is sharper than the males. While in year 1985, female IMR stood at 92 as compared to male IMR of 77. In the early nineties, State witnessed the lower female infant mortality rate for the first time but the trend did not continue as is visible from the table given above.

Life expectancy at birth for males and females is given in the table below:-

Table-8

Trends of Life Expectancy at Birth

Period	1970-75	1976-80	1981-85	1986-90	1993-97	2002-06	2006-10
Age Female	50.9	54.9	62.8	62.8	65.2	67.3	72.4
(Years)Male	54.8	58.1	58.5	62.6	64.6	66.5	67.7

Source: Health & Family Welfare Department, Himachal Pradesh.

Life expectancy at birth for males was 54.8 as against 50.9 years for females for the period 1970-75, though genetically females are considered to be robust and are expected to live longer than their male counterparts. However, as per the SRS rates for the period 2001-05, life expectancy for females is 67.1 years as compared to 66.3 years for males which shows a healthy trend. However, the average difference in life expectancies in the developed

countries between males and females is 5 years. Himachal Pradesh still has a long way to go in this direction. When compared with all India scenario, female life expectancy in Himachal Pradesh compares favorably. However, these aggregate figures tell a bit incomplete story and if, age wise life expectancy figures are analyzed, a different picture emerges. This comparative advantage in life expectancies remains valid, till the age of 40 years, while after the age of 40, it is male who has higher probability to live longer than female. This is mainly due to treatment seeking behaviors and social or cultural inhibitions that might prevent women to seek medical help or take proper care of their nutritional needs. Whatsoever is the reason, in the older years, females have disproportionate burden. Life expectancy at different age groups/ levels of males and females is as under:

Table-9

Life Expectancy at Different Ages

Life Expectancy	Overall	Male	Females
Year 0	65.1	64.6	65.2
Year1	68.5	68.1	68.5
Year10	60.8	60.1	61.1
Year 20	51.3	50.6	51.7
Year 30	42.5	42	42.7
Year40	33.7	33.5	33.7
Year 50	25.2	25.1	25
Year 60	18.1	18.7	18.2
Year70+	12.2	13.9	10.1

Source: Vital Statistics Division- Registrar General Office.

It is clear from the table above that females maintain their comparative advantage till the age of 40, while in the abridged life tables, life expectancy at the age of 50 for males is 25.1 years as compared to females, which is 25 years. However, this gap increases, and at 70 plus, while a male may be expected to live 13.9 years more, a female is expected to live only 10.1 years more. Thereafter, data, which segregates health adjusted life years for females and males is not available. Further, at present life expectancy data is not available for individual districts, so regional disparities are difficult to assess. However, the available data strongly suggests that in terms of female health life, there is every likelihood of her to have less healthy years as compared to her male counterpart.

A study, carried out by PGI, Chandigarh shows that in Himachal Pradesh leading causes for premature mortality among women are easily manageable and preventable if, essential health care is provided and accessibility is improved. The major causes for premature mortality account for almost 48% of total mortality. The main cause of premature mortality among women is iron deficiency/ anaemia. The other leading causes of premature mortality among women and related premature mortality percentage are as under:-

Table-10

Leading Causes of Premature Mortality (%age) among Women

Sr. No.	Causes	Premature Mortality (%)
1	Diarrheal Diseases	16.48
2	Lower Respiratory Infections	15.86
3	Other Maternal Conditions	6.46
4	Other Infectious Diseases	4.81
5	Pre Natal Conditions	4.8
6	Ischeamic Heart Diseases	3.37
7	Falls	3.02
8	Tuberculosis	3.01
9	Self Inflicted Injuries	2.96
10	Maternal Hemorrhage	2.95

MEAN AGE OF MARRIAGE: SRS data for the year 2003 shows that female age at effective marriage is 22.0 years. Despite the evidence of increase in the age of marriage, NFHS-II estimates show that almost 11% of women get married before the legal age of marriage (in 20-24 age group responses). However, Himachal Pradesh is the first State in the country to have enforced "H.P. Registartion of Marriages Act, 1996".

CONTRACEPTIVE PREVALENCE: NFHS-III shows that contraceptive prevalence rate in Himachal Pradesh is quite high. 97.7 % women and 97.9 % men have knowledge of any contraceptive method. However, gender bias is clearly evident as the extent of female sterilization is 93.9 % while for male it is 80.7% despite the fact that male sterilization is more convenient and safer. The higher female sterilization, as in the rest of India underscores the attitudes, sociocultural aspects and throws light on the issues well known and related to female empowerment. Percentage of couples protected by family welfare methods in Himachal Pradesh is as under:-

Table-11

Percentage of Couples Protected by Family Welfare Methods in H.P.

Year	Sterilization	IUD	CC Users	OP Users	Total
2001-02	38.10	6.91	3.37	2.22	50.60
2002-03	37.48	6.64	3.43	2.49	50.04
2003-04	36.62	6.37	3.73	2.32	49.04
2004-05	35.92	6.09	4.08	2.58	48.67
2005-06	34.77	5.84	3.98	2.41	47.01
2006-07	33.49	5.55	4.13	2.52	45.69
2007-08	32.95	5.46	4.07	2.48	44.97
2008-09	31.80	4.93	4.30	2.57	43.59
2009-10	30.76	4.59	4.33	2.49	42.17
2010-11	31.53	4.47	3.65	2.35	42.00

2011-12	30.28	4.9	3.23	2.70	40.30
2012-13	30.19	4.81	4.29	2.53	41.62

Source: Health and Family Welfare Department, Himachal Pradesh.

INSTITUTIONAL DELIVERIES: Population Fund of India has rated Himachal Pradesh as one of the best state in the RCH implementation. Health care seeking behavior has also shown impressive improvement. 87.2% women are receiving ante natal care and institutional deliveries have constantly gone up. The institutional deliveries in the year 2009-10 were 52.86% which in the year 2010- 11 went up to 63.45% and in 2011-12, it was 71.34%. The State Government is alive to this issue and has taken significant steps to improve the status of institutional deliveries.

CRIMES AND SECURITY: In the issues related to the security of women, Himachal Pradesh has been graded as one of the high ranking States. However, the status of crimes against women in the State is as under:-

Table-12

Crime against Women in Himachal Pradesh

S. No.	Head of Crime	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012
1	Murder	28	31	29	24	23	30	36	37	27	34	30
2	Culpable Homicide	-	-	1	1	1	2	1	1	2		
3	Rape	137	126	153	141	113	159	157	182	160	168	183
4	Dowry Death	6	6	8	2	3	7	3	1	2	1	2
5	Kidnap/ abduction	119	96	97	101	108	153	137	123	163	191	152
6	Molestation	347	250	282	283	274	324	295	320	348	329	248

11	Dowry (P) Act	4	5	5	1	2	4	2	4	-	-	-
12	Immoral Trafficking (P) Act	2	5	4	4	-	-	1	5	1	2	6
13	**Total**	**920**	**801**	**910**	**874**	**871**	**1132**	**1106**	**1083**	**1145**	**1024**	**1112**

It reveals from the table that cases of crimes against women have increased during 2007 to 2012 in comparison to the previous years. This increase can be attributed to the increased awareness among women, change in social values, ethos, social reassurances being provided by the society, free registration of cases and Suvidha scheme started by the State Government through the Police Department as women are more often coming forward to

report the offences/ crime taking place against them.

CRIME AGAINST WOMEN IN HIMACHAL: The women in Himachal are also constantly under threat in one way or the other. In 2003 31 women were murdered, in 2004, 29; in 2005, 24; in 2006, 23; in 2007, 30; in 2008, 36; in 2009, 37; in 2010, 27; in 2011, 34; in 2012, 30; in 2013, 42; on an average after every ten days a women is murder in the state.

The age old tradition of dowry cases are also reported now and then. In 2003 and 2004 there were six cases in each year, in 2005-2, 2006-3, 2007-5, 2008-7, 2009-7, 2010-3, 2011-I, 2012-2 and in 2013-7 cases of dowry were reported. In the cases of murder the primary causes are dowry, fidelity, one sided love affair, illegal pregnancy etc.

With the opening of economy and inflow of outsiders, abduction and kidnapping cases are also on an increase. In 2003, 96 women were kidnapped; in 2004, 97; in 2005, 101; in 2006, 108; in 2007, 153; in 2008, 137; in 2009, 123; in 2010, 163; in 2011, 190; in 2012, 152 and in 2013, 205.

In the category of rape cases, in 2003, 126 cases were reported, in 2004, 153; in 2005-141, in 2006, 113; in 2007, 159; in 2008, 157; in 2009, 182; in 2010, 160; in 2011, 168; in 2012, 183 and in 2013, 212 cases of rape were reported from different parts of the state. These are the cases reported to the Police. There could be many more cases which have remained unreported due to social stigma, fear of exposure or threat from the predators. Cases of rape and gang rape are on increase. The innocent women of hills are becoming easy prey of flesh trade.

The total crime against women are on increase as in 2003 all kind of crime against were 801; in 2004, 910; in 2005, 874; in 2006, 871; in 2007, 1132; in 2008, 1106; in 2009, 168; in 2010, 1145; in 2011, 2095; in 2012, 2245 and 2013, 2191 crime occurred. From 1988 to 2014 (March 31st) 5320 women were either kidnapped/ abducted or forced into flesh trade, because they have not been traced so far. To look into the cases of human trafficking in the state, anti - human trafficking unit was setup on 20th May 2011. *'Beti Hai Anmol'* mission was launched on 12th July 2009 by Chief Minister Prem Kumar Dhumal.

Some incidences of missing women and children are taking place. The year-wise detail of missing women and children upto 18 years of age along with traced out figures is as under:-

Table-13

Detail of Missing Children in Himachal Pradesh

	Female children below 18 years of age			Male children below 18 years of age		
Year	Missing	Traced	Untraced	Missing	Traced	Untraced
2007	117	114	3	154	152	2
2008	100	100	0	163	159	4
2009	155	152	3	151	146	5
2010	124	117	7	151	146	5
2011	195	175	20	162	147	15

2012	148	94	54	111	85	26
2013	163	89	74	103	76	27

However, there are no reports that the missing women and children, who are still not traced out, have been kidnapped for trafficking purpose.

Empowerment of women is the much publicized cliche concept of the 21st Century. Everybody right from local politician to national leaders, NGOs, International Community and Policy makers talk about it. Women are not yet full and equal participants in public policy and choices that affect their lives. In fact, women lag behind on vital aspects of life, be it in terms of access to education, employment opportunities or even crucial decisions about their families.

Women are the most deprived amongst the marginalized communities. In 1994, the Beijing Declaration of platform for action stressed upon the need for empowerment of women. Subsequently, platform for Action of the Fourth World Conference on Women, 2000 stated, *Women should be empowered by enhancing their skills, knowledge and access to information and technology". This would strengthen their ability to combat negative portrayals of women internationally and challenge instances of abuse of power. As a follow up of national commitments made during these conferences, India has formulated the "Women Empowerment Policy, 2001* for the upliftment of women socially, politically and economically. This would require creation of an environment, through positive economic and social policies, for the development of women to enable them to realize their full potential.

Himachal Pradesh Government has taken a number of steps to empower women in every sphere of life. In order to check the decline in sex ratio a massive awareness campaign has been launched to highlight that protection of female child is vital to maintain the very fabric of society. State Government is implementing schemes of cash incentives to improve sex ratio and protection of the female child. A scheme for awarding the Panchayats upto '5.00 lakh for recording favourable sex ratio at birth has been started. Incentive is given to anybody who gives information in person or on telephone/ fax/in writing about violation of provisions of PC & PNDT Act to the appropriate authority of the District i.e. the CMO of the concerned district. Identity of the informer is not disclosed. The incentive money i.e. Rs. 10,000/- is given in cash. The payment of cash award is subject to nailing down of the culprit and to the satisfaction of the appropriate authority.

Another scheme called *"Indira Gandhi Balika Suraksha Yojana"* to raise the status of girl child and to prevent female foeticide is also under implementation in the State. Under this scheme, an incentive of '25,000/- is provided to the parents who adopt terminal family planning methods after the birth of the first girl child and the parents who adopt terminal family planning method after the birth of second girl child are provided an incentive of '20,000/-. These incentives are given as interest bearing deposits in the name of girl child to be encashed at the time of her marriage. Financial assistance under *"Matri Shakti Bima Yojana"* has been increased 4 times. In the event

of death due to accident; relief money has been enhanced from '25,000/- to '1,00,000/- and in the event of loss of a part of the body, this amount has been raised from '12,500/- to ' 50,000/-. *'Jan Shri Yojana'* has also been started for Anganwadi Workers and Helpers in the State under which no premium is to be paid by the beneficiaries. In the event of death under different circumstances, assistance ranging from '20,000/- to '75,000/- is provided under the scheme.

Under *"Janani Suraksh Yojana"* all women aged 19 years or above belonging to BPL, SC & ST families are given Rs. 600 (to those belonging to urban areas) and Rs. 700 (to those belonging to rural areas) for deliveries in a Government health institution or in an accredited private health institution. All pregnant women belonging to BPL families are also given Rs. 500 for home deliveries. These cash benefits are linked upto 2 live births. To reduce IMR (Infant Mortality Rate) and MMR (Mother Mortality Rate), Government of India has launched *"Janani Shishu Suraksha Karyakram"* under which following entitlements are given to expectant mothers and infants:-

- Free delivery.
- Free Caesarean section.
- Free Drugs and consumable.
- Free diagnostics (blood, urine tests and USG).
- Free diet during stay in health institution (upto 3 days for normal delivery and 7 days for C-Section).

Apart from above, one of the major strategies for securing gender equality for decision making in allocation of public resources and budget distribution, all departments of the State Government have been asked to ensure that atleast 30% of the funds are earmarked in women related sectors in such a manner that these benefit and empower the women. State Level Gender Budgeting Cell has been established under the Chairpersonship of Director, Women and Child Development to monitor and coordinate the activities of all Departments. Representation in this Cell has been given to the Planning and Finance Departments. This Cell will also compile and analyze the data received from various departments and will suggest policy interventions.

HP State Resource Centre for Women has been set up for implementation of National Mission for Empowerment of Women in the State. Purpose of the Mission is to secure convergence of schemes / programmes of both central as well as the State Government. The Mission will also review the legislations affecting women and their implementation, apart from giving a fillip to gender mainstreaming of policies and programmes. Under the Mission, State Mission Authority (SMA) has been constituted under the Chairmanship of Hon'ble Chief Minister Himachal Pradesh. Hon'ble Minister of Education, Revenue, IPH, Housing, Rural Development and Panchayati Raj, Health, Industries/ Labour &Employment and Chairperson, State Commission for Women are members of the SMA. Hon'ble Social Justice & Empowerment Minister is the Member- Convener. State Resource Centre for Women has

also registered as Society under HP Societies Registration Act, 2006 on 02 April 2012.

On political front, women MLAs constitute 4.41 % in the present Vidhan Sabha. To increase the participation of women in decision-making and developmental activities, the State Government has raised the reservation for women in the PRIs and ULBs from 33% to minimum 50%. The percentage of women, elected in the Panchayat Elections held in December 2010 and January, 2011 is as under:-

Table-14

Representation of women in Panchayati Raj Institutions

1	Ward Members	58.33 %
2	Members of Panchayat Samitis	51.55 %
3	Members of Zila Parishad	51.00 %
4	Gram Panchayat Pradhans	50.54 %
5	Chairpersons of Panchayat Samitis	54.55 %
6	Chairpersons of Zila Parishads	50.00 %

Mahatma Gandhi National Rural Employment Guarantee Act, 2005 is being implemented in all the Districts of the State w.e.f. 1st April 2008 through Rural Development Department. Though there is no specific provision for women in this Act, but employment opportunity is offered equally to men and women, hence, women do get benefit of this Act. Another provision beneficial to women under this Act is that in case the number of children (below the age of 6 years) accompanying the women working at any site is 5 or more, one of such women workers will be deputed to look after these children.

Female prisoners in the Jails of the State are kept in separate blocks/ barracks. The female prisoner is allowed to keep child with her till the age of 6 years. Pre-natal and postnatal care for both the mother and child are provided in the Zonal/ Regional Government Hospitals. The pregnant prisoner is released on parole to enable delivery outside the jail. To provide medical checkup facilities to the women prisoners, regular/ permanent medical officers have been appointed in 4 Jails viz. Kanda, Nahan, Dharamshala and Bilaspur. Number of female prisoners in rest of the jails/ sub-jails generally remains quite low, therefore, permanent medical officers have not been appointed in those jails. However, Dispensers have been appointed in all the jails of the State. With a view to provide better facilities, women who are found victims in any case, are shifted to Kanda Jail.

For protection of Women from domestic violence, *"Domestic Violence (Prevention), Act 2005"* has come into force in the State w.e.f. 26th day of October, 2006. Under Section 8(1) of the Act, all ICDS Supervisors have been declared Protection Officers within their respective area of jurisdiction for the implementation of this Act. Proper orientation through Himachal Pradesh Judicial Academy has been given to all the Protection Officers. *Nari Sewa Sadan Mashobra* in Shimla District has been declared as Shelter Home under

Section 6 of the Act. The Government of Himachal Pradesh has declared all District Hospitals/ Referral Hospitals/CHCs/PHCs and Dispensaries (both Ayurvedic and Allopathic) as Appropriate Health Institutions for providing health related facilities under Section 7 of the Act. Besides, 15 NGOs have been declared as Service Providers in the State under Section 10 of the Act.

In order to prevent the sexual exploitation of women at work place, Complaint Committees have been constituted in all the Departments/ Boards/ corporations and Universities of the State. Particulars of the Chairpersons of all Complaints Committees have also been put on the website of Department of Social Justice and Empowerment.

The Dowry Prohibition Act, 1961 has also been enacted by the Central Government to prevent giving and taking of Dowry in the country. The Government of Himachal Pradesh is implementing this Act through Police Department. Under the Act, Dowry Prohibition Rules-2000 have been notified by the State Government. To prevent dowry, all Child Development Project Officers (appointed under ICDS) have been notified as Dowry Prohibition Officers and to assist them Advisory Boards have been constituted in all Districts of the State.

There are a number of other programmes/ schemes under implementation in Himachal Pradesh which are aimed at socio-economic upliftment of women and their general well-being. Scheme-wise description of such programmes being run by the department of Social Justice and Empowerment is given below:-

i) **Mukhya Mantri Kanyadan Yojana:** Under this scheme, a grant of ₹21000/- per beneficiary is given to the parents/guardians of the girl or the girl herself for her marriage, provided their annual income does not exceed ₹15000/-.

ii) **Widow Re-Marriage Scheme:** From the year 2004-05, the State Govt. has started Widow Re-Marriage Scheme. Main objective of the scheme is to help in rehabilitation of widows by encouraging male persons to enter into wedlock with widows, by providing some monetary incentive for the same. Under this scheme, ₹25000/- are provided as a grant to the couple.

iii) **Self Employment Scheme for Women:** Under this scheme, ₹2500/- are provided to the women whose annual income is less than ₹7500/- for carrying income generating activities.

iv) **Mata Shabri Mahila Sashaktikaran Yojana:** With a view to relieve poor women belonging to Scheduled Castes BPL Families from drudgery of collecting fuel-wood, "Mata Shabri Mahila Sashaktikaran Yojana" has been started. Under the scheme, 50% subsidy subject to a maximum of ₹1300, is given to eligible women for purchase of Gas connection. There is a provision of benefiting 75 women belonging to SC BPL families in each Vidhan Sabha Constituency.

v) **Vishesh Mahila Utthan Yojana:** From the financial year 2012-13,

State Government has started *"Vishesh Mahila Utthan Yojana"* as 100% State Plan Scheme for training and rehabilitation of women in moral danger in the State. Under this scheme, a provision to provide stipend @ Rs. 3000/- per month per trainee and test fee of Rs. 800/- per trainee through the Department of Women and Child Development has been made. Further, for those women who intend to start their own self employment projects, a back ended subsidy is provided @ 20 % of the Project Cost subject to maximum of Rs. 10,000/-per beneficiary, on loan arranged through HP Mahila Vikas Nigam.

vi) **Financial Assistance and Support Services to Victims of Rape Scheme 2012:** This scheme has been notified on 22nd September 2012 as 100% State Plan Scheme to be implemented with immediate effect. The scheme aims to provide financial assistance and support services such as counseling, medical aid, legal assistance, education and vocational training; depending upon the needs of rape victims. An affected women shall be entitled to financial assistance and restorative support / services adding upto a maximum amount of Rs. 75,000/-. Additional assistance of Rs. 25,000/- can also be given in special cases.

vii) **Indira Gandhi Matritva Sahyog Yojana:** Indira Gandhi Matritva Sahyog Yojana was started during 2010-11 in Hamirpur District with the objective to improve the health and nutrition status of pregnant & lactating women and infants by promoting appropriate practices, care and service utilization during pregnancy, delivery and lactation period. Under the scheme, there is a provision of providing cash incentive of '4000/- in a phased manner to pregnant and lactating women (excluding State/ Central Govt. employees) of 19 years of age and above for first two live births.

viii) **Honorariun to Anganwadi Workers and Helpers:** As fixed by the Government of India, monthly honorarium @ '3000/- and'1500/- is being paid to the Anganwadi Workers and Helpers/ Mini AWWs w.e.f. 01.04.2011.

ix) **State Home:** For destitute women and wayward girls/women, State Home is being run at Mashobra (Shimla) by the department. The inmates of this Home are provided free boarding and lodging facilities and training in craft, tailoring and embroidery etc. For rehabilitation of such women, after leaving State Home, financial Assistance upto ' 10,000/- per woman is also provided.

x) **Self Help Groups:** To promote economic empowerment among women, 29282 Self Help Groups of women have been formed through the network of ICDS. Out of these 12614 groups have been linked with banks.

xi) **Working Women Hostels:** A centrally sponsored scheme, 'Working Women Hostel' is under implementation in the State from the year 1983-84. Voluntary organizations, public trusts working in the field of women's welfare/social welfare/women's education are eligible for the assistance. Under this scheme, 14 Working Women Hostels have been constructed in the State.

xii) **State Women Council:** To review and monitor the effective imple-

mentation of national policy for the empowerment of women 2001 (NPEW) and to advise on policy matters, from time to time on issues like advancement, development and empowerment of women, a State Women Council has been constituted under the Chairmanship of Hon'ble Chief Minister.

xiii) Awareness Campaign: To mobilize public opinion and strengthen social efforts against social evils like dowry, child marriage, and female foeticide and to make women aware of the departmental schemes and their legal rights, awareness camps are being organized by the department for representatives of PRIs and women including SHG/ Mahila Mandal members.

xiv) H.P. Women Development Corporation: The Himachal Pradesh Women Development Corporation is assisting the women entrepreneurs in the rural as well as urban areas in securing cheap loans from commercial and co-operative banks for their self employment oriented projects. To make the loans cheaper, interest subsidy is also provided on all bank loans so that the beneficiary does not have to bear the burden on interest beyond the rates fixed by the corporation. In addition to the above programme, the corporation initiates new projects with the financial assistance from State as well as Central Government under STEP, RMK. The corporation has been appointed as nodal agency for *'Rashtriya Mahila Kosh'*.

Beti Hai Anmol: In order to change the negative attitude of community towards girl child and mother at the time of birth, Beti Hai Anmol scheme has been started w.e.f. 5th July 2010. Under the scheme a post birth grant of '10,000/- is deposited in bank/ post office in the name of the girl child, taking birth in a BPL family which can be drawn by her after attaining the age of 18 years. Annual scholarship ranging between '300/- to '1,500/- is also provided to these girls when they start going to school from 1st to 10+2 standard.

Kishori Shakti Yojana

Objectives of Kishori Shakti Yojana are

i) to improve the nutritional and health status of adolescent girls;

ii) to train and equip the adolescent girls to improve/ upgrade home-based and vocational skills; and

iv) to promote awareness of health, hygiene, nutrition and family welfare, home management and child care and to take all measure as to facilitate their marrying only after attaining the age of 18 years and if possible, even later.

This is a centrally sponsored scheme and was being implemented through out the State. From the financial year 2010-11, *Kishori Shakti Yojana* was replaced by *Rajiv Gandhi Scheme for Empowerment of Adolescent Girls*-SABLA" in 32 ICDS Projects of Solan, Chamba, Kullu and Kangra Districts. In 46 ICDS Projects of remaining District, Kishori Shakti Yojana will continue to be implemented as before.

Rajiv Gandhi Scheme for Empowerment of Adolescent Girls-

SABLA: This scheme was started from the financial year 2010-11 on pilot basis in Solan, Chamba, Kangra and Kullu Districts by replacing Kishori Shakti Yojana and also Nutritional Programme for Adolescent Girls (NPAG) in Kangra District. Objectives of the scheme are almost same as that of Kishori Shakti Yojna. Under the scheme grant provided by the GOI has been increased from `1.10 lac per project to `3.80 lac per project for IEC activities, Nutritional and Health Education, Life Skill/ Vocational Trainings, Iron Folic Acids tablets etc. In addition to this, Supplementary Nutrition will be provided to the school going girls in the age groups of 15-18 years and all out of school adolescent girls at the rate of `5.00 per day per adolescent girl. Under this component, GOI bear 50% cost. Remaining 50% expenditure is borne by the State Government.

Mother Teressa Asahaya Matri Sambal Yojana: For the bringing up of children upto the age of 18 years, the destitute, widow, deserted and divorced women belonging to BPL families whose annual income is below `18,000/- are provided annual assistance of `3000/- per child (for two children).

Prohibition of Child Marriage Act, 2006: The Prohibition of Child Marriage Act, 2006 is being implemented in the State with the objective of prohibiting child / minor marriages. Child marriage/ minor marriage means a marriage taking place between a male who has not completed 21 years of age and a female who has not completed 18 years of age. The Child Development Project Officers have been declared as the Child Marriage Prohibition Officers within their respective areas of jurisdiction.

Bal Balika Suraksha Yojana: The State Government has started a new scheme titled "Bal Balika Suraksha Yojana" (sponsorship and foster care) to ensure holistic development of destitute children. This scheme is providing financial assistance to the families which look after destitute children so that the children instead of being sent to the institutional care are brought up in a family environment. An assistance of Rs. 500 per child (upto 18 years) per month is provided under the Scheme.

Himachal Pradesh Mahila Vikas Nigam

Himachal Pradesh Women's Corporation was created with a view to lay stress on the development of women. Its headquarters is at Shimla. The Himachal Pradesh Mahila Vikas Nigam was set up on 10th April, 1989 under Section 25 of the Companies Act, 1956 with the following main objectives :

(a) To assist women entrepreneurs, women cooperative societies and other organizations of the women subject to such terms and conditions as may be prescribed.

(b) To provide entrepreneurship among women.

(c) To provide margin money, subsidy to women or their organization

preferably cooperative societies for trades, business or other economic activities so as to enable them to secure financial assistance from financing institutions.

(d) To identify trades and industries which can be taken up by the women. It also undertakes feasibility studies of such schemes for the benefit of women entrepreneurs.

(e) Arranging training programs to promote talent among women to improve their professional skill and general development.

(f) To undertake programs for promotion of literacy and education among women for their development.

O Women, thousand of year back this society was created to protect your honour, dignity and to ensure you safety from might is right. Restriction and taboos were levelled to place you in a comfortable position by developing the institution of marriage and recognized motherhood. Today the same very institutions (society and marriage) are in danger because of your own uncalled desire of my life my right. Think of a situation where there is no society to control unbridled behaviour of man, where there is no institution of marriage and all women are free for all men as it happens in animal kingdom. Will you be able to protect your chastity in that situation?

Today on the name of women liberation, so much vulgarity is offered by exposing women physically from toothpaste to car, furniture to tiles, women are used as an object of publicity and that too in most sensuous way. Did you ever realise that why you are always made to minimise your clothes in a simple video clipping, where you ought to be in a sensible clothes? The idea of live in relationship, premarital and extra marital sex, my life my right, beauty pageant is nothing but sophisticated ways of mental and physical exploitation of women by male dominated society.

The more you expose, the more you become laughing stuff for men. Don't compete men with vulgarity and sensuousness, challenge them if you want with the power of mind and wisdom. By exposing body a woman can earn money but not respect. Look around which women earned respect and position in the world, those who dare nude or those who were knowledgeful and dignified in their behaviour. Nudity and unrestricted sexual behaviour is nothing but elements of pre-civilized animal conglomeration. In the age of stone human beings were used to walk nude and their behaviour was not controlled by any social restrictions or laws. While living in society we must learn to obey the rules which have been developed since the formation of the society to make it worth living.

H.P. State Women Commission

Himachal Pradesh State Commission for Women was constituted under H.P. State Commission for Women Act, 1996 with the aim of furthering the fundamental rights guaranteed by Article 14, 15 & 16 of the Constitution of India with respect to women and to give effect to the Directive Principles of State Policy and in particular those enshrined in Articles 38, 39, 39A and 42 of

the Constitution. The Commission strives to improve the status and dignity of women in society, to investigate into and take or suggest suitable remedial measures against practices derogatory to women, to effectively monitor and implement laws affecting women and to advise the Government in all matters related to the improvement and upliftment of status and dignity of women in society.

H.P. State Commission for Women Chairpersons

History Of Himachal Pradesh

(Earliest Peroid To Till Date)

The term history is derived from the Greek word 'historia' which means information or an enquiry into truth. The word history has been used to refer not only to the process of inquiry but also to knowledge obtained as the result of investigation into human action and written account of the same. History has expressed both vertically and horizontally. The study of history is important for several reasons. It tells us how, when and where people developed the earliest cultures. It indicates how they started agriculture, which made life secure and settled. It shows how ancient civilization originated and developed, and utilized natural resources, how they created means for their livelihood. We come to know how they founded villages, cities and large kingdoms. We come to know about the language that we speak today, have roots in past and have developed through the ages.

The ancient history of Himachal Pradesh, like many other regions of India is lost in obscurity because of the lack of accurate source material. History of Himachal has remained unexposed and unearthed, the main cause of this phenomenon is that, for most of the time, Himachal as a state, what we see today was non existent. It was a territory under the control of local rulers; Rajas, Ranas, Thakurs and frequently devastated by natural calamities and foreign aggression. Local rulers were also not in good terms. This resulted into frequent battles and destruction of invaluable records of the time.

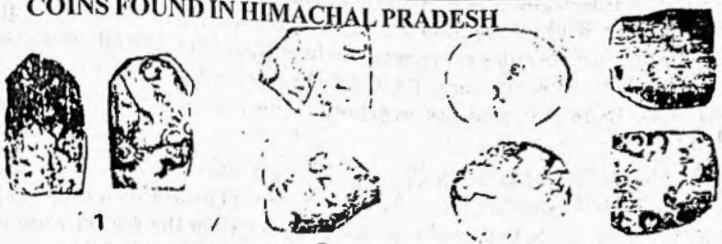
SOURCES OF HISTORY

Whatever source material pertaining to Himachal Pradesh is available with us can be divided into the category *i.e.* Archaeological and literary. The former sources could further be categorized as stone tools, coins, monuments, inscriptions and sculptures etc. Of the literary side we have Sanskrit works, Greek and Chinese traveller's accounts of pedigree (vamshavalis) which give us a fair amount of informations about the people, their culture, life etc.

Archaeological Sources: The importance of archaeological sources for the history of Himachal Pradesh is manifold in the absence of reliable literary sources. However, the archaeological sources are also not as eloquent and sufficient to make any authentic declaration on the subject. In the past years very little excavation work has been made due to financial and technical problems. In the Shivalik hills and interiors no systematic excavation has been made to excavate the historical sites. The archaeological sources include stone tools, implements, coins, inscriptions, monuments and sculptures.

The places where excavations have been made include Guler, Dhaliara, Dehra, Masrur, all in Kangra district, to trace out the remnants of culture in the sub-Himalayan basin. Other surveys conducted in the areas of Jwalamukhi, Dehra-Gopipur and Nurpur give indication about the early stone age. Some other prospective sites are—Balh valley, Salanu near Manglore, Nawahi near Sarkaghat, Binaul in Siwa-Badar and Kao-Mamel in Mandi district, Nirath, Dattanagar, Sholi, Sarahan, Nirmand, Hatkoti, Kamru, Sungra, Kothi, Chitkul, Kullu, Mandi, Naggar, Bajaura, Jagatsukh, Dashal and Khokan.

There are a good number of monuments in Himachal Pradesh in the form of Forts and Temples which can throw adequate light on the history of Himachal Pradesh.

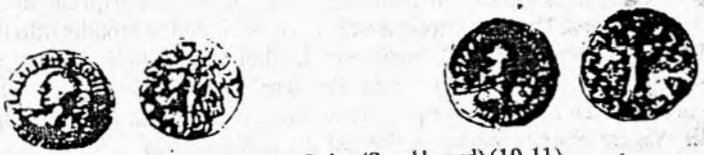


(i) Coins: The only hope in retrieving the history of Himachal Pradesh lies in numismatics— the study of coins found in the region. But hardly any attention was paid to them for long. During the British period many small principalities were scattered all over the region; none of them was interested in their heritage of the past. No attempt was even made to collect ancient coins or gather any kind of information about them.

The only Museum that existed during this period in this region was the Bhuri Sing Museum at Chamba. But that too remained indifferent towards numismatics. Only a few coins of no consequence reached this Museum. People not being aware of the importance of the coins, mostly melted them for their metal, if and when any came into their possession through chance discoveries. A few such finds filtered out of the region and reached the hands of those for whom they had some meaning. But even these finds were not properly noticed or recorded; if they were noticed, the information is buried in the pages of journals that are not easily accessible to scholars in India.

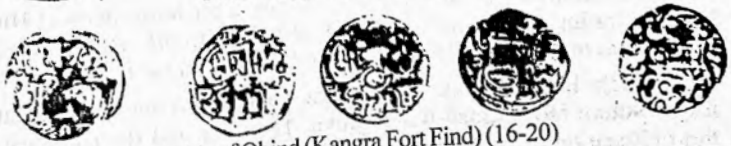
With the advent of Independence and the formation of the state of Himachal Pradesh by the integration in the Republic of India of more than thirty Punjab and Shimla Hill states that were created during the British period, some consciousness towards the collection of coins awakened. With the establishment of the Himachal State Museum in 1973-74 at Shimla, the coin finds attracted the attention of its curator, Dr. V.C. Ohri. Now this Museum as well as the Bhuri Singh Museum, Chamba, began acquiring coins from the region's finds that came to their notice. They have now built up coin collections of their own. The State Museum Shimla and the Bhuri Singh Museum Chamba contain the large collection of coins pertaining to the ancient tribal kingdoms of Trigarta, Adumbara, Kulutas and Kunindas extending from the 2nd century B.C. to the 2nd century A.D. The earliest 87 punch-marked coins out of which 25 coins are preserved in the Bhuri Singh Museum Chamba, and 12 are kept in State Museum Shimla are found from Arki, 21 coins from Appollodotus have been found in Tappa Mewa village in Hamirpur district, while 31 coins were found from Jwalamukhi in Kangra district. Some Indo-Greek coins have also been found in Lachori and Sarol villages of Chamba district.

These coins show the influence of Greco-Bacterian penetration into



COINS FOUND IN HIMACHAL PRADESH

Silver Punch-Marked Coins (Arki hoard) Shimla Museum (1-4)



Punch-Marked Indo-Greek Coins (Lachori hoard) (5-9)

Indo-Greek Coins (Sarol hoard) (10-11)

Kashmir (Pratapaditya) (12-15)

Shahis of Ohind (Kangra Fort Find) (16-20)

Chamba and Hamirpur. Most of the coins found are punch marked. The earliest coins found in Kullu were issued by a Virayash King of 1st century A.D. In district Kangra two eulogies *(prasastis)* have also been found. Both these inscriptions mention the local Chief Lakshmana or Lakshman Chandra of Kiragrama (Kangra) and his overlord, King Jayachandra of Trigarta (Jalandhara).

The availability of coins belonging to foreign rulers in different parts of Himachal Pradesh, should not be taken as remnants of invasion and supremacy. But may be that trade links and commercial activities in the region were wide spread, extending to the other parts of world too at that period of time.

(ii) Inscriptions: A large number of copper plates and other relevant material is preserved in the Bhuri Singh Museum Chamba. These inscriptions throw light on the early socio-economic and political history of Himachal Pradesh. The earliest inscriptions have been found in 'Pathyar' and Kanihara in Kangra district, Soopur from hillock cave inscription of Hatkoti in Shimla district and Salanu near Manglore in Mandi district. The Nirmand copper plate of 7th century AD issued by Mahasamanta Maharaja Samudrasena is an important historical document.

(iii) Stone Inscription: In Himachal Pradesh a large number of stone inscriptions have been found. These inscriptions can be put under four broad categories viz., Rock inscription, Fountain inscription, Slab inscription and Sati stone inscriptions. These inscriptions which may be classified broadly into three headings of commemorative, Donative and Dedicative have helped a lot in the reconstitution of the history of ancient Himachal Pradesh. Those inscriptions have been written in various scripts such as *Sharda, Kharoshti, Brahmi, Tankri, Kutila, Nagari, Sankha, Bhotia or Tibetan* and *Sidhamatrika.*

The highest number of inscriptions numbering 36 have been found in the Chamba region. They are donative in character and have been mostly written in *Sharda* and *Tankari* scripts. The Bhuri Singh Museum Chamba is housing these inscriptions.

Literary Source:

(i) Persian Source: Many Persian chronicles speak about the "Turkish penetration into the Shivalik Hills. Some of the famous books are *Tarikh-i-Yamini* or *Kitabul-Yamini* (1020 A.D.) followed by Khawand Mir's *'Habibus Siyar'* (1523 A.D.) and Farishta's *Tarikh-i-Farishta* or *Gulshan-i-Ibrahim.* The two contemporary chronicles namely the *Tabaqat-i-Nasiri* and *Tarikh-i-Feruz Shahi* often mention about the rebels finding shelter in the lower parts of Himachal Pradesh. During Tughlaq period Badr Chach in his *'Qasaid-i-Badr-i-Chach'* gives some verses of the penetration of the Turkish forces in the Kangra hills.

Ziauddin Barani has also made some reference to the Nagarkot invasion led by Sultan Mohammed-bin-Tughluq. The siege and the conquest of the fort of Nagarkot by Sultan Firoz-Shah Tughlaq is found in Barani's and Afif's

'Tarikh-i-Feruz Shahi', Farishta's *'Tarikh-i-Farishta'*, Jahangir's *'Tuzuk-i-Jahangiri'* and Shahnawaz Khan's *'Muasir-ul-Umara'*. The autobiography of Mongol invader Amir Timur (1369-1414 A.D.), the *'Tezuk-i-Timuri'* refers to Raja Ratan Sen of Shivalik Hills. Other books such as *'Waqiat-i-Mushtaq'* by Rizakulla Mushtaq. *'Akbar Nama'* and *'Ain-i-Akbari'* by Abul-Fazal, *'Munrakhab-ul-Tawarikh'* by Abdul Qadir Badauni and emperor Jahangir's autobiography the *'Tuzuk-i-Jahangiri'* are the important source of information related to the Muslim period of Indian history.

(ii) Sanskrit Literature: The famous among the Sanskrit books are the four Vedas— *'Rig Veda'*, *'Sam Veda'*, *'Yajur Veda'* and *'Atharva Veda'*. The Rigveda speaks about various tribes of Himalayan foothills about 1800 B.C. Besides this, *Puranas, Brahmins, Aranyakas, Ramayana* and *Mahabharata* also have references about the Himalayan region in general. In secular Sanskrit Literature Panini's *'Ashtadhyayi'*, the *'Raghuvansham'* of Kalidasa, Vishakhadutta's *Devichandra Guptam*, *'Mudrarakshasha'*, Kalhan's *'Rajtarangini'* are very useful works, throwing light on the life of the people of this region.

(iii) Khalsa Literature: The major part of the modern Himachal Pradesh is comprising of the erstwhile Punjab hill states. That is why a fair amount of information is present in the Sikh historical and religious literature. The *'Guru Granth Sahib'* (The Adi Granth)— the holy scripture of the Sikhs, the *'Bachitra Natak'* of Guru Govind Singh, the *'Janam Sakhis'* (biographies) of Sikh Gurus and other writers, the *'Gur Sobha'* of Sena Pat, *the 'Gur Bilas'* of Bhai Sukha Singh and Mohsin Fani's *'Dabistan-i-Mazahib'* give detailed history of the penetration of Sikh religion in the Himalayan foothills. The Himalayas had been an attraction for the Sikh Gurus for which accounts are available in various books written during 16th to 19th century. Besides these sources, the Bhandari collection at the Punjab state Archives. Patiala is also useful to extract some invaluable information pertaining to Punjab hill states.

(iv) Travelogues: The Himalayas have always been inspiring people from all over the world. The accounts left by these foreign and domestic travelers are serving as very important source of information. Hiuen Tsang, the Chinese traveller left the reliable historical references about the Himalayan state, who visited India in 630 A.D. and remained here till 648 A.D. The Kuluta, Jalandhara and Shrughna state are mentioned by him.

Among European travellers include William Finch and Thomas Coryat, who visited during the time of Aurangzeb. Foster visited in 1783, J.B. Fraser in 1815, Alexander Gerard in 1817-18, W.Moorcraft in 1820-22, Captain Monday in 1829, Major Archer in 1829, Baron Charles Hugel visited in 1835-39. Others include George Forsters, G.T. Vigne, J.C. Davidson and Captain A.P.F. Harcourt. The details left by these travellers ranges from political to cultural, geographical to historical and religious to economic affairs. Their details also include the description of the courts of the native Himalayan rulers and their behaviour in contrast with the outside powers such as Gurkhas,

Britishers and Sikhs.

(v) **Vamshavalis (Genealogical rolls):** The genealogical rolls include the names of the rulers with tenure and various activities performed during that period. These rolls were prepared by the Rajgurus or Kul purohits. Some of them have doubtful description, while most of them are acknowledged for their accuracy and as an authentic source of history.

In the 20th century with the expansion of research and literary activities more and more informations are being extracted by historians from the available resources. That is why on Himachal Pradesh, particularly on Punjab Hill states and Lahaul-Spiti and Kinnaur an adequate compilations have been released in the recent past. In the year 2011 Himachal Pradesh Language, Art and Culture academy found 600 year old manuscript in Spiti valley. This manuscript deals with Ayurvedic system of medicine. This is written in Bhoti language. Another manuscript written in golden words was found in Tholag Village of Lahaul Valley. The Language, Art and Cultural academy has started a unique project of collecting manuscript from different parts of the state, lying with individual families for hundreds of years.

The history of Himachal Pradesh can be divided into two broad categories of states i.e. Jalandhara circle and Shimla Hill states. The third is Durgar circle or Jammu circle which may be included here because of its proximity and geographical contiguity with Jalandhara circle state. The prominent states are mentioned here:

(A) JALANDHRA

Country	*Clan*	*Country*	*Clan*
(1) Chamba	Chambial	(2) Nurpur	Pathania
(3) Guler	Guleria	(4) Datarpur	Dadwal
(5) Siba	Sibai	(6) Jaswan	Jaswal
(7) Kangra	Katoch	(8) Kutlehar	Kutleria
(9) Mandi	Mandial	(10) Suket	Suketia
(11) Kullu	Koluo	(12) Bangahal	Bangahalia
(13) Shahpur	Pathania	(14) Kotla	Guleria

DURGAR

Country	*Clan*	*Country*	*Clan*
(1) Chamba	Chambial	(2) Basohli	Baloria
(3) Bhadu	Bhadwal	(4) Mankot	Mankotia
(5) Bandralla	Bandra	(6) Jasrota	Jasrotia
(7) Samba	Sambial	(8) Jammu	Jamwal
(9) Chanehni	Hantal	(10) Kashtwar	Kashtwaria
(11) Bhadrawah	Bhadrawahia		

The above mentioned states were Hindu states. There were also some Mohammaden states in the Durgar region such as-

Country	Clan	Country	Clan
(1) Kashtwar	Kashtwaria	(2) Punch	Mangral
(3) Kotli	Mangral	(4) Rajauri	Jaral
(5) Bhimdar	Chib	(6) Khari-Khariyali	Chib

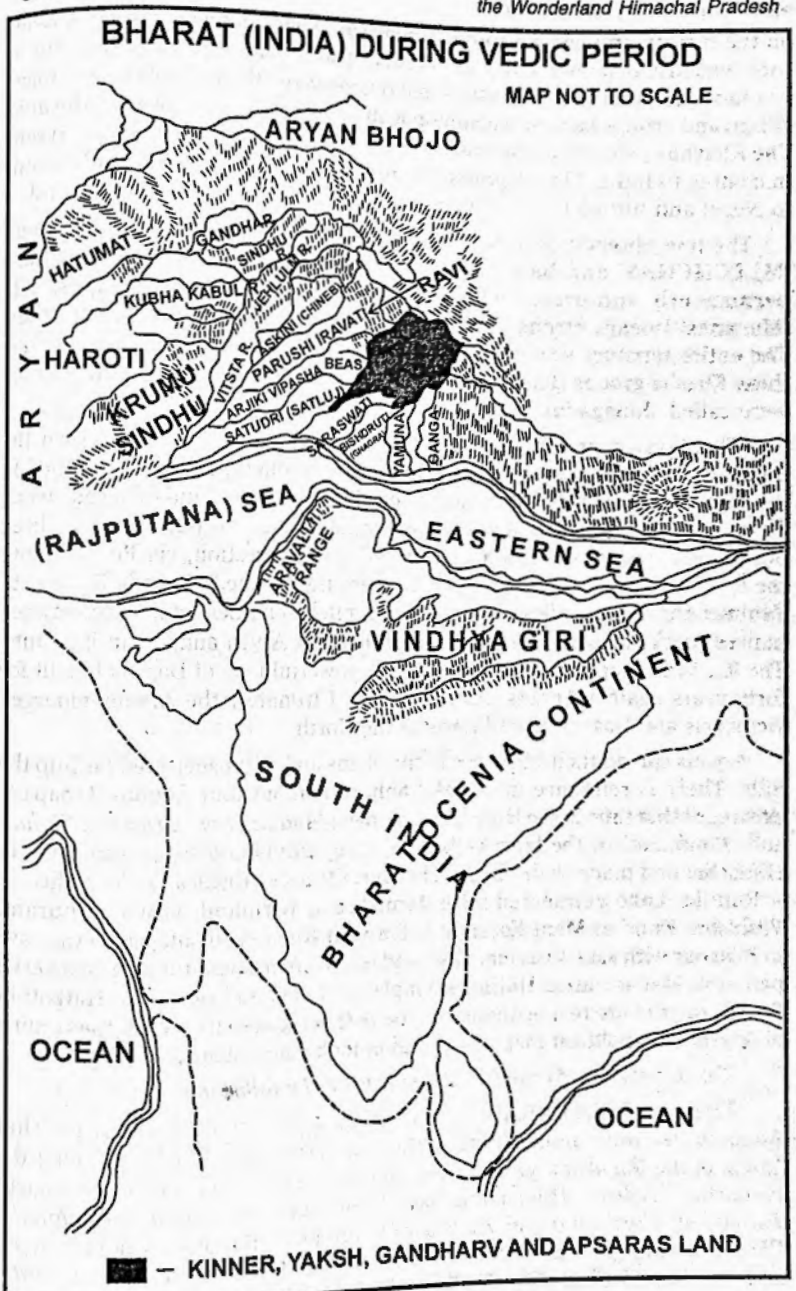
The Chamba finds mention in both category of states, owing to its being divided by the river Ravi.

Nomenclature and Rank in Hill States: Each of the ruling family had a distinguished appellation or *'Al'* i.e. class name, derived invariably and without exception from the country over which it formerly held dominion. In some cases, the clan name was taken from the original capital and it usually remained the same when capital was changed. In addition to the general clan name, each clan comprises numerous subdivisions. For example, the Katoch clan has four great subdivision, viz., *Jaswal, Guleria, Dadwal* and Sibia, in addition to the generic appellation of *'Katoch'* and each of these in turn comprises several subordinate *'als'* or *surnames.* In the same way, the *Jamwal* clan has four chief subdivision: *Jasrotia, Mankotia, Sambial* and *Lakhanpuria* each of these has its own separate *'als'.* Jamwal has 24 *als.* Katoch 24 *als,* Pathanias 22, Baloria 12, Chambial 12 *als.*

All the members of these 22 clans are now distinguished by the honorific title of **Mian,** said to have been conferred on their ancestors by the Emperor Jahangir. From the various records available from the hills it becomes quite clear that the original rulers of these states were all Rajputs. It is interesting to note that the older and the more important states names, which, as in ancient India, were applicable to both to the country and the tribe, by which it was inhabited. In most of the states the name of the capital was different from that of the principality. The states of later origin were generally named after the capital, and when that was changed the name of the state was changed with it. Thus, Chamba has received its name from its present capital, the ancient Chamba. Other instances are *Nurpur,* Mandi, Suket etc. Sometimes the capital was simply called *Nagar* or the 'Town' being the only real town in the state e.g. Naggar in Kullu and Nagarkot in Trigarta or Kangra.

In the ancient ages royal personages were addressed as 'deva' and also used this title as suffix. From this came the Rajput salutation *'Jaidea'* or *Jaideva,* which is accorded only to Rajputs in the hills as being members of the ruling family. Jaidea usually is an abbreviation of the Sanskrit phrases *"Jayatu Deva"* - may the king be victorious. Among Rajputs the receiving and returning of this salutation was of prime importance.

In the ancient times to present day, certain titles have also been in vogue in the royal clans. In the ancient ages, an heir apparent bore the ancient title of 'Yuvaraja' found in inscriptions down to the 16th century. In recent times the 'Yuvaraja' or the eldest son of a ruling chief bore the title of *'Tikka',* and the younger sons were called *'Dothain', 'Trithain', 'Chauthain'* etc. The



title of Raj Kumar was also used. The title 'Mian' is also significantly used among the Rajputs. The title was originally given by Emperor Jahangir to the 22 Rajput princes from the Punjab Hill states, who were hostages to the Mughal court, a practice which had been introduced by Akbar to ensure the loyalty of these states. Later on the title became the distinctive appellation of all the 22 royal clans to which those princes belonged. At present time its application has become more general, applicable to all the estates of Rajputs in the hills. A 'Mian' had to follow a certain social code in the past. He must not drive the plough; he must never give his daughter in marriage to an inferior in social rank nor himself marry much below his rank; he must never accept money in return for the betrothal of his daughter, his female household must observe strict seclusion. But with the passage of time these restrictions have become much relaxed and now virtually outdated.

There are clear-cut evidences of the existence of prehistoric man in the Himalayan region. There is little doubt that two million years ago at least one form of man lived on the Himachal foothills, the area traversed by the *Banganga-Beas of Beas valleys of Kangra, the Sirsa-Satluj valleys of Nalagarh-Bilaspur* and *the Markanda valley of Sirmaur.* In the earliest stages, it is believed that migration and cross migration of people from the Indian plains and central Asia was a common feature. The Indus valley civilization is believed to have flourished between 3000 B.C. to 1500 B.C.

This civilization covered an enormous area from the Arabian sea to the Gangetic valley in the East. In the North and the East it covered whole of Punjab as far as the Shivalik hills, and in the South, Gujarat and Rajasthan. The prehistoric culture came to Himachal from South and settled down in Central and Southern slopes. This is represented today by *Koli, Hali, Domis, Channals* etc. and their language is *Kolarian.* Kinnaur and Lahaul-Spiti are their primary concentration. The Indo-Gangetic plains in the prehistoric times were inhabited by Proto-Australoid or say, Munda speaking Kolarian people. When the Indus-valley people spread in these areas; they pushed forward the Kolarian people. The latter moved to the forests and valleys of Himachal where they could preserve their way of life.

The earliest inhabitants of Himachal—'Dasas', 'Nishads' and 'Dasyus' etc. find mention in the Rig Veda. The Kolis, also known as 'Mundas', were perhaps the earliest and original migrants to the Himachal hills. Their powerful king was **Shambra** who had ninety nine strong forts in the hills between the Yamuna and the Beas rivers. The Mongoloid people called **'Bhotas'** and **'Kiratas'** in Indian literature, who came around 3rd millennium B.C. occupied the sub-Himalayan region in the prehistoric times and at present settled in the highest region of Himachal Pradesh. **Mongoloids** were the second race to enter this area.

The third race to enter the Himalayan regions were the **'Aryan'** or **'Khasas'**, who entered India from North (via Kashgir to Kashmir) and settled in mid-mountains, from Kashmir to Nepal. This race has left very deep impact

on the history and culture of the Himalayas. Their language closely aligned with Sanskrit is known today as *'Pahari'*. The Aryans who were superior in war tactics, suppressed the natives and overpowered them. In organized form, village and groups became a common feature with a chief, known as 'Mavana'. The Khashas (who are considered to be Kshatriyas) preceded the Vedic Aryans in coming to India. They captured the region of Cis-Himalayas from Kashmir to Nepal and turned to the Kinnaur-Kirat and Nagaland into Khasha land.

The non observance of Sanskritic rules by these people had made them 'MLECHCHAS' and barbarians in their behaviour. They settled here permanently and organized themselves into families and villages. The 'Mavanas' (means strong man) were constantly fighting with each other. The entire territory was divided into small units. With the passage of time these Khasha groups (territorial units) developed into tribal republics, which were called 'Janapadas' in Sanskrit Literature.

The Aryan race, which entered the later stages came to be known the 'Indo-Aryans'. After crossing the 'Hindukush' through passes, they settled in the Indus valley, which they called 'Sapta-Sindhu' or the land of seven rivers. These Indo-Aryans subjugated the local inhabitants, who were more civilized people and then moved towards North-Easterly direction, via Punjab, upto the foothills of the Himalayas, from where they turned towards Saraswati, Yamuna and Ganga valleys. Many a times, pitched battles took place between natives (dark skinned people) called 'Dasyus' by Aryan and Aryan migrants. The Rig Veda mentions that Shambra the powerful king of Dasyus fought for forty years against Aryans unsuccessfully. Ultimately the Aryans emerged victorious and Dasyus retired towards the North.

Aryans spread their influence in the plains and also penetrated far into the hills. There is reference in the Mahabharata about four famous Janapada existing at that time in the Himalayas, namely; *'Audumbara', 'Trigarta', 'Kuluta'* and *'Kunindas'*. In the later Vedic age, many saints and sages also came to Himachal and made their abode. The Hermitages of Rishies are identified as – Renuka Lake connected with Jamadagni, Nirmand with Parshuram, Vashishta Kund at Mani Karan in Kullu with Rishi Vashishta, the Vyas cave in Bilaspur with sage Vyas etc. The Pandava brothers spent their 12 years exile period in Mahasu area. Hidimba temple in Manali and place like Hatkoti in Shimla district are real testimony to the post vedic scenario. With the coming of Aryans, the political map of the region took a new shape.

The Janapadas, formed by Aryans, were the following:

THE AUDUMBARAS – The epic Mahabharata testifies that Audumbaras were descendants of the sage Vishwamitra, who founded the *'gotra'* of the *'Kaushika'* group. They were one of the famous tribes of ancient Himachal Pradesh. Their coins have been found in *Kangra, Jwalamukhi, Pathankot, Gurdaspur* and *Hoshiarpur* regions. A Buddhist scholar named Chandragomin (5th century A.D.) refers to the Audumbaras in his book *'Vritti'* as a section of 'Shalvas'. Mention of Shalvas has also been made in the

'Satapatha Brahamana', a work of 8th century B.C. This refers to the fact, that there were many constituent unit of Shalvas, and Audumbaras were also one of them. The coins, inscribed with 'Brahmi' and 'Kharosthi' legends, throw adequate light on the form of Government prevailing during that period. They were 'Shaivite' in faith.

Panini a great Sanskrit scholar who lived most probably in 5th century B.C. has also made mention about Audumbaras, along with the people of Jalandhara is his Ganapatha'. It is very difficult to establish the fact, that where Audumbaras have been living. J. Prezyluski mentions that they (Audumbaras) had to bear the brunt of the Aryan invasion, which ultimately resulted in the division among the tribe. According to him, the *'Markandya Purana'* and *'Brihatsamhita'* mention about Southern Audumbaras, while the couples them with the Trigarta, the ancient people of Kangra and Kulindas. Adumbara or Audumbaras were used in interchangeably.

The territory of Audumbaras was located on a very advantageously trade route running from 'Takshashila' to the 'Gangetic valley'. Their territory was also serving as a natural link between the mountains and the plains. It was a route from Magadha to Kashmir. 'Pathankot', where a number of coins of the Audumbaras have been found was the junction of the commercial routes from Kangra, Nurpur and Chamba. The tribe Audumbaras had republican system with an elected King. Their coins inscribed in *'Brahmi'* and *'Kharosthi'*, throw sufficient light on their form of government.

1. Mahadevsa Rana — Sivadasa Odumbarisa
2. Mahadevsa Rana — Rudradassa -do-
3. Mahadevsa Rana — Dharaghosasa Odumbarisa
4. Bhagavati Mahadevasa — Raja Rana -do-

The Audumbaras coins had an additional word 'Mahadevsa' along with the name of the Raja or Rana of the tribe. Either it was used as a regal title for the Audumbara leaders or for lord Shiva. The use of the title for lord Shiva is also supported by the figure of a 'trident' (three prolonged implement), a symbol of Shiva on their coins. It indicates that the issuers of these coins were 'Shaivite' (worshipper of Shiva). The coins that bear the figure of a bull also point to the same conclusion, for a bull probably stands for Nandi, the *vahana* (carrier) of Shiva. In the later stages downfall of republican system paved the way for monarchial system of government. The coins of the Adumbaras were made of copper and silver, issued in the name of the community and the King. On the coins of Sivadas, Rudradas, Dharaghosha and Mahadeva we find the name of the tribe associated with that of the King. These coins date from 1st century B.C. and have legends in both *'Brahmi'* and *'Kharosthi'*. The numismatic evidence shows that the Audumbaras asserted their independence and formed a separate state in about 2nd century B.C.

On the careful study of the chronological history of the Audumbaras we find that the lineage *'Mitra'* (second group among Audumbaras) followed the

former. Their well known chiefs were, Rudravarma, Mahimitra, Aryamitra, Bhanumitra and Mahabhutimitra. Their coins omit the name of the tribe. The omission of the name of the tribe may be due to increase in the authority of the rulers of the tribe, who gave their own name only in the coin legends. The material prosperity of Audumbaras is testified to by the abundance of coins, which bear their names. Local industries contributed a major source of their wealth. Sheep rearing was one of the occupations of the people. Audumbaras may have grown prosperous through the sale of woollen goods manufactured by them. Their economic affluence is also testified to by Buddhist texts like *'the Vinaya'*.

Among the states which existed earliest, **'TRIGARTA'** was one counted most. The dwellers of the area were called by Panini as **'Ayudhajivis'** (one who earn by means of war). Trigarta came into existence some time around 8th—5th century B.C. It was founded by **Susharma Chandra,** who helped *'the Kauravas'* in the Mahabharata war. The original seat of the Susharma's family was said to be at **Multan.** He built the fort of Nagarkot. It is believed that Trigarta and Jalandhara were used interchangeably for the whole region. Jalandhara was the name of the country in the plains and Trigarta of that in the hills. *Trigarta denotes the region drained by three rivers, the Ravi, the Beas and the Satluj. Modern Kangra was called Trigarta in the past. Trigarta is the oldest princely state in Himachal Pradesh.* It also found mention in the Mahabharata, the Puranas and the work of Panini.

TRIGARTA: Susharma, the founder of Trigarta, was an ally of the 'Kauravas' and attacked Virata; the King of the Matasya, with whom Pandavas had sought refuge. Apparently 'Trigarta' and the 'Matasya' were neighbours. In the **'Mahabharata'** and **'Brihatsamhita'**, Trigarta is mentioned with other tribes of Punjab. They are closely connected with the Yaudheyas. The **Vishnu Purana** couples the Kulutas and the Audumbaras.

The first historical mention of Trigarta was found in the writings of Sanskrit scholar **Panini.** He called it a confederation of six states known as *'Trigarta-Shashthas'*. Trigarta represent a second group of mountainous *Sanghas* being counted amongst **'Parvata- srainah'** along with the **Niharas, Darvas, Karna Pravarnas** etc. who formed the North-Western group.

The Kashika mentions the six members of this confederacy as:

1. Kaundoparatha	2. Kraushakti	3. Dandaki
4. Janaki	5. Jalamani	6. Brahmagupta

These states have not been identified so for. The existence of Trigarta an independent republic in the 2nd century B.C. is indicated by a coin bearing the legend **'Trakata Janapadasa'** in Brahmi script and the traces of the same inscription in Kharosthi. The coin is square in shape, is further confirmation of its early date. ***(For more details see chapter on Kangra district).***

KULUTA: The area located in the upper Beas valley found mention in 'the Ramayana', 'the Mahabharatha' and 'the Vishnu Purana', under that name

in a list of the countries lying in the North of India. The *'Brihatsamhita'* and the *'Markandya Purana'* also mention about it. There is reference about inhabitants (Kulutas) along with many other tribes like the Audumbaras, the Kashmiras, the Kulindas, the Dravabhisaras, the Tanganas and the Dardas. The Kuluta has also been referred as a territory of two people— the Kulutas and the Audumbaras, not widely separated from each other. Its ancient capital was "Naggar" on the Beas, a name mentioned in the *'Katreyadi Ganga'* (iv. 2.95) of Panini.

Vishakha Dutt, the author of 'Mudrarakshasa' discussed 'Kuluta' as a separate political entity. According to him Chandragupta Maurya (324 B.C.) had an alliance with Himalayan states, which gave him an army recruited from a variety of people. But the reference to various states which either helped or opposed Chandragupta Maurya is of no help to prove the existence of these people in the territory called as Kuluta. The oldest historical record of the Kulutas is the legend on a coin found in the 'Kullu valley bearing the name 'Virayasasyarajna Kulutasya' (of the Kuluta King Virayasa). The probable date of this coin is about 100 A.D. The coin is made of *copper,* the metal which was readily available during that period. The coin was inscribed in Sanskrit form bearing the impression of *'Prakrit'* and *'Kharosthi'* on the reverse. But the name of Kullu raja, mentioned on the coins (Virayas) is not available in the *'Vamshavali'* of the Kullu rajas. Kullu tradition says that the founder of the state was one **BIHANGMANI,** who came to the valley from **Prayag.** It means that second Kullu state was founded in the Pre-Gupta period.

THE KUNINDAS (or Kulindas): The other group of people which find mention in **'the Mahabharata', 'the Vishnu Purana', 'the Vayu Purana'** and **'the Markandeya Purana'** were Kulindas or Kunindas. The Mahabharata mentions that the Kulinda people were conquered by Arjuna. From description in the epic, it may be concluded that they were mountaineers and neighbours of the Trigartas. From the various reference such as from Vishnu Purana, Panini's Kuluna (Gans Patha, iv 2.133, iv, 3.93), Ptolemy's (c.140 A.D) Geographica, it can be said that, Kunindas occupied the country of the lofty mountains, where in the Beas, the Satluj, the Yamuna and the Ganga had their sources. Varahimira (c. 500 A.D.) mentions them as the people of Kulutas and Sirhind. From the above description it may be concluded that Kunindas or Kulindas were a hill people who lived in the area lying between the rivers Beas, Satluj and the Yamuna i.e. Sirmaur and Shimla hills and between Ambala and Saharanpur in the plains. The coins of Kulindas have also been found in the territory between Ambala and Saharanpur on the plains and on the Shivalik hills. In the modern period, we can identify Kunindas with the Kanets or Kunets, who form the bulk of population of Kullu, the Shimla hills and the Sirmaur hills.

The names Kunindas or Kulindas are still preserved in the district of Kullu on the Beas, Kinnaur on the Satluj, and Sirmaur on the Giri river. The names 'Mavi' or 'Mavana' given to the Kanets and the Khashas designate the ancient

inhabitants of the hills, whom they identify as their ancestors. Their tradition also says that before the coming of Aryan immigrants, Kanets and the Khashas were the masters of the hills. The numismatics find of the 2nd and 1st centuries B.C shows the ethnographic distribution of the Kulindas in the Shivalik hills right from Kangra to Kumaon, including Himachal Pradesh and the area of the plains between Ambala and Saharanpur, showed that, at that time Kulindas were independent. During Saka invasion, when Greeks were pushed out of Mathura, the Kulindas extended their power down to the plains, with which they were familiar.

Kulindas are believed to use plains as grazing grounds for their cattle, like *Gaddi tribe* of today's Himachal. They issued silver coins and these were furnished with only one name, Amoghabhuti, who was ruling during the later half of 1st century B.C. Kulindas lost their independence in the plains, with the entry of Sakas. From the coming of Sakas to 3rd century A.D. their coinage ceased and reappeared only with the decline of Kushana empire. They (Kunindas) probably had joined hands with Yaudheyas in the expulsion of Kushanas from the Eastern Punjab. Kunindas had republican form of government. The confirmation to this fact is established by a coin legends bearing *'Rajnah Kunindasya Amoghabutisya Maharajasya'*. The literature of the period shows that all the members of the tribal assembly were called *'Rajas'* and the *'President'* or the chief of the house was called 'Maharaja'. One confusing element in the coins of Kunindas was the use of the name Amoghabhuti, 'Raja' and 'Maharaja'. The coins bearing the title 'Amoghabhuti' have been issued during a period, extending over centuries. It means, that 'Amoghabhuti' was not the name of a person, but official title.

The Kunindas were the contemporaries of the Audumbaras, the Trigartas and the Kulutas in the hills, and the Yaudheyas, the Malavas and the Arjunayas in the plains. The Kunindas coinage bears legends in *Prakrit*. Their coins were of two types; silver and copper. The silver coins bear the Prakrit script in the obverse and the Kharosthi on the reverse. The copper coins mostly have legends in Brahmi script. For local use copper coins were used while silver coins had importance beyond the boundaries. It means the prevalent script of Kunindas was Brahmi.

The coins of Kunindas fall into two groups, one about the end of the first century B.C. and the other were issued at the end of the 2nd century A.D. or beginning of the third century. The former bears the name of Amoghabhuti, with a legend which reads 'Rajnah Kunindasya Amoghabhutisya Maharajasya'; these are distinguished by Buddhist symbols, in addition to the name of Kunindas. While the latter are large copper pieces, resembling that of Kushana copper coins. The obverse bears a figure of Shiva holding a trident and the legend 'Bhagavata-Chatresvara-Mahatman'. It implies that this was an Indian insignia of sovereignty and Kunindas at one time were probably dedicated to lord 'Shiva' and coins were issued in his name in the capacity of its sovereign ruler. Kunindas were economically very strong,

this can be inferred from their capacity of issuing silver coins.

The republican states, which flourished, in the Shivalik hills and area around, during 3rd century B.C. to 4th century A.D., suddenly disappeared, with the coming of Imperial Guptas. In the 4th century A.D. Samudragupta subdued and overpowered all these 'Ganas' and 'Sanghas', and made them part of his own empire. With this came the end of these Sanghas.

The beginning of Samudragupta's reign was marked by the defeat of his immediate neighbours, Achyuta, ruler of Ahichchhatra, and Nagasena. Following this Samudragupta began a campaign against the kingdoms to the south. This southern campaign took him south along the bay of Bengal. He passed through the forest tracts of Madhya Pradesh, crossed the Odisha coast, marched through Ganjam, Vishakapatnam, Godavari, Krishna and Nellore districts and may have reached as far as Kancheepuram. Here however he did not attempt to maintain direct control. After capturing his enemies he reinstated them as tributary kings. This act prevented the Gupta Empire from attaining the almost immediate demise of the Maurya Empire and is a testament to his abilities as a statesman. His ambition was inspired by becoming "Raja Chakravarti" or greatest emperor and *"Ekrat"*, undisputed ruler. In the North, he adopted the policy of "Digvijaya" which meant the conquest and annexation of all territories. In the South, his policy was *"Dharma Vijaya"* which meant conquest but not annexation.

Samudra Gupta was chosen as emperor by his father over other contenders and apparently had to repress revolts in his first years of rule. On pacifying the kingdom, which probably then reached from what is now Allahabad (in present-day Uttar Pradesh state) to the borders of Bengal, he began a series of wars of expansion from his northern base near what is now Delhi. In the southern Pallava kingdom of Kanchipuram, he defeated King Vishnugopa, then restored him and other defeated southern kings to their thrones on payment of tribute. Several northern kings were uprooted, however, and their territories added to the Gupta empire. At the height of Samudragupta's power, he controlled nearly all of the valley of the Ganges (Ganga) River and received homage from rulers of parts of east Bengal, Assam, Nepal, the eastern part of the Punjab, and various tribes of Rajasthan. He exterminated 9 monarchs and subjugated 12 others in his campaigns. That Samudragupta was a brilliant commander and a great conqueror is proved by Harisena's description of his conquests. He mentions that Samudragaupta exterminated nine north Indian states, Subdued eighteen Atavika kingdoms near Bajalpur and Chhota Nagpur, and in his blitz-like campaign humbled the pride of twelve South Indian Kings, Nine border tribes, and five frontier states of Smatata, Devaka, Karupa, Nepal and Krtripur 'paid taxes, obeyed orders and performed obeisance in person to the great Samudragupta'. The conquests made him the lord-paramount of India. Fortune's child as he was, he was never defeated in any battle. His Eran inscription also stresses his being 'invincible' in battle.

The early history of Himachal Pradesh will remain incomplete, if no

reference is made about foreign invaders who came from central Asia during 5th century B.C. to 2nd century A.D. and the emergence of Mauryan dynasty with the downfall of Nanda dynasty.

Before 5th century B.C. and the beginning of Christian era, the **Persians, the Greeks, the Scythians** and the nomadic **Kushanas** from Central Asia overran Northern India. In 327 B.C. **Alexander** from Macedonia crossed Afghanistan and advanced as far as the river Beas. In Punjab he was opposed by republican people, who were mentioned by **Panini** as **Ayudhajivi Sangha**, (warrior communities). When Alexander met stiff resistance in the Punjab, his soldiers refused to go further and in 321 B.C. he returned. On his way back to Macedonia he died of Malaria at Babyloan in Afghanistan.

After the departure of Alexander an internal rising took place in India. Chandragupta was the contender of Magadha throne. He along with **Chanakya** (also known as **Kautilya** and **Vishnu Gupta**) took full advantage of the situation. They gathered army from different regions. Chanakya mentions the name of the Mlechcha tribe like the highlanders. He also made an alliance with the Himalayan chief **Parvataka**, as stated in both the Sanskrit and Jaina texts, **'Mudrarakshasa'** and **'Parishishtapavan'**. The Himalayan alliance gave Chandragupta an army of variety of people. Among these are mentioned the following: *the Yavanas, the Kiratas, the Sakas, the Kambojas, the Vahlikas* and *Paraskas*. According to Mahabharata, the **Vahlikas** comprised *the Prasthalas, the Madras, the Gandharas, the Khasas, the Sindhus, the Sauviras* and *Vasatis*. If not others, the Kiratas and the Khashas were definitely from the Himachal hills, and the Himalayan King Parvataka must be Trigarta (modern Kangra) chief major portion of whose dominion was spread into the hills and whose capital was at Jalandhara. Moreover before leaving, Alexander had made the king of Abhisara rule in Kashmir with the state of Arsaces (Hazara) added to his kingdom. All this shows that the Parvataka were the rulers of the territory between the Ravi and the Yamuna rivers.

In 324 B.C. Chandragupta Maurya ascended the throne of Magadha at Patliputra by removing the Nanda dynasty. His next target was Greeks garrison in Punjab. Chandragupta followed up his success by subduing all the states of Northern India. He tried to penetrate into the inner hills of the Himalayas. There is a mention in the 'Mudrarakshasa' that he was opposed by a coalition of five kings, among whom the name of **Chitravarma** of Kuluta is mentioned. Chandragupta who was assisted in his early mission by *'Ganas'* from Himalayas, followed the policy of subduing and destroying them. Ashoka, the grandson of Chandragupta, extended his boundaries into the Himalayan region. He followed the policy of tolerance and religiosity. Ashoka was a staunch Buddhist. At the conclusion of the third Buddhist council, he sent Buddhist monks to various regions.

The mission to Himalaya was headed by **Majjhima** with four monks namely—**Kassapagotta, Dundhibissara, Sahadeva and Mulakadeva.** The **'Mahavansha'** mentions that Majjihima along with four monks preached

Buddhism in five countries of the Himalayas. These five countries of the ancient period are today identified with *Himachal Pradesh, Garhwal and Kumaon.* Buddhism was injected into the Himachal hills as early as 242 B.C. by Buddhist missionaries and their disciples. Ashoka also built many stupas in the Himalayan region. One of them is existing in the Kullu valley (Chinese traveller Hiuen Tsang, 630-644 A.D has also mentioned it). Ashoka also erected many rock edicts. One of them is at Kalsi, at the confluence of the Tons and the Yamuna in the Jaunsar Bawar region of Uttrakhand. Earlier it was the part of Sirmaur state. The people of hills accepted the overlordship of Ashoka, but were free to look after their own affairs. The social, political, cultural, religious and economic relations between the people of hills and plains at that time were quite active and harmonious.

After the disintegration of Mauryan Empire, the republics of Himalayan hills declared themselves independent. The Sunghas (187-75 B.C.) could not keep local republics under their control. These republics became free and issued their coins from 2nd century B.C. to 2nd century A.D. Issuing of coins was probably the sign of independence and superiority. Sunghas were followed by the Kushanas (A.D. 20-A.D. 225). They established extensive empire, extending from Central Asia to Mathura and Banaras in the East. Kanishka was the greatest ruler of this dynasty. He was a staunch Buddhist. The finds of 382 copper coins of *'Wema Kadphises'* with 40 copper coins of Kanishka on the *Kalka Kasauli Road* and two coins of Wema Kadphises, one of Kanishka and one of Vasudeva at *Kanihara* in the Kangra district throw light on the extensive nature of Kushana's empire.

The fourth Buddhist council was held during the period of Kanishka to discuss the matter pertaining to Buddhist theology and doctrine. Historians are not unanimous on the actual venue of the meeting. While one group favours the *'Kundalavana Vihara'* in Kashmir others locate it in the *'Kuvana monastery'* at Jalandhara, the capital of Trigarta. Under the overlordship of Kanishka and Huviska, Kushanas were very powerful. The tribal republics of Audumbara, Trigarta, Kuluta and Kulinda probably were in the domination of Kushanas at that time. But the policy of Kushana rulers against these tribal republics was not hostile at all. They (tribal republics) were free to issue their own coins, under the overlordship of Kushanas.

This is evident from the fact, that coins of Kushanas and tribal chiefs belonging to 2nd century B.C. to 2nd century A.D have been found together. With the passage of time, the Kushanas power started declining by the end of 2nd century A.D. and beginning of 3rd century A.D. By that time *the Yaudheyas, the Arjunayas* (of Punjab) and *the Kulindas* republics had grown powerful, due to the policy of free hand given to them by the Kushanas. Later on the combined forces of these republics succeeded in pushing the Kushanas completely beyond the Satluj. They (local republics) issued new coins and asserted their independence. The first blow to the Kushanans empire was given by the combined force of Kulindas (Kunindas), Arjunayas and the Yaudheyas

while second and last came from the monarchical power of the Guptas. The above mentioned tribal republics had asserted their independence in the Punjab and the Himachal hills about 145 A.D.

In the middle of 4th century A.D., the Guptas power arose from Magadha with its capital at **Pataliputra**. The Gupta empire was founded by **Shrigupta**, the grandfather of Chandragupta-I. The greatest king of this dynasty was **Samudra Gupta** (*also known as Indian Nepolean and Kaviraj*). His achievements have been engrave by his minister of war, **Harisena**, on the 'Ashoka pillar' at Allahabad. He expanded the limit of his kingdom far and wide. In the Punjab the state of Kartiputra and in the Shivalik, the Arjunayas, the Madrakas and the Yaudheyas acknowledged the overlordship of Samudra Gupta without a war. Samudra Gupta never felt the need of picking up arms against them, since they had readily recognized his supremacy. He followed quite a different policy towards the republican tribes of the Punjab region. The rulers who submitted, were not disturbed in their internal administration and enjoyed internal autonomy, but they had to acknowledge Gupta's supremacy and paid tributes to him as feudatories. All the lands of the feudal chiefs were considered as parts of the Gupta empire. The good relation between Gupta empire on the one side and feudatories on the other ensured latter social, economic and political development.

Samudragupta was succeeded by his son Ram Gupta, whose wife was Dhruva Devi. Chandragupta II was the younger brother of Ram Gupta. The plot of Vishakhadatta's play **'DEVICHANDRAGUPTAM'** is the story related to Ram Gupta, Dhruva Devi and Chandragupta. It is said that in a course of war with a Saka King, Ram Gupta was defeated, and besieged and placed in such an embarrassing position that in order to save his people, he agreed to surrender his queen Dhruva Devi to the Saka King. Ban Bhatt has also mentioned in his book **'Harshacharita'** that the Saka King possessed lust, for another wife. On hearing this act of dishonour and wickedness, the younger brother Chandragupta, offered to go to the enemy's camp in the disguise of queen Dhruva Devi in order to kill the Saka King.

He was accompanied by all the youth of Royal camp, disguised as maidens. The stratagem succeeded and Chandragupta saved the empire and its honour. Later on he married a Dhruva Devi, who was no more interested to stay with Ram Gupta her first husband for his act of wickedness. *'Mujmalu-i-Twarikh'*, an Arabic Folklore translated in Persian by **Abdul Husain Ali** in A.D. 1226, also made reference to a similar version. In this book, Ram Gupta has been named as **'Rawal'** and Chandragupta as **Barkamaris**. Chandra Gupta II continued the task of conquest and empire expansion, started by his father Samudragupta. He not only subdued the tribal states and kingdoms on the border but also the territories ruled by foreign lords, like *the Kushanas and the Sakas.* The **Mehrauli Iron Pillar** inscription which is related to Chandragupta's period throws sufficient light on the mission and achievements of this monarch. He launched severe attacks against the rulers of North-

West, who were insubordinate and refused to acknowledge his supremacy. In the initial years of his reign he devoted himself fully to the strengthening of his North-Western dominion from Jalandhara to Mathura. Chandragupta was followed by Kumaragupta and Skandgupta. With the end of the rule of these valiant gupta rulers, the empire began to weaken.

During the period from the beginning of the 4th century to the end of 6th century a great deal of changes took place in the political condition of ancient Himalayan states. Some old republics dwindled and new appeared. 'Audumbara republic' also came to an end probably some time in the 4th century. There is no reference to this republic in the Samudragupta's Allahabad pillar inscription. But it is difficult to ascertain, what led to the extinction or weakening of this republican state. It is presumed that two neighbouring states i.e. Madrakas from the West and Trigarta from the East must have occupied the lands of the Audumbaras. Another republic, whose name is not found in the Allahabad pillar inscription was, Kuninda.

Kuninda republic was fragmented into many small kingdoms with the rise of Gupta power in the 4th century. Some of them are —**'Brahampura'** in Ramganga valley, **'Govisana'** (a place identified with a site in the vicinity of Kasipur) and **'Kartipur'** in the Katyur valley of Kumaon. The name of Kartipur is found in the Allahabad inscription. The Kulutas, who were the western neighbours of 'Kunindas' probably had encroached on their land on the upper Beas and Satluj valleys. By this time two new powers i.e. **Bushahr** (in the upper regions of Himalayas) and **Sirmaur** (in Jaunsar-Bawar region) appeared to have come into existence. (Jaunsar-Bawar, which is currently in Uttrakhand was part of Sirmaur before A.D. 1815, when it was transferred. According to the two inscriptions of 6th century found in *'Lakha Mandal'* this kingdom is called *'Singpur'*, which can be connected with Sirmaur. This kingdom was established some time around 150 A.D. The inscriptions in 'Lakha Mandal', reveals the name of some rajas, having suffix **Varman** with all of them. (Names are—Sen Varman, Datt Varman, Pradeep Varman, Ishwar Varman, Jai Varman, Yagya Varman, Achal Varman and Bhaskar Varman).

The Trigarta people seem to have faced foreign aggression and Gupta subjugation with great courage and audacity. In the process they must have encroached on the territory of Audumbaras in the West, **'GABDIKA'** (Bharmaur) in the North and **'SUKSHETRA'** (Satluj valley) in the East. In the 6th century A.D., a new dynasty was established in the upper Ravi valley by Maru Varman, who is said to have come from the upper Ganga valley. Its capital was Brahampura (modern Bharmaur in Chamba district).

Before the emergence of Gupta dynasty, in the 4th century A.D., these hill states followed a *'republican system'* of government (with central assembly and an elected head), but later on they fancied to follow in the footsteps of their overlord Guptas and adopted the monarchial system (hereditary system). By the 4th century A.D., the Audumbaras and the Kulindas had totally disappeared from the scene and new dynasties in Sirmaur, Bushahr, Kullu and Chamba

regions came into existence. The Trigarta confederation, a powerful one also came to an end.

In the middle of the 5th century A.D., a central Asian Tribe, the Hunas, accompanied by *'Gujjars'* entered in the Punjab and settled there. From there, they moved towards the Yamuna valley and overcame the reigning Gupta King. Their chief was 'Toramana'. He was succeeded by his son Mihiragula who was very cruel. In 520 A.D., he was defeated at *'Kahrur'* near Multan by the United forces of Indian princes under the command of 'Baladitya' of *'Magadha'* and Yashodharman of *'Malwa'*. He was forced to retire to Kashmir, where he died in 540 A.D. Some of the fleeing tribesmen settled in the hills and got absorbed into Hindu society. Those, who could not settle, followed the pastoral and nomadic way of life. The Gujjars and Gaddis of the Shivalik and sub-Himalayan region in the modern period are identified with the tribesmen of Hunas race.

The confusion prevailing, after the collapse of Gupta Empire and before the emergence of Harsha, led to the rise of local chiefs known as 'Rajas', 'Ranas' and 'Thakurs' in the cis-Himalayan region between the Ravi and the Yamuna. They claimed themselves to be Kshatriyas. Except Kangra and Kullu, the whole of Himachal was divided into small Apthakurai (ruled by Rajas), Rahun (ruled by Ranas) and Thakurai (ruled by Thakurs). In the Chamba region alone, there were more than 100 such states. The Ranas are evidently identical with the old Rajanakas, the court elites of the pre-Rajput times. There is reference about them in the inscriptions ranging from 7th century to 10th century and beyond. The Thakur means 'lord' and originally may have been applied to any petty chieftains. It is difficult to define the actual status of Ranas and Thakurs in terms of political jurisdiction; whether they were independent rulers or under the suzerainty of a paramount power.

These states were constantly in wars and so their boundaries were liable to change frequently. Mutual conflicts, dissensions and hatred among these petty chiefs, resulted in their early extinction from the political map of Himachal hills and paved the way for the rise of numerous Rajput principalities which ruled the area almost till the dawn of independence in 1947.

The Apthakurai or Ranahun Age: The ancient tradition shows that narrow and deep valleys of rivers and streams were parcelled out into hundreds of tiny political units under small chieftains called *'Ranas'* and *'Thakurs'*. On the slab inscriptions and copper plate title deeds the *'Ranas'* are indicated by the title *'Rajanaka'*. In the Sanskrit the final *'Ka'* is not pronounced. Obviously the word *'rana'* has been derived from *'rajana'*, the former form taking place of the latter in Kharosthi script on most of the tribal coins. Thus *rajana* is the original of the modern *rana* which is used either as the title of a petty chief or as a caste name. In the former meaning it is synonymous with Sanskrit *'samanta'* and *'thakura'*.

In the Rajtarangini it is used in exactly the same sense as *'rajanaka'*, to denote a feudal chieftain. The *Ranas* were of the Kshatriya or Warrior caste,

as in the republican period there were Kshatriya families in which the title and office of *rajana* and military leadership had become hereditary. In due course of time these families became independent in their respective territories and established Rana families with their own hereditary *'Thakurain'* or *'Ranhuis'*.

On the fountain slabs the *Ranas* are rudely depicted as knights on horseback, armed with sword and shield, and as feudal barons each of them had his own retainers with whom he accompanied his lord superior, the Raja on military expeditions. In this relationship we see a close analogy to the feudal system of Medieval Europe. The title *'Rajanaka'* seems originally to have been held only by the ancient petty chiefs, but in later times the Rajas of Kashmir, Chamba and probably other states, were in the habit of conferring it on some of their officers as a personal distinction for special services. The title was probably given along with a *Jagir* or grant of land. The high officials on whom the honorary title *'Rajanaka'* was conferred were usually *'Brahmins'* and thus the word has survived in Kashmir in the form *'Razdan'* as a Brahmanical family name.

The title of *'Thakura'* was also conferred as an honorary distinction in the same way as that of *Rajanaka.* The name *Thakura* like Rajanaka is also a Sanskritized rather than a true Sanskrit word and may have been introduced into India by some foreign tribes purely as a title, meaning *"lord"*. Hence the use of term *"Thakur"* in its latter form to donate *'Vishnu'* and his incarnations. It too, is used as a caste name. In Rajputana the Thakurs are all Rajputs, the name being used chiefly as a title. In the Western hills *Thakur* is used as a title and also as a caste name in the old families, but among others the caste name is *Thakur,* the ancient form. The old feudatory *'Ranas'* of the Jammu-Himachal Hills belonged naturally to the warrior caste. But the high officials on whom the honorary title of *'Rajanaka'* was conferred were often Brahmins and thus the word has survived in Kashmir in the form of *'Razdan'* as a Brahmin family name. It would seem that two titles implied a difference of caste, the *Thakurs* ranking lower than the Ranas socially— a distinction which is maintained to the present days. As a caste the Thakurs rank in the hills immediately below the Rajputs.

In their relations with one another the *Ranas* appear in less favourable light. By each of them his neighbourers seem to have been regarded as natural enemies, with whom the only possible relationship was one of the mortal feud. When not opposing a common foe, they were engaged in oppressing and despoiling one another and in the traditions of the hill men they are associated only with dissensions and strife. Numerous incidents of those stirring times have been handed down by local traditions and are treasured in folklore of the people. In some parts of the hills the *'Ranas'* acknowledged the supremacy of a paramount power seems probable, but that in others, especially in the olden time they were free and independent rulers is fully borne out of local tradition, and the negative evidence of some of the slab inscriptions.

Traditions related to *'Apthakurai'* (independent rule) period are common

throughout the hills and many traces still exist of the old order of things. The time during which the *'Ranas'* and *'Thakurs'* ruled in the hills is spoken of as the *"Thakuri"* or *"Thakurain"* and in Chamba the name *"Ranhui"* is occasionally heard. But nothing definitely can be said about the origin and decline of the *Thakurain.* The traditions relating to the Thakurain are much older in Kangra than in Kullu, owing probably to the fact that the *Ranas* were subjected at a much earlier period in the former than in the latter. In Kullu they continued to maintain a semi-independent existence till the reign of Raja Bahadur Singh A.D. 1559 by whom most of them were finally subdued. In the upper Ravi valley they lost their independence at a very early period but in the lower Ravi valley and Pangi they were probably independent down to the tenth or eleventh century when they became subject to Chamba. The *Thakurs* of Lahaul where in ancient times subject to Tibet or Ladakh, but in the 10th or 11th century those of upper Chandrabhaga valley were under the control of Chamba.

Indeed, all through the hills, traces are still to be found of the old order of things, and local traditions can often point to the sites of the *Ranas* forts, or recall stories of their exploits, and even define the boundaries of their territories. Some of the state *'Kothis'* are said to stand on the very sites formerly occupied by the *Ranas* forts, and there is hardly a locality where the villagers can't recall the place of residence of the local *Rana,* and can often point out the very site on which his house or fort formerly stood.

The baronies owned by these petty chiefs were called *Ranhu,* and were always of small extent often comprising only a few villages. As it is evident from various sources that Trigarta, Kuluta, Bushahr and other easily accessible parts of present Himachal were ruled by *Rajas,* at the same time it is possible and even probable that the remote and inaccessible valleys continued under the sway of *Ranas* and *Thakurs,* who enjoyed practical independence. The duration of the *Apthakurai* period is a matter of doubt, but their end led to the emergence of numerous Rajput principalities, which held dominion till recent past. These were founded by Rajput adventurers who either came direct from the plains, or were descendants of one or other of the noble families which had already established themselves in the hills. By then the *Rana* and *Thakurs* were reduced to the position of tributaries.

Their subjection, however, seem to have been little more than nominal, the petty chiefs simply agreeing to acknowledge the supremacy of the local Raja, while they continued as before to rule their own baronies, waged war on one another and generally act as they were quite independent. For a long period after their subjection by the Rajas, the *Ranas* seem to have clung to the hope of regaining their independence and in almost every one of the hill states an attempt was made by them to drive out their new masters. The central authority treated them as danger and safety was assured by their complete subjection. After their subjection the *Ranas* and *Thakurs* ranked as bendal barons under the Rajas and the copper plate deeds of the 10th, 11th and 12th centuries in Chamba clearly prove that. It thus appears that like their

contemporaneous princes in Europe, the Rajas sought to attach the feudal barons to their court and from turbulent chieftains to convert them into assiduous officials. Most of these families now occupy the position of common agriculturists, in no way different from the agricultural community of which they form a part.

Harsha ascended the throne in 606 A.D., the centre of power now shifted first from 'Patliputra' to 'Thaneswar' and then to 'Kanauj'. He was a patron of both Buddhism and Brahminism. Harsha established a unified empire in Northern India. The great Chinese piligrim Hiuen-Tsang visited India during the period of Harsha. He stayed here for 13 years, from A.D. 630-644, and visited a very large part of Indian territory including the parts of Himachal Pradesh. In 635 A.D. he visited Jalandhar, the capital city of Jalandhar-Trigarta and remained there as a guest of Raja Utitas for four months, who has been identified with the Adima of the '*Vamshavali*' (genealogy).

In his return journey from Kanauj in A.D. 643, Hiuen-Tsang again visited Jalandhar. He has left a vivid account of the Jalandhar Kingdom and its people. According to him, the kingdom was spread about 1000 Li or 267 kms from East to West, and about 800 Li or 213 kms from. North to South, the capital was 12 to 13 Li in Circuit. The people were brave and rustic in appearance, houses were rich and well planned, land was fertile and useful for the cultivation of rice and pulses, climate was warm and moist.

People were of religious bent of mind, there were temples of Devas and 500 heretics, who all belonged to the '*Pasupatas*' (i.e. lord Shiva). There were also 50 or so convents and 2000 priests. They had students of both little and great vehicle. According to Cunningham, if these dimensions given by Hiuen-Tsang are correct by any means, then Jalandhar must have included the district of Chamba in the North, and Mandi and Suket in the East, and Satadru in the South-East. But records of the period do not speak anything about the Chamba dynasty, which was founded by Maru Varman, with it capital at Bharmaur. The inscriptions made in the Harsha era are not found beyond the Karnal district in the Haryana and Punjab regions and hence it may be inferred that the era lying to the West of the said district was outside Harsha's jurisdiction. From this it may be concluded that Jalandhar was a very important state in the first half of the 7th century.

Hiuen Tsang, after spending four months at Jalandhar went to Kullu, a place nearly 700 Li (187 kms) or so (he called it Ku-lu-ta=Kuluta) from Jalandhar. This country was about 3000 Li (801 kms) in circuit and surrounded on every side by mountains. The chief town was about 14 or 15 Li (upwards of 3 kms) round. He has left vivid account of the people, land, climate, crops, minerals, religion and social system of the country. There are about twenty 'Sangharamas' and 1000 priests or so. They mostly study the great vehicle, a few practise other schools. There are 15 Deva temples, different sects occupy them without distinction.

There are stone chambers along the sides of the mountains (a type of caves)

where the 'Arhats' dwelt or '*the Rishis*' stop. In the middle of the country is a stupa built by Ashokraja, reminds us the visit of Tathagata, who came to this country with his followers to preach the law and to save men. From Kuluta (Kullu) he visited of the country Lo-u-Lo (Lahaul) and from there to the country of Mo-lo-so (also called San-po-ho). Hiuen-Tsang did not mention anything about the political status of Kuluta at that time. Buddhism was widely practised in the valley. He has mentioned of a stone image of 'Avalokiteshwara' in the temple of 'Kapila Muni' at Kelat, some miles North of Sultanpur, which is worshipped even today. The valley was rich in minerals, flora, fauna and medicinal herbs, exported to various parts of the country and outside (medicinal herbs were exported from Kuluta and Kashmir to Roman territories). Hiuen-Tsang stayed for some time at SURUGHNA (Sirmaur) with the monk **Jaya-Guptam**, but has not discussed anything about its rulers and political status.

It was only 67 km from Thaneshwar and probably a feudatory of Harsha. It is clear from the facts discussed above that in the 7th century *Jalandhara, Kuluta, Surughna, Bharmaur* and *Spiti* were important states, located in the Himalayan valleys between the Ravi and the Tons-Yamuna rivers. During the period of Harsha, there were no foreign aggressions and peace was prevailing in the Himalayan hills. People followed Buddhism and Brahminism (Hinduism) with equal dignity and freedom. In the seventh century a new branch of Buddhism called Vajrayana emerged with its centre in Eastern India.

Harsha died in 647 A.D. His death was followed by the era of trouble and confusion in the history of Himachal Pradesh, until the reign of King **Yashovarman** (A.D. 700-740). He was the contemporary of Lalitaditya (A.D. 724-760) of Kashmir. There is mention of a war between these two in the immortal work of Kalhanas **'Rajtarangani'** in which Yashovarman was defeated. It was during this period that Trigarta, Brahampura (Chamba) and other Western hill states came under the influence of Yashovarman. Trigarta (Kangra) and the territory upto the river Satluj were subject to Kashmir state in the 9th century. **Shankaravarman** (A.D. 883-903) a king of Kashmir had led an expedition to conquer Gurjara (Gujarat). In the way he was opposed by the chief of Trigarta, **Prithvi Chandra**, who was probably an ally of Gurjara. But on the approach of Kashmir army he fled away.

Kannauj had become a centre of power since the days of Harsha. In the post Harsha period, all the powers that arose in the succeeding centuries wanted to be the ruler of Kannauj. The master of Kanauj was considered to be the sovereign ruler of the Western Himalayan Hill states. To occupy the proud possession of Kannauj, triangular contest was ensued with the rise of the **Rashtrakutas** under the leadership of **Danti Durga** (A.D. 757-773) from the South, **Palas** under **Dharampala** (A.D. 770-810) from the East and the **Prathiharas** under **Nagabhatta I, Mihira Bhoja** (A.D. 836-885) and **Mahendrapala** (A.D. 885-908) from the West and the North. In the ensued struggle Gurjara-Prathiharas, emerged victorious. They extended their

influence Northwards as far as 'Pehoa' in the Karnal district of Haryana. Their further progress was halted by Shankravarman of Kashmir. The Pehoa inscription of Mihira Bhoja describes that his armies carried invasion upto Karnal and the areas lying in the North-Western Himalayas were outside the power influence of Gurjara-Pratiharas. The decline of Pratihara empire in the 10th century gave rise to a number of feudatories in Rajasthan and the Ganga-Jamuna Doab (Rajput states). In the absence of marked physical boundaries of these newly emerged states, they continued fighting amongst themselves for supremacy.

Some of the Rajput rulers, who could not face the power of their rivals in the plains, turned their way to the North and with their followers penetrated into the central and Western Himalayan valleys and founded a number of states in the hills in the 10th and 11th century. This was the period, when Muslim invasion of India started. In the turbulent period of Indian history i.e. after the death of Harsha and more particularly from 8th to 12th century a number of Rajput princely states were founded by the migrant Rajputs from plains in the outer ranges of the Himalayas between the Ravi and the Yamuna.

Nirmand Plate (in Kullu district): The Nirmand copper plate found in Kullu district has some controversy associated with it regarding its date and the king who issued it. On the basis of paleogeographical grounds Dr. Fleet says that it belongs to 7th century A.D. The donor of the plate calls himself a Mahasamanta or feudatory of some paramount power; but probably of Kullu or Jalandhara. The name of state over which he ruled is not mentioned on the plate. The names mentioned on the plate in chronological order are—Mahasamanta Maharaj Varmasena; his son from Prabalika, the Mahasamanta Maharaja Ravi-Sena; his son from Sikharasvamini, the Mahasamanta Maharaja Samudrasena. There is also mention of a chief of the past, a Maharaja Sarvavarnan. The year '6' which is mentioned on the plate possibly refers to the crowning year of Samudrasena. This Sena dynasty appears to have been subordinate to the rulers of Kuluta and in turn Jalandhara.

In the early centuries of Christian era, a pre-Buddhist Hindu dynasty bearing the surname of *'Sena'* is said to have been ruling in the Spiti. Captain A.P.F. Harcourt, famous writer of the book *"The Himalayan District Kooloo, Lahoul and Spiti,"* states that coins with *'Sena suffix'* on them have been found in the Spiti valley. Although this statement has not been verified, yet if authentic, the donor of the plate might have been one of the Spiti Raja. R.S. Tripathi assigns the record of the plate to the Harsha era. But it is difficult to agree to this statement, since the inscriptions dated in the Harsha period have not been found beyond the Karnal district of Haryana.

HILL STATES AND CENTRAL AUTHORITY

The period from 8th to 12th century was turbulent period in the history of

Himachal Pradesh. During this period adventurous Rajput migrants founded numerous states in the outer ranges of the Himalayas lying between the Ravi and the Yamuna. Some of these principalities were founded as late as the 15th or 16th century. Here an attempt has been made to discuss the role of central authority which came into contact with these principalities from 11th century to the end of British Empire in India.

TURKISH INVASION OF KANGRA

The Arab conquest of India in the eighth century was only a passing phase in the History of India. However, the work started by the Arabs was completed by the Turks, a brave, energetic and enthusiastic people who poured into India from beyond the Afghan hills. The Turks were barbaric people who were employed by the *Khalifas* to protect their person.

In other words we can also say that in the eighth and ninth centuries, the Turks got the upper hand over the Khalifas of Baghdad. The Turks were different from the Arabs. They were more aggressive than the Arabs. They spread Islam at the point of sword. They were brave and full of boundless energy. They were thoroughly materialistic in their outlook. They were full of ambition, eminently fitted for establishing a military empire in the East so, in the course of time. Turks came to occupy a position of dominance by relegating the Arabs to the background. Actually the power of the Arabs began to decline after the fall of Khalifa Omaxyad. The new Khalifa Abbasibs, who succeeded him began to neglect the Arab aristocracy and entrusted the administration to the persion officials. This led to the replacement of the democratic Ideals of the Arabs by the despotic ideas of the Persians.

With the decline in the power of the Khalifa the central authority was greatly weakend. This encouraged the local governors to assert their independence and a number of independent principalities made their appearance which was ruled by the Persions, Turkish, Kurdish, Arab and other. Slowly the Turks established their dominance and conquered large part of western Asia. By the middle of the tenth century, they even began to invade India Lane-Poole describes the expansion of the Turks as *"the master movement in the Mohammadan Empire in the tenth and eleventh centuries." The early Turk invaders were followings–*

Alaptgin: The first Turkish adventurer whose name is associated with the story of Muslim conquest of India was Alaptgin. He was a man of great ability and courage and was originally a slave of Abdul Malik, the Samanid King of Bukhara (Persia). By dint of sheer ability, he rose to the rank of Hajib-ul-Hujjab. He was appointed the Governor of Khorasan in 956 A.D. When Abdul Malik died in 962 A.D., there was a struggle for succession to throne between his brother and uncle. Alaptgin took up the cause of the uncle but in spite of that, Mansur, the brother of Abdul Malik, gained the throne. It was under these circumstances that Alaptgin settled in Ghazni in Afghan territory with his personal retainers numbered about 800. He frustrated the plots of

Mansur to dislodge him from Ghazni and retained the mastery of the city and its neighbourhood. Alaptgin died in 963 A.D. and was succeeded by chiefs like Abul Ishaq, Bilaktgin and Piritgin. The latter even organised certain attacks against India but did not succeed.

Subuktgin (977-97): After the death of Alaptgin, there was once again struggle for power" and it was in 977 A.D. that Subuktgin became the king of Ghazni. Subuktgin was also originally a slave of Alaptgin. He had been purchased by Alaptgin from a certain merchant who had brought him from Turkestan to Bukhara. As Subuktgin appeared to be a promising young man, he was given promotions by his master.

He was given the title of *Amir-ul-Umra.* Alaptgin also married his daughter to him. It was with the accession of Subuktgin the Afghan power greatly expanded. Subuktgin tried to coalesce the Afghans into a compact body and extended his sphere of influence by conquering *Lamghan and Sistan.* After settling himself on the throne, he started a career of conquest which brought him into prominence in the Eastern world. After years of continued fighting, he was able to secure the province of Khorasan in 994 A.D. Ambitious as he was; Subaktgin directed his attention towards the conquest of India, a country full of riches and the worshippers of idols.

First Invasion, the first Indian ruler he had to meet was Raja Jai Pal of the Shahi Dynasty whose kingdom extended from Sarhind to Lamghan (Jalalabad) and from Kashmir to Multan. Shahi Kings had their capitals successively at *Und, Lahore and Bhatinda.* In 986-87 A.D., Subuktgin attacked the Indian Territory for the first time. He conquered forts and captured cities "which had up to that time been tenanted only by infidels and not trodden by the camels and horses of Musalmans." This was too much for Jai Pal. He collected his troops and marched into the valley of Lamghan where he was met by Subuktgin and his son. The battle dragged on for several days. A snowstorm upset all the calculations of Jai Pal.

It was under these circumstances that he sued for peace. Subuktgin was willing to accept the terms of peace but Mahmud, his son, asked him to continue the war for *"the honour of Islam and of Musalmans."* He addressed his father in these words: *"Cry neither for peace nor demand it, for you are the highest and God is with you, and will not suffer your affairs to fail."* In spite of his initial failure, Jai Pal sent the following message to Subuktgin: *"You have seen the impetuosity of the Hindus and there in difference to death whenever any calamity befalls them, as at this moment. If therefore, you refuse to grant peace in the hope of obtaining plunder, tribute, elephants, and prisoners, then there is no alternative for us but to mount the horse of stern determination, destroy our property, take out the eyes of our elephants, cast our children into the fire, and rush on each other with sword and spear, so that all that will be left to you, is stones and dirt, dead bodies, and scattered bones."* After this, peace was made and Jai Pal agreed to pay a tribute of one million Dirhams, fifty elephants and some cities and fortresses situated in his dominion. He was

also to send two hostages to Subuktgin as a guarantee for fulfilling the terms of the treaty.

The Second Invasion: It is stated that as soon as Jai Pal found him out of danger, he decided to violate the terms of peace and imprisoned the officers of Subuktgin who had accompanied him. Subuktgin was very much annoyed and he appeared like a *"foaming torrent"*. He at once marched towards India to punish Jai Pal for his "wickedness and infidelity." The border lands of Jai Pal were ravaged and the town of Lamghan was captured. When Jai Pal found that "his chiefs had become the food of vultures and hyenas and that weakness had fallen on his arm, he resolved to fight once more against the Muslims." He organised in 991 A.D., a confederacy of the rulers of *Ajmer, Kalinjar* and *Kanauj* and started at the head of more than a lakh of soldiers to meet the enemy. Ultimately Jai Pal was defeated and had to give lot of booty including 200 elephants of war by Jai Pal as a heavy tribute.

The sovereignty of Subuktgin was acknowledged by Jai Pal. Subuktgin appointed one of his officers with ten thousand horses to the government of Peshawar. Before Subuktgin could proceed further, he died in 997 A.D. exhausted by perpetual wars and conquests leaving behind him a large and well established kingdom for his son, Mahmud.

About A.D. 980, Kabul was captured and soon afterwards the last bulwark against Mohammedans was broken down. Mahmud of Ghazani succeeded his father in A.D. 997, and in A.D. 1001 invaded India. In his fourth expedition (A.D. 1009) Mahmud, after defeating a large Hindu army, advanced into the Punjab, and crossing the large rivers near the foot of the hills, laid siege to Nagarkot Kangra. It was probably the first among the Hill States to fall a prey to deliberate and atrocious Muslim vandalism. The avaricious iconoclast Mahmud of Ghazani, made a raid on Nagarkot or Kangra in A.D. 1008-09 and he robbed the town of its very penny and carried away immense wealth which the Turks had never even dreamed of. As Prof. J.R. Sharma remarks: *"with the plunder of the ancient temple of Nagarkot (Kangra) in 1008 A.D. the tiger tasted human blood."*

Sultan entered the fort with the ruler of Juzjan, **Abu Hasar Ahmad Bin Muhammad Fariguni**. Two of his commanders *'Asightigin'* and *'Altutmish'* were allowed to take charge of all valuables including gold and silver, while he himself took charge of the jewels. The Kangra fort is situated about 150 feet above the *river Banganga,* near its confluence with Beas. It is about three miles in extent. The sides of the hill are very precipitous, and masonry and ramparts protect the more exposed parts.

After capturing Kangra fort, he appointed one of his most confidential servants to the charge of the fort and property in it. The wealth carried off by Mahmud from Kangra fort did not comprise of only the offerings to the idol accumulated there over centuries. But the contents described by 'Utbi' show that these were contents of royal treasury of the Hindu Shahis of Kabul, who had shifted it from Kabul and Peshawar to this stronghold after their defeat at Sakawad at the hands of Sabuktigin. Some opine that temple plundered by

Mahmud was probably situated within the fort and not the temple of Devi in Bhawan as has been supposed. But plunder of the Bhawan is not ruled out, when it was quite near and undefended as well.

The reason for the easy fall of Kangra fort seems to be the fact that Anand Pal Shahi had, in a bid to save his trans-Indus dominions and Peshawar, give a call to his vassal and fellow rulers to join his flags against the Turk invaders. He organized a confederacy in which chieftains from North Punjab and Hills must have participated. This confederate army fought the invaders desperately and when Mahmud was thinking of withdrawing, Anand Pal's elephant fled the battle field and this was taken by Anand Pal's armies as a signal to retreat. Disorder prevailed in the Indian army. Thus a sure victory converted into defeat. The fleet footed cavalry of Mahmud pursued the fugitives in hot haste and fleeing troops found no shelter. The chieftains of Kangra and around must have gone at the head of their armies to help their overlord, who once held a vast kingdom spreading from Kabul to Kangra. This left Nagarkot undefended and unimaginative inhabitants of the fort, surrendered it meekly.

The Nagarkot fort remained under the possession of Mahmud's garrison till A.D. 1043. According to traditional accounts, Katoch rulers were helped in their venture against Madud, grandson of Mahmud Ghazani to recover Nagarkot by a Tomar chief of Delhi. The proud Tomar chief of Delhi Mahipal founded a confederacy of Indian princes in 1043 A.D., to put an end to Ghanavide rule in the plains of Punjab. He then marched against Hanoi, Thanesar and other places held by Mohammedan garrisons under Madud, grandson of Mahmud, and drove them out. Having completed raids in the plains, he moved towards hills and after four months siege captured the Kangra Fort.

Although Mahmud had conquered a part of the Punjab, yet he could not establish garrison till A.D. 1023, except Nagarkot. The Hindu Shahi rulers then continued asserting their suzerainty in constant warfare against Mahmud Ghazani. Trilochan Pal and his son Bhim Pal were both killed in battles, fighting against Mahmud Ghazani, and with the death of *Bhim Pal, the last of the Hindu Shahi ruler* in A.D. 1026, the Shahi rule in Kabul, Ohind and Punjab came to an end, and the Western Punjab was finally occupied by Ghazani rulers.

There is some reference by Khwaja Masud-bin-Sad-bin Salman that Kangra fort was recaptured by one Abdul Rashid, son of Sultan Mahmud in 1051-52 A.D., but it was recovered by 1060 A.D. by the Katoch rulers. Then on, for nearly 300 years, it remained in their (Katoch dynasty) possession. Till about A.D. 1170 the state continued undivided under one head. For nearly 200 years after Mahmud, the Mohammedans were unable to advance their frontiers much beyond the Satluj. To the South, they were opposed by the Rajas of Delhi of the Tomar line of Rajputs, who had formed confederacy with chiefs of Northern India. There is reference in 'Prithvi Raj Raso' by the bard Chandbardai that "Kangra and its mountain chiefs" included among those who were summoned by Anang Pal-the last of his line— to follow his standard to the field. Anang Pal died childless in A.D. 1151, he was succeeded by Visaladeva

Chauhan of Ajmer-whose grandson Prithvi Raj, was the son of Anang Pal's younger daughter, and followed in succession about 1171 A.D. as Raja of Ajmer and Delhi. The first two royal houses of Delhi *Sultanate* viz., Slaves (1206-1290 A.D.) and *Khilji's* (1290-1320 A.D.) did not pay any serious attention towards the Punjab hills as against Punjab plains which witnessed several attacks by the Muslim Turks, and that led many Rajputs such as Chauhans, Chandels, Tomar, Sens and Panwars etc. to migrate to Himachal Hills in the early 12th century and subsequently they founded several Rajput states.

TUGHLAQ DYNASTY AND KANGRA

The Tughlaq dynasty also referred to as Tughluq or Tughluk dynasty, was a Muslim dynasty of Turkic origin which ruled over the Delhi sultanate in medieval India. Its reign started in 1320 in Delhi when Ghazi Malik assumed the throne under the title of **Ghiyath al-Din Tughluq**. The dynasty ended in 1413. The dynasty expanded its territorial reach through a military campaign led by **Muhammad ibn Tughluq**, and reached its zenith between 1330 and 1335. The rule was marked with torture, cruelty and rebellions, resulting in the rapid disintegration of the dynasty's territorial reach after 1335 AD. Khilji dynasty was ruling Delhi Sultanate before 1320. Its last ruler, Khusro Khan was an Indian born Hindu who had converted to Islam and then served Delhi Sultanate as the general of its army. Khusro Khan, along with Malik Kafur, had led numerous military campaigns on behalf of Alauddin Khilji, to expand the Sultanate and plunder non-Muslim kingdoms in India.

After Alauddin Khilji's death from illness in 1316, a series of palace arrests and assassinations followed, with Khusro Khan coming to power in June 1320 after killing licentious son of Alauddin Khilji, **Mubarak Khilji**. However, he lacked the support of the Persian and Afghan nobels and aristocrats in Delhi. The Muslim aristocracy invited the Turkic origin **Ghazi Malik**, then the governor in Punjab, to lead a coup in Delhi and remove Khusro Khan. In 1320, Ghazi Malik launched an attack and killed Khusro Khan to assume power. After assuming power, Ghazi Malik rechristened himself as **Ghiyasuddin Tughlaq** - thus starting and naming the Tughlaq dynasty. Ghiyasuddin Tughlaq is also referred in scholarly works as *Tughlak Shah*. He was of *Turko-Indian origins*, with a Turkic father and a Hindu mother.

Ghiyasuddin Tughlaq ordered the construction of Tughlakabad, a city near Delhi with fort to protect Delhi Sultanate from Mongol attacks. Ghiyasuddin Tughlaq rewarded all those maliks, amirs and officials of Khilji dynasty who had rendered him a service and helped him come to power. He punished those who had rendered service to Khusro Khan, his predecessor. He lowered the tax rate on Muslims that was prevalent during Khilji dynasty, but raised the taxes on Hindus, wrote his court historian **Ziauddin Barni**, so that they might not be blinded by wealth or afford to become rebellious. He built a city six kilometers east of Delhi, with a fort considered more defensible against the Mongol attacks, and called it Tughlakabad.

In 1321, he sent his eldest son Ulugh Khan, later known as Muhammad bin Tughlaq, to Deogir to plunder the Hindu kingdoms of *Arangal* and *Tilang* (now part of Telangana). His first attempt was a failure. Four months later, Ghiyasuddin Tughlaq sent large army reinforcements for his son asking him to attempt plundering Arangal and Tilang again. This time Ulugh Khan succeeded. Arangal fell, was renamed to *Sultanpur,* and all plundered wealth, state treasury and captives were transferred from the captured kingdom to Delhi Sultanate. According to many historians such as *Ibn Battuta, al-Safadi, Isami,* and *Vincent Smith*, Ghiyasuddin Tughlaq was killed by his son Ulugh Juna Khan, who then assumed power in 1325 AD. Juna Khan rechristened himself as Muhammad bin Tughlaq, and ruled for 26 years. During Muhammad bin Tughluq's rule, Delhi Sultanate temporarily expanded to most of the Indian subcontinent, its peak in terms of geographical reach.

He attacked and plundered *Malwa, Gujarat, Mahratta, Tilang, Kampila, Dhur-samundar, Mabar, Lakhnauti, Chittagong, Sunarganw* and *Tirhut.* His distant campaigns were expensive, although each raid and attack on non-Muslim kingdoms brought new looted wealth and ransom payments from captured people. The extended empire was difficult to retain, and rebellions all over Indian subcontinent became routine.

He raised taxes to levels where people refused to pay any. In India's fertile lands between Ganges and Yamuna rivers, the Sultan increased the land tax rate on non-Muslims by ten fold in some districts, and twenty fold in others. Along with land taxes, *dhimmis* were required to pay crop taxes by giving up half or more of their harvested crop. These sharply higher crop and land tax led entire villages of Hindu farmers to quit farming and escape into jungles; they refused to grow anything or work at all. Many became robber clans. Famines followed. The Sultan responded with bitterness by expanding arrests, torture and mass punishments, killing people as if he was *"cutting down weeds"*. Historical documents note that Muhammad bin Tughluq was cruel and severe not only with non-Muslims, but also with certain sects of Musalmans. He routinely executed *Sayyids* (Shia), *Sufis, Qalandars,* and other Muslim officials.

Revolts against Muhammad bin Tughlaq began in 1327, continued over his reign, and over time the geographical reach of the Sultanate shrunk particularly after 1335. The Vijayanagara Empire originated in southern India as a direct response to attacks from the Delhi Sultanate. In 1338 his own nephew rebelled in Malwa, whom he attacked, caught and flayed alive. By 1339, the eastern regions under local Muslim governors and southern parts led by Hindu kings had revolted and declared independence from Delhi Sultanate. Muhammad bin Tughlaq did not have the resources or support to respond to the shrinking kingdom. By 1347, Bahmanid Sultanate had become an independent and competing Muslim kingdom in Deccan region of South Asia. At the time of Muhammad bin Tughlaq's death, the geographic control of Delhi Sultanate had shrunk to Vindhya range (now in central India).

After Muhammad bin Tughluq died, a collateral relative, Mahmud Ibn

Muhammad, ruled for less than a month. Thereafter, Muhammad bin Tughluq's 45 year old nephew Firuz Shah Tughlaq replaced him and assumed the throne. His rule lasted 37 years. Firuz Shah was, like his grandfather, of Turko-Indian origins. His Turkic father Sipah Rajab became infatuated with a Hindu princess named Naila. She initially refused to marry him. Her father refused the marriage proposal as well. Sultan Muhammad bin Tughlaq and Sipah Rajab then sent in an army with a demand for one year taxes in advance and a threat of seizure of all property of her family and Dipalpur people. The kingdom was suffering from famines, and could not meet the ransom demand. The princess, after learning about ransom demands against her family and people, offered herself in sacrifice if the army would stop the misery to her people. Sipah Rajab and the Sultan accepted the proposal. Sipah Rajab and Naila were married and Firoz Shah was their first son.

Firoz Shah Tughlaq reign was marked by reduction in extreme forms of torture, eliminating favours to select parts of society, but an increased intolerance and persecution of targeted groups. After the death of his heir in 1376 AD, Firuz Shah started strict implementation of Sharia throughout his dominions.

Firuz Shah suffered from bodily infirmities, and his rule was considered by his court historians as more merciful than that of Muhammad bin Tughlaq. When Firuz Shah came to power, India was suffering from a collapsed economy, abandoned villages and towns, and frequent famines. He undertook many infrastructure projects including an irrigation canals connecting Yamuna-Ghaggar and Yamuna-Sutlej rivers, bridges, madrasas (religious schools), mosques and other Islamic buildings. He also undertook destruction of Hindu temples, suppressed non-Sunni sects by demolishing their structures. Firuz Shah Tughlaq is credited with patronizing Indo-Islamic architecture, including the installation of lats (ancient Hindu and Buddhist pillars) near mosques. The irrigation canals continued to be in use through the 19th century. After Feroz died in 1388, the Tughlaq dynasty's power continued to fade, and no more able leaders came to the throne. Firoz Shah Tughlaq's death created anarchy and disintegration of kingdom. In the years preceding his death, internecine strife among his descendants had already erupted.

The first civil war broke out in 1384 AD four years before the death of aging Firoz Shah Tughlaq, while the second civil war started in 1394 AD six years after Firoz Shah was dead. The Islamic historians Sirhindi and Bihamadkhani provide the detailed account of this period. These civil wars were primarily between different factions of Sunni Islam aristocracy, each seeking sovereignty and land to tax dhimmis and extract income from resident peasants. Firuz Shah Tughluq's favorite grandson died in 1376. Thereafter, Firuz Shah sought and followed Sharia more than ever, with the help of his wazirs. He himself fell ill in 1384. By then, Muslim nobility who had installed Firuz Shah Tughluq to power in 1351 had died out, and their descendants had inherited the wealth and rights to extract taxes from non-Muslim peasants. *Khan Jahan II*, a wazir in Delhi, was the son of Firuz Shah Tughluq's favorite wazir Khan Jahan I, and rose in

power after his father died in 1368 A.D.

The booty captured by Mahmud Ghazani from Kangra fort made it quite popular among Mohammedan rulers of Lahore and Delhi. The Sultans of Tughlaq dynasty were more ambitious than their predecessors. It was during the reign of Prithvi Chandra, that the Sultan of Delhi, Mohammed Tughlaq, (A.D. 1325-1351), is said to have invaded the Kangra fort and captured it. But neither Ferishta nor Barni has made any reference to the invasion of Kangra fort in his *Tarikh-i-Firozshahi*. As per the narration of Badari Chacha, the siege took place in the year A.D. 1337 i.e. the year of the so called invasion of China (Quarachi) by the Sultan. He had not accompanied the army, and the invasion was only an incursion of short duration into the outer Himalayas and a detachment may have reached Kangra, since it was famous all over India.

The next ruler of Kangra was Parava Chand (1354-1360) whose reign was uneventful. The reign of his successor, Rup Chand (A.D. 1360-1375) however was an important period. It was during his period that Firoz Shah Tughlaq besieged the fort of Kangra in A.D. 1365. Rup Chand's plundering raid on the plains upto Delhi, provided Firoz Shah Tughlaq (A.D. 1351-1388), a rational pretext to lead an expedition for the conquest of Nagarkot in A.D. 1365. This expedition of Kangra and siege of Nagarkot has been referred to both in *"Tarikh-i-Firoz Ferishta"* and in the *"Tarikh-i-Firoz Shahi"*.

The Rajput chiefs of the hills were feeling quite uneasiness under the new yoke imposed upon them by the Mohammedan rulers. They (hill rulers) were always looking out for an opportunity to harass the alien Mohammedan rulers. This probably continued from the days of Mahmud Ghazani's days. Raja Rup Chand of Kangra had been participating in such revengeful expeditions. Once when Raja Rup Chand after plundering the plains upto Delhi, was returning, he was encountered and lost all wealth to the Sultan of Kashmir, Shahabuddin (1356-1374 A.D.) and fled back to Kangra.

The offended Firoz Shah Tughlaq undertook calculative invasion of Nagarkot in 1361 A.D. to punish Rup Chand. For six months siege continued and ultimately the Katoch chief was forced to surrender. So, the Raja throwing-off his pride, came down from his fort and making apologies, cast himself at the feet of the Sultan, who with much dignity placed his hand on the back of the Raja, and having bestowed upon him robes of honour and an umbrella sent him back to his fort. Raja Rup Chand was also presented with gifts and invaluables by the Sultan Feroz Shah Tughlaq. In reciprocation, Raja also sent many offerings and horses of priceless worth to Sultan.

According to Ferishta's account, the name of Nagarkot was on this occasion changed to that of *'Mohammedabad'* in honour of the late king. The people of Nagarkot told Firoz that the idol which the Hindus worshipped in the temple of Nagarkot was the image of Nowshaba, the wife of *Alexander* the Great and that conqueror had left the idol with them. The name by which it was then known as *'Jwalamukhi'*. In this temple there was a fine library of Hindu books, consisting of 1,300 volumes.

Firoz Shah Tughlaq ordered one of these books to be translated into Persian, which treated of philosophy, astrology and divination and called it *'Dalayil-i-Firoz Shahi'*. This translation was done by Izzudin Khalid Khani. In his account Ferishta has confounded two different goddesses, the great *Mata Devi* of Nagarkot and the goddess of Jwalamukhi, two places which are upwards of twenty miles apart. Shams-i-Siraj correctly states that Jwalamukhi, much worshipped by the Hindus, was situated "in the road to Nagarkot".

The event of the siege of Kangra fort by Firoz Shah has also found mention in the *Ma 'Usir-ul Umara* writings. Cunnighum says that the fort of Nagarkot was occupied by Mohammedan garrison. This however, is not supported by any contemporaneous account, and is not clearly deducible from the bard's narratives. On the contrary Ferishta distinctly states that Rup Chand was resorted to his dominions, while the *Tarikh-i-Firoz Shahi* written during the reign of Firoz Shah, says nothing about a garrison, having been left in the fort. *Ma 'Usir-ul Umara'* also strengthen the conclusion that the fort was not occupied. *'Shah-Fateh-i-Kangra'* also affirms the view that Kangra fort was never occupied or garrisoned by Mohammedan armies before its occupation by *Jahangir.*

Raja Rup Chand died in A.D. 1375 and was succeeded by his son Sangara Chand. During his period Firoz Shah's eldest son *Nasir-ud-Din* was compelled to take shelter, driven from power by his two cousins. The fugitive prince first fled for safety to mountains of Sirmaur, and being pursued he retreated to Nagarkot. Prince *Nasir-ud-Din* seems to have been given asylum in the fort along with a few of his followers in fulfilment to the Rajput tradition to extend protection to those who supplicate for it, even if any of them happened to be fallen enemy. The prince remained at Nagarkot till the end of A.D. 1389 when he was recalled to Delhi, and in August A.D. 1390 he ascended the throne under the name of *Mohammed Tughlaq.*

TIMUR INVASION OF KANGRA

Timur Historically known as Tamerlane Timur(-e) Lang, "Timur the Lame"), was a Turko-Mongol conqueror and the founder of the *Timurid dynasty* in Central Asia. Born into the Barlas confederation in Transoxiana during the 1320s or 1330s, he gained control of Western Chagatai Khanate by 1370. From that base, he led military campaigns across West, South and Central Asia and emerged as the most powerful ruler in the Muslim world after defeating the Mamluks of Egypt and Syria, the emerging Ottoman Empire and the declining Sultanate of Delhi. From these conquests he founded the *Timurid Empire*, although it fragmented shortly after his death. He is considered the last of the great nomadic conquerors of the Eurasian steppe, and his empire set the stage for rise of the more structured and lasting gunpowder empires in the 1500s and 1600s.

Timur envisioned the restoration of the Mongol Empire of Genghis Khan. As a means of legitimating his conquests, Timur relied on Islamic symbols

and language, referring to himself as the Sword of Islam and patronizing educational and religious institutions. He converted nearly all the Borjigin leaders to Islam during his lifetime. His armies were inclusively multi-ethnic. Timur also decisively defeated the Christian Knights Hospitaller at Smyrna, styling himself a ghazi.

Timur's armies were feared throughout Asia, Africa, and Europe, sizable parts of which were laid waste by his campaigns. Scholars estimate that his military campaigns caused the deaths of 17 million people, amounting to about 5% of the world population.

He was the grandfather of Ulugh Beg, who ruled Central Asia from 1411 to 1449, and the great-great-great-grandfather of Babur, founder of the Mughal Empire, which ruled parts of South Asia for around four centuries, from 1526 until 1857. Timur is also recognized as a great patron of art and architecture, as he interacted with Muslim intellectuals such as Ibn Khaldun and Hafiz-i Abru.

The last Tughluq ruler Mahmud Nasir-uddin ruled from 1395-1413 AD. The invasion of Mongol ruler Timur in 1398 A.D. sealed the fate of the Tughluq dynasty. Muhammad fled and Timur captured the city and destroyed many temples in north India. Thousands of people were killed and Delhi was plundered for fifteen days, Timur returned to Samarkhand carrying away a large amount of wealth with him. Muhammad Tughlaq reoccupied Delhi and ruled till 1413 A.D. Raja Megh Chand succeeded to the throne of Kangra in A.D. 1390. During his regime Timur invaded India in A.D. 1398-99. A reference to Nagarkot occurs in Timur's memoirs called *'Malfuzat-i-Timuri'*. The invasion of the Mongol Amir Timur in 1398 A.D. gave a death blow to the crumbling Sultanate of Delhi. Timur invaded the Shivalik states on his return journey in A.D. 1399. He reached the foot of Shivaliks somewhere near Haridwar and advanced along the outskirts of the hills to Jammu.

His accounts reveal that he had invaded the *Kiarda-dun valley* of Sirmaur also. He claims to have stormed eight forts in the hills but does not actually state that Kangra was one of them. He made numerous excursions into the valleys and ravines till he had reached Nurpur, then called *'Dhameri'* or *'Dhamal'* and most likely passing through Pathankot crossed the Ravi over to Jasrota and Sambha and reached Jammu from the North-East. The Jammu people gave him tough resistance but by a stratagem he captured the Raja of Jammu. At Akhnoor he left the Jammu territory. His camp was probably at Dasuha near Hoshiarpur at the time he formed the resolve to subdue Nagarkot, but the difficult character of terrain prevented him from fully carrying out his design. Winning over lower Sirmaur hills, he reached Hindur (Nalagarh). Alam Chand (1356-1406 A.D.) was the Raja of Hindur at that time, who offered needed provisions to Timur and his entourage, who marched on without inflicting any injury to Hindur state. It is said that one Rattan Singh ruling the area between Shivalik foot hills, perhaps a part of the present day districts of Kangra and Hoshiarpur or may be a territory around Sirmaur opposed to

his march. A few years after invasion of Timur, Hari Chand became the Raja of Kangra, probably in 1405 A.D.

After the death of Firoz Shah Tughlaq in A.D. 1388, the affairs of the Delhi Empire fell into confusion for about a century. The struggle for power was so intense in Delhi, that the hills of Kangra were almost forgotten. In an inscription in the temple of Mata Devi Bhawan, of the date somewhat later than the reign of Karam Chand, it is stated that the Raja Sansar Chand Katoch (I), was a tributary of Mohammed Shah, most probably of the Sayyid dynasty. But disorder of uncertainty was so acute in Delhi Durbar; that it made tributary relationship purely nominal. Indeed Kangra finds no mention in any of Mohammedan records till the reign of Sher Shah Suri A.D. 1540-1545. "A careful study of the whole question leads to the conclusion that the fort remained in the possession of its ancestral chiefs from A.D. 1043 till its capture by Jahangir in A.D. 1620."

SUR AND MUGHALS INVASION OF KANGRA

The Mughal emperors were Central Asian Turo-Mangols from modern-day Uzbekistan, who claimed direct descent from both Genghis Khan (through his son Chagatai Khan) and Timur. At the height of their power in the late 17th and early 18th centuries, they controlled much of the Indian subcontinent, extending from Bengal in the east to Kabul & Sindh in the west, Kashmir in the north to the Kaveri basin in the south. Its population at that time has been estimated as between 110 and 150 million (quarter of the world's population), over a territory of more than 3.2 million square kilometers (1.2 million square miles).

Mughal dynasty started with Babur ascending the throne of Agra in 1526 A.D. In the beginning his rule in India Babur had to face the problems of the Rajputs and the Afghan chiefs. He battled Rana Sanga of Mewar in 1527 A.D. in the battle of Kanwah. Rana lost the battle. The defeat of Rana Sanga shook the power of the Rajputs. Babur's Empire extended from Bhera and Lahore to Bahraich and Bihar and from Sialkot to Ranthambhor. Like his predecessor Muslim Sultans Babur continued with policy of plundering and destroying Hindu temples and killing people. Babur died in 1530 AD. Humayun the eldest of his four sons succeeded him and ascended the throne of Agra in 1530. Humayun was faced with numerous difficulties. He had to reorganize his army that comprised of mixed races. He faced problems from his brothers, and nobles.

The Afghans though defeated by Babur were not vanquished. Sher Khan the King of Bengal defeated Humayun in the battle of Chausa in 1539 A.D. In 1540 A.D., he again defeated Humayun at Kanauj, and went on to capture Delhi and Agra. Thus Sher Khan re-established the Afghans rule in Delhi. Humayun was compelled to flee from India.

In the first half of 16th century Punjab and its hill areas acquired historical importance due to Babur's invasion. It is said that by 1525 A.D. Babur had

established his outposts at Lahore, Sialkot from where he came to Delhi via Malot near Kangra. Due to his fear Daulat Khan, the Punjab Governor and his son Ghazi Khan took refuge in forests near Kangra, but Babur captured the fort and made Daulat Khan a prisoner. Babur does not seem to have encountered the Raja of Kangra directly. It was in 1526 A.D. that Babur killed Ibrahim Lodhi and established Mughal Empire in India.

Babur was succeeded by his son Humayun in 1530 A.D. He was a weak ruler. In 1540 on the expulsion of Humayun and accession of Sher Shah Suri, the things entirely changed for the hill states. The Suri Empire was established by a Muslim dynasty of Pashtun origin who ruled a large territory in Northern part of South Asia for nearly 16 years, between 1540 to 1556, with Delhi serving as its capital. It was founded by Sher Shah Suri, an ethnic Pashtun of the house of Sur, who supplanted the Mughal dynasty as rulers of North India during the reign of the relatively ineffectual second Mughal emperor Humayun. Sher Shah defeated Humayun in the *Battle of Chausa* (June 26, 1539) and again in the *Battle of Bilgram* (May 17, 1540).

The Sur dynasty held control of nearly all the Mughal territories, from modern-day eastern Afghanistan in the west to Bengal in modern-day Bangladesh in the east. The Mughals had retreated west to Persia. During the almost 17 year rule of the Sur dynasty, the region of the South Asia witnessed much economic development and administrative reforms. A systematized relationship was created between the people and the ruler, minimizing corruption and the oppression of the public. Their rule came to an end by a defeat that led to restoration of the Mughal Empire. Today, the Sur are part of the Pashtun tribal system and belong to the sub-groups of the Ghilzais. Sher Shah Suri sent his able general *Khawas Khan* to the Kangra hills to bring the country under subjugation. After the conquest, the hill tracts were placed in charge of one Hamid Khan Kakar. But there was no reference to this event in the works of other historians. All historians agreed to one point that the Kangra fort remained virgin till its capture by Jahangir in A.D. 1620.

The Punjab was then under the rule of Sikandar Shah Sur, a nephew of Sher Shah, who was defeated by the Mughals at Sirhind and then retreated into Shivaliks around Dhameri (Nurpur) and Kangra. We get detailed informations about Afghan period from Rizakulla's *'Waquit-i-Mushtaqi'*.

Akbar succeeded to the throne in A.D. 1556. He was the first among the Mughal rulers, to plan the conquest of Kangra fort. Akbar is said to have subdued the country of Nagarkot and captured the fort, but this is contradicted by later writers. It seems certain that he did not penetrate so far into the hills, and his camp was probably at Nurpur while his army was engaged in scouring the country in pursuit of Sikandar Shah with whom Raja Bakht Mal of Nurpur was in alliance. We find description of this event in *Tabakat-i-Akbari*.

In the following year A.D. 1557, Sikandar Shah came out of his shelter and invaded the Punjab. Akbar then advanced against him and he sought refuge in a fort on way between Pathankot and Nurpur. This fort was built by

Salim Shah Sur, son of Sher Shah. This was besieged by the Mughals for eight months period. On account of scarcity of foodgrains, in the fort, Sikandar Shah supplicated for peace and terms of surrender. He was allowed to retire to Bengal, and promised to remain faithful to his allegiance and leave his son as a hostage. The terms were accepted by Akbar in July 1557 A.D. The fort was surrendered and Sikandar Shah was assigned the districts of Bihar and Kharid in Jagir, but died two years later. We may perhaps assume that a contingent from Kangra was present at the siege, though Dharam Chand was too old to take command. The Kangra Chief was probably among the first in the Punjab Hills to tender his allegiance, but early in Akbar's rule all of them came more or less under Mughal control. To ensure the fidelity Akbar initiated the practice of sending hostages to the Mughal Court, the hostages usually being a son or other near relative of the ruling chief, and in the beginning of Jahangir's reign there are said to have been twenty two young princes from the hill states in attendance on the Emperor.

Jai Chand, the Raja of Kangra incurred Akbar's suspicion, and an order was issued for his arrest, which was affected by Raja Ram Chand of Guler, and he was probably put in confinement in Delhi. His son **Bidhi Chand**, although a minor regarded his father dead, assumed the rule of the state and broke out into revolt. He was being assisted by Raja Gopi Chand of Jaswan. In A.D. 1572, Akbar sent an army under **Khan Jahan Hussain Quli Khan**, Viceroy of Punjab to subdue the country, which had been bestowed by the emperor in *Jagir* upon Raja Birbal.

Raja Birbal seems to have accompanied the Mughal army, and on his arrival at Lahore, Hussain Quli Khan and other nobles set out for Nagarkot by way of Paithan (Pathankot) and Dhameri (Nurpur). On reaching Dhameri the holder of the place; named *Choto* (Takhat Mal) probably Raja of Nurpur, who is said to have been a relative of *Jai Chand,* relying on the security of his Fort, which he had strengthened, declined to come out and sent two *vakils* with his offerings.

There is a reference at some places that a fort had existed there from former times, previous to the one erected by Raja Basu, son of Takht Mal, who transferred the capital of the state from *Pathankot* to *Nurpur. Bakht Mal,* the Raja of Nurpur, in A.D. 1556, had allied himself with *Sikandar Shah* and after the surrender of Mankot he was taken to Lahore and executed by *Bairam Khan,* Akbar's general. His brother **Takhat Mal** was then installed in his place, and must have been ruling when Mughal army passed through Nurpur.

He perhaps thought it safer to keep out of his way, remembering his father's fate. The Mughal army then passed on, a small force being left at Nurpur, seemingly to keep up communications. Mughal army then marched to the Kotla fort, located twenty miles from Nurpur. It originally belonged to Raja **Ram Chand** of Guler, but Raja Dharam Chand and Jai Chand of Kangra had occupied it by force. The Mughal army snatched the fort and handed it over to the Raja of Guler. But he left a garrison of his own in the fort and then

advanced to Nagarkot and invested it.

The siege of Kangra fort was progressing favourably, when it was reported that Ibrahim Hussain Mirza and Musud Mirza, relatives of Akbar, had invaded the Punjab. *Khan Jahan,* therefore with the approval of the other Amirs, opened negotiations with the commander of garrison and on his agreeing to payment of five *mans* of gold and some valuables, the siege was raised and the Mughal army departed to oppose the Mirzas. The *Tabakat-i-Akbari* presents interesting account of all these events.

There is a reference in *Tabakat-i-Akbari,* that on 8th November, 1572 Khan Jahan encamped by a field of maize near Nagarkot. The fortress of Bhawan, which is an idol temple of Mahamai, and in which none but her servants dwelt, was taken by valour and resolution of the assailants at the first assault. A party of Rajputs, who had resolved to die, fought most desperately till they were all cut down. A number of Brahmins, who for many years had served the temple, never gave on thought to flight and were killed.

The accounts of the siege of the Kangra fort are also found in the *'Maasir-ul-Umara'* and *'Akbarnamah'*. The Raja of Nagarkot Gobind Chand accompanied the Mughal army against the Mirza brothers. But soon returned. The Mirza belonged to a branch of the Mughal royal family descended from Timurpur, and they aspired to the throne. After many contests they were all defeated and captured or killed.

It was probably after the Khan Jahan's expedition to Kangra, that Akbar deputed his great finance minister *Todar Mal,* to Kangra in order to create an imperial demesne by confiscation of territory from the hill states. The position of the demesne taken from Kangra seems to have included sixty six villages in the valley; and the whole of *Rihlu* was annexed from Chamba, with similar confiscation accounting to their means from the territories of other Hill states. According to one historian, Akbar failed in his attempt to capture the fort, and this seems to have been the only expedition sent against Nagarkot during his reign.

After the siege made by *Khan Jahan* there is no mention of Nagarkot in the Mohammedan histories till A.D. 1582. Akbar was then on his way to Indus and had reached Dasuha (near Hoshiarpur). He decided to visit Nagarkot temple, but later on abandoned the idea, under some spiritual impression.

Although Mughal supremacy had been established in the hills yet the Hill Chiefs had not been reconciled to the new masters. After the death of Raja Jai Chand in 1585 A.D. his son Bidhi Chand ascended the throne and formed a confederation, embracing most of the states in the outer hills, between Jammu and Kangra. In the thirty fifth year of Akbar (A.D. 1588-89) they all broke into rebellion and *Zain Khan Koka,* Akbar's foster brother, was sent with a large force to bring them into subjugation. He marched through the hills from Pathankot to the Satluj, and on their surrender thirteen of the hill chiefs accompanied him to the court and tendered their allegiance.

On their submission they were all dealt considerately and had their territories and honours restored, but Bidhi Chand had to leave his son Triloka-Chand, then a boy as hostage at the Mughal court. In the last years of Akbar (A.D. 1594-95) there was another rebellion by the hill chiefs led by the Raja of Jasrota. Bidhi Chand of Kangra and Raja Basu of Nurpur do not seem to have been involved in it. A force under *Mirza Rustam Qandhari* was sent against him which entered the hills of Pathankot. A force under Sheikh Farid, the Emperor's Bakshi (paymaster) was also sent to suppress the rising, and marched through the outer hills from Jammu by Jasrota and Man'kot to Guler. But none of the rebellious rulers could stand against the royal army and they all rendered submission one by one. After having carried the campaign to a successful issue ***Sheikh Farid*** paid his respects to the Emperor and received great rewards. *Sheikh Farid* afterwards received the title of *Murtaza Khan* for his services at the siege of Kangra Fort, in A.D. 1615 in collaboration with Suraj Mal of Nurpur.

Bidhi Chand died in 1605 A.D., and was succeeded by his son **Trilok Chand.** Jahangir also succeeded to the throne in A.D. 1605, but it was not till A.D. 1615, that he sent a force against Kangra, under the command of ***Sheikh Farid Murtaza Khan,*** governor of Punjab, the same who commanded in A.D. 1594-95. In his venture Raja Suraj Mal of Nurpur also assisted the imperial forces. Jahangir has made detailed description of these events in his autobiography *"Tazuk-i-Jahangiri".* Raja Suraj Mal's previous *mansab* was increased by 500 personnel and horses. By the order of Emperor, Raja Man, who was in confinement in the fort of Gwalior was also released, on the security of *Murtaza Khan,* and confirming his *mansab,* sent him to assist Murtaza Khan, in his expedition to Nagarkot. When Kangra fort was about to be besieged, differences developed between Sheikh Murtaza Khan and **Raja Suraj Mal** of Nurpur. The reduction of fort was held in abeyance and Jahangir requested Raja Suraj Mal to come back, and on his return, he was attached to the prince Shahjahan to the *Dakhan* in October A.D. 1616. Soon after Suraj Mal's recall, Murtaza Khan was taken ill and died at Pathankot. So the first attempt to capture Kangra fort failed.

After the death of Murtaza Khan, Raja Man was made leader of the attack on the Kangra fort. Probably he was also made governor of Punjab in succession to Murtaza Khan. He however, was killed before he could take over his charge by one of the **Zamindars** (chiefs) of the hill country of Punjab, named ***Sangram.*** The siege of Kangra Fort was then deferred for a time. This was in the end of A.D. 1616 or in January A.D. 1617, when Raja Sangram was probably the ruler of Jammu and Raja Man was ruling Ambar (Jaipur).

Not baffled with his unsuccessful attempt to capture Kangra fort, Jahangir had a discussion with Shah Jahan (Khurram) regarding feasibility of new venture. After having favourable response from the Prince, the enterprise was sanctioned. Shah Jahan selected Suraj Mal and Shah Quli Khan Mohammed Taqi, his own Bakshi for the command. Before leaving, Suraj Mal was honoured

with a standard and drums and was also presented with a *Khilat* or dress of honour, an elephant and a jewelled *Khapwa* (dagger), and Mohammed Taqi with a *Khilat*. The Royal army started on its expedition to Nagarkot in September A.D. 1617. In the way to Nagarkot Suraj Mal started quarrelling with Mohammed Tagi with a view to get rid of him, as to be able to assume the supreme command of the Mughal forces and declaring Mohammed Taqi incompetent, he was recalled. The blood of rebellion was surging in Suraj Mal's veins and his only object seems to have been to be back to his hills on the pretext of Nagarkot invasion. After Mohammed Taqi's departure Suraj Mal started sending away the imperial troops to their Jagirs for re-equipment as the pretext of the shortage of supply.

When most of the Mughal troops had been dispersed and Mughal camp was thus weakened, he collected his troops and raised revolt. He ravaged the *parganas* at the foot of the hills, and carried off all he could lay his hands on, in the shape of money and moveable property. On hearing of Suraj Mal's rebellion, Jahangir sent Rai Raiyan Sunder Dass for his suppression. Suraj Mal was forced to abandon *Mankot* and *Nurpur* forts, and took shelter in Chamba territory, where he died in A.D. 1619. On the arrival of Mughal army, Suraj Mal fled to the fort of Mankot, from there to Nurpur fort and then fled to Taragarh fort, which belonged to Raja of Chamba.

In the outbreak of Suraj Mal's rebellion, his younger brother Jagat Singh was summoned from Bengal "in greatest haste". On his arrival he was asked to join Mughal army, in its expedition to Kangra hills. He joined Rai Raiyan in the siege of Kangra fort. The garrison put up a stout resistance, but ultimately surrendered in November, 1620. It was the first time then, that Kangra fort was garrisoned by the Mughal army under *Nawab Ali Khan* and it continued to be held so by Mughal Quiladar (Governor) till A.D. 1783.

Hari Chand, chief of garrison, being twelve years of age, made over the fortress to Rai Raiyan Bikramjit. Hari Chand then, with one Sikandar, his uncle and chief officer, and the rest of garrison, appeared before the Rai Raiyan. He left trusted men in charge of the fortress, and placing Hari Chand and the rest under surveillance, he began his march to the court. The siege had lasted one year, two months and some days, as we learn from the *Maasir-ul-Umara*. Jahangir received the news of capture of Kangra fort on 20th November A.D. 1620. The famous fort thus passed away from the possession of the Katoch princes, and for a hundred and sixty years probably not one of them was ever inside its walls. It also seems certain that the whole state was annexed by the Mughals, along with the fort, only the district of Rajgir being assigned as *Jagir* for the maintenance of the royal family of Kangra.

In January A.D. 1622, Jahangir visited Kangra in person. He came by way of *Siba* and *Guler* and returned by *Nurpur* and *Pathankot*. This visit is still recalled in local tradition, and it is said that he was so fascinated with the beauty of the valley that he ordered a palace to be built for himself, and the foundations were actually laid and the site still exists in *Mauza Gargari*. The work however could

not, proceed further; probably Kashmir had greater attractions for him. As a memory of this visit, one of the gates in the fort was called *'Jahangiri Darwaza'*, having been erected by the order of the Emperor. On the gate, it is said, was inscribed the date of conquest on a marble slab. Presumably the slab was broken in pieces when the fort was captured by *Sansar Chand* in A.D. 1786. On the occasion of Jahangir's visit to Kangra, several Hill Chiefs must have waited upon him and among them was the Raja of Chamba. This was a great event in the sense that, the ruler of Chamba "had not obeyed any king nor sent offerings". He was also considered greatest Zamindar in the Kangra hills. The Raja of Chamba at that time was probably *Janardhan*. He along with his brother, *Bishambar* had waited on Jahangir. Both of them were killed in the following year in a war with Jagat Singh of Nurpur.

Guerilla warfare to capture the fort started from Raja Hari Chand's time and continued by Raja **Chander Bhan Chand,** who was later captured and imprisoned in Delhi. But the rulers of Kangra seem to have realized the futility of uneven struggle against a powerful foe and had probably reconciled themselves to the status of subordinate *Jagirdars* of the Mughals.

According to *'Tarikh-i-Punjab'* Vijay Ram Chand succeeded to the Gaddi in A.D. 1660, he defied summons from the Imperial court, and consequently *'rajtilak'* was conferred on his brother Udai Ram, along with *Jagir* of *Rajgir* and five other taluqas of *Nadaun, Palam, Mahal Sarai, Jaisukh* and *Malhar*. Raja Vijay Ram Chand founded the town Bijapur or Bijaipur. Royal palaces were constructed there and the town was made the capital, which continued to be the place of residence of the Rajas till the reign of Raja Ghamand Chand. He died in A.D. 1687.

The Battle of Nadaun: The Battle of Nadaun was fought at Nadaun, between Raja Bhim Chand of Bilaspur (Kahlur) and the Mughals under Alif Khan. Raja Bhim Chand was supported by Guru Gobind Singh (the tenth Sikh Guru) and other hill chieftains, who had refused to pay tribute to the Mughal emperor. The Mughals were supported by Raja of Kangra and Raja Dayal of Bijarwal. The battle resulted in the victory of Bhim Chand and his aides. Different authors give the date of the battle variously as 1687, 1689, 1690,20 March 1691, and 4 April 1691.

Bichitra Natak, considered to be the autobiography of Guru Gobind Singh, is one of the major sources of information about the battle. However, its authorship is disputed by some scholars.

The Mughal emperor Aurangzeb's Deccan campaigns against Bijapur and Golconda had put considerable strain on the Mughal exchequer. To meet these expenses, Aurangazeb ordered the Governor of Punjab, Azim Khan, to recover annual tributes from the rulers of hill states, who had been defaulting on the payment for three consecutive years. Azim Khan assigned the duty of collecting tributes to Mian Khan, the viceroy of Jammu. The duty of collecting tributes from Kangra and adjoining principalities was assigned to Alif

Khan (or Alaf Khan).

Alif Khan first approached Raja Kirpal Chand (or Bhim Chand Katoch of Kangra). The Raja told him that Raja Bhim Chand of Bilaspur (Kahlur) was the most powerful king in the region; if he pays tribute, the others will follow. Raja Dayal of Bijarwal (or Bijharwal) was persuaded by Kirpal to meet Alif Khan's demands. At Raja Kirpal's suggestion, Alif Khan proceeded towards Bhim Chand's capital. He halted at Nadaun and sent his envoy to Bhim Chand of Bilaspur with his demands. However, Bhim Chand refused to pay the tribute.

Raja Bhim Chand of Bilaspur formed an alliance with the rest of the hill Rajas, and also sought the support of Guru Gobind Singh. The Guru, who was against the idea of paying tributes to the Mughals, decided to support Bhim Chand. The author of Bichitra Natak states that Bhim Chand was aided by Raj Singh, Ram Singh, Sukhdev Gaji of Jasrota, and Prithi Chand of Datarpur, among others. He also states that the Rajputs of the Nanglua and Panglu tribes, and the soldiers of Jaswan and Guler, also participated in the battle.

Initially, the forces of Kirpal Chand overpowered Bhim Chand's forces. Then, Bhim Chand called all his allies, including the Guru. As the combined forces launched an attack, the enemy forces of Raja Dayal of Bijharwal and Raja Kirpal also advanced. In the ensuing battle, the forces of Mughals and Kirpal Chand were driven out into the river. Alif Khan and his warriors fled away. According to Bichitra Natak, Guru Gobind Singh remained at Nadaun, on the banks of the River Beas, for eight more days, and visited the places of all the chiefs. Later, both the parties made an agreement and peace was established. Later, Maharaja Ranjit Singh built a gurdwara on the spot where the Guru had pitched his tent. The Gurdwara was affiliated to Shiromani Gurdwara Prabandhak Committee in 1935. It is known as **Gurudwara Dasvin Patshahi or Gurdwara Nadaun Sahib.**

The first Mughal Quiladar of Kangra fort was ***Nawab Ali Khan,*** succeeded by his son whose name probably was *Hurmat Khan.* During the reign of Shah Jahan Nawab Asad Ullah Khan and Koch Quli Khan succeeded to the possession of the fort one after the other. Koch Quli Khan held the fort for 17 years till his death. He was buried on the bank of the branch of Ban Ganga river, flowing near the fort. During Auragzeb's reign Kangra fort was successfully held by Mughal Quiladars Sayyid Hussain Khan, Hasan Abdulla Khan Pathan and Nawab Sayyid Khalil Ullah Khan. The fifty years of Aurangzeb's imperial sway saw the turn of the tide in the Mughal glory. The bulk of his army and all the best officers were in Deccan since 1681, and North India sank back to a place of secondary importance. Moreover, on the issue of converting all Hindu temples into mosques, Raja Bhim Chand was probably provoked by such intolerance and he rose in protest and leagued with Guru Govind Singh in order to repel and attack on his country by Mughal Chief Mian Khan and Raja of Jammu which proved victorious.

The last Mughal Quiladar of Kangra fort Nawab Sarif Ali Khan was appointed in A.D. 1740 during the closing reign of Mughal Empire. In the

beginning of second half of the 18th century, the Mughal empire was in the throes of dissolution. Chaos and confusion prevailed and the Sikh confederacies wrested most territories from the Mughal rulers. The authority of the Mughal governors of Lahore did not extend beyond the city wall. **Zakaria Khan** (1726-1745 A.D.), the Nazim of Punjab carried out ruthless persecution of the Sikhs. Meanwhile Ahmad Shah Durrani invaded Punjab ten times between 1748 and 1788.

He carried out an extensive loot of the fertile plains of North-Western India, with the result that common people developed a government's philosophy of life contained in a popular adage (खादा पीता लाहे दे ते बाकी अहमद शाहे दा) "whatever you eat is yours, the rest belongs to Ahmad Shah"). The succeeding Mughal governors of Lahore, Mir Mannu (1745-1752 A.D.) and Adina Beg, did not fare better. They carried on their relentless persecution of the Sikhs and a crumbling defence against Ahmad Shah Durrani. From South Marathas struggled for mastery over the Punjab plains and appointed ***Adina Beg*** as their Governor. Ahmad Shah Durrani's invasions destroyed the Mughal administration in Punjab, leaving the field open for the Sikhs, who had been flattened during Farrukhsiyar's reign. On 15th November Ahmad shah left Peshawar to sack Delhi. There was no one to resist him. In January 1757, he was acknowledged Emperor of Delhi, but was interested only in fleecing India of its wealth. Delhi was divided into sectors under Afghan leaders so that they might plunder it systematically. From there Durrani marched upon Mathura and savagely looted the Hindu temples and rich merchants. The advent of Summer made Afghans further advances impossible and Ahmad Shah returned to his country laden with treasure from his Indian invasions.

Raja **Ghamand Chand**, took advantage of this confusion, like several other hill chiefs, recovered all the territory that had been lost by his ancestors to the Mughals, with the exception of Kangra fort, which held out under the last Mughal Nawabs, **Saif Ali Khan**, who maintained his position against all assailants for 40 years and continued direct relations with Delhi. Only once in A.D. 1758 he was compelled to bow to a man stronger than himself-Adina Beg Khan, then governor of the Doab, and afterwards Viceroy of the Punjab.

Ahmad Shah Durrani appointed Ghamand Chand in 1759 A.D. as Nazim of Jalandhara Doab and thus acquired the supremacy over all the Hill States of the Jalandhara circle, between the Satluj and the Ravi. Kullu was also invaded as mentioned by Moorcraft and it was probably on that occasion that the figures on the Bajaura Temple were mutilated by his mercenaries. Ghamand Chand had enlisted a large army of 4,000 Mohammedans, chiefly Rohillas and Afghans and with it attacked the Kangra fort, but was unable to capture it.

MUGHALS AND CHAMBA

In the annals of history, there is no evidence that Chamba was ever invaded by Muslims before 16th century. However it is said that Chamba became tributary to the Mughal Empire after the capture of Kangra fort. Akbar had

sent his able Finance Minister, Raja Todar Mal to build imperial demesne in Kangra by way of confiscating territories from various adjoining states of Kangra group. In this process the state of Chamba lost Rihlu, Chari and Gharoh. Raja Pratap Singh Verman of Chamba, a contemporary of Akbar continued to remain loyal to the Mughals. When Raja Suraj Mal of Nurpur took refuge in Chamba, against protecting himself from Mughal army, the ruler of Chamba was asked to surrender him or face the wrath of the Mughal army. However, before anything could happen, Raja Suraj Mal fell ill and died. The ruler of Chamba handed over all property and articles of Suraj Mal to Mughal authority.

In the *Dhalog battle* (near Dalhousie) between Raja Janardhan of Chamba and Jagat Singh of Nurpur, Mughal sided with Jagat Singh. Chamba was defeated in this battle. Raja Janardhan of Chamba was deceptively made to present himself at the Mughal court to settle the terms of negotiations with Raja Jagat Singh. He was treacherously murdered sometime in the year 1623 A.D. and consequently for two decades Raja Jagat Singh ruled over Chamba. While Raja Jagat Singh was reigning the Chamba state, he revolted against the Mughal authority. Emperor Shah Jahan sent large number of Army under the command of Murad Baksh in 1641 A.D. to suppress rebellion Janardhan's son Prithvi Singh rushed to Rajas of Mandi and Suket to seek their help for restoration of the Chamba throne. With the help of Raja of Mandi, he crossed Rohtang and entered Lahaul and Pangi via Cheni pass and remained successful in capturing his capital.

Raja Jagat Singh fought bravely, but could not withstand the might of Mughal Army. The fort *Taragarh* was sieged and Jagat Singh was pardoned. He spent his remaining period in the service of the Emperor and the kingdom of Chamba was restored to Prithvi Singh. He developed good reputation in Mughal Durbar and visited Delhi about nine times. He was granted *Jagir of Jaswan* permanently. In his dispute with chief of Basholi, Sangram Pal regarding his claim over Bhalai, he was favoured by settling the dispute in his favour.

Raja Chatar Singh, who succeeded Raja Prithvi Singh, was contemporary of Aurangzeb, refused to obey the royal order, regarding the demolition of all Brahmnical temples in the native state. Upon this Raja Chater Singh was compelled to organize a confederacy of the hill chiefs of Basholi, Guler and Jammu to counter the attack of Mughals led by Mirza Obed Beg. Consequently the Mughals got defeated whereupon the hill chiefs recovered their lost principalities.

MUGHALS AND SIRMAUR

The Mughal authority also tried to capture Sirmaur Kingdom. Raja Dharam Prakash (1538-70 A.D.) to Raja Budhi Prakash (1605-1615 A.D.) are reported to have remained loyal to Mughal Emperors Akbar and Jahangir. Raja Mandhata Prakash was a contemporary of Shah Jahan, who assisted Mughal forces in numerous expedition against Gharwal chiefs. For his service

to the Mughal authority, he was restored several territories near Doon Kohistan. **Raja Subhag Prakash** (1647-59 A.D.) was the contemporary of Aurangzeb. He was directed to intercept all correspondence exchanged between Sulaiman Shukoh and his father Dara Shukoh.

The Sirmaur chief was restored several of his territories for his loyal services and till the rule of **Medni Parkash** when Guru Gobind Singh was invited to Sirmaur and who founded Paonta Sahib, the Sirmaur rulers had established cordial relations with the Mughal Empire and were granted with *Khillat*. However, the state of Sirmaur remained always dependent on the Mughal court to check encáshments on its territory by the adjoining rulers of Garhwal.

SIKH AND HILL STATES

Guru Nanak Dev was the first Sikh Guru, and founder of Sikhism. To deliver his message of peace, goodwill, brotherhood of human and fatherhood of God, he travelled several times to places such as Ladakh, Kangra, Jwalamukhi, Kullu, Lahaul-Spiti, Tibet, Sirmaur and Garhwal. The 5th Sikh Guru Arjun Dev (1563-1645 A.D.) is said to have sent Bhai Kaliana to Hill States to collect funds to complete Harminder Sahib. The sixth Guru Hargobind (1595-1645 A.D.) is said to have travelled extensively in the hill states and Kiratpur is built by him on the plot gifted by the Raja of Bilaspur.

The ninth Guru, **Teg Bahadur** (1664-1675 A.D.) visited the state of Kahlur to express his condolences on the demise of the prince. He purchased some land there and established himself in the village of *'Makhowal'*, that was later on developed and came to be known as Sikh town of *'Anandpur Sahib'*. Guru Gobind Singh the 10th guru of Sikhs, publicly made it known that he would welcome offerings of arms, horses and able courageous men force to join in his crusade against the Mughals. He succeeded in his mission but said to have been misunderstood by Rajas of Kahlur and Hindur.

A rift developed between Guru Gobind Singh and Raja Bhim Chand of Kahlur on account of a petty white elephant, which was gifted to Guru by Rattan Rai of Assam. Raja demanded the elephant for himself and that was refused by the Guru. At later period on the occasion of betrothal ceremony of Raja's son with the daughter of Raja Fateh Shah of Garhwal, the Kahlur Raja again sent his men to Guru to borrow the white elephant for the occasion but in vain. This paved the way for great animosity between the two. However it is also said that bitterness was also due to the fact that the Guru's army also included some rebel Pathan deserters from the Mughal army. Whatever might be the real issue, battle was fought at *'Bhangani'* near Paonta Sahib in 1686 A.D. in which Guru Gobind Singh emerged victorious. In this battle the Raja of Hindur **Hari Chand** got killed by the arrow of Guru Gobind Singh.

Once the battle was over, the Guru returned Kahlur territory to the successor of Hari Chand and founded the village Anandpur. He became once again friendly with **Raja Bhim Chand**. During this time Aurangzeb had sent **Alif Khan** to collect annual tribute from the hill Rajas. But Bhim Chand

the Raja of Kahlur refused to pay the tribute and instead prepared for an inevitable war with the Mughal army. Mughal forces marched to Bilaspur. Raja Bhim Chand and his allies fought bravely but could not win against a powerful army. He then sought the help of Guru Gobind Singh. The request was accepted, and Guru reached at *'Nadaun'* with considerable army. When *Raja Dayal Chand* an ally to Alif Khan was killed by an arrow of Guru and his friend *Kripal Chand* too was wounded then the Mughal army lost its courage and withdrew in the darkness of night.

According to one version Guru Gobind Singh also visited Kullu and Mandi, at the time of Mandi ruler Raja Sidh Sen (1684-1727 A.D.) Fierce battle between the Guru and the Mughal army took place repeatedly in which every time Guru Gobind Singh emerged victorious. However, Mirza Beg's expedition of 1696 A.D. crushed the rebellion of the hill chiefs. They plundered the country and put the villages on fire. In *Kahlur* Guru Gobind Singh created Khalsa on Baishakhi day, 13 April 1699 A.D. at Anandpur in which about 80,000 people joined to build up a military order. This event created panic among the hill rulers and was viewed as a standing menance to their princely order. After some time Emperor Aurangzeb sent *Adina Beg,* the Mughal Commander along with Paind Khan, a brave Pathan to fight and subdue the Guru. Hill Rajas also helped Mughals. But once again they got defeated. Azmatullah, a leader of Gujjars also helped Mughals along with the hill Rajas to crush the Sikhs. However he was killed and battle continued. In the end Sikhs faced defeat and evacuated *Nirmoh* and retreated to *Basholi* in the dominion of Raja Dharampala.

Later on Guru reoccupied Anandpur and started regrouping his army and strengthening himself. Mughal commander with the help of other allies on the specific instruction of Aurangzeb laid siege to starve the Guru and the Khalsa force to submission. However, the Guru was assured the safe evacuation and left Anandpur on 21st December, 1704 A.D. To oppose the Mughal imperialism in the Punjab, Guru Gobind Singh, had assumed the outward insignia of its grandeur. And in the course of his struggle against the Empire, strongly reminiscent of the trials and tribulations, the fortitude, courage and determination of Maharana Pratap, he lost two of his sons in fighting, two others gave their heads as the penalty for refuging to apostate. Of course, he did not live to achieve this ambition, but success is not always the measure of greatness. To take revenge of the murder of his father a Pathan stabbed Guru Gobind Singh mortally when asleep. Such was the end of the great Sikh reformer. He departed from this world on Thursday, 18th October, 1708 at Nander (in Maharastra) in the Deccan on the banks of Godavari in the forty eight year of his life, having reigned as Guru for thirty years and eleven months.

MAHARAJA RANJIT SINGH AND HILL STATES

Bahadur Shah (1702-1712 A.D.) was quite friendly with Guru Gobind Singh, because the latter had given him military assistance in his struggle against his

brothers for the throne. So, the Guru was taken by Bahadur Shah to his Deccan tour, where the former met one Bairagi named Madho Das at Nander. He became extremely devoted to Guru, who asked to go to North to fight against the enemies of Khalsa. Also, Punjab Sikhs were instructed to obey him and to come jointly under his banner. Accordingly Banda's forces sacked Sirhind captured Amritsar, Kasus, Batala, Pathankot and looted Lahore.

To stop the marauding army of Banda Bahadur, Mughal Emperor Bahadur Shah send *Amin Khan* to subdue Banda who besieged him in the fort of Lahagarh but made good escape from there on 10th December, 1710 A.D. Since he had escaped through Sirmaur state, so Raja Bhup Prakash, the son of Hari Prakash the ruler of Sirmaur was brought back as prisoner, but set free due to confusion during Jahandar's time, during (1712-1713 A.D.) within fortnight of his escape after issuing letters called *Hukamnama* to Sikhs. He led an expedition against the Hindu chiefs, who had been working against Sikhs. The first state to face the wrath of Banda Bahadur was Kahlur. This incident demoralized other hill chiefs. They voluntarily submitted to Banda Bahadur and paid Nazrana and assured him their loyalty and integrity.

The Rajas of *Chamba* and *Mandi* were first to surrender to Banda. In the meanwhile Farukh Siyar came into power who had ousted Jahandar Shah, asked his brave General *Abdus Samad Khan* to punish Banda Bahadur. Banda Bahadur, who was in the hills at that time and had fierce battle with Mughal forces in 1715 A.D. The battle continued for eight long months. In the end he was captured and along with his men executed in June, 1716 A.D.

After the death of Banda Bahadur, the Sikhs organized themselves into 12 groups (commandants) which are known as *Misals*.

The last Mughal Quiladar Nawab Saif Ali Khan was appointed in A.D. 1740, during the closing years of reign. When Mughal empire was in the throes of dissolution, Ahmad Shah Durrani invaded Punjab plains ten times between A.D. 1748-1768. Zakaria Khan (1726-1745 A.D.) the Nazim of Punjab carried out ruthless persecution of Sikhs. Ultimately in A.D. 1752 the weak Mughal emperor of Delhi ceded to Ahmad Shah Durrani the Punjab along with the hill states. Taking advantage of Chaos and confusion, Ghamand Chand of Kangra, established himself and recovered all the territory that had been lost by his ancestors to the Mughals. In 1758, Ghamand Chand was compelled to bow before Adina Begh Khan, the Governor of the Doab, and afterwards viceroy of the Punjab.

In 1759, Ghamand Chand was appointed Governor of Jalandhra Doab by Ahmad Shah Durrani and thus acquired the supremacy over all the hill states of Jalandhara circle between the Satluj and the Ravi. He also annexed *'Chauki'* the Northern half of Kutlehr state and seized the 'taluka of Palam' from Chamba. Raja Ghamand Chand was successful in expelling the Sikh intruders. He defeated Jassa-Singh Ramgarhia in a pitched battle, second time when the latter attacked Raja Ghamand Chand in collaboration with another Sikh miseldar Jai Singh Kanheya. They were again repulsed. His

capital was at Nadaun. The first amongst the Sikh chieftains to invade Kangra Hills was Jassa Singh Ramgarhia, who had made Kangra, Nurpur and Chamba his tributaries. But in 1775 Jai Singh Kanheya defeated Jassa Singh Ramgarhia on the plains and captured the Kangra group of states, including Datarpur, Siba and Nurpur.

But the Kangra fort was still under the siege of Mughal Governor. In 1781-82 Sansar Chand II called into his aid Jai Singh Kanheya to lay siege to the stronghold. The old Nawab was then dying and on his demise in 1783, the fort was surrendered, but by stratagem it fell into the hands of the Sikhs. Four years later Sansar Chand obtained the aid of other Sikh leaders and in 1787 Jay Singh reluctantly obliged to surrender the fort into the hands of Sansar Chand. With the possession of the fort and supreme power in the hills, Sansar Chand was able to prosecute his ambitious designs.

The period 1786-1805 A.D. was a glorious chapter in the history of Kangra. Raja Sansar Chand after the possession of the Kangra fort went upon an operation of ambitious expansion and subdued the states of *Guler, Siba, Jaswan, Datarpur, Kahlur* and *Mandi* consequently as per compulsion the chiefs of hill states formed a confederation to face and subdue his tyranny that resulted in his downfall and the extinction of his empire.

Ranjit Singh was born on Nov. 13, 1780 at Gujranwala. He was named Ranjit Singh by his father Mahan Singh. Ranjit Singh had his first taste of battle, when he was hardly ten years old. It was Sahib Singh Bhangi (they were called bhangis as they use to drink 'Bhang' all the time) of Gujarat (a town in Punjab, now in Pakistan) refused to pay tribute to Mahan Singh and his estate was attacked by him. Sahib singh shut himself at the fort of Sodhran and the siege of the fort was laid. Ranjit singh accompanied Mahan Singh. The siege continued for several months. Mahan singh fell grievously ill. Apprehending his approaching end he INVESTED Ranjit singh chief of the *Sukerchakia Misl* by putting Ranjit's forehead saffron paste. It was a great occasion of joy. When the other Bhangi sardars came to know about the illness of Mahan singh and the army of Sukerchikia's was commanded by a child of ten years they came to rescue the Sahib Singh Bhangi at Sodhran. Ranjit Singh ambushed them and routed their forces. Ranjit singh's victory opened the eyes of many chieftains. When the news of victory was conveyed to Mahan singh, he distributed sweets and perhaps it was the last news given to Mahan singh before he breathed his last.

Mahan Singh died in 1792. Ranjit Singh was then 12 years old. He was too young to manage the affairs of the estate. His mother Raj Kaur became his natural guardian. He was also helped by Diwan Lakhpat Rai. She had full confidence in his integrity but her brother Dal Singh did not like his interference in the administration of the territory. So, Dal Singh joined hands with Sada Kaur, Ranjit Singh's mother-in-law who exercised a lot of control over him. Thus two clear cut groups were formed, Diwan and Raj Kaur on one hand, Sada Kaur and Dal Singh on the other side. The intrigues and counter

intrigues made Ranjit sick of all of them. He started spending most of this time outside the house on hunting expeditions. Ranjit Singh also became suspicious of people around him and disliked some of them.

Ranjit grew up without any formal education and remained totally illiterate. Fond of swimming and excursions, Ranjit had more traits to become a soldier later in life. Ranjit singh once told Captain wade, British agent at Ludhiana that his father had left for him 20,000 rounds of shot which he expended in firing at marks. At the age of 16 Ranjit singh was married to Mehtab Kaur of Kanhaiya misal, thus this marriage brought two great misals together. Then in 1798 he again married to the daughter of Khazan singh Nakai thus also adding his strength. The second marriage annoyed Sada kaur and Mehtab kaur.

Punjab presented a picture of chaos and confusion when Ranjit singh took reins of Sukerchikias misal. The edifice of Ahmad Shah Abdali's empire in India had crumbled. Afghanistan was dismembered. Peshawar and Kashmir though under the suzerainty of Afghanistan had attained *de facto* independence. Barakzais were the masters of these places. Attock was ruled by Wazrikhels and Jhang lay at the feet of Sials. Pathans were ruling Kasur. Multan had thrown yoke and Nawab Muzaffar Khan had

GURKHAS AND HILL STATES

In the second half of 18th century, the Gurkhas of Nepal had been seized with an ambition to set up a Gurkha kingdom, stretching from Nepal to Kashmir. Before the end of century they had extended their dominion from Gagra to Satluj, over the whole of Kumaon, Garhwal, Sirmaur and the Shimla Hill States. To achieve their target of setting up Gurkha kingdom, they also approached Raja Ranjit Singh for a joint action against the Durranis of Kabul who then ruled the Kashmir valley, but the Sikh chief had marked out Kashmir as his own prize, did not encourage them.

While Gurkhas were plundering and subdueing Garhwal, Raja Karam Parkash (1793-1814 A.D. succeeded to Sirmaur *Gaddi.* He was indolent and inexperienced ruler. Raja Ram Saran Singh of *Hindur* (Nalagarh) was his contemporary. He started meddling in the internal affairs of the Sirmaur state and as a consequence the most influential of Karan Parkash officials, Ajit Singh and Kishan Singh conspired with Kanwar Rattan Singh, the Raja's brother, whom they desired to occupy the throne. They besieged the Raja in 'Kangra', a fort in Sirmaur Dun, some 50 kms from Nahan. In the fighting that ensued, one *Cholu Mian,* who resembled Karam Prakash in appearance, was killed and the rumour spread that the raja had been slained.

Taking advantage of this confusion, Raja Karam Parkash managed to escape with his family from the fort to Kalsi. Kanwar Rattan Singh then seized the throne. Raja Karam Parkash, despaired of being regaining his *gaddi,* sought help from Gurkhas. Amar Singh Thapa sent a detachment of 700 men under Bhakti Thapa to quell the rebels but it was encircled by a Hindur force

at *'Jamata'* and was forced to capitulate and to withdraw. This event took place in 1804 A.D. Not being dejected with this setback Raja Karam Prakash again reminded Amar Singh Thapa of their treaty. This time Gurkha General came himself and subdued most of the adjoining states and Sirmaur. But after expulsion of Rattan Singh, Amar Singh Thapa set up his own government, leaving Raja Karam Parkash in no better position than before.

During this period Raja Ram Saran Singh of Hindur managed to win over the loyalties of *Bara Thakurais* (12 Thakurais) which had been feudatories of Kahlur. These Thakurais renounced their allegiance to Raja Mahan Chand of Kahlur in 1793. After sometime Raja Ram Saran of Hindur allied himself with Raja Sansar Chand of Kangra, who invaded the territory of Kahlur located on the right bank of Satluj and occupied fertile land there. He also built a fort at *'Dhar Jhanjiar'*.

In the meantime Raja Ram Saran Hinduria also attacked Kahlur and sacked Bilaspur town. He also captured the forests of *Fatehpur, Bahadurpur* and *Rattanpur*. This made Raja Mahan Chand of Kahlur quite vulnerable and threat to his life was imminent. Sansar Chand's action against Kahlur aroused bitter resentment among the other hill states, and smarting under many wrongs they had endured at his hands, as well as fearing for their own possessions, the chiefs formed coalition against him. The coalition against Raja Sansar Chand drafted a joint invitation to Gurkha Chief Amar Singh Thapa and by 1804 A.D. he arrived in Shimla Hill States. First of all the Gurkha General defeated the Hindur troops at Ajamgarh. But the Forts of Ramgarh and Nalagarh were strongly invested. The garrisons there in were bribed to surrender and Ram Saran Singh fled South to the fort of Palasi Mahan Chand was given nominal trust of all the Thakurais. Seeing his great success, Mahan Chand asked Amar Singh Thapa to intervene in the struggle then going between Kahlur and Kangra over *'taluka of Bati'* in Kahlur which Sansar Chand claimed.

Accepting this invitation, Amar Singh Thapa, the Gurkha commander, who is said to have had an army of 40,000 men, crossed the Satluj at Bilaspur and Jiuri in Suket was joined by the various contingents from the Hill states of Kangra group, and Bilaspur and Basholi. Their united forces amounting to about one lakh men. (The Gurkhas crossed the Satluj in the end of 1805 A.D.)

In 1806, Gurkhas took Mahan Chand with them and the Kangra forces were defeated at *'Mahal Morian' (a place in district Hamirpur now, near Bhoranj).* Pushed back Raja Sansar Chand first took position at Tira-Sujanpur to harass the enemy but later sought refuge in Kangra fort, along with his family. The supplies of grains for the garrison had been sufficient for twelve years, but want of care and actual waste exhausted them in much shorter period. On this, his own kinsmen and relatives also deserted Raja Sansar Chand at this critical time. The Gurkhas then advanced into the heart of the state and laid siege to the fort but all their efforts to capture it were fruitless. For four years Gurkhas plundered and laid waste the country and so dreadful were the ravages they committed that the inhabitants deserted their homes

and fled into neighbouring states.

After the struggle had continued for four years, Sansar Chand rendered desperate by the ruin which had come upon his country; as a last resort, Raja Sansar Chand in 1809 A.D. appealed to Maharaja Ranjit Singh for help. This was accepted after a month long negotiation between the Raja and the Maharaja in Jwalamukhi Temple. (Treaty was signed on 20th July A.D. 1809). Then on Sikh army advanced towards Kangra and defeated Gurkhas, whose number had already reduced due to desertion by other hill rulers and diseases. After expulsion of Gurkhas, Maharaja Ranjit Singh advanced towards the fort. The Kangra fort was surrendered to Maharaja Ranjit Singh by Raja Sansar Chand on 24th August, 1809.

Desa Singh Majithia was appointed Nazim of the fort and the administration of Kangra Hills. With the cession of Kangra fort to Ranjit Singh, the Kangra state, as well as all the other states of the Jalandhara group became subject and tributary to the Sikhs. From that time Sansar Chand retired to Tira-Sujanpur.

After his retreat from Kangra in 1809 A.D. Amar Singh Thapa put his pressure against Raja Ram Saran Singh of Hindur, but during that year the advance of British troops to Ludhiana saved *'Palasi'* from being captured. So Amar Singh Thapa established himself at Arki, in the small state of Baghal, whose chief Rana Jagat Singh was driven into exile in Palasi. Sometime afterwards, Amar Singh Thapa sent a force under his son ***Ranzor Singh*** to attack Sirmaur. Its ruler Karam Prakah was defeated. He first fled to Subathu in the ilaqa of Ramgarh and then to *'Buria'* in Ambala. Thus Nahan and Jythak (in Sirmaur) became important Gurkha posts in the year immediately after these events.

By the year 1810, Gurkhas had conquered *'Hindur'* and *'Jubbal'* States and Pundra area. The *fort of 'Nagana'* in Balsan state was also captured. Some of the Shimla Hill States then made request to the chief of Bushahr state to check the growing power and expansion of Gurkhas. Consequently the Raja of Bushahr sent a strong force under his able wazir to subdue them. Amar Singh Thapa dealt with this new threat from the North in person. In May 1811 he marched from Subathu with a large force, finally took Nagana, and pushed onward into the middle Satluj valley, where stood Rampur, the capital of Bushahr.

However, the ultimately death of Ugar Singh, the Raja of Bushahr, eased the designed operation of Gurkhas. Mohinder Singh the next successor was minor at that time, proved very helpful to the invading party. The Wazir of Bushahr, foresighted threat to the ruling family, escaped along with the Raja and Rajmata into the dense forests. Till 1812, Amar Singh Thapa tried his level best to capture the Raja but all was in vain. Finally, he agreed to leave young Raja all the country North of Sarahan mountains and beyond the Satluj, for a payment of Rs. 12,000 per annum. Thus the entire territory lying between the Yamuna and Satluj had come under Gurkhas control. The Gurkha General

Amar Singh Thapa remained in Rampur and its neighbourhood until 1813 A.D. after which he retired to Arki.

THE GURKHAS AND THE BRITISH

The expansion of East India Company in the Northern part of India, was a bad signal for the Gurkhas, who were desirous of extending their territory beyond the south of foothills, announced their willingness of occupying certain villages in the plains of Sirhind on the plea that they belong to Sirmaur and Hindur, which were conquered by them. The British agent of the area objected to this and asked Gurkhas to withdraw from the proclaimed possessions. The British wanted to keep this area as a buffer zone between the Gurkhas and the British spheres of interest.

In the middle of 1813 A.D. there was a second frontier crisis. The Gurkha men seized six villages of which two were of David Ochterlony's Sikh proteges. Patiala and Hindur affirmed. It belonged to their lowland possessions. Amar Singh Thapa claimed that they belong to Sirmaur and Keonthal states of the hills which he had conquered and to all of whose estates he had the right. This misadventure was objected to by David Ochterlony. The Gurkhas expansion Westward brought all the Himalayan passes under their control. This helped them in practical control of all the trade routes between Tibet and the plains excluding all foreign traders (including British merchants) from business exploitation of the hill markets. Tibet was rich in shawls, wool, borax and musk production. The state of Bushahr had acquired great importance as a commercial centre being situated on the route from Ladakh to Tibet. The traders from Kashmir and Yarkland used to come down to meet the lowland traders to barter the precious merchandise of Central Asia for wheat and other manufactured goods of the plains.

The mercantile interests of the British, made them to frame British Himalayan policy of 1814, based on two considerations; on local border problem, and the other, deriving from basic economic and strategic issues. To achieve its objectives and uncooperative attitudes of the Nepali government in restraining marauding Gurkhas in the hills, the British finally on November 1, 1814 declared war against the Gurkhas. This British adventure was also backed by the local hill rulers, who were fed up with Gurkhas invasions and they were in search of an opportunity to restore their lost territories. While making war's declaration, the British also addressed a proclamation to all hill chiefs of the region offering reinstatement under British guarantee in return for aid against the Gurkhas.

To liberate Himalayan states from Gurkhas, the British put four separate divisions of troops into operation in different sectors. The main columns were under Major General David Ochterlony and Major General Rollo Gillespie. Major Gillespie with 4400 fighting army marched from Saharanpur to Dehra Dun and Kiarda Dun. The Commander of Gurkhas forces Bala Bhadra Thapa was at Dehra Dun when heard of this news. He along with his men positioned at fort of Kalinga, also known Nalapani. A pitched battle took place between

Gurkhas and the British forces in which Gillespie was mortally wounded but British emerged victorious and captured the Kalinga fort.

In Sirmaur, Ranzor Singh son of Amar Singh Thapa was incharge of Gurkha troops in Nahan. On hearing the arrival of the British forces, he left Nahan and took position at *'Jythak'* on a ridge overlooking Nahan. On 19th December 1814, British troops launched attack on Jythak fort. The Gurkhas evacuated the fort, and fell suddenly upon the British troops, who were exhausted and disorganized by the difficulties of ascent. The British had severe losses. For a month odd, British could not take initiative against the Gurkhas.

Now British started acquainting themselves with the difficult and inaccessible terrains, before launching further attacks on the Gurkhas. Meanwhile Amar Singh Thapa with the help of Raja of Kehlur, was determined to resist the British advancement in the region. Gurkhas were attacked with great force at *Ramgarh* by Ochterlony; however, having boomeranged, the British forces led by **Major Mcleod** and **Lt. Col. Thompson** suffered heavy casualties. After changing fighting strategies the British with the help of local Chief of Kahlur (Bilaspur) constructed a road from *Khandri* to *Nahar* to subdue the Gurkhas, who had taken up position on a high inaccessible mountain ridge that was defended by several forts of great strength.

Amar Singh Thapa came to know about this plan and immediately changed his positions. Therefore on 16th January, 1815 Ochterlony marched towards Arki and crossed Gambar river. After analyzing the situation Amar Singh Thapa moved to Malaon and lost important posts such as *Jorjori*, *Ramgarh* and *Taragarh* fort. In the meantime Britishers turned towards Jubbal state in the Northern side. By February, 1815 William Fraser, the British Political Agent suggested that a force of irregulars (not of an army) be sent and Martindell agreed to that. They accompanied by about 500 troops, crossed **Choordhar peak** and reached Sarahan a village near Chopal on 12th March, 1815. There they were joined by two chief men of Jubbal, Dangi Wazir and Primu in secret. Then they marched to Chaupal and surrounded the small fort of Chopal, one of the strongholds of Jubbal controlled by about 100 Gurkhas. After some negotiation the Gurkha men surrendered and all were received into the British camp.

The reduction of Gurkhas in Chaupal was a great victory. After this, the party proceeded to *'Rawingarh fort'*, another stronghold of the Gurkhas, just opposite to Hatkoti in Jubbal. The Rawingarh fort was under the control of Ranzor Singh Thapa. On 17th March 1815, irregular troops from Chaupal also arrived. Here they were joined by Dangi Wazir with Jubbal troops. On the other side *Tikam Dass* and *Badri*, were leading Bushahr forces against the Gurkha garrison of Rawingarh. Fearing the extinction in the hands of combined forces, the Gurkhas evacuated the fort, and it was then occupied by Fraser's irregulars.

In Rampur-Kotgarh region, the Gurkha force occupying the *Hattu Range* was under the control of Kirti Rana. At the beginning of 1815 the combined

forces of Bushahr and Kullu besieged him at *'Nawagarh'*. Finding that his supplies and water were running out, he attempted to retreat to Rawingarh but later on surrendered to the Wazir of Bushahr at *'Saran-Ka-Tibba'* on the conditions that the lives of his soldiers were to be spared, and that they were to be handed over to the nearest British general.

In the end of October 1814, David Ochterlony, entered the foothills of Himalayas from Ropar and proceeded to Nalagarh, which surrendered on 5th November, 1814. This was followed by the surrender of Taragarh, a small hill fort in the neighbourhood. In the meantime Gurkha General Amar Singh Thapa moved along with full force from his headquarters *Arki* to a lofty and inaccessible ridge of mountains. There on his right flank resting the fort of Ramgarh and on his left flank was a high and well fortified hill. At this stage Raja Ram Saran Singh of Hindur joined hands with the British and provided them with his troops. On the other side the Raja of Kahlur also forshook Gurkhas and took side with the British. David Ochterlony played a great role in forming alliance with the chiefs of *Hindur* and *Kahlur*.

Encouraged with his previous adventures with the old friends of Gurkhas, on 16th January, 1815, David Ochterlony launched a major attack on the Gurkha forces led by Amar Singh Thapa. He sealed the Eastern, Southern and Northern approaches to the ridge and thus compelled Amar Singh Thapa to evacuate Ramgarh fort and to concentrate his army in *Malaon*. Then 18 pounders under *Lt. Tenant*, were brought up the mountain with incredible labour, and a battery of fire was opened upon Ramgarh fort which soon surrendered. Now Ochterlony targeted on Malaon fort. **Bhakti Thapa**, one of the bravest officers in the Gurkha army died there in the *Malaon fort*. It was a great loss to Amar Singh Thapa.

In the meanwhile, the news of the fall of Kumaon reached. Amar Singh Thapa was unwilling to surrender but his men started deserting him. Finally, Amar Singh Thapa, under the compulsion of circumstances, surrendered with honour both for himself and for Ranzor Singh Thapa who was defending the fort of *'Jythak'* in Sirmaur against Major General Martindell. On November 28, 1815, the *'treaty of Sagauli'* was signed between Gurkha General Amar Singh Thapa and the British Major General David Ochterlony, under which Gurkhas were allowed to return along with their private properties to Nepal, leaving the hill territory from river Kali to Satluj under the sovereignty of the British.

Treaty of Sugauli (Sagauli)

The Sugauli Treaty (also spelled Sugowlee and Segqulee) was signed on 2 December 1815 and ratified by 4 March 1816 between the East India Company and King of Nepal following the Anglo-Nepalese War in the years 1814-16. The signatory for Nepal was Raj Guru Gajraj Mishra aided by Chandra Sekher Upadhyaya and the signatory for the Company was Lt. Col. Paris Bradshaw. The treaty called for territorial concessions in which parts of Nepal will be given to British India, the establishment of a British represen-

tative in Kathmandu, and allowed Britain to recruit Gurkhas for military service. Nepal also lost the right to deploy any American or European employee in its service (earlier several French commanders had been deployed to train the Nepali army).

Under the treaty, about one-third of Nepalese territory was lost including all the territories that the King of Nepal had won in wars in the last 25 years or so such as Sikkim in the east, Kumaon Kingdom and Garhwal Kingdom (also known as Gadhwal) in the west and much of the Terai in the south. Some of the Terai lands were restored to Nepal in 1816. More Terai lands were restored to Nepal in 1860 to thank Nepal for helping the British to suppress the Indian rebellion of 1857. The British representative in Kathmandu was the first Westerner allowed to live in the post-Malla Era Nepal. (It is to be noted that few Christian missionaries operating were deported by the Gurkhas after conquering Nepal during mid 18th century). The first representative was Edward Gardner, who was installed at a compound north of Kathmandu. That site is now called Lazimpat and is home to the Indian and British embassies. The Sugauli Treaty was superseded in December 1923 by a *"treaty of perpetual peace and friendship,"* which upgraded the British resident to an envoy. A separate treaty was signed with India (independent by now) in 1950 which restored fresh relations between the two as independent countries.

In 1816, East India Company signed a treaty with the Kingdom of Gorkha (Nepal), which led to the end of the two-year-long Anglo-Nepali war. Under this treaty, a part of Mithila was conceded from India to Nepal. This region was popularly called Eastern Terai or Mithila in Nepal. Since the Sugauli Treaty, Nepal holds the control over the Northern parts (minor portion) of Mithila, while the Southern Parts (Major portion) remain under the control of India. Until the Sugauli Treaty was signed, the territory of Nepal also included Darjeeling and Tista to the east, Nainital to the south-west and Kumaon Kingdom, Garhwal Kingdom and Bushahar to the west. These areas had been won by Nepal in the last 25 years or so.

Terms of Sugauli Treaty

The terms of the treaty were as follows:-

There shall be perpetual peace and friendship between the East India company and the king of Nepal.

The king of Nepal will renounce all claim to the lands which were the subject of discussion between the two States before the war; and will acknowledge the right of the company to the sovereignty of those lands.

The king of Nepal will cede to the East India company in perpetuity all the under mentioned territories: i) The whole of low lands between the rivers Kali and Rapti. ii) The whole of low lands between Rapti and Gandaki, except Butwal. iii) The whole of low lands between Gandaki and Koshi in which the authority of the East India company has been established. iv) The whole of low lands between the rivers Mechi and Teesta. v) The whole of territories

within the hills eastward of the Mechi river. The aforesaid territory shall be evacuated by the Gorkha troops within forty days from this date.

With a view to indemnify the chiefs and Bhardars of Nepal, whose interest will suffer by the alienation of the lands ceded by the foregoing Article (No. 3 above), the East India company agrees to settle pensions to the aggregate amount of two lakhs of rupees per annum on such chiefs as may be decided by the king of Nepal.

The king of Nepal renounces for himself, his heirs, and successors, all claim to the countries lying to the West of the River Kali, and engaged never to have any concern with those countries or the inhabitants thereof.

The king of Nepal engages never to molest or disturb the king of Sikkim in the possession of his territories. If any difference shall arise between Nepal and Sikkim, it shall be referred to the arbitration of the East India company.

The king of Nepal hereby engages never to take or retain in his service any British subject, nor the subject of any European or American State, without the consent of the British Government.

In order to secure and improve the relations of amity and peace hereby established between Nepal and Britain (East India company), it is agreed that accredited Ministers from each shall reside at the court of the other.

This treaty shall be ratified by the King of Nepal within 15 days from this date, and the ratification shall be delivered to Lt. Col. Bradshaw, who engages to obtain and deliver to the king the ratification of the Governor-General within 20 days, or sooner, if practicable.

DONE at Sugauli, on the 2nd day of December 1815. PARIS BRADSHAW, LT.-COL., P.A. Received this treaty from Chandra Shekhar Upadhyaya, Agent on the part of the Raja of Nepal, in the valley of Makwanpoor, at half-past two o'clock p.m. on 4 March 1816, and delivered to them the Counterpart Treaty on behalf of the British Government.

DD. OCHTERLONY, Agent, Governor-General Memorandum for the approval and acceptance of the Raja of Nepal, presented on 8 December 1816 ADVERTING to the amity and confidence subsisting with the Raja of Nepal, the British Government proposes to suppress as much as possible, the execution of certain Articles in the Treaty of Sugauli, which bear hard upon the Raja as follows:

With a view to gratify the Raja in a point which he has much at heart, the British Government is willing to restore the Terai ceded to it by the Raja in the Treaty, to wit, the whole Terai lands lying between the Rivers Kushwaha and Gandak, such as appertained to the Raja before the late disagreement; excepting the disputed lands in the district of Tirhoot and Sarun, and excepting such portions of territory as may occur on both sides for the purpose of settling a frontier, upon investigation by the respective Commissioners; and excepting such lands as may have been given in possession to any one by the

British Government upon ascertainment of his rights subsequent to the cession of Terai to the Government. In case the Raja is desirous of retaining the lands of such ascertained proprietors, they may be exchanged for others, and let it be clearly understood that, notwithstanding the considerable extent of the lands in the district of Tirhoot, which have for a long time been a subject of dispute, the settlement made in the year 1812 of Christ, corresponding with year 1869 of Bikram Sambat, shall be taken, and everything else relinquished, that is to say, that the settlement and negotiations, such as occurred at that period, shall in the present case hold good and be established.

The British Government is willing likewise to restore the Terai lying between the Rivers Gandak and Rapti, that is to say, from the River Gandak to the western limits of the district of Gorakhpur, together with Butwal and Sheeraj, such as appertained to Nepal previous to the disagreements, complete, with the exception of the disputed places in the Terai, and such quantity of ground as may be considered mutually to be requisite for the new boundary. As it is impossible to establish desirable limits between the two States without survey, it will be expedient that Commissioners be appointed on both sides for the purpose of arranging in concert a well defined boundary on the basis of the preceding terms, and of establishing a straight line of frontier, with a view to the distinct separation of the respective territories of the British Government to the south and of Nepal to the north; and in case any indentations occur to destroy the even tenor of the line, the Commissioners should effect an exchange of lands so interfering on principles of clear reciprocity.

And should it occur that the proprietors of lands situated on the mutual frontier, as it may be rectified, whether holding of the British Government of the Raja of Nepal, should be placed in the condition of subjects to both Governments, with a view to prevent continual dispute and discussion between the two Governments, the respective Commissioners should effect in mutual concurrence and co-operation the exchange of such lands, so as to render them subject to one dominion alone. Whensoever the Terai should be restored, the Raja of Nepal will cease to require the sum of two lakhs of Rupees per annum, which the British Government agreed to advance for the maintenance of certain Bhardars of his Government.

Moreover, the Raja of Nepal agrees to refrain from prosecuting any inhabitants of the Terai, after its revertance to his rule, on account of having favored the cause of the British Government during the war, and should any of those persons, excepting the cultivators of the soil, be desirous of quitting their estates, and of retiring within the Company's territories, he shall not be liable to hindrance. In the event of the Rajah's approving the foregoing terms, the proposed arrangement for the survey and establishment of boundary marks shall be carried into execution, and after the determination in concert, of the boundary line, Sanads conformable to the foregoing stipulations, drawn out and sealed by the two States, shall be delivered and accepted on both sides.

HILL STATES AND THE BRITISH

On the conclusion of Gurkha-British war in 1815 A.D., the British decided to secure the cooperation of all the liberated hill chiefs by an offer to them with a guarantee of future independence on the condition of their taking part with the British in the event of any subsequent incursions by the Nepalese. Now all the 20 Shimla Hill States had come under the British sovereignty. The General Ochterlony held a collective meeting of all the hill chiefs at 'Palasi'. The objective of this conference was to determine the territories held by each chief prior to the Gurkha occupation. The chiefs of *Bilaspur, Kotkhai, Baghal* and *Bushahr* were granted Sanads, thus came under British overlordship between 1815 and 1819 A.D.

The Thakurais of *Kumharsain, Balson, Tharoch, Kuthar, Mangal* and *Dhami* were constituted as separate chiefships and granted independent *'Sanads'* whereas the Thakurais of *Khaneti* and *Delath* were conferred upon Bushahr state and those of *Koti, Ghund, Theog, Madhan* and *Ratesh* upon Keonthal state. The exigencies of their position to submit to a more powerful neighbour, the superior chief was recognized as the overlord of the inferior one. Under the *sanads,* the hill chiefs were put under certain obligations in return for their protection. They were required to allow full passage to the British merchants and their commodities to provide *begar* and to construct roads in their respective territories. The princely states were under the sovereignty of the British government and were made to pay *Nazarana* in cash. The British could overthrow any heir from his throne in case found defaulter in the fulfilment of the obligations laid down in *sanads.* The recognition of any state by the British was a necessary condition.

The dates of the Sanads granted to these states are as under:

State	Name of the Chief	Date of Issuing
1	2	3
1. Bilaspur	Raja Mahan Chand	6th March, 1815
2. Baghal	Raja Jagat Singh	3rd September, 1815
3. Kuthar	Rana Bhup Singh	3rd September, 1815
4. Baghat	Rana Mohinder Singh	4th September, 1815
5. Bhajji	Rana Rudar Pal	4th September, 1815
6. Dhami	Goverdhan Singh	4th September, 1815
7. Mahlog	Thakur Sansar Chand	4th September, 1815
8. Beja	Thakur Man Chand	4th September, 1815
9. Keonthal	Rana Sansar Sen	6th September, 1815
10. Sirmaur	Raja Fatesh Parkash	21st September, 1815
11. Balsan	Thakur Jog Raj	21st September, 1815
12. Nalagarh	Raja Ram Saran Singh	20th October, 1815
13. Jubbal	Rana Puran Chand	18th November, 1815
14. Sangri	Raja Bikramjit Singh	16th December, 1815

15. Mangal	Rana Bahadur Singh	20th December, 1815
16. Darkoti	Rana Surtes Ram	22nd December, 1815
17. Kunihar	Thakur Magan Deo	28th December, 1815
18. Kumharsain	Rana Kehar Singh	7th February, 1816
19. Bushahr	Raja Mohender Singh	8th February, 1816
20. Tharoch	Thakur Jhobu	31st January, 1819

These chiefs were also asked to promote the welfare of their subjects, to improve land conditions, their cultivation, to keep the public roads safe, apart to redress grievances. In case some conflict arose between Rajas and the trans Satluj states they were required to seek arbitration of the British courts. Thus restoring lands to their legitimate chiefs in perpetuity by the British, in lieu laid certain conditions that were made clear in the *Sanads* given to these Hill Chiefs.

Gradually, the British departed from several practices promised in the *Sanads*. This departure from accepted policy was stated to be due to misrule, oppression of the masses and non fulfilment of the terms of the treaties and Sanads by the Hill States. In short, the relations between British and the hill states from 1815 to 1845 A.D. centred mainly around issues such as retention of territories, complaints, asylum to the Hill Chiefs, intervention to side the hill rulers, problems of succession, British intervention and secret communications with British higher authority.

By this time Sikh forces had become a big threat to the Hill States. Some rulers fled into the British territory due to the fear of Sikhs or may be due to some other reasons. For example, Raja Bir Singh left the state of Nurpur and sought refuge in the British territory at Shimla and Subathu. Likewise, Maharaja Ranjit Singh expelled Charhat Singh, who sought asylum in British territory across the Satluj. Balbir Sen, Raja of Mandi wrote to the political Agent Col. Tapp at Subathu about sending forces of Ranjit Singh against him.

Both the English as well as the Sikhs feared each other's strength and thus avoided direct conflict. Therefore Maharaja Ranjit Singh maintained friendly relations with the British. Although from 1820 A.D. onwards, the British policy towards Maharaja Ranjit Singh began to change outwardly, yet in every respect Britishers continued their respect for the 1809 Amritsar Treaty. The Treaty of Amritsar of 1809 was an agreement between the British East India Company and Ranjit Singh, the Sikh leader who founded the Sikh empire. Among the outcomes was that Singh gained a carte blanche to further consolidate his territorial gains north of the Sutlej river at the expense both of other Sikh chiefs and their peers among the other dominant communities.

Ranjit Singh (1780-1839) was a Sikh warrior who had been establishing a kingdom in what was at that time northern India. He had established a capital at Lahore in 1799 when he defeated Zaman Shah, an Afghan leader, and this emphasised his status among the Sikhs. He proclaimed himself *maharajah of the Punjab* in 1801 and expanded his territories to such an extent that by 1808 he had control of an area bounded by *Gujarat, Ludhiana and Multan.*

He had Malwa, on the south side of the Sutlej river, as his next target but the Sikh chiefs in that area appealed to the British for protection. The protection was forthcoming and the British, who until recently had been occupied in Hindustan obtaining victory in the Second Anglo-Maratha War, attempted to resolve the issue using diplomacy. This failed, Ranjit Singh invaded Malwa in September 1808 and in February 1809 the British successfully attacked Ranjit Singh's forces there. Realising his relative military weakness, Ranjit Singh conceded with the Treaty of Amritsar.

The Text of the Lahore Treaty 1809: *Whereas certain differences which had arisen between the British Government and the Raja of Lahore have been happily and amicably adjusted, and both parties being anxious to maintain the relations of perfect amity and-concord, the following Articles of treaty, which shall be binding on the heirs and successors of the two parties, have been concluded by* ***Raja Ranjeet Sing*** *on his own part, and by the agency of* ***Charles Theophilus Metcalfe,*** *Esquire, on the part of the British Government.*

Article 1. Perpetual friendship shall subsist between the British Government and the State of Lahore. The latter shall be considered, with respect to the former, to be on the footing of the most favoured powers; and the British Government will have no concern with the territories and subjects of the Rajah to the northward of the Satluj.

Article 2. The Rajah will never maintain in the territory occupied by him and his dependants,.on the left bank of the River Satluj, more troops than are necessary for the internal duties of that territory, nor commit or suffer any encroachments on the possessions or rights of the Chiefs in its vicinity.

Article 3. In the event of a violation of any of the preceding Articles,

or of a departure from the rules of friendship on the part of either State, this Treaty shall be considered to be null and void.

Article 4. This Treaty, consisting of four Articles, having been settled and concluded at Amritsar, on the 25th day of April, 1809, Mr. Charles Theophilus Metcalfe has delivered to the Rajah of Lahore a copy of the same, in English and Persian, under his seal and signature, and the said Rajah has delivered another copy of the same, under his seal and signature; and Mr. Charles Theophilus Metcalfe engages to procure, within the space of two months, a copy of the same duly ratified by the Right Honourable the Governor-General in Council, on the receipt of which by the Raja, the present Treaty shall be deemed complete and binding on both parties, and the copy of it now delivered to the Raja shall be returned.

Although the terms of the treaty prevented Ranjit Singh from any further territorial expansion south of the Sutlej, they also permitted him complete freedom of action to the north of it. This enabled him to extract tribute from less powerful chieftains, including Jats and other Sikhs, and ultimately to gain control of areas such as Peshawar and Kashmir. The unification of these territories, which was aided by him Westernising his armies, formed the Sikh empire that last until British subjugation in 1849.

However, a feeling began to grow in British circle that Ranjit Singh had become master of Punjab without any fear of English. So, Captain Murray,

the political Agent (at Ludhiana upto 1823 A.D. and then at Ambala) advocated that Ranjit Singh was not to be allowed to strengthen his hold South of the river Satluj. In fact, when final crisis arose by that time Ranjit Singh had become too weak. In 1839 A.D. after the death of Ranjit Singh, the Sikh Kingdom fell into disorder. The Sikhs fought battles at 'Mudki' and 'Ferozpur' in December 1845 A.D. at Aliwal in January, 1846 A.D. and at Sabraon on 10th February 1846.

Battle of Aliwal

The Battle of Aliwal was fought on 28 January 1846 between the British and the Sikhs. The British were led by **Sir Harry Smith**, while the Sikhs were led by **Ranjodh Singh Majithia**. The British won a victory which is sometimes regarded as the turning point of the First Anglo-Sikh War. The First Anglo-Sikh War began six years after the death of Maharaja Ranjit Singh, who had established the Sikh Empire in the Punjab. The Punjab became increasingly disordered, while the British increased their military forces on their border with the Punjab. Eventually, the increasingly turbulent Khalsa, the army of the Sikh empire, was goaded into crossing the Satluj River and invading British territory, under leaders who were distrustful of their own troops.

On 21 December and 22 December 1845, the army of the British East India Company commanded by **Sir Hugh Gough** and the Governor-General of Bengal, Sir Henry Hardinge, fought the bloody Battle of Ferozeshah. The Sikh armies under **Wazir Lal Singh** and Commander in Chief **Tej Singh** eventually retreated, but the British army was shaken by its heavy losses. They did not renew hostilities for some weeks, and Hardinge sought to relieve Gough of his command, blaming his tactics for the heavy casualties. The Sikhs too were temporarily disheartened by the retreats ordered by their commanders. However, they were reinforced by troops who had not yet seen action, and moved back across the Satluj to occupy a bridgehead at Sobraon, while, a detachment under Ranjodh Singh Majithia (sometimes transcribed as Runjoor Singh), with 7,000 men and 20 guns, crossed higher up the Satluj to besiege the British-held fortress of Ludhiana and menace Gough's and Hardinge's supply lines. The British commanders detached a division under Sir Harry Smith to clear this threat to their rear.

On 16 January 1846, Smith recovered two outposts which the Sikhs had seized at Fategarh and Dharmkot. Although Ranjodh Singh's irregular cavalry had raided over a wide area and set fire to part of the British cantonments at Ludhiana, his main body was advancing only slowly on Ludhiana.

Harry Smith first intended to attack Ranjodh Singh's army at Buddowal. However, on learning of the Sikh strength, and receiving further orders from Gough, he instead force-marched his troops via Jagraon, collecting a British regiment there, to reach Ludhiana ahead of the Sikh main body. On 21 January, as he left Buddowal, the Sikh irregular cavalry (the Gorchurras) continually attacked his rear guards. They captured most of Smith's baggage animals

(mules, bullocks and elephants), and cut down any straggling troops. Nevertheless, Smith succeeded in reaching Ludhiana, with his troops exhausted. A brigade of troops from Delhi, including two Gurkha battalions, reinforced him. After resting his troops, Smith once again advanced to Buddowal. The Sikhs had withdrawn to Aliwal on the Satluj, awaiting reinforcements. On 28 January, Smith advanced against them, cautiously at first. The Sikhs had occupied a position 4 miles (6.4 km) long, which ran along a ridge between the villages of Aliwal, on the Satluj, and Bhundri. The Satluj ran close to their rear for the entire length of their line, making it difficult for them to manoeuvre and also potentially disastrous if they were forced to retreat.

After the initial artillery salvoes, Smith determined that Aliwal was the Sikh weak point. He sent two of his four infantry brigades to capture the village, from where they could enfilade the Sikh centre. They seized the village, and began pressing forwards to threaten the fords across the Satluj. As the Sikhs tried to swing back their left, pivoting on Bhundri, some of their cavalry tried to threaten the open British left flank. A British and Indian cavalry brigade, led by the 16th Lancers, charged and dispersed them. The 16th Lancers then attacked a large body of Sikh infantry. These were battalions organised and trained in contemporary European fashion by Neapolitan mercenary, Paolo Di Avitabile. They formed square to receive cavalry, as most European armies did. Nevertheless, the 16th Lancers broke them, with heavy casualties. The infantry in the Sikh centre tried to defend a *nullah* (dry stream bed), but were enfiladed and forced into the open by a Bengal infantry regiment, and then cut down by fire from Smith's batteries of Bengal Horse Artillery.

Unlike most of the battles of both Anglo-Sikh Wars, when the Sikhs at Aliwal began to retreat, the retreat quickly turned into a disorderly rout across the fords. Most of the Sikh guns were abandoned, either on the river bank or in the fords, along with all baggage, tents and supplies. They lost 2,000 men and 67 guns. Smith wrote afterwards: "I have gained one of the most glorious battles ever fought in India ... Never was victory more complete, and never was one fought under more happy circumstances, literally with the pomp of a field day; and right well did all behave."

Battle of Sobraon

The Battle of Sobraon was fought on 10 February 1846, between the forces of the East India Company and the Sikh Khalsa Army, the army of the Sikh Empire of the Punjab. The Sikhs were completely defeated, making this the decisive battle of the First Anglo-Sikh War. The First Anglo-Sikh war began in late 1845, after a combination of increasing disorder in the Sikh empire following the death of Maharaja Ranjit Singh in 1839 and provocations by the British East India Company led to the Khalsa invading British territory. The British had won the first two major battles of the war through a combination of luck, the steadfastness of British and Bengal units and equivocal conduct bordering on deliberate treachery by Tej Singh and Lal Singh, the senior commanders of the Khalsa.

On the British side, the Governor General, Sir Henry Hardinge, had been dismayed by the head-on tactics of the Bengal Army's commander-in-chief, Sir Hugh Gough, and was seeking to have him removed from command. However, no commander senior enough to supersede Gough could arrive from England for several months. Then the army's spirits were revived by the victory gained by Sir Harry Smith at the Battle of Aliwal, in which he eliminated a threat to the army's lines of communication, and the arrival of reinforcements including much-needed heavy artillery and two battalions of Gurkhas. The Sikhs had been temporarily dismayed by their defeat at the Battle of Ferozeshah, and had withdrawn most of their forces across the Satluj River. The Regent Jind Kaur who was ruling in the name of her son, the infant Maharaja Duleep Singh, had accused 500 of her officers of cowardice, even flinging one of her garments in their faces.

The Khalsa had been reinforced from districts west of Lahore, and now moved in strength into a bridgehead across the Satluj at Sobraon, entrenching and fortifying their encampment. Any wavering after their earlier defeats was dispelled by the presence of the respected veteran leader, Sham Singh Attariwala. Unfortunately for the Khalsa, Tej Singh and Lal Singh retained the overall direction of the Sikh armies. Also, their position at Sobraon was linked to the west, Punjabi, bank of the river by a single vulnerable pontoon bridge. Three days' continuous rain before the battle had swollen the river and threatened to carry away this bridge. Gough had intended to attack the Sikh army as soon as Smith's division rejoined from Ludhiana, but Hardinge forced him to wait until a heavy artillery train had arrived. At last, he moved forward early on 10 February. The start of the battle was delayed by heavy fog, but as it lifted, 35 British heavy guns and howitzers opened fire. The Sikh cannon replied. The bombardment went on for two hours without much effect on the Sikh defences. Gough was told that his heavy guns were running short of ammunition and is alleged to have replied, "Thank God! Then I'll be at them with the bayonet."

Two British divisions under Harry Smith and Major General Sir Walter Gilbert made faint attacks on the Sikh left, while another division under Major General Robert Henry Dick made the main attack on the Sikh right, where the defences were of soft sand and were lower and weaker than the rest of the line. (It is believed that Lal Singh had supplied this information to Major Henry Lawrence, the Political Agent at Gough's headquarters.) Nevertheless, Dick's division was driven back by Sikh counterattacks after initially gaining footholds within the Sikh lines. Dick himself was killed. As the British fell back, some frenzied Sikh soldiers attacked British and left them wounded in the ditch in front of the entrenchments, enraging the British soldiers.

The British, Gurkhas and Bengal regiments renewed their attacks along the entire front of the entrenchment, and broke through at several points. On the vulnerable Sikh right, engineers blew a breach in the fortifications and British cavalry and horse artillery pushed through it to engage the Sikhs in the

centre of their position. Tej Singh had left the battlefield early. It is alleged in many Sikh accounts that he deliberately weakened the pontoon bridge, casting loose the boat at its centre, or that he ordered his own artillery on the west bank to fire on the bridge on the pretext of preventing British pursuit. British accounts claim that the bridge simply broke under the weight of the numbers of soldiers trying to retreat across it, having been weakened by the swollen river. Whichever account is correct, the bridge broke, trapping nearly 20,000 of the Khalsa on the east bank.

None of the trapped Sikh soldiers attempted to surrender. Many detachments, including one led by Sham Singh, fought to the death. Some Sikhs rushed forward to attack the British regiments sword in hand; others tried to ford or swim the river. British horse artillery lined the bank of the river and continued to fire into the crowds in the water. By the time the firing ceased, the Sikhs had lost about 10,000 men. The British had also captured 67 guns. The destruction of the bridge did not delay Gough at all, if this had indeed been Tej Singh's intention. The first British units began to cross the river on the evening of the day of battle, and on 13 February, Gough's army was only 30 miles (48 km) from Lahore, the capital. Although detachments of the Khalsa remained intact in outlying frontier districts of the Punjab, they could not be concentrated quickly enough to defend Lahore.

The central durbar of the Punjab nominated **Gulab Singh**, the effective ruler of Jammu, to negotiate terms for surrender. By the Treaty of Lahore, the Sikhs ceded the valuable agricultural lands of the Jullundur (Jalandhar) Doab (between the Satluj and Chenab Rivers) to the East India Company, and allowed a British Resident at Lahore with subordinates in other principal cities. These Residents and Agents would indirectly govern the Punjab, through Sikh Sardars. In addition, the Sikhs were to pay an indemnity of 1.2 million pounds. Since they could not readily find this sum, Gulab Singh was allowed to acquire Kashmir from the Punjab by paying 750,000/- pounds to the East India Company.

The Hill Rulers were tired of Maharaja Ranjit Singh's policy of annexation and extinction towards them and now looking for an opportunity to regain their territories from the Sikhs and some of them had made their complaints to the British in writing. For example, **Shamsher Singh** of Guler raised a force and turned Sikhs out of Haripur fort. Bir Singh of Nurpur attempted at the cost of his life to vacate the fort of Nurpur for which his enemies had avenged afterwards. **Raja Narain Pal** of Kutlehr expelled the Sikhs and captured all the forts except Kamlagarh, which got freed only after the war was over. Raja of Suket also sent a confidential agent **'Pandit Sibu'** to Erskine to tender their allegiance on 10th February, 1846, Sikhs were defeated by the British in the *Battle of Saraon*. The Punjab Hill Chiefs were expecting the same generous treatment from the British as was given in the case of Shimla Hill States, at the end of Anglo-Gurkha war in 1815 A.D.

As per the *treaty of Lahore*, 9th March, 1846, which was signed between

British and Sikhs, the latter ceded to the British all territories to the South of Satluj along with Jalandhara Doab, lying between the Satluj and the Beas. Instead of restoring the ceded territory to the hill chiefs, the British occupied it as British territory and dispersed the rest to Maharaja Gulab Singh of Jammu.

The Treaty of Lahore: Maharaja Ranjit Singh Sukerchakia had made Lahore the capital of the Sikh Empire of the Punjab, which he built up between 1799 and his death in 1839. After his death, factions and assassinations destroyed the unity of the State, causing alarm to the British because it weakened the buffer against the perceived threat of invasion from the north. Provocative acts by both the British and the Sikhs escalated tension and, on 13 December 1845, Hardinge issued a proclamation declaring war on the Sikhs.

The British came very near to defeat at the *Battle of Ferozeshah*, but were eventually victorious and, after the defeat of the Sikhs at the *Battle of Sobraon*, the British marched unopposed into Lahore on 20 February 1846. The Treaty of Lahore of 9 March 1846, was a peace treaty marking the end of the First Anglo-Sikh War. The Treaty was concluded, for the British, by the Governor-General **Sir Henry Hardinge** and two officers of the East India Company and, for the Sikhs, by the seven-year-old **Maharaja Duleep Singh Bahadur** and seven members of the Lahore Durbar acting on his behalf (Bhai Ram Sing, Raja Lal Sing, Sardar Tej Sing, Sardar Chattur Sing Attarewalla, Sardar Ranjore Sing Majeethia, Dewan Deena Nath and Fakeer Noorudeen).

The terms of the Treaty were punitive. Sikh territory was reduced to a fraction of its former size, losing Jammu, Kashmir, Hazara, the territory to the south of the river Sutlej and the forts and territory in the Jalandhar Doab between the rivers Sutlej and Beas. In addition, controls were placed on the size of the Lahore army and thirty-six field guns were confiscated. The control of the rivers Sutlej and Beas and part of the Indus passed to the British, with the provision that this was not to interfere with the passage of passenger boats owned by the Lahore Government. Also, provision was made for the separate sale of all the hilly regions between River Beas and Indus, including Kashmir, by the East India Company at a later date to Gulab Singh, the Raja of Jammu. The peace treaty was negotiated and drafted by **Frederick Currie**, assisted on military aspects by **Brevet-Major Henry Lawrence**, acting under powers vested in them by Hardinge. Currie's diplomatic skills so impressed Hardinge that the home authorities rewarded him with a baronetcy in January 1847. On 11 March 1846, two days after the signing of the Treaty, a supplement, comprising eight Articles of Agreement, was signed by the same parties.

It provided that a British force would remain in Lahore until no longer than the end of the year *"for the purpose of protecting the person of the Maharajah and the inhabitants of the City of Lahore, during the reorganization of the Sikh Army"*. This supplementary agreement was at the request of the Lahore Durbar. The Lahore army would vacate the City, convenient quarters would be provided for the British troops and the Lahore Government would pay the extra expenses. The Agreement also provided that the British would

respect the bona fide rights of *jagirdars* in the Lahore territories and would assist the Lahore Government in recovering the arrears of revenue justly due to the Lahore Government from the kardars and managers in the territories ceded by the provisions of Articles 3 and 4 of the Treaty.

Consequently in 1846, the Hill states of Kangra, Nurpur, Guler, Jaswan, Datarpur, Suket, Mandi, Kullu, Lahaul-Spiti came under the direct control of the British. Retention of these areas by the British was a great disappointment to the Chiefs of Kangra Hill states. So during the next English-Sikh war they supported internally and outwardly Sikhs and revolted against British. But success of Britishers in this battle proved suicidal for the Kangra Hill Chiefs. The revolt was suppressed and guilty chiefs were brought to book and banished. So the period from 1846 to 1857 A.D. may thus be said as a period of the expansion of British in Himachal Hills.

Maharishi Devendra Nath Tagore (father of R.N. Tagore) was stranded for about 18 months at Shimla (28.4.1857 to 16.10.1858) due to widespread revolt. It was his first visit to Shimla. After the revolt of 1857, a new series of *Sanads* were issued to princely states. The Sanads between 1857-1929 vary from that of the earlier ones which were issued from 1815-1848. Now they included issues such as *annexation of lands, grants of titles, grant of territories, postal conventions* and *Khillats* etc. As per the changed policy of the British, the states under Gurkha power such as *Hindur, Bilaspur, Baghal, Sirmaur* and *Bushahr* were restored to their legitimate Rulers, however complete restoration of their territories was not permitted as expected. On the pretext of providing security from alien enemy, the British retained with them some of the favourable strategic military instalments.

During the revolt of 1857, the Raja of Nalagarh Ram Singh, of Suket Ugar Sen, of Chamba Sri Singh, expressed loyalty with the British and for that they were granted with suitable territories. The revolt of 1857 also marked the end of East India Company's rule in India. On 1st November, 1858, Queen Victoria issued the proclamation which assured the Chiefs of Hill states that the imperial crown had taken over all the *treaties* and *Sanads* issued earlier and made it clear that it had no desire to extend its territorial possessions and that the privileges, dignities and authorities of all Hill Rulers and States would be preserved. After experiencing the bitter tragedy of 1857, the new British System devised a new policy to accomplish cooperation from feudal chiefs and princely rulers in the direction to neutralize any mass movement. For this objective in mind a Chamber of princes consisting of 120 members (known as Narendra Mandal) was framed as a consultative and advisory body on 8th February, 1921. The Viceroy acted as the President and a Chancellor and Pro-Chancellor were elected by the member princes from among themselves.

In the beginning there were 108 permanent members and 12 additional members elected by the rulers. By virtue of 11 gun salute states, *Chamba, Mandi, Suket* and *Sirmaur* became the members of the Chamber of Princes. The Shimla Hill States were represented by the six rulers. Raja Bhagat Chand

of *Jubbal* became an elected representative of the Shimla Hill states in 1921 and again in the year 1933. Raja Durga Singh of Baghat also represented the Shimla Hill States as an elected member from 1924 to 1933. Hence, during 1st World War many Hill Chiefs had remained faithful to the British and many of them were subsequently rewarded.

From the second half of 19th century to the independence of India, many popular movements were launched. Some of them were against the British raj and others against tyrannical rule of the local hill chiefs. Upon the transfer of power in 1947, there was an uneasy calm seen among many ruling families, regarding their status and powers in the Independent India. To enrich readers with thorough knowledge of history of Himachal Pradesh, each district's history has been discussed, as per the princely states falling in their territorial jurisdiction at present.

DISTRICTS PROFILE

BILASPUR

(HQ, BILASPUR, ALTITUDE 610 METERS)

Total Area - : 1,167 sq.Km

Languages spoken : BILASPURI (KAHLURI), HINDI, PUNJABI ETC.

The Bilaspur district lies between 31°12'30" and 31°35'45" North latitude and between 76°23'45" and 76°55'40" East longitude in the outer hills of the Himalayas. It is bounded on the North by *'Mandi'* and *'Hamirpur'* districts, on the West by *'Hamirpur'* and *'Una districts'*, on its South lies 'Nalagarh' area of Solan district. It is encircled on the East and South East by *'Solan'* and *'Mandi'* districts. It lies on both the banks of river Satluj which forms the boundary between Mandi and Bilaspur districts upto the centre of the Eastern boundary. The maximum length of the district from East to West is about 51 Km and maximum width from North to South is about 43 Km. Bilaspur stands divided into two natural parts formed by the Satluj river.

The river flows from East to West with a large bend midway and divides the district into two approximately equal parts. Each of the two tracts so formed stands naturally further subdivided into side valley of stream, sub-valleys of stream-lets all enclosed by hills of varying altitudes. On its extreme West is *'Dhar Kathar'* and further to the East is the *'Naina Devi range"*. The district is mostly hilly but has no mountains of higher altitude from the mean sea level. The elevation of the lowest point is about 290 meters and that of the highest is about 1,980 meters.

There are seven main ranges of hills. These are- *Naina Devi, Kot, Jhanjiar, Tiun, Bandla, Bahadurpur* and *Ratanpur*. These have been so prominent that the erstwhile princely state at times used to be called *'Sat-dhar-Kahlur'*, meaning Kahlur of the seven hills.

Naina Devi Hills: 30 Km in length. On this hill lies a celebrated temple dedicated to *'Naina Devi'* at an elevation of about 1,100 meters above mean sea level. Pargana of *'Kot Kahlur'* and *'Fatehpur' lie* on this range. Some of the important forts such as the 'Kot Kahlur fort' and 'Fatehpur fort' (where seven small forts have been constructed) are located on this range.

Kot Hill: 30 Km in length. Parganas *'Baseh'* and *'Bachhretu'* are within the fold of this hill. The well known forts of *Bachhretu, Basiah, Naun* or

Shiwala Bachhretu Kot and *Dagoga Malhot* are located on this hill. The highest peak, *'Kakrer'* has an altitude of 1,430 meters.

Jhanjiar Hill: The Seer Khad divides this range into two parts; Southern part known as Badol, and Northern as Jhanjiar. The Jhanjiar is the highest peak in this range at about 1,100 meters above mean sea level. There are famous temples of 'Devi Badoli' and 'Guga Gherwin' located in the Southern range.

Tiun Hill: 10 Km in length. The highest point is the *'Sariun peak'* at about 1,350 meters from the mean sea level. The forts of *Sariun, Naurangarh,* temple of *'Peer Bhiyanu', 'Haramba Devi', 'Tiun fort'* and *'Sidh Gurunath'* are located on this hill.

Bandla Hill: 17 Km in length. Its highest peak has an altitude of 1,375 meters from the mean sea level.

Bahadurpur Hill: The *'Ali Khad'* divides this hill into two parts, Northern known as Tatoh and Southern as Bahadurpur. Bahadurpur fort located at an elevation of about 1,980 meters above mean sea level was the summer abode of Raja Bijai Chand.

Ratanapur Hill: 11 Km in length. The Ratanapur fort lies on it at an elevation of about 1,230 meters. It was from this fort that General Ochterlony inflicted defeat on Amar Singh Thapa, the Gurkha leader.

There are three famous valleys in the Bilaspur district:

The Satluj Valley: The Satluj flows for about 90 km within the district, starting from *'Kasol'* hamlet, where the river enters the boundary of the district and running upto village *'Naila'*, where it leaves the district. The Satluj valley is famous for variety of fauna and flora. The villages located in and around the Satluj valley are utilizing the water of river Satluj for agriculture, vegetable production and horticulture. There are a number of streams flowing through this valley.

The Chaunto Valley: Stretching nearly 13 km near Bhakhra dam, is flat and has very fertile soil. The Chaunto valley, having proximity to Punjab and lower Shivalik hills having same type of climate and economic viability from agriculture and allied activities point of view. The formation of Govind Sagar Lake, due to the construction of Bhakhra Dam has added a new dimension to the economy of the district.

The Danwin Valley: It is located between Bahadurpur and the Bandla hills and is about 10 km in length and 5 km in width. It is famous for its produce of maize, rice, sugarcane, ginger and wheat crops.

River System

Bilaspur district's main river is the Satluj. After flowing through Kinnaur, Shimla and Mandi districts, it enters Bilaspur at village Kasol and leaves the district at Village Naila, in Pargana Kot Kahlur. It was the river over which

the treaty between the English and Maharaja Ranjit Singh of the Sikhs Kingdom was signed in 1809. Several foreign travellers, William Moorcraft (1820 A.D.), Baron Charles Hugel, a German (1835 A.D.) and G.T. Vigne (1838-39) have left very interesting accounts of the river Satluj.

Ali Stream: It rises near village *'Mangu Giyana'* in Tehsil Arki of Solan *district* and enters Bilaspur at village *'Kothi Harrar'* and *'Manothi'*. It joins Satluj at a point known as *'Beri Ghat'*.

Ghambar Khad: It is a tributary of the Satluj. It rises below Tara Devi in the Shimla Hills, enters Bilaspur at Village *'Neri'* of Pargana Ratanpur and finally outflows into Satluj at village 'Dagran'.

Seer Khad: It is the largest tributary of the Satluj, which rises in Mandi district. Two small Khads known as *Sukar* and *Saryali* rising in Hamirpur district join this Khad at village *'Balgar'*. It enters Bilaspur district at village Hatwar and joins the Satluj at village 'Seri', after for about 65 km in the district's territory. In 1968, a *pukka* bridge was constructed near Ghumarwin on this Khad.

There are no natural lakes, nevertheless the district enjoys the honour of having the *'largest man made lake'* **Govind Sagar,** as a result of Bhakhra dam. It is said that 256 villages of the district were submerged into Govind Sagar, uprooting ten thousand people. Bilaspur district has some well known tanks. A tank in local parlance is called *toba*. Some of them are:

(a) **Tank Riwalsar:** This small tank exists in village 'Panot'.

(b) **Jagat Khana Tank:** Its area is about 200 square meters. This tank is said to have been constructed by Raja Hira Chand in 1874 A.D. when the state was hit by a famine.

(c) **Tank at Swarghat:** It has an area of 350 square meters. It was also constructed by Raja Hira Chand in A.D. 1874.

(d) **Tank of Naina Devi:** It has an area of about 1,200 square meters.

(e) **Tank of Jamthal:** It has an area of 1,000 square meters, situated 25 km North of Bilaspur.

(f) **Tank of Kasol:** Area occupied around 200 square meters.

(g) **Tank at Toba Sanghwana** (Toba Kaolanwala): It has an area of about 17,600 square meters. This water tank was constructed by **Raja Bije Chand.**

The tanks or toba or talab were constructed in the olden days to store water for animals, washing cloths, construction of houses and many such requirements for which water was necessary; These tanks were also helping in maintaining the water level in the surrounding areas.

Himachal Pradesh is famous for springs, known for their medicinal properties. Bilaspur district has also got two famous springs, namely Luhnd Spring at *Dadrana* close to Swarghat and another at village *Bassi*. The water

of Bassi Spring is considered very sacred.

The climate of this district is generally temperate compared to the near plains of Punjab. The average annual rainfall at Bilaspur is 1373.1 mm. The annual average maximum temperature is 44°C and minimum is 15°C. The places such as Bilaspur and Ghumarwin has extreme temperature in summer and winter.

HISTORY

Why name Kehlur ? There is a saying that when Bir Chand the founder of the state found an idol of Goddess Durga beneath a stone slab, at the same place one day a Gurjar named Kehlu saw that one of his goat was standing on the same slab, attacked by a leopard thrice but every time goat repulsed the attack with her sharp horns and the leopard finally ran away. When this incident was narrated to Bir Chand, he immediately understood the secret of this miraculous slab and built a fort there, named it Kot Kehlur after the name of Kehlu Gurjar. Raja also began to reside there. Since then Kehlur is associated with Bilaspur. The idol found from this place was honored by consecrating for it the Naina Devi temple.

The area which is known as district Bilaspur was never in the past brought within the fold of archaeological survey. The monuments provide only a slender source of history of this district. It is evident from the *"Twarikh-i-Rajputana Mulk-i-Punjab"* by **Thakur Kahn Singh Balaurea and Binod** (gives detailed chronological record for each reign from 697 A.D. down to present day) that prior to the foundation of the state, the territory was under the rule of petty Ranas and Thakurs. Might and superior force was probably the sole criterion of succession as was elsewhere in the hills.

Raja Bir Chand (A.D. 900): The founder of Bilaspur state was Raja Bir Chand, a cadet of the Chandel Rajput family, then ruling in **'Chanderi Bundelkhand'**. The Raja of Chanderi, Harihar Chand had five sons, named Govind Chand, Bir Chand, Gambir Chand, Kabir Chand and Sabir Chand. Gambir Chand founded **'Chanehni state'** and Kabir Chand, a state in Kumaun. The eldest of all brothers, Govind Chand took possession of his ancestral kingdom. Bir Chand, who happened to be on a travelling trip founded the state Bilaspur. Bir Chand waged many wars during his reign of thirty three years and conquered not fewer than fifteen neighbouring states. He built a temple of Goddess Naina Devi on one of the seven *Dhars*, now called Dhar Naina Devi and below it founded his capital. He humbled the chiefs of Baghal, Kunihar, Beja, Dhami, Keonthal, Kuthar, Jubbal, Baghat, Bhajji, Mahlog, Mangal and Balson. Bir Chand, founder of the state, was followed in succession by Udhran Chand, Jaskaran Chand, Madanbrahm Chand and Ahl Chand. But all these rulers were of little importance.

Raja Kahal Chand: He was the sixth descendant of the ruling family and is said to have built the fort 'Kot Kahlur', but according to another account, it was built by Raja Bir Chand.

Raja Ajit Chand: Kahal Chand had four sons, named Ajit Chand, Ajai Chand, Tegh Chand and Suchet Chand. After the death of their father, they attacked and captured the neighbouring states. Ajit Chand founded the ruling dynasty of *Hindur*, which later came to be known as *Nalagarh*. According to one account, the ruling family of Nalagarh descended from Suchet Chand, who was installed as the

Raja of Hindur by Ajit Chand. After Ajit Chand, this royal dynasty was continued by Gokal Chand, Udai Chand, Gen Chand (or Gyan Chand) and Prithvi Chand.

Raja Sangar Chand (1197-1220 A.D.) From seven of his sons descended seven different Rajput families namely **Darol, Jhandwal, Sangwal, Ghal, Nanglu, Meghari and Dohkli.**

Raja Megh Chand: Megh Chand the eldest son of Sangar Chand succeeded to the *gaddi*. But being harsh and tyrannical, he was forced by people to leave the state and took asylum in *'Kullu'*. Ultimately with the help of Delhi's Sultan, Shamsu-ud-din Altutmash (1211-1236), he regained the lost kingdom. Megh Chand was followed in succession by Raja Dev Chand and Alim Chand.

Raja Abhisand Chand: He ruled the state during the period of **Sikandar Lodhi.** He fought long and victorious battle against **Tatar Khan Amir.** But Raja Abhisand Chand and his youngest son, Sunder Chand were treacherously killed by the son of Tatar Khan.

Raja Sampuran Chand (1380 A.D.) His rule continued for a short-while, basically occupied by ill-feeling with younger brother, Ratan Chand. Sampuran Chand was killed by Ratan Chand. This was a rare case among Hindu ruler when a younger brother killed his elder brother for the throne.

Raja Ratan Chand (1400 A.D.) Ratan Chand had a long reign, marked by cordial relations with the court at Delhi.

Raja Narinder Chand: Ratan Chand had two sons, Narinder and Mian Mithu. Narinder Chand succeeded his father Ratan Chand. Subsequent successors were *'Fateh Chand'*, *'Pahar Chand'*, *'Ram Chand'* and *'Uttam Chand'*. Nothing much is available about these rulers, who basically reigned unnoticed.

Raja Gyan Chand or Ayam Chand (1570 A.D.): Gyan Chand was a contemporary of the Mughal emperor, Akbar (1556-1586 A.D.) His overbearing attitude towards the smaller states aroused their antipathy against him. Raja Gyan Chand under the influence of the Viceroy of Sirhind embraced Islam. Gyan Chand's tomb is still shown at Kiratpur in Punjab. He had three sons-**'Bik Chand', 'Rama'** and **'Bhima Chand'** - the two younger sons also embraced Islam with large number of people. Bik Chand, however, remained under the Hindu faith and fled across the Satluj to a place called *'Sunhani'*. Raja Trilok Chand of Kangra (1600-1612 A.D.) gave his daughter to Bik Chand, but this remained the most unsuccessful union. Later on Bik Chand succeeded Gyan Chand, who died after a long reign. The Muslim inhabitants of Bilaspur today are largely the descendants of converts who were originally Hindus.

Raja Bik Chand (1600 A.D.): Bik Chand went to Kot Kahlur, leaving behind two Ranis, one of these from Kangra and other from Bhagal at Sunhani. A son was born to each of the Ranis. The Kangra Rani gave birth to **Sultan Chand** and the Bhagal Rani to **Kesba Chand.** Raja Bik Chand abdicated the throne during his life in favour of Sultan Chand. Sultan Chand ascended the throne in 1620 A.D. He left a son, named Kalian Chand, who succeeded his father.

Raja Kalian Chand (1630 A.D.): Kalian Chand was a contemporary of Raja Shyam Sen of Suket (A.D. 1620-53), whose daughter was his Chief Rani. He built a fort on the borders of Hindur, which caused hostile feelings and ultimately led to a war between the two states. The Raja of Hindur was killed and his Rani with an infant son came under the protection of Raja Kalian Chand. Later on, Suketi Raja and Kalian Chand were mortally wounded and died at a place still called *'Kalian Chand di-dwari'* (cave of Kalian Chand) while returning to Bilaspur. The Suketi Rani became Sati.

Raja Tara Chand (1645 A.D.): Kalian Chand had eight sons. He was succeeded by his eldest son Tara Chand, who was weak and timid. 'Taragarh fort' in Hindur, now demolished, was built by him.

Raja Dip Chand (1650-1656 A.D.): Dip Chand regained the lost prestige of the state. He shifted the residence of ruling family from Sunhani to a place on the left bank of the Satluj, traditionally called *'Vyasgufa'*. The new palace erected by him was called *'Dholra'*, overlooking the river, he founded a town and called it Biaspur, now Bilaspur. Dip Chand fixed the salute 'Jai Deva' to *Raja*, 'Jai' to *Mians* and 'Ram-Ram' for the *Ranas*. About 1656, the Sikhs who then came into power, in the Punjab, invaded Bilaspur; and reduced it to submission. Raja Dip Chand was poisoned, during his stay at Nadaun in district Hamirpur by the Raja of Kangra. The raja of Kangra at that time was Chander Bhan Chand.

Raja Bhim Chand (1667 A.D.): Bhim Chand was a minor at the time of his father's death. Manak Chand brother of Dip Chand was appointed as the *Wazir*, but he proved tyrannical and so was dismissed by *'Jalal Devi'*, the queen mother. Manak Chand, with the help of the Raja of Kangra, attacked Bilaspur but was repulsed by the combined forces of Sidh sen of Mandi and Bhim Chand at *'Jaboth'* near Bhambla. They burnt the towers of Jai Singapur and Bilaspur, now in Palampur tehsil. In 1682, Guru Govind Singh was in Bilaspur state and trouble arose between him and Bhim Chand, in which the latter was defeated. In 1685, Bhim Chand leagued with the Rajas of Guler, Kangra and other states, and again attacked the Sikhs but faced heavy defeat again. Dispute again arose in 1700 A.D. and Raja Bhim Chand and Alam Chand of Kangra attacked the Sikhs only to be completely routed. The closing years of his life he spent as a *Faqir* after abdicating in favour of his son. He died about 1712 A.D. and was succeeded by his son, Ajmer Chand.

Raja Ajmer Chand (1712-41 A.D.): He had a peaceful reign of long duration. He married in Gharwal, Sirmaur and the Shakuraian and had seven sons. He built a fort called 'Ajmergarh' on the border of Hindur. He died in 1741 and was succeeded by his eldest son Devi Chand.

Raja Devi Chand (1741-78 A.D.): Soon after his succession, a revolt took place in the adjoining state of Hindur and Raja Man Chand and his son, both were killed. Devi Chand installed Gaje Singh Hindurea, a member of Hindur's ruling family as Raja. At a later date Abhai Chand of Jaswan

invaded Kangra and Devi Chand went to help Raja Ghamand Chand. Later on, Abhai Chand of Jaswan was expelled by his brother Jagrup Chand and Devi Chand restored him his state. Devi Chand also recovered the state territory that had been annexed by the Mughals. Adina Begh Khan was the Nawab of Jalandhara at that time. Devi Chand was also a contemporary of Nadir Shah. Devi Chand built the fort of 'Bhamaikot' and gave the Ramgarh fort to Bejai Chand of Hindur. He married to a Katoch princess and late in life had a son, named Mahan Chand, born in 1772. He was six years old at Devi Chand's death.

Raja Mahan Chand (1778-1824 A.D.): Mahan Chand being a minor, the administration remained in the hands of Ramu of the '*Darol family*' and other officers, in association with the Rani. Ramu Wazir died in 1785 and the Rani called in '*Bairagi Ram*', formerly Wazir of Mandi to perform the duties of a Wazir. But this trial failed and later on '*Zorawar Chand*', younger brother of Raja Devi Chand was appointed Wazir and held office till Mahan Chand came of age. Raja Sansar Chand of Kangra, in 1795 invaded the territory on the right bank of the Satluj and occupied *Chauki Hatwar*. Mahan Chand used to spend his time in sexual pleasures and low company. Raja Dharam Parkash of Sirmaur, who came to help Kahlur on the request of the Rani, got killed. Sansar Chand built a fort on *Dhar Janjrar* in Bilaspur territory and called it 'Chhatipur' i.e. a fort on the chest of Bilaspur. Mahan Chand at last became alarmed and sent for the Sikh Sardars, Gurdit Singh and Desa Singh residing at Anandpur, for help. They came, but again defeat followed and the Sardars were killed. In 1808, Maharaja Ranjit Singh annexed *Hathawat, Jahanbhari* and *Dharkot*.

In the later part of the eighteenth century, the Gurkhas of Nepal emerged as a great force. Their headquarters was at '*Garhwal*'. In his great anxiety, Mahan Chand turned to them for help, by sending an invitation to Amar Singh Thapa, the Gurkha Commander, to invade Kangra. In this, he was supported by other Chiefs of Kangra state against Sansar Chand. Towards the end of 1805, Sansar Chand's forces were defeated at Mahal Morian a place nine kilometers from Ladraur, in district Hamirpur. The Kangra forces were retreated and Sansar Chand moved to the Kangra fort. The Gurkhas laid siege to Kangra fort. In 1809, Kangra fort was liberated by Ranjit Singh who compelled the Gurkhas to retire across Satluj. The Gurkhas continued to occupy Bilaspur and other hill states till 1814. Jahanbhari annexed by the Sikhs in 1808, was not restored to Bilaspur and is now in Hoshiarpur district of Punjab state. Mahan Chand's only son Kharak Chand was born in 1813, In 1819, Desa Singh Majithia, the Nizam of Kangra hills, assisted by Sansar Chand, captured the forts of *'Pichrota; 'Nihalgarh'* and *'Biholi Devi.* Mahan Chand died in 1824 A.D.

Raja Kharak Chand (1824-1839 A.D.): As predicted by astrologer at the time of his birth that he had been born under unlucky stars and would be a cause of great calamity to the state, proved true. *Kharak Chand's reign*

marks the darkest page in the history of Bilaspur. When his atrocities became unbearable, the people went to Mian Jagat Chand, the Raja's uncle and begged him to help them. A revolt was led against the Raja by his two uncles, one of them was Jagat Chand, and fighting continued for some time. Shortly afterwards, the Raja contracted smallpox and died.

Raja Jagat Chand (1839-1857 A.D): Raja Kharak Chand died childless. was duly installed as Raja in April 1839. One of the two *Ranis* of Kharak Chand was pregnant and gave birth to a son at her parental house in Sirmaur. The Ranis, then returned to Bilaspur with an army, furnished by the Raja of Sirmaur, and a force from Suket to claim the gaddi. Raja Jagat Chand fled to Hindur to save his life. On receiving information, the political agent of Ambala restored Jagat Chand again to power. Raja Ram Saran of Hindur also helped Jagat Chand. In 1847, Jagat Chand got back the territory annexed by Sikhs in 1809 on the right bank of the Satluj. Raja jagat Chand had only one son, named *'Narpat Chand'* who died in 1844, leaving a son named 'Hira Chand', nine years of age. In 1850, Jagat Chand abdicated the throne in favour of his grandson and retired to 'Brindaban'. He died in 1857 A.D.

Raja Hira Chand (1857-1882 A.D): Hira Chand extended valuable support to the British during 1857 revolt, in acknowledgment of which a *salute of eleven guns* was granted as a honour to the state. In the same year, his son Amar Chand was born. His period is remembered by the people as the *golden age.* Till 1863, the land revenue was paid in kind, the state taking one-third of the product. Hira Chand reorganized the system and made revenue demand payable partly in Cash and partly in kind in certain selected portions of the territory. In 1867, a long strip of land called 'Based' 'Bachhretu' was restored to the state. The Doab region ceded by Sikhs in 1846 was also restored to the state. Mian Bhangi Purgnia was his Wazir. In 1882, Hira Chand accompanied by his son 'Tikka Amar Chand paid a visit to Shimla. Raja develop serious illness there. Tikka Amar Chand arranged a *'Palki'* (palanquin) to remove him to his state, but on the way he died at 'Mahol;

Raja Amar Chand (1883-1888 A.D): Amar Chand son of Hira Chand was installed by Deputy Commissioner of Shimla in January 1883. His short reign was marked with revolt against revenue administration. In 1885, the record of cases was ordered to be kept in 'Nagari' (Hindi). During his rule, he opened schools, hospitals and got constructed a suspension bridge over Satluj. Raja Amar Chand died in 1888.

Raja Bijai Chand: He was born in 1872. Bijai Chand was forty-third ruler of the line. Having been installed in 1889, he effected many reforms in the state administration. The system of Court fee and non judicial stamps were introduced for the first time. He was invested with full powers in 1893 A.D. He also had a water supply system laid in Bilaspur town. He built two houses for his residence in 'Varanasi' in 1896-1902 and a summer house at 'Bahadurpur' and at a place called 'Haridwar' near Bilaspur and also the famous 'Rang Mahal' palace at Bilaspur.

In 1901, Chandel Rajputs revolted against him. His officers also did not cooperate with him. Lala Hari Chand, a retired tehsildar, was appointed Wazir in 1902. The Raja became so depressed and dispirited that he indicated his wish to divest himself of his administrative duties. After sometime, the Raja made over the administration

and departed for Varanasi. In 1903 **Rai Sahib Mian Amar Singh**, a tehsildar of Jalandhara division was appointed Manager of the State, and carried out many reforms in an efficient manner. Bijai Chand returned to the state in 1908 and resumed control of the state with Rai Sahib Amar Singh as Wazir. In the first World War 1914-18, he extended all possible help to the British. In acknowledgments of his services, he was decorated with the title of K.C.I.E., (Knight Companion in the most Eminent Order of the Indian Empire) as also the honorary rank of a major. He died at Varanasi in 1931 at the age of 59 years.

Raja Anand Chand (1928-1948 A.D): Anand Chand born on 26th January 1913. K.C.I.E Raja of Bilaspur from 1927 to 1938, succeeded to the throne after the abdication by his father on 18 February 1927. He abolished child marriage, begar and introduced prohibition in Bilaspur by Act in 1942, he constructed new roads linking the capital with Suket and Mandi as well as new schools and health centres; he also built the Shri Gopalji Temple and the new Palace (now submerged). He was educated at Mayo College, Ajmer. In 1931, he passed post diploma course examination with distinction. He then received training in revenue settlement and administration of civil and criminal laws at Gurgaon in British Punjab now located in Haryana. The second World War continued from 1939 to 45 A.D In 1942, the Congress party started 'Quit India' movement, which brought independence to the country in 1947. Bilaspur, one of the Indian states, acceded to the Indian dominion and signed the instrument of accession. Anand Chand ruled upto 9 October 1948 when Bilaspur was made a part 'C' state vide agreement dated 15th August 1948. On 12 October 1948, Anand Chand was appointed by the Government of India as the first Chief Commissioner of the newly formed part 'C' state and continued upto 1 April 1949. On 2 April 1949, he handed over the charge of the Chief Commissionership to Sri Chand Chhabra. Sri Chand Chhabra continued to hold charge upto 3 November 1953, when **Major General Himmat Singh**, the Lieutenant Governor of Himachal Pradesh, took over additional charge of Chief Commissionership of Bilaspur also. On 1 July 1954, Bilaspur was merged into Himachal Pradesh to form a district. He was member of Constituent Assembly from 1947-48; Chief Commissioner of Bilaspur 1948 to 1950; member of Lok Sabha from 1952-57, member Rajya Sabha from 1964 to 1970, member of H.P legislative Assembly from 1977-1982. He married firstly on 18th May 1931 to Rani Umavati Kumari (born in 1916 and died on 12/13 March 1961) a princess from Jubbal State, married secondly in 1969 to Rani Sudarshan Kumari (born in 1940) princess of Bhojpur, in Madhya Pradesh. He also wrote a book entitled, ***Bilaspur Past, Present and Future"***. He died on 12 October 1983 in London. He had six children .

-Raj Kumari Ambika born in 1933, died unmarried in 1981.
-Tikka Rajendra Chand, born on 2nd September 1935, died unmarried on 12 March 1970.
-Raj Kumari Raj Rajeshwari born on 7th November 1938 died unmarried on 11 November 2004.
-Raja Kirti Chand born in 1941.
-Raj Kumar Dr. Gopal Chand, born in 1969 educated from London M.A Ph.D., and
-Raj Kumari Dr. Sunanda Chand (MBBS) born in 1973.

Raja Kirti Chand: Born in 1941 and educated at Chandigarh. He succeeded to the royal inheritance after the death of Raja Anand Chand in 1983. On 24th November 2004, Kanwar Kirti Chand son of last Raja of Bilaspur Anand Chand was appointed as heir apparent by the *Kul purohit (family priest)*, after the death of his

elder sister. He was presented with family turban (pagari) and sword and was declared the custodian of family property and dignity. He married to Kumari Karuna Kumari daughter of Kanwar Hemender Singh of Mohal Suket and has a son and a daughter. He died on 8th October 2013 at Chandigarh.

Raja Shubhendra Chand: Born in 1987 and succeeded his father on 8th October 2013 and owns the Palace Bilaspur.

GENEOLOGY OF KAHLUR

The available Geneology of Kahlur state is as follows:

(1) Bir Chand	(2) Udharan Chand	(3) Jaskaran Chand
(4) Madanbrahm Chand	(5) Ahal Chand	(6) Kahal Chand
(7) Sansar Chand	(8) Main Chand	(9) Sain Chand
(10) Sulakshan Chand	(11) Kahan Chand	(12) Ajit Chand
(13) Gokal Chand	(14) Udai Chand	(15) Gain Chand
(16) Prithvi Chand	(17) Shringar Chand(Sangar Chand)	
(18) Megh Chand	(19)Dev Chand	(20) Alam Chand
(21) Abhay Sar Chand	(22) Sampuran Chand	(23) Rattan Chand
(24) Narendra Chand	(25) Fateh Chand	(26) Pahar Chand
(27) Ram Chand	(28) Uttam Chand	(29) Gian Chand
(30) Vikram Chand	(31) Sultan Chand	(32) Kalyan Chand
(33) Tara Chand	(34) Deep Chand	(35) Bhim Chand
(36) Ajmer Chand	(37) Devi Chand	(38) Mahan Chand
(39) Khark Chand	(40) Jagat Chand	(41) Hira Chand
(42) Amar Chand	(43) Bijal Chand	(44) Anand Chand

ECONOMY

Most of the soil of the Bilaspur district is somewhat sandy. The rock facies to be met within Bilaspur fall into two broad stratigraphic Zones; these are:

(1) The outer or sub-Himalayan zone composed of sediments for the most part of Tertiary age but including sub-recent deposits; and

(2) Central zone composed of granite and other crystalline rocks.

Most of the cultivated soil is of the kind known in the plains as *'rausli'* a light but somewhat sandy soil. This is intermixed with patches of stiff clay, is the soil which hardens with drying- up of the moisture and can be ploughed with difficulty. The land is usually cultivated by means of plough and seed is usually broadcast with hand and is known as *chhats*. The important crops grown in the district are Maize, Wheat, Paddy, Ginger, Sugarcane, Barley, Gram and Oils seeds. The horticultural development has significantly supplemented the low income of the people in this state. In district Bilaspur, serious efforts have been made to provide better facilities to the people. Five progeny-cum-demonstration orchard at Nihal, Baroha, Nihari, Saloa and Khothipura and two nurseries at Kot kahlur and Guru- ka-Lahaur have been established in the district. The fruits grown in the district are mango, pomegranate, guava, fig, banana, litchi, citrus, pear, plum, Peach and papaya.

The district has a network of rivers and streams, which is one of the most essential aspects of fishery development. The river Satluj and other streams that

flow through this district, have vast potentialities for the development and exploitation of its riverine fisheries. Important fishing ground along the Satluj exists at **Dehar, Auhar, Berighat, Sersimatta and Gah,** and on **Seerkhad** at **Bam, Matial, Dabhia Ghumarwin, Sunhani, Baghla** and **Balghar.** The Govind Sagar lake, spread over an area of 169 square kilometres, has opened new vistas for the development of commercial fishery in the region. There is a fish hatchery set up at Deoli on the bank of *Ali Khad* in Bilaspur district during the year 1961-62. It is the **largest fish breeding farm in Asia.**

The district in the past had very little to contribute in the industrial sector. Nevertheless, at present some industries have provided impetus to industrial growth. Some of these are: leather-work , cotton spinning and handloom weaving, basketry, pottery, gold and silver smithy, blacksmithy, stone products, mat making, katha making, sericulture, resin and turpentine factory, furniture manufacture, shoe, model-making, paddy-husking machines, oil crushing machines timber-sawing machines, cotton-carding machines, corn-grinding machines, assembling of sewing machines, bookbinding machines, scissors and razor making etc. The presence of limestone in huge quantity has attracted the scheme for cement plants construction. **Barmana** cement plant produces high quality cement.

In 1944, the first bank to be set up in the district was the **'Bank of Bilaspur'** After the merger of Bilaspur into Himachal pradesh, a branch of **H.P. Sate Cooperative Bank** was established in Bilaspur and is functioning since 12th April 1956. Now there are a large number of bank branches in the district, of National and Cooperative Banks.

Bilaspur district has the distinction of having the important bridges providing all weather road links. These are:

(i) **Kandror Bridge** - it is across the river satluj. Its construction was started in 1959 and was completed in 1964. The span of the bridge is about 255 metres with a breadth of about seven metres and the height above the lowest river bed below is about 60 metres, making it one of the highest bridges in world. **It is ranked first in Asia for its height.**

(ii) **Slapper Bridge** - The construction of this bridge was started in February 1960 and was completed by the end of the January 1964. The total length of this double-lane bridge is about 139 metres with a breadth of about 6.7 metres.

(iii) **Seer khad Arch Bridge** - it was constructed by the Himachal Pradesh P.W.D. during 1957-1962. This bridge has a span of about 39.6 metres with a breadth of 6.7 metres.

(iv) **Ali khad (Ghagas). R.C.C. Bridge** - It was also constructed by the Himachal Pradesh P.W.D. on NH-21. It has a span of about 30.5 metres and a breadth of 6.7 metres. Due to heavy traffic rush this bridge started crumbling in 2009 and a new bridge was constructed in the year 2009 - 2011.

(v) **Gamrola Bridge**- It is 105 metres long with a width of 6.7 metres. It was constructed by Himachal Pradesh P.W.D. on NH-21.

(vi) **R.C.C pre-stressed Bridge on Jamthal Hullah** - This bridge has a span of about 40 metres and breath of 6.7 metres on NH-21 and was completed in 1963.

(vii) **Steel Tussel Bridge across Majhasu Nullah- Its construction**

started in 1963 and was completed in 1970. It is 33.5 metres long.

(viii) **R.C.C. Bridge over Ghamber River-** It is located on NH-21.

(ix) **R.C.C. T-beam Bridge over Bai Khad-** It was constructed on the Ali Khad over the Bai stream during the years 1967 to 1969.

Fair and Festivals: Naina Devi fair, Markanda fair, Gugga fair at Gehrwin, Chakrana fair, Bharnet fair, Hari Devi fair, Baishakhi fair at Hatwar tehsil fair at Nagroan and Nalwari fair Bilaspur. Lohri, Baishakhi, Rakhrunia, Dushehra, Diwali etc. are celebrated all over the district. Nalwari fair conceived by W. Goldstein in A.D.1889, has been declared as state fair now.

Temples: Shri Gopal temple (Bilaspur), Gopal Krishan temple at Dhawan Kothi, Murli Manohar temple (Bilaspur), Narsingh temple (Dhaulra), Shiv temple at Saloa, Naina devi temple at Nainadevi, Lakhdata (Pir Payanoo), Gugga temple at Bhatehr Uparil, Markanday temple at Makri, Khanmukheswar temple etc.

Naina devi temple: Now you can perform prayers and give offerings in the Naina Devi shrine with just a click of a mouse. The hilltop temple has launched its website. "Devotees from across the globe will now have access to the daily activities and perform online puja.The devotees could even make online offerings. "For this, temple trust" has tied up with the HDFC bank, . People can also participate in the daily *'arti'*-both in the morning and evening. "The temple website (www.srinainadevi.com) has a collection of photographs and history of the temple. It also includes forthcoming religious events and festivals. One can literally have a *'parikrama'* of the temple."

Almost the entire district population constitutes of Hindus in the general sense of the term. Among Hindus, Brahmins, Rajputs, Kanaits, Rathis, Jhinwars are found. There is also scattered population of Muslims, Sikhs, Christians and Buddhists. The people of district Bilaspur are as hard working and culturally bound as of any other part of the state. Simplicity and honesty is the hall mark of their identity. The dress and food habits resemble the people of the adjoining districts.

Food Habits: The chief staple foods are maize and rice. Other cereals include barley, gram besides pulses. On festive occasions, Potande, babaru, ankaloo, bhalle and khichari form the special dishes. On Baishakhi festival, potande constitutes the dainty dish. Every festive occasion necessitates its own special dish, such as ankaloos (prepared with rice flour) on Diwali and 'Khichari' (rice boiled with pulses) on Lohri, falling a day ahead of the 'Sakrant' of 'Magh.'

The vegetables consumed on mass scale are mustard leaves *(Sarson ka Saag)*, potato and kachalu in the winter, but vegetables are more extensively consumed during rainy season, when these grow in abundance. These are pumpkins, gourds, brinjals, lady fingers, raddish, ginger and onion. Though non-vegetarians are in majority, yet due to shortage of meat supply, it is taken

rather rarely, i.e. twice or thrice a month. On festive occasions, a goat is often killed to provide meat. Consumption of meat is avoided by almost all sections on 'Punya' (full moon day) and on fast days. Cows and buffaloes are kept almost by each household in the rural areas according to the economic position of the owner and ghee (butter oil) is prepared and consumed. Tea is taken fairly largely. Sharbat and Chhach (butter milk) are also taken in the morning during summer. Among fruits, mango, papaya, guava, peach orange and bananas are grown and eaten, but in smaller quantity. Various food taboos exist in the district. A woman in menses is not allowed to touch and much less to cook food until after four days when she bathes and changes her clothes. She cannot enter the kitchen nor can she touch earthen vessels during the period. But now such taboos are observed in the traditional families only.

Since the last decade of the 20th century, the spread of education and opening of economy has paved the way for new outlook and social behavior of the people. The taboos which were in existence earlier as part of *Sutak* and *Patak* have also been abandoned. Marriage which used to be a large and big social ceremony has reduced largely to a family function. Traditional social life speedily moving towards nuclear individual life.

District Bilaspur has the distinction of having **Naval National Cadet Corps** unit, established in March 1963.

DECADEL POPULATION GROWTH SINCE 1901-2011

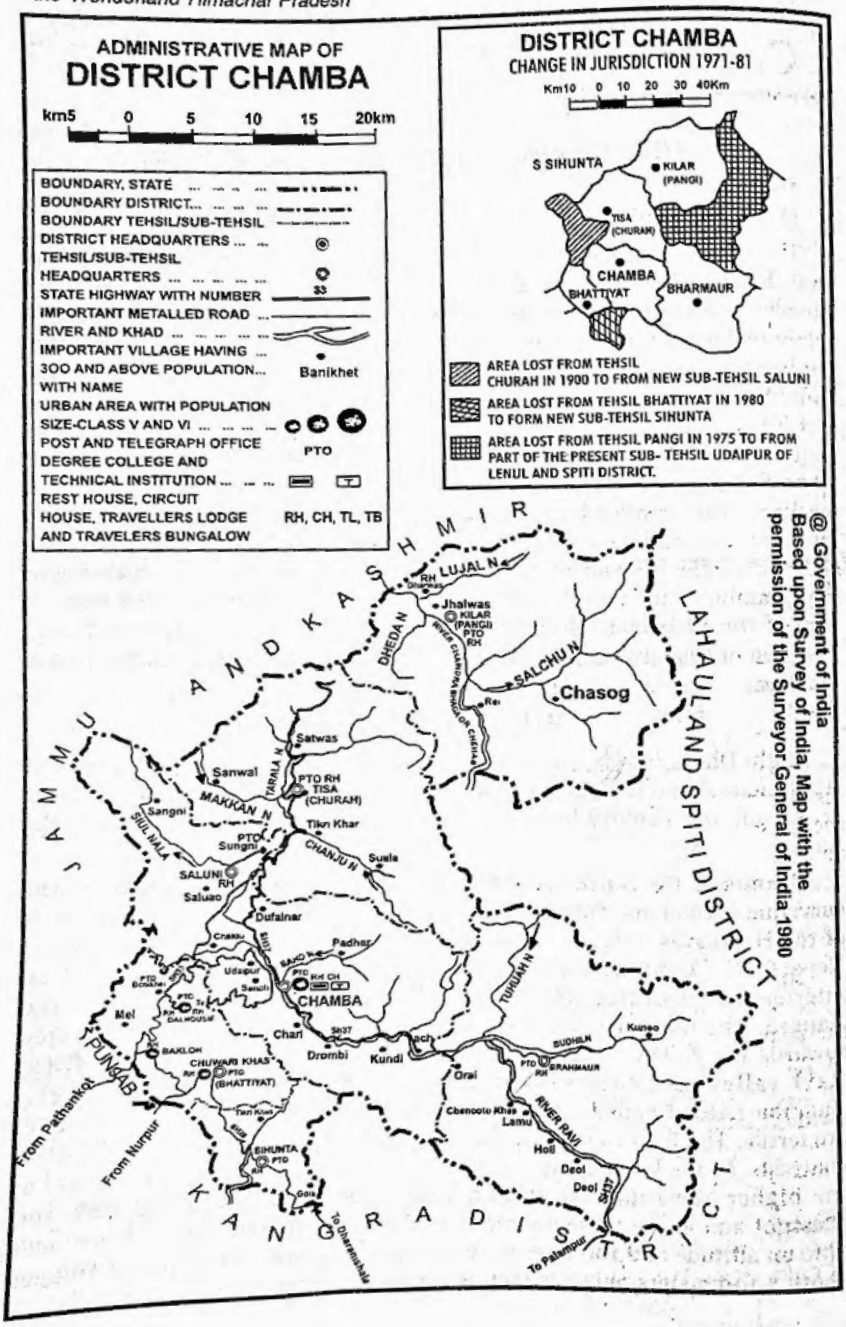
CHAMBA

(HQ. CHAMBA, ALTITUDE 1006 METER)

Total Area : 6528 sq. Km



Languages spoken : CHAMBYALI & HINDI

The district is located between North latitude 32°10' and 33°13' and East longitude 75°45' and 77°33'. Lying mostly astride the main Himalayas, and touching on the fringes at one corner of a bit of the Shivalik, before plains commence on the other side of the border. The district touches the boundaries with 'Jammu and Kashmir' on the Northwest and west, Ladakh area of J&K Lahaul and Bara Bangahal on the North -East, and east Kangra on the South -East and Gurdaspur districts of Punjab on the South. The territory is wholly mountainous with altitudes varying from about 2,000 feet (610 meters) to about 21,000 feet (6,400 meters) above the mean sea-level. The greatest length from South - West to North - East is about seventy miles; and the greatest breadth from South - East to North - West is about fifty miles; The main natural divisions are the Ravi valley, which means the Chamba valley proper, including Bharmaur, the Churah area and the part of the Bhattiyat tehsil, the Chenab Valley, which comprises Pangi, inclusive of Chamba, Lahaul and the Beas region which takes in the rest of Bhattiyat.

MOUNTAIN SYSTEMS

Hathi Dhar (Snowless range) - The highest point of this range is 5256 feet (1615 meters) and is really the inner ridge of the Shivalik area and maintains nearly unbroken course from the Rihlu area in Kangra almost close to the Ravi.

Chamba is the North-Western most district of Himachal Pradesh. The surviving ancient inscriptions in this small area are so large that in the whole of the Himalayas, Chamba is reckoned to be as important as Kashmir and Nepal for the antiquarian studies. Chamba was always vulnerable to political interference, both from the South and South - East, i.e. Gurdaspur and Kangra. The district is more or less rough, oblong in shape contracted towards the North. There are three big valleys, i.e. (1) Beas valley, (2) Ravi valley or Chamba valley, and (3) Chenab valley or Pangi - Chamba Lahaul valleys. The valleys on the South - West of the district are fertile. The Ravi valley as a whole is open and presents many delightful contrasts. In the lower areas of the valley, vegetation is semitropical and at the higher elevation, the tress belong to Pinus - longifolia, oak and chestnut and above these are birch and juniper. In this valley, in villages upto an altitude of 2,100 meters, two crops are grown, while in the villages above 2,100 meters only one crop is grown.

The area between the Pangi and Zanskar ranges comprises the valley of Chenab, called 'Chandrabhaga' in the higher hills. The whole area appears to be a great boon of nature. The area is sparsely populated. The winter is very severe and communication with the outside world remains cut off from October to March-April. The tract between the Hathidhar and the Dhauladhar ranges falls in the Beas Valley and with addition of a small portion of the lower Ravi valley forms the Bhattiyat tehsil and Shiunta sub-tehsil. It is the most populous and fertile valley of the district. The vegetation found in the valley is the 'bamboo, Pipal, mango, fir, 'barberry' and the 'oak, Two crops are grown in a year.

There are three well defined snowy ranges of the Himalayas in the Chamba district. The one nearest to the plains is the Dhauladhar (outer Himalaya) separates the basin of the Beas from the Ravi. Dhauladhar represents a lofty mountain barrier with peaks from 4,300 meters to 5,200 meters. The passes are from 2,400 meters to 4,600 meters. The inner Himalaya (Zanskar range) separates Chamba and Lahaul from Zanskar and farther West forms the Northern boundary of the Kashmir valley. The altitude of this range varies from 5,500 meters to 6,100 meters. The passes are 5,200 meters to 5,500 meters high and are more difficult due to the size of the permanent glaciers. The low range of hills called, the Hathidhar, runs parallel to the South of Dhauladhar. The highest point of this range is 1,615 meters above the mean-sea level.

THE PANGI RANGE - This range of the Himachal in the Mid-Himalaya is called Pir-Panjal by geologist and Pangi Range by common people. It is the direct continuation of the main Himalayan axis entering the Himachal on the East of Bushahr. After dividing Kullu from Lahaul and Spiti, it enters Chamba territory on the Western border of Bara Bangahal and traverses the district for more than sixty miles. This range divides Chamba into two unequal sections and separates these from each other to such an extent that even in summer there is comparatively little inter communications. The Northern or smaller section is called Pangi and Chamba-Lahaul is then completely isolated from the outer world. Pangi was formerly used as a place of banishment for political offenders.

This range forms second mountain barrier with magnificent snowy peaks, some of which reach an altitude of 19,000 feet or so. The mean elevation of the peaks cannot be less than 17,000 feet and the passes range from about 14,328 to over 17,000 feet. At the point where the Pangi Range first touches the Chamba territory, gives off the Mani Mahesh branch to the South, which divides Chamba from Bara Bangahal as far as the Ravi. Thence the boundary runs upto the summit of the Dhaula Dhar.

THE DAGANI DHAR-This is a small range which shoots off from the Pangi Range from the point where the latter enters Jammu territory. The Dagani Dhar forms the boundary between 'Chamba' and 'Bhadarwah' in Jammu. At its Western extremity this branch is connected with the 'Chatar

Dhar' by a short ridge, in which there are 'the Padri' and 'Chatar Dhar passes. Both the Pangi Range and the Dagani Dhar are composed of silurian rocks, chiefly schists, slates and Blaini conglomerate.

THE ZANSKAR RANGE- Towards the Northern portion of the Himachal lie the Inner Himalaya, or the Zanskar Range, which is the most direct continuation of the main Himalayan axis. After leaving the Satluj in the North-Eastern corner of the Himachal it runs in a North Western direction, dividing Ladakh from Spiti and Lahaul. It then touches the Chamba district for a short distance, along its Northern border, separating Chamba-Lahaul from Zanskar and farther West forms the Northern boundary of the Kashmir valley. This magnificent mountain chain is masked by lofty ranges in front. The mean altitude is about 18,000 feet and some of the peaks rise to about 20, 000 feet. The passes in Pangi and Poddar are 17,000 to 18,000 feet and are thus higher than those of the Pangi Range and are also more difficult owing to the size of the permanent glacier. Those in Kullu–Lahaul are easy and practicable for laden animals. The range is chiefly composed of gneissose granite. The boundary between Chamba–Lahaul and Kullu–Lahaul is formed by a spur from the Zanskar Range, separating the Miyar and the Kado–Tokpo streams and ending at the *'Tirot'* (Thirkoe) Nala on the Chandra Bhaga; whence the line ascends to the crest of the Pangi Range.

To the south of the Dhaula Dhar Range of the outer Himalayas lies the Kangra proper, which consists of an irregular triangle, whose base lies upon the Hoshiarpur border while the Chamba and Mandi constrict its upper portion to a narrow neck known as **'Banghal'** at one point less than 16 kms. in width. Beyond this, the Eastern block of former Kangra district, expands once more like an hourglass and embraces the Kullu subdivision which comprises the tehsils of Kullu and Saraj and the mid–Himalayan cantons of *Lahaul–Spiti.* Of the total estimated area of 15,965 km. 4,688 km. are in Kangra proper.

District Chamba has two main rivers, i.e. the *Chenab* or *Chandrabhaga* and the *Ravi.*

The Chandrabhaga, as it is called in this part of the country, rises near the top of the *Baralacha pass* in Lahaul, from two streams, *the Chandra and Bhaga.* These two unite at **Tandi** and forms the *Chenab.* At **Thirot,** it enters Chamba and forms the boundary between Chamba and Lahaul and follows a Westerly course to Tandi, after which it turns to the North. At *Shaor* and *Purthi,* there are villages on the right bank. From *Mindhal* and *Sach,* the river is more open. It flows on a North–Westerly direction through picturesque scenery, past *Kilar* and *Dharwas* to the **Ganaur** or **Sansari Nala** where it leaves the territory. Then it continues its course through Poddar, Kishtwar and the outer hills in Jammu territory to the plains. *Gold is found in this river in a small quantity.* The main tributaries of the Chenab are *Miyar Nala,* meeting at Udaipur and *Saichu Nala* joining at Sach. On the left bank, some ice–streams from snowy passes which join Chenab are the *Chobia* and *Kalicho* streams at *Trilokinath, Haser, Drati* and *Marhu* streams near *Tandi*

and *Cheni* and *Sach* streams near *Mindhal* and *Kilar.*

The Ravi is the main river, which drains the whole of the Chamba valley between Dhauladhar and Pangi ranges. In the upper reaches, it is called Rauti or Irawati. It rises in the mid–Himalaya and Bara Bhanghal ranges. This range separates it from the Beas in the upper Kullu. It flows through Bara Bansu, Tretha and Chanota to Ulansa. Budhil and Tundah are the two main tributaries. After passing Piur, Rakh and Mehta, the river courses to the North–West and reaches Chamba town where the Saho or Sal from the Saho ranges merges with the river. The longest tributary Siul and Seawa (from North) fall into it at a point where it touches Jammu territory. It leaves the district at Kheri to the plains at *Shahpur.* During the rainy season, its flow is maximum.

There are two well known lakes in the district at Manimahesh in Bharmaur tehsil and another at Khajjiar, the world famous tourists spot. On the occasion of Radha Astmi falling in the month of September, a fair is held at Manimahesh. It is situated at an altitude of 3,950 meters.

The rocks exposed in the district have been classified into certain groups and encompass a period over 600 million years to recent times. These groups are Kalhel, Salooni, Manjir and Chamba–Basantpur Mandi–Darla volcanoes, Murree and Shivalik. The rock types are generally sand stone, shale, slate, limestone, conglomerates and quartzites. Locally one comes across the in–durated clays of the Shivalik group.

HISTORY

The principal authority for the history of the state is the *Vamshavali* or genealogical roll of the Rajas, which in addition to a list of names, contains much historical material of great interest. Next in importance are the epigraphical records and copper plate title deeds. *Chamba has the rare fortune to escape the successive wars of Mohammedan invasion, which swept away all monuments of ancient Indian civilization of the plains. The result is that its ancient remains are most abundant and better preserved than in any other part of the Punjab Himalayas.* Copper plate- grants issued by the early rulers of Chamba, whose names figure in the *Rajtarangini* are still preserved by the descendants of the original donee, who enjoy the granted land upto the recent past.

The records material found have been classified according to the objects on which they are found as rock inscriptions, image inscriptions, slab inscriptions and copper plate title deeds. The rock inscriptions are the most ancient. The oldest inscriptions are in the Gupta character of the seventh century.

EARLY HISTORY OF CHAMBA

Till about the fourth decade of the 20th century, the existence of "democratic republic" in North Western India was not known. Now we know for positive that the Kangra, Shimla and Jammu Hills were inhabited

by republican tribes for some centuries before and after Christ. The *Madra-Salvas, the Kunindas, the Trigartas, the Kulutas, the Yaudheyas, the Audumbaras, the Vemkas, the Kiras* and several others had established their tribal republics in these hills, long before these were subjugated by the Indo-Greeks and Saka-Kushanas. Some of these tribal republics formed confederacies and fought their foreign masters out and revived their independent republics after the fall of Indo-Greek and Kushana powers.

In this struggle for survival some tribes, like Audumbaras, disappeared or integrated with the confederacies and lost their individual identity, but the others like Kunindas, Yaudheyas, Kulutas and Trigartas reemerged as powerful democracies. However the Gupta supremacy in the Punjab and Shivalik hills, executed a death blow to these republics. Their precariously subjointed democratic system tumbled down, and probably their *'rajanas'* and *'leaders'* established their own petty principalities, later on known as *Apthakurai* and *Ranhun.*

These principalities were ruled by Thakurs and Ranas. In Chamba we find very few Thakur families, most of the old petty chiefs having been Ranas. In the upper Ravi Valley they lost their independence at a very early period, for we have the record of a feudatory chief, named 'Ashadha' of *'Gun'*, as early as the reign of Meru Verman of Chamba (A.D. 680-700) whose *Samanta* or vassal he styles himself. In the lower Ravi valley and Pangi they were probably independent down to the 10th and 11th century, when they became subject to Chamba. In the 10th or 11th century the *Thakurs* of upper Chandrabhaga valley came under the control of Chamba. In *Poddar,* the *Ranas* ruled the country till the 17th century, when they were displaced to Chamba.

In the Chamba state there are several cases in which their descendants retain possession to this day of the whole or a part of old families domain and still bear the old family title; while many more have sunk to the position of common cultivators are spoken of, and addressed to as *Rana.* The Chamba territory was minutely subdivided among *Thakurs* and *Ranas.* In some cases in Chamba as at Mulkihar and Devi Kothi, the ruins of *Kothis* and *tappas* are still visible, and in others, as at Kothi—*Anhu, Sutker* and *Eol,* the ancient buildings are or till recently were, in actual use. The reference to the *Ranas* and *Thakurs,* on the old copper plate grants and slab inscriptions of Chamba prove that down to the twelfth century and even later, they had lost nothing of their ancient prestige. Till then, indeed, it seems to have been a policy of some of the Rajas to retain their allegiance by appointing them to high offices at the court and in the administration. The last Chamba copper plate deed, in which the *Ranas* are mentioned, is that of *Raja Asata Varman,* A.D. 1080-1100.

After this there is a long break in the continuity of our records, probably owing to several plates having been lost. The next plate extent is that of Raja Vairasi Varman dated A.D. 1330 and in it all references of the Ranas have ceased. At present, there also exists, in Chamba a few Ranas who are such in the original sense of the word, and retain the position of the *Rajanaka* of the

inscriptions. Chief among them is the Rana of Triloknath, whose barony comprises the greater part of Chamba–Lahaul, where the family has been in possession since time immemorial. The ancestor is said to have come from Jammu and settled in Tundah in Bharmaur, and the family afterwards crossed the Pangi range to Tundah or Triloknath, before the idol at that place was set up.

One of the Rana's ancestors, named Hamir Bardhaim, whose praise is sung in local dialect, is said to have defeated the Raja of Kullu who attempted to carry off the idol, but was afterwards killed at a feast in which he had laid aside his armour. The *Rana* acts as manager of the Triloknath shrine, appoints the lama or Buddhist priest; and receives the offerings. He also takes part in the annual *mela* in the month of *Sawan*, when bloody rites of an aboriginal character are intermingled with the worship of Triloknath. The *Rana* ranks as a *Jagirdar* and his eldest son is addressed as *Tikka*.

The *Ranas next* in importance reside at *Ulama* and *Suai* in *Bharmaur pargana*. Till 1912 a third *Rana* belonging to the same family lived at Gurola, but on his demise without male issue his *Jagir* lapsed to the state. There was also formerly a barony of *Ranhun–Kothi* adjoining *'Ulansa'*, which like Gurola lapsed to the states and is now a *pargana*. Thus we see that even the few baronies that still exist are gradually disappearing, and as no new *Ranas* are now created, there is likelihood that in Chamba also the ruling Ranas will finally merge into agricultural population. There are also two other *Ranas* in Chamba who hold small Jagirs one of whom is the *Rana of Sambra*. His ancestor is said to have come from hereditary keepers of *Prithvijor Fort* in Churah. A branch of this family lives at Geyra in Piyur Pargana. The *Rana of Margran,* whose family is an offshoot of that of Triloknath, holds a small Jagir in his own village.

There are very few Thakur families in Chmaba, only two being known, who reside respectively in the Behra and Kilar *parganas*. Since independence and creation of Himachal Pradesh as a separate entity, the old feudal order has paved way for the new democratic culture, in which *Thakurs* and *Ranas* have no place.

It is difficult to determine with certainty the exact date at which the Chamba state was founded, but it seems probable that this event took place about the middle of the sixth century A.D. *The Rajas of Chamba belong to the Suryavanshi line of Rajputs, and their Vamshavali begins from Vishnu or Narayana. Rama, the hero of Ramayana, is sixty–third in the order of descent, which is continued through Kusa, the son of Rama. The original home of the family is said to have been in Ayodhya, but they moved at a very early period to the upper Ganges valley, where they settled in Kalpa.*

The historical portion of *Vamshavali* commences with the name of Maru, who was then the head of the family. Maru is said to have been at first a religious devotee. He afterwards married and three sons were born to him. When they reached manhood, one was given the ancestral home, other one settled in the mountains near Kashmir and the third and youngest, Meru

founded the town of Bharmaur and made it the capital of the new state. The chronicle says that having founded the state, Meru made it over to his son and returned to Kalpa and became a *'Sadhu'* (ascetic). After Maru, the Rajas who ruled in succession were *Jaistambh, Jalstambh* and *Mahastambh.*

Aaditya Varman (A.D. 620): His name appears as Adi Varman in the vamshavali and he is referred to as the great grandfather of Meru Varman. He was first of the Chamba line to assume the suffix of *'Varman'.* It was during his period that Brahmo, Pal, Raja of Kullu, left no legitimate sons and the Rajas of Brahmpura Ladakh, Suket, Bushahar, Kangra and Bangahal made one Ganesh Pal his heir. It shows that Brahmpura was recognised by all the neighbouring states of the time.

Bala Varman (A.D. 640): His name has been omitted from the vamshavali by some clerical error. But in two of the Brahmpura inscriptions, Bala Varman is called the grandfather of Meru Varman.

Diwakar Varman (A.D. 660): In the vamshavali and the *'Chatrari inscription'*, his name occurs as Deva Varman, while in Bharmaur inscription as Divakara Varman.

Meru Varman (A.D. 680): He seems to have been one of the most notable of the early Brahmapura rulers. He was probably the first to extend the state boundaries by conquest, for that he dedicated the idol of Shakti Devi in gratitude for help against his enemies. From an inscribed stone found at 'Gun' erected by a feudatory of Meru Varman named *Ashadha,* it is clear that Meru's rule extended from down to the Ravi Valley upto the present Chamba town. In the reign of Sri Dateshwar Pal, Raja of Kullu, there was a with war Brahmpura in which the Kullu Chief was killed by Meru Varman (mentioned as Amar). The predominance of Brahmpura was also confirmed further by a note in the Kullu annals that Amarpal, Raja of the state, was killed with his sons except one by the Brahmpura chief.

This son, Sital Pal and his five descendents never reigned again. Ancient Chamba was prosperous and had considerable wealth in the time of Meru Varman. He not only was triumphant in war but was also a great patron of temple arts. The temple of *'Mani–Mahesha', 'Lakshana Devi', 'Ganesha'* and *'Narsingha'* were built by him. The *Surajmukha shrine* at Bharmaur is also built by Meru Varman and according to an interesting custom, whenever a Chamba Raja visits Bharmaur, he must first worship at this temple before proceeding to his residence, *'Gugga'* was a master craftsman during the reign of Meru Varman. Meru was followed by **Mandar Varman, Kartar Varman, Pragalbh Varman.** But nothing much is found about them.

Ajia Varman (A.D. 760): It is said that Gaddi (Shepherd) came from Delhi during his reign and settled in Bharmaur. Before retiring to the junction of the Ravi and Budhil rivers near Ulansa, where he spent his last days, he initiated his son into the art of governance.

Suvarn Varman (A.D. 780): Nothing much is available about his reign.

Lakshmi Varman (A.D. 800): During the reign of Lakshmi Varman, an epidemic broke out in the state and a large number of people fell victims, almost depopulating the state. 'Kira' who have been referred as *'Tibetans' or 'Yarklandis'* took advantage of the situation and occupied the territory. They also held Baijnath in the Kangra valley, which was anciently called 'Kiragrama'.

Kullu, probably since the days of Meru Varman remained under the sway of Brahmapura and it is only on the death of Lakshmi Varman it regained its independence with the help obtained from the Raja of Bushahr.

Mushan Varman (A.D. 820): Lakshmi Varman left no son, but his Rani was pregnant at the time of his death. According to a legend, on the death of the Raja, the *'Wazir'* and *'Purohit'* (family priest) had the Rani put into a *palki* and carried towards Kangra to save her from invaders. On reaching the village of 'Garoh', a little beyond Deol, in the Trehta area of the upper Ravi valley, she felt the labour pains. She asked the bearers to put down the *'palki'* and went into a cave, where she gave birth to a son. Fearing the risk of his capture, she left him there and resumed her journey. Suspicion, however, aroused in the minds of Wazir and Purohit, who questioned her closely and after knowing the reality, returned and found the young prince, with a number of mice surrounding and keeping guard over him. From this he was named Mushan Varman ("Mushan' is a Sanskrit word means mouse). Rani and prince Mushan stayed in the house of a Brahmin for 8–9 years without revealing their identity.

One day, the Brahmin on seeing Mushan's foot print recognised it to be that of royal person. The Brahmin thereupon knowing the truth, introduced them to the Raja of Suket. The Raja of Suket received them kindly and made arrangements for Mushan's education. The prince grew intelligent and brave and received the Raja's daughter in marriage and a Jagir in the Pargana of *'Pangna'* as dowry. Mushan was also provided with an army and after returning to Brahmpura, he drove out the invaders. *Mushan Varman prohibited the killing of mice in his kingdom, on account of the services rendered by these animals in his infancy. This custom still obtained in the Chamba royal family.* The following Rajas ruled in succession after Mushan Varman, but nothing is known regarding any of them:

Hans Varman: Sar Varman; Sen Varman; Sajjan Varman and Mritunjaya Varman.

Sahil Varman (A.D. 920): It was probably in the beginning of his reign that a twelve year war took place against Kullu. He transferred the seat of government from Brahmpura to the new capital, founded at Chamba. The Raja was without heir. Shortly after his accession, Brahmpura was visited by *84 yogis,* who were very pleased with the Sahil's hospitality and promised him ten sons. In due course, ten sons and a daughter named Champavati were born. Sahil Varman brought under his sway all the petty

Ranas of the Ravi valley. On these expeditions he was accompanied by Charpatnath, one of the Yogis and also by his queen and daughter. The territory on which Chamba town was founded was taken from a Brahmin with promise that eight Chaklis–*Chamba copper coins* be given in perpetuity on the occasion of every marriage in the town. This condition was observed till late. The town was named after princess Champavati.

According to a legend, the town had no convenient water supply. The Raja, therefore, had a water course made from the *Sarohta stream*. But somehow, water refused to enter the channel made for it. In accordance with the superstitious notions of the time, it was ascribed to supernatural causes. The Brahmins advised that the spirit of the stream must be tranquilized and victim must be either Rani or her son. Another tradition runs that the Raja himself saw all this in dream.

The Rani, named Naina Devi, got ready to sacrifice herself. Accompanied by her maidens and bareheaded as for *'Sati'*, she was taken to the spot near the village of 'Balota', where Rani was buried alive. The legend goes on to say that when the grave was filled in, the water began to flow and has ever since flowed abundantly. A shrine was constructed at the top of the hill by Raja in her memory. A *mela* (fair) called 'Suhi mela' is also held in her memory from 15th of Chait to the 1st of Vaishakh, where only women and children are allowed to participate. They are entertained at the Raja's expenses on this occasion. The steps to the shrine having been constructed by Rani Sarda, queen of Raja Jit Singh (A.D. 1794–1808.)

Champavati, daughter of Sahil and Naina, was of a religious disposition and used to visit a *'Sadhu'* for conversation. According to legend, suspicion developed into the Raja's mind and he followed her on one occasion with a drawn sword, only however to find that the house was empty. As he entered, a voice came from the stillness scolding him for his suspicions and telling him that his child had been taken from him as a punishment. He was also commanded to build a temple to her, on the spot where he stood, to atone for this sin. The temple was accordingly built and named after Champavati, who is worshipped as goddess. It is regarded as the family temple of the Chamba Rajas and *Mela* is also held there from 1st to the 21st Vaishakh. Sahil Varman built the following famous temples. *Lakshmi Narayan or Vishnu, Chandrasekhra at Saho and Chandragupta and Kameshwara temples.*

The only coin special to Chamba is the *'Chakli'*, five of which make an *'anna'*. Sahil Varman caused to struck a pierced ear on coins, the symbol of a yogi, in honour of Charpatnath. Later Rajas added the *'Vishnu pad'* (feet of Vishnu) on their coins. About the name of Chamba town, another explanation is that, it derived its name from the Champa trees which grew in abundance in its neighbourhood. Sahil Varman did not spend the last years of his life in Chamba. He in the company of Yogi Charptnath retired to Brahmpura and abdicated his throne in favour of his son Yugankar. *In the memory of 84 Yogis, who had stayed in Brahmpura (Bharmaur), small temples were*

constructed; for this reason this area is called the *"Chaurasi".*

The history of Chamba between seventh and the tenth centuries A.D., roughly corresponding to the Post–Harsha and pre–Ghazani periods is not one of complete isolation but is linked with the history of the adjoining areas. Forces at work in Northern India do not appear to have spared this region of Chamba. The later history provides some interesting facts which reveal or suggest the relationship of this kingdom and its rulers with the Kannauj family of the Gurjara–pratiharas. According to *'Vamshavali'* the war between Sahil Verman and the Kullu Chief Continued for twelve years. It appears that the conquest over Kullu and routing the forces of the Turushkas was a feat achieved in two different directions and could not have been possible except with the help or as an ally of some strong power, which could be the Kannauj family of the Gurjara–pratiharas. In this context the reference to the assumption of the title Karivarsha after making a gift of elephants to the sun god at the time of solar eclipse at Kurukshetra in the territory of the Gurjanra –Pratiharas could be possible only as a faithful ally of the Kanauj house. The reference for the Turushkas could be traced earlier in the Gwaliar inscription of Bhoja which mentions Nagabhata forcibly seizing the hill forts of the kings of Anartta, Malava, Kirata, Turushka, Vatsa and Matasya. Here Turushka refers to Arabs. It is very likely that Gurjara–Pratihara empire in the time of Mahipala and probably earlier too include the present Kangra and Chamba regions, which Sahil Varman acting as the Pratihara feudatory in his time. He had therefore, every reason to Participate in the exploits of his overlord which was claimed as his own in the records of his successors when the Pratihara hold had waned or was ineffective.

Eastern Punjab and Kangra valley, including Chamba continued to be within the empire of the Pratiharas as is evident from Peheva record of the time of Bhoja. Mahipala's conquest of Kuluta and other region as recorded by Rajsekhra could be explained as reassertion of Pratihara authority over his region after the disturbed political situation at the beginning of his career with Bhoja II intruding in. As such Mahipala's campaign could be an attempt to regain control over the lost territory as also to retrieve the adverse situation.

According to Herman Goetiz–Sahil Varman seems to have risen as a General of the Pratiharas and became Military Governor of the mountain of frontier against encroachments of Sankar–Varman and thereafter Hindushahis of Kabul whose first vassals of Kashmir soon became independent rulers of the Punjab. The sack of Kannauj by Indra II Rashtrakuta seems to have resulted in the disintegration of the Pratihara empire which incited the Kashmir and Shahi rulers to invade the Kangra Valley. Sahil Varman succeeded in beating off this independent ruler over these very districts, suppressing some revolts of the local princelings. The evidence available from a few inscriptions and artistic influence as temple and sculpture reveal pratihara or Gurjara–Pratihar impact on political and cultural life of Chamba and its rulers.

Yugankar Varman (A.D. 940): There is nothing much in record about Yugankar Varman in the chronicle. His queen was Tribhuvanrekha Devi. The temple of the Narsingha at Brahmpura was erected by the queen. Yugankar Varman himself erected the temple of Ishwar–Gaurja (Gauri–Shankar) in Chamba near the temple of Lakshmi Narayana.

Vidagdha Varman (A.D. 960): A copper plate of his reign mentions his father Yugankar Varman and mother Bhogmati Devi. An inscribed stone found near *'Basu'* dated 960 A.D. was erected by a vassal, probably a Rana.

Dodak Varman (A.D. 980): According to an inscribed stone found near Basu, mentions in consecutive order, the names of Yugankar, Vidagdha and Dodak Varman. Dodak Varman was succeeded by **Vichitra Varman** and **Dhairya Varman.**

Salvahan Varman (A.D. 1040): The name of this Raja is nonexistent in the *vamshavali.* It is only in three copper plates, reference has been made to him. In A.D. 1028, Ananta Deva succeeded as a child to the throne of Kashmir and when he grew upto manhood, he tried to follow the policy of his ancestors to setup supremacy over the adjoining hill chiefs. It is mentioned in the *Rajtarangini,* the historical chronicle of Kashmir, as having invaded Bharmaur in the eleventh century by the Kashmir ruler, *Ananta Deva* (1028–1063 A.D.). Two inscribed fountain slabs of the time of Salvahan Varaman found in the **'Sai'** and **'Tissa'** *pargana* of Churah reveal that Churah, now the Northern part of Chamba was then a part of **'Balor'** (Basholi) state. Salavahana Varman had two sons—Soma Varman and Asata Varman.

Soma Varman (A. D. 1060): The *vamshavali* is silent about Soma Varman and Asata Varman, but strong confirming evidence is furnished by the Rajatarangini where it is mentioned that "Astat, Raja of Chamba visited Kashmir in the winter of A.D. 1087–88. in the reign of Kalasa son of Ananta–Deva, who like his father, affirmed the claim of suzerainty over Chamba and other hill states. After the invasion of Ananta–Deva Chamba remained more or less dependent on Kashmir for a considerable period. Later on the two ruling families had marital relations. **Bappika** sister of Asata Varman was married to Kalasa. Harsha, the son of Bappika, succeeded to the throne after the death of Kalasa. Asata Varman occupied the throne in (A.D. 1080).

Jasata Varman (A.D. 1105): The chronicle is silent about him, but he is referred to in the Rajtarangini as affording support to Harsha, his own cousin, in A.D. 1101, when Kashmir was invaded by the princes of the *'Lohara family'.* On that occasion, he was taken prisoner by Sussala, in the temple at Vijeshwara. In A.D. 1112, Jasata is again mentioned in the Rajtarangini as supporting Bhikschachara, grandson of Harsha against Sussala, who had occupied the throne of Kashmir. Being unsuccessful, Bhikshachara retired to Chamba and stayed there for four–five years. Jasata Varman's reign most probably had lasted till about A.D. 1117–18. An inscribed stone of Jasata's reign exists at *Loh–Tikri* in Churah. Churah was brought under the

domination of Chamba some time around A.D. 1030 from Balor. And it was some later date than A.D. 1161, the Balorea Raja had recovered possession of Churah. The name of the Raja of Balor was Rana Pal. He was succeeded by his son Ajaya Pal.

Dhal Varman (A.D. 1118): He was brother of Jasata Varman and ruled for a short period. Nothing much is available about them in the writings.

Udaya Varman (A.D. 1120): Udaya Varman is mentioned in the Rajtarangini as having been in Kashmir in A.D. 1122. Chamba had now changed sides in the struggle which was going on for the throne of Kashmir. Udaya Varman lent his support to Sussala. The change of attitude was most likely due to the fact that in interval, Sussala had married the princesses of the Chamba family, whose names were Devalekha and Taralekha, both of whom became Sati on the death of Sussala in A.D. 1128. The situation in Kashmir precipitated further unsettled condition, which provided an opportunity to Chamba state to assert its independence. After Udaya Varman, the following Rajas ruled in succession:

Ajita Varman, Daityari Varman and Prithvi Varman.

Nothing much is available about these rulers in the chronicle of Chamba empire.

Lalit Varman (A.D. 1143): Two slab inscriptions of Lalit Varman's period have been found. One at 'Debri Kothi' and another at 'Salhi' in the Saichu Nala, Pangi. In it, Pangi is called *'Pangati'* which seems to be the ancient name of the valley.

Vijaya Varman (A.D. 1175): The state's boundaries were extended during his time. He invaded Kashmir and Ladakh and brought back much spoil. The easy success which came in the way of Vijaya Varman was due to the disorder and confusion prevailing after the attack of Mohammed Ghori in 1191 A.D. and in A.D. 1193 on India. Vijaya Varman was succeeded by Raja Varman, Sar Varman, Kirti Varman, Ajita Varman, Madana Varman (brother of Ajita), Narakanjar Varman, Asha Varman and Jimut Varman.

Vairasi Varman (A.D. 1330): He had probably a long reign and died about A.D. 1370.

Manikya Varman (A.D. 1370): He succeeded his father Vairasi Varman and ruled upto A.D. 1397.

Bhot Varman (A.D. 1397): Bhot Varman ruled from 1397 to 1442 A.D.

Sangram Varman (A. D. 1442): Sangram Varman ruled probably from 1442 to 1475 A.D.

Anand Varman (A.D. 1475): The name of Anand Varman's mother was *Sampurna Devi*. He was very religious and was believed to have the power of working miracles. He was married to the daughter of the Raja of

Kangra. Anand Varman died about A.D. 1512.

Ganesh Varman (A.D. 1512): The plates of this era furnishes the earliest instances of the use of the suffix 'Singh' in the Chamba family. Ganesh Varman built the *fort of Ganeshgarh* in the Mothila area to protect his frontier. The Mughal influence had started making itself felt in Chamba before the death of Ganesh Varman in A.D. 1559. Ganesha Varman had six sons viz. Pratap Singh, Jit Singh, Bir Bahadur, Hari Singh, Satargun Singh and Rupanand Singh.

Pratap Singh Varman (A.D. 1559): Pratap Singh Varman was the son of Ganesha Varman and Sahib Devi. He was said to be very generous. It was during his time a war broke out between the Chamba and Kangra. The Raja of Kangra has been mentioned as 'Chandrapal'. It ended with the defeat of Katoch forces and death of Jit Chand, the younger brother of the Raja of Kangra. During this war, *Guler* was also occupied by Chamba forces. Pratap Singh Varman was a contemporary of Emperor Akbar and it seems that early in his reign the whole of Hill States including Chamba became subject and tributary to the Mughal Empire.

In the war with Kangra, *'Chari'* and *'Gharoh'*, the small districts near the Chamba border were annexed by Chamba. To create landed property in the hill states including Chamba, Todar Mal was deputed by Akbar. *Chamba was compelled to surrender Rihlu and all the territory it then held to the East of that province, as also the two small districts of Chari and Gharoh.* For nearly 200 years, Chamba was in subjection to the Mughal Empire. The latest plates of Pratap Singh Varman are dated A.D. 1586, and he probably died in the same year. *It was during his time that Suffix Singh was used with the name of Raja in Chamba dynasty.*

Vir Varman (A.D. 1586): No plate of his reign has been found. He was in power for only four years at the most.

Balbhadra (A.D. 1589): Balbhadra was famous for piety and great generosity. He was profuse in his gifts to Brahmins, and at least 42 copper plates of his reign are known to be extant. By his people, he was named 'Bali–Karna', after two heroes of antiquity famous for their generosity. He regarded bestowing grants of land and other gifts as his highest and most imperative duty, refusing even to eat each morning till this had been discharged. He gifted grants of land to the Lakshmi Naryan Temple, as well as many jewels and other valuables. These lavish gifts had gone to such an extent that state administration became seriously embarrassed. Owing to the excessive drain of the treasury, there was difficulty in meeting ordinary and necessary state expenditure.

Just then Janardhan, the Raja's eldest son, came of the age and the officials begged him to intervene. Janardhan removed his father Balbhadra and deported him to the village of 'Baraia' on the other side of the Ravi, and a house and lands were assigned for his support. But there also Balbhadra

continued distributing his lavish gifts and in the course of time, the whole building was gifted away along with the lands. On being reported to his son, Janardhan gave his father a fresh grant of land to enable him to continue his benefactions.

Soon after Janardhan assumed charge of the kingdom, war broke out between him and the Raja of Nurpur, *Suraj Mal*. The war went on in a desultory manner for *twelve years* without either side gaining any decisive advantage. In 1618 A.D., when Suraj Mal rebelled against imperial authority and was compelled by the Mughal army to flee, he found a temporary refuge in one of the Chamba forts. There he was joined by his younger brother **'Madho Singh'**. On Suraj Mal's rebellion, his younger brother **'Jagat Singh'** was called from Bengal by the Emperor to assist in the siege of Kangra fort. He later succeeded Suraj Mal. The siege of Kangra ended in November A.D. 1620, and in January 1622, Jahangir visited Kangra, coming via Siba and returning via Nurpur. The Raja of Chamba Janardhan and his brother **'Bishambar'** also visited the Emperor.

Hostilities seem to have been resumed with Chamba soon afterwards. A decisive battle was fought at Dhalog on Sandhara road; the Chamba army was defeated. Bishambar, Janardhan's brother, was also ki'led. Later on, Jagat Singh by treachery also killed Janardhan. This had happened sometime around A.D. 1623. On Janardhan's death, the state (Chamba) became subject to Jagat Singh and is said to have been ruled by his officials for twenty years. Jagat Singh built the *fort of Taragarh* within Chamba territory. It stood in good stead at the time of his own rebellion in A.D. 1641.

It is said that Balabhadra on Janardhan's death, was restored to power and continued till his death to rule the state in subjection to Jagat Singh. Janardhan left no heir, but his Rani was enceinte, and on learning this, Jagat Singh ordered to keep strict watch on the palace. If the infant proved to be a boy, he was at once to be killed, and if girl, she was to be married into the Nurpur family, so as to strengthen his hold on the state. When the child Prithvi Singh was born, his nurse named 'Batlu', is said to have smuggled him out of the palace and sent him away to Mandi. A second plate granted by Janardhan in A.D. 1619 reveals that a son was born before the death of the Raja.

Prithvi Singh (A.D. 1641): In A.D. 1641, Raja Jagat Singh of Nurpur in union with his son, Rajrup Singh, revolted against the authority of Emperor 'Shahjahan'. A large army under the command of prince Murad Baksh, the youngest son of the Emperor, was sent to suppress it. The army assembled at Pathankot in August A.D. 1641. Jagat Singh offered a brave resistance. He had strongly fortified three principal strongholds in his territory, i.e. *'Mankot', 'Nurpur'* and *'Taragarh'*. This war came as a long awaited opportunity to Prithvi Singh, who was still in Mandi. On hearing the news of rebellion, Prithvi Singh obtained the help of Raja of Mandi and Suket to recover his kingdom.

To reach capital Chamba, he passed through Kullu, Rohtang pass, Lahaul,

Pangi, Cheni pass and Churah, the Northern province of the state. Raja Man Singh of Gwalior (Guler) who was the mortal enemy of Jagat Singh, also assisted Prithvi Singh in this war. Raja Jagat Singh, realizing that his cause was hopeless at the face of massive army, in the company with his sons, surrendered himself to the clemency of the Emperor. After making their submission, they were not only pardoned but restored to all their honours on the conclusion of the war. **'Taragarh'** was taken over by the Mughals. Prithvi Singh had also concluded a league with **'Sangram Pal'** of Basholi avenging himself on Jagat Singh and surrendered to him the *'pargana'* of Bhalai.

Having recovered his kingdom, Prithvi Singh next addressed himself to the consolidation and extension of his domain. He was the first to build state offices *(Kothis)* in Churah and Pangi. Soon after the end of the war, a dispute began between Prithvi Singh and Sangram Pal over the possession of Bhalai pargana. This dispute was finally settled by a Mughal officer in A.D. 1648 in favour of Chamba.

Prithvi Singh went on pilgrimage to Prayag, Kashi and Gaya. *He is said to have visited Delhi nine times in the reign of Shahjahan. The Family idol of the Chamba Rajas, called 'Raghubir', is said to have been obtained from Shahjahan on one of these occasions. It had originally been used as a weight in the Mughal palace.* Prithvi Singh had eight sons–Shastru Singh, Jai Singh, Indar Singh, Mohipat Singh, Ragunath Singh, Ram Singh, Shakti Singh and Raj Singh. From this time, the old suffix of Varman was entirely dropped. The temples ***Khajinag at Khajiar, Hidimba at Mahal*** and ***Sita Ram at Chamba*** were constructed in his reign by 'Batlu', the nurse, who was instrumental saving Prithvi Singh's life.

Chattar Singh (A.D. 1664): The Raja's name was Shastru Singh, as appears from the copper plates, but Chattar Singh is the name in common use. On accession, he appointed 'Jai Singh', his brother, to the office of the Wazir and sent him to Sangram Pal of Basohli to demand the *'Bhalai ilaqa'*, given by his father. This demand being refused, Chattar Singh invaded Basholi and re-occupied Bhalai to Chamba. *In A.D. 1678, the Emperor Aurangzeb issued an order for the demolition of all Hindu temples of the state. Raja Chattar Singh refused to obey the order and in defiance to it, he ordered to put a gilt pinnacle on each of the chief temples in Chamba. On hearing this, the emperor summoned the Raja to Delhi. Instead of going himself, he sent his brother Shokat Singh, who was accompanied by Raj Singh of Guler, but for some unknown reason, they turned back from Bajwara before reaching Delhi.*

A confederation was formed, in which were included Chattar Singh of Chamba. Raj Singh of Guler, Dhiraj Pal of Basohil and Kirpal Deo of Jammu against Mirza Rezia Beg, Viceroy of the Punjab, who used to make incursions into the hills. Ladakh was invaded in 1646–47 by Eastern Tibet and gained a footing in Lahaul. Later on, some time around 1663–64, combined forces of Chamba and Kullu expelled the invaders and then divided the Lahaul country between them. Chattar Singh died in A.D. 1690, leaving two sons: Udai Singh

and Lakshman Singh.

Udai Singh (A.D. 1690): The time Udai Singh succeeded to the throne, there was prosperity everywhere and people were happy and contented. So long as **Jai Singh**, Wazir and uncle of Raja Udai Singh was alive, things were moving swiftly. But shortly after accession of Udai Singh, Jai Singh died. Udai Singh was of a self–willed disposition, and after his uncle's guiding hand and wise counsel were withdrawn, his natural tendencies began to assert themselves. He gave way to evil courses and surrendered himself to sexual pleasure. A climax was reached when Udai Singh appointed a barber, with whose daughter he had fallen in love, to the office of the *Wazir* and put all authority into his hands.

The officials deposed him from power, appointed **Ugar Sing**, son of Mahipal Singh and a cousin of Rana as a regent. At the end of the month, Udai Singh was restored, but soon he relapsed into his former ways. Ugar Singh being afraid, fled to Jammu. The officials then formed a conspiracy with younger brother of Raja, **Lakshman Singh**, to kill Udai Singh. To carry out this purpose, day was fixed, but at the last moment, Lakshman Singh decided to abandon the conspirators and stood beside his brother. On this, officials killed Laksham Singh and Udai Singh was mortally wounded. Udai Singh died in A.D. 1720. Both the Raja and his younger brother had no child to succeed to the throne of Chamba state.

Umed Singh (A.D. 1720): On Udai Singh's restoration, Ugar Singh had fled to Jammu. There without disclosing his identity, he entered the service of **'Dhruv Dev'**. Raja of Jammu, as a soldier. One day, when he was returning after having bath in the river Tawi, he was met by a *mast elephant*, which seeing Ugar Singh suddenly charged down upon him. He checked the animal for a moment by the blow with the *Lota* (an utensil made of brass), and then drew his sword with which he severed the trunk from the body at one blow. On hearing this, the Raja summoned Ugar Singh and elicited from him the whole fact of his near relationship to the royal family. Shortly afterwards, the news of Udai Singh's murder reached Jammu. Dhruv Dev then furnished Ugar Singh with necessary assistance and sent him back to Chamba where he was installed as Raja. The place where Udai Singh was killed, a temple was erected by Ugar Singh to appease the ghost of the Raja, which used to appear to Ugar Singh in dreams and caused him much distress. A small tax known as '***Tusera Udai Singhiana Auteriana***' was imposed for its maintenance.

After a good beginning, Ugar Singh earned disfavour of the officials. To depose him and raise Dalel Singh son of Ragunath Singh and cousin of Ugar Singh to throne, they first ensured the release of Dalel Singh from the Mughal imprisonment by paying one lakh rupees and then issued a *sanad* appointing him Raja of Chamba. Ugar Singh did not oppose him, but broke down the bridge over the Ravi and set fire to the town. He then retired to the Chamunda temple and finally fled to Kangra, where he died. He had two sons - Umed Singh and Sher Singh.

Dalel Singh (A.D. 1735): Having secured the *gaddi* (the seat of power), the new Raja's first care was to have Ugar Singh's sons - Umed Singh and Sher Singh placed under lock and key in Lahore where they remained for thirteen years. Nevertheless the sons of Ugar Singh, as the rightful heirs to the throne, had many friends and supporters among the people. After some length of time, a servant of Umed Singh who resembled him in look, exchanged his clothes with Umed Singh and helped him to escape.

But Umed Singh was recaptured and brought back to Lahore. However, when the Viceroy was acquainted with the fact, he helped Umed Singh to recover his territory. Umed Singh was married to the daughter of Raja of Jasrota and Basholi states. On the other side, Dalel Singh voluntarily abdicated in favour of Umed Singh and retired from active life and became a *'Sadhu'* (hermit). He died at Jawalamukhi. He had no sons and his daughter was married to the Raja of Jammu, Bajai Deo. In A.D. 1744, the **Pathiyar** Pargana in Kangra was granted as jagir to Raja Dalel Singh by a *Sanad* under the seal of Zakaria Khan, Governor of Punjab, for Mohammed Shah of Delhi, and was continued to Raja Umed Singh.

Umed Singh (A.D. 1748): He succeeded to the *gaddi* at a very momentous period in Indian history, when the Mughal empire was in the throes of dissolution and the Viceroys in the provinces were assuming independence. The Marathas and Afghans had begun their life and death struggle for the mastery of India. During Umed Singh's reign, the territory of the state was enlarged to the South of Dhauladhar upto the border of Mandi. The fort of Pathiyar near Palampur was also garrisoned by his troops and Bir- Bangahal was also under his influence. The **'Akhand Chand'** portion of the palace was also erected by him and a palace at 'Nada' was also built. This place was named Rajnagar. There his son Raj Singh was born in A.D. 1755. The foundation of **'Rang Mahal of Chamba'** is also said to have been laid by this Raja. *Umed Singh died at the age of 39 on 13th of Vaishakh, A.D. 1764, the 16th year of his reign. He left orders that no Rani was to become sati at his funeral.*

Raja Singh (A.D. 1764): Raj Singh was only nine years old, at the time of his father Umed Singh's death. Taking advantage of Raj Singh's minority. Ghamand Chand of Kangra, seized the fort of Pathiyar and drove the Chamba troops out of Bir–Bangahal. But the queen regent, who was a Jammu princess, obtained help from **'Ranjit Deo'** of the state and recovered the lost territory. Ranjit Deo of Jammu, seems to have interfered a great deal in Chamba affairs and appointed one of his own officials named **'Aklu'** to the office of *Wazir*. Soon after Raj Singh came of age, he removed Aklu from the position of power to prison.

This was resented by Ranjit Deo as a personal insult and he sent an army under **'Amrit Pal'** of Basholi to invade Chamba. At that time, Raj Singh was away from the state with the Viceroy of Punjab. He took the help of Ramgarhia Sardars to recover his territory. This took place in A.D. 1775. Raj Singh was

married to the daughter of 'Sampat Pal' of Bhadrawah and a son Jit Singh was born to him in A.D. 1775. In 1782, Raj Singh invaded and conquered Basholi, but restored it on payment of a lakh of rupees. Bhadrawah, at this time a tributary of Chamba was, however, under the rule of its native ruler *Daya Pal.* In A.D. 1786, an army was sent under the command of Jit Singh who was only eleven years old to capture Kishtwar state on the invitation of the Brij Raj Deo of Jammu. Kishtwar was captured and held for six months.

Raja Sansar Chand of Kangra, after setting his authority over Kangra fort, demanded of Raj Singh the surrender of the 'Rihlu' area, as having been part of Kangra 'Kardari' under the Mughals. This demand was met with a prompt refusal. Raja Sansar Chand concluded a treaty with *Dhian Singh, Wazir of Guler,* who had seized the small state of Kotla, between Kangra and Nurpur and Raj Singh obtained help from Nurpur. A pitched battle took place near Shahpur in which Raja Raj Singh of Chamba was killed. He was struck on the head with a sword by a man named Jit Singh Purbea (also mentioned Amar Singh Hazuri in different accounts) from behind. Raj Singh is said to have paid special veneration to Chamunda Devi, The Goddess of War of the Chamba chiefs and was promised by her an addition of twelve years to his life and the honour of dying in the battle as desired.

Raj Singh died in A.D. 1794 in the 40th year of his age and the 30th of his reign. As already mentioned. *Churah* was the standing cause of dispute between Chamba and Basholi. In 1794, after the death of Raj Singh, a final attempt was made by Basholi aided by Jammu to recover the territory.

Jit Singh (A.D. 1794): Jit Singh was nineteen years of age at the time of accession. Shortly after his coming to power, he had to face a war with Basholi state, whose Raja Bijai Pal was in the habit of making inroads into the *'Jundh'* and *'Bhalai'* areas of Chamba and plundering them. In A.D. 1800, Jit Singh retaliated by invading Basohli, and after conquering the state, restored it as his father had done, on payment of a war indemnity. During the reign of Jit Singh, Raja Sansar Chand of Kangra was busy in extending his domain over all hill states and Punjab. By 1803 A.D., majority of these hill states had come under the suzerainty of the Kangra chief. In A.D. 1804–05, the Raja of Bilaspur, Raja Mahan Chand in conjunction with all the associated states of the Jalandhara circle and also Basohli invited the Gurkhas of Nepal (Commander Amar Singh Thapa) to invade Kangra, and promised full support in this venture. The Chamba state also sent troops under Nathu Wazir.

In A.D. 1809, Kangra, after the Gurkha–Sikh war, was reduced to the position of a feudatory of the Sikhs. From A.D. 1809, Chamba including Kangra and its captured states became tributary to Lahore. Jit Singh died in A.D. 1808, while the siege of the Kangra fort was still going on in the 33rd year of his age and the 14th of his reign. He had two sons – Charhat Singh and Zorawar Singh.

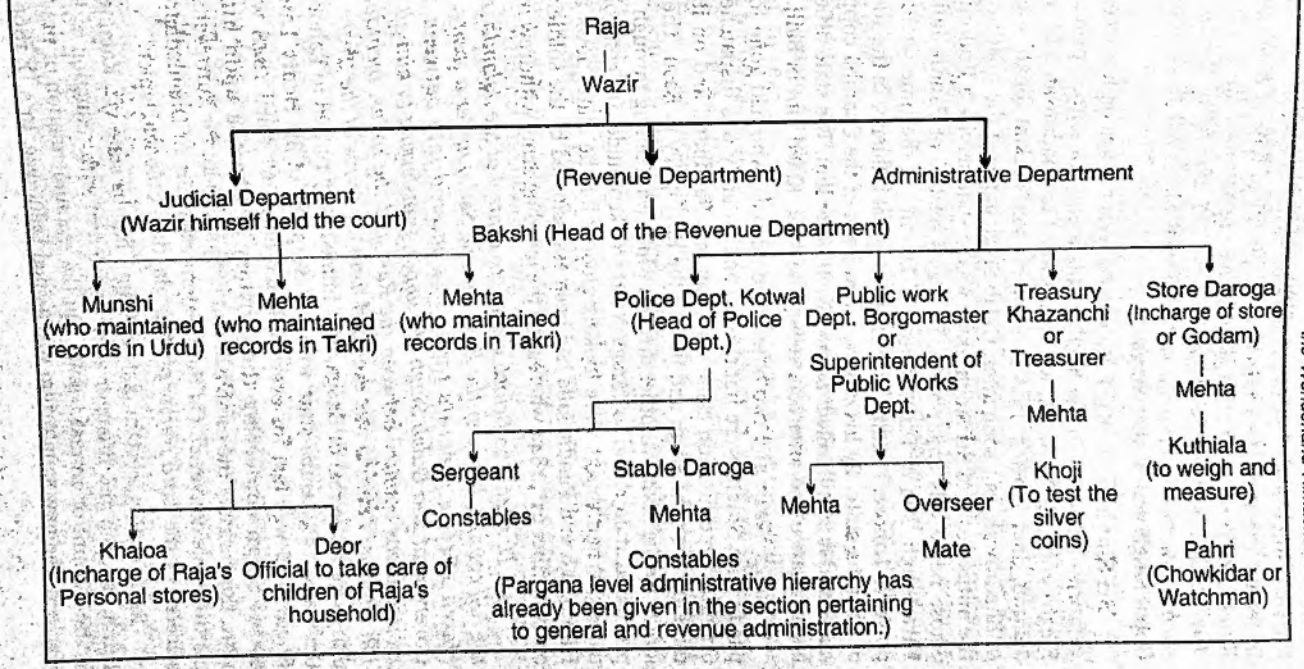
Charhat Singh (A.D. 1808): Charhat Singh was only six year old when he was installed as Raja. During his minority, the administration was in the

hands of the queen mother, a Jammu princess, and of Nathu who was appointed Wazir in the reign of Jit Sing. The name of queen mother was **Rani Sharda**. She erected the temple of *'Radha–Krishna'* which was consecrated in A.D. 1825. As already mentioned, the small state of Bhadrawah had long been tributary to Chamba, but now its chief **Pahar Chand**, who succeeded **Daya Pal** his cousin, refused to pay tribute to Chamba. On this, Nathu Wazir advanced against him but was defeated on the **Padari Pass**. In 1821 A.D. Nathu obtained help from Maharaj Ranjit Singh and forced the chief of Bhadrawah to flee, never to return. Since then, this state came under direct control of the Chamba, *In A.D. 1821, Dessa Singh Majithia in the name of Maharaj Ranjit Singh, claimed Rihlu fort and adjoining area.*

In A.D. 1815, Bir Singh of Nurpur, brother–in–law of Charhat Singh was expelled from his principality by Maharaj Ranjit Singh. He attempted in vain twice in 1826 and 1846 to regain his principality.

In A.D. 1820 –25, **Ratnu**, the chief state official in Padar, invaded Zanskar area and made it tributary to Chamba. In A.D. 1835, Gulab Singh of Jammu sent an army under **Wazir Zorawar Singh Kahluria**, one of his ablest generals, to invade and conquer Ladakh. After conquest, a force under 'Wazir Lakhpat Rai' was detached from the main army to annex Zanskar, which still held out, and having done so, the force crossed the Umasi and passed through Padar on the way back to Jammu. Although Gulab Singh had no intention to invade Chamba, yet people got suspicious.

There upon, Ratnu stirred up the people, seized thirty Dogra soldiers and sent them to Chamba. In the spring of 1836 A.D., Zorawar Singh came with large force to avenge the insult. Ratnu had the bridge over the Chandra Bhaga broken down, and in this way kept the Dogras at bay for three months. But Zorawar Singh with the help of villagers passed a *Jhula* (rope bridge) across the river and transferred a portion of his force to the other bank. The force effected an entrance into **Chatargarh** by the bridge over Bhutna Nala. Chatargarh was razed to the ground, and the name of the place changed to 'Gulabgarh'. A large number of people were killed by Jammu forces. The country was then annexed to Jammu.



Ratnu was arrested but released at once for his boldness and sense of patriotism. In 1836 A.D. Dogra force under Zorawar Singh Kahluria made vain attempt to annex Bhadrawah. Wazir Nathu's death in about 1838 after 40 years service was a great loss to the state. He was succeeded by 'Wazir Bhaga', also a member of the *'Baratru family'*. It was soon after this *in February 1839 that Chamba was for the first time visited by a European, Mr. Vigne.* He came via *Basholi* and *Sandhara* and departed by *Chawari* and *Nurpur.*

In the same year 1839, Chamba was visited by **General Cunningham** who was the first to examine the archaeological remains in the state, at the capital and Bharmaur. Zorawar Singh, younger brother of Charhat Singh, is still remembered in Chamba, for respect he used to give to his elder brother.

Table - I

Administrative Structure

Chamba State (During Nineteenth Century)

Charhat Singh never visited Lahore himself, but always sent Zorawar Singh instead. In 1833, he was raised to the dignity of Raja of Bhadrawah. *Charhat Singh died in 1844 at the age of 42, having occupied the gaddi for 36 years. Two Ranis and six concubines became Sati, this being the last occasion of such a practice in Chamba state.* Charhat Singh left three sons, Sri Singh, Gopal Singh and Suchet Singh.

Sri Singh (A.D. 1844): He was five years of age on his accession and all authority remained in the hands of his mother, a Katoch princess. Zorawar Singh, uncle of Sri Singh, who had shifted to Bhadrawah and from there to Jammu, died in 1845. In A.D. 1845, his son **'Prakim Singh'** was made Raja of Bhadrawah, but soon after, Gulab Singh annexed the Bhadrawah state. In the initial years of Sri Singh, there was in state service a Brahmin of Basholi whose name was **Lakar Shah.** He was a relative of **Pandit Jalla,** who with **Hira Singh,** son of Dhian Singh of Jammu, at the time wielded supreme power in Lahore. Pandit Lakar Shah had great influence in the administration of Chamba state. By his orders, a new issue of the Chamba copper coin was made and it is still called *'Lakar–Shahi'*, after him. The state official resented his arrogance and after counselling the Rani. Killed him in Bailj.

Bhaga Wazir and two other state officials, who had gone to Lahore to pacify Hira Singh, were imprisoned and an army was dispatched to invade Chamba. One division came via **Chun and Sandhara,** and on its approach, the Rani took Sri Singh and fled up the Ravi valley to Basu. The capital was looted by the Sikhs. Another division which was coming through Nurpur was prevented at Jajri and so Taragarh fort was kept under the control of Chamba troops. When things were looking gloomy for the state, news arrived that Hira Singh and Pandit Jalla had been assassinated by the soldiery in Lahore on December 21st, 1844 whereupon the invading army withdrew immediately.

In A.D. 1846, the British came into control of the Jalandhara Doab and the hill country between the Beas and the Satluj under a treaty. On the 16th March 1846, a separate treaty was entered into between the British Government and Gulab Singh of Jammu, transferring to him all the hill and mountainous country between the Ravi and the Indus, including Chamba. But later on, Chamba was excluded from the terms of the treaty. It was only due to patriotic zeal of Bhaga, who immediately rushed to Lahore to restore the status of Chamba state with the sympathy of **Sir Henry Lawrence.** But Bhadrawah was lost for ever. **A Sanad dated 6th April 1848 was granted to Sri Singh conferring the territory of Chamba upon him.** In A.D. 1851, the desire of the establishment of Sanatorium for Europeans within the territory was conveyed. On the Western extremity of Dhauladhar, a site was selected by the *Lord Napier* of Magdala, then Colonel Napier.

In A.D. 1853, certain plateau from Chamba state viz. Katalagh, Potrain, Terah, Bakrota and Bhangor were transferred with reduction of Rs. 2,000/- in the amount of annual tribute. On the recommendation of the Sir Donald Macleed, the new sanatorium was named Dalhousie. In A.D. 1866, the *Balun*

plateau for a Recovering Depot of European troops and *Bakloh plateau* for a Gurkha cantonment were taken over, with a further reduction of Rs. 5,000/- in the annual tribute. ***During the first war of independence in A.D. 1857, Sri Singh was loyal to the Government and sent troops to Dalhousie under Mian Autar Singh.***

Bhaga Wazir retired in 1854 and was succeeded by **Wazir Billu**, also of the *Baratru family*, who held office till 1860. *It was during the reign of Sri Singh that Chamba state came under the influence of the British regime. The state was attached politically to Jalandhara division.* The Raja was married to a Suket princess and during his minority, the economy of the state was completely shattered because of mismanagement and extravagance. The Raja, therefore, asked for the services of an officer from the British Government and ***Major Blair Reid*** was appointed superintendent of the state in January 1863. Till then, the forts of *Taragarh, Ganeshgarh* and *Prithvigarh* which had been controlled by state troops, were withdrawn and handed over to the care of local state officials.

Major Reid next devoted attention to the development of the internal resources of the state. In 1863, a post office and a primary school were opened in the capital. In 1864, the State Forest Department was leased to the British Government for 99 years, subject to revision after every 20 years. In January 1865, Major Reid was succeeded by captain Forbes. In January 1866, Lieutenant E.G. Wace succeeded Captain Forbes till Major Reids, returned in December 1866. In December 1866 a hospital was opened under Doctor Elmslie of the Kashmir Medical Mission. In the next two years 1867–69, two new roads to Dalhousie via Kotri and Khajiar and two Dak Bungalows–one at Chamba and other at Khajiar were constructed. **'Jandrighat'**, the Raja's Dalhousie residence, was erected in 1870–71. Reforms were carried out in almost all departments and income from revenue touched all time high mark in 1870, Rs. 1,73,000/. Sri Singh died in 1870 after a short illness in the 27th year of his reign at the age of 32, when progress and everything augured well for the future. His only son died in infancy and his only daughter was married to the Maharaja of Jammu and Kashmir.

Gopal Singh (A.D. 1870): The order of Government directing his recognition as Raja was notified in open Darbar by Colonel Blair Reid on 25th October 1870. **Mian Suchet Singh**, the youngest of three brothers, who had also laid claim to *the gaddi*, then retired from Chamba but continued to press his claim for a long period. He died in London in August 1896 without male heirs. Raja Gopal Singh like his brother Sri Singh had the assistance of a political officer. The reforms initiated by Raja Sri Singh were pushed in by Gopal Singh. Several new roads were constructed and efforts were made to beautify the town. The primary school at Chamba was raised to middle standard. The people who had earlier been dependent on orthodox methods of treating ailments were more attracted towards the state hospital. On 13th November 1871, Chamba was visited by **Lord Mayo**, Governor General of India.

On 5th January 1872, Colonel Blair Reid proceeded on leave and Colonel G.A. McAndrew was appointed superintendent. In the spring of 1873, Gopal Singh abdicated throne in favour of his eldest son Sham Singh and spent the remaining years of his life at Manjir until his death in March 1895. Gopal Singh had three sons; Sham Singh born on 8th July 1866, Bhuri Singh, was born on 18th December 1869 and Pratap Singh after his abdication.

Sham Singh (A.D. 1873): Sham Singh was only of seven years on 7th October 1873 when installed as Raja by General Reynell Taylor, Commissioner of Amritsar and Mian Autur Singh was appointed Wazir and continued till his retirement in 1878. In April 1874, Chamba was visited by Sir Henry Davies, Lieutenant–Governor of the Punjab. In March 1875, the Raja was present at the imperial Darbar in Delhi and in 1876, he visited Lahore with other chiefs to meet the prince of Wales, being the youngest ruling chief present on the occasion. On 1st January 1877, he took part in the great proclamation Darbar at Delhi.

A land revenue settlement begun by Colonel Reid in 1876 resulted in a considerable gain to the state finances. The revenue now stood at Rs. 2,00,000/– annum. On three intervals of absence, Colonel Blair Reid retired on 5th March 1877. He was succeeded by Mr. R.T. Burney, who did much to improve the lines of communication. One road was carried from the capital to the Chauri Pass and other to Khajiar. In 1878, *Mr. John Harrey* was appointed tutor to the Raja and on his promotion in 1881, he was succeeded by *Mr. G.W. Blaithwayt.* On 7th October 1879, Mr. Burney was succeeded by Captain C.H.T. Marshall who retained charge till November 1885. A new Darbar Hall, named after Marshall, was added to the palace. *Hop–Growing* was introduced in the state in 1880 with great success, but was soon abandoned in 1886, owing to the difficulties in the process of drying. In 1881, a Branch Dispensary was opened at Tissa. In A.D. 1880, it was in *Poddar* that a *Sapphire* (a precious stone of blue colour) mine was discovered under the control of Jammu state.

In November 1883, Sham Singh was married to the granddaughter of the Maharaja of Jammu and Kashmir, and in the same year to a cousin of the Raja of Sirmaur. At the same time, Chamba was visited by Cap. Sir Charles Aitchison, Lieutenant–Governor of the Punjab. By the end of May 1884, the total revenue of the state had gone up to Rs. 2,50,000/– annum due of disciplined administrative actions. Raja Sham Singh came to the age in July 1884, and in the following October was invested with full powers as a ruling chief by Colonel C.A. McMohan, commissioner of Lahore. Diwan Govind Chand was at the same time advanced to the office of Wazir, which had been vacant since 1878.

On 3rd November 1885, the entire burden of the administration was transferred to the Raja by the withdrawal of the Superintendent. In 1887, a postal convention was concluded which brought the state into direct relations with the Imperial postal system. In the same year, branch offices were opened

at *Bharmaur, Lil, Sihunta, Bathri, Tissa, Bhandal* and *Pangi.* A special *surcharge stamp* was also introduced, which has been a source of revenue to the state. The hospital buildings erected by Colonel Reid in 1875 were demolished in 1891 to make way for the 'Sham Singh Hospital' with accommodation for 40 patients. Other construction activities took place during Sham Singh's period on a large scale, among these may be mentioned the erection of a new *Court House, Post Office, Kotwali, Hospital and Jail.*

The Chaughan (public promenade) within the town was levelled and extended. The palace was renovated and a number of new houses were built. Sheetla bridge over the Ravi, which was damaged by the floods in 1894, was replaced by a suspension bridge of iron at the cost of nearly a lakh of rupees. The judicial department adapted to local conditions was reorganized on the British pattern. The police force was increased to maintain law and order. Education was fostered by opening new schools and promising pupils were offered scholarships for study within and outside the state. A small military force consisting of 300 infantry and 30 cavalry with four guns was formed and barracks were erected in the neighbourhood of the town.

In the year 1895, an agrarian agitation arose in the *Bhattiyat Wazarat,* which subsided later on. In January 1898, Wazir Govind Chand retired on pension and Raja's brother, *Mian Bhuri Singh,* was appointed to succeed him. In September 1900, the state was honoured by the visit of the *Viceroy and Lady Curzon,* who spent a week in Chamba. They were accommodated in the Residency, which was tastefully furnished for them. In November 1901, Sir Mackworth Young. Lieutenant–Governor of Punjab, made a cold weather tour of Chamba. The revenue had now reached Rs. 4,00,000/– annum.

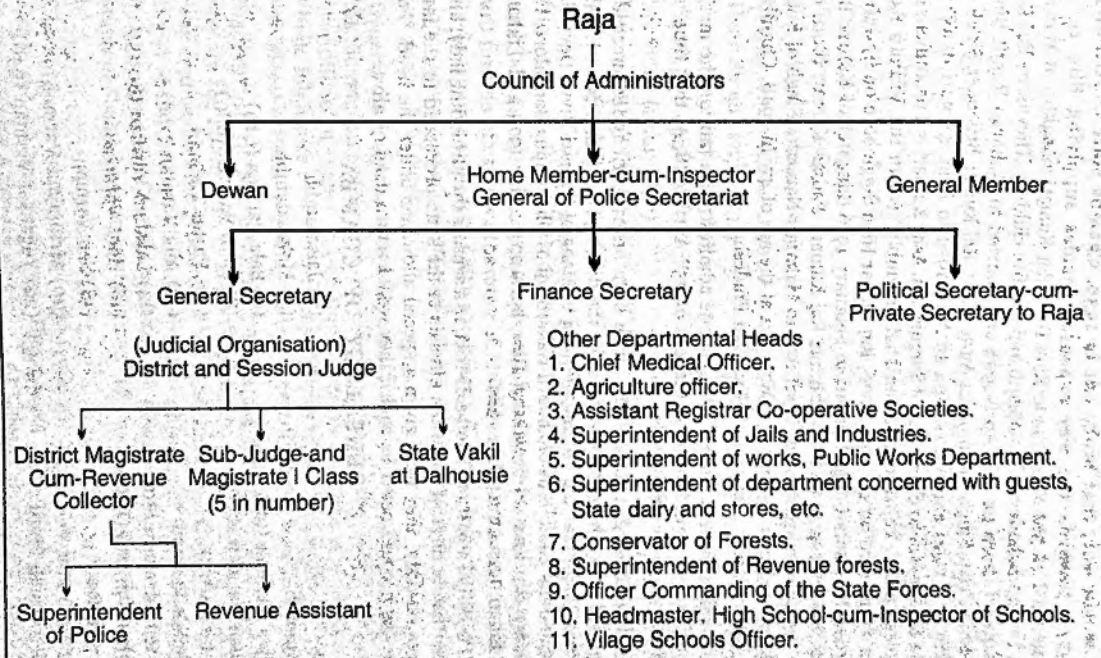
In September 1902, the Raja was overthrown by a serious and prolonged illness. Finding himself unequal to the duties inseparable from his position, he abdicated in favour of his brother Bhuri Singh in 1904. Honourable C.I.E. Commissioner of Lahore, Mr. A. Anderson, made this notification in open Darbar on 22nd January 1904.

Bhuri Singh (A.D. 1904): On 12th May 1904, Mian Bhuri Singh, C.I.E., was installed as Raja of Chamba by Sir Charles Rivaz, K.C.S.I., Lieutenant–Governor of the Punjab. He was highly cultured and of mature judgement, with wide administrative experience and an intimate knowledge of the state and its needs. Raja Bhuri Singh entered on a career of great promise. As a ruling Chief, he took special interest in public works. The roads in the vicinity of Chamba town were widened. After his abdication, Raja Sham Singh continued to reside in Chamba in the enjoyment of liberal allowance. He was in good health then, but on 10th June 1919, his sudden demise caused excessive grief throughout the state. He was 39 years at the time of his death and occupied *gaddi* for 30 years.

On 1st January 1906, His Highness Bhuri Singh received from the King Emperor his distinction of Knighthood. In 1906, a new Dak Bungalow was built in the town. Apart from this, a commodious guest house

was constructed and another one in the suburb of Darogh. A public reading room and library was opened. The middle school was upgraded to a High School in 1905. In 1907, the Raja was present at the Viceregal Darbar in Agra to meet the Amir of Afghanistan.

The famous Bhuri Singh Museum was inaugurated in 1908. In the same year, the negotiation with government regarding the forest lease, ultimately put the forest management under the state's jurisdiction. *A power house was installed on river Sal in the vicinity of the town and the town was electrified in 1910,* in addition to the completion of water supply at a cost of Rs. 2,47,000/- Raja Bhuri Singh rendered help to the British in the World War–I, for which he was honoured with Knighthood, the most eminent order of the Indian empire. By this time, the revenue had risen to Rs. 7,00,000/- annum. The various departments of the administration were fully organized. There were, however, indications that the Raja's strenuous application to state affairs, was impairing his health, but nothing serious was anticipated. Suddenly on 18th September 1919, Raja had a stroke and died. Raja Sir Bhuri Singh had two sons and two daughters, and was succeeded by his elder son *Tikka Ram Singh.* The elder princess was married to Tikka Brijmohan Pal of Kutlehr and younger to Raja Sir Hari Singh of Kashmir, subsequently Maharaja of the state.



Tikka Ram Singh (A.D. 1919): Raja Ram Singh was installed as Raja by Sir Eduard Maclagan, K.C.S.I., Governor of the Punjab in March 1920. Rai Bahadur Lala Madho Ram was appointed the Private Secretary and later on elevated to the position of the Chief Secretary. After some time, Mian Sahib Kesari Singh brother of His Highness, was appointed Wazir of the state. As regards the training and education of the Raja of this high office, it was conducted at Chamba in the supervision and guidance of his tutor Mr. E.M. Atkinson. Thereafter, he joined full course study at the Chief's College, Lahore and on its completion, proceeded to Dehra Dun for military training. Soon after his accession, the Raja gave a great fillip to education. As many as fifteen new village schools were opened.

Physical education was also introduced. On 1st November 1921, the state came under direct control of the government of India in the political department. A large portion of the road from Chamba to Nurpur was realigned and completed upto the state border. The *Chamba –Bharmaur* road was completed upto the twentieth mile and was carried on to *'Kiani'* with a suspension bridge over the Ravi. Drainage system was provided in the Chamba town to improve sanitation. To overcome water scarcity during summer, a big tank was constructed. On 8th December 1924, a son was born to Raja Ram Singh, named Tikka Lakshman Singh. Raja Ram Singh died on 7th December 1935 in Lahore, when he was only 45 years of age.

A sum of Rs. 75,000/- was expended on necessary charges in connection with electric and water supply in the capital. By this time, the state revenue had gone upto Rs. 9,00,000/- annum.

Table - 2

Administrative Chart–Chamba State Before 1947*

Source- *Thakur Sen Negi, Gazetteer of India—Himachal Pradesh—Chamba, Batala: Standard Printing Press, 1911, pp. 33-

Raja Lakshman Singh (A.D. 1935): Raja Lakshman Singh born on 8 December 1924 and educated at Aitchison Chief,s College Lahore. Raja Ram Singh was succeeded by His Highness Raja Lakshman Singh. At the time of his installation, Raja Lakshman Singh was a minor and as such the state remained under council of administrators consisting of three members, including a President till the Raja came of age in 1945. **Major Toulnim** was the first President of the Council. **During the second world war, that broke out in 1939, Chamba state contributed Rs. 1,09,992/– towards the war expenses besides supplying 889 recruits.** He was married on 3rd May 1944 to Rani Devender Kumari, daughter of Maharawat Sir Ram Singhji Bahadur of Pratapgarh and had five children. They were-Raj Kumari Durga Kumari (born on 2nd April 1946 and married to Maharao Ranjit Singh of Bundi), Raja Prem Singh (born on 21 April 1948), Raj Kumar Brijender Singh (born on 24 January 1950 and married on 19 April 1979 to Asha Kumari daughter of Maharaja Madaneshwar Singh Deo of Surguja. Ms. Asha Kumari is a prominent leader of Congress party, represented Banikhet assembly seat in the Vidhan Sabha). Brijender Singh died on 16 April 2006, Raj Kumar Hem Singh born on 27 July 1952 and married to Kumari Jagadishwari in February 1976 daughter of Kumar Bhagat Singhji of Vana Guajrat; and the fifth one Raj Kumari Padma Kumari (born on 1st January 1953 and married on 27 April 1971 to Maharaja Narender Singh of Bikaner). Raja Lakshman Singh died on 21st May 1971 at the age of 47. In 1948, Chamba was merged with a larger province of Himachal Pradesh.

Chamba district was formed as a separate administrative unit on the merger of the erstwhile state with Himachal Pradesh on 15th April 1948. At that time, it had three tehsils and two sub–tehsils.

Raja Prem Singh: Raja Prem Singh born on 21 April 1948, succeeded to ancestral property on 20 May 1971, after the death of his father Raja Lakshman Singh. Prem Singh married on 24 June 1974 to Maharaj Kumari Divya Devi, daughter of Maharana Sahib Shri Shahdevji Nahardevji of Dharampur Bangalore. He has two children Raj Kumari Beejakshri Devi, born on 12 May 1975 and Tikka Sahil Verman Singh born on 24 July 1989.

The Pir Panjal a part of Chamba district, in a sense is the forbidding lady, because one reads that in days of old when officials of the state proceeded to the isolated Pangi area on duty, they were given a special allowance under the head *"Funeral Expenses"* as it could never be said if they would return dead or alive.

(69) Ram Singh (1919–1935)
(70) Lakshman Singh (1935–48)

INSCRIPTIONS OF CHAMBA STATE

Chamba, the hill state on the upper Ravi, owing to its secluded position, had the rare fortune of escaping the wave of Muhammadan invasions and the almost equally destructive influence of Sikh ascendancy. This fact is borne out by a greater abundance of archaeological, especially epigraphical material than is available with in other parts of the Punjab.

General Cunningham visited Chamba in 1839 and was first to draw attention towards the remnants of the past. He gave an account of the ancient temples and of the inscriptions on copper and on stone found in the State. But his visit was too short to do full justice to the subject, especially as regards epigraphy, the acquisition of epigraphical material requiring no less time and labour than its decipherment.

Inscription of Meru Varma: The most ancient records discovered in Chamba are the inscriptions of Meru Varman, one of the early rulers of the State. They are engraved on the pedestals of the brass images of Laksana Devi, Ganesha, Nandi and Shakti Devi, of which the first three mentioned are found at Bharmaur, the ancient capital of the state, situated on the Budhil, a tributary of the Ravi, whilst the temple of Shakti Devi stands at Chatrari half way between Bharmaur and Chamba town.

The shrines in which the two devi (goddess) images are placed, are of a type peculiar to the Western Himalayas. They consist of a square cella enclosed by a double wall, leaving a passage all around. At Chatrari this passage must once have

been an open verandah, as the outer wall is found to consist of twelve heavy wooden pillars with beautifully carved capital, the intervening spaces of which have been filled with masonry walls. The wooden verandah running round the outer wall is evidently a later addition as appears from the different style of wood carving. The tasteless frescoes on the inner wall belong to a very late age, and by their glaring colours contrast strangely with the subdued antiquity of the building. Both the temples are surmounted by a sloping slate roof not different from that found on an ordinary village house in the Himachal Hills.

The special interest attached to the *devi* shrines is their graceful wood carving, which is far superior to the crude work found in Kullu and other Hill States of the past. At Bharmaur, the carving of the facade has been defaced by a long exposure to the weather. A remarkable feature is the trefoil arch enclosed in a triangular pediment, analogous to those of the ancient Kashmir temples. But here the tympanum is decorated with reliefs, the central figure of which represents the twelve armed Sun god, which is placed at the top of the numerous rows of miniature figures covering the facade. The finest carvings are those on the inner door and the ceiling and pillar capitals of the Shakti temple, which being protected against the weather are still in an excellent state of preservation. Those of the outer entrance are inferior and evidently of a later date.

The shrine in which the Ganesha image is placed is little more than a shed. The bull Nandi stands in front of a *Shikhara temple* of the ordinary type, containing a *linga (phallus)* and known by the name of Manimahesha. Opposite this temple is another, built in the same style, but smaller in size, which is dedicated to Narasimha . Tradition ascribes it along with the others to Meru Varman. Not only does the absence of any inscription plead against this assumption; but there is positive proof, that the Narasimha temple was founded considerably later than the others.

The four inscribed images which were made by order of Meru Varman exhibit a high degree of technique, rather than of artistic merit. In the *devi* statues the workman, whose name Gugga is perpetuated in the inscriptions, has realized that conception of female beauty so frequently portrayed in old Indian poetry, but so alien to Western taste. The Ganesha figure is more fortunate and one cannot but admire the skill with which he has succeeded in imparting majesty to the grotesque features of the elephant faced god. Lakshana, apparently one of the numerous name of Durga Parvati, is also known as Bhagavati is represented in the act of slaying the Mahisasura. Her right foot is placed on the head of the buffalo shaped demon, and with *trisula* held in her right hand she pierces his neck. Her left hand raises his body party from the ground. Another right hand clasps a sword, another left hand a bell. The image proper is 3 feet 4 inches, the pedestal 9 inches high. Shakti Devi of Chatrari, the personification of the divine power, is also four armed. In her right hands she holds a lance and a lotus flower, in her left hands a bell and a snake. The first mentioned attribute possibly implies an allusion to the name of the goddess, Sanskrit Shakti meaning both power and lance. The images of Ganesha and Nandi do not require any detailed description. The former is 3 feet high, its copper pedestal 14½". The bull is of considerable size, being 5 feet high, to which the pedestal adds 13 inches.

It should be noted that of the Ganesha statue the legs are broken and that of the tail of the bull a portion is missing. It is believed that this damage was done on the occasion of a foreign invasion, but tradition fails to supply

any reliable information as to the nationality of these invaders. The *Vamsavali* of the Chamba Rajas related that to the reign of Lakshmi Varman, the grandson of Meru Varman, the Kiras invaded Chamba and killed the Raja in the battle. It seems not unlikely that the damages done to the statues may be connected with this invasion. The language of Meru Varman's inscription is Sanskrit. The Ganesha and Lakshana inscription are in prose, the other two in verse, the Nandi inscription in the Vasantatilaka, the Shakti inscription is what is evidently meant for the Indravajra. There are number of mistakes in the language, which probably shows the inability of *Pandits* of Meru Varman.

The engraving of the Bharmaur inscription was well executed. The letters were clear and perfectly legible, especially those of the Nandi legend. In the Chatrari inscription on the other hand the cutting was indistinct and hesitating; the value of several of the characters is therefore far from certain.

General Cunningham noticed the four inscriptions, one on stone and three on copper plates. The number of copper plates, however, existing in Chamba was considerably larger, as appeared from the details left by Raja Bhuri Singh. A large number of copper plates have been found ranging from the period of Yugankar Verman to Raja Shyam Singh. These plates are of very high value from the local history point of view. These were partly written in vernacular, and contain a number of agricultural terms, which were in use during that period in the Western Himalayas.

ECONOMY

The soil is generally loamy in texture with a little more percentage of clay on the higher altitude as well as on the lower elevations. The soil is well supplied with organic matter. Its extent is low at mid–elevation and minimum in low lying valleys.

Agriculture is the mainstay of the majority of the population in the district. Generally two crops are taken from the land. *Maize* is the main crop of Kharif season and potato and paddy are also sown, where the conditions so permit. Wheat and barley are the major Rabi crops. The period of sowing and harvesting of crops depend upon the elevations. Millets and coarse cereals like *Ogla, Kangni, China, Chilai* and *Bathu* constitute important crops of the cold region of Bharmaur and Pangi where maize is not sown during the Kharif. The total cultivated area in the district was 58, 381 hectares (1981 census) and 59.3 thousands hectares according to 1977–98 survey. By the end of 2007, the total cropped area was 66.2 thousand hectares. Amongst the vegetables grown during the Kharif season are tomato, peas, potato and cabbage. Mostly these crops are grown to meet local requirements of the cultivators, six seed multiplication farms are functioning at Bhanota, Rajura, Bhagat, Thullet, Ahla and Dharwas.

The variations in the climatic conditions in the district present immense possibilities for the development of horticulture. In 1955, fruit production was started on a large scale. The district has suitable pockets for the production of hazelnut, chilgoza, apricot, walnut, peach, apple, pear, plum and mango.

The apple orchards are located mainly in *Churah, Bharmaur, Chamba* and *Pangi* tehsils and Salooni sub–tehsils where delicious varieties of apple like red, royal and golden are mostly found. Walnut is grown all over the district. Chilgoza is mostly found in *Pangi area* and certain pockets of Bharmaur tehsil. There are three olive development centres in the district at **Lanji, Saro** and **Rajnagar.**

In order to meet the plant requirements of the cultivators, the department is maintaining progeny orchards and nurseries in the district. In order to provide a market for the horticulture produce, the Horticulture Department of the state government has started fruit canning unit in the public sector at **Rajpura** and another such unit is functioning at **Chamba** in the cooperative sector. Before the introduction of the Himachal Pradesh Abolition of Big Landed Estates and Land Reforms Act, 1953, there were three types of holdings in the district: (i) **Zamindari,** (ii) **Pattedari,** and (iii) **Bhaichara.** Now Zamindari has been abolished and tenants are the actual cultivators, given tenancy rights.

Next to agriculture, livestock is the main wealth of the people. Every house invariably keeps a few cows or buffaloes, sheep, goats, pigs and ponies. Animals are kept for milk as well as for work purposes and goats and sheep are reared for meat and wool. Nomadic population of the district depends mainly on livestock rearing for their livelihood. The improvement of breed of livestock remains the main concern of the department of Animal Husbandry. The Veterinary Hospitals are located at Chamba, Saho, Koti, Churi in Chamba tehsil, Tissa, Himgiri in Churah tehsil, Kihar in Salooni sub–tehsil, Bathri/ Dalhousie, Chowari in Bhattiyat tehsil and Sihunta, Kilar and Dharwas in Pangi tehsil, Bharmaur, Holi, Tundah and Gharola in Bharmaur tehsil. There are 56 *veterinary dispensaries.*

The rearing of *jersey cows* is finding favour with the people due to high yield of milk and long period of lactation. In order to improve the breed of buffalo in the district, *Murrah buffalo* bulls have been distributed to the various Panchayats in the district. Most of the sheep in the district especially in Pangi and Bharmaur areas are being reared as migratory flocks. To evolve a suitable breed of sheep carrying a higher yield and superior quality of wool, sheep breeding farm was established at Sarol during second five year plan. There is also a wool–analysis laboratory at Sarol. The crossing of local sheep with *Rambullet* and *Spanish Marino* rams have been carried out in the farm. Under intensive sheep development project, which is in operation in Bharmaur, Chamba and Bhattiyat tehsils, improved sheep are being distributed and dipping and drenching facilities to the breeders are provided and pastures improved.

To supplement the income of small and marginal farmers, various schemes have been formulated for encouraging the poultry farming. During the first five year plan, a poultry farm was set up at Chamba. Two more poultry units at *Chowari* and *Tissa* were also set up during the second five year plan. The Department of Dairy Development is making strenuous efforts

in increasing the production of the milk in the district. Chamba Milk Supply Scheme was introduced in December 1978. A milk chilling centre of 2000 liters capacity was established in 1985.

The hilly terrain of the district presents difficulties in providing adequate irrigation facilities. The only source of irrigation available in the district is the *Kuhls*. Of the 58,381 (1985–86) hectares of net area sown in the district, only 3,550 hectares were having the irrigation facilities. This went up to 4290 hectares by the end of 2007. The total cropped area of the district in 2011-12 was 67534 hectares and the area sown was more than 25773 hectares.

From the industrial point of view, the district is most backward. 'Chamba chappals' are quite famous and are in great demand. Chamba 'rumals' are very artistic and are finding a steady demand. Among the village industries, mention may be made of weaving, carpentry and blacksmithy. Nearly all the agriculturists in the upper hills make woollen cloth for their own use. The woollen clothes especially pattis and blankets of Pangi Bharmaur are in great demand. *The Himachal Pradesh handicrafts and Handlooms Corporation* is maintaining the following centres in the district.

(1) Chamba Footwear, Chamba
(2) Chamba Textile, Chamba
(3) Chamba Rumal Centre, Chamba
(4) Wooden Utensils Centre, Jagti (Bharmaur)

Handmade Chamba Chappals: Chamba is famous for its artistic handmade chappals. *Yet, long ago Chamba was shoeless*–so goes the story. There were only crudely made "*grass shoes*". When the local Raja married a princess of Kangra from across the high Dhauladhar ranges, there was a change. Knowing she was stepping into the shoeless Chamba, the princess brought with her a cobbler family, as part of the dowry. This family started and spread this unique art in Chamba. There descendants still live in Chamba town, carrying on the now–famed art of making Chamba chappals.

First, the craftsmen have to choose the leather with great care. Traditionally this was of sheep, goat and calf skins, now more of it is synthetic. The sole is cut into the required shape and size and further cut into two parts. Then these parts are glued with local glue called "*lati*". Next a flat leather chord is glued to the sole. The vamp or upper part of the chappal and the strap are stitched. The vamp is an interwoven, mesh like collection of small leather strips.

The artisan must very carefully stitch the difficult pointed front of the vamp. The open too, the partly woven vamp is very comfortable and light, ideal for hiking. Plain chappals have many models—*Nakodar, Jalidar* and *Khopa*. Plain socks are worn with these chappals. But Chamba chappals are embroidered. The embroidery is done after the plain chappal is ready. Traditionally, this work is done by women. Sometimes silk, silver and golden threads called "*russi tilla*" are used for the embroidery. Usually the motifs are

of *lantana flower and leaves*. Embroidered socks are worn with these chappals.

The district is also having three units dealing with manufacturing of *Dhoop*. One Industrial Training Institute is also functioning at Chamba. There is one carpet weaving centre for Tibetans at Dalhousie. At the end of 1989, there were *59 factories* and *65 small scale units* registered on the permanent basis. In 2010 there were 73 factories providing employment to 1459 workers, which went upto 77 in 2012 and employment to 1659 people. The number of small scale industrial registered on permanent bases was 30 in 2011, 21 in 2012 and 10 in 2013.

The first hydro– electric station was commissioned to Chamba town in 1910. At present, the district is having hydel generating station at *Gharola* and *Bharmaur*. The work on Baira Siul power Project. Holi Hydel Scheme is also under consideration on the *Holi Nalla*, a tributary of the river Ravi in Chamba district. All 1,144 villages of Chamba district were provided with electricity in 1988 A.D.

The Chamera Dam impounds the River Ravi and supports the hydroelectricity project in the region. It is located near the town of Dalhousie. The reservoir of the dam is the Chamera Lake. After completion of the first phase, the Chamera-I generates 540 MW (3x180 MW) of electricity. The second stage i.e. Chamera-II Dam generates 300 MW (3X100 MW) of electricity. From year 2012, the 3rd stage i.e. Chamera III generates 231 MW (3x77) of electricity. The unique feature of the region is the fluctuating day and night temperature. The temperature during the day near the dam rises up to 35 degrees Celsius and drops to a minimum of 18 to 20 °C at night. The water level in the Chamera Lake rises to a maximum of 763 meters while the minimum water level is 747 meters.

The catchment are of the dam is 472.5 km2. The reservoir has a live storage capacity of 110 MCN and mean annual inflow of 1,273 BCM. The power house has 3 units of 180 MW each and has a firm power of 160 MW After the completion of Chamera Power Station Stage - II (3X100 MW) in the year 2003, the Chamera Dam has been renamed Chamera Power Station Stage - I. The third stage of the Ravi Basin Projects Chamera Stage - III (77X3 MW) is also completed and is under operation now. All the three stages of Chamera are owned by NHPC Limited a company listed on the National Stock Exchange of India (Code NHPC). The stage - I is a storage hydroelectric project while stage - II and III are run of the river schemes.

The total road length in the district including roads other than National highways in 1988 was approximately 2,350 km. The trading centres available in the district are at Chamba, Dalhousie, Chowari, Tissa, Sihunta, Salooni and Bharmaur. The commodities imported in the district are cloth, food grains, utensils, cigarettes, kerosene oil, building material etc. The articles of export are timber, forest produce, honey, shawls and Chamba Chappals. 1957 saw the opening of a branch of the State Bank of India at Chamba. A branch of the Himachal Pradesh State Cooperative Bank Ltd. Was

opened on 6th April, 1965.

The People: The three main groups of population found in the district are Hindus, Muslims and Sikhs. The Jains and the Christians constitute a negligible proportion of the district population. Among Hindus, mention may be made of Rajputs, Kanets, Brahmins etc. Rajputs before 1948 had a predominant position. They are known as *Mians, Thakurs, Jagirdars, Rathis* and *Ranas*. Besides, scheduled castes which are mainly *Kolis, Dumnas, Lohars, Bodhis* are also found all over the district. The *Gujjar* and *Gaddis* are the famous tribal groups. Gaddi is a generic name. Brahmins, Rajputs, Khatris, Thakurs and Rathis are covered under this term. It is believed that due to religious atrocities during the regime of Aurangzeb, they migrated to Bharmaur from plains.

Gujjars are the permanent inhabitants, found in Churah, Chamba and Bhattiyat tehsils and Salooni sub–tehsil. Their main occupation is rearing of cattle. *Pangwals*, another category of scheduled tribes, live within the Pangi tehsil in the Pargana of Kilar, Sach and Dharwas, are mainly engaged in agriculture. *Bhots* are also occupying the upper reaches of the tehsil.

The language spoken in the district is Western Pahari in five different dialects. Chambyali is spoken in Chamba and neighbouring areas. *Gaddi* or *Bharmauri* in Bharmaur, Bhattiyali in Bhattiyat tehsil and Sihunta sub-tehsil and Churahi in Churah tehsil and Salooni sub–tehsil. *Pangwali* is spoken in the Pangi, and Bhots speak a language akin to Tibetans. During the regime of Rajas, *Tankri script* which is believed to have been derived from the *Sharada script* was much in use. All the official business with the Parganas used to be conducted in Tankri script using Chambyali. Now English and Hindi are the official languages.

Maize and wheat are the staple food of the people. They also take rice occasionally. The food is generally taken four times a day, i.e. *Nawari* (breakfast) and consists of Chapatis taken with 'Sag' or Chhachh. *Kalwar* (lunch) consists of maize or wheat chapatis taken with vegetable or lassi. *Archni* (afternoon resembles Kalwar). *Biali* (dinner) consists of rice or wheat/ maize chappatis taken with Dal or vegetables. Villagers take butter, milk and are very fond of curry. Mustard oil, hydrogenerated oil and Desi Ghee is used for the preparation of vegetables. In cold areas, people use liquor, which is locally distilled, and meat in the diet frequently. Many women also drink though not in the public as a rule.

In Chamba district, mostly woollen garments are used. Cotton turban, home spun and locally woven *patti pyjama* and coat is the typical dress of the Chamba people. Women wear *Kurta* and *Salwar* and a *dupatta* called *Chadru*. In the area of Bharmaur, Churah and Salooni tehsils, people mostly wear woollen coats. Men use *chola* and *Dora*. Jagi is the common head dress of the Churah and Pangi women. A change in the traditional dress has been noticed both in the rural and urban areas.

Religious Places: Chaurasi area (84 temples), Manimahesh, Ganesh temple, Chandragutpa temple kameshwara temple, Lakshna devi temple at Bharmaur. Nar Singhji temple and Chandrashekhra temple at Saho.

Fairs: Sui fair, Bharmaur Yatra, Minjar fair, Chhatrari Yatra etc. are quite famous.

DECADEL POPULATION GROWTH SINCE 1901-2011

Year	Persons	Males	Females	Decade variation	Percentage decade variation	Females per 1000 of males
1	2	3	4	5	6	7
1901	130,244	68,432	61,812	—	—	903

HAMIRPUR

(HQ, HAMIRPUR, ALTITUDE 786 METRES)

Total Area : 1,118 sq.Km.

Languages spoken : PAHARI HIMACHALI OR KANGRI AND HINDI

Hamirpur district is situated between 76° 18' to 76° 44' East longitude and 31° 25' to 31° 52' North latitudes. The tract is hilly covered by the Shivalik range. The elevation varies from 400 metres to 1100 metres having the configuration ranging from the almost flat-lands that border the portion of river Beas to the lofty heights of cliffs, crags and precipitous slopes of hill-ranges. There are three principal ranges which run in a South-Easterly direction.

The "Jakh Dhar" runs in continuation of the 'Kali Dhar' range in the Kangra district. It enters Hamirpur district near '*Nadaun*' and traverses it in South-Eastern direction. The town of Hamirpur lies to the East of this range. The hills are bare, rugged and full of deep ravines. The Chabutra hills have the same dip and strike as in the Jakh Dhar and continue beyond the river Beas as a mass of rugged and broken hills. The 'Sola Singhi Dhar' is the longest range of the tract and is known by various names; such as '*Chintpurni*' and '*Jaswan Dhar*' in Una and '*Sola Singhi*' in Hamirpur. The district in the North is bounded by the river Beas which separates it from Kangra district. In the West lies the Una district and in the South Bilaspur district. In the East Seer Khad separates it from Mandi district. Barsar tehsil is on the South -West of Hamirpur district, Sujánpur Tira in the North, Nadaun in the North - West and Bhoranj is towards Eastern end of the district. The main streams of the district are *Bekar Khad, Pung Khad, Sundran Khad, Kunah Khad, Hathali Khad* and *Maan Khad.* All of them drain into the river Beas, but Sukar Khad and Mundkhar Khad drain into Seer khad which ultimately drains into the river Satluj.

The middle and upper Shivalik and the comparatively recent deposits constitute the main geological formations. The Shivalik comprises of conglomerates friable, miscaceous sandstone, siltstone and claystone. The recent deposits includes alluvian fans and terraces of unassorted sand, silt, clay and rock fragment and boulder beds. The conglomerates are in general poorly cemented but at places they are very hard. These consist mainly of pebbles and cobbles of quartzites. The stray pebbles of granite, limestone, sandstone, breccia and lumps of claystone are also observed at some places. The Shivalik represents 6,000 metres of layered sequence of sandy rocks deposited in the floor plain of the area now occupied by the Himalayan foothills. The sediments were brought down from 2 to 2.5 million years ago by numerous fast flowing rivers. Recent deposits occupy the wide valleys and comprise sand, salt and clay in varying proportions and support the cultivation.

HISTORY

The history of Hamirpur is closely associated with the Katoch dynasty which ruled the area between the Ravi and Satluj rivers in the olden days. It is evident from the "*Puranas*" and Panini's "*Ashtadhyai*" that during the Mahabharta period, Hamirpur was a part of the old *Jalandhar-Trigarta* empire. Panini referred to the people of this kingdom as great warriors and fighters.

NEWLY CREATED DISTRICT IN 1972 FROM HAMIRPUR AND PART OF BARSAR TAHSIL OF OLD KANGRA DISTRICT

This tradition of those people seems to have continued till today, evident from the large number of people from the region in Indian defence forces. It is believed that in the ancient period, the rulers of Gupta dynasty had set up their sovereignty over this part of the land. During the middle ages, presumably the area fell under the control of Mohammed Gazani, Timurlang, Mughal Nawabs and later Sultans. But with the passage of time, all the aforesaid rulers faded away and at the time of Hamir Chand, a Katoch ruler, the area was under the control of '*Ranas*' (feudal hill chiefs). Some of the prominent Ranas were, Ranas of *Mewa*, Ranas of *Mehalta* and *Dhatwal*. There was no time when these feudal chiefs were not in quarrel against each other.

It was only the Katoch dynasty which put these Ranas under its control, to ensure an orderly society. The Katoch dynasty became predominant during the period of Hamir Chand who ruled from 1700 A.D. to 1747 A.D. It was this ruler who built the fort at Hamipur and the present town of Hamirpur derives its name from this ruler. Hamirpur came to much limelight only during the period of Raja Sansar Chand-II. He made 'Sujanpur Tira' his capital and erected palaces and temples at this place. Raja Sansar Chand ruled from 1775 A.D. to 1823 A.D. He dreamt of establishing the old empire of Jalandhar-Trigarta, which his ancestors had held at one time and perhaps according to some historians he tried twice unsuccessfully. The rise of Raja Ranjit Singh proved a great hurdle for his ambitions. Therefore, he diverted his attention towards the local hill chiefs. He attached Mandi state and made Raja Ishwar Sen a prisoner for 12 years at Nadaum.

He also obliged the Suket ruler to pay an annual tribute and annexed parts of Bilaspur state on the right bank of the Satluj. Becoming alarmed by the advancement of Sansar Chand, all the hill chiefs joined hands and invited the Gurkhas to stop the uncontrolled might of the Katoch ruler. The combined armies fought against Sansar Chand's army at Mahal Morian in Hamirpur near Kharwar in Bhoranj tehsil. Raja Sansar Chand's army forced a crushing defeat on the combined forces and compelled them to retreat on the left banks of river Satluj. By that time, Raja Sansar Chand, on the advice of this General Gulam Mohammed tried to affect economy in the army by replacing the existing ones with Rohillas. This proved a self-defeating folly on his part. On hearing about the weakness of Katoch's army, the combined forces again attacked the forces of Kangra at Mahal Morian in the second battle and forced a crushing defeat in 1806 A.D. Raja Sansar Chand along with his family took shelter in the Kangra fort. The Gurkhas sieged the Kangra fort and ruthlessly looted the area between the fort of Kangra and Mahal Morian and virtually destroyed the villages. Ishwari Sen was liberated by the Gurkhas from the Nadaun jail. The siege on the fort continued for three years. Raja Ranjit Singh on the request of Sansar Chand, waged war against the Gurkhas and defeated them in 1809 A.D. But Sansar Chand had to pay a heavy price whereby he had to lose Kangra fort and 66 villages to the Sikhs.

The Sikhs maintained their sovereignty over Kangra and Hamirpur till 1846, when they were defeated by the British army in the first Anglo-Sikh war. Ever since, the supremacy of the British continued in the area which became a part of the British empire. Sansar Chand died as a most disillusioned man. His successor (grandson) Raja Pramudh Chand in alliance with the Sikhs and other rulers tried vainly to dislodge the British. The British made Kangra, of which Hamipur formed a part, a district of which Kullu and Lahaul-Spiti were also merged to form the part of the district. In 1846, after annexation of Kangra, Nadaun was made the tehsil

headquarters. This settlement was revised in 1868, and as a result the tehsil headquarters was changed from Nadaun to Hamipur. In 1888, Palampur tehsil was created, merging part of the areas of Hamirpur and Kangra Tehsils.

Nadaun Fief

Nadaun is a part district Hamirpur at present was part of Kangra princely state in the past. The jagir of Nadaun was granted to the son of Sansar Chand II in 1823 by the British. Nadaun is located at 31°47 to 31°78' North latitude and 76°21 to 76°35 East longitude. Bulleh Shah mentions Nadaun as city of Innocent. He is said to have written the famous saying about Nadaun " *Aaye Nadaun Jaaye Kaun*" (who come to Nadaun would never want to go back) In his famous poem "Bulla ki Janna mein kaun" has mention of Nadaun as "*Na main rehnda vich Nadaun*".

Raja Sir Jodhbir Chand: Born in 1815, became Ist Raja of Nadaun from 1823 to 1873. He was son of Raja Sansar Chand II of Kangra and was granted Nadaun Jagir for his family maintenance. In 1846 as a result of the first Sikh war the territory came under the dominion of the British, who granted a sanad in favour of the Raja, in recognition of his services. In 1848, after the second Sikh war he was granted a fresh sanad by the British in respect of the Jagir of Nadaun. Jodhbir Chand had seven sons namely Raja Amar Chand (born in 1837), Mian Prithi Singh (born in 1838 and died in 1907) Mian Hari Singh (born in 1840 and died in 1903), Mian Sher Singh (born in 1844 and died in 1900), Mian Suchet Singh (born in 1848 and died in 1895), Mian Chet Singh (born in 1849 and died in 1869) and Mian Ishri Singh (born in 1851 and died in 1900). During the tenure of Jodhbir Chand the administration of the country was transferred from East India Company to the Crown of Britain in 1858 after the revolt of 1857. The period after that was the period of constitutional development and democratic devolution.

Raja Amar Chand: Born in 1837, succeeded his father, Raja Jodhbir Chand in 1873 and continued till 1890. He married to the niece of Raja of Jasrota and had a son named Narendra Chand. Raja Amar Chand died in 1890.

Raja Narendra Chand: Born in 1860, he was the third raja of Nadaun from 1890 to 1924, succeeded his father Raja Amar Chand. He was conferred C.S.I in 1907 and tittle of Raja as a hereditary distinction on 15 March 1909 by the Viceroy of India Lord Minto. He married in 1873, the daughter of Rana Karam Chand of Jubbal and secondly a Rani from Mankot and had five sons, namely- Raja Mahendra Chand (born in 1888), Kanwar Devi Chand (born in 1892), Kanwar Nawal Kishore Chand (born in 1895), Kanwar Khargendra Chand (born in 1897), Kanwar Bhim Chand (born in 1898). Raja Narendra Chand died in 1924.

Raja Mahendra Chand: He was born in 1888 and became the 4th raja of Nadaun from 1924 to 1935. He married firstly a princess of Nalagarh, married secondly and thirdly two daughters of Raja Durga Singh of Bhajji. He had four sons and two daughters. They were as- Raja Rajendra Chand (born in 1908), Kanwar Gajendra Chand (married Kanwarani Puran Devi daughter of Mian of Anu Hamirpur) Kanwar Upendra Chand (born in 1922 and married to Kumari Sheela Devi, daughter of Kanwar Kesari Singh of Chamba), RajKumari Rajeshwari Bala Sundari (married Lt. Col. Ghandarva Singh Charak) Raj Kumari Tripu Bala Sundari (married to Capt. Thakur Man Singh Chauhan of Pauri-Garhwal) and Kanwar Sohan Singh (married Kanwarani Durga Devi, daughter of the Chief Kotwal of Nadaun forts). Raja Mahendra Chand died in 1935. He was succeeded by his son Tikka Rajendra Chand.

Raja Rajendra Chand: Born in 1908, became the fifth Raja of Nadaun from 1935 to 1978, married firstly Rani Shiv Kumari of Narauli Moradabad Uttar Pradesh and married secondly to Rani Vidya Devi daughter of the Thakur of Theog and had a son and a daughter named Raj Kumari Chander Prabha (born in 1943 and married to Kanwar Sachindra Singh of Doonga in Dehradun. Raja Rajendra Chand died in 1970 and was succeeded by his son Raja Maheshwar Chand.

Raja Maheshwar Chand: Born in 1952, educated at Doon School Dehradun and became the 6th Raja of Nadaun since 1970. All Jagirdar of Nadaun since 1947 are only head of the family and there is no power with them as ruler of the Jagir.

Harmirpur remained a part of the Punjab province until the 1st of November 1966, when these areas were merged in Himachal Pradesh consequent upon the reorganization of the Punjab. As a result of rearrangement of the districts in the merged areas on 1st September 1972, Hamirpur was created as a Separate distt. with the two tehsils of Hamirpur and Barsar. In 1980 three more tehsil viz. Tira Sujanpur, Nadaun and Bhoranj were created with the further reorganization of the tehsils.

ECONOMY

The main cereal crops of the district are maize, wheat and paddy. There is no cash crop worth the name except the vegetables which are grown in some isolated pockets, wherever lift-irrigation and tube-well irrigation facilities have become available. Amongst pulses, new high yielding varieties are being introduced. Regarding seasonal vegetables, onion and *Arkal-peas* are being popularized. Sugercane and potato production is also getting popular day by day. In respect of oil seeds, '*Toria*' is introduced and the farmers are also being encouraged to grow mixed crops like maize and mash, gram wheat etc.

District Horticulture Office for the first time came into existence in 1972. The district has one progeny-cum-demonstration orchard at 'Bhumpal' in Nadaun tehsil where *sand peas, mango, kinnow* are being grown for the benefit of the farmers and the nursery also produces saplings of *Galgal, Lime, Kinnow, Mango* and other stone fruit trees at this farm. Another progeny-cum-demonstration orchard at 'Badiana' in Bhoranj tehsil has been set up in 1979. Hamirpur district has Seven Veterinary Hospitals, One each at Hamirpur, Bhota, Barsar, Sujanpur Tira, Nadaun, Deraparol and Rait. Apart from this, there are 24 veterinary dispensaries and ten artificial insemination centres.

The sheep-breeding Farm at 'Tal' in Hamirpur tehsil is maintained by the state Govt. where crossbreeding is done under the expert supervision of veterinary doctors. There is a milk chilling plant at 'Jalari' set up in October 1978. Hamirpur district has no state run poultry farm or fisheries ponds and projects. The district had very little foundation in the field of industries. But since the formation of Hamirpur district, impetus is being given to industrial development. An industrial estate has been set up at a distance of two km. from Hamirpur. Some of the units/ institutes, which are helping in the industiralisation of the area are; Verma Steel Works, Hamirpur; Dev Raj Sewing Machine Assembling, Resin and Turpentine factory (Jagdamba Association at '*Khaihdri*', Rural industrial Training Institute at Nadam (imparts training in carpentry, weaving and fitting, shawl producing centres at Hamirpur and Dugha, carpet weaving training and production centre at Lambloo and Kharad, Polytenchnique Institute, Hamirpur, a Government Industrial training institute, Hamirpur and five tailoring centres started at Utpur, Jhamkar, Jalari, Garli and Kanjian.

PLACES OF HISTORICAL INTEREST

Tira Sujanpur: Tira Sujanpur is located at 31.83°N 76.50°E. It has an average elevation of 562 metres (1,844 feet). Climate here varies all through from very hot summer to cold winter. Being on the bank of river Beas, the winter is quite severe. The temperature vary from 38Deg C in summers to almost zero Deg C in winters. Winters experience low lying clouds which add to the cold weather and one can enjoy walking amidst the clouds. It was founded by Raja Abhay Chand, the king of ruling Katoch dynasty of Kangra in 1748 A.D. There is a tomb of Nawab Gulam Mohammad of Rampur. There are five old temples at Tira and Sujanpur. The temple dedicated to Gauri Shankar was built during the time of Raja Sansar Chand in 1793 A.D. in the sacred memory of his mother.

The temples of Murli Manohar and Narbadeshwar (built by Prasani Devi, the Suketi Rani of Raja Sansar Chand) were also built in his time in 1790 and 1823 A.D. respectively. Other temples of repute are the Mahadev temple, Devi and Vyasheshwar (dedicated to Rishi Vyas) temple. The Chaugan (ground) of Sujanpur is famous for '*Holi Mela*' held in the month of March 'Every year'. Obreen's horses grave (he was Raja Sansar Chand's commander) is also located in Sujanpur. This territory was first visited by a German, named **'Traveck'** and then by a British traveller named **'Moorcraft'**. Sujanpur Tira is well-connected to all the major towns of Himachal Pradesh and of the country in all the directions through road network. It is at stones' throw to Hamirpur (25 km), Palampur (35 km) and about 120 km from Dharamshala. The nearest railway station is Maranda (near Palampur) where narrow gauge runs up to Pathankot on one side and Jogindernagar to the other. On one side it is connected to Una-Nangal by road, the other side it is connected towards Kangra, Pathankot; To Mandi-Manali and Ladakh and one side to Shimla. Its geographical locations connect this town with almost every direction through web of tarred road network.

Deotsidh: Deotsidh Temple is a famous cave temple dedicated to Baba Balak Nath. It is an important centre of worship for devotees coming in from all parts of India. Located in the scenic terrains of Dhaulgiri Hills and atop Deotsidh Dhar Range in Shivalik Hills, this temple is bordered by Hamirpur (45 km) and Bilaspur (40 km) towns. Deotsidh Temple can be easily accessible by road and other means of transportation.

Shri Sidh Baba Balak Nath Temple at Deotsidh is one of the most renowned shrines in Northern India and is dedicated to Baba Balak Nath (also considered an incarnation of Lord Shiva). Shri Baba Balak Nath was a SPIRITUAL reformer during the times of Shakti movement and is revered for his acts of philanthropy. A holy shrine here is inaccessible to women who are barred from entering the cave. They can view the deity from a raised platform, which is located in front of the cave temple.

Nadaun: In princely days, it used to be the headquarters of the Nadaun Jagir, where Maharaja Sansar Chand of Kangra used to hold his court during summer for a number of years during his reign. Nadaun is also known for Blikleshwar Mahadev temple which is said to be have been founded by the Pandavas. Nadaun is famous for its beautiful people and a Gurudwara founded in A.D. 1929. Nadaun was a gay place, during the reign of Sansar Chand II. There was a saying current in Kangra hill:- आए नादौन तो जाए कौन! (Who that comes to Nadaun, will not go away). This is explained by the fact that there were two hundred singing and dancing girls at Nadaun and

whoever come under the spell of these enchantresses never thought of leaving. Thus writes Ghulam Mohiuddin in *Tarikh-i Punjab.*

Markanda: It is located in district Hamirpur, 6 Km away from Dera Parol on the bank of Kunah Khad. It is the place of Markandya Rishi. According to Puranas, it is there that the idol of Rishi Markandya was installed. A natural water spring is also located there. The fair of Markanda is also famous. It is held on Baisakhi (April 13) every year. Presently Markanda drinking water scheme is supplying water to a large number of villages surrounding it.

Bhota: It is located on Dharamshala-Shimla road at a distance of 15 kms. from Hamirpur towards Bilaspur. The place is famous for **Radha Swami Satsang** and one of the largest hospital of the state has been constructed by the same religious trust.

Fairs: Gasota Mahadev, Holi of Tira Sujanpur, Baba Deotsidh fair, Ghasian fair, Awah Devi fair, Jhaniary fair, Piplu-ra-Mela, Sair fair (Ladraur), Baggi Mela, Tauni Devi fair, Markand a fair are worth mentioning. All these fairs have religious sanctity and commercial importance for local people. The fairs which have only commercial significance are the cattle fairs at Jahu, Chakmoh and Dhirar.

Sair Festival: Keeping up with the tradition of all things grand, the Sair Festival in Himachal Pradesh is also celebrated on a huge SCALE. Thousands, of people, visit the fair and enjoy the numerous offerings. People enjoy an extended vacation with their family, friends and other loved ones. They also relish the quiet hillside environment. Rejuvenating and refreshing, a trip to the Sair Festival is a lot more than just a visit to hill stations. It's a whole experience in itself. The festival is celebrated on a grand scale. Various activities are part of the fair that is organized to celebrate this festival. Street plays, dances, songs, acrobatics, and games are all part of the festival and the fair. Stalls are set up and locals sell a variety of items especially designed keeping in mind the requirements of the local people.

The Sair Fair of Ladraur is quite famous, held at Bhota Jahu road in the month of September. The place is also famous for Santoshi Mata temple on the hill top known earlier as ***Turi-ra-rida*** (hill top full of dust) and people used to fear to visit this place even in day time, Government Senior Secondary School and a telephone exchange. The Sair Festival is one of the many festivals organised as part of Himachal Pradesh's rich cultural heritage. This festival is usually organised in the month of September and it is celebrated every year in Himachal Pradesh with much fanfare. The festival provides the perfect escape from the humdrum of daily life and locals find relief from the monotonous existence and partake in the festivities to celebrate life, colour and happiness. To celebrate the abundant natural beauty and the rich cultural heritage of Himachal Pradesh, the locals get together, form committees, organise this festival every year. Visitors, too, visit the region to partake in the festivities.

Lohri: Lohri is also known as Maghi festival. This festival is celebrated annually in whole of Himachal Pradesh including district Hamirpur sometime in the middle of January. This festival commemorates the last day for sowing of the rabi or winter crops. This day generally marks the middle of winter. This festival is celebrated by community bonfires, dances and folk songs. The popular dish is Khichri of rice and mash. The festival continues for seven days, when village children (both boys and

girls) sing lohri songs and visit house to house in the night

Baisakhi: Baisakhi (also known Basoa) festival is a very important festival celebrated in Hamirpur district. It is held in the month of April. It commemorates the first day of spring or the first "Baisakh" and it celebrates the passing of winter. This is mainly a rural festival. The people of the district take dips in the Ganga on this day, in various places like Rewalsar, Tattapani is which near Shimla, and at the Prashar lakes which are near Mandi and local religious places Gasota and Markanda.

Majority of the population here comprise of Hindus. Bulk of the people speak *Pahari* which is indeed akin to other dialect spoken in Mandi and Bilaspur areas and the *Kangri* spoken in Kangra district. Hamirpur is the most literate district in Himachal Pradesh. The majority of its population fluently speaks Hindi. The district has highest density of roads in the state. The school college and other technical institutes have contributed to make it an educational hub.

Dress: The common dress of the people is *'Kameez* and *'Pyjama'*. The women wear *'Kameez', 'Salwar'* and *'Chadroo'*. Among the younger generation, it is common to find the latest Western dresses of the cities.

Folklore: The people have inherited a rich folk literature which is occasionally exhibited during the marriage, fairs and festivals. In *'Jatras'* young girls sing folk-songs and also a group folk song by men which is commonly known as *'Jheras'*, which literally means battle. The most common 'Jhere' being 'Gugga Chauha', other 'jhera' sung in the district are 'Raja Sansar Chand', 'Raja Bhangal' and 'Raja Sirmaur'. Other folk dances worth mentioning are *Gidha* of women folk and *Chanderwali* dance of men folk.

DECADEL VARIATIONS IN POPULATION GROWTH SINCE 1901-2001

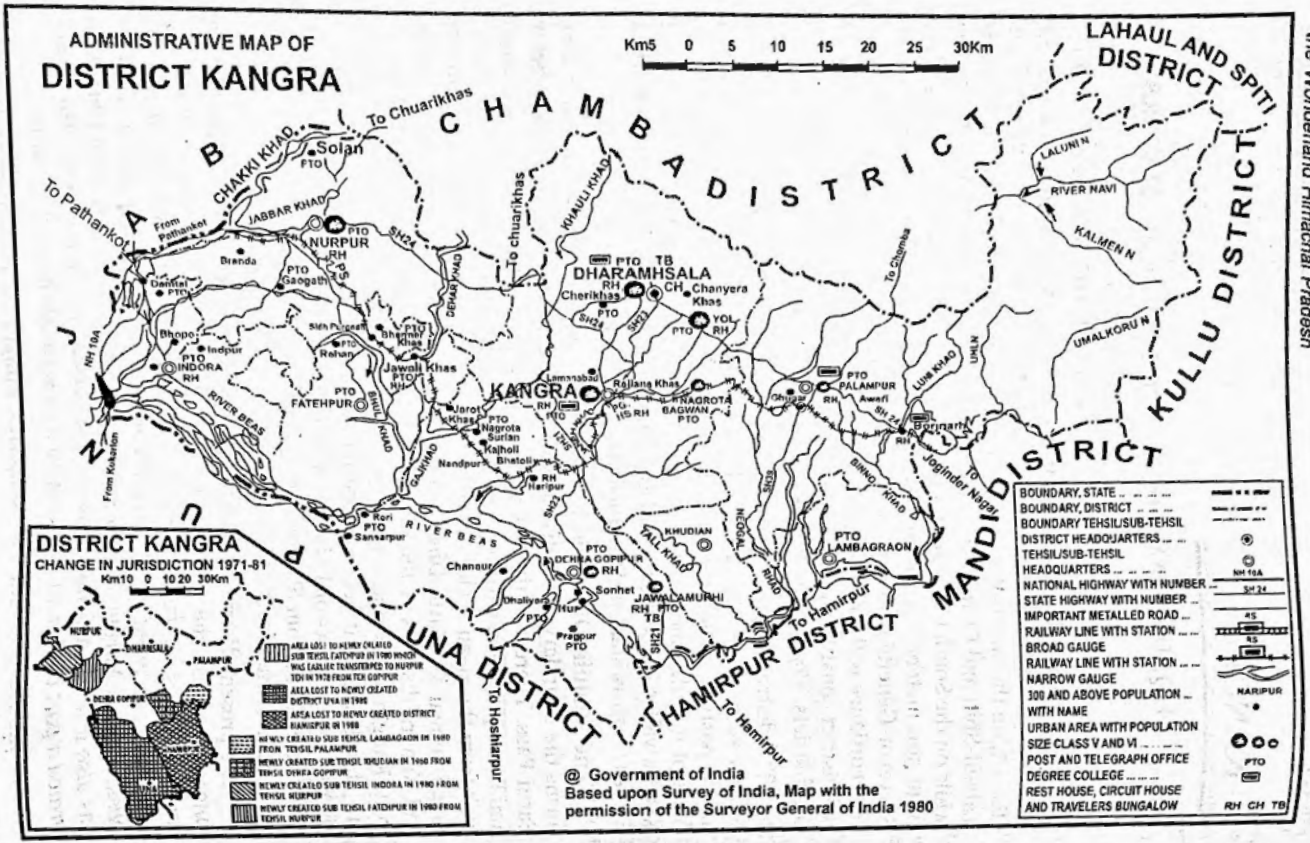
KANGRA

(HQ, DHARAMSHALA, ALTITUDE 1,597 METERS)

Total Area : 5,739 sq.Km

Languages spoken : KANGRI, HINDI AND PUNJABI



The district lies between 31° 40' -32° 25' East longitudes and 70° 35' -77° 5' North latitudes and is bounded on the South-West by Una district, on the North-West by district Gurdaspur of Punjab, on the North by Lahaul-Spiti and Chamba districts, on the East by Kullu and Mandi districts, while on the South it touches Hamirpur district. The elevation generally varies from 500 meters to 5,500 meters from the mean sea level. According to the Surveyor-General of India, the area of the district is 5,739 square km, while in accordance with village records, it is 4,849.25 square km. In terms of area, the district constitutes 10.31 per cent of the state area and ranks fourth among the districts. *Population-wise, Kangra is the biggest district.*

The district Kangra is crisscrossed by mountain ranges and valleys. The terrain varies from the "Dhaula Dhar" range. It looks like a big giant in a sitting posture to the wide open and fertile valley in Palampur and Kangra. In front of it is this most important mountain range which falls in the district. Kangra valley is the meeting place of Eastern and Western monsoon, which causes high rainfall in Dharamshala and adjoining areas.

The Dhaula Dhar: which starts from the right bank of the river Beas forms the boundary of the district with Kullu district to a distant point below Sarui Pass. Thereafter the range passes through Bhangal area above Kangra and Palampur valley covering Bara-Bhangal ridge which is about 6,000 meters high from the mean sea level and thereafter runs parallel to another mountain range known as 'Hathi Dhar' which forms the boundary between Chamba and Kangra districts of the state. The Paprola range shuts out Bir-Bhangal from Kangra valley and this range after crossing Binwa at Paprola runs on the Mandi where it acquires the name of Sikandar Dhar. In the Kangra district some areas of Dehragopipur tehsil fall in the Beas valley and the valley stretching from Shahpur on the banks of the river Beas to Dhatwal on the border of Hamirpur fall in this zone.

The present district of Kangra came into existence on 1st September 1972 consequent upon the reorganization of districts by the Govt. of Himachal Pradesh. *It was the largest district of the composite Punjab in terms of area till it was transferred to Himachal Pradesh on 1st November, 1966 and had six tehsils, namely Nurpur, Kangra, Palampur, Dehragopipur and Hamirpur, Kullu was also a tehsil of Kangra district upto 1962 and Lahaul-Spiti, which also formed a part of Kangra, was created as a separate district in 1960.*

On the reorganization of composite Punjab on 1st November 1966, the

area constituting Kangra district were transferred to Himachal Pradesh along with the district of Shimla, Kullu and Lahaul-Spiti and tehsils of Una and Nalagarh and three villages of Gurdaspur district. Thus, till the reorganization of districts on 1st September, 1972, Kangra comprised of Nurpur, Kangra, Palampur, Dehragopipur, Hamirpur, Una, Amb, and Barsar tehsils. It was the largest district of Himachal Pradesh in terms of population. The district upto 2001 had of 14 tehsils, three sub-tehsils and eight towns including one cantonment board. In 2013 there were six sub division, 18 tehsils, 4 sub-tehsils and 15 blocks. The village Har of Nurpur tehsil among villages and Dharmashala Municipal Committee among towns of the district are the biggest in population in the respective sectors.

The Beas, is the main river which receives almost the entire drainage of the district. It rises from the Pir Panjal range near Rohtang Pass at the height of over 3,978 meters from the mean sea level. The main tributaries of the Beas are; *Binwa* which rises in the hills above Baijnath and joins the Beas above Sandhol and Neugal discharge itself into the Beas opposite Tira Sujanpur. The Banganga, its tributaries *Dehr* and *Chakki Nallah* form the boundary of the district with Gurdaspur of Punjab. The Beas after flowing through Kullu and Mandi districts enters Kangra at Sandhol in Palampur tehsil. From this point, it takes South-Westerly course and enters the valley of Nadaun in Hamripur district. At Mirthal Ghat beyond Hajipur, it leaves Kangra and enters Gurdaspur district of Punjab.

The district is rich in antiquarian remains belonging to different religions. In the light of the fact that most of these temples were located in the hinterland, escaped the destruction at the hands of foreign invaders. The only temple which was looted and razed to the ground was 'Bajreshwari Devi' in Kangra town, then known as 'Nagarkot', by the forces of Mahmud Gazni. Some of the famous temples in the district are the Rockcut temples of Masrur, Shiva temple of Bhawan, Bhimtila near Chetru, temple Basheshar Mahadev in upper Dharamshala, temple of Jawalamukhi and Thakurdwara of Fatehpur. There is also the tomb of Lord Elgin in Dharamshala. Apart from these, there are the earliest rock inscriptions at Pathiar and Kanihara in Brahmi script and Buddhist remains of Stupa, about 270 meters in circumference at Chari and Chetru. Kangra fort, which was once considered impregnable was later damaged and ruined by the earthquake of 1905 A.D.

HISTORY

Kangra district derived its name from Kangra town which was called *'Nagarkot'* in the ancient times. Kangra in originally was part of the ancient Trigarta (JALANDHARA). The word Trigarta was used for the territory drained by three rivers; the Satluj, the Beas and the Ravi. Trigarta had two provinces, one in the plains with headquarters at Jalandhara or Jullundur and the other in the hills with headquarters at Nagarkot (Kangra). The excavations made in the recent past by historians go to prove the fact, that there was certainly the existence of human race in the earliest of human

history i.e. Stone age in this part of the Himalayas. Dr. G.C. Mahapatra found 52 stone axes on the bank of Banganga river in the village RAHAUR. More remnants of the stone age have been found at NADAUN on the bank of the Beas river, its tributaries and to the South of the town Nurpur. On the meeting place of the Banganga and Patalganga near Kangra in a village named Nandrool an almond shaped stone axe has been found, carved on a shining stone. It probably belongs to the early or mid stone age.

More remnants have been found in Kuparlahar, Dehra-Gopipur (in Naker Khad), Dhawala village, Jamol village on the Thor Khad, Panjasaran village of Sukhar-di-Khad, which is located near Raja Ka - Talab (Raja's Tank) on Nurpur-Jawali road, 10 km. from Jasur. Out of the total 360 coins of Audumbaras, 103 coins have been found in Kangra, near Tripal and Jwalamukhi. Four coins of Kushana rulers have been found in Kanihara and three of Kunindas in Jwalamukhi. In 1853. A.D. when Audumbaras and Trigarta's coins were being taken to London, the ship carrier drowned near Sri Lanka and so these coins were lost forever.

Sir A Cunningham, was the first to draw attention to the history of the royal family of Jalandhara and Trigarta in detail. According to him, the name of the place is said to have been derived from the famous *'Danava'* (monster) Jalandhara, the son of the Ganges by the Ocean, mention of which has been made in the 'PADMA PURANA'. The name of Jalandhara's wife was Vrinda or 'Bindra'. Jalandhara was killed by Lord Shiva; so vast was his body that, it covered a circuit of 48 kos or about 64 miles, which is said to be the exact extent of the present pilgrims route called *'Jalandhara Tirath'*. His head was placed to the North of the Beas, with his mouth at Jwalamukhi, while his body covered the whole extent of the country lying between the Beas and the Satluj; his back being immediately beneath the district of Jalandhara and his feet at Multan.

A glance at the map will show this version of the legend have originated in the shape of the country. According to the another version, Jalandhara was killed by Vishnu. A third version confines the demon's body to the Kangra valley. According to it, the top of Demon's head lie under the temple of Nandikeshwara Mahadeva at Jindrangal on the Neugal river. The pine tree forests between Jindrangal and Palampur is called *'Bindravan'* after the wife of Jalandhara; the head is said to be under the Mukteshwar temple, in the village of Sinsol near Baijnath. One hand is placed at the left bank of the Beas river, to the South of Jwalamukhi. All the places of note in this line of pilgrimage lie to the North of the Beas with single exception of Kalesar.

In the *'Ain-i-Akbari*, the Jalandhara district is called **'Bist-Jalandhara'**. The name "Trigarta" is found in the 'Mahabharta', the 'Puranas' as well as in the 'Rajtarangini'. Trigarta has also been used synonymous with Jalandhara. In the ancient times, Jalandhara was identified with Bahlikas or Valhikas.

The early history of Kangra is by and large ill-defined and not liable to a

coherent chronological analysis. The *Vamshavali* contains nearly 500 names from that of 'Bhuma Chand', the founder (supposedly sprung from the perspiration of the brow of the goddess enshrined at Kangra). There is nothing mentioned about other Rajas. *'the first historical mention of Trigarta is to be found in the 5th century B.C. in the writings of Sanskrit writer Panini'.* It is mentioned by Panini as 'Ayudyajivi Sangha' and a confederation of six states known as *'Trigarta-Shashthas'.*

The first historical notice to Jalandhara, Cunningham says, is to be found in the works of Ptolemy, the Greek geographer, where it is called KALINDARINE. The triumphant march of Alexander the great halted at Murthal by the Punjabis led by Porus in 326 B.C. Trigarta is repeatedly referred to in Sanskrit literature; as Susharama Chandra, the 234th king from the founder of the dynasty has been identified with the king Susharma of the Mahabharta. In the Mahabharta war, Susharma sided with the Kaurvas and attacked the king Virata of Matasyadesa and marched in the South-Eastern direction. The original seat of the family is said to have been at MULTAN. After the great war, they retired under Susharma to the district of Jalandhara and built the fort of Kangra. The Kaushika mentions the six members of Trigarta confederacy as follows;

(1) Kaundopartha (2) Dandaki (3) Raushokti
(4) Jalamani (5) Brahmagupta (6) Janaki

These confederacy have not been identified till date. Panini in his Sutras has described them as *Ayudhyajivi Sanghas* (martial republican tribe). The existence of Trigarta as an independent republic in the 2nd century B.C. is indicated by a coin bearing the legend 'Traketa-Janapadsa' in Brahmi character and the traces of the same inscription in Kharosthi on the obverse are visible. There is reference about Trigarta in the 'Rajtarangani' and narratives of Hiuen Tsang who passed through Jalandhara in the second quarter of the 7th century. He described it as a kingdom, 267 miles in length from East to West and 213 miles in breadth from North to South.

The capital of Trigarta was probably Nagarkot (Kangra) which does not find mention, until captured by Mahmud of Gazni in 1009 A.D. In the 'Tarikh-i-Yamini in Utbi, Private secretary of Mahmud Gazni, it is called Bhimnagar, but Farishta refers to it as Bhimkot. The name Nagarkot however, must also have been in use probably from early times and it is mentioned by Alberuni (Abu Rihan) in A.D. 1017-31. He also refers to Jalandhara in the itinerary from Kannauj to Kashmir, which ran through the outer hills from Pinjor via Dhamala or Dhameri (Nurpur) which is called the capital of Jalandhara, at the foot of mountains. In most recent times, Trigarta seems to have been identified as Katoch dynasty, though this name also may be ancient and from it the clan name of ruling family is derived. However, the origin of the actual name is uncertain.

The name Kangra is also of uncertain derivation, but probably of ancient origin and may have been applied originally only to the fort. There is yet

another name to the capital of the state in some records (Baijnath Eulogies), i.e. **Susarmapura**. *The European travellers who visited Kangra were* **Thomas Coryat** *in A.D. 1615;* **Thevenot** *in 1666;* **Vigne** *in 1835;* **Foster** *in 1783 and Moorcraft in 1832. Both Foster and Moorcraft passed through the outer hills but did not visit Kangra.* The origin of the Katoch royal family is lost in the mist of the past. Its claim to great antiquity is fully supported by the many offshoots which have sprung from the parent stem.

As mentioned earlier, the first Raja according to local legend was not of human origin but sprang from the perspiration of the brow of the goddess at Kangra. He stands as the mythical progenitor of the Katoch line. His name was **Bhuma Chand**. The earliest historical reference is Farishta's history and it relates to events which are said to have occurred in the first century of the Christian era. The next mention of Trigarta is made in the Rajtarangini, where it is stated that Sreshtha Sena of Kashmir bestowed the land of Trigarta in A.D. 470 and again about A.D. 520 when Praversena II conquered Trigarta.

The Chinese pilgrim **Hieun Tsang** visited Jalandhara in March A.D. 635 and remained in the Kangra valley as the guest of Raja **Utito** (perhaps Adima) for four months before leaving for Kannauj and again stopped at Jalandhara on his return journey in A.D. 643. Another mention of Trigarta is found after a long interval in *Rajatarangini* in A.D. 883-903, when Sankara Varman, Raja of Kashmir, was on conquest expedition to Gurajara (Gujarat) and it was opposed by **Prithvi Chandra**, the Raja of Trigarta, who was perhaps an ally of Gurajara. When Hiuen Tsang visited Trigarta, it was subject to king Harsha Vardhana of Kannauj.

In A.D. 997, Mahmud of Gazni succeeded his father and in A.D. 1001 he invaded India. In his fourth expedition A.D. 1009, after defeating a large army on the banks of the river, 'Indus' under the command of **Anand Pal** of **Ohind** and Lahore, advanced into the Punjab and laid seize to Nagarkot. The fort was then called *Bhimnagar* from the mythical ancestor of the Katoch family, or perhaps Bhim Sen, the hero of Mahabharta. Traditionally, the fort is said to have been founded by Susharma Chandra, soon after the great war. This fort was famous for its strength all over Northern India. Mahmud was attracted by the fabulous wealth believed to be stored within the walls. After defeating **Brahman Pal**, the son of Anand Pal, he captured the fort and looted the whole wealth and returned to Ghazani.

According to Farishta's account, *in Bhim fort were found 700, 000 Dinars, 700 mans of gold and silver plates, 200 mans of pure gold in ingots, 2,000 mans of silver bullion and 20 mans of various jewels.* The Raja of the time is said to have been **Jagdish Chand**, who was 436th in descent from Bhuma Chand and 202 from Susharma Chand, the traditional founder of the state. Mahmud, left a garrison in the fort on his departure, which held possession till A.D. 1043. In that year, the Raja of Delhi, of the Tomar line, collected a large army and marched against Hansi, Thanesar and other places held by Mohammedan garrison under **Modud**, grandson of Mahmud and drove them

out. Nagarkot was also liberated after four month's siege.

Somewhere about A.D. 1030-40, Ananta Deva, the Raja of Kashmir, was married to two princess of the Katoch family, the daughter of Indu Chandra. This is the last reference to the state in the Rajtarangini. In A.D. 1051-52, Abdul Rashid, a son of Mahmud, who had come into power, appointed Hashtagin Hajib Governor of Punjab and he recaptured the fort of Nagarkot. The Kangra Rajas were successful in recovering the fort only some time after about 1060 A.D. Till about A.D. 1170, the state continued undivided under one head. The Raja of the time is said to have been Padam Chand and his younger brother Parab Chand, who founded the state of *Jaswan.* For nearly 200 years after Mahmud, the Mohammedans were unable to advance their frontier much beyond the Satluj.

The next reference to the Rajas of Trigarta occurs on two slabs in the Shiva temple at Baijnath in the Kangra valley. Baijnath (Vaidyanath) was originally the name of the temple, the village in which it stands being called Kiragrama. The name engraved of the Rana of Kiragrama was Lakshman Chandra. In the inscription, the name of the contemporary Raja is given as Jaya Chandra. Jaya Sinha Chandra, as identified by *Hutchinson* and *Vogel* with Jaya Chandra ruled Trigarta in the beginning of the thirteenth century-say A.D. 1200-20. In between, four or five kings came before Prithvi Chand, whose name is found mentioned in the *Vamshavali,* succeeded to the throne about A.D. 1330.

Prithvi Chand (A.D. 1330): During the reign of Prithvi Chand in A.D. 1337, Kangra fort is said to have been captured by Mohammed Tughlaq (A.D. 1325-51). Beginning with Raja Prithvi Chand, there are many coins existing of the Rajas of Kangra.

Parab Chand (A.D. 1345) Prithvi Chand was succeeded by Parab Chand about A.D. 1345 and in A.D. 1351, Mohammed Tughlaq died. He was succeeded by Firoz Shah Tughlaq.

Rup Chand (A.D. 1360): Rup Chand probably succeeded about A.D. 1360, for he was reigning when the fort was besieged by Feroz Tuglaq about 1365 A.D. and from him to Anirudh Chand (A.D. 1828) there were *twenty-seven rulers,* giving an average duration of seventeen years. Rup Chand's name is found in the *'Dharam Chand Natak'* written by Manik Chand, about A.D. 1562 in the reign of Raja Dharam Chand. Rup Chand in the early part of his reign, set out on a raiding expedition for the plains and plundered the country almost to the gates of Delhi. On his return Journey, laden with booty, he encountered 'Shahab-ud-din' of Kashmir (A.D. 1363-86) who was out on a similar adventure, and laying his spoils at the feet of the Kashmir Chief, swore loyalty to him. Afterwards, Feroz Shah Tughlaq marched with his army from Delhi towards Nagarkot and after six months siege, established his sovereignty over the fort of Kangra. According to one account, Feroz Shah was not successful in conquering Nagarkot fort, seems to be erroneous.

After the submission of Rup Chand, Feroz Shah Tughlaq visited Jwalamukhi temple. *Some historians state that Feroz on this occasion broke idols of the goddess at Jwalamukhi and mixing the fragments with pieces of cow's flesh filled bags with them and caused them to be tied round the necks of Brahmins, who were then paraded through the camps.* In the Tarikh-i-Ferozshahi, no mention is made of these occurrences. There existed a library containing 1300 books in the temple. The Sultan, out of his deep love for learning took possession of these books and had some of them translated. The famous writer of the period *Izzudin* Khalid Khani, translated them into Persian verse and called these after the Sultan *"Dalail-i-Firozshahi"*. Some contemporary accounts illumine the fact that Feroz Shah was not successful in conquering Nagarkot and found an excuse to accept Raja's submission and made peace with him. Rup Chand died about A.D. 1375 and was succeeded by his son Sangara Chand.

Sangara Chand (A.D. 1375): There is no record of his reign. One incident mentioned is related to Kangra fort in the Mohammedan history which recognizes the impregnability of this fort. In A.D. 1387, Feroz Tughlaq recognised his eldest son, Nasir-ud-din, as his successor, but the prince showed so little ability that in less than a year, he was driven out from power by his two cousins and fled for safety to the mountains of Sirmaur and being pursued, he retreated to Nagarkot. Prince Nasir-ud-din remained at Nagarkot till the end of A.D. 1389, when he was recalled to Delhi and in August 1390 occupied the throne under the name of Mohammed Tughlaq. Sangara Chand died about A.D. 1390 and was succeeded by his son Megh Chand.

Megh Chand (A.D. 1390): Raja Megh Chand was on *Gaddi* when the worst of the Mongol raids took place in 1398 A.D., under the leadership of Timur-i-Lang. Timur mentioned in his memoirs *(Malfuzat-i-Timuri)* that on his return journey from Delhi in A.D. 1399, he went to Meerut and from there to Haridwar. He had heard of Nagarkot and wished to capture it but does not seem to have penetrated so far into interior of the hills. Pathankot and Nurpur, then called *Dhameri,* lay right in his way and must have suffered at his hands. He fought twenty battles and conflicts with various opponents in a short period of thirty two days, capturing seven celebrated forts belonging to the Rajas of hills. But there is no mention anywhere that Nagarkot was one of them. Raja *Alan Chand* (1356-1406 A.D.) was the Chief of Hindur (Nalagarh) when lower Sirmaur Hills were plundered by Timur.

Hari Chand-I (A.D. 1405): A few years after Timur's invasion. Hari Chand succeeded to the throne of Kangra. One day the Raja set out with his attendants on a hunting expedition in the direction of *HARSAR* (Guler) and in the course of hunt, he somehow got separated from the party and fell into a well. On his disappearance, search was made for several days but in vain. Believing that he had fallen prey to some wild beast, the officials returned to the capital, where the Raja's funeral rites were duly performed, even his Ranis becoming Sati. He, however, was still alive and after twenty one days, it is

said, was discovered by a passing merchant and rescued. On hearing what had taken place at Kangra, where his younger brother **Karam Chand** was installed as Raja, he selected a site near the junction of the Banganga, Kurali and Neugal rivers and founded the fort and town of Haripur and established an independent state. The merchant was rewarded with remitting all duties on his goods in perpetuity. *Since then Guler had been taking precedence over Kangra on all ceremonial occasions, because it was ruled by the elder brother of the dynasty.*

Karam Chand (A.D. 1415): There is nothing eventful about his period. This was the time, when north India was in turmoil and foreign aggression was order of the day.

Sansar Chand-I (A.D. 1430): He was son of Raja Karam Chand, succeeded about A.D. 1430. The next Rajas in succession were Devangga Chand A.D. 1450 and Narender Chand A.D. 1465. But there is nothing noteworthy about their reigns.

Suvira Chand (A.D. 1480): Narendra Chand died childless. But at the time of his death, one of his Ranis was pregnant. There were many claimants to the throne after the demise of Raja. Fearing a conspiracy against her child, in the event of bearing a son, she escaped to her parent's house in Poona. On the way, her son *Suvira* was born in a Kumhar's (potter) hut. Later on with the help of his-maternal grandfather, he set up his authority over Kangra. A *'jagir'* was given to the Kumhar in whose house the future king was born.

Prayag Chand (A.D. 1490): He followed Suvira Chand. He was then followed by Ram Chand about A.D. 1510. Lodhi dynasty was ruling at Delhi at that time and Mughals under Babur attacked Delhi.

Dharam Chand (A.D. 1528): For a very long time, Kangra fort had immunity from attacks. After the expulsion of Mughal King **Humayun** from Delhi by Sher Shah in A.D. 1540, he ordered his general, **Khawas Khan**, to capture Nagarkot. After its conquest, **Hamid Khan Kakar** was made incharge of Nagarkot, Jawali, Dadhwal and Jammu Hills. He lived in the fort of Malot. But this does not seem to be an authentic version. The Punjab was then under the rule of **Sikandar Shah Sur** a nephew of Sher Shah. In February A.D. 1556, Akbar was installed as emperor after the death of Humayun, at the age of 14 years. He then advanced into the hills and Raja Dharam Chand made his submission. In the following year (A.D. 1557), Akbar advanced against ruler of Punjab **Sikandar Shah**. He took refuge in the strong fortress of ***Maukot***, on the Mau hills, nearly half way between Pathankot and Nurpur. After about eight months siege, Sikandar Shah surrendered and promised to remain faithful and so was allowed to retire to Bengal in July A.D. 1557. He was assigned the districts of Bihar and Kharid in Jagir, but died after two years. With the establishment of strong Mughal authority, the events in Kangra became much more precise and detailed.

Manikya Chand (A.D. 1563): Dharam Chand was succeeded by his son

Manikya Chand. He died in A.D. 1570 and was followed by his son Jai Chand.

Jai Chand (A.D. 1570): Soon after coming to power, for some unknown reasons, he incurred Akbar's suspicion and an order was issued for his arrest. **Raja Ram Chand** of Guler affected this order. Jai Chand's son **Bidhi Chand**, though minor, regarded his father as dead, came to power and broke into revolt against Akbar in A.D. 1572 and army under **Khan Jahan Hussain Quli Khan**, Viceroy of Punjab, was sent to subdue the territory which was bestowed by emperor in Jagir upon Raja **Birbal**. Raja Birbal joined Mughal army at Lahore and set out far Nagarkot by way of Paithan (Pathankot) and Dhameri (Nurpur).

Bakht Mal, Raja of the Nurpur, in A.D. 1556, had allied himself with Sikandar Shah and was executed by Bairam Khan, Akbar's General. His brother Takht Mal was now ruling in Nurpur while the Mughal army was passing through. To keep himself out of danger, he decided to follow the policy of noninterference. The fort of Kotla located twelve miles beyond Nurpur was under the possession of Kangra forces, refused to surrender. Originally, it belonged to **Raja Ram Chand** of Guler, but Raja Dharam Chand and Jai Chand had occupied it by force. On arriving at Kotla, a short-lived battle took place in which Mughal army emerged victorious. Their guns established the authority of Mughal army. This fortress, which originally belonged to the Raja of Guler, was handed over to him. When the seize of Kangra fort was in progress, news came that two relatives of Akbar, **Ibrahim Hussain Mirza** and Masud Mirza, had invaded Punjab. To counter the attack of the Mirzas, Khan Jahan opened negotiations with the commander of the garrison, and on his agreeing to the payment of five *mans* of gold and some valuables, the siege was lifted. *According to a reference in the 'Tabakat-i-Akbair', Khan Jahan in 1572 A.D. captured the fortress of Bhun (Bhawan) which has an idol temple of Mahamai. A number of Rajputs and Brahmins were killed in the temple itself. During the struggle, nearly 200 black cows belonging to the Hindus, were killed one by one by some savage Turks. Then they took off their boots and filled them with the blood and cast it upon the roof and walls of the temple.* It was probably after this expedition that Akbar deputed his great finance minister, *Todar Mal*, to Kangra in order to create an imperial demesne by confiscation of territory from the Hill states. After the seize, there is no further mention of Nagarkot in the Mohammedan histories, till A.D. 1583, when Akbar visited upto 'Dasuha' (near Hoshiarpur) but returned without seeing Nagarkot fortress. According to local tradition, Akbar was told that Kangra was famous for four things. *(a) The manufacturing of new noses; (b) The treatment of eye diseases; (c) Basmati rice, and (d) The strong fort.*

Bidhi Chand (A.D. 1858): Raja Jai Chand died in A.D. 1585 and was succeeded by Bidhi Chand. He formed a secret confederation with the states in the outer hills, between Jammu and Kangra and in the year A.D. 1588-89, they all broke into rebellion. Akbar sent his foster brother, **'Zain Khan Koka'**, with a large force to bring them into subjection. All the thirteen hill chiefs on

their submission were dealt considerately and had their territories and honours restored, *but Bidhi Chand had to leave his son,* 'Trilok Chand', *as a hostage at the Mughal court.* In the 41st year of Akbar's rule (A.D. 1594-95), there was another rebellion by the hill chiefs, led by the Raja of Jasrota, but neither Bidhi Chand of Kangra nor Raja Basu of Nurpur was involved in it. A force under 'Mirza Rustam Qandhari' and 'Shaikh Farid' was sent against the Raja of Jasrota to suppress the rising. Shaikh Farid afterwards received the title of *'Murtaza Khan,* for his services at the seize of Kangra fort, in A.D. 1615, in collaboration with Suraj Mal of Nurpur. Raja Bidhi Chand died about A.D. 1605.

Trilok Chand (A.D. 1605); When Trilok Chand ascended the throne of Kangra, in the same year *Jahangir succeeded to throne of Delhi.* Raja Bidhi Chand, father of Trilok Chand, had kept him in the court of Delhi as a hostage when he was only a boy as prince Salim (Jahangir). The people of Kangra have a story that when Salim and Trilok Chand were together at Delhi, the latter had a parrot which Jahangir wished to possess, but the young Rajput prince would not part with it. On this account, Jahangir, it is said, cherished a grudge against Trilok Chand and marched against Kangra on becoming Emperor. Trilok Chand was either killed or died about A.D. 1612.

Hari Chand -II (A.D. 1612): In A.D. 1615, Jahangir sent Murtaza Khan and Raja Suraj Mal, son of Raja Basu of Nurpur to capture Kangra fort with massive force. Shortly afterwards, Khan had certain suspicions with regard to Suraj Mal and on this account, considering him an undesirable companion, sent petitions to the court and continued writing until the Raja was summoned back. Soon after Suraj Mal's recall, Murtaza Khan was taken ill and died at Pathankot. After the death of Khan, in the early spring of A.D. 1616, **Raja Man,** a Rajput chief of Rajputana, probably Amber or Jaipur, seems to have been in command and acted loyally and gave encouragement to the force besieging the fort. Raja Man was honoured for his loyalty and bravery shown to the imperial court. When Raja Man arrived Lahore, he heard that Sangram, one of the Zamindars of the hill country of the Punjab, had attacked his palace and taken possession of a part of his province (i.e. Punjab for which Raja Man was made Governor).

Raja Man made Sangram leave the country. He pursued him deep into the hills with a small force, which provided an opportunity to Sangram to take flight, which resulted in the death of Raja Man and a number of his men. By this time, Raja Suraj Mal of Nurpur, who was sent along with Shahjahan to *'Dakhan',* had returned. He requested Jahangir to send him to annex the fort of Kangra. His request was accepted and he along with 'Shah Quli Khan Mohammed Taqi' was sent to complete the undone task. Suraj Mal was, however, insincere throughout. Soon after reaching Kangra, Suraj Mal began to quarrel with Mohammed Taqi and sent complaints to Shah Jahan, that Bakshi was incompetent and that the seize was being delayed. On this Bakshi was recalled. Having now a free hand, Suraj Mal, on the pretext

that their supplies were exhausted, dispersed many of the imperial contingents. His own troops laid hands on money and movable property by ravaging the *parganas* at the foot of the hills.

Shah Jahan, soon after hearing of the revolt, dispatched **'Sundar Das, Rai Raiyan'** with reinforcements to suppress it. Suraj Mal was defeated and he took refuge in *'Maukot'* and from there he moved to Nurpur and finally to Chamba where he died in A.D. 1619. After the death of Suraj Mal, **Jagat Singh**, the younger Brother of Raja Basu of Nurpur, was summoned from Bengal, and was made Raja of Nurpur. He was ordered to join Mughal forces in the chiefship of Rai Raiyan in the seize of Kangra fort, which was resumed on 5th September A.D. 1619. In November 1620. Kangra fort was subdued by Mughal forces under **'Nawab Ali Khan'**, *'the first Kiladar or Governor'*, and it continued to be so held till A.D. 1783. Most of the parganas at the foot of the hills, which were ravaged by Suraj Mal were in the Jagir of **Itimad-ul-daulah** (father of Noor Jahan Begum).

The efforts of Rai Raiyan were next directed against *'fort Kotilah'*, (or Kotla) which lies between Kangra and Nurpur where Madhu Singh, brother of Suraj Mal, had taken refuge. The place was surrounded and in three days, it was taken. Madhu Singh fled and joined Suraj Mal in Chamba. After the death of Suraj Mal, the Raja of Chamba was made to return all cash and goods and Madhu Singh and his son to the Rai Raiyan's camp failing which the Raja was threatened with dire consequences. The Raja of Chamba followed these dictates. Later on under *farman,* they were released and forgiven. Rai Raiyan was also called **'Raja Bikramjit'**. He was one of the most faithful and obedient servants to the throne.

Sometime after the annexation, that is in January, A.D. 1622, Jahangir visited Kangra in person. He came by way of Siba and Guler and returned by Nurpur and Pathankot. He was so fascinated by the beauty of the valley, that he ordered a palace to be built for himself and the foundations were actually laid in 'Mauza Gargari', but work proceeded no further. *Jahangir was the first Mughal ruler other than the Rajas of Kangra who brought Kangra fort under his control. In Jahangir's own memoirs, he mentioned that by the grace of God, prayers were said in the fort, the Khutba was read, a cow was killed, and other things were done such as had never been done before, from the foundation of the fort to the present time.* The Raja of Chamba at that time was *Bala Bhadra.* He had two sons, Janardan and Bishambar.

These two brothers probably waited upon Jahangir along with other hill chiefs when he visited Kangra. Both of them were killed in the following year in a war with Jagat Singh of Nurpur. *The first Kiladar of the fort was Nawab Ali Khan, succeeded by his son 'Humrat Khan'.* During the reign of Shah Jahan, the fort was held by **'Nawab Asad Ullah Khan'** and **'Koch Quli Khan'** the latter retaining charge for seventeen years till his death. He was buried on the bank of the **Munni river**, a branch of the Banganga, according to Muslim tradition. Raja Hari Chand was killed by Jahangir, and if so, this

must have taken place before A.D. 1627, the year in which Jahangir died.

Chander Bhan Chand (A.D. 1627): The period of Kangra history for some time after the capture of the fort in A.D. 1620, is very confused and uncertain. There are no references of Kangra in any of the Mohammedan records of that time and we are dependent on local traditions. Raja Hari Chand died childless. After Hari Chand's death, Chander Bhan continued to prosecute guerilla warfare against the Mughals. He was descended from Kalyan Chand, younger brother of Raja Dharam Chand and was probably the next in succession of the Gaddi after Hari Chand. On the occupation of Kangra fort, the whole territory was annexed, only the Jagir of Rajgir being assigned to the royal family.

The Jagir of 'Rajgir' is situated on the right bank of the Beas, above Alampur, including *Lambagram, Jaisinghpur* and *Bijapur.* It is often called Rajgiri. For Chander Bhan's dareful action of guerilla warfare against Mughals, he is said to have been finally captured in the reign of Aurangzeb about A.D. 1660. Chander Bhan is said to have built a fort near Nirwanah, east of Dharamshala. Before his capture, once he retired to the lofty hill, 9000 feet high, on the outskirts of the Dhauladhar, which ever since been called 'Chander Bhan ka tilla'. It is half way between Dharamshala and Palampur.

Vijai Ram Chand (A.D. 1660): He was son of Chander Bhan Chand Vijay Ram founded the town Bijapur, which remained the residence of the Rajas till the reign of Raja Ghamand Chand. He died without a direct heir and was succeeded by his brother, Udai Ram Chand.

Udai Ram Chand (A.D. 1687): There is nothing special to be mentioned about his reign. He died in A.D. 1690.

Bhim Chand (A.D. 1690): He succeeded his father Udai Ram Chand in A.D. 1690. Bhim Chand followed the policy of a *'pacific recourse'* and regular attendance at the Mughal court, for which he was called 'Diwan'. He built a temple at Bijapur. His brother Kirpal Chand made the *Bhawarnawali Kuhl* (watercourse) from the snow-fed Dhauladhar above Bandla.

Alam Chand (A.D. 1697): He succeeded his father Bhim Chand in 1697 after his death. He founded *'Alampur'* near Sujanpur where he chiefly resided. He died in A.D. 1700.

Hamir Chand (A.D. 1700): Alam Chand died in 1700 A.D. and succeeded by his son Hamir Chand, who reigned for forty seven years. Hamir Chand built a fort near the place now called 'Hamirpur' from which it got its name as a tehsil and now district. During Aurangzeb's reign, the Kangra fort was successively held under the charge of *'Sayyid Hussain Khan, Hasan Abdullah Khan Pathan'* and *'Nawab Sayyid Khalil Ullah Khan.* Hamir Chand lived long enough to see the appointment of *'Nawab Saif Ali Khan'* (about A.D. 1740), who was fated to be the last Mughal governor of Kangra.

Abhaya Chand (A.D. 1747); He built the *Thakurdwara'* in Alampur and a fort called *'Abhayamanpur'* or *'Tira'*, in 1748 on the hill above Sujanpur. His reign lasted for three years. He died childless.

Ghamir Chand (A.D. 1750); Ghamir Chand was younger brother of Hamir Chand and uncle of Abhaya Chand who died without a male heir. Ghamir died in 1751, leaving behind eleven sons, who were all disliked by the officials. They, therefore, raised Ghamand Chand, a son of Ghamir Chand's younger brother to power.

Ghamand Chand (A.D. 1751): When he came to power, the Mughal empire was crumbling and there was struggle between **'Ahmad Shah Durrani'** from the North and the Marathas from the South to establish supremacy over Delhi. In 1752, Delhi Emperor ceded Punjab along with the hill states to **Ahmad Shah Durrani**. Taking advantage of the disorder and confusion, Ghamand Chand recovered all the lost territory of his ancestors with the exception of Kangra fort. He also set up direct link with the court at Delhi. Only once in 1758 A.D., he was compelled to bow to a man stronger than he - 'Adina Beg Khan', the Governor of Doab and later on Viceroy of the Punjab. After acquiring supremacy over all the hill states of the Jallandhara circle, Ahamed Shah Durrani appointed Ghamand Chand Governor (Nizam) of the Jallandhara Doab. He also captured **'Chauki'**, the Northern half of Kutlehr state and seized the *taluqa of 'Palam'* from Chamba. He was a strong ruler. Ghamand Chand founded **Sujanpur** and the use of double name *Tira Sujanpur* dates from the reign of Raja Ghamand Chand. Many beautiful buildings were constructed by him there, which became the residence of his descendants.

Tegh Chand (A.D. 1774); Raja Ghamand Chand died in 1774 and succeeded by his son Tegh Chand. He died quite early in A.D. 1775.

Sansar Chand-II (A.D. 1775); Sansar Chand was the most notable chief who ever ruled Kangra. *He was only 'ten years' of age when he succeeded to the Gaddi (throne).* From the middle of the 18th century, the Sikhs had been rising into power and under their various leaders were every where engaged in plunder and rapine. **'Jassa Singh Ramgarhia'** was the first of these chieftains to invade the Kangra hills, and Kangra, Chamba, Nurpur etc.

In 1775, he was defeated in the plains by **'Jai Singh Kanheya'** who got supremacy over the hill states. Sansar Chand's chief aim was the capture of 'Kangra Fort', which was then under the garrison of **'Saif Ali Khan'**. Raja Sansar Chand called to his aid Jai Singh Kanheya and in 1781-82, the combined forces laid seize to the stronghold. It was only after the death of **'Saif Ali Khan'**, the fort was surrendered in 1783, but by stratagem it fell into the hands of the Sikhs. *Mohammed Latif* states in his book **'History of the Punjab'** that Jai Singh Kanheya on being called in by Sansar Chand bribed **Jewan Khan**, son of Saif Ali Khan, who was then dead, to vacate the fort, and thus got possession of it. The fort remained in his possession for four years.

In 1787, Jai Singh agreed to surrender the fort, in exchange of the territory in the plains which had been conquered by Sansar Chand. With the possession of the fort and supreme power in the hills, Raja Sansar Chand demanded from the hill chiefs their surrender to him, as Lord Paramount of all the fertile tracts, that had been included in the Imperial *'Zamindari'*, attached to the fort during the time of Mughals. In pursuance of this policy, the Chamba chief was required to make over Rihlu, and on his refusal, the state was attacked and Raja was killed in a battle at 'Nerti', near Shahpur. The Mandi kingdom was also treated alike. Its capital was sacked, the young Raja Ishwari Sen being made captive and retained as prisoner at Nadaun for twelve years. Out of three districts of Mandi, which were seized, one each was given to Suket and Kullu, and the third was retained by Sansar Chand. He also tried to capture the fort of *'Kamlagarh'* unsuccessfully. Other states, like Kutlehr was annexed completely.

Sansar Chand's fame spread far and wide and his court became the resort of all classes of people, in search of pleasure or personal advantage. *Ghulam Muhai-ud-din* writes in 'Tarikh-i-Punjab' that the Raja was regarded as the *'Hatim'* of that age and, in generosity, the Rustam of that time. Many paintings of that time are extant at Kangra, Lambagram, Guler, Nadaun and other places; also in the Lahore Museum. It seems that in the earlier part of his reign, his court was used to be held chiefly at *Amtar* near Nadaun. For twenty years, Sansar Chand ruled as undisputed monarch of the hills but his overwhelming ambition carried him too far, and his fortune turned to his misfortune. In 1803-04, he twice invaded the plains in the direction of Hoshiarpur and Bajwarah, but was defeated and repulsed by Ranjit Singh. Disappointed in his design in the plains, he turned his arms against Kahlur (Bilaspur) and annexed the part of the state lying on the right bank of the Satluj river. This act led to the downfall of his kingdom.

In the later half of the 18th century, the Gurkhas of Nepal had also developed similar ambitions as that of Sansar Chand and before the end of the century, they had extended their dominion over the whole Kumaon, Garhawal, Sirmaur and other hill states. Sansar Chand's action against Kahlur aroused bitter resentment among the other hill states. They formed a coalition against him and sent a united invitation, through the Raja of Bilaspur to the Gurkha commander to invade Kangra. The invitation was accepted, since it was in keeping with their ulterior designs. Amar Singh Thapa, the Gurkha commander, who is said to have an army of 40,000 men, crossed the Satluj at 'Bilaspur' and 'Jiuri' in Suket and was joined by the various contingents with other states of the Kangra group and Bilaspur and Basholi.

Along from the hill states, Chamba sent a force to assist the Gurkhas under the command of 'Wazir Nathu'. *Jit Singh* was the Raja of Chamba at the time. The first encounter took place in Mahal Morian and Sansar Chand made a brave stand. But in the second encounter, he was defeated. The Gurkhas then advanced into the country and on reaching Nadaun they

liberated the Raja of Mandi (Ishwari Sen), who had been detained by Sansar Chand as prisoner for twelve years.

Sansar Chand after this defeat first took up the position at Tira Sujanpur to harass the enemy and later sought refuge in Kangra fort along with his family. The Gurkhas then advanced into the heart of the state and laid seize to the fort, but all their efforts to capture it were fruitless. The Gurkhas plundered and laid waste the country for four years. In the fertile valleys of Kangra, not a blade of cultivation was to be seen, grass grew up in the towns and tigresses whelped in the streets of Nadaun. The people, harassed and bewildered, fled to the neighbouring states, some to Chamba, some to the plains of the Jallandhara Doab. In the meantime, Gurkhas cut off the food supplies by blocking the river gate of entrance into the fort.

At last, Raja Sansar Chand applied to Maharaja Rajit Singh for help, the Kangra fort being offered as the price of his help. Twice, it is said, the Maharaja set out from Lahore for Kangra and turned back; once from Sujanpur and once from Nurpur. Sansar Chand, being in despair, then opened negotiations with Gurkhas. Sansar Chand somehow through his Wazir Naurang, persuaded the Gurkhas, to retire from the gate leading to the river. He then secretly left the fort and retired with his family, disguised as peasants. Once in safety at Tira Sujanpur, he again made a request for help to Ranjit Singh, through his brother, **Fateh Chand**. In May 1809, Ranjit Singh moved from Lahore.

For nearly a month, discussions went on at **Jwalamukhi**, between Ranjit Singh and Sansar Chand. The two monarchs met at the temple of Jwalamukhi where Sansar Chand's terms were accepted and the Maharaja, with his hand over the sacred flame, took an oath not to harm him. Ranjit Singh's army advanced towards Kangra in August 1809 A.D. and attacked the Gurkhas. Gurkhas were defeated and pushed to the east of the Satluj river. Before this, on the advice of one of his officers, the Maharaja sent for **Anirudh Chand**, son of Sansar Chand, from Tira Sujanpur. On his arrival, he was placed in charge of Fateh Singh Ahluwalia, in order to hold him as a hostage for the fulfillment of the treaty.

Amar Singh Thapa had sent his confidential agent **Zorawar Singh** with double *nazrana* of the value what was promised by Sansar Chand, on the condition that Maharaja would withdraw his troops. The Maharaja Ranjit Singh, however, declined the offer, on the ground that he had already given his word to the Katoch chief. The *moment fort was liberated from the Gurkhas, it was under the command of Naurang Wazir.* Maharaja Ranjit Singh then took possession of the Kangra fort along with 66 villages in the Kangra valley and the remaining state was handed over to Raja Sansar Chand. On 24th August 1809, the fort of Kangra came into Ranjit Singh's fold. The Gurkhas were pushed to the east of the Satluj.

It is said that Amar Singh Thapa had purchased his retreat by paying Ranjit Singh one lakh rupees, thus abandoning his conquests. Sansar Chand

and Fateh Singh Ahluwalia were the first to enter the fort, after the dismissal of the Gurkhas. **Desa Singh Majithia** was appointed Nazim or Governor of the fort and administration of the Kangra hills. Maharaja Ranjit Singh after paying respect at Jwalamukhi temple and receiving *nazrana* from the hill states, returned to Jallandhara.

Sansar Chand thus sank into the position of an obedient dependent. From that time, Sansar Chand retired to Tira Sujanpur. The revenue of his territories was valued at six lakh and he paid Ranjit Singh two lakh rupees. He used to keep two disciplined sepoy battalions under the command of a European officer, named **Jackson**, a deserter from the company's artillery. With the reduction of his financial and military power, Sansar Chand was anxious to place himself under British protection and in the event of a rupture with the Sikhs, it would find in him a zealous and useful ally. **Mr. Moorcraft** has left a graphic account to his experiences at Sansar Chand's capital, where he was treated with the utmost kindness and generosity.

According to an interesting account. Sansar Chand's younger brother, Fateh Chand was taken seriously ill and all hope of his survival was despaired of. Every one was in distress and preparations had begun for the funeral, even the Ranis being ready to become Sati when Mr. Moorcraft by his medical skill was able to avert a great calamity and bring back the patient almost from the jaws of death. The whole country seemed to rejoice in **Fateh Singh's** recovery, for his courage and frankness made him a general favourite. He himself, when sufficiently restored, insisted on exchanging his turban for Moorcraft's hat and making him his brother by adoption. In addition to many other token of gratitude, a grant of land was also conferred on Mr. Moorcraft. Sansar Chand died in December 1824 A.D., a frustrated man and his son Anirudh Chand was allowed to succeed to the throne on the payment of one lakh rupees as the fee for investiture.

The entry of the Sikhs in the Kangra hills was the end of Raja Sansar Chand's dream of establishing a strong and stable 'Hindu Kingdom' in *Himachal hills.* The various hill chiefs, however, miserably failed in their assessment of Sansar Chand and did not co-operate with him. They realized their mistake, only when the irreparable loss had already occurred to the country. Raja Sansar Chand surrendered his (now largely notional) state to Ranjit Singh, in return for a substantial fief to be held under the suzerainty of the latter. This estate consisted, in 1947, of 20 villages yielding a revenue of Rs. 40,000/- and encompassing an area of 324 km^2. Ranjit Singh duly established his rule over the land; Sansar Chand received in addition the estate of Lambagraon. With him, the glory of the Katoches passed away.

Anirudh Chand (A.D. 1824); On Sansar Chand's death, his son Anirudh Chand was installed as Raja. Maharaja Ranjit Singh was at that time at *Adinanager* and a demand for two lakh rupees was made from Anirudh Chand, as *nazrana* on his accession to his father's *gaddi.* But young chief expressed his inability to pay this much and ultimately one lakh amount was

paid and rest was remitted. Prince Kharak Singh (Son of Ranjit Singh) is stated to have exchanged turbans, in token of brotherhood, with the Katoch chief Anirudh Chand. In 1827, when Raja Anirudh Chand made his third visit to the Maharaja's court, he was met by a very unacceptable demand.

Raja Dhian Singh of Jammu, the Prime Minister of Maharaja Ranjit Singh, asked through Maharaja, for the hand of one of the sisters (Sansar Chand had two daughters) of Anirudh for his son **Hira Singh** . For prudential reasons, Anirudh Chand expressed his willingness and gave a written engagement, *but in reality he considered the proposed alliance as an insult to the family honour.* Anirudh Chand was Raja of his own right and descendant of a long line of kings, while Dhian Singh was a Raja only by favour of his master. On one or other pretext, Raja Anirudh Chand delayed the occasion. When one year had passed, the Maharaja at the instigation of his minister, started for Nadaun to speed up the marriage, if necessary by force. On hearing this, Anirudh Chand sent his family across the Satluj and when the Maharaja reached Adinanagar, he himself fled into British territory.

Ranjit Singh came to Nadaun and Fateh Chand, the younger brother of Sansar Chand, who did not leave the territory with his nephew, offered his own granddaughter in marriage to Raja Hira Singh. In reward, he received the Rajgir pargana as Jagir, and was made a Raja. He died soon after and was succeeded by his son **Ludar Chand**. Nadaun was granted in Jagir to **Jodhbir Chand**, a younger son of Sansar Chand, with the title of Raja. He was succeeded by Raja Narendra Chand with residence at **'Amtar'** near Nadaun.

Anirudh Chand got his two sisters married to the Raja of Tehri Garhwal, and died four years later, leaving two sons, **Ranbir Chand and Pramudh Chand**. In 1833, on the request of the British Government, Maharaja Ranjit Singh recalled them and granted a Jagir of Rs. 50,000 value in Mahal Morian, where they took up their residence.

Under the treaty of 9th March 1846, Kangra directly came under the British control. The transfer of the hill tracts to Government was a consummation to which hill chiefs had long been looking forward, in the eager hope and expectation that they would all be restored their territories, great then was their disappointment when the chiefs found that the British Government meant to retain the country in its own hands. In consequence, when in 1848 they (hill chiefs) were approached by emissaries from the Sikh Sardars in rebellion, some of them willingly supported the move.

First the wazir of Nurpur and then Pramudh Chand son of Anirudh Chand, along with the Rajas of **'Jaswan'** and **'Datarpur'**, broke into revolt. A force under Mr. Lawrence suppressed the rebellion. On his surrender, Pramudh Chand, along with the Rajas of Jaswan and Datarpur, was sent to Almora and detained as a political prisoner; there he died in 1851, childless. Ludar Chand, son of Fateh Chand was followed by **Pratap Chand**, who succeeded to the family title in 1851 on the demise of Raja Pramudh chand. He died in 1864 and then his son Colonel Maharaja Sir Jai Chand, K.C.I.E.

(Knight Companion in the most Eminent Order of the Indian Empire) was the head of the Katoch clan. His residence was at Lambagram near Sujanpur, on the right bank of the Beas. He was partly educated at Mayo College, Ajmer and partly by private tutors. He was honorary Colonel in the 37th Dogras and served with distinction in the *'Black Mountain'* and *'Chitral Relief Expedition'*. He was conferred with the title of *'Maharaja'* for his loyalty and distinguished services to the government during the first World War. He received Jagir in 1883. After his death, his son Dhruv Dev Chandra ascended to the throne, who was the last ruler.

Dhruv Dev Chand Katoch: Raja of Lambagraon from 1935 to 1948, born in 1922 and married Rani Shailendra Kumari, daughter of Lt.-Col. Sir Maharaja Narendra Shah Sahib Bahadur of Tehri-Garhwal, and his wife, Maharani Kamlendu Mati Devi, and had two sons namely Aditya Dev Chand Katoch, Manikya Dev Chand Katoch and a daughter Rajkumari Mandvi Kumari. Dhruv Dev Chand died in 1988.

Aditya Dev Chand Katoch: He succeeded ancestral property as head of the clan in 1988 Raja of his line, Head of the Royal House of Kangra, Jagirdar of Lambagraon, Rajgir and Mahal Morian since 1988. Educated at the Doon School, Dehra Dun; married on 4th December 1968, Rani Shrimati Chandresh Kumari, daughter of Raj Rajeshwar Maharajadhiraj Maharaja Shri Hanwant Singhji Sahib Bahadur of Jodhpur, and his wife, Maharani Krishna Kumari Ba Sahiba, and has two sons Tikka Aishwariya Chand Katoch (born 16th January 1970) and Natiraj Ambikeshwar Dev Chand Katoch (born 22nd December 1998).

The history of Kangra district will remain incomplete if we do not discuss the history of its offshoots, i.e. **Guler, Jaswan, Siba, Datarpur, Nurpur, Kutlehr and Bara Bangahal**, which are currently parts of the district.

GULER STATE

The original name of the state was Gwalior, of which Guler is a derivation. The name is derived from the word *'Gopala'* or *'Gwala'*, meaning a *'cowherd'* and the tradition is that a Gwala pointed out the Hari Chand, the site where a tiger and

goat were seen drinking water together, as a suitable place for his capital. It was the same Hari Chand, who was ruler of Kangra in A.D. 1405. In Keeping with the custom of the time, the cowhered was offered as a sacrifice and his head was buried in the foundation to ensure the stability of the fort. Hari Chand founded the fort of 'Haripur' at the ridge overhanging the Banganga river. The two outer gateways of this fort were demolished in 1847 and much destruction was caused by the earthquake of 1905. *The name of the clan was Guleria.*

In addition to the Haripur fort (Guler fort), there were six other forts along the frontiers of the state, namely, *'Mastagrah', 'Kotla', 'Nehklonok', 'Gandharp', 'Ramgarh'* and *'Mastgarh'*. Hari Chand also founded the town of Haripur on the flat below the fort. Very little information is available about the early history of the state. The Rajas after Hari Chand were Bhaun Chand, Suvarn Chand, Udhyan Chand, Narinder Chand, Udharn Chand, Ratan Chand,Nand Chand, Garuda Chand Ghambir Chand, Abhaya Chand,Uttam Chand, Prithvi Chand and Karam Chand of whose reigns there are no records extant.

Ram Chand (A.D. 1540): Ram Chand was the fifteenth Raja in direct succession after Hari Chand. Probably, there is reference to the Guler state in the *'Tarikh-i-Daudil'* in the reign of *Islam Shah*, son of Sher Shah, who is said to have subdued all the hill chiefs.

Jagdish Chand (A.D. 1570): In A.D. 1572, Akbar dispatched a strong force to suppress the revolt in the hills, but the Raja of Guler did not participate in the revolt. Mughal emperor Akbar restored the part of the Guler state which was seized by Dharam Chand and his son Jai Chand of Kangra as a mark of generosity by the Mughal Emperor. The ruler of Kangra at that time was **Bidhi Chand**, son of Jai Chand. At a later date, in Akbar's reign (A.D. 1588-89), another revolt broke out in the hills, but there is no reference to the state of Guler in this revolt. Still another revolt occurred in A.D. 1594-95, in which most of the hill chiefs, between Jammu and Satluj were involved. But it is evident from the writings of the time that Raja of Guler was not a party to the group of rebels against Mughal empire.

Vijaya Chand (A.D. 1605): Succeeded his father Jagdish Chand and ruled for only a few years, when his younger brother Rup Chand, ascended to the throne.

Rup Chand (A.D. 1610): He was the most notable of the Guleria chiefs. He took an active part in the final seize of Kangra fort in the reign of Jahangir, which surrendered to the imperial army on 16th November 1620 A.D. In 1623-24, when Jagat Singh the Raja of Nurpur, raised a rebellion on the instigation of Prince Khurram (Shah Jahan), Rup Chand was also appointed along with many *'amirs'* to suppress the disturbance. Raja Rup Chand received the *'title of Bahadur'* and a *'Khillat'* and two weapons from Emperor Jahangir for his services.

In A.D. 1634, Shah Jahan sent an army under the command of Najabat Khan to invade the Garhwal state, ruled by **Prithvi Shah**. Rup Chand was also assisting the Mughal army in this expedition. The Mughal army had hardly made some advance to the hills, when the Raja of Garhwal surrounded them and cut off their retreat. On the request of Najabat Khan, he was allowed to retire along with his soldiers. But Rup Chand stood firm, though deprived of all support and advanced towards *'Srinagar'*, the capital of the state; but was killed in the battle. Najabat Khan later distinguished himself at the seize of *'Maukot'* in 1641-42 against Jagat Singh of Nurpur, and later in the war with Dara Shikoh.

Man Chand Singh (A.D.1635): Rup Chand was succeeded by his son, Man Singh, and from his time the suffix of the family was changed to Singh, by the order of Shah Jahan who admired Man Chand for his valour and called him 'Sher Afghan'. Man Singh was attached to the Mughal army in the seizes of *'Maukot'* and *'Taragarh'* in A.D. 1641-42. He is said to have conquered Mândi, Suket, Kullu and Bushahr, and was with the Mughal army under Aurangzeb in A.D. 1647 for the seize of Kandhar. The fort of *Mangarh* was built by him. He abdicated in favour of his son and retired to 'Banares', where he died in A.D. 1661.

Bikram Singh (A.D. 1661): He rose to fame for his physical strength and could break a coconut in pieces with his figures. Bikram Singh also was employed on the North-West frontier against the 'Yusufzai Pathan' Tribes and was mortally wounded and died at a place called 'Chauntra' on his way back.

Raj Singh (A.D. 1675): Bikram Singh was succeeded by his son Raj Singh. The Viceroy of Lahore at that time was **'Khwaja Riza Beg'**, who used to make inroads in the hill states. Raj Singh of Guler, Chatar Singh of Chamba, Kirpal Dev of Jammu and Dhiraj Pal of Basholi combined against him and recovered their lost territories. Raj Singh also defeated the Mughal forces under **Hussain Khan** (Kiladar of Kangra fort), **Alaf Khan** and Mian Khan to save Mandi and Kahlur from similar oppression.

Dalip Singh (A.D. 1695): Born in A.D. 1688. His father Raj Singh died in 1695, when Dalip Singh was only seven years old. *Raja Udai Singh of Chamba was appointed his guardian.* Udai Singh with the help of Siba, Kahlur and Mandi also drove out the Rajas of Jammu and Basholi when they invaded Guler, taking advantage of Dalip Singh's minority. Another attempt by Hussain Khan (Kiladar of Kangra) was repulsed by the state subjects. Dalip Singh died about A.D. 1730.

Govardhan Singh (A.D. 1730): Govardhan Singh had a quarrel with Adina Beg Khan, Governor of the Jallandhara Doab, about a horse, in which Guleria chief emerged victorious. He probably ruled for a longer period without any great events.

Prakash Singh (A.D. 1760): By this time, the Mughal empire had lost its credibility. In 1758, Guler came under the control of Ghamand Chand of Kangra, and under the Sikhs at a later date till 1776 when Raja Sansar Chand acquired supreme power in the hills. But Guler maintained its own separate identity. *'Kotla ilaqa'* of the Guler state, which had been under the control of Mughals, when evacuated in 1785, was captured by **'Dhian Singh, Wazir'** of Guler, who made himself sovereign and successfully repulsed even Raja Sansar Chand.

Bhup Singh (A.D. 1790): Bhup Singh was the last ruling chief of Guler. He was to join with his contingents against Sansar Chand when Raja of Kahlur

invited Gurkhas to invade Kangra. In 1809, when all states of the Kangra group came under the control of Ranjit Singh, Bhup Singh was treated with respect. In 1811 A.D., Guler was the first to be annexed by the Maharaja. Desa Singh Majithia was sent to capture Kotla fort, which he did successfully. Wazir Dhian Singh was given a Jagir in the Doab. Bhup Singh died in 1820 and was succeeded by his son Samsher Singh.

Raja Shamsher Singh: He was the 26th raja of Guler from 1826 to 1877. He was born in 1820 and received the fort of Haripur, married and had only a female issue. He died in 1877 and since, there was no male heir the state lapsed to British empire. His only daughter was married to Raja Gopal Singh of Chamba. He liberated Haripur fort from the Sikhs in the first Sikh war. As he had left no son, he was followed by his brother Raja Jai Singh.

Raja Jai Singh: Born in 1822 and succeeded as 27th raja of Guler in 1878 to 1884. He occupied and gaddi after one year and was also granted the title of 'raja'. He married to the daughter of Raja Ratan Chand of Babhaur and had five children, two sons and three daughters. All three daughters were married to Raja Bijai Sen of Mandi. Kanwar Hardit Singh born on 1866, was married to Kanwarani Chandrika Kumari, daughter of Kanwar Rudra Singh of Koti. who died in 1884 and succeeded by Raja Raghunath Singh.

Raja Ragunath Singh : He was the elder son of Raja Jai Singh, born in 1865, succeeded as 28th Raja of Guler from 1884 to 1920. He was conferred the title of 'raja' as a hereditary distinction on 15th March 1909 by the Viceroy of India Lord Minto. He had one son and three daughters. First daughter was married to Raja Pratap Shah of Tehri Garhwal, second daughter married in 1900 to Raja Bijey Sen of Keonthal and third daughter married to Mian Shiv Singh of Bilaspur. Raja Ragunath Singh was succeeded by his son Baldev Chand. He died on 9th March 1920. The title of Raja was conferred on Raja Jai Singh, the head of the family, as a hereditary distinction in 1878. In 1920, Raja Baldeo Singh succeeded Raja Raghunath Singh was residing at Nandpur within his Jagir, but the Haripur fort was also in his possession having been made over to the family by the government in the time of Raja Shamsher Singh. *Raja Baldeo was first 'Viceregal Darbari' in the Kangra district.*

Raja Baldev Chand: Was born in 1884, and became 29th Raja of Guler from 1920-1959. He was 1st Viceregal Darbari in Kangra district, exercises criminal and civil power within his jagir and married to the daughter of Raja Pratap Singh of Tehri-Garhwal. He died in 1959. He had a son Tikka Shri Nardev Chand, who was born in 1922 and married to Rani Sanyukta Kumari. But he died in 1958. Tikka Nardev Chand had a son and two daughters namely Rajkumari Ravinder Kumari and RajKumari Pradeep Kumari. The other member of Guler royal family are - Mian Ajab Singh, Mian Ranjit Singh Guleria, Kanwarani Madhvi Kumari, Kumari Sonia Kumari, Balvinder Singh Guleria and Sardar Inder Singh Guleria.

Raja Brijesh Chand: He is the 30th hereditary raja and successor of Guler, since 1959. He married to Rani Raju Kumari. He has a son named Tikka Praduman Singh born on 8th October 1979 in Calcutta.

GENEALOGY OF GULER STATE

(29) Baldeo Singh (1920)

JASWAN STATE

It was founded by a cadet of the Katoch family about A.D. 1170, whose name was said to be 'Purab Chand'. Till then, the Kangra state had remained one and undivided, *the Jaswan was thus the first offshoot from the parent stem.* The capital of the state was at 'Rajpura' and *the clan name is Jaswal.*

Jaswan state occupied a fertile tract in the Jaswan Dun of the outer Hills now in Una district of Himachal Pradesh. It is a long and narrow track about 40 miles long and five miles broad, bounded on the South and West by Shivalik Hills and the Punjab plains, on the North by Siba and Datarpur and on the East by Kangra, Kutlehr, and Kahlur. It is a rich and fertile vale, drained by the river Swan and flanked on either side by sleeping hills.

The Rajas after Purab Chand were: Parab Chand, Biswa Chand, Gopal Chand, Sirbalik Chand, Dhula Chand, Sulochan Chand, Auki Chand, Udhan Chand, Nirpat Chand, Udharam Chand, Bhikh Chand, Sirkar Chand, Mubarak Chand, Gobind Chand, Bikram Chand, Anirudh Chand, that is *17 Rajas in 400 years.* Like other hill states, Jaswan was subject to the Mughals from the time of Akbar.

In 1572 A.D. when Jai Chand the Raja of Kangra was arrested and sent to Delhi, he put his son, Bidhi Chand, then a minor, in charge of Raja Gobind Chand of Jaswan, who successfully defended the fort of Kangra, till he was not made a handsome offer by Mughal commander, for the surrender of the fort. At a later time in A.D. 1588-89, Anirudh Chand of Jaswan, grandson of Gobind Chand, joined the rebellion led by Bidhi Chand of Kangra, embracing almost all hill states between the Chenab and the Satluj. The revolt was suppressed and on their submission, they were all pardoned, *Jaswan was also*

involved in the rebellion of A.D. 1594-95. After Anirudh Chand, the Rajas were Samir Chand, Man Singh, Ajab Singh, Ram Singh, Ajit Singh, Jagahar Singh, Abiram Singh, Jagrup Singh, Prit Singh and Umed Singh.

Jaswan state remained loyal to the Imperial Darbar and on its decline, Jaswan came under the control of the Sikhs. In 1786, Raja Sansar Chand acquired paramount power in the hills and Jaswan was no exception to that. Later on, when Gurkhas invaded Kangra, Jaswan gave helping hand to them against Sansar Chand. Umed Chand was in power at Jaswan at that time. After acquisition of Kangra fort in 1809 by Maharaja Ranjit Singh, Jaswan state was annexed to the Sikh kingdom in 1815 A.D.

In the same year, the Maharaja summoned all his forces, personnels and tributaries to assemble at Sialkot, but the Rajas of Jaswan and Nurpur failed to obey the summons, for which they were fined beyond their capacity. Raja Umed Singh submitted quietly to his fate and resigned his state, accepting a Jagir of Rs. 12,000/- annual value. In 1848 A.D. during the second Sikh war, Umed Singh joined hands against British authority, for which he and his son Jai Singh were deported to Almora, where they both died.

RAJA RAN SINGH: Raja Ran Singh was 29th Raja of Jaswan from 1863 to 1892, he was born in 1833 and received the jagir of Ramkot in Jammu when he married the Princess of Jammu. The title of "Raja" not recognized by the British for him. In 1877 the jagir in Jaswan, consisting of 21 villages in the Jaswan Dun was restored to the Raja, as well as the family garden at Amb and buildings at Rajpura at the request of Maharaja, Ranbir Singh of Jammu and Kashmir. He married 1stly, grand daughter of the Raja of Baghal and married 2ndly, grand daughter of Maharaja Gulab Singh of Jammu and Kashmir. He died in 1892. He had a son Raghunath Singh and a daughter who married to Tikka Arimardan Sen of Suket riyasat.

RAJA RAGHUNATH SINGH: Raja Raghunath Singh was 30th Raja of Jaswan from 1892 to 1918, was born in 1852. He was granted the personal title of "Raja" on account of his ancient lineage and marriage connection with the Maharaja of Jammu & Kashmir. The title did not grant him the right to administer law and order in his jagir, and such title could not be passed on by inheritance. His property was divided among six children. He married 1st in 1871 to a daughter of Maharaja Ranbir Singh of Jammu and Kashmir, married 2nd time in 1871, another daughter of Maharaja Ranbir Singh of Jammu and Kashmir, married 3rd time Rani a daughter of Raja Kishan Singh, Raja of Baghal and married 4thly in 1901, a daughter of Raja Ram Palji of Kutlehar, and had issues. He died in 1918. He got his daughter married to Raja Shyam Singh of Chamba. Rani Dharam Deiji Saheba (by a Jammu Rani), married Raja Ram Singh of Chamba. She died in 1980. Raja Lakshman Singh (by the 4th Rani). Rajkumar Santdev Singh (by the 4th Rani), born in 1907, he was mentally unsound and was looked after by his younger brother, Rajkumar Shivdev Singh. He died in 1960. Rajkumar Hardev Singh (by the 3rd Rani) was born in 1909, married and had issue. He died in 1970.

Rajkumar Shivdev Singh (by the 4th Rani) was born in 1910, he served in the administration of Maharaja Hari Singh of Jammu and Kashmir and retired as Chairman of independent India's Union Public Service Commission, married and had issues. He died in 1998. (Jammu) Kunwar Rameshwar Singh, married Kunwarani Kamla Kumari of Bhikamkor in Rajasthan, and had issue. He died 16th August 2009 in Jammu.

RAJA LAKSHMAN SINGH: Raja Lakshman Singh, 31st Raja of Jaswan from 1918 to 1945, was born in 1904, Head of the Royal family of Jaswan, resided at Ramkot; married 1st time to Rani Tottan Dei, daughter of Raja Kedar Chand of Chenani and married 2nd time a daughter of Major Kunwar Ishar Singh Jamwal, and had issue. He died on 4th June 1945 in Ramkot and was cremated at Khoon, seven kilometers from Ramkot. Rajkumari Hemlata Kumari (by Rani Tottan Dei), born in October 1923 and married to Tikka (later Raja) Udaibhan Chand of Datarpur, and had issue. She died in 2000.

RAJA CHAIN SINGH: Raja Chain Singh was 32nd Raja of Jaswan from 1945 to 1948, he was educated at Aitchison Chiefs' College, Lahore; he moved to Amb at the time of partition in 1947, leaving behind the royal palaces empty at Ramkot; married to Rani Mohan Kanwar, daughter of Sri Raji-Rajan Maharawal Sir Prithvi Singhji Bahadur of Banswara and Maharani Daulat Kanwar he had issues. He died in 2014. Tikka Sahib Nagendra Singh of Jaswan, he succeeded as Raja Nagendra Singh, Raja of Jaswan. Rajkumar Vijayendra Singh, married Rajkumarani Ritu Kumari, daughter of Kanwar Devendra Narain Singh of Tirwa. Kunwar Raghuvendra Singh was born on 30th July 1988.

(31) Chain Singh 1945 to 1948

SIBA STATE

Siba was a small state, bounded on the South by Jaswan, on the South-West and West by the Punjab plains, on the North by Guler and on the East by Datarpur and Kangra. It appears to be a patch of somewhat rough country, girdled on the North by the wide stream of the Beas river and bounded to the South by a steep ridge, raddled with dried up water-courses strewn with boulders.

Siba was an offshoot from Guler, founded in A.D. 1450 by a younger brother of the ruling chief of Guler, named Sibarn Chand (or Sibram Chand). *The clan's name is 'Sibaia'.* These were 25 Rajas in succession after Sibram Chand: Hemi Chand, Prahlad Chand, Jeet Chand, Udhan Chand, Autar Chand, Rup Chand, Manak Chand, Nirmadh Chand, Jai Chand, Kailash Chand, Prag Chand, Sansar Chand, Narain Chand, Trilok Chand, Kishan Chand, Jai Chand Prithi Chand, Amar Chand, Jaswant Chand, Bhag Singh, Lakel Singh, Madho Singh, Sher Singh, Gobind Singh and Ram Singh.

Very little is known of its early history. The state however finds mention in Jahangir's Memories. The Mughal emperor Jahangir accompanied by empress Noor Jahan visited Siba in A.D. 1622. The state seems to have preserved its independence all through the Mughal period. It was subjected to the Sikhs like the other hill states, and to Sansar Chand of Kangra from 1786 till Gurkha invasion in 1806. The Raja of Siba at that time was Gobind Singh. In 1808, Raja Bhup Singh of Guler invaded Siba and annexed it. In 1809, it came under Maharaja Ranjit Singh and in 1830, he restored it to Raja Gobind Singh. Raja Dhian Singh, the Prime Minister of Maharaja Ranjit Singh, had obtained the princesses of the Siba family in marriage.

Siba tributary to the Sikh Army of Maharaja Ranjit Singh, 1830-1845. In another words Siba State was also divided into two parts one part that is 1/3 rd of the State was with Raja Gobind Singh and 1/4th was given to Mian Devi Singh and fort was under Sikhs (Maharaja Ranjit Singh's Army). So the Siba State divided into two parts, one is Siba State and the ruler was Raja Gobind Singh, the other is Siba Jagir and the ruler was Mian Devi Singh. So two branches were created automatically i.e. *Koi Branch and Kotla Branch.* After the death of Raja Gobind Singh, his son Raja Ram Singh became Raja of Siba State. He married with one Rani namely Kutlehri Ganga Daee, she died in samvat 1936. Raja Ram Singh fought against the Sikhs in the second Sikh war and was able to take from them the Siba Fort, which until they had garrisoned; he also ousted his cousin Mian Devi Singh from his jagir in Kotla. Later on, in 1848, English Rulers incorporated Siba Jagir (territory of Mian Devi Singh) alongwith its other sister states namely *Datarpur, Jawan, Guler.* Thereafter, the English rulers linked Datarpur to Siba Jagir under the joint name of Dadu-Siba presently known as Dada-Siba and both incorporated in the British district of Kangra.

Raja Ram Singh, however, with the help of his brother Sunder Singh re-

tained the state and the Royal Chair of Raja. Raja Ram Singh also restored the Radha Krishan Temple in Siba and to have built the palace on the hilltop. On appeal to the British Vice Royal at Lahore, only the share of Siba Jagir i.e. 1/4 th of Siba State was later on restored to Bijai (Vijay) Singh son of Mian Devi Singh by the British in 1858 but did not acknowledge him as Raja. Later on, after the creation of Dada-Siba, the Britishers created Jai Singh son of Bijai Singh as Raja of Dada-Siba Jagir but Siba State remained an Independent State. Evidence is very much present as Siba State is very much shown as Independent State in the map of Punjab State Agencies, 1946. When Britishers were planning for another attempt to capture Siba State of Raja Ram Singh, Sunder Singh, brother of Raja Ram Singh, who was also looking after the seat of wazir of Siba, went to Lahore in a horse race. Sunder Singh stood first there. Thakur Sunder Singh often visited Lahore via Chak Ladian, famous village within the Hoshiarpur District where he had warm welcome by the local people. Chak Ladian was Muslim gujjar populated area. On return to his home in Koi (Siba), he saw Britishers with the members of Dada-Siba royal family, on the bank of river Beas, on the border of Dada-Siba (Jagir) and Siba State, thereafter the whole atmosphere turned into an armed conflict in which two Britishers and one of the royals, who belonged to Koi was killed and he was held responsible for killing with his gun. There were no rule under which the Royal was punished for killing some one, therefore, as a result the English played a game and exiled Thakur Sunder Singh from Dada Siba (Jagir). As he also killed one member of his own family (cousin), he showed his inability to reside in Siba.

He hided himself and migrated to village Chack Ladian of Kapurthala Princely State, presently situated in Hoshiarpur District of Punjab. There he took shelter in an Inn of Puran Shah Suthara, Head of Suthra community of village Chack Ladian. After few months, he purchased a piece of land in between Village *Chack Ladian* and *Chack Nur Ali* from one Jagirdar and thereafter, resided in Tents and made their own kingdom presently known as village Tantpalan. Raja Ram Singh died without heir in A.D. 1874 and his Jagir was transferred to Bijai Singh. He was followed by his son, Raja Jai Singh, who died in 1920, and after him, his son Raja Gajindar Singh, died in 1926. Raja Sham Singh then became head of the family. The state is generally spoken as 'DADA-SIBA' named after the two adjoining places.

(30) Sham Singh

DATARPUR STATE

A midget state was surrounded on the South by Jaswan, on the West by Siba and Punjab Plains, on the North by Guler and on the North-East by Kangra. It was about half the size of Jaswan, less fertile, but possessing the same physical characteristics. The territory is cluster of round undulating hills near Datarpur.

Datarpur was an off-shoot from Siba. It was founded by Datar Chand in about A.D. 1550. Manak Chand, Raja of Siba, had three sons-Narmuda Chand, Ram Chand and Lakhudah Chand. The third son had his residence in Dada, within the Siba state. To him, in the third generation was born Datar Chand. The clan name of the family is *'Dadwal'* from Dada, their original name. After Datar Chand, ten Rajas ruled in succession - Ganesh Chand, Chatar Chand, Udai Chand, Prithi Chand, Jai Chand, Dalel Chand, Ugar Chand, Nand Chand, Gobind Chand and Jagat Chand.

Nothing much is known about the history of the state from 1550-1785 A.D. In 1786, the state came under the control of Raja Sansar Chand. In 1806, *Gobind Chand sided with the Gurkhas* in their invasion of Kangra. In 1809, state became subject to Maharaja Ranjit Singh who reduced it to the status of Jagir. Gobind Chand died in 1818 and then Ranjit Singh decided to annex the territory.

Raja Jagat Chand: He succeeded his father as 11th raja of Datarpur in 1818 and remained head of the family till 1877. In 1818 he surrendered the state and received a Jagir of Rs 4600/-per annum revenue for his maintenance. In 1848, When he revolted along with Katoch princes, was deported to Almora, where he died in 1877. He married and had four sons and a daughter. They were- Mian Devi Chand (born in 1838), Mian Hira Chand (his daughter was married to Raja Bijai Sen of Mandi as sixth wife) Mian Udham Singh (born in 1838 and granted a pension of Rs 600/- per annum, his family resided at Prithipur in Hosiarpur district), Mian Man Chand (died in 1857), and a Raj Kumari, who was also married to raja Bijai sen of Mandi as his first wife on 21st July 1859. Raja Jagat Singh continued holding this Jagir till 1848. His son Mian Devi Chand was born in 1838.

Raja Devi Chand: Born in 1838, he became the 12th raja of Datarpur in 1883. He was married and had two sons . They were Mian Surma Chand and Raghbir Chand who was granted a pension of Rs 420/- per annum by the British Government, was married and had five sons and a daughter. They were- Mian Baldev Chand (who later on succeeded as head of the princely family of Datarpur), Kumari (unknown) married as seventh wife of raja Bijai Sen of Mandi, Mian Balraj Chand (born in 1866), Mian Sheorai Chand (born in 1870), Mian Hira Chand (born in 1877) and Hari Balraj Chand (born in 1881). Raghbir Chand died in 1910. Devi Chand died leaving two sons-Surma Chand (settled at Jammu) and Raghubir Chand (settled at Mandi). A younger branch descended from a third son Udham, Singh, resided at Pirthipur in Hoshiarpur district.

Mian Surma Chand: He was 13th raja of Datarpur, resided in Jammu, a General in the army of the Maharaja of Jammu.

Raja Baldev Chand: He was 14th raja of Datarpur born in 1910, was son of Mian Raghbir Chand, was married and had a son named Tikka Durga Chand. Raja Baldev Chand died in 1960.

Raja Durga Chand : He succeeded raja Baldev Chand as 15th raja of Datarpur. He married to the daughter of the raja of Bilaspur and had three sons and two daughters. They were- Tikka Udey Bhanu Chand (born in 1923), Kanwar Surinder Chand, who married Kanwarani Tara Devi daughter of Colonel Rai Hoshiar Singh Pathania of Reh, served in the Jammu and Kashmir army and A.D.C to then Maharaja Hari Singhji of Jammu and Kashmir and had two sons named Kanwar Deepak Singh and Kanwar Oma Chand, (he was the younger son of Durga Chand, who died at the age at 27).

Raja Udey Bhanu Chand: Born in 1923, he became the 16th raja of Datarpur and married to Rani Hemlata Kumari, a daughter of Raja Lakshman Singh of Amb in Jaswan and had two sons named Tikka Rajeshwar Singh and Kanwar Rameshwar Singh.

Raja Gyanendra Chand: Became the 17th raja of Datarpur, he is currently owner and head of the royal family of Datarpur.

GENEALOGY OF DATARPUR

(1) Datar Chand (1550 A.D.)
(2) Ganesh Chand
(3) Chattar Chand
(4) Udai Chand
(5) Prithvi Chand
(6) Jai Chand
(7) Dalel Chand
(8) Ugar Chand
(9) Nand Chand
(10) Gobind Chand (died-1848)
(11) Jagat Chand (died - 1877)
(12) Mian Devi Chand (died -1883)
(13) Surma Chand
(14) Baldev Chand
(15) Durga Chand
(16) Udeybhanu Chand

NURPUR STATE

A small state nearly 48 km long and twenty miles wide was bounded on the North-East by Chamba, on the East and South-East by Guler, on the South by Gurdaspur district of Punjab and on the North-West by Basholi. Nurpur state once included Pathankot and a large tract on the plains, also the whole of the present Nurpur tehsil with the addition of Shahpur and Kandi, now in Gurdaspur and a small tract to the West of the Ravi, called Lakhanpur, are now in Jammu and Kashmir state.

The original capital and nucleus of Nurpur was *'Pathankot'* of which the name in Mughal time was Paithan. From the various account, it may be believed that *'Audumbara'* was the ancient name of the whole district, in which were situated the two towns of Nurpur and Pathankot, as known by their present name. The old Hindu name of Nurpur was 'Dhameri'. The name was changed to Nurpur during the period of Raja Jagat Singh by Jahangir in honour of his wife, Noor Janan. The clan name of the Nurpur Rajas is *'Pathania'* and that it is derived from the place name, **'Paithan'**. The transfer of the capital from Pathankot to Nurpur occurred in the time of Akbar, but it does not mean that Nurpur was founded at that time. It was in existence probably since ancient period. The Rajas of Pathankot and Nurpur were called 'Pandi' or *descendants of the Pandvas* - a claim which they share with the royal families of Basholi, Kullu, Bhadu, Bhadrawah, Mandi and Suket. They claim their descent from the Tomar Rajas of Delhi.

From the Vishnupurana and the *Brihatsamhita* of Varahamihira we learn that

in ancient days the district was called Audumbara, probably because of the abundant growth of the *udumbara* tree *(ficus gloerata)* or on account of the ruddy complexion of the inhabitants (from *audumbara-* copper coloured). This statement is also strengthened by the legends on the coins that were found in the area. They give the name of Audumbara, and since not a single specimen of them has yet been found elsewhere, that name must have been the name of this tract.

Numerous coins of great antiquity found in and around Pathankot prove that it is one of the oldest sites in the Punjab and it must always have been a place of great significance situated as it is in the foot of the hills, between the Ravi and the Beas, where the trade routes enter the hills. The discovery of numerous ancient coins of Pathankot prove its antiquity. Among the coins found at Pathankot by Sir Alexander Cunningham were a Greek Zoilus with Goudophares. The Mohammadan coins found there range from Keusru Ghazni vide down to Shah Jahan and the coins of Kangra Rajas from Pithama Chandra to Triloka. There was a single specimen of Indo-Scythian period, with the name in Nagari letters of Sri Vagamarisa, which reminds one of the name of Barkamaris mentioned by Rashid-ud-Din in his work **Mujmal-ut-Twarikh.**

But the most fascinating coins found at Pathankot were the ancient coins of Pathankot itself. "These coins are thin pieces of copper either square" or oblong, with a temple on one face and an elephant on the other. Beside the temple are symbols of Swastik and Dharama and underneath is a snake. Before the elephant there is tree surrounded by a Buddhist railing with an Aryan legend on two sides, of which one half reads distinctly "ODUMBARA".

Various scriptures go to prove it that this part of the world in the beginning was occupied by odumbaras. It is also probable that odumbara was the ancient name of whole tract in which were situated two towns, presently known Nurpur and Pathankot. It is also probable that ***Pratishthana*** was the ancient capital of the state of which we know the name of at least one ruler from the coins found at Pathankot. It is 'Dharaghosha' on whose coins is found the following legend. *"Mahadevasarjna Dharaghosha Audumbaras"* meaning "of the Great lord, king Dharaghosha, Prince of Audumbaras". This legend occurs on both the obverse and the reverse of the coin in the Kharosthi and Brahmi script which were used concurrently in the Punjab. Audumbra, probably continued in use as the name of the state down to the times of the Mohammedan invasions after which pratishthana or Paithan came into prominence, as during the reign of Shah Jahan the state was still called *"Mau* and *Paithan"* and not till a still later period was it designated by the name of Nurpur. The transfer of the capital from Pathankot to Nurpur, then called *Dhameri,* occurred in the time of Akbar.

But there is no reason to believe that Nurpur town was founded at that time, because it has its own history and probably was the seat of earlier dynasty. Its former name *'Dhameri'* has been spelt variously:- *Dhamal, Damal, Dahmari, Dahmeri, Dhamari, Dhammeri.* In *"Tuzk-i-Jahangiri"* it is referred as Dhameri, a fort which is reflected in the works of the old European travellers as *"Temmery".*

The *Pathaniyas* or Chiefs of Nurpur claim descent from the *Tuar* clan of the Rajputs. The latter were the first historical masters of the Rajputs. From a popular saying it can be extracted that Delhi was first under the Tuars, then it passed to the hands of the Chauhan and then it was forcibly taken by the Mughals. Tradition says that some enterprising members of this clan came over and settled in this district. Their first settlement seems to have been at a place now known by the name of Pathankot, some sixteen miles to the south of Nurpur. The word kot did not originally

form part of this name, which was simply Pathan or Paithan. This term Paithan was current in the seventeenth century and, as we learn from the *Ain-i-Akbari* and the *Badshah -namah*, it designated the whole tract forming a district pargana of the Bari Doab, which yielded a revenue of 7,29,7,015 dams (40 dams =1 Akbari rupee) and furnished 250 horses and 2,000 foot soldiers.

The early history of Nurpur is very uncertain. Most of it, upto the reign of Raja Bakht Mal in Akbar's time (A.D. 1556) is only conjectural and even the names of the rulers are not certain as is revealed by vast variations found in two lists of Rajas, one prepared by *Sir Alexander Cunningham* and the other given by *Mian Raghunath Singh* in his vernacular history *'Twarikh-i-Rajan-i-Pathania'*.The founder Raja of the Nurpur state was **'Jhet Pal'**, younger brother of the reigning Raja of Delhi, who left his home, in what seems to have been the fashion of the time and founded the state in about 1000 A.D. The Rajas who followed Jhet Pal were - Khetr Pal, Sushvin Pal, Jagat Pal, Ram Pal, Gopal Pal, Arjan (Ujjain) Pal, Varsha Pal, Jatan Pal, Vidhurath Pal, Jagan Pal, Kirat Pal, Kakho Pal and Jas Pal. Very little is known about these Rajas, except the last named Jaspal, who ruled from A.D. 1313-1337 and was contemporary of *Ala-ud-din Khilji*. Jas Pal had nine sons.

Kailash Pal (A.D. 1353-97): He is accorded the credit of having defeated and wounded the famous Mohammedan General, named 'Tatar Khan', Governor of Khorasan, who invaded the Punjab. This Raja also constructed the irrigation channel from the Ravi to Pathankot.

Nag Pal (A.D. 1397-1438): He was the eldest son of Kailash Pal and as is alleged, received his name from the fact that a Nag (snake) was born along with him. The snake was ultimately put into a baoli (well) and is still regarded as the *Kulaj* (family Deity) of the Pathania clan.

Prithi or Phato Pal (A.D. 1438-73): Nothing much is available about his reign.

Bhil Pal (A.D. 1473-1513): Bhil Pal was a contemporary of *Sultan Sikandar Lodhi* of Delhi (A.D. 1488-1516) and is said to have assisted him in his wars.

Bakht Mal (A.D. 1513-58): There is reference about him in the *'Akbarnama'*. Like his father, he attached himself to the Lodhi dynasty. On the conquests of Babar in A.D. 1526, the state must have come under Mughal control, but on the flight of Humanyun in A.D. 1540, and the accession of Sher Shah Suri, he extended allegiance to the Sur dynasty. The famous fortress of *'Maukot'* was erected in the state by *Salim Shah Sur* (A.D. 1545-53) son of Sher Shah Sur; during the reign of Bakht Mal. On the return of Humanyun in A.D. 1555, he was opposed at Sirhind by Sikandar Shah Surm who was defeated and fled to the Shivalik hills. In A.D. 1557, when Akbar came to power, Sikandar Shah had taken refuge in the fortress of Maukot. Bakht Mal supported him, but ultimately had to surrender to mighty force of Mughals. After his surrender, Sikandar Shah Sur retired to Bengal, where a Jagir was assigned to him, and Bakht Mal was taken as prisoner to Lahore and there he was put to death by Bairam Khan in A.D. 1558. His brother, Takht Mal, was put in his place. Bakht Mal is said to have built the fort of *'Shahpur'* on

the river Ravi, naming it after the Shah Sur family.

From the succession list given by Cunningham we find that Kiratpal, a Pathania Raja, was called Rana, which leads us to believe that Pathania Chiefs held a secondary rank and were probably vassals of their more powerful neighbours the Kings of Trigarta (Kangra). The Plains being open to incessant attacks, they selected Mau, some six miles to the north of Pathankot, on a ridge of low hills running to the east of Chakki river, as a place of seclusion and safety. Here they built a stronghold, which, owing to the dense thorny jungles and hills around it proved a source of trouble and defied the imperial power of Delhi, so much so that an expedition against it was regarded as a call of death. *Mau ki muhim yaro maut ki nishani hai.*

As masters of Paithan and Mau the Pathanias were first noticed in the beginning of Akbar's reign, when Raja Bakht Mall is mentioned as a supporter of Sikandar Sur whom Akbar conquered. They were called Zamindars of Mau and Pathan by the Muhammadan chronicler.

Pahari Mal (A.D. 1558-80): He has been mentioned as *'Bihari Mal'* by Cunnigham and Takht Mal in the Mohammedan histories. His period was quite peaceful and trouble free. Pahari Mal was the first to realize the danger of having his capital at Pathankot, so near to the plains, but before he could transfer it to Nurpur (Dhameri), he passed away.

Bas Dev (A.D. 1580-1613): He was also called 'Basu'. Soon after his accession, he carried out his father's design into execution, by *transferring the capital to Dhameri*, which his son Jagat Singh, renamed *Nurpur* in the honour of the emperor Jahangri's visit in A.D. 1622, Raja Basu revolted against the Mughals quite a number of times— in A.D. 1585, in 1589-90, in 1594-95, in 1602-03 and in 1603-04. Most of these revolts were on the instigation of Prince Salim against his father. When he revolted for the first time against 'Akbar' the Mughal emperor, the latter sent his Commander-in chief Hassan Beg Umri to teach a lesson to Raja Basu. But before anything could had happen, Raja Basu approached Todar Mal for mercy, which was granted to him by Akbar.

In his second revolt against Akbar, Mirza Rustam and Asif Khan were sent by the Mughal emperor against Raja Basu. But they owing to their old friendship with the Raja, refused to go. On this Raja Man Singh's son Jagat Singh was appointed Commander of the army to capture fugitive Raja. In 1597, he captured 'Mau fort' located on Pathankot-Nurpur road on the Eastern side of the *'Chakki'* river. This fort was built by Islam Shah Sur, son of Sher Shah Sur. Raja Basu fled to the forest. Raja Basu was very close to Jahangir, even when he was prince. The Raja was also deputed by Jahangir to capture Khurram (Shah Jahan) on his flight from Agra in March A.D. 1606.

During the reign of Akbar, Raja Basu was not employed on any military expeditions. But in A.D. 1611, Jahangir sent an army under Raja Basu on the recommendation of Abdullah Khan against the Rana of Mewar (Udaipur).

In A.D. 1613, Raja Basu died in the *'thana' of Shahbad* before achieving victory over the rebel Rana. But according, to the another version, he died in *'Dakhan'*, while he was on an expedition, on the order of Jahangir. He built the fort of Nurpur, a canal was constructed from the river Ravi to Pathankot, and planted a garden of mango trees, known as *'Raja ka Bagh'*. He had three sons, named Suraj Mal, Jagat Singh and Madho Singh.

Suraj Mal (A.D. 1613-18): Among the three brothers, no one was capable in the eyes of Jahangir to become successor of Raja Basu. Ultimately, Suraj Mal was favoured. As the seize of Kangra fort was then in progress, Suraj Mal was ordered to join **'Murtaza Khan'** and **'Shaikh Farid'**, the commanders of the Mughal army, along with his contingent. The Raja proved ungrateful for the favours conferred upon him, soon began to stir up trouble in the Mughal camp. There upon Murtaza Khan sent a complaint to the emperor, of Suraj Mal's disloyalty. On the other side, Suraj Mal made a petition to prince Khurram to protect his life in the imperial court, and this was done. Soon afterwards in A.D. 1616, Murtaza Khan died at Pathankot and the seize of Kangra fort was abandoned for the time being. Suraj Mal on his recall to the court was attached to the prince's force, who was then about to leave to the *Dakhan* (Deccan) in October, A.D. 1616. On his return from *Dakhan* in A.D. 1617, he along with **Shah Quli Khan** and **Mohammed Taqui** dispatched to lay seize to the Kangra fort.

It was a great success for Suraj Mal in his design to getting back to the hills in order to stir up trouble. Soon after reaching Kangra, Suraj Mal began to quarrel with Shah Quli Khan and Mohammed Taqi. On Suraj Mal's request, Mohammed Taqi was recalled. Now finding himself in a most favourable position, he revolted against the Imperial authority and ravaged most of the *praganas* at the foot of the hills. The Kangra territory at that time was the Jagir of Noor Jahan's father *Ghiyas Beg.* (Itmad-ul-daula).

Jahangir sent force under **Sunder Das Rai Raiyan** (Raja Bikram Jit) to suppress it. Jagat Singh, younger brother of Suraj Mal was invited from Bengal to take part in this campaign, with the promise that his father's territory would be given to him, if he remained loyal. After displaying initial courage, Suraj Mal fled and took refuge in Chamba state, where he died soon after. Meanwhile, the Rai Raiyan continued his seize over smaller forts in territory, all of which were speedily captured, the last to fall was that of Kotla. It was held by Madho Singh, the youngest son of Raja Basu and was taken after three days fighting. Madho Singh, who had escaped then to Chamba, also surrendered.

The Raja of Chamba returned all property and money belonging to Suraj Mal to the Mughal commander. According to another version in 1618, Bikramjit captured Mau, Nurpur and Kangra. Raja Suraj Mal fled to the higher hills. In 1619 Suraj Mal along with his younger brother Madho Singh was captured by Bikramjit and Mughal emperor Jahangir awarded them death penalty.

Jagat Singh (A.D. 1619-46): In the beginning, Jagat Singh was in the service of Mughal court. Later on, when Raja Suraj Mal revolted, he was recalled from Bengal and then sent to the Rai Raiyan, who was actively engaged in suppressing the revolt and was afterwards ordered to assist in the seize of Kangra fort. On its capitulation in November A.D. 1620, he seems to have taken up his residence at Nurpur. In A.D. 1622, emperor Jahangir and his consort, Noor Jahan paid a visit to the valley.

In A.D. 1623, Prince Khurram rebelled against his father Jahangir, and Jagat Singh, who had attached himself to the prince, was sent to raze the chiefs of Kangra hills. Jahangir sent **Sadiq Khan**, Viceroy of Punjab, to suppress the revolt. Madho Singh, the younger brother of Jagat Singh, was conferred on the title of *'Raja'* and sent to assist the operations. Raja **Rup Chand** of Guler was also engaged in the suppression of this revolt.

In the Chamba annals, it is stated, that there was war with Jagat Singh for twelve years, from about A.D. 1613 onwards. It ended in a final invasion of Chamba by Jagat Singh in A.D. 1623, assisted by Mughal troops, and a battle was fought at 'Dahlog' near Dalhousie. The Raja on *'gaddi'* (throne) at that time was Balabhadra (A.D. 1589-1641). But for the time being, Janardhan, his son, was installed as Raja, who fled from the capital on the arrival of Nurpur army.

Later on, on the pretext to conference, Raja Jagat Singh killed Janardhan. *Basholi was the first state to come under the control of Jagat Singh in A.D. 1614-15 when Raja of Basholi Bhupat Pal was arrested on a false accusation.* In about 1627 A.D., when Bhupat Pal returned to Basholi in disguise, he expelled the Nurpur garrison and recovered the state. But it is said that when Bhupat Pal went to Delhi to pay his regards to the emperor, Jagat Singh got him assassinated. On the accession of Shah Jahan in A.D. 1627, Raja Jagat singh rendered valuable services to the throne by assisting in a number of army expeditions. Raja Jagat Singh, who wanted to establish himself as undisputed authority, revolted against emperor along with his son **Rajrup** in A.D. 1640. When this news reached Shah Jahan, he sent his youngest son, **Murad Baksh**, to suppress the revolt.

Jagat Singh who had long been preparing for this emergency, had strengthened the three principal forts in his territory, viz; *'Maukot', 'Nurpur'* and *'Taragarh'*. Jagat Singh made a brave resistance to the overwhelming force sent against him, but ultimately surrendered. He then along with his sons, submitted to the clemency of the emperor, and after appearing in *Darbar* (royal court) with halters round their necks, they were forgiven and had their honours restored. The fort of Taragarh was erected by him on the summit of a high mountain. Prince Dara Shikoh visited the whole of territory on November 23, 1642 A. D. On the basis of his report, 'Najabat Khan' was appointed *'Faujdar'* of the hill country of Kangra.

The fort of Maukot was completely demolished by Mughal forces, while Nurpur and Taragarh forts continued in use till after the 1857 revolt, when

the former was dismantled by order of the government. Taragarh was held by state troops till 1863-64 and was not dismantled till 1872. In 1642, Jagat Singh was made to accompany prince Dara Shikoh to Quandhar (now in Afghanistan). In A.D. 1645, he was appointed to reinforce the 'Amir-ul-Umara' (Ali Mardan Khan) on his expedition for the conquest of 'Bakh' and 'Badakhshan'. In this expedition, he was also accompanied by his younger son, *Bhau Singh. Raja* Jagat Singh got wide acclaim for his achievements in this expedition. On his return journey, when he reached Peshawar in A.D. 1646, he died there soon afterwards. *Under Jagat Singh the Nurpur state reached the zenith of its prosperity. His strong personality commanded him to the favour of the Mughal emperor and he is said to have possessed great influence with Noor Jahan Begum, whom he addressed as beti (daughter). His warlike exploits find honourable mention in the form of subject of a poem. 'The Rhapsodies of Gambir Rai—the Nurpur bard' (A.D. 1650) was written few years after his death.* The *'Dhampal Ashram'* was founded by Narain, a Brahmin of Kahnuwan in Gurdaspur district. The temple in this ashram was built by Raja Jagat Singh about A.D. 1646. The *'Ashram'* was a double storeyed building. On the first floor, the 'Rang Mahal' or painted palace was built in A.D. 1650.

Rajrup Singh (A.D. 1646-1661): After the death of Raja Jagat Singh his son Rajrup was given the title of Raja by Shah Jahan. From time to time, his status was enhanced with more personnel and horses. He was attached to a number of expeditions with Mughal generals and princes.

In A.D. 1657, the serious illness of Shah Jahan precipitated a conflict among his four sons. Although there are a number of stories about Rajrup's attachment with Mughal princes after the death of Shah Jahan, yet it is undoubtedly said that the last years of his life, he spent in the service of Aurangzeb. He died in A.D. 1661. Bhau Singh, the younger son of Jagat Singh, rendered good services in the campaign in Badakhshan and even continued after his father's death. In A.D. 1650, he received from Shah Jahan a fief, the portion of Nurpur state, including the *taluqas* of *'Shahpur', 'Palahi'* and *'Kandi'*. The capital of the state was Shahpur. *In A.D. 1686, Bhau Singh embraced Islam, receiving from the emperor the name of 'Murid Khan'.* The state was annexed by the Sikhs in A.D. 1781 and the descendants of the ruling family made *Sujanpur* near Madhopur as their residence.

Mandhata (A.D. 1661-1700): On the death of Raja Rajrup Singh, his son, Mandhata was recognised as Raja by the emperor. He also held high offices under the Mughals. *Half of the 'Rhapsodies' in praise of his grandfather were written by him. He was the last of the Pathania Rajas to hold office under the Mughal emperors, or to receive distinction from them.*

Dayadhata (A.D. 1700-35): There is nothing in detail about the reign of this Raja in the records. He had four sons, named Prithvi Singh, Indar Singh, Mahan Singh and Sunder Singh, all by different *'Ranis'* (Queens). Indar Singh was married to a daughter of the Kangra Raja and settled in that state,

becoming the ancestor of the 'Reh' branch of the family.

Prithvi Singh (A.D. 1735-89): Prithvi Singh was recognised as the heir apparent, and became Raja on his father Dayadhata's death. The Mughal power at that time was in the throes of dissolution, and in 1752, the Punjab was ceded to Ahamd Shah Durrani by his namesake, the emperor of Delhi. Encouraged by the disorder in the plains, all the hill chiefs asserted their independence and took by force the territory of which they had been deprived under Mughal rule. On the Maratha invasion of the Punjab in A.D. 1758, **'Adina Beg Khan'** was appointed Viceroy and for a short time, he brought the whole of the hill states under his control. But he died in the same year and they again recovered their freedom. In A.D. 1770, Jassa Singh Ramgarhia succeeded in making several of them his tributary, probably including Kangra, Nurpur and Chamba. On his defeat in 1775, the supremacy passed to **Jai Singh Kanheya,** who retained it till 1786. Nurpur about the same time (1785) succeeded in acquiring from Basholi a portion of territory to the West of the river Ravi called **'Lakhanpur'**, which was regarded as Nurpur territory down to 1846-47. According to the vernacular history of the state, Feteh Singh predeceased his father, leaving a son Bir Singh, who succeeded Prithvi Singh in 1789.

Bir Singh (A.D. 1789-1846): Bir Singh was fated to be the *last ruling chief of Nurpur.* Raja Sansar Chand in A.D. 1809 had to give the fort of Kangra and 66 villages to Maharaja Ranjit Singh for his help against Gurkhas expulsion from the state. With the acquisition of this fort, he also acquired the supremacy over all the hill states between the Ravi and the Satluj. Soon afterwards, Ranjit Singh began to manifest his hostile design towards the Hill States and in 1812, he came in person with an army to Dina Nagar to exact tribute from the hill Rajas and Nurpur Chief was called upon to pay Rs.40,000/-.

In 1815, when the Rajas of Nurpur and Jaswan failed to attend the military assembly at *'Sialkot',* a fine was deliberately imposed upon each, which was impossible for them to pay. The Raja of Jaswan quietly surrendered his state, but Bir Singh tried with utmost difficulty, even selling household goods to pay the fine unsuccessfully. Ultimately he was forced to make over his state and offered a Jagir. In 1816 A.D., he was at Ludhiana, plotting with 'Shah Shuja', the exiled Amir of Kabul, against Ranjit Singh. For this, he was expelled from Ludhiana, whereupon he settled in 'Arki', one of the Shimla hill states, where he lived for ten years. In 1826, Bir Singh reached Nurpur in disguise and raised a revolt. Maharaja Ranjit Singh sent **'Dessa Singh Majithia'** and Bir Singh fled to Chamba. Fearing the consequence, the Chamba chief delivered him up to Ranjit Singh, who kept him confined in 'Govindgarh fort' at Amritsar for seven years. Bir Singh was married to a sister of the Raja of Chamba Charhat Singh. He only secured the release of Bir Singh by paying a sum of Rs. 85,000. He was offered a Jagir at *'Kathlot',* but again declined.

Nurpur Fort: This was the last and chief stronghold of this warlike tribe. It is situated on a precipitous rock, which forms the western end of the

spur on which the town is built. *Abu-I-Fazl* mentions Dhameri, but nothing about this fort. From this it appears that this stronghold had no existence at that time. From the *Tuzuk-i-Jahangiri* we learn that it was founded by Raja Basu. When Jahangir visited Dhameri on his return from Kangra in A.D. 1622, a considerable portion of it had already been constructed; and, being very pleased with the site, the Emperor granted a lakh of rupees from the Imperial Treasury for constructing good mansions worthy of the place. The whole building, however, was not brought to completion by one Chief. The difference in age of the extant portions is clear, and shows that the succeeding Rajas must have made several additions. That Suraj Mal did so, is evidenced by the Tuzuk. The *Badshah Namah* bears testimony to Jagat Singh's further fortifying the place when he was fighting against the Emperor. As mentioned above, an edifice in the western end of the fort is said tc have been built by Raja Mandhata. It goes by the name of *Thakurdwara*, a term generally applied to the shrines dedicated to Visnu (Thakur=Lord). The image of Krishna, called Brajraj, which it contains, is of black marble and a good piece of workmanship. The appearance of this building is that of an audience hall -*Diwan -i-aam* and, if it was not intentional to give such a shape to the sanctum, it must have served as such originally.

Its main feature is the fresco ornamentation representing scenes of Krishna's life and, in one of the spandrels, a Hindu Raja, probably the founder himself. Three plain rooms of ordinary dimensions to the north of this structure are also used as sanctums. One of them contains an image of Devi, the pedestal of which bears an inscription in Sanskrit and in the Nagari alphabet dated Sam. 1667 (A.D. 1610). To the south of the *Thakurdwara*, there are two miniature temples, which are in a good state of preservation. Two gates to the east, except the portion which was later used as a School building and Post Office with Public Works Department rest house, obviously erected after the British conquest, is all in ruins. The fort, along with several other strongholds in the district, was blown up in A.D. 1857. By far the most interesting building in the fort is the ruined temple that was excavated in 1886 by Mr. C.J. Rodgers, Archaeological Surveyor to the Punjab Government. On excavation, some very interesting features were found in the basement and upper portion of the ruined structure.

In March 1904, at the suggestion of Dr. Vogel, this structure was dismantled by Mr. Farley, Executive Engineer, Kangra. The space round the temple was also widened out, and thus all the decorative details on the basement were exposed and made accessible to the camera. The temple was 117 feet long and 50 feet wide externally. It was built of red sandstone and consists of an *ante room* (*mandapa*) leading through a central chamber (*antaralaya*) to the sanctuary (*garbhagriha*) octagonal in plan with recesses at the angles. Its plan does not resemble that of any other shrine in the Punjab, but was very similar to those of the famous temples of Govind Dev at Bindraban and Hari Dev at Govardhan near Mathura. The main entrance must have been at the south end, though there were entrances direct into the central

room on the east and west sides as is the case in the Hari Dev temple. But at that time the stairs were extant on the west side only. That it had entrances at the south and east sides was evidenced by the stones that were preserved and shaped like those found on the thresholds inside the temple.

The temple was most probably dedicated to *Vishnu*. It has no signs of *Shiva* or *Shakti* worship. Krishna, the Divine cowherd attended with milkmaids (*gopis*), cows etc., is represented on it. This we should expect in a Vishnuite shrine. The pedestal, moreover, proves that the cella contained an image and not a *linga*. And it should be remembered that Shiva is mostly worshipped under the form of the phallic emblem. Besides, tradition says that the image of Brajraj in the Thakurdwara, noticed above, originally belonged to this sanctuary. There are no adequate proof to substantiate that temple was destroyed by Mahmud of Ghazni. Because the temple closely resemble to that of Hari Dev temple built by Raja Bhagwan Das about A.D. 1557, and of the Govind Dev shrine, erected by Man Singh in 1590 A.D, during the tolerant reign of Akbar. The ornamentation also is of the mixed Hindu Mughal style, which was in vogue at the time of the said Emperor and his immediate successors.

If the temple was built, as it very probably was, by Raja Basu, the founder of the fort, it was suppressed, i.e., in (A.D. 1618). For we learn from the Tuzuk that Jahangir issued peremptory orders to the leaders of his host, who quelled that insurrection, to pull down from the very foundation, the fortifications and the buildings which Suraj Mal or his father had erected, and these orders must have been obeyed.

In the autumn of 1845, the Sikh army crossed the Satluj to invade British territory and in four hard fought battles, their power was broken. The ruling chiefs who had been ousted from their dominions by the Sikhs had long looked forward with eager expectation to the British in the belief that they would all be restored to power. It was a great disappointment to them all. When they came to know that British meant to retain them, they all became disaffected and on being approached by the leaders of the revolt in 1848, they lent a willing ear. *Nurpur was the first to rise in rebellion against the British.*

Raja BIR SINGH: Raja Bhir Singh Raja of Nurpur 1805–1846, born 1785, last ruling Chief of Nurpur, he endeavoured to resist Maharaja Ranjit Singh of Lahore, but being compelled to take refuge in Chamba, was given up by the Raja of Chamba, and imprisoned in the fortress of Gobindgarh, subsequently he was ransomed by his brother-in-law, Sardar Charat Singh, for Rs. 85,000/- and in 1846, he raised the standard of revolt, besieged Nurpur, and died in battle before its walls; married (a), a daughter of Raja Jit Singh of Chamba, married (b), a daughter of Raja Sansar Chand II of Kangra, married (c), a daughter of Raja Bikram Sen II of Suket, and had issue. He died 1846. Bir Singh had left a son named Jaswant Singh, a minor, whose chief officer was Ram Singh, son of Shyam Singh, the last Wazir of the state.

Raja JASWANT SINGH: Raja Jaswant Singh Raja of Nurpur 1846–1898, born 1836, he received a large grant from the British Government in

compensation for the loss of his state, married and had issue. He died 1898. In 1846, East India Company captured the Kangra valley and subdued the local rulers. Jaswant Singh was also conferred the annual Jagir of Rs. 5,000/- and Nurpur state was merged with Kangra. Gathering a force from the Jammu hills, Ram Singh suddenly crossed the river Ravi and occupied Shahpur fort, where he proclaimed Jaswant Singh, Raja of Nurpur (In 1848) and himself as his Wazir, but soon afterwards on the arrival of British army, Ram Singh fled to the Sikh army in Gujarat. The Commissioner of Jallandhara at that time was Sir Henry Lawrence and Kangra district collector Mr. Barnes.

In 1849, Ram Singh again took up a position on the *Dalle ka Dhar* near Pathankot, where a pitched battle took place, and finally Ram Singh was taken in Kangra having been betrayed by a Brahmin friend named Pahar Chand. John Peel, the nephew of British Prime Minister Sir Robert Peel was killed in this battle. Ram Singh was banished to Singapur (or Rangoon), where he died. A jagir of Rs.5,000/- which was granted to Jaswant Singh by Sir John Lawrence, was doubled in A.D. 1861 for the loyalty shown by the minor Raja during the 1857 revolt. Raja Jaswant singh had two sons, one was an officer in the 29th Punjabi Battalion and died later on, while second one was Gagan Singh. Their residence was near the town of Nurpur.

Raja GAGAN SINGH: Raja Gagan Singh Raja of Nurpur 1898–1952, born 1882, 6th Viceregal Darbari in Kangra District, an honorary magistrate in Kangra District; the hereditary title of Raja was conferred 15 March 1909 by the Viceroy, married and had issue. He died 1952.

Raja DEVENDRA SINGH: Raja of Nurpur 1952, born 1901, died after 1960.

GENEALOGY OF NURPUR STATE

(1) Jhet Pal (1000 A.D.) (2) Kashetra Pal
(3) Sushvin Pal (4) Jagat Pal
(5) Ram Pal (6) Gopal Pal
(7) Ujjain Pal (8) Varsha Pal
(9) Jatan Pal (10) Vidhyurath Pal
(11) Jagan Pal (12) Kirat Pal
(13) Kakho Pal (14) Jash Pal (1313-1337)
(15) Kailash Pal (1353-1397) (16) Nag Pal (1397-1438)
(17) Prithvi Pal (1438-1473) (18) Bhil Pal (1473-1513)
(19) Bakht Mal (1513-1558) (20) Takht Mal or Pahari Mal (1558-1580)
(21) Bas Dev (1580-1613) (22) Suraj Mal (1613-1619)
(23) Jagat Singh (1619-1646) (24) Rajrup Singh (1646-1661)
(25) Mandhata (1661-1700) (26) Dayadhata (1700-1735 A.D.)
(27) Prithvi Singh (1735-1789) (28) Bir Singh (1789-1815)
(29) Jaswant Singh (1846- 1898) (30) Gagan Singh (1898-1952)
(31) Devendra Singh (1952-1960)

In the beginning of 20th century, Nurpur was lying in latitude 32° 18' 10" north, and longitude 75° 55' 30" east, on the *Jabhar Khad*, a small tributary of the Chakki torrent which flows into the river Beas. It was a picturesquely situated on a spur, 2,000 feet above the sea level, and some twenty two miles north west of Kangra. It was formerly the capital of a petty hill state ruled by the *Pathania* clan of the Rajputs. For long it enjoyed a considerable commercial importance dependent on the manufacture of shawls, and the fact of its being a great rendezvous on the way to Kashmir, Chamba and Ladakh. But with the passage of time shawl trade collapsed. With the addition of the *talukas* of Shahpur and Kandi Bachertu were attached to the district of Gurdaspur, and a small tract across the river Ravi, that was given in exchange to the Raja of Jammu, the boundaries of the old principality were retained almost entire in the then tehsil of Nurpur.

BANGAHAL STATE

The Bangahal state included in its territories of 'Bara Bangahal', 'Chhota Bangahal', 'Paprolo ', 'Landoh' and 'Rajjer'. The capital of the state was Bir in Bir Bangahal. There is very little history of the state of its early period. The founder of the state is said to have been a Brahmin who ranked as Rajput on becoming a Raja and his descendants are said to have ruled the state for twenty generations previous to Prithi Pal, who was murdered in about A.D. 1720. The early Rajas used the suffix Pal with their names and they were of *'Chandravanshi'* race. The clan name is *'Bangahalia'*.

Being in proximity to Kangra, Mandi and Kullu, the state had been a great temptation to encroachments from these neighbours. In C.A.D. 1240, Raja 'Madan Sen' of Suket and in A.D. 1554 Raja 'Sahib Sen' of Mandi, probably had annexed the state. About A.D. 1637, Suraj Sen of Mandi, invaded Bangahal, but was soon opposed and driven back by Jagat Singh of Kullu, who as a price of his help, seized a portion of the state territory adjoining his own.

Prithi Pal (A.D. 1710): Prithi Pal was the son-in-law of Sidh Sen of Mandi (A.D. 1684-1728). His sister was married to Man Singh of Kullu. Sidh Sen had covetous eyes on Prithi Pal's principality. Once he invited him to Mandi and received with great honour, but within a month, he was taken into the 'Damdama Palace' and murdered. His body was burnt and the head was buried in front of the palace. Sidh Sen then sent an army against Bangahal. Prithi Pal's mother appealed to Man Singh of Kullu for help. The Mandi forces were driven back, but Raja Man Singh kept a big territory under his own control.

Raghunath Pal (A.D. 1720): He succeeded his father Prithi Pal. During his period, Sidh Sen tried to seize 'Karanpur', but was repulsed; on the second occasion Sidh Sen penetrated as far as 'Kotharlu Galu', but was again driven back with the help of Kullu. After some time, Shamsher Sen of Mandi son of

Sidh Sen, seized Karanpur, while Raghunath Pal was away in Punjab to meet Mughal Viceroy.

Dalel Pal (A.D. 1735): Raghunath Pal died in 1735 and was succeeded by his son Dalel Pal. During his time, a combined attack was made on Bangahal by Mandi, Kullu, Kahlur, Nalagarh, Guler and Jaswan, which was successfully repelled, but with great loss. Dalel Pal died in A.D. 1749 and then most of his territory was taken by Mandi and Kullu.

Man Pal (A.D. 1749): Man Pal was the last ruling chief, he succeeded to the taluqas of 'Landoh', 'Paprola' and 'Rajjer'. He died on his way to Delhi, when going to secure assistance from the Mughal emperor. In the absence of Raja, Bangahal was captured by Kangra and Guler State. Landoh and Paprola being attached to Kangra and the remaining territory to Guler. Man Pal's widow with her infant son, 'Nihal Pal', was given refuge by Raja Raj Singh of Chamba. In 1785, Raja Sansar Chand of Kangra married the daughter of Raja Man Pal and lent a force to Uchal Pal, son of Man Pal to recover his patrimony from Mandi. Uchal Pal was unsuccessful in this. Soon afterwards, the Kullu and Mandi Rajas paid five lakh rupees to Sansar Chand to secure themselves in occupation of Bangahal. Uchal Pal died soon afterwards, leaving three sons and a daughter under Sansar Chand's protection. The daughter was married to the Raja of Siba. Ram Pal the eldest son, died in 1843 childless. His Younger brother, Bahadur Pal tried in vain to recover his family patrimony and died in 1854. With this, it seems to be the end of the mainline of heirs.

KUTLEHR STATE

It was the 'smallest' of all the principalities in the Kangra area. Forty generations of Rajas are said to have ruled the state. The progenitor of the family was a *'Brahman'*, but on acquiring regal power, he was recognised as a Rajput. In about 10th or 11th century, then head of the family, **Jas Pal**, conquered the taluqas of 'Talhati' and 'Kutlehr', and established his capital at 'Kot Kutlehr'. The two states of *Bhajji* and *Koti* in the Shimla hills were founded by his son and grandson respectively. The clan name is *Kutlehria.*

There is no reference to the state in the Mohammedan histories of the time. In A.D. 1758, Ghamand Chand of Kangra annexed the Northern province of the state, 'Chauki'. In 1786, when Sansar Chand was on the throne of Kangra, he completely seized the state, but during the Gurkha invasion, its Raja was restored with his territory. From 1809, the state was subjected to the Sikhs, and in A.D. 1825, Ranjit Singh determined to annex it fully and laid seize to the fort of 'Kotwalbah'. Raja 'Narain Pal' in person conducted the defence and for two months the seize made no progress. Ultimately, when the Raja was promised to pay a Jagir of Rs. 10,000/-, he agreed to surrender the fort. The original Jagir was in Hoshiarpur, but was afterwards exchanged for villages in Kutlehr taluqa. Raja Narain Pal died in 1864 and was succeeded by his son Raja 'Rajendra Pal'. The last known head of the family was Raja 'Brijmohan Pal'.

ECONOMY

The district Kangra is covered by fertile valleys and agriculture is the mainstay of the majority of the rural population. The agro-climatic conditions obtaining in the district are most suitable for the growing of food crops such as wheat, rice, maize, oil seeds, sugarcane, potatoes and tea. Soil texture in district varies from sandy loam to clay. At higher elevations, the soil is well supplied with organic matters. However, its extent is low at mid-elevations and minimum in low lying valleys. With the implementation of various programmes, the Government has endeavoured to increase the agricultural production. The introduction of improved varieties of seeds, increased use of chemical fertilizers, chemical pesticides, improved agricultural implements, extension of irrigation facilities and implementation of Land Reforms and Ceiling Act.

(a)Tea Plantation and Orchards: Tea Plantation in Kangra and Palampur areas was started by the British ex-military officers who had settled in Kangra district around the year 1849 A.D. In 1905, the devastating earthquake in Kangra took a heavy toll of the planters and tea industry was affected badly. New businessmen who entered the field could not get on with the business quickly and so Kangra tea was replaced by Assam tea in the foreign market.

Green and black tea are both produced in the district. With the setting up of a Tea Processing factory at *'Bir'* near Baijnath and Tea Plantation Supply and Marketing Cooperative Industrial Society' in Palampur, there are continuous efforts for the improvement of the tea's quality and quantity. The tea farm established in Palampur in 1939 and the H.P. Agriculture University at Palampur in 1978, has been renamed as Chaudhry Sarvan kumar University, are doing pioneer work in the research programme.

(b) Horticulture: Kangra district has variety of altitudes and climatic conditions with favourable soil texture which provide positive scope for the development of horticulture. It has immense potentialities for the growing of citrus fruits, guavas, mangoes, loquats, pomegranates and papaya. Certain varieties of lime, grapes, lemon and galgal are also found in the Kangra district. Lower parts of the district provide ample scope for the growing of fruit like citrus, mangoes and litchi etc. There is a Fruit Farm established in Palampur in 1936 and progeny orchards and nurseries at Kangra, Dehra, Nurpur and Palampur provide technical guidance to the orchardists. District Kangra has the distinction of having largest production of mangoes in the state.

(c) Sericulture: A major part of the district has been found suitable for rearing of *'Uniboltine'* silk worm races, which are much superior to *'Multiboltine'* races being reared in the rest of the country. Under silk production programme, a foreign species basic silk seed station is functioning at 'Nagrota' which produces commercial seeds. The other farms are at *'Palampur'* and *'Shahpur'*. A silk filature is functioning at *'Bodh'* in tehsil Nurpur.

(d) Apiculture: With the luxuriant growth of flora of vast variety there is ample scope for propagation of apiculture in the district. In the villages, almost all the houses keep beehives and the honey is extracted twice a year in spring and autumn seasons. While the honey extracted in the spring season is brownish in colour, in the autumn produce is some what whitish. Honey is of a great medicinal value and good source of income to the farmers. There is a government Bee Farm at 'Nagrota' established in the year 1936. The Khadi and Gramodyog is also engaged in the development of apiculture.

(e)Animal husbandry: The vast majority of population of the district resides in villages and each house invariably keeps a cow, buffalo, sheep, goats, oxen or poultry birds. The improvement of the livestock breeds remains the main concern of the department of Animal husbandry. The rearing of Jersy and crossbreed *Jersy cows* are finding favour with the people due to high yield of milk and long period of lactation. Buffaloes are being crossbreed with *Murrah Buffaloes.*

District Kangra has a large number of sheep and goats. The local sheep is no match for the Australian, Russian or even the Tibetan and Kinnauri pack animals, because their wool is rough in quality and short-flapped. The crossing of local sheep with *Rombullet* and *Spanish Marino rams* is being carried out in the sheep farms. There are a number of wool extension centres functioning in the district. The department of Animal Husbandry has introduced a number of improved breeds of poultry in Kangra district such as white *Leghorns, Rhode, Island Red and white Plymouth Rock.* Poultry farms are functioning at Palampur Jaisingpur, Nagrota, Nurpur Baijnath, Kangra, Dehra Gopipur and Bhawarna. To facilitate the quick supply of milk to the town areas, milk supply scheme was introduced in the district in 1973. Three chilling centres are functioning at *Darkota, Kotla* and *Jalari.* The main chilling centre is at *'Dagwar'.* Milk is procured from the farmers by the Cooperative societies. Kangra valley is full of a variety of fauna. In the years 1897 and 1901, the British government supported the people of Kangra valley in the killing of a great number of wild beast.

(f) Fisheries: Perennial rivers and streams in the district provide good scope for pisciculture. The district has an area of about 60 km. of river and stream irrigated lands which provide congenial environment for the development of pisciculture. Adequate facilities in the matter of sport fishing are also available at *Jaisinghpur, Alampur, Bharoti, Chamba Pattan, Kura Dera etc.* In 1962-63, Punjab government had set up a fish farm at Kangra, which was remodelled in the year A.D. 1980. The Mirror Carp spawns are imported from Calcutta and reared in this farm. The fingerlings so obtained are stocked in the Pong dam reservoir in an area of about 2400 hectares from Chamba Pattan to Bharoli.

(g)Industries: Kangra district has no big industry worth the name. There are only small scale and cottage industries based on local raw materials. Since 1990's a number of industrial centres have been set up.

(i) **Tea Plantation:** After the visit of Dr. Jameson, Superintendent of the Botanical Garden, North-West province, to ascertain the fitness of the area for the cultivation in 1849, a few gardens were set up by European planters. The hot, damp climate of the region, with heavy rainfall for almost seven months, was considered ideal for growing tea. A number of European tea planters exported tea to Europe, America and Australia. Following the earthquake, a majority of the European tea planters decided to wind up their factories and leave the place. It took many years to undertake the restoration work and build new structures.

(ii) **Dhoop Making:** Jwalamukhi and Kangra.

(iii) **Lac Industry:** some trees got infested with Lac insects in Nurpur and Dehra-Gopipur. The crude lac obtained from these trees is sold to the dealers at Amritsar and Hoshiarpur.

(iv) **Katha Making:** Katha is obtained from *'Khair'* (Acacia catechu) trees which are found in abundance in Kangra district.

(v) **Wool Spinning and Weaving:** (i) Floral Shawls-Nurpur; (ii) Carpet Weaving-Palampur and Multhan; (iii) Gudmas and Namdas-Palampur. Quality carpets, Chaddars, Woollen sweaters, mufflers etc. are also produced in Dharamshala, at Mcleod Ganj by Tibetan weavers.

(iv) **Slate Industry:** Slate quarries are located at *Dharamkot, Bhagsu, Jia, Kangra, Narwana, Chachoana, Deol and Kandhari.*

The other industries, which are providing productive employment to the local people are Bamboo work, Gharats (Flour mills), Woodwork and Pottery. To impart technical education to the young people, polytechnics and junior technical schools are also functioning at Baijnath, Kangra, Dharamshala, Palampur Shahpur and other towns of the district.

(h) **Minerals:** The following type of minerals are found in Kangra district.

(i) **Limestones:** It is the basic raw material for manufacturing cement. Lime stone deposits of great depth has been reported from Dharamkot area.

(ii) **Slate:** The reserves of roofing slates of good quantity and quality are found in the district. The slates are being quarried at Khaniara, Kharli, Bhagsu and North of Yol Camp.

(iii) **Natural Gas:** Jwalamukhi area of Kangra district.

Fairs and Festivals: Himachal Pradesh is the land of gods and goddesses. The people being God fearing and having a musical taste, Kangra district is no exception to it. Following are some of the famous fairs and festivals of the district;

1. Naoni fair (Kalkar Kulari in tehsil Nurpur); 2. Mela Shah Abdul Rehman (Nurpur); 3. Baba Dayagir fair (village Daulatpur, Kangra tehsil); 4. Dhamu Shah fair (Bari, Kangra tehsil); 5. Mela Sujan Bharti (Panapari); 6. Chamba fair (Dagoh, tehsil Palampur); 7. Jwalaji fair observed in the district, apart

from the few mentioned above. The festivals celebrated in the district are Shivratri, Holi, Baishakhi, Ramnaumi, Janmashtami, Dushehra, Diwali, etc.

Cattle Fairs: Zamora, Bhatberni and Lidbar (Kangra tehsil), Bhika Shah, Harshi and Salyana (Palampur tehsil) Narihasma and Garli (Dera Gopipur tehsil) and Indora in Nurpur. With the introductions of tractor system , the frequency of cattle fair has reduced.

Temples: Apart from some of the well known temples such as; Jwalamukhi temple, Bajreshwari temple (Kangra), Chamunda (near Dharamshala), Masrur temple, Vaidyanath (Baijnath), some other temples are — Mata Tunge Balika-Mandir (at Harnera, near Shahpur) is also known as Dhauli Mata, Shri Krishna Thakurdwara (at Dhar Kalan near Harchakian) Baba Kalyan -ki - Samadhi (grave) in Village Lapyana (near Harckakiam) and temple of Baba Bhupat, Baba Gauriya Sidh temple (in Pargor village near Lapyana village). Mata Kaltha temple (in village Salol), Dargah of Peer Bindli (near village Masrur), Mata Atal Devi (Tal) temple in village Darini (13 km from Shahpur) built in 1808-1825 by Rani Sharda of Chamba, mother of Raja Charhat Singh. Temple dedicated to Kelong Wazir (Gaddi deity) Khabra (Gaddi deity) and Lord Shiva are located on Dhauladhar mountains. The recently built temple of Baba Braoh has became centre of attraction for all sections of society

People: The population of the district comprises of Hindus, Muslims, Buddhists, Christians, Jains and Sikhs. Among Hindus, there is predominance of Brahmans, Rajputs and Scheduled Castes. The Rajputs who occupy a predominant role in the history for displaying valour and fighting qualities, are classified as Pathania, Katoch, Dogra, Jaswal, Jamwal, Guleria, Jasrotia, Thakur, Rana, Rathi, etc. Rajputs were the sole saviours of the country's independence against foreign aggression in the past. The Brahmans generally acted as priests and religious devotees. Brahmans also constitute various groups. The Scheduled Castes include the Chamars, Barad, Julahe, Chureh/ Bhangi, Chhimbe, Dumne, Suhai, Teli, Lohar etc. Apart from these, the Hindus constitute Sood, Khatri, Mahajan castes etc., who are mainly engaged in business and trade activities. Gaddis and Gujjars are the only two famous tribal groups found in the Kangra district. Ghirth constitute a sizeable chunk of population particularly in Kangra and Dehra tehsil of the district.

Dress: Mostly cotton clothes are preferred by the people. The Males use *Kurta, Pyjama* and *Safa* (a kind of turban) and in the case of females: *Salwar, Kameez* and *Dupatta.* In winter, people generally wear cotton/woollen-coat and sweaters. In marriages, the brides put on 'Ghagri' (a kind of long shirt or Lehnga) made of coloured silken cloth. With the change of time, change is visible in the habits and tastes of the people also. The cotton and khadi are being rapidly replaced by polyester or synthetic yarns, Maize and wheat are the staple food. People also take rice at least once in a day. The people are also fond of non-vegetarian dishes and tea is becoming popular with the masses. Food is generally taken four times a day. The morning meal is known

as *'Datyalu'* (breakfast), mid-day meal is known as *'Dupehri'* (lunch), about 4 p.m. meal is known as *'Tukru'* or *'Sanjyalu'* and in the night, dinner.

Kangra clay dolls: the antique and invaluable contribution of Kangra potters is the Kangra clay dolls. Raw as well as furnaced, such dolls represent a peerless art. The antiquity of Kangra clay dolls goes back to the days of Akbar. He was a great lover of Kangra dolls and pottery. While he didn't appreciate the dolls of Hindu gods and goddesses, he loved to see the dolls of lovely maidens engaged in romance. But then a drastic change came over the clay doll art. Maharaja Ranjit Singh appreciated the clay dolls of Hindu gods and goddesses. Very frequently, he honoured and financed the clay doll artists. It is said that Kangra Fort used to have a special room where Maharaja Ranjit Singh had collected rare Kangra clay dolls.

Kangra clay dolls represent the culture, taste and traditions of the area. Since the area is dominated by Hindu temples of Shiva and Shakti, the clay dolls represent these. Though clay dolls of fairies, kings, queens and demons are also made, the popular dolls are of Shiva and Parbati. A combination of Shiva and Parbati dolls represents cooperation and strength. The poised Shiva is given a twisted moustache. The hood of a snake on his head and shoulders are not only decorative but also represent mental and muscle powers.

The lifted right hand of Parbati show how co- operative a woman should be and also how her man is her right hand. The coloured but beautiful dresses of both symbolizes the pollution free cleanliness and beauty of the area. Their garlands of different types indicate the deep-rooted religious sanctity in the Kangra culture. The sacrifice of Kangra clay dolls is often made to please the deities. No festival and fair is complete without the local clay dolls.

Language spoken in the Kangra district is Hindi in six different dialects, i.e. *Pahari, Kangri, Gaddi, Pahari Kangri, Dogari and Nepali/Gorkhali.* During princely days, official business of the state used to be conducted in 'Tankri script' and 'Urdu'. In the later stages, when area came under the direct influence of Mughal, Urdu was the main official language. During British period, *English* and *Urdu* were being used extensively. In 1947, when India got independence. English and Hindi are the official languages of the district since then.

DHARAMSHALA

Dharamshala came into being in 1849, when it was selected as a site to accommodate a native regiment that was being raised in the town. Dharamshala originally formed a subsidiary cantonment for the troops stationed at Kangra was fully occupied by its garrison and there was insufficient space for the civil station, a search for an alternate location was made. The ideal location for the cantonment was found at the slopes of the Dhauldhar, upon which stood an old Hindu sanctuary or "Dharamshala" the name adopted for the town.

Finally in 1855, the new station was recognised as the headquarters of

the district. At this stage, apart from the cantonment building and the market, there were about eight European houses located at the elevation of the Bhagsu hill. Enchantingly tucked away in dense deodars, upper Dharamshala comprised for Forsythganj, St. John's Church and Mcleodganj. The place was named Mcleodganj in honour of Sir D. Mcleod, former Lieutenant Governor of the province. Dharamshala, overlooking the Kangra valley, used to be the hot weather seat of the commissioner of Jullundur (now Jallandhar) division during the British Raj. A faint colonial aura still lingers around cottages which were built by the English settlers.

MCLEODGANJ

The arrival of the Tibetan spiritual leader, the Dalai Lama, along with thousands of refugees at Dharamshala in 1959, made the life here more active. A number of Tibetan settlements, with religious education and other rehabilitation centres mushroomed all over the Mcleodganj area. As Dharamshala became the headquarters of the Tibetan Government in exile, headed by the Dalai Lama, it gained prominence all over the world and prominent personalities started arriving here. Mcleodganj emerged as a major Buddhist centre. The Gompa, a sacred place of learning and worship for Buddhists, houses a 1500 year old idol of Guru Padam-Sambhav and a life size image of Avalokiteshvra. Historic relic brought from Lahasa during the cultural revolution have also been preserved here. A huge collection of 225 volumes of Lord Buddha's sermons and discourses all in Sanskrit and called *'Thangyur'* in Tibetan have been safely placed in silken embroidered poaches in a corner of the temple.

The market in Mcleodganj, Which is basically a Tibetan settlement is lined with small shops selling Tibetan carpets, paintings and other handicraft items. A large number of restaurants, specializing in Tibetan cuisine, are packed with tourists wanting to have a taste of this peculiar food. To preserve and develop in exile the artistic literary aspects of Tibetan culture the Tibetan Institute of performing Arts (TIPA) was founded in August 1959, in Dharamshala (Mcleodganj). TIPA was the one of the first institutions to be established by the Tibetan government after it escaped to India (A.D. 1959). The main focus of TIPA is to train a younger generation of artists who were born and brought up in India. TIPA has a very rich collection of traditional costumes and jewellery from various regions of Tibet. TIPA also holds an annual opera festival called 'SHOTOU' which was an annual feature in Lhasa prior to 1959.

The traditional paintings called *'Thankas'* are a unique Tibetan art form. Tibetan *'Thankas' as* a medium of expressing Buddhist ideals and, as such they have sacred objects. As the destruction and dilution of ancient cultures across the world is becoming more evident, the Norbulingka Institute has been set with the motive of preserving such art forms. Young Tibetans, including monks are taught this art by a selected group of teachers who managed to escape to India. The wood carving school offers complete training

in the art of traditional wood carving. In fact, the annual Himalayan International Festival held in Mcleodganj in December every year has become a cultural bonanza for the tourists as well as the locals. Artists from Nepal, North eastern states, Jammu & Kashmir take part in the festival which attract people from all over the world.

BAIJNATH

The original name of the place, as we get from various records was Kiragrama, located on the bank of river called Binduka, which is known in modern period as Binwa, a tributary of the river Beas. The name Kiragrama, known up to the present day, seems to indicate that the village owed its origin to a settlement of Kiras, a tribe located in the neighbourhood of Kashmir and mentioned both in the Rajatarangini and Chamba history as a warlike tribe employed by the Dogra Raja, against Sahil Verman the founder of Chamba town. The village Baijnath is situated twenty three miles east of Nagarkot (Kangra fort) as the crow flies, close to the border of the petty hill state of Mandi and on the main road which leads from the Punjab plains through Kangra, Kullu, Lahaul and Ladakh to Centra Asia. The mention of a custom house (*Sanskrit mandapika*) in one of the Baijnath prasastis would indicate that as far back as the beginning of the 13th century the place was a frontier station. The place is famous for Shiva temple popularly known as "Vaidyanath" (lord of physicians).

This much is certain, that at the time of the Baijnath inscriptions Kiragrama had for eight generations been the seat of a feudal chief who owed allegiance to the kings of Trigarta or Jallandhara. The site of the castle in which the barons of Baijnath resided, is known as Jhakhpur, where during the British period a Dak Bungalow was built. A large number of copper coins have been found in the area. The title *rajanaka* found in the inscription is a sanskritized vernacular term corresponding with modern *rana*. There is a tradition that once the whole of the Punjab hills were ruled by *ranas*. The ranas ruled this territory and were powerful till 11th and 12th centuries. But it is evident that they acknowledged the Raja of Chamba as their overlord.

EMINENT PERSONS FROM DHARAMSHALA

Dalai Lama — The Tibetan spiritual and temporal leader.

General V.N. Sharam— Former Chief of Army Staff.

Major Som Nath Sharma— Awarded the Param Vir Chakra, India's first post-Independence award, posthumously.

Justice Mehar Chand Mahajan— Former Chief Justice of India.

Captain Ram Singh— Music Director of the Indian National Army (INA) of Netaji Subhash Chandra Bose.

Brigadier Sher Jung Thapa— The fist recipient of the Maha Vir Chakra in 1948.

Durga Mal— A freedom fighter, who was hanged in Delhi Jail in 1943.

Dal Bahadur— A freedom fighter, hanged in Delhi in 1945.

O.P. Taak— A renowned painter of Kangra miniatures.

Bakshi Tek Chand— Member of the Constituent Assembly and the Chief Justice of the Punjab High Court.

Master Mitrasen— A social reformer, poet and dramatist.

Chandresh Kumari— A former Union Minister, a Rajya Sabha member, President of All India Women Congress and later as member of Lok-Sabha from Rajasthan.

N.N. Nowrojee— The lone Parsi in the town. One of the oldest settlers in Mcleodganj.

DECADEL VARIATIONS IN POPULATION SINCE 1901-2011

Year	Persons	Males	Females	Decadel variation	Percentage decadel variation	Females per 1000 of males
1	2	3	4	5	6	7
1901	478,364	—	—	—	—	—*
1911	469,046	246,835	222,211	-9,318	-1.95	900
1921	4,69,251	2,43,142	2,26,109	+205	+1.95	930

KINNAUR

(HQ, REKONG PEO, ALTITUDE 2290 METERS)

Languages spoken : KINNAURI (HAMSKAD), SANGNAUR, JANGIAM, SHUMECHO ETC.

The present name and spelling, that is Kinnaur, were conceived and introduced officially when the separate district was carved out on 1st May 1960, out of the erstwhile *Mahasu* district. Kinnaur then was known as 'Chini' tehsil of Mahasu district. Earlier it was known by different nomenclatures of *'Kanawar', 'Kanaur', 'Kanauring', 'Kunavur', 'Kunawr'* and *'Koonawur'*. Kinnaur is located in the North-Eastern part of Himachal Pradesh. Lying on the both sides of the river Satluj in higher reaches, the district is situated 77° 45' and 79° 00'35" East longitudes and between 31° 55'50" and 32° 05'15" North latitudes.

Kinnaur shares its Eastern boundary with Tibet. The Zanskar mountains form the international frontier between Kinnaur and Tibet. The international border starts at a point 'Parechhu' and passes through *Shipkila, the Rainso Pass, the Shimdang Pass* and the *Gumrang* (Khimokul) Pass and reaches a point flanking *Chor Gad* valley in the East. On the South and South-Eastern sides, it has Uttar Kashi a district of Uttrakhand, on the Western side lies the Shimla district and on the North and on the North and North-West in situated Lahaul and Spiti. Kullu also touches it from the West. Three parallel ranges, i.e. (i) Zanskar mountains in the East, (ii) the Great Himalayas which stretches from the North-Western corner of the district to its South Eastern extremity and (iii) the crest of the Dhauladhar range forms the Southern boundary of the district.

The two highest peaks of Kinnaur, Leo Pargial (6,791 meters) and Parasala (6,608 meters) lie in the Zanskar mountains. The third and the fourth peaks (one unnamed 6,593 meters and the other Kinner Kailash or Raldang Kailash 6,500 meters) lie in the Great Himalayas. Kinnauras strongly believe that Mt. Kinner Kailash is the inaccessible dwelling place of Lord Shiva and his Consort Parbati or Durga. Leo Pargial rises from the spiti on one side and from the Satluj on the other side. The cream coloured granite and quartz give it the appearance of marble. During night, the scene is absolutely overpowering, when the mantle of night rises slowly behind the dark precipices with lengthening shadows. While itself unseen, the moon's white light illuminates the deep gorges of the Spiti river and throws a silvery splendour on the marble like towers and battlements of Leo Pargial.

Some of the important valleys of the region are:

The Satluj valley is the largest river valley of the district and traverses for about 140 km. in the region. There are many cliffs in this valley, the most

prominent being *'Taranda', Wangtu' and 'Rogi'.* The Hangrang or Spiti Valley is drained by the river Spiti or Lee. About 32 km. passage of the Spiti river lies in this district. The valley joins the main valley on the Spiti near 'Khab' (also called Khabo) village. Only the lower portion of this valley is located in Kinnaur while the upper part lies in the Lahaul Spiti district. The Ropa or Shyaso (also spelt Shiasu, Shyasu and Chhiasu) or Sunam valley, is drained by Ropa stream. The valley traverses through the inhabited area only for about 5 km.

The Baspa or Sangla Valley is drained by the Baspa river. It is named Sangla valley after the name of the Sangla village. It is the most romantic and beautiful valley of Kinnaur. *The historic village Kamru (Mone)* is situated in this valley. Baspa valley is connected with Garhwal by several passes. Situated along the Southern ridge of the valley these passes from the West to East are: Burua pass or *Buran Ghati* (4,578 mets.) *Kimilay or Khamilogo Pass* (5,151 mets.); *Borsu Pass* (5,360 mets.) and *Lamkhaga Pass* (5284 mets.). *The Shinka,* Kimilay and Borsa Passes lead to the famous Har ki Dun valley. The Tidong valley is without exception the most rugged glen of the district. It is often called *'a scene of savage grandeur'.* The Wangpo or Bhabha, the Gyanthing or Nesang; the Pejur or Leppa; the Kashang; the Mulgoon and the Yula are other worth mentioning valleys of Kinnaur. The small wooded valley of Bhabha has the largest village of the district, i.e. **'Bhabha'.**

Chitkul (3,450 meters) is the last and highest village in the Baspa valley in district Kinnaur. It is situated on the right bank of Baspa river Chitkul is the last inhabited village near the Indo-Tibet border. The Indian road ends here. During winters, the place mostly remains covered with the snow and the inhabitants move to lower regions of Himachal. Potatoes grown at Chittkul are one of the best in the world and are very costly. Chitkul, on the banks of Baspa River, is the first village of the Baspa Valley and the last village on the old Hindustan-Tibet trade route. It is also the last point in India one can travel to without a permit. Of particular interest at Chitkul are its houses with either slate or wooden plank roofs, a Buddhist temple and a small tower. However, there has been an increased use of tin-roofs, especially the high school and the army/ITBP barracks.

After one crosses over the 5,242 m high Charang Pass, it is a long and steep run down through slithery scree slopes to Chitkul (3,450m). The powerful goddess of Chitkul is the only non-Buddhist deity to which respect must be paid by the Parikrama pilgrims.

Poo, or Pooh, also spelled Puh, (altitude 2,662 meters or 8,736 ft), is a small town in Kinnaur district, Himachal Pradesh. It is also known as "Spuwa". The approximate population given within a 7 km radius of the town is 1,192.

Poo is 58 km from Powari along National Highway 22. It is renowned for its natural beauty, green fields, apricot orchards, vineyards and almond trees. Inscriptions, suggest that Poo was an important trading center in the early 11th century.

When A. H. Francke arrived in Poo from the south in July, 1910, it was the first village he found where the language was "entirely Tibetan".

There is an ancient temple, the Lotsaba-bai-lha-khang, dedicated to Shakyamuni or Lord Buddha and attributed to the great translator (or Lotsaba), Rinchen Zangpo (958–1055). The shrine has wooden columns supporting a high ceiling. It has murals and a painted door from the period of Rinchen Zangpo (10th to 11th century), though they are in a poor state of preservation.

There is a local pre-Buddhist deity, Dabla, who has no dwelling or altar in Poo (although he has a devta temple devoted to him at Kanum). His only manifestation is a pole with a small idol set on its upper portion and adorned with yak tail hair and long pieces of coloured cloth.

Chango (3058m) : At a distance of 122 km from Kalpa, is a collection of 4 hamlets in Pargna Shuwa, sub-tehsil Hangrang on the left bank of the river Spiti. It is encircled on every side by high hills which is witness to the presence of a former lake. Buddhism is generally practised here but there are some local Hindu deities too namely Gyalbo, Dablaand Yulsa.

Kinnaur has some very important rivers. they are: The Satluj, which divides Kinnaur almost in two equal parts. In the Vedic literature, the stream is referred to as *Sutudri,* while in the later Sanskrit literature, it is called as *Shatadru.* Greek scholars mention this river as *Zasradros or Heisidrus.* In Tibet, it is known as *'Zungtee' and 'Muksung'.* The river traverses for about 140 Km. in Kinnaur. The river Spiti joins it at *Khab* Village.

The Spiti is the second major river of the district. The Baspa rises on the North-Eastern declivity of the Dhauladhar range. *The Zupkia, the Thatang, the Bering, the Rutki* and *the Suthi* are its important tributaries. The *Yolong* also joins the Spiti. It originates between Shialkhar and Leo. The *Ropa* rises on the declivity of the range that divides the district of Kinnaur and Lahaul-Spiti and merges with Satluj near 'Shiasu'. The Pejur or the Taiti is one of the largest feeder of the Satluj. The Kashang also joins the river Satluj. The Mulgoon coursing for 24 kilometre exhausts itself in the Satluj. *The Yula* is another tributary of the Satluj.

There are two small lakes in the Kinnaur district in village 'Nako' in Hangrang sub-tehsil. Another small lake is situated above the villages of 'Jani' and 'Ramni' in Nichar tehsil. It is locally called 'Sorang'. Springs here are mostly snowfed. One such spring is found at *Nathpa,* three at *Tapri* and one at *Joktiaring.*

By virtue of its location, Kinnaur experiences the cool temperate climate. The cool temperate zone climate that is found in the district is characterized by long winters from October to March and short summers from June to September. June is the hottest month in the lower Kinnaur. In Upper Kinnaur, which is an arid tract, the hottest months are July and August. The rainfall in lower Kinnaur upto Wangtu does not vary greatly from rainfall in Shimla,

i.e. about 200 cm. Beyond that, the amount of rainfall decreases progressively. The climatic conditions in different valleys of Kinnaur does not vary only with elevation but also with the direction of valley faces and width of valleys. In Kinnaur district, three types of natural vegetation are found:

(i) The wet zone forests are found on the left side of the Satluj valley where common variety is Kail, Spruce and Fir trees. In the depressed tracts, broad leaved trees of horse chestnut, hazelnut maple, bird cherry and walnut are found.

(ii) The dry zone forests extend from Nichar to Chini. Deodar reaches its optimum height and development in this zone. At lower levels, pine trees abound, while in the higher tracts blue pine, spruce and silver fir trees are found. *Neoza pines, which produce edible nuts, grow in this zone and are the only forests of Neoza in India.*

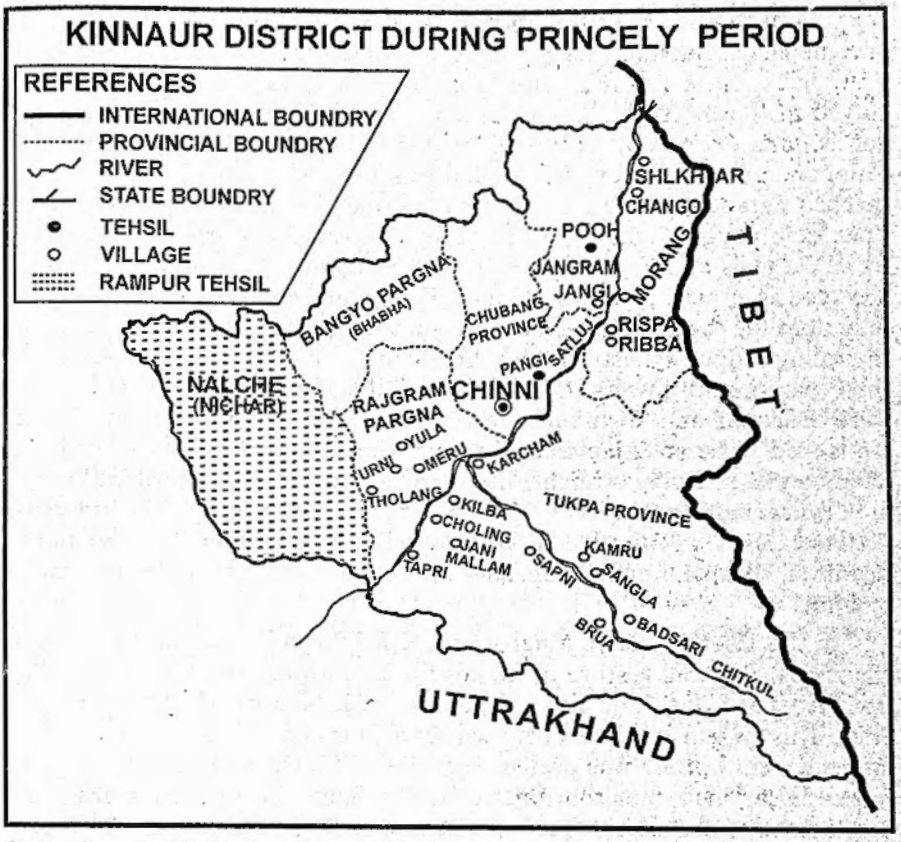
(iii) The parts adjoining Tibetan border contain arid zone forests consisting of rose dog and dwarf bushes. On higher elevations with cool aspects, deodar grows.

Only about 282 square kilometers area of the district was under forests till 1991. Since then government has been following intensive plantation scheme to ensure its increase.

The soil in Kinnaur generally consists of sand, sandy loam, clayey loam, gravel etc. We come across all these types in all parts of the district.

District Kinnaur is also rich in mineral deposits. Copper veins have been noticed near Rangwar, North-West of Ropa. China clay deposits have been found between Asrang and Lipa to the North of Taiti. Flourspar veins of rare occurrence have been noticed at Wangtu. Occurrence of small quantities of gold in almost all the Himalayan rivers is well known. Mica is found in Tangling Khad. Gemstone like Amethyst and Kaynite have also been noticed at certain places in Kinnaur. Pyrite has been reported in Chirgaon, Shiasu and Purbani. Quartz Crystals does occur at some places. Silver deposits are reported to exist near Chirgaon. Talc occurs near Thakthow, a hamlet of Asrang. Deposits of gypsum are reported from Shialkhar and Chango. Rough slate quarries are also found in the Sangla valley where these are used for roofing purposes.

Inspite of many positive factors, Kinnaur is one of the most backward areas, not only of Himachal Pradesh but of India also. The economic structure is primarily agrarian and essentially rural in character. The size of the land holding is exceedingly small and the methods of cultivation are by and large crude as well as primitive. Kinnauras primarily have been *agro-pastoral tribe.* Sheep and goats as well as ponies and horses have always played an appreciable role in the Kinnaura's economy. In the past, Kinnauras had trade links across the border with Tibet. Kinnaura traders used to bring salt, borax, pashmina, sheep, goats and wool from Tibet and transported cereals, fruit, cloth, sugar, gur (jaggery) and other portable necessaries of life to Tibet.



HISTORY

As far as historical evidence has been able to reveal, right upto Indian independence in 1947, Kinnaur had been a part of the Rampur Bushahr state. There is reference in the famous Sanskrit Classic *'AMARKOSA'* about many tribes and castes in India which claim their origin from divine sources. The Gandharvas, Yakshas, Vidyadhars, Apsaras, Siddhas, Guhakas, Kinners, Pishachas, Rakshasas, Bhutas etc. find *mention in the classic. In mythological and legendry accounts, the 'Kinners'* are described as distinct race of demigods. The encyclopedia of religion and ethics depicts the *'Kinners'* with horse's head and the Kimpurshas with human's body. Probably such descriptions led to the epithet of Kimpurushas meaning; (Kim in Sanskrit) what kind of (Purushas) 'human beings'? The word (किन्नर = किम् + नरः) Kinner also means the same thing.

Kinnaur is called as 'Khunu' by Tibetans. Kinnaur has also been referred as 'Kurpa'. In Leh the area is called as Maon. Mone or Maon have also been the names for Bushahr state. Kamru a seat of former Bushahr state is also known as Mone. Kinners, who are now called Kinnauras, are also called as *Khas* or *Khasia.* From the writing of many Indian scholars, it becomes clear that there existed a tract inhabited by the Kinners in the High Himalayas, to the West of the Kailash mountain and lake Mansarover. The five Pandava brothers, the heroes of Mahabharata, are said to have passed of a good part of their 12 year exile in Kinnaur. Kalidasa has also made a mention of Kinners in his famous book 'Kumarasmbhava'. In 'Vayu Purana', the Kinners are said to be the inhabitants of the 'Mahanand' mountains.

It is only in the post Vedic literature we find mention about Kinners. The region falling between Kashmir and Nepal in the Western Himalayas was essentially the tract inhabited by Kinner tribe. The book 'Vimanvathu' by 'Sutpitak' written in the second and third century B.C. contains a verse which supports this view. *Kimpurushavarsha'* or *Kimpurshavarata'* has also been the name of the Himalayan Kingdom that existed in the ancient past. The Kinners are also referred to as Kimpurshas in ancient literature, and it is no wonder that their habitat which extended over a large area in the past has now contracted the present frontiers of Kinnaur.

It appears that the Khasas had arrived in the Himalayas before the Vedic Aryans and were already living there when the Aryans reached. The Khasas and the Aryans were originally from the same stock and thus could live in harmony. The *"Kanait' or Kunait'* sprung up as a sub-sect of the Khasa-Kinner assimilation. Kinnaura Rajputs living in Kinnaur were primarily divided into Kanaits and Jads. The people living in the Hangrang valley and some other villages lying near the Indo-Tibet border speak dialects quite akin to Tibetan, whereas the Kinnauras living in Nichar tehsil and lower parts of the Sangla Valley speak dialects quite different from Tibetan. By the seventh century A.D., the people of this area took a settled life. They established a peaceful coexistence and trade contacts with the 'Bhoteas' living in Tibet. Some of

these also established contacts with the outer valleys. Rampur Bushahr and Sangla became two such markets where materials purchased in these two territories were marketed. *Consequently Rampur Bushar became the birth place of the 'Lavi fair'* celebrated even now with great pomp and show.

From the 7th to 10th century A.D., the Kinnauras came under the strong *'influence of Buddhism'* and the Bhotea language. The entire Kinner tract came under the Guge empire of Tibet. By the end of the 12th century, the Guge empire itself started tottering and crumbling. The last Bhot emperor 'Partampal' had to witness the liquidation of his forefather's empire. In Kinnaur, then every valley or group of villages became a separate *'Thakurai'*. The hegemonies created thus produced an atmosphere of confusion and commanding sites for defensive and offensive purposes. The historic forts in ruins now at *'Labrang', 'Morang' and 'Kamru'* still tell the story of that age. In the beginning of the sixteenth century, the Thakur of Mone became so powerful that he defeated one by one all other Thakurs. Then he extended his domain to Rampur Bushahr which physiographically falls outside the Kinnaur tract.

There are many legends famous for the heroic role played by gods in the

shaping of the future of this forbidden land. There is a legend that in the ancient past, three gods (devtas) appeared in *Mathura*-Anna Puran *Vrindavan.* They were Tapa Puran', 'Anna Puran' and 'Deva Puran'. Tapa Puran stayed at 'Badri Nath', Anna Puran at 'Tehri Gharwal' and Deva Puran got *'Kamru Badri Nath'.* He liquidated the Thakurs of Kamru, Sangla and Chini one by one. The Chuling Thakur was also exterminated. In the end, he reached Sarahan, where Banasur was the ruler and Deva Puran killed him. Then he brought Praduman Singh, a Chandervamshi ancestor of Dashratha from Varanasi and he was crowned King at Kamru. Kamru place had been accepted as crowning place since then. Historical records of this state go back only upto the time of Raja Chatar Singh, who is said to be the 110th ruler of the ruling Rajpur dynasty of Bushahr. He made the Bushahr state one of the three paramount powers in the Shimla Hill states of that time. Other two were 'Bilaspur and 'Sirmaur'. He was succeeded by his son Kehri Singh. He is said to be an 'Ajanvahu' (i.e. one who can touch his knees with his hands while standing straight) like Lord Rama. He was accorded the title of *'Chattarpati'* by the then Mughal emperor Aurangzeb. The rulers of *Garhwal, Sirmaur, Mandi and Suket* were humbled by him. The Thakurs of Keonthal, Kotkhai, Kumharsain, Balsan, Theog and Darkoti were also subdued by him.

In the Tibeto-Ladakhi Mughal war, Kehri Singh helped Tibet to emerge victorious. For this gesture of friendship, he received the Hangrang valley from Tibet as a Jagir and also right to free trade between Tibet and Bushahr State. This system continued between Kinnauras and Tibetans till 1962 when international border was sealed. Raja Kehri Singh died in 1811. He was succeeded by his minor son Raja Mahender Singh. From 1803 to 1815, the erstwhile state of Bushahr faced the menace of Gurkha invasions. The minor ruler and his mother who could not withstand the attack fled away to Kamru, leaving behind a rich treasury at Sarahan. The Kinnauras fought a fierce battle with Gurkhas.

Wazir 'Tikka Ram' and 'Badri Prasad' provided a good leadership to the army. A decisive battle was fought at Chholtu bridge' near Chirgaon village. To halt the march of Gurkhas, people destroyed the Wangtu bridge on the Satluj and this sealed the fate of the Gurkhas. At this moment, the British also entered the scene. After the Gurkhas discomfiture, Raja Mahender Singh returned to Sarahan. The British government granted a *Sanad* dated 6th November, 1815 to Raja Mahender' restoring to him all his former territories except *'Rawin' and 'Kotgarh'* which were kept as British possessions and later transferred to Keonthal in exchange for Shimla. Raja Mahander Singh died in 1850 at the age of 47 and was succeeded by his minor son Raja Shamsher Singh.

As Raja Shamsher Singh attained maturity, he grew restless with the unwanted interference of the British. The first war of Indian Independence 1857 came as an opportunity for him. He did not offer help to the British. This

act of defiance enraged the then Deputy Commissioner of Shimla-cum-Agent of the Hill states, Mr. William Hay. But issue was overlooked later on. In 1859, people of the state revolted against the new revenue payment introduced by Munshi Ram Lal in 1854. Mr. G. Barnes, the Superintendent of Shimla Hill States arrived at Bushahr to settle the dispute. In the year 1887, Raja Shamsher Singh was pressurized to abdicate the throne in favour of his only legitimate son 'Tikka Ragunath Singh. The latter administered the state affairs well, till his death in 1898. Tikka Ragunath was survived by an infant son who died eleven months after the death of his father. Raja Shamsher Singh, who was still alive, wanted to regain the administration, but British instead made 'Rai Sahib Mangat Ram', formerly manager of the Kumharsain state, Chief Wazir with the powers of a full-fledged ruler.

Raja Shamsher Singh feared the extinction of his lineage, adopted *'Surender Shah'* the younger brother of Garhwal ruler as his son. Samsher's only s'Surviving son from a concubine, 'Padam Singh', was considered illegitimate. In 1914, on 13th November, British agreed to recognize Padam Singh as legitimate heir and was crowned as the ruler of Rampur Bushahr. He was the ruler of Rampur Bushahr when India got independence in 1947. The princely states integration process was continuing all over the country. Padam Singh was reluctant to hand over his state for the merger with greater nation. Master Annu Lal, a freedom fighter, headed the merger movement here. Baldev Singh was *Dewan* of the State at that time. After initial opposition, in March 1948, Rampur Bushahr became part and parcel of the centrally administered Chief Commissioner's province of Himachal Pradesh.

Social life and customs: Kinnaur Society, although quite ahead of primitive way of living, yet, carries many age old traditions and customs (some of which are better than the so-called advanced customs) as compared to the ones prevailing in socioeconomically advanced areas.

Birth Customs: In almost all over Kinnaur, the prospective mother is confined to *'Khudd'* (cowshed) soon after she starts getting labour pains. The indigenous midwife, i.e. *'dai'*, looks after the mother as well as the new born baby. The cutting of *'naval cord'* and the disposal of *'placenta'* is her responsibility. Nowhere in the Kinnaur, there is a tradition of singing any types of songs on the birth of a child. In Ropa village, all families blessed with sons offer one goat collectively to the village deity on *'Ukhyang festival'*. Although not much difference is attached to the birth of a female child all over Kinnaur, yet it is Leo village which is fairly impartial in this respect.

Death Customs: Similar to other customs, the death customs in Kinnaur differ from valley to valley. In the past, old customs such as ***dubant*** (drowning), ***phukant*** (burning), ***bhakhant*** (eating by vultures and birds etc.) were very much in practice, now giving way to cremation through burning. At the cremation ground, dead body is placed on 'dursa' (pyre made of wood) and the same is lit by a close relative of the deceased. The same evening the bereaved members throw a mixed pudding prepared from loaves

and pulses on the roof of their houses. This act is called *'thuning'* and is done under a belief that through crows and other birds the food would reach the departed soul. The family remains in mourning for one year. No dancing and singing ceremonies are held in the house. For thirteen days, the inmates of the house take simple food invariable bereft of meat dishes. After thirteen days, either on this night or any other night, convenient to the bereaved family, a feast has to be managed to the villagers. On this night, the villagers are served with liquor and good food. After drinking and eating, the villagers sing and dance.

Marriage Customs: Marriage customs of a society are the mirror of a society's standard and progress. There are four major forms of marriage in Kinnaur.

(i) 'Janekang' or 'Janetang', i.e. a common arranged marriage.
(ii) 'Damchalshish' or 'Damtangshish' or 'benang-hachis' or 'jushish', i.e. love marriage.
(iii) 'Darosh' or 'dub dub' or 'nymasha depang' or 'nymsha lemo' or 'ashish' or 'huchis', i.e. marriage by forceful or consented capture.
(iv) 'Har', i.e. enticing away some one's wife.

It may be mentioned that no vedic rites such as going round the fire etc. are followed in the solemnization of marriage in Kinnaur. *Polyandry* a rare form of marriage has been in vogue in Kinnaur, Lahaul-Spiti, Sirmaur and Jaunsar Bawar tract of Uttrakhand. It is *'fraternal polynadry'* that is practised in Kinnaur. In Kinnaur, however, this custom has prevailed for a long time because of historical reasons and economic compulsions. Kinnaur had higher sex ratio than even the national average. In 1951, there were 1007 women for 1000 men. It is only with the arrival of male in excess from outside as labour force that overall sex ratio in Kinnaur is progressively going down. In the native society, nonetheless, sex ratio is still higher than the state and national average. Many of the women because of polyandrous marriages (having more than one husband) remain spinsters and become Jomos.

Fairs and Festivals: Kinnaura society is a fair-festival dominated society. It goes to the credit of Kinnauras that they devised their own methods of recreation and amusement. In this god cult dominated habitat, all fairs and festivals are ceremonised with a view to appease and worship gods and goddesses. Many such occasions are accompanied by community fasts. So, probably it would be apt to call all these ceremonies as festivities. Broadly the festivities here revolve round Hindu religious rites, Lamaistic religious rites and primitive traditions.

Sazo: This festival is observed in the month of January. On this day the people take their bath in the natural springs and few even go to Satluj river for bathing if they happen to live near the river. Poltus, rice, pulses, vegetables, meat, halva, chilta and pug are the principal dishes prepared on this occasion. In the morning the family god is worshiped with the food except meat. The

hearth is also worshiped near Noon time, the deity is brought out and worshiped with wine and halwa A fold dance is held. Thereafter the deity is believed to have gone to Kinner Kailash

Chaitral festival (named after Bikrami month of Chaitra) is celebrated at Chirgaon village. On the night of Chaitral, every inhabitant of the village is permitted to express vulgarity through action and words. It is believed that in good old days, the demons used to visit and kill people. The *'devata'* of the village made the demon not to visit the village. The occasion is now celebrated to commemorate the day.

Beeshu is an important festival of many Kinnaur villages and is the first festival in villages where Chaitral is not celebrated. The festival falls in the Bikrami month of Vaishakh (April-May).

Dakreni or Dakrain is an important festival of Kinnaur celebrated in the Shravana (July-August) month of Bikrami calendar. In Pangi, the fair starts with the singing of a vulgar song. After the song is over, people indulge in lose talk.

Ukhyang or Phulaich is a festival of flowers. It is also known by various names, such as *'Namangam', 'Ukhing', 'Chamang'* and *Minthiko* etc. This is the most important and widely prevalent festival of Kinnaur, commences in Rupi on Bhadra 10 (August) and ends in Jangi in Kartika (October-November). On 16th of Bhadra (September) about 10 Rajputs of the village go to the high hills to pluck flowers and stay there till 17th of Bhadra. On 18th, they return to the village and spend the night in singing and dancing under deodar trees. Some of the flowers are so scented that the outsiders sometimes feel giddiness with its fragrance. The fragrance of some of flowers are intoxicated, but local people are used to it. On 20th, in the morning the Devata *'Narayan'* (local god), is bedecked with images and fine clothes. The images of the Devatas (local gods) made of gold and silver are mounted on all sides of the frame. All people - men, women and children dressed in their gayest, dance in the open, under deodar trees with abandon and ease unknown to the busy world today. On 23rd of Bhadra, the last day of the festival, the village god is brought back to the temple, at the original place and a goat and a lamb is sacrificed.

Phaguli also known as 'Luskar' is celebrated in Phagun month (Bikrami calendar) coinciding with mid February to mid March in Roman calendar. In Kamru, the festival starts on Basant Panchami. The festival continues for five days at Kamru. In Ropa, the festival is known as 'Phalgun'. In Lipa, the festival is celebrated under the name of 'Lamoch'. In Jangi, it is celebrated twice a year.

Losar (Lo in Tibetan means *'new'* and Sar means *'year'*, i.e. new year) is an important festival of Tibet. Hence the Losar festivities are limited only upto upper Kinnaur, where Tibetan influence is at the climax.

Shirkin festival is celebrated in Kartika month (October-November)

when trans-human semi nomads move to the sub-mountainous and plain areas with the flock of their sheep and goat.

Jagro festival is celebrated in the villages of Morang, Kamru and Ribba, where Mahasu god is held in very high esteem. It is also known as 'Jagang', *which means night long awakening. This resemble to what is celebrated in the areas as Jagrata.*

Sazo festival is observed in the month of January every year to bid farewell to the devatas who are supposed to proceed for a temporary sojourn to paradise in winter. The *'swarga'*, i.e. paradise of the Kinnauras is at *Raldang*, a mountain peak in the group of Kinner Kailash peaks. In some parts of the district, festival is also known as 'Shu Pitang Hoorang' (means the bolt of devata's door)

Khepa is an important primitive society festival, which is held only in handful of villages in Kinnaur. This festival is celebrated in the Ropa valley villages of Ropa, Gyabong, Sunam Rushkling.

Rang Rorang Chin festival is celebrated only in few villages which have a clear view of the Kinner Kailash group of mountains (mostly in July). Rang Rorang Chin means the *delight of mountains.*

Deewal festival, is held throughout Kinnaur. Sangla valley villagers are renowned in the district for celebration *'Chotta deewal'.*

Jatrang is celebrated only in Thangi. 'Shuktok' is celebrated in Namgia only in the month of July-August.

In 'Chango Sheshul' (in July) is *celebrated* as an occasion to make as much use *of vulgarity* as *possible.*

In Leo and Rarang, 'Bongkar' is held in May.

In villages of Kanum and Lippa, Kanjur Zalama or Lama Zalen or Loma Zulkha are celebrated in July.

Mahang Sanga is celebrated throughout Kinnaur in one or the other form. It is celebrated around first of February.

Eratang is celebrated only in Chirgaon village in the first week of June.

Peetag Puja is the occasion celebrated on the ripening of barley crop in Morang village.

Chhayang Kulma is a Lamaistic festival celebrated in Kanum area only.

Saura Vaishakhang is celebrated only in Katgaon in the last week of April.

Shivratri is purely a Hindu festival. This festival is mostly celebrated by the *Harijans* of Kinnaur. The celebration of Shivratri by Harijans supports the view that these people migrated to Kinnaur at a later stage from Hindu dominated tracts.

Toshim or Toshing or Toshiming (means to take rest or enjoy together)

is quite different from the other festivities. The festive occasion is organized by the young unmarried men. In some cases, women do participate in it. The boys and girls take food together. The boys drink local liquor called *'ghanti'* to their taste. This festival continues for any period between a week and a month.

Chandika Temple Kothi : A handsome temple dedicated to goddess Chandika, more especially designated as Shuwang Chandika has spread the fame of village Kothi in greater part of the district. The local people hold the goddess in great reverence and consider her to be one of the most powerful goddess. For want of social contact by the local people with their more advanced and brahmin ridden brethren they have evolved their own peculiar procedure of ritual and worship to this presiding deity. There is an image of gold, seated in an ark. It is danced up and down by four persons at the time of worship.

Her legend goes that she was the daughter of the demon devta Banasur who presided over the Kinnaur. He had 18 sons and daughters. Chandika was the eldest among all. She presided over Sairag the heart of Kinnaur. But establishing her hold on the area was not so easy. The thakur of Chini ruled Sairag with a aid of a powerful demon. To defeat this enemy, Chandika took the aid of a cunning female relative called Byche. Byche duped the demon into placing his long hair between the grinding stones of a water mill. Then Chandika sprang on the helpless giant and severed his head with her sword. But a new head immediately replaced the old. Repeated swishes of her sword only brought forth more grinning faces. Frustrated and tiring, Chandika was soon in danger of drowning in the sea of blood created by her actions. Forsaking her pride, she appeared to her brothers for assistance. Chagaon Maheshwar responded and told her to kill the life sustaining beetle, hovering over the demon's head. Chandika maintains her chief abode at Kothi in the middle of Sairag.

Kinnaur is the border district of Himachal Pradesh with Tibet on the East. The most important road of the district is National Highway No. 22 popularly known as Hindustan Tibet Road. About 142 km long stretch of this road falls in Kinnaur.

Some of the important food crops of Kinnaur district are: Wheat known as *'rejat', 'jod', 'oja', 'tho', or 'do'* in different dialects of Kinnaur is mostly grown in rainfed fields. Barley locally known as *'tag', cha', 'tang', 'chak', 'nan', 'tak-swa'* is the staple food of the district. It is used partly as bread and partly for brewing a local drink. *Maize* known as *'chhaha'* is sown in July on Bakhal (soil of manured fields located near the homsteads) land only, and harvested in September. Millets *like ogla, phaphra, bathu, kodra* have been grown in the district since time immemorial. Rice has been an important crop of the sole village of 'Kilba' since unknown times. Vegetables like cabbage, turnip, peas, beans, tomatoes, chillies, reddish, garlic etc. are also grown in many parts of the region. Cumin and saffron are produced in the Sangla valley. The climate of Kinnaur is cold and dry and is ideally suited for the production of temperate fruit and fruit that can be dried. Apples,

apricots, almond, walnut are grown all over the district. Grapes are grown in Kalpa and Morang areas. Plums, cherry, hazelnut, pears and peaches are widely grown in Nichar, Kalpa and Morang areas. Kaghzi almonds grown here match the best quality of almonds grown anywhere. *Ribba valley* is famous for grapes.

Food and Dress: In Kinnaur district, cereals used very commonly are, *barley, ogala, phaphara, chini, chalai, wheat, rice, maize, kada* and *bami.* The important dishes prepared out of these cereals are—*rote, poltu, dup, vud, phanitang, muri, sutrale, kanoi, ral, skur and sunpole* (joote in Pooh subdivision). All these dishes are prepared with special care and mixtures. *Sutrale* is a festive dish. *Sunpole* or joote is prepared like Jalebis of the ogala flour in frying pan. These are also taken on festive occasions along with tea. *Kaoni* is similar to saltish barffi, a sweet. It is a sacred food taken on religious festivals. It is also distributed among the Harijans on such occasions. Ral or rice is taken either as ordinary boiled rice or Khichari or ralu thupa. The latter is the mixture of rice, water, salt, spices and animal fat. In Kinnaur, breakfast is called *'Khaoo'*, lunch as *'Shill'* and dinner is called as *'Khaoo'.*

Drinking is quite common in Kinnaur. Barring as an offering of the deity, women as a practice do not drink. Men on the other hand are excessive drinkers. For brewing liquor, grapes, wild apricots, wild peaches, barley and other cereals are grown in Kinnaur in abundance. The brew obtained from barley is called 'Chhang', extensively used in Hangrang valley. 'Ghanti' is the other common name given to the liquor obtained from barley and other cereals.

Surprisingly, the men drink but distillation is the business of women folk. Practically every household is a mini distillery. Every household is granted a permit by the authorities to distill liquor for its own use, but illicit sale to outsiders is quite common. The 'Angoori' prepared at Ribba and 'Brandi' distilled in Nesing village are liquors of very high quality. *Alcohol has got so important place in the life of local people that even in the worship of the deities of this area, Liguor tops the list of articles required for the performance of any puja. It is must on such occasions.*

Dress: Kinners are famous for their own distinctive dresses and ornaments. The traditional dress of a Kinnaura woman resembles with pannier worn by English woman long back. The dresses used in Hangrang valley are clearly distinct from the dresses worn elsewhere in Kinnaur. *'Chamu Kurti'* is an ordinary shirt worn by men. During winter, Chamu Kurti is put on under *'Chhuba'*, a long woollen cloak. *'Chamu Sutan'* is a woollen pyjama (trousers) worn by men. *'Thepang'*, now popularly known Himachali cap, is a common dress of men and women in Kinnaur.

Women use 'Dhori', 'Choli, 'Chhanli' and 'Gachhang' for their dress. *Choli* is akin to full sleeved blouse. *Dhori* is a sort of woollen sari a girtle. It is a blanket that folds partly round the body and partly comes up around the shoulders and across the breasts, where it is fastened by a large metal broach.

Chhanli is a shawl. Men prefer pyjama of white or grey colour but never black. The important garments of male dress are 'Ragu' (Shirt), 'Ghoya' (woollen cloak), 'Suluka' (waist coat), 'Sutan' (woollen trousers), 'Shew' (cap) and 'Kera' (woollen rope tied around waist). 'Ra Ghaja' (ordinary shirt), 'Golak' or 'Ghoye' or 'Yangluk' or 'Ligche' (woollen shawl), 'Kera', 'Sutan' and 'Shew' are worn by ladies.

'Chutan', akin to baby shawl, is the dress of children in this valley. But now wind of change has started affecting mode and kind of dresses commonly used by the Kinners. Kinnaura women are very fond of ornaments. Thick bracelets, large ear rings, heavy silver chains, various kinds of beads and precious stones are the proud possession of a Kinnaura dame. Kinnaura men generally do not use ornaments. In old days, men used to wear even 'daglo' (steel bangles), 'botone se Shanglya' (silver chain with buttons) and silver buttons, 'Chakman' (a piece of steel for striking fire), a knife, a hatchet, a smoking pipe (Hukka) and goats hair rope round waist is a common possession of men and shepherds of upper Kinnaur.

KINNAURI SHAWLS: The Kinnauri Shawls has been registered in 2011, under Geographical Indications which will prevent traders from selling cheap imitations produced elsewhere in the country. The Kinnauri shawls are made with great labour on traditional looms in the tribal district of the hill state. Kinnauri Shawls with intricate borders in bright colours was the fourth product after Kullu shawl, Kangra tea and Chamba rumal to be registered under the Geographical Indications (GI) of Goods act, 1999, by the Registrar, GI Chennai. The registration move was jointly moved by the State Council for Science, Technology and Environment and the Kinnauri Handloom Weavers Association, Kalpa. This step would improve the trade prospects of Kinnauri shawls.

A geographical indication (GI) is a name or sign used on certain products which corresponds to a specific geographical location or origin (e.g. a town, region, or country). India, as a member of the World Trade Organization (WTO), enacted the Geographical Indications of Goods (Registration and Protection) Act, 1999 has come into force with effect from 15 September 2003. GIS has been defined under Article 22(1) of the WTO Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) Agreement as: "Indications which identify a good as originating in the territory of a member, or a region or a locality in that territory, where a given quality, reputation or characteristic of the good is essentially attributable to its geographic origin."

The GI tag ensures that none other than those registered as authorized users (or at least those residing inside the geographic territory) are allowed to use the popular product name. Darjeeling tea became the first GI tagged product in India, in 2004-05, since then by September 2010, 184 had been added to the list.

Crime and Punishment: In Kinnaur, punishments are devised for different crimes and offences over the centuries and are also unique and

peculiar. Here it is a mixture of modern laws and traditional *'biradari'* judgments taken into account while awarding punishments to guilty. Deity's decision has been taken as final. No one can defile devata's judgement in past. Earlier devta had been remanding people to jail. In Rohru, there is a place where 'Jubal Narayan' used to imprison criminal for ghastly criminal acts, even death sentence was awarded. One has to render *'izzat'* money as fine either to the aggrieved party or to the deity or *panchayat* even now for offences like kidnapping, divorce, accusations etc. If someone gravely violates the tenets of society, he is outcast. *'Tichig Michig'* punishment is awarded for grabbing of someone's immovable property, exogamy and for violating devta's direction, 'Chhetpa' is a fine awarded by 'biradari panchayat' for violating its orders. 'Ti Darang Shishe' is an exemplary punishment given to the incorrigible errant.

Kinnaur Mahotsav: Kinnaur Mahotsav is being celebrated since 1994 from 30 October to 2nd November every year at District Headquarter Reckong Peo and this festival has been declared as State Level festival and was earlier since 1987 celebrated under different names like *Janjatiya Utsav, Phulaich Utsav* and also as *Tribal Festival.* This festival not only depicts the panorama of rich culture heritage of district but also provides an opportunity to the local people to sell/exhibit their horticulture/agriculture produce, handicraft and artifacts. Besides the Kinnauri culture groups, participants from other districts/states also present and perform culture programmes symbolising national integration and brotherhood

DECADEL POPULATION GROWTH SINCE 1901-2011

Year	*Persons*	*Males*	*Females variation of Population*	*Percentage per 1000 males*	*Females*
1	2	3	4	5	6
1901	27,232	14,252	12,980	—	911
1911	28,470	14,710	13,700	4.55	935
1921	28,191	14,664	13,527	-0.98	922
1931	30,445	15,685	14,760	+8.00	941
1941	33,238	17,400	15,838	+9.17	910

KULLU

(HQ, KULLU, ALTITUDE 1,219 METERS)

Languages spoken : KULLUVI AND HINDI

Kullu district is located between 31° 58'00" North latitude and 77° 06' 4" East longitude. On the North and North-East, it is bounded by Lahaul-Spiti and Kangra districts, on the East and South-East by Kinnaur and Shimla districts. Kullu was once a big state next in importance only to Kashmir and Kangra. After the British occupation of the Punjab Hills in 1846, it formed a part of the British territory. The state under the Rajas included the Upper Beas valley from the Rohtang Pass to Bajaura, Lahaul and a portion of Satluj valley and consisted of seven waziris (provinces) which were as under.

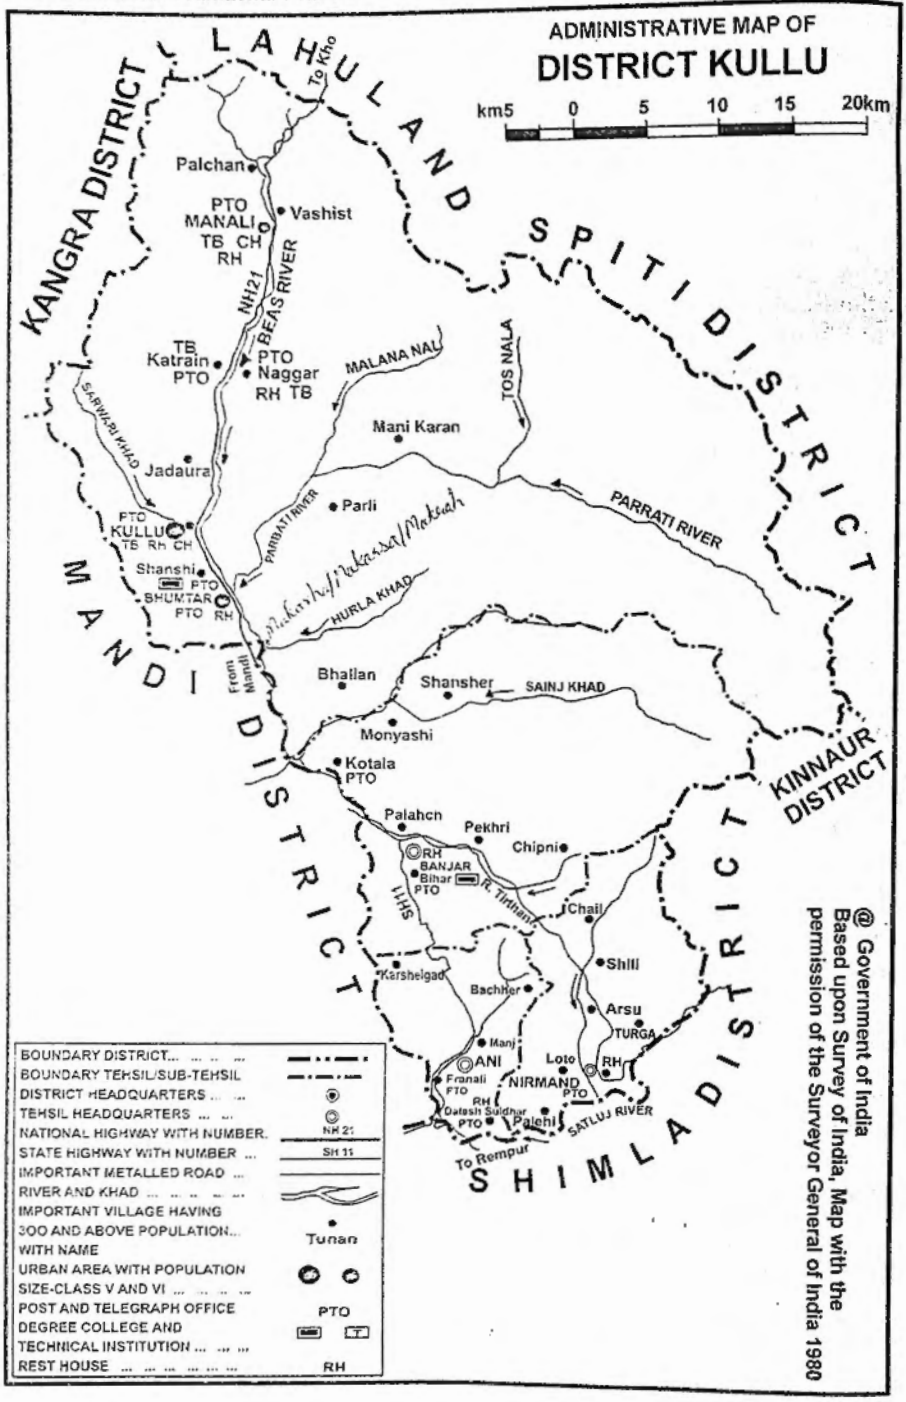
(1) Waziri Parol (Kullu proper)

(2) Waziri Rupi, the tract between *'Parbati;* and *'Sainj nullah'* on the left bank of the Beas including the hills of the upper *'Parbati valley'* tract known as 'Kanawar'.

(3) Waziri Lag Maharaj, the *'right bank* of *Sarvari, nullah'* and *'Sultanpur'* and of the Beas from there to Bajaura.

(4) Waziri Saraj, the Northern portion of the state, divided into outer and inner Saraj by the Jalori range.

(5) Waziri Lag Sari, the tract between the Phojal and Sarvari nullah on the right bank of the Beas.



(6) Waziri Bangahal, a portion of Chhota Bangahal.

(7) Waziri Lahaul, the tract of South-Eastern Lahaul.

Hiuen Tsang, Chinese traveller who visited Indian subcontinent from 630 to 644 A.D described country known as 'KULUTA' situated at 187 km (700 Li) to the North-East of Jalandhar with a circuit of 801 km (3000 Li).

Climate of the district is cool and dry. The district receives moderate rainfall and bulk of it is received during the months of July, August, December and January, *The wettest month is August.* From climatic point of view, the most enjoyable altitude is between 1500 to 1800 meters as this range is neither too hot nor too cold. The district Kullu forms a transitional zone between the lesser and the greater Himalayas and presents a typical rugged mountainous terrain with moderate to high relief. The altitude varies from 1,300 meters to over, 6,000 meters from the mean sea level. The rock types found in the district are Phylite, slate, quartzite, limestone, schists and granites and have been classified on the basis of their physical characters and period of formation.

The Satluj and the Beas are the principal rivers of the district and the entire drainage of the district is received by these two rivers. The main tributaries of the Beas in the district are the Solang, Manalsu, Sujoin, Phozal

nullah and the Sarvary. On the East of Bhunter comes in the Parbati, which at its junction is as large as the Beas itself. The Parbati, after flowing North-Westerly direction, merges with the Beas. Between its basin and that of the Sainj nullah lies the 'Hurlagoa' which rises from glaciated area. It joins the Beas opposite Bajaura. The Sainj is the fairly large river flowing to the West from 'Supa Kuni' high peak on the Spiti boundary. It joins the Beas at Larjee.

The Tirthan stream joins the Sainj a little above the junction of the latter with the Beas. The Satluj touches the district in Nirmand tehsil opposite to Rampur tehsil of Shimla district. It receives water of Kurpan, Anni and Jibhi *Khuds*. These streams rise from Jalori range.

HISTORY

The material at our disposal for the history of Kullu is very scanty and unreliable. In tracing the history of Kullu state, most authentic information has been provided by Dr. Hirananda Shastri of ASI, 'Vamshavali' or Genealogical roll of the Rajas and Colonel A.P.F. Harcourt, in his book "Kooloo, Lahoul and Spiti" etc. We know from historical documents that next to Kashmir and Kangra, Kullu was probably the most ancient state in the Punjab Hill states. The oldest historical record in the country is the legend on a coin of Raja of Kullu, named Virayasa. This ancient Kullu was first published by Sir A. Cunningham, but the correct reading of the legend was established by the Swedish scholar, Dr. A.V. Bergny. The coin of the King Virayasa of Kullu bears the full Sanskrit legend in Brahmi and one word *(rana)* in the Kharosthi character.

The original name of Kullu was KULUTA. It occurs in Sanskrit literature, as in the 'Vishnu Purana' and 'Ramayana'. It is also mentioned in the 'Mahabharta', the 'Markandya Purana', the 'Brihat Samhita', the 'Rajtarangini', in Bana's Kadambari' (7th C.A.D.) etc. The Chinese pilgrim Hiuen Tsang (A.D. 630-644) visited India, describes the country as 'K' iu' lu' te', situated 187 miles to the North of Jalandhra. Hiuen Tsang also makes mention of a Stupa, erected by Ashoka in the middle of the valley to commemorate Buddha's alleged visit. Of the copper plate title deeds found in Kullu, the oldest one is that of Nirmand. It, however, was not granted by a Raja of Kullu, but by one Raja Samudra Sen, whose identity has not yet been fully ascertained. This copper plate belongs to the 7th century A.D. Later references to Kullu are found in Chamba copper title deeds of eleventh century granted in the reigns of Soma-Varman and Asta-Varman and relating to the events that took place in the reign of Sahila Varman of Chamba.

According to the traditional folklore of the local people, the Kullu valley originally bore the name of 'Kulantapitha', meaning *'the end of their inhabitable world'* as being in the estimation of the people of the period, the utmost limit of human abode. The name also occurs in the booklet called *Kulantapitha Mahatmya*, which is in possession of the priests of Manikaran in the Parbati valley, and it claims to be a part of the *'Brahmanda Purana'*.

Some references of Kullu are also found in the Tibetan chronicle of Ladakh, called the 'Gyalrabs' or *"Book of the kings:*. Again, there is a reference to the state in the Kashmir chronicle of 'Jonaraja'.

Assuming that the Kullu state was founded not later than the first or second century, the Vamshavali tends to confirm local tradition in the hills to the effect that the rule of the Ranas and Thakurs was of still more ancient origin for they were said to have been in possession of the country anterior to this, either as independent rulers or in nominal subjection to a paramount power. The Ranas of Kullu were of the warrior caste and probably came from the plains; the Thakurs were almost certainly Kanets. In the Vamshavali of Kullu state are found 73 names of the 'Pal' line of Rajas and 15 of the later line, who bore the surname or suffix of 'Singh', i.e., 88 names in all. The later line began about A.D. 1500 and came to an end in 1840 with the overthrow of the state by the Sikhs; giving a period of 340 years, on an average reign of 20 years to each Raja. Captain Harcourt states that the total number of Pal Rajas was 85, with fifteen of Singh dynasty, making 100 in all.

The founder of the Pal line of Rajas in Kullu is believed to have come from the plains. The earlier seat of the family is said to have been at 'Prayag' or 'Allahabad'. From there, they migrated into the mountains of Almora and after sometime moved Westwards and conquered *'Mayapuri'* or *'Haridwar'*, where they settled. At an early period, a cadet of the family, named 'Bihangmani Pal', is traditionally believed to have been the founder of Kullu state. He had seven brothers. He was accompanied to Kullu from Mayapuri by his Rani and his son, *Pachch Pal* and also his family priest, Purohit Udai Ram. Bihangmani attacked and overcame some of the petty chiefs in the Parbati valley. But it was a temporary success, and he next appears as a fugitive at Jagat Sukh, living in concealment in the house of one Chapai Ram. On his death, Bihangmani was succeeded by his son Pachch Pal, who continued the contest with the *'Ranas'* and *'Thakurs'* in his effort to consolidate the kingdom. He overcame the Rana of *'Gajan'* and the Rana of *'Bevala'*. His younger brother, Narinder Pal, is said to have been killed in fighting.

Bahang Pal and Durhin or Hin Pal followed, but nothing is recorded about them.

Surag Pal, the next in succession had two sons by different Ranis, named Shakti and Janak, who contested the succession, as they were born about the same time. At last they consulted the purohit as to whose right it was to reign and he decided in favour of Shakti Pal, as he was the son of elder Rani. He was in turn followed by Mahindra Pal, Om Pal and Rajendra Pal. At that time, the Rana of Gajan in *'Kothi Barsai'*, (between Jagatsukh and Naggar,) named Surat Chand, died without any male heir, leaving only a daughter, named 'Rup Sundari', who succeeded her father Surat Chand. Rajendra Pal took it as a golden opportunity to merge Kothi Barsai with his kingdom. For this, he tried to capture it by force unsuccessfully. Ultimately through the good offices, marriage proposal was put forward before Rup

Sundari, which she accepted without much hesitation. Thus Kothi Barsai, in which Gajan territory was situated, came into the Raja's hands.

Visal Pal, succeeded father Rajendra Pal. At that time, Naggar was held by a Rana named Karam Chand, with whom Raja waged a war. The Rana was killed in the battle and succeeded by his son, from whom the Raja extracted tribute.

Visud Pal followed Visad Pal. In the case of preceding Rajas, 'Nast' (Jagat Sukh) is recorded as their place of residence, but Visudh Pal had his capital at 'Naggar'. The next Rajas were Uttam Pal; Dvij Pal; Chakar Pal; Karan and Suraj Pal about whom chronicle contains no record. Suraj Pal is said to have had no heir, but many illegitimate sons. He was succeeded by 'Rakesh Pal', but we do not know anything about their relation to each other (Suraj Pal and Rakesh Pal). He too died without issue and was succeeded by his brother Rudra Pal. Initially, other brothers, of Raja Rudra Pal disputed the succession, but apparently seeing the challenge of Ranas to the throne, they recognised Rudra Pal as Raja. Later on, Ranas were defeated in the battle and was those who survived were made to pay tribute.

Soon afterwards arose a new danger in consequence of an invasion of Kullu by Raja of Spiti, named Rajendra Sen. The country was subdued and Rudra Pal in his turn was made to pay tribute to Spiti. Hamir Pal, who succeeded Rudra Pal, continued paying tribute money, amounting to six anna in the rupee, of yearly revenue, but on Hamir Pal's death, his son, Parsidh Pal, declined to continue the payment of tribute and moved out with an army to oppose Chet Sen, the Spiti chief. The battle took place in the area near by the Rohtang Pass and Parsidh Pal liberated his country from Spiti and Lahaul from Chamba.

Parsidh Pal was followed by Harichand Pal, Subhat Pal, Som Pal and Sansar Pal. In Sansar Pal's reign (600-650 A.D.), the final overthrow and extinction of the Pre-Buddhist Hindu dynasty in Spiti took place, when the country passed under Tibetan rule.

Bagh Pal succeeded Sansar Pal and his claim was contested by his brother, Vibhay Pal. A war ensued between two brothers, which resulted in the death of Bhag Pal. He was then succeeded by Vibhay Pal, who in turn was followed by Brahm Pal. The Raja Brahm Pal had no legitimate son, and then as chronicle states, the Rajas of Kangra, Bangahal, Chamba, Bushahr, Suket and Ladakh agreed to make Ganesh Pal an illegitimate son of the late Raja, his successor. The authenticity of this action seems to be unreliable.

Gambir Pal succeeded Ganesh Pal. Gambir had two sons, named Bhumi Pal and Sukhu Pal, who contended for the *gaddi*. A contest took place in which Bhumi Pal emerged victorious. There is nothing much in the chronicle about the reign of Bhumi Pal. He was succeeded by his son, *Sri Dateshwar Pal*. At that early period. *Meru-Varaman* of Chamba (Brahmpura) (C.A. D. 680-700) invaded Kullu state. In the battle, Kullu Chief, Sri Dateshwar Pal,

was defeated and killed . Sri Dateshwar Pal was 31st Raja of Kullu. 'Gobardhan' was Raja of Delhi at that time. On his father's death, Amar Pal took command of the Kullu forces, and with his two sons tried to oppose Chamba advance unsuccessfully, Amar Pal too, with one of his sons was slain and the second son, named Sital Pal, fled to Bushahr state to ask for help. There, family seems to have remained for some time, as Sital Pal and five of his descendants never reigned, Meantime, Kullu seems to have been under the rule of Chamba.

Sri Jareshwar Pal, the sixth descendant from Sital Pal, liberated Kullu from Chamba with the help of Bushahr ruler. This event took place some time around A.D. 780-800, when Chamba was inavaded by Kiras or Tibetans and the Raja of Chamba was killed. Sri Jareshwar was followed by 'Prakash Pal', 'Achamba Pal', 'Tapaneshwar Pal', 'Param Pal' and 'Nagendra Pal', of whom nothing special is on record.

These rajas had either very small period of reign or were greatly under the influence of their officials that is why nothing is recorded about them.

Narad Pal's reign, marked by another war with Chamba, which continued for twelve years and then peace was concluded. But Kullu people were insincere and they were looking for an opportunity to destroy the invaders. For that a social gathering was arranged to which Chamba people were invited, ostensibly to cement the truce, which had been concluded. According to the local tradition, a great part of Chamba army was deceitfully drowned in the river Beas near village Kothi and the remainder fled back to their country. *The Chamba force was traditionally called "the Gaddi Army"*

Narottam Pal, Shish Pal and Bhup Pal followed in succession. Bhup Pal, 43rd in succession, was contemporary of Bir Sen, the founder of the state Suket. There is reference in both Kullu and Suket chronicles, that Bir Sen, Raja of Suket, led an army into Saraj and defeated Bhup Pal and made him prisoner. The state (Kullu) was afterwards released on condition of tribute and feudal services. Bhup Pal's successor, 'Anirudh Pal', also continued to pay tribute to Suket, but his son, 'Hast Pal I' was freed from tribute on the condition of giving aid to Suket in a civil war.

According to Suket chronicle, Raja Bikram Sen, grandson of Raja Bir Sen after ascending to throne, went on pilgrimage to Haridwar leaving his younger brother *'Tribikram Sen'*, incharge of the state. However, he proved unfaithful to his elder brother. To secure the assistance of the Kullu chief in his design, his state was restored, on the condition that Hast Pal would render support on Bikram Sen's return. Raja Bikram Sen came back after two years, and hearing on the way what had happened, sought the aid of Rana of Keonthal, his own Kinsman.

A pitched battle took place at 'Jiuri' on the bank of Satluj, in which Hast Pal of Kullu and Tribikram Sen of Suket were both killed. Bikram Sen then advanced into Kullu and took possession of the country. The descendants of

Hast Pal, named Dhani Ram, Gopal Das and Lachmi Das, were only Jagirdars. In the third generation from the time of Bikram Sen of Suket, Lakshaman Sen (a minor) succeeded to the throne and it came as a great opportunity for the Kullu Raja named Surat Pal (Hasir Pal) to free the country. Fourteen years later, Suketi Raja again subdued Kullu. *(This invasion of Kullu by Lakshman Sen is not confirmed by Kullu chronicle).*

Santokh Pal- I, the next Raja was succeeded by his son 'Tegh Pal', who supposedly conquered Baltistan by killing the chief, named 'Mohammed Khan' and making his son a tributary (authenticity of these statements is doubtful). Raja Tegh Pal was succeeded by Uchit Pal, who invaded Tibet, but on his death, the Rajas of 'Lahasa' captured the Raja's son while engaged in performing his father's funeral ceremonies and put him in jail in *Mohangarh* (in Kothi Chaparsa, near Bubu Pass). This event took place in the reign of 'Lha Chen Utpala', C.A.D. 1125-50. On that occasion, the king of Kullu bound himself by oath to pay tribute in *'dzos'* and *'iron'* to the king of Ladakh, which remained in force down to the reign of 'Sengge Namgyal' (A.D. 1590-1620) even later.

The next Raja, Sikandar Pal, then went to Delhi to complain against the Chinese aggression. The Raja of Delhi came in person with an army which passed through Kullu and conquered 'Gya Mur Orr', *'Baltistan'* and *Tibet'* as 'Mantilac' (Mansarover) lake. The lake Mansarover, in olden days, was called Mantilac. The Rajas of 'Gya Mur orr', Baltistan and Tibet were made to pay tribute to Delhi through the Kullu Raja, who was restored to his dominions.

Saras Pal, Sachdev Pal, Sri Mahadev Pal and Nirati Pal: followed in succession, of whom there are no details. Bain Pal, the next Raja, was followed by Hast Pal II in whose period the Raja of Bushahr invaded Kullu and after exacting tribute, left the country. This tribute continued to be paid during the next Raja Sasi Pal's reign but his son, Gambir Chand (Pal), succeeded in freeing his country from Bushahr.

Nisudan Pal: the next Raga was followed by *'Narinder Pal'*, in whose period Kullu was captured by 'Bangahal' and remained subject to that state for ten years. The next Raja *Santokh Pal II* was succeeded by *'Nand Pal'* ,in whose time Kullu became tributary to Kangra and continued so till the reign of Dharti Pal. Inder Pal, however, recovered his independence and threw off allegiance to Kangra.

'Mahi Chakar Pal': 'Jayadhar Pal' and 'Keral Pal' followed in succession. In Keral Pal's reign, Kullu was again invaded by the Raja of Suket. Rana Bhosal, the possessor of the land between the Siunsa Nala and Bajaura, on the right bank of the Beas, was a well known petty chief of the time. He was married to the princess of Suket and resided at the fortified palace of *'Garh Dhek'*. His capital was 'Sangor', opposite to Naggar, and his chief defence was the huge dressed stone fort of 'Baragarh'. His wife was named

Rupni, his son 'Tikka Ghungru' and his daughter Dei Ghudari'. The Rana was notorious for his stupidity. The Rana had a wazir, named 'Tita Mehta'. After Keral Pal, the following Rajas ruled the state; Hans Pal, Agast Pal, Madan Pal and Urdhan Pal.

The Raja Urdhan Pal built the *'temple of Sandhya Devi'* at Jagatsukh. He was 72nd Raja of Pal dynasty and ruled between 1418 to 1428 A.D.

Kailash Pal (A.D. 1428): Kailash Pal was *the last Raja of Kullu who bore the surname of Pal* and probably ruled till about A.D. 1450. After him, there is a long break of about 50 years, during which there seems to have been no Raja in Kullu. Meanwhile, Suket retained its hold over a large part of the territory and to it many of the 'Ranas' and 'Thakurs' were tributary.

Sidh Singh (A.D. 1500): There was fifty years interregnum between Kailash Pal and his successor, Sidh Singh. Some historians believe that Sidh Singh was founder of a new dynasty. But in *Vamshavali,* there is no reference to this presumption. On the contrary, it seems to be assumed that he was a descendant from the Pal family and he himself originally bore the Pal suffix. It is not certain what relation Sidh Pal (Singh) had with Kailash Pal. He may have been the grandson or great grandson of Kailash Pal. Sidh Singh had to put forth strenuous efforts to subdue the *'Ranas'* and *'Thakurs'*, who during a long period of complete independence, had regained full powers all over the country.

At the beginning of Sidh Singh's reign, both banks of the Beas above Jagatsukh were held by a powerful chief named **'Jhinna Rana'**, His chief strongholds were at *'Madankot'* and *'Manali'* and was too powerful to be attacked openly. Jhinna Rana had a groom of *Dagi caste* bearing the nickname of 'Muchiani', on account of the length of his moustache, who was a noted sportsman with bow and arrow. Rana Jhinna had strong dislike for his long moustache and so ordered the groom to cut it earnestly, which he did not. By late, both were not in good terms. This came to Sidh Singh as an opportunity and he sent for the Muchiani and bribed him to kill the Rana. One day, when the Rana had gone to look at his rice fields at **'Kumanu'** and **'Rambar'** below Vashist, and as he was riding back, the Muchiani shot him dead.

On hearing this bad news, the Rani set fire to the fort, perishing with all her women including the Muchiani's wife. After her sati, the Rani is believed to have become a *'Jogin'* (goddess), and her shrine is in the ruins of 'Madanko'. The Muchiani's wife is also worshipped as *Jogin.* For his services, Muchiani was rewarded by Sindh Singh with the Kumanu rice fields. At the time of Jhinnah Rana's death, one of his wives was pregnant, and the Rani sent her out of the fort before setting fire to it. In due course, a boy was born. He founded *'Nuwani family'*, famous for erecting memorial stones for its dead, a royal privilege in Kullu, Suket and Mandi. The Nuwani family had strong hatred for the Badani Rajas of Kullu.

The fort of **Baragarh** was the next, captured by Sidh Singh with the

timely help extended by a women living in the fort. After Rana *'Bhosal's* death, it was under the possession of Suket, and held by a garrison. One day the garrison went down to *'Hurrah Kothi'* for the *'Pali jatra'* on 2nd Jeth, and the woman then waved a red petticoat, the signal agreed on, which was seen from *Naggar,* and the Raja marched in by the *Sujoin Nala* and captured the fort. The first thing Sidh Singh did on entering was to order the women to be thrown down the precipice. Sidh Singh died probably in A.D. 1532 and was succeeded by his son, Bahadur Singh.

Bahadur Singh (A. D. 1532): The subjugation of the *'Ranas'* and *'Thakurs'* was started by Sidh Singh and completed by Bahadur Singh. The Raja Arjun Sen of Suket was the contemporary of Bahadur Singh of Kullu. *'Waziri Ruppi'* was still in the possession of Suket and Thakurs of the area paid tribute to Suket. The Raja of Suket was notorious for his arrogance. Once he called the Thakurs of Waziri Ruppi as Crows of Ruppi' and refused to grant their request. So, on their way back from Suket, they decided to offer their allegiance to Bahadur Singh, who treated them respectfully by designating as "Lords of Ruppi". When he (Bahadur Singh) asked their objective to come to Kullu, they replied that formerly they were subject of the Kullu state and now they desired to become so again. Thus, quietly, *Waziri Ruppi was made part of Kullu state.* Bahadur Singh continued his mission against *'Thakurais',* and in the process brought 'Harkandi Kothi', 'Chung Kothi', 'Kothi Kot-Khandi', Thakur of 'Basa' and Thakur of 'Tandi' in Bhulan Kothi under his control.

On ascending to throne, Bahadur Singh settled at 'Makarasa', where he built a palace for himself and rehabilitated the town. It is generally believed that the place Makarasa initially was founded on the left bank of the Beas by 'Makas', one of the two sons of 'Vidura' of *'Mahabharta',* who had married a daughter of Tandi, the local demon chief in the South of the Rohtang Pass. Makas was brought up by 'Vyasa Rishi'. The capital of the state, however, remained at Naggar.

Later on *Thakur Haul of Sainsar Kothi* was also subdued and killed by Bahadur Singh with assistance of the Thakur's relative, who had betrayed him. They in return got a Jagir as promised by the Raja. The policy of expansionism and annexation followed by Raja Bahadur Singh continued with subduing of *Banogi near Larji, Nohanda, Kothi Bunga, Kothi Sarchi, Ramgarh and Kothi Chahni.* Bahadur Singh and his son 'Pratap Singh' extended the territories of Kullu state by conquering 'Ruppi', and 'Lag area', Sarvari valley, the right bank of the Beas from Raisain to Bajaura, half of the inner Saraj, North-Western portion of outer Saraj with portion of Chhota Bangahal. The territory of Kullu state remained extended and unchanged upto the accession of Raja Jagat Singh in A.D. 1637. In A.D. 1559, towards the end of Bahadur Singh's reign, a marriage took place between the royal families of Kullu and Chamba. The Raja of Chamba of that time was probably Ganesh Varman and the bridegroom Pratap Singh, his son and heir, of

Chamba throne to whom three Kullu princesses were married at the same time. Bahadur Singh was succeeded by **Partap Singh** (A.D. 1559-1575); Partap Singh (A.D. 1575-1608); Prithi Singh (A.D. 1608-1635) and Kalyan Singh (A.D. 1635-1637), the last name being a brother of the previous Raja.

Unfortunately, there is no record of reigns of these Rajas, Though there is no mention in the chronology of Kullu, it is probable that Kullu like most other states was subjugated by Akbar in 1556 A.D. All the Rajas of hills about that period used to pay tribute to the Mughal emperor of Delhi. During the period above Rajas ruled at Kullu, Delhi's Mughal emperors were Akbar, Jahangir and Shah Jahan.

Jagat Singh (A.D. 1637-1672): *was the most powerful ruler of the dynasty*. During his period, territory of the state was extended. He annexed the whole of the *'Lag area'* and *'Outer Saraj'*, which was formed the part of Suket and Bushahr. Jagat Singh invaded the area and captured the forts of *Narsinghgarh'*, *'Srigarh'*, and *'Himgiri'*. Jagat Singh had invaded Lag in conjunction with the Raja of Mandi, probably Suraj Sen. The Lag state was then ruled by two brothers, one of whom was **Jai Chand** (or Jog Chand) residing at 'Dughi-Lag' and the other **'Sultan Chand'** at **'Sultanpur'**, which according to tradition, was founded by and named after him. **'Lag'** was annexed to Mandi and Kullu, probably about A.D. 1650-55.

An interesting and important incident in the beginning of Raja Jagat Singh's period was the installation of the idol of **Raghunathji**. This idol was brought by one 'Damodar Das' (a Brahmin) from *'Ayodhya'* in 1653 A.D., on the order of Raja Jagat Singh of Kullu, so that he may be relieved of the curse which had fallen upon him. On receiving, the image was placed on *'gaddi'* and henceforth the Rajas of Kullu regarded themselves as only the *vice-regents* of Raghunathji (Ram) and ruling only in his name.

The 'curse' for which reference has been made in the above paragraph was that; a Brahmin residing at 'Tippari' between Chamman and Jari was said to have about three pounds of pearls. The Raja sent to demand the pearls and met with a refusal. And once, when Raja was on his way to 'Manikaran' and at 'Sarsari', he again sent to the Brahmin for the pearls. Being angry, the latter replied that he would produce them on the Raja's return from Manikaran, but on the approach of the royal party, he set fire to his house and perished with all his family. The Raja then went on to 'Makarasa' and on food being set before him, it all turned to worms. This caused much restlessness, and a Brahamin of reputed piety was sent from Suket, who came unwillingly. On matter being laid before him, he told the Raja that it had been revealed to him in a dream that the sin of Brahmin's murder could be expiated only by bringing the image of 'Raghunathji' from Ayodhya.

Having subdued the whole of the upper Kullu valley, Jagat Singh *transferred the capital from 'Naggar' to 'Sultanpur'*, probably about A.D. 1660, and built a palace for himself and a temple for Raghunathji. Thereafter, he resided alternately at Sultanpur, Naggar and Thawa-the last named place

is above Naggar. Aurangzeb, the Mughal emperor, was the only one to recognise Jagat Singh as the 'Raja of Kullu. Twelve *farmans* addressed to Jagat Singh before Aurangzeb from Mughal court, called him 'Zamindar of Kullu'. Jagat Singh died after 35 eventful years and succeeded by his equally capable son Bidhi Singh.

Bidhi Singh (A.D. 1672-1688): Raja Jagat Singh had three sons Hari Singh, Bidhi Singh and Fakir Singh. Hari Singh was probably killed in a battle and Bidhi Singh Succeeded on his father's death. Bidhi Singh is said to have extended the boundaries of the kingdom in every direction at the expense of his neighbourhood. About 1670-80, he advanced into upper Lahaul and freed it from Ladakh, to which it as well as Kullu had been tributary from A.D. 1125-50. This was probably rendered easy in consequence of the invasion of Ladakh by Eastern Tibet in A.D. 1646-47, which greatly weakened the power of Ladakh. He also annexed the Kothis of *'Dhaul'*, *'Kot Khandhi'* and *'Baramgarh'* in outer Saraj, after taking them from Bushahr. Bidhi Singh died in A.D. 1688.

Man Singh (A.D. 1688-1719): Man Singh, son of Raja Bidhi Singh, was also one of the outstanding rulers of the state. He reigned from 1688 to 1719 A.D. In the early part of the reign, he invaded Mandi and conquered the country as far as Darang salt mines. The Mandi records, however, state that he was defeated and driven back. He captured the *taluka* of Outer Saraj by taking the present Kullu Kothi of *'Pandrabis'* from Bushahr, and built the forts of *'Pandrabis'*, *'Dabkopochka'* and *'Tangusta'*.

About A.D. 1700, Man Singh again took the field against Mandi in consequence of the invasion of Bangahal. The Raja of Mandi at that time was Sidh Sen. Prithi Pal, the Raja of Bangahal, was son in law of Sidh Sen and Prithi Pal's sister was married to Man Singh of Kullu. The Raja of Kullu annexed Chhota and Bara Bangahal from Mandi state. Prithi Pal, the Raja of Bangahal, was invited to Mandi on the pretext of seeking his assistance against Suket, but a month later, murdered at Damdama Palace. (reference has already been made).

Man Singh, after some time forced the ruler of Ladakh to fix a boundary between Kullu and Ladakh at *'Lingti plain'*. Spiti was also made to pay tributes to Kullu. Towards the South, while passing through Saraj, he crossed the Satluj and seized 'Shangri', which was then held by a Thakur. He built the forts at *'Kalgarh'*, *'Sirikota'*, *'Salachani'*, *'Ratu'*, *'Rararna'* and *'Pagi'* and took tribute from Kotgarh, Kumharsain and Balsan. Soon afterwards Mandi invaded Kullu, and Garhchula, Madanpur, Bisturi and Tarapur were also attacked. Raja Man Singh of Kullu repulsed the aggressor with greater force and forced the Raja of Mandi to come to terms at a place called *'Dhangi'*.

He also built a palace at *'Ratah village'*. During Man Singh's period, Kullu was at the zenith of its power and glory. His kingdom comprised upper Lahaul, Bara Banghal and a part of Chhota Bangahal, while towards South it extended nearly to Shimla (Shangri state to the East of the Satluj was then a Kullu

territory) and to the town of Mandi. Raja Man Singh's reign came to a tragic end when he was assassinated by the Rana of Kumharsain, with whose wife Raja had fallen in love. This act was performed at *'Srikot'* across Satluj.

Raj Singh (A.D. 1719-1731): The period of Raja Raj Singh was uneventful. It was about this time that Guru Govind Singh, the tenth Sikh Guru, visited Kullu to seek Raj Singh's help against Mohammadens, but Raja was unfavourably disposed towards the Guru. Raja Raj Singh's reign was short one, and he died about A.D. 1731.

Jai Singh (A.D. 1731-1742): Raja Raj Singh was succeeded by his son Jai Singh, **'Kalu of Diyar'** was the *wazir* of the state in the early part of his reign. Somehow, Raja was not pleased with his wazir and expelled him from the country. The wazir then retired to *'Kareti'* and stirred up a revolt. On hearing of the revolt, Raja fled to Lahore along with 500 servants to seek Mughals viceroy's support. Hearing of this, **'Samsher Sen'** of Mandi invaded the state and took possession of **Chauhar** territory. From Lahore, Jai Singh did not return to Kullu, but went on pilgrimage to **'Ayodhya'** and lived at *Ramdarbar'*, devoting himself to the worship of 'Raghunathji' till his death.

Tedhi Singh (A.D. 1742-1767): He succeeded his elder brother Jai Singh. His reign was famous for revolts on one or other pretexts. *It was probably during this period that invasion of Kullu took place and images on the Bajaura temple were mutilated, probably by Mohammaden mercenaries.* Tedhi Singh had no legitimate son, but there were *three sons by concubines,* named Pritam Singh, Charan Singh and Prem Singh.

Pritam Singh (A.D. 1767-1806): Tedhi Singh was succeeded by Pritam Singh. Soon after his accession, he invaded Mandi and recovered the forts of *'Deogarh', 'Mastpur', 'Sari' and 'Amargarh'.* Although his reign was uneventful, yet there were records of plots hatched against him by neighbouring rulers. One such plot was planned in A.D. 1778 by the ruler of Mandi, Raja Samsher Sen and his son Mian Surma Sen, Raja Sansar Chand of Kangra and Raj Singh of Chamba to attack Kullu and seize Bangahal and divide it equally among them. This was done and wazir of Kullu, named **'Bhag Chand'**, had also been captured. He was released later, on the payment of Rs. 15,000/- Another agreement was entered into against Kullu between Chamba, Mandi and Bilaspur, dated A.D. 1786. Nothing seems to have come of this agreement.

In 1775 A.D. Sansar Chand II came to power in Kangra. He was an ambitious ruler. By 1792, a large number of hill states were already under his control. But Kullu does not seem to have been interfered with by Sansar Chand to the same extent as some of the other states. Its isolated position in the high mountains had probably come to its protection. In A.D. 1801, Pritam Singh of Kullu wrote a letter to Raja Jit Singh of Chamba, promising assistance in a united attack upon Kangra. By that time, strong resentment had already developed against Sansar Chand Katoch among hill chiefs. Pritam Singh died in A.D. 1806.

The period from 1750 onwards was very tubulent in the History of Himachal Pradesh. The rise of Raja Sansar Chand of Kangra, invasion of Gorkhas, emergence of Sikh Power under Maharaja Ranjit Singh and British ascendancy all took place during this period, and also changed the political map of Himachal Hills.

Bikram Singh (A.D. 1806-1816): Pritam Singh was succeeded by his son Bikram Singh. In the early part of his reign, Mandi invaded, Kullu and retook the forts of *'Deogarh, Mastpur'* and *'Sari'*. With the possession of Kangra fort by Ranjit Singh in A.D. 1809, Kullu and other hill states also became part of subjection. In 1810 A.D. Rs. 40,000/- tribute was paid by Kullu to a Sikh force; in 1813, 'Mokham Chand' entered the valley by the *'Dulchi pass'* and asked for Rs. 50,000 which was refused. On this, the Sikhs plundered the territory and looted treasury. Raja Bikram Singh fled to village 'Sangla' up the mountains. But ultimately Rs. 3 lakh is said to have been paid. The Raja died in about A.D. 1816.

Ajit Singh (A.D. 1816-1841): Raja Bikram Singh had no legitimate son. Ajit Singh was the *son of a concubine*, but in the absence of a legitimate heir, he was acknowledged as Raja and installed by the Raja of Mandi acting as deputy. The right of the Raja of the Mandi was disputed by Sansar Chand of Kangra and he stirred up Kishan Singh, the Raja's uncle, to dispute the succession. Ranis also supported Kishan Singh, but were opposed by the people. He then fled to Kangra and collected a force with the help of Sansar Chand. After sometime, Kishan Singh advanced into Kullu and Ajit Singh was defeated, and so he fled to Mandi. But he came back again and recaptured his kingdom from Kishan Singh. Kishan Singh was overpowered and made prisoner. *The Katoch men were stripped naked and left to find their way home over the mountains in this condition.* As a reward for his services, the Mandi Raja claimed the restoration of two forts and the Chuhar territory, which was with Kullu for some time. Kishan Singh died soon afterwards.

Some time in 1816-17, the ex-Amir of Kabul, 'Shah Shuja', passed down through Kullu into British territory. On hearing his hideouts in Kishtwar, Maharaja Ranjit Singh asked for his surrender, but he fled over the high ranges into Kullu. On hearing that, Shah Shuja had been allowed to escape, Ranjit Singh imposed a fine of Rs. 80,000/- (or Rs. 30,000/-) on Kullu, which was paid.

All these exorbitant demands from the Sikhs exhausted the State treasury of Kullu. Kullu then might have directed Lahaul, then its tributary, to share the burden. But it is an untold story. Kullu also made attempts to fill up its treasury through raids on its petty and weak neighbours. In 1818, it invaded Spiti through *Prini Pass* under the command of the brother of Wazir Sobha Ram. The Kullu army plundered the monasteries looted the villagers and returned with heavy booty.

Immediately after this in 1818-19, Lahaul helped Kullu in a similar raid on Zanskar from where again the Kullu army returned with heavy loot. In

1820 Kullu also raised a trade dispute with Ladakh. The case was brought for decision before Moorcraft. He remarks: *"The object of the Kullu wazir, whatever might be pretended, was, no doubt, to raise means for paying the exactions of Ranjit Singh".*

After this Kullu submitted to the Sikhs with the condition to pay some kind of tributes as other Hill States were doing since 1810.

Mr. Moorcraft was the first European to visit Kullu on his way to Ladakh in A.D. 1820.

During Ajit Singh's minority, affairs of the state were administrated by the Wazir 'Sobha Ram', who was an intelligent man. In 1839, a portion of Sikh army under the 'Sindhanwala Sardars' was dispatched for Kullu invasion. No opposition was met with here and then forces advances to Sultanpur. Raja Ajit Singh was treacherously made prisoner and forced to surrender the state. It is said that the Sikhs treated the Raja with great indignity and want of courtesy and the report of this treatment aroused strong feeling of anger among the people against Sikhs. After completing its work, Sikh force when coming back from outer Saraj by the *'Basloh pass'*, was ambushed by the Sarajis and Raja Ajit Singh was caught up and carried swiftly up the mountain side. Later on approximately 1000 men of Sikh force was mercilessly massacred by them.

This happened in the spring of A.D. 1840. Meantime, Raja Ajit Singh was conveyed across the Satluj to his small state of Shangri, which was under British protection. There he died in September A.D. 1841. On the other side, the main Sikh army remained at Sultanpur, and against it, Kullu people were powerless. After some time, a strong force was dispatched to Saraj to avenge the cruelties committed against Sikhs by Sarajis. A number of villages were burnt and country was plundered, and thereafter it was handed over to the Raja of Mandi for Rs. 32,000/-. The rest of the area remained under Sikh revenue collector. In the autumn of 1841, Ajit Singh's two Ranis, who were under Sikhs captivity, managed to move out of Sultanpur palace by a subterranean tunnel, dug under the wall. But on their way to Shangri, when they heard the news of Raja's death, they came back to Sultanpur.

On Ajit Singh's demise, the Superintendent of the Shimla hill states, 'Mr. Erskine', made an inquiry as to the succession to the fief of Shangri, and said to have reported in favour of 'Ranbir Singh', minor son of Mian 'Jhagar Singh', first cousin of Ajit Singh. Mian Jhagar Singh was passed over, owing to his being an imbecile. The Ranis of Ranjit Singh and Sikhs disputed the succession. But before anything could be done, child (Ranbir) fell sick and passed away.

Thakur Singh the first cousin of Ajit Singh, was then selected by the Sikhs and made Raja with *'Wazire Ruppi'* in *'Jagir'*. The fief of Shangri, however, remained in the hands of Jagir Singh. Thakur Singh was invited to Lahore in the reign of Maharaj Sher Singh and installed as Raja.

By the treaty of 9th March, 1846, after the first Anglo-Sikh war, the hill country between the Satluj and Indus was ceded to British Government. Kullu was also within the ceded territory. Thakur Singh was confirmed in his Jagir of *'Waziri Ruppi'*, with sovereign powers and Ladakh was made part of Kangra district. In the meantime, Spiti was separated from Ladakh and annexed to Kullu. Thakur Singh died in 1852 and succeeded by his illegitimate son 'Gyan Singh'. And for that, Government changed his title to 'Rai' and withdrew all political powers. Gyan Singh died in 1869, and the jagir passed to his son Dalip Singh, on his attaining majority in 1883. As it is mentioned earlier that Raja Ajit Singh's succession to Gaddi was disputed by his uncle Kishan Singh, who (Kishan Singh) at his death left a posthumous son.

Shortly before first war of independence in 1857, a man calling himself Pratap Singh son of Kishan Singh, appeared in Kullu and on the outbreak of 1857 struggle, put forward his claim to *'Gaddi'* and aroused trouble. Thereupon he was arrested by 'Major Hay', the Assistant commissioner and after trial was hanged at 'Dharamshala'. Dalip Singh, who succeeded to *'gaddi'* in 1883, enjoyed his possession only for few years, and died in 1892. He was succeeded by Megh Singh, an illegitimate son, with the title of *'Rai'* under special restrictions. He resided at his ancestral palace at Sultanpur where he died on 10th May 1921 and was succeeded by his son Rai Bhagwant Singh.

Kullu was not always independent of foreign control. Sometimes it remained a tributary to the rulers of Chamba and Suket and sometimes to that of Kangra, Mandi, Sikhs and the British. 'Jagatsukh', 'Naggar' and 'Sultanpur' were capital of princely state of Kullu from time to time.

In 1846, the Sikhs were defeated by the Britishers and they had to cede the territory of Jalandhar Doab along with Kullu and other states of Kangra to the latter. *Since then (1846 A.D.) Kullu became subdivision of Kangra district.* Kullu appeared as a separate district of Punjab state in 1963. Till 31st October 1966, it continued as part of Punjab state. It is only when Punjab re-organisation took place that Kullu with other hill areas was transferred to Himachal Pradesh.

Kullu was a sub division of Kangra district of Punjab since 1846 and comprised the Upper Beas Valley, Waziri Rupi, Saraj, Lahaul and Spiti. It was lying between 31° 20' and 30° 55' latitude and 76° 50' and 78° 35" longitude. On the north it was bounded by Ladakh, on the east by Tibet, on the west by the principalities of Chamba, Mandi and Suket, on the south by the Satluj and the Bushahr States. The total area of the sub- division was 6,025 square miles. Its population, according to the census of 1901, was only 1,19, 585. For administrative purposes this tract was divided into two tehsils, called Kullu and Seraj. The latter and a portion of the former tehsil together form a homogeneous region which was termed as Kullu proper. The remainder of the Kullu tehsil consists of Lahaul and Spiti.

Raja Bhagwant Singh was born in 1907 A.D. He was the only son of Rai Megh Singh. Raja Bhagwant was married to 'Rani Umavati' of

Sundernagar. He died on 24th January 1960. He had two sons, Raja Mahender Singh and Raj Kumar Kuber Singh. Raja Mahender Singh, who succeeded his father, was born on 15th September 1927. He was married to Rani Diweswari in 1946, daughter of General Rana Krishna Samsher of Nepal. Rana Krishna Samsher was Ambassador to India and number of other countries. Raja Mahender Singh died on 4th September 1989. Raj Kumar Kuber Singh was born in 1931. He was married in November 1959 to Kanwar Rani Purnima, daughter of Shri Mool Raj Singh of Birpur, Rajkot (Saurashtra). Kuber Singh died in December 1986. Raja Bhagwant Singh also had a daughter, Rai Kumari Tara Devi, who is married to Raja Jasjeet Singh of Trilokpur, district Kangra.

Raja Maheshwar Singh succeeded his father Raja Mahender Singh. Raja Maheshwar Singh and Raj Kumar Karan Singh are the two sons of Raja Mahender Singh. Maheshwar Singh was born on 13th February 1949. He got married to 'Rani Meera Kumari' on 6th June 1971, daughter of Rana Narendar Samsher of Nepal presently settled in Dehradun (Uttrakhand). Raja Maheshwar Singh has two sons, Tikka Danvender Singh and Raj Kumar Hiteshwar Singh . Raj Kumar Karan Singh, younger brother of Raja Maheshwar Singh was born on 14th October 1957. He got married to Kanwar Rani Shivani Singh on 8th December 1980, daughter of Shri Shaila Raj Kumar, retired Additional Chief Secretary of Madhya Pradesh. Raj Kumar Karan Singh has two sons, Kanwar Abhishek Raj Singh and Kanwar Aaditya Vikram Singh. Raja Mahender Singh too had a daughter, named Maharani Kiran Kumari, born in 1948 and married to Maharaja Ashok Pal Sen of Mandi on 6th January 1961.

The present Kullu district capital was once known as Sultanpur. Founded by Raja Sultan Chand of Lag, it is located on the junction of the Beas river and its tributary the Sarvari. Once this was the capital of Lag Kingdom. It was later captured by Raja Jagat Singh of Naggar and Makrahar from Jog Chand, Jagat Singh made it the capital of Kullu kingdom. Today the town is sprawling area consisting of two distinct spots, namely *Akhara Bazar* and *Dhalpur*. The then ruler brought *Bairagis* who settled and used the place for physical exercises and wrestling, that is why the name Akhara Bazar.

Kullu has distinction of having the oldest democracy in the world in village 'Malana', where it is said that traditional customs and conventions are held in high esteem than the rules of the modern state. The life of the people there is much governed by their own customs. To preserve the sanctity of 'Malanies', Government has also been following the policy of noninterference. It is also believed that idol worshipping was first ever started in Kullu valley. Kullu, which was formerly a princely state, has been made a district of Himachal Pradesh now.

GENEALOGY OF KULLU

(1) Bihangmani Pal (2) Puch Pal (3) Bahang Pal
(4) Durhin or Hin Pal (5) Surag Pal (6) Shakti Pal

(7) Mahindra Pal (8) Om Pal (9) Rajendra Pal
(10) Visad Pal (11) Visud Pal (12) Uttam Pal
(13) Dvij Pal (14) Chakar Pal (15) Karn Pal
(16) Suraj Pal (17) Rakesh Pal (18) Rudra Pal
(19) Hamir Pal (20) Parsidh Pal (21) Hari Chand Pal
(22) Subhat Pal (23) Som Pal (24) Sansar Pal
(25) Bagh Pal (26) Vibhay Pal (27) Brahm Pal
(28) Ganesh Pal (29) Gambir Pal (30) Bhumi Pal
(31) Sri Dateshwar Pal (32) Amar Pal (33) Sital Pal
(34) Sri Jareshwar Pal (35) Prakash Pal (36) Achamba Pal
(37) Tapneshwar Pal (38) Param Pal (39) Nagendra Pal
(40) Narad Pal (41) Narottam Pal (42) Sish Pal
(43) Bhup Pal (44) Anirudh Pal (45) Hast Pal-I
(46) Surat Pal (47) Santokh Pal-I (48) Tegh Pal
(49) Uchit Pal (50) Sikandar Pal (51) Saras Pal
(52) Sachdev Pal (53) Sri Mahadev Pal (54) Nirati Pal
(55) Bain Pal (56) Hast Pal-II (57) Sasi Pal
(58) Gambir Pal (59) Nisudan Pal (60) Narinder Pal
(61) Santokh Pal -II (62) Nand Pal (63) Dharti Pal
(64) Inder Pal (65) Mahi Chakkar Pal (66) Jayadhar Pal
(67) Keral Pal (68) Hans Pal (69) Agast Pal
(70) Madan Pal (71) Urdhan Pal (72) Madhu Pal
(73) Kailash Pal (1428) (74) Sidh Singh (1500 A.D.)
(75) Bahadur Singh (1532) (76) Partap Singh (1559-1575)
(77) Partab Singh (1575-1608) (78) Prithi Singh (1608-1635)
(79) Kalyan Singh (1635-1637) (80) Jagat Singh (1637-1972)
(81) Bidhi Singh (1672-1688) (82) Man Singh (1688-1719)
(83) Raj Singh (1719-1731) (84) Jai Singh (1731-1742)
(85) Tedhi Singh (1742-1767) (86) Pritam Singh (1767-1806)
(87) Bikram Singh (1806-1816) (88) Ajit Singh (1816-1841)
(89) Raja Thakur Singh (1841-1852) (90) Rai Gyan Singh (1852-1869)
(91) Rai Dalip Singh (1869-1892) (92) Rai Megh Singh (1892- 1921)
(93) Raja Bhagwant Singh (1921-1948) (94) Raja Mahender Singh
(95) Raja Maheshwar Singh

The people: The bulk of the population of the district comprises of Hindus followed by Buddhists and a sprinkling of others belonging to Sikhs, Jains and Christians. Hindus are Rajputs (Kanets and Khasas), Brahmins, Khatris and Scheduled Castes. Scheduled Castes mostly comprise of *'Koli'*, *'Chamar'* and *'Dumna'*. Stray mention of the existence of non-Aryan people in some parts of the district is evident from the battle fought by Bhim Sen of the *'Mahabharata'* with demon king *'Tandi'* (Hidimb) subsequent marriage of the former with Hidimba, the sister of the latter. From their union, *'Ghatotkatch'* was born who fought against *'Kaurvas'* in the Mahabharta war.

According to Hiuen-Tsang, a Chinese pilgrim, Kullu was a distinct stat-

during 7th century A.D. and there were about 20 Buddhist *'Sanghmas'* where some 1000 priests, mostly studied the *'Mahayana'*. He also made references to the Ashoka pillar at Kullu to Commemorate Buddha's visit to the valley. He also refers to the Deva temples belonging to the different sects. The local deities which are found almost in every revenue estate play a very important role in the daily lives of the people. On all social occasions like births and marriages and in ailments and disputes arising out of routine matters, the settlements are made by these deities through their oracles and their decisions are accepted and blessings invariably obtained.

ECONOMY

The economy of the district is basically agrarian. The agro-climatic conditions in the district vary considerably. The average rainfall also varies in the valley as well as on the high altitude. The texture of the soil is generally *sandy loam and clay loam.* Colour of the soil varies from **'dark to brown'.** Depth of the soil varies from 50 to 150 cms. However, the agroclimatic conditions provide a range of potentialities for growing cash crops like off season vegetables, seed potatoes, pulses and temperate fruits apart from the cereals, millets and oil seeds. Among the cereals, wheat, maize, paddy and barley are grown extensively. The agriculture in the district is wholly dependent on the vagaries of nature. To improve production, following schemes are in existence in the district:

(i) The Cereal Seed Multiplication Farm at **'Sainj'** is being maintained by 'National Seed Corporation':

(ii) The Potato Development Stations at **'Hamta'** (Kullu) and **'Kuna'** (Anni).

(iii) Vegetables Research Station at **'Katrain'** is maintained by the Indian Agriculture Research Institute.

Due to agro-climatic conditions, the district is most suitable for the growing of stone, citrus and temperate fruits. Since last many decades, Kullu apples are well known throughout the country. Pioneer of fruit growing in Kullu area was late 'Captain R.C. Lee' of *'Bundrole orchard'.* He set up an apple orchard in the year 1870 and obtained plants from U.K., his native country. He was followed by Captain A.T. Banon. Among other fruits, mention can be made of the plum orchards, the persimmon locally known as Japanese fruit, apricot plantation etc.

Next to agriculture, livestock is the most important source of income. Every household in the district invariably keeps a few cows or buffaloes, sheep, goats, pigs or ponies. The improvement of breed of livestock is the main concern of the department of Animal husbandry. The hill cattle development scheme is in operation in the district. Among the milch animals, cows are more important. The local cows are of non-descriptive breed and efforts are being made to replace the local breed by *'Jersey'.* Sheep and goats are also found in quite good number in the district.

The exotic varieties of sheep breeding farm at Nagwain started in 1963 under the Indo-German project. Initially, it was under the territorial jurisdiction of Mandi district and transferred to Kullu district along with Animal Husbandry office in 1971. In addition, a private 'ANGORA' rearing farm was set up at 'Mohal' (Kullu) in the year 1964. The Indian Council of Animals Research is also maintaining Fur Animal Division at 'Garsha'. Pisciculture (fisheries) has better scope in the Kullu district. It has perennial rivers, the Beas, Solang, Manalsu. Chhaki, Parbati, Sujoin, Fojal, Gadsa, Kurpan etc. The important varieties of fish found in the district are *Trout* and *Himalayan Barbel.* The fish farms in Kullu district are located at *'Patli Kuhl', 'Moheli'* and *'Nagini'.*

Among the industries that exist in the Kullu valley are the shawl and handloom industry. In 1944, the Bhutti Weavers Cooperative Industrial Society was formed at Shamsi near Bhuntar, 8 km. South of Kullu. It is today known for its high quality of shawls woven in distinctive designs. The pioneers of the shawl industry were Arya Samaj activists of Naggar-Karam Chand, Sheru Ram of Angu, Dhobhi and Ram Chand of Lag valley. But this industry got the present momentum by Ved Ram, a prominent manufacturer of shawls. With joint efforts of cooperatives and private, shawl making has assumed the status of a leading industry in the valley.

Another thing which has become extremely popular is the *Kullu Cap.* Besides these, borders with interesting designs are being produced for use in sarees and other dresses, Before Shawls, the locals used to weave *pattus* and *pattis* which were used for making local dress. This was and is basically a home spun tweed.

BHUTTICO: Twelve progressive weavers of a remote Himalayan village, Bhutti joined hands and the Bhutti Weavers Cooperative Society Ltd. came into existence in 1944. Working of the Bhuttico remained dormant up to 1955. In 1956, a master weaver (Mr. Ved Ram Thakur) having his private entrepreneurship joined Bhuttico on being motivated by Mr. Gurcharan Singh, the then Inspector of Cooperative Societies. He was elected and elevated as the President of the Society. From that day, functioning of the Society was transformed from a somnolent Cooperative to a revived one. Besides his working industry, Mr. Thakur brought in his professional acumen, business and administrative expertise, which laid a strong foundation towards the systematic growth and development of the Society. These made him *de facto* member of the Society and is today remembered as "The Soul of Bhuttico". After the sad demise of Mr. Ved Ram Thakur in 1971, the members & management under the able guidance of Mr. Satya Prakash Thakur (former Minister of the Himachal Pradesh State Government) kept alive Mr. Ved Ram Thakur's dream of making BHUTTICO the biggest name in the hand-woven woollen shawl industry. Under his able leadership Bhuttico not only became a National name but also received appreciation from its customers in terms of increasing sales year after year.

One little known fact is that tea was grown in Kullu. It was said to have

an excellent flavour and aroma and also secured first two prizes at the 1866 Lahore Exhibition where it was declared the best black tea grown in India. The London tea brokers also praised this variety. However the yield was low, cost of cultivation quite uneconomical and transportation to long distances was a problem. Then there was also stiff competition from the tea growers of Assam, Darjeeling and Ceylon (Srilanka). The first company called the *'Kullu Tea Company'* was established jointly by Colonel Rennick, Theodore and Minnickin, who also owned fruit orchards. The tea garden were primarily located at Bajaura, Naggar and Raisain. But due to many problems these tea growers shifted their main attention to fruit growing.

One of the first orchardists was Captain R.C. Lee, who planted his orchard at Bundrole near Kullu. The local pioneer who followed suit was Padha Bansi Lal of *Seobagh* (which means apple orchard). In Manali the first orchards consisting of English varieties of apple were planted by Captain A.T. Banon in 1884. The other Englishmen who also began growing apples and other fruits were Duff at Katrain and Dungri, Colonel Rennick at Bajaura, Minnickin at Raison and Naggar and W.H. Donald at Dhobhi. Colonel C.R. Johnson came later and settled in Raison where his descendants still manage the orchards.

To make district Kullu viable from industrial point of view, following training centres have been opened;

(i) The Rural Industrial Training Institute, 'Kullu'.

(ii) Girls Industrial Training Institute, 'Kullu'.

(iii) Training centres run by Industrial Department are located at: (a) 'Jari'; (b) 'Katrain'; (c) 'Banjar'; (d) 'Nirmand'; and (e) 'Anni';

(iv The Industrial Training Institute, 'Shamshi' was started during 1961-62.

Kullu district has following types of Industrial units:

Extraction of essential oil from the herbs, fruit preservation units at *'Katrain', 'Shamshi'* and *'Banjar',* tooth paste and shampoo of herbal oil unit, T-chest buttons, packing cases, gunbutts, pencil making, cardboards, handloom accessories, PVC shoes, Angora wool units and mineral water found at Kalath (Kullu).

The district has some of the important minerals to its credit:

(a) Beryl: White and bluish coloured crystals found in Saragona valley and North-East of *'Dondo-Dee-Thack'* in the Parbati valley, Beryl is the source of beryllium.

(b) Building stone: The area abounds in variety of building material such as quartzite and granite.

(c) Kyanite: It occurs at number of places in the Parbati valley. It is a silicate of aluminium and is used for refractory bricks.

(d) Copper: Occurrence of copper ore was reported from *'Chashikni', 'Jhari, 'Maol', 'Saond'* and *'Saghar'.* It is used in electric industry.

(e) Limestone: Limestone is the main raw material for cement industry.

It is found in *Larjee', 'Hurla', 'Gharsha Saiji'* valleys in abundance.

Fairs and Festivals: Dussehra festival (Kullu), Sainj Fair (Raila), Diar Kahika Fair (Village Diar), Shamshi Virshu (Village Khokhan), Mela Bhunter Luhri Lavi (Village Dingidhar at Luri), Anni Fair (Village Farnali at Anni), Dalash Fair (Village Soidhar at Dalash), Ganter Fair, Ghatasani Fair (Village Dawra), Doongri Fair (in the memory of Devi Hidimba), Bhadoli Fair (in the memory of Lord Parshu Ram) and Buddi Diwali (Village Nirmand).

Kulluvi Nati's World Record : On 7 October 2014, on the celebration of Dushehra at Dhalpur Maidan, 8760 Women danced Kulluvi Nati on the tune of Dhol, Nagara and Shehnai. The occasion was also celebrated as *"Beti Bachao"*. This was first time that such a large number of women had gathered wearing traditional costume with ornaments such as jomala, chamakali, chhata, dodmala, chandrahar, kangnoo, toke, churi, marindri, bajuband, kanbali, kanbiche, tili, fuli, gokharu, pajeb, janjiri, jhalren and bichhu. The earlier record of a group dance was noted in Latin American Country Bolivia, where 2700 people danced folk dance, *"Moranda"* on the bank of Titikaka Lake. The Nati has been recorded in Limca book of records and likely to be entered in Guinees book of records edition 2014.

Famous Temples: Mahisasuramardani at Bajaura, Hidimba Devi at Manali, Parshu Ram at Nirmand, Doca-Moca at Gajan and Vishveshwara temple at Bajaura.

The Temple of Bajaura

The temple of Bajaura is of great archaeological interest, as temple towers of this type, built entirely of stone, are as rare in the hills as they are common in the Plains. Captain A.P.F. Harcourt enumerated only sixteen buildings of this kind in the whole of the Kullu valley, and hardly any of them dates farther back than the 17th century when the Rajas of Kullu vigorously promoted the worship of Krishna and Rama. There is indeed every reason to suppose that the so called *sikhara* temple or stone temple tower was originally foreign to the Hills. The indigenous hill temple is built of wood and stone and has either a pent roof covered with slates or shingles or a pyramidal wooden roof sometimes rising in several tiers. Temples of the latter variety are typical of Himalayan architecture and are best known from Kashmir to Nepal. In the early temples of the former country we find the pyramidal or pagoda roof executed in stone. In Kullu there are three examples of pent roofed type: the *temple of Hidimba Devi* (or Hirma) at Dhungri near Manali, in the upper Beas valley (right bank), that of *Tripura Sundari Devi* at Naggar, the ancient capital, and that of *Triyuga Narayana* at Dyar on the left bank of the Beas, opposite Bajaura. The Bajaura temple is dedicated to Mahadeva under the name of Basheshar (i.e., Sanskrit Visvesvara meaning Lord of the Universe).

The object of worship is a large stone linga occupying most of the space in the sanctum which measures only 8'6" by 7' 2". This cella is enclosed with in heavy walls forming a square of 13' outwardly, from which project four ornamental porches, that to the east containing the doorway (9'6" by 2'10") and the other three each a large niche or chapel which enshrines a well carved image slab. Each porch is surmounted by an elaborately decorated pediment showing three miniature *sikhara* shrines in relief and over the central one a sunk circular medallion containing three faces, the one in the middle being shown full and those at the sides half.

The whole outer surface is covered with carving in which the pot and foliage motive is often repeated. It will be remembered that this is an ornament used for capitals of pillars and pilasters, but here we find it, as it were, doubled, two blocks carved in this fashion being every time placed one over the other. Besides all this, a Naga couple with interlaced snake tails and two Kinnaras, male and female, in fond embrace, their bushy tails merging into profuse scroll work. The not less elaborately carved tower or *sikhara* is, as usual, surmounted by an *amalaka* stone, part of which had fallen down but has now been replaced.

The three large image slabs (height 5'4") which occupy the niches deserve special notice (Plate VII). That on the south side shows the familiar figure of the elephant headed Ganesha seated on a lotus throne supported by two lions couchant to front. The god is four armed and holds in his right hand a hatchet and an indistinct object partly broken. In his upper left hand he has what appears to be his second tusk, and his second left clasps a vessel of sweetmeats to which he applies his trunk. He wears a long garland hanging down below his knees and a sacred thread in the shape of a snake. Between the two lions of the *simhasana*, there is a nude miniature figure kneeling and holding in both hands an indistinct object. The figure which is characterised by a large head with protruding eyes and elephant ears reminds one of a similar grotesque figure found in a somewhat analogous position on the Ganesha image of Meruvarman (c.A.D.700) at Bharmaur the ancient capital of Chamba State. One camp presume that it represents in both instances one of the Ganas or dwarfs, of which Ganesha is the lord and leader.

The sculpture in the back or west niche is a beautifully carved image of Vishnu standing to front between two miniature attendant figures. The god is four armed and holds his usual attributes the wheel (*chakra*) and lotus flower (*padma*) in his two right hands, and the mace (*gada*) and conch shell (*shankha*) in the two left hands. He is distinguished by a quadruple circular halo from which a pair of flying garland carrying figurine project, and wears a three pointed diadem or tiara and long curly locks streaming down on both shoulders. His body is adorned with the usual ornaments, a sacred thread and a long garland slung round his shoulders and hanging down below his knees.

The third image which is placed in the niche on the north side represents the goddess Durga in the act of slaying the demons. Her head is encircled with a circular flaming halo of similar design to those of the two previously described sculptures. She also wears a crown and a long garland hanging down from the shoulders to below the knees. She is eight armed, whence the name *Ashtabhuji*, by which she is commonly indicated. With one of her right hands she plunges a trident (*trisula*) into the body of a demon, whose tuft of hair she has seized with one of her left hands and who seems to struggle in her grip. The remaining three right hands of the goddess hold a thunderbolt (*vajra*) half broken but similar in shape to the *rdorje* of the Lamas, an arrow (*bana, sara*) and a sword (*khadga*). The three remaining emblems on the left side are a bell (*ghanta*), a cup (*patra*) and a bow (*dhanus, chapa*).

To the left of Durga, somewhat in the background, is a second demon,

armed with sword and shield, who seems to strike a desperate blow at the warlike goddess.

Another not less famous exploit of Durga, the destruction of the "Buffalo" demon *(Mahishasura)* is also shown in this same base relief. For at her feet we notice the prostrate body of the buffalo, its head severed from the trunk whence issues halfway the vanquished demon king in human shape, clasping a mace in his right hand.

In the Bajaura temple two female figures, carved on two slabs (2'7" by 1'2") which are found on both sides of the entrance porch (Plate VIII). They personify the two sacred rivers, Ganga and Yamuna, which we find regularly represented on both sides of the doorways of ancient temples all over Northern India. Ganga, placed to the left side on entering the temple, is shown standing on a lotus cushion supported by a crocodile or *makara. Crocodile is the vehicle of Ganga. This* animal emerging from a mass of scroll work is so conventionally treated as to be almost unrecognizable, but its head with the snout like upper jaw holding a lotus stalk is quite clear. The river goddess is two armed and lifts on the palm of her left hand a *lota like* vase to the height of her shoulder in the manner of Indian women. Her right hand resting on the crowned head of a dwarf like attendant holds a long lotus stalk which rises in various stems, each carrying a flower or bud.

A second attendant, somewhat larger than the first and evidently female, holds the long staff on an umbrella which forms a canopy over the head of the main figure in the midst of over hanging palm leaves. The corresponding figure on the right side of the temple entrance is the river goddess Yamuna, as appears from the *tortoise her vehicle*, the head of which is visible among the scrolly foliage at her feet. There can be little doubt that the three large image slabs as well as the two last described, were all carved at the same time, as is evident from the similarity of style and the sameness of certain decorative details. The exact time of execution is not so easy to establish, but the excellent workmanship of the large base reliefs and in fact, of all the sculptural decoration on the Bajaura temple points to an early period. The earliest recorded account of the Bajaura temple is that by the traveller William Moorcraft who passed through the Kullu valley on his way to Ladakh and Bukhara in August 1820.

Hidimba Devi Temple: Hidimba Devi Temple, also known variously as the Hadimba Temple,is located in Manali,a hill station in the State of Himachal Pradesh. It is an ancient cave temple dedicated to Hidimbi Devi, sister of Hidimb,who was a character in the Indian epic, Mahabharata.The temple is surrounded by a cedar forest at the foot of the Himalayas. The sanctuary is built over a huge rock jutting out of the ground, which was worshipped as an image of the deity. The structure was built in A.D. 1553.

The Hidimba Devi temple is built around a cave where Hidimba performed meditation. Hidimba was supposed to live here with her brother Hidimb, and

not much is known about their parents. Born in the *Rakshas family*, Hidimba vowed to marry one who would defeat her brother Hidimb, who was supposed to be very brave and fearless. During the Pandava's exile, when they visited Manali; Bhima, one of the five Pandvas, killed Hidimb. Thus, Hidimba married Bhima, and gave birth to their son Ghatotkacha.

The Hidimbi Devi Temple has intricately carved wooden doors and a 24 meters tall wooden *"shikhar"* or tower above the sanctuary. The tower consists of three square roofs covered with timber tiles and a fourth brass cone-shaped roof at the top. The earth goddess Durga forms the theme of the main door carvings. The temple base is made out of whitewashed, mud-covered stonework. An enormous rock occupies the inside of the temple, only a 7.5 cm (3 inch) tall brass image representing goddess Hidimbi Devi.

About 70 metres away from the temple, there is a shrine dedicated to Goddess Hidimbi's son, Ghatotkacha who was born after she married Bhima. The most surprising feature of the temple or what believers could call the most reassuring feature of the temple is the fact that inside the temple the imprint of the feet of the Goddess carved on a block of stone are worshipped.

Manali: The international Resort. Manali on the banks of river Beas nestles below the mighty Pir Panjal range to the North and the Dhaulandhar range to the East. Manali in Kullu district, derives its name from *Manu-Alya* (the house of Manu). Manu was an ancient sage who is believed to have recreated mankind with the help of lord Brahma after the world was destroyed in the great deluge. There stands a temple in Mandi village the only of its kind in the world, dedicated to this revered *Rishi*. Manali village is located on a hillside and below it flows the Manalsu stream, a tributary of the Beas.

The upper Manali region has a couple of villages and lakes named after ancient sages who, it is believed, had lived there. The village Vashisht is named after Rishi Vashishta and is famous for its hot sulphur springs. The jointly dedicated to them, the most well known lake is named after sage Bhrigu and is located high above Vashisht village. Rishi Bhrigu authored *Bhrigu Shastra* which contains details of each man's life. In the past Manali was known as 'Dana Aghe'. Even today the older generations refer to it by this name. Manali, in those days was an isolated place with dense forests along the Beas river. In the olden days, Manali consisted only of a couple of shops and godowns which were used by traders as a transit place before they proceeded to the high altitude desert areas of Zanskar, Ladakh, Tibet and central Asia.

The first European visitors to the Kullu were A. Moorcraft and Travoc, who were on their way to Central Asia. Another visitor was Alexander Cunningham, who arrived in 1846. Later, quite a few Britishers also came here. Among them were Capt A.T. Banon and C.R. Johnson Their families still live here managing fruit orchards and guest houses. Both these men married local women and their descendants today speak the local dialect fluently as well as follow some of the local customs. The *'Sunshine Paying Guest House'* was the first to come up in Manali and was run by a member of

the Banon family. In 1995 there were 350 hotels in and around Manali, the number has increased many fold since then. One of the oldest houses which was built around 1870 is called the **Duff Dunbar house** and a school is being run on the premises. Duff Dunbar who was Deputy Forest Officer, was instrumental in planting and protecting the forests of Manali and Dhungri.

The Beas river has its origins 51 km North of Manali near Rohtang pass. Towards the South, 6 km away from the left bank of the Beas in Manali lies the ancient Jagat Sukh village. It was once the old capital of Kullu Rajas and was called Nast. The 12 generations of Kullu Rajas ruled from this place.

Naggar: From Jagat Sukh the capital was transferred to Naggar by Raja Visud Pal and later taken to Sultanpur (Kullu) in 1660 A.D. Naggar today is a popular tourist destination. It was founded by Visud Pal, who lived here till *'Markarasa'* was rebuilt by Bahadur Singh in 1535 A.D. The castle built about 500 years ago is now a Himachal Tourism Department Hotel. The ancient temples of Gauri Shankar, Tripura Sundari Devi, Vishnu and Murali Dhar are located here. When the British came to the Kullu valley, they made Nagger the sub-divisional headquarters. The first Assistant commissioner to govern the district from here was Major Hay. The castle is so solidly built that it withstood the severe earthquake of 1905, when most of the houses in valley were damaged. Inside the castle is a courtyard in which lies a massive stone slab known as 'Jagtipat' which is believed to have been brought here from Deo Tibba peak by honey bees. Jagtipat is regarded as the seat of the gods and goddesses of the Kullu valley.

Near the castle is located a beautiful cottage and estate of the late Russian painter Nicholas Roerich. He visited India for the first time in 1923 and painted enchanting landscapes on canvas. He liked Naggar so much that he returned in 1929 and bought what was then called 'The Hall Estate' with its cottage and adjoining land. He resided there till his death in December 1947. Prime Minister Jawahar Lal Nehru along with his daughter Indira visited Nicholas Roerich in 1942. The first lady of Indian screen Devika Rani and her husband Svetoslav Roerich often lived in the estate too. Svetoslav died at his Bangalore estate in 1993, after which Devika Rani donated the Hall Estate to the International Roerich Memorial Trust. Devika Rani passed away on March 9, 1994. This lovely cottage now houses some of the painter's most famous works and is known as the **Roerich Art Gallery.**

EMINENT PERSONS FROM THE KULLU VALLEY

Pratap Singh of Kullu was the hero of the First War of Independence of Punjab and the hill states. He along with his brother-in-law Bir Singh, was hanged at Dharamshala on August 3, 1857.

Nicholas Roerich was a famous Russian artist who came to the valley and fell in love with the landscape. He stayed hear for a while and painted exquisite Himalayan landscapes. He returned to the village of Naggar and bought a house and estate. He remained here till his death in 1947.

Lal Chand Prarthi was a freedom fighter who became a Minister and was responsible for giving rise to the Congress movement in Kullu during the Quit India Movement in 1942.

Bed Ram Thakur was the founder of the Bhutti Weavers Cooperative Society in 1944. He encouraged local weavers to set up handlooms in their homes.

Padha Bansi Lal was the first local farmer who planted apple trees in Kullu valley at Seobagh.

Col. Prithi Chand (MVC): In October, 1948, Pakistani infiltrators from Gilgit reached up to Padum. Col. Prithi Chand was sent to repulse the enemy which he successfully did.

M.R. Thakur was a noted scholar and linguist who was honoured by the National Sahitya Akademi Delhi, for his contribution to the development of Pahari language and literature.

Raja Maheshwar Singh, Successor of Kullu Royal family, Member of Parliament and founder of Himachal Lok Hit Party a regional outfit in 2010.

Dicky Dolma, Deepu Sharam and Radha Devi: In May, 1993, scaled the 8843 meter high Mount Everest. Dicky Dolma of Palchan village near Manali became the youngest women in the world to do so.

The following table presents the growth of the population in Kullu district in the past years:

DECADEL VARIATIONS IN POPULATION SINCE 1901-2011

Year	*Persons*	*Males*	*Females variation Population*	*Decadel variation of of males*	*Percentage per 1000*	*Females*

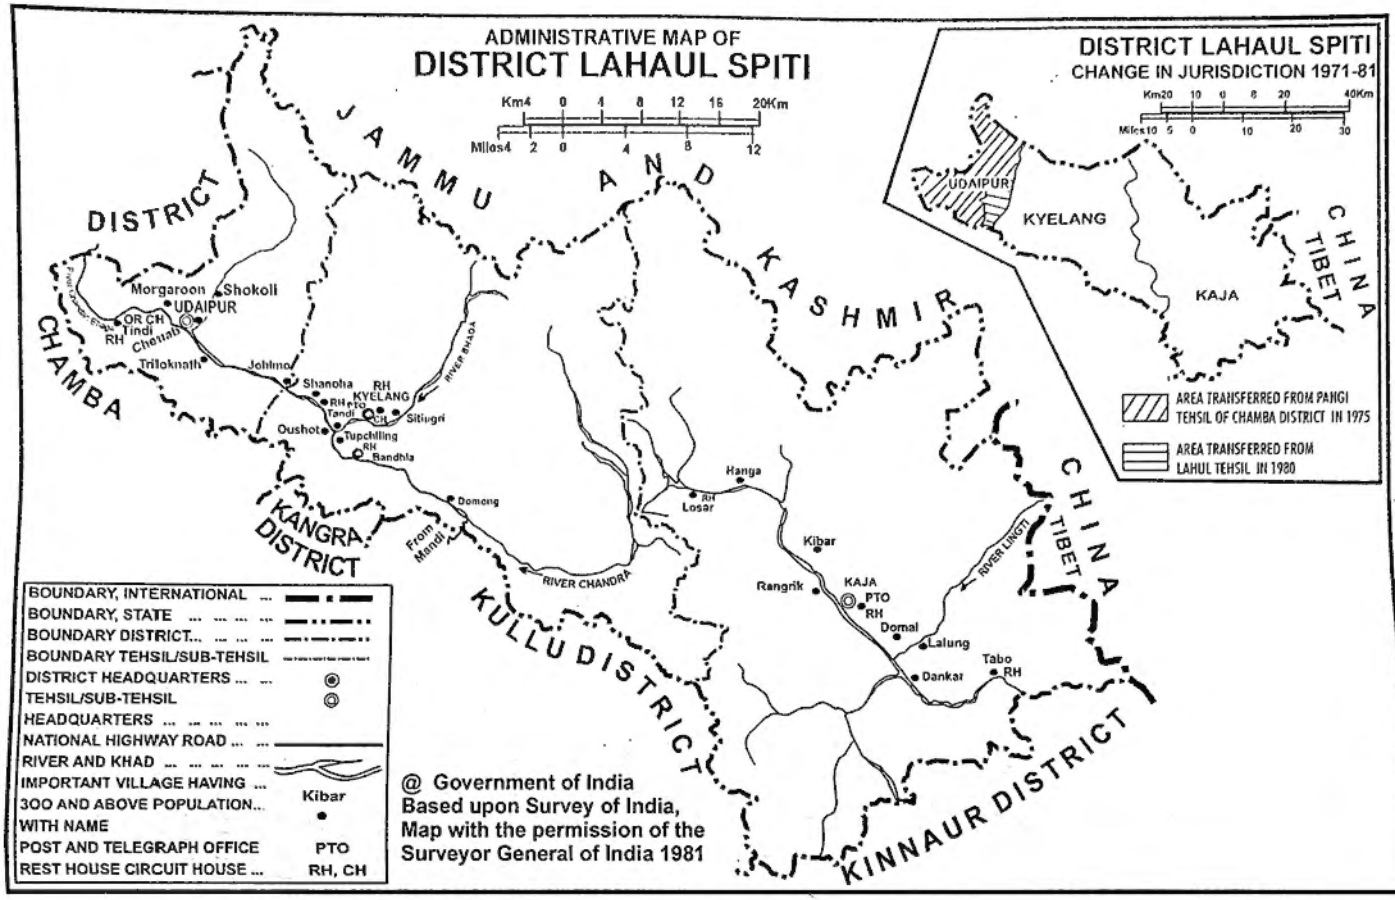
LAHAUL SPITI

(HQ, KEYLONG, ALTITUDE 3,165 METERS)

Languages spoken : BHOTI, MANCHAT, CHANGSA and GAHERI

Lahaul-Spiti became a district of Himachal Pradesh (Punjab hill areas) in 1960 and is one of the frontier districts of India. This district in the Western Himalayas is situated between 31°44'57" and 32°59'57" North latitude and between 76°46'29" and 78°41'34" East longitude. It is separated in the North from Jammu & Kashmir, Tibet in the East and Kullu, Kinnaur in South-East and Chamba in the South-West and West. The sole access to Lahaul-Spiti lies over the 3,978 meters high Rohtang pass. The two valley at Lahaul and Spiti have a tenuous link over the Kunzam pass (4,520 meters). The two twin valleys, Lahaul and Spiti in the North Eastern corner of Himachal, protected by distance is a region of nature at its wildest which has lent it much enchantment. The threshold of the Lahaul plateau is nourished by the Chandra and Bhaga rivers, dry and very cold, it is surrounded by high mountains on all side, the Great Himalayas to the North, the Pir Panjal to the South and the Spiti and Chandra watershed to the East.



The small province of Lahaul is known by three different names viz. *Lahaul, Garźha* and *Swangla*. In the absence of any definite source, it is difficult to explain the origin and significance of these names.

LAHAUL

Enclosed within the high ranges of the Greater Himalaya and the Pir Panjal, and accessed either through the Kunzam La or the Rohtang La and consisting of the Chandra-Bagha river-watersheds is the ever fascinating land of Lahaul. Other than the high peaks, fast flowing streams and tranquil mountain lakes, the landscape of Lahaul is dominated by many glaciers.

Before their incorporation into a single administrative unit, Lahaul and Spiti were separate principalities. Within Lahaul, the house of Gushal, Khardang, Darcha, Barbog and Gondhla were governed by separate baronial families. The people are gentle and mainly follow the tenets of Buddhism. The famous monasteries of Lahaul which include Guru Ghantal, Kardang, Shashur, Tayul and Gemur attract many pilgrims, tourists and researchers. The frescoes, mural paintings, wood carvings and libraries stacked with ancient scriptures in these monasteries have served to keep Buddhism alive and vibrant in the valley. Besides the monasteries, places of interest in Lahaul include Keylong (the district headquarters), Trilokpur, Udaipur, Gondhla and Sissu. This name is used most widely today among all the three names stated above.

The name, however, is not employed at all by the Lahaulis themselves in any of their dialects to designate to the Tibetans and the people of Spiti, Rubsho,

Ladakh and Zanskar who speak similar dialects. Even then some scholars hold that *'Lahaul'* is a word of Tibetan origin and they have suggested meanings of the word according to their own views.

A Cunningham is of the view that this name was given by the Tibetans (i.e. the *Ladakhis*) to denote their southern district *(Lho-yul).* Rahul Sankrityayan means by it the *'country of gods' (Lha-yul).* In this manner another meaning of the word could be suggested as the *'Country of Passes' (Lha-yul).* This would be, in fact, the most appropriate meaning.

Cunnigham's argument that this name was given by the Ladakhis is not acceptable. The name *'LAHAUL'* existed as early as seventh century A.D. and was known to the people of Kullu as such from whom Hiuen Tsang learned about it. On the other hand, the second kingdom of Ladakh was established only in the tenth century A.D. and since then Tibetan language and culture began to spread in the area. Before that Ladakh was inhabited by people of non-Tibetan race and language like *'Mons'* and *'Dards'.* Lahaul was annexed to the Ladakhi kingdom only in the eleventh century A.D. Therefore it is unlikely that the name *'Lahaul'* was invented by the *Ladakhis.* Even the Chronicles of ladakh never mentioned it as such in its descriptions of the country of *'Lahaul'.*

It is not found referred in Tibetan literature in any of its variant forms which would imply the country of Lahaul, nor is it used in any of its dialects. It is used only by the people of Kullu, Chamba and others who speak Aryan languages.

Despite all these facts, the theory of Tibetan origin of the name cannot be discarded so easily. It may be possible that the name belongs to one of the spoken dialects of the Indo-Tibetans—with which race *Lahaulis* have intimate relation—which came down to us unrecorded in writing.

It is not possible to agree with Andrew Wilson who suggests that *'Lahaul'* is a Hindustani word signifying a wilderness for the reason that the name *'Lahaul'* is a considerably old word as compared to Hindustani language. The name *'Lahaul,* as already noticed, existed as early as the seventh century A.D. whereas the origin of the Hindustani language cannot be traced before the coming of Islam in India, in the tenth century A.D. at the earliest.

Gergan's suggestion that *'Lahaul'* is a word of *'Tha-pa'* in the dialect of Tod *'Tha-pa'* implies the people other than Mons (of Kullu) language is just equivalent to say that Lahaul is a Hindustani word and adds nothing to our knowledge.

GARZHA

It is the second popular name by which Lahaul is known. It is used in dialects of *'Tinan', 'Punan'* and *'sTod'* of Lahaul and the languages of Spiti. Zanskar, Ladakh and Tibet. This Name is also found mentioned in local literature and inscriptions and Tibetan literature. It is written with different spellings.

As regards its origin there is no view to the contrary that it is a Tibetan word. Its application in Tibetan with special epithet like *Garzha-mkh' a-dro-gling* (Lahaul the country of *dakinis*) and *Garzha-ral-gsum* (Lahaul the country of three names, as the valleys of Lahaul are formed by three ranges of mountains) in the manner of *Zanskar-sgo-gsum* for Zanskar and *Spi-ti-spi-lcogs* for Spiti, also suggest the same conclusion.

Francke suggests that *Garzha* is made up of two original names *a'-zha,* signifying an ancient tribe and *dkar-zhva,* meaning *'white cap'.* Gergan also holds a similar view and suggests that it is the corrupt form of *dkar-zhva.* As far as the first part of the name *i.e.* the *a'-zha* tribe is concerned the *Lahaulis* have no relation whatsoever with them. They are the inhabitants of Chinese Turkistan. Similarly, the mention of the country *a'-zha* in the Padmasambhava's literature should refer to the country of the tribe of the same name and not to Lahaul as Francke thinks. As regards the second part of the name *dkar-zha,* the assumption of the two scholars is based on the analogy of Tibetan names for India and China as *rgya-dkar* (the extensive country where the people dress in white) and *rgya-nag* (the extensive country where the people dress in black) respectively. This is well known fact that the people of India are in the habit of wearing usually white clothes and those of China black. Therefore, the countries have been appropriately named as *rgya-dkar* and *rgya-nag.* But in respect of Lahaul there is no such peculiar practice of wearing white caps so that they should be distinguished as 'white cap wearers'. Therefore, the assumption of the two scholars becomes unfounded.

Even on the analogy of the names *rgya-dkar* and *rgay-nag* the correct form of the word should be *Zhva-dkar* and not *dkar-zhva.* This is the demand of the Tibetan grammatical rule where noun precedes the adjective, unlike in English or Hindi. But it is also noteworthy that the name *Gar-zha* appears to be unknown to the Tibetan writers generally. However, in a Tibetan historical work two names *viz., 'Ka-sha'* and *'Kha-sha',* similar to Garzha, are found mentioned in a list of countries. But we cannot say if any of them refers to Lahaul. Another name *'Ga-sha'* has been found mentioned in the biography of 'Padmasambhava' which has been identified with Lahaul.

SWANGLA

In the dialect of 'Manchad' Lahaul is known as Swangla. It also denotes the language of MANCHAD and a section of people who consider themselves as Brahmins.

Rahul was the son of Buddha and the name *'Lahaul'* is probably derived from Rahul.

Andrew Wilson, a European traveller (1873 A.D.) called Lahaul *"a valley of glaciers".*

From Lahaul the Himalayas can be seen in all their mighty splendour. The barren landscape and sparse vegetation lends a magnificent charm to this otherwise bleak country.

AREA AND SITUATION

Lahaul with an area of about 2000 sq. miles is situated between North latitude 30° 8' and 32° 59' and East longitude 76° 30' and 77° 50'. The surrounding countries include Rubsho and Zanskar on the North; Kullu and Banghal on the South; Spiti on the East; and Chamba on the West. The shape of the tract is roughly rectangular with the Greater Himalaya on the North and Mid Himalaya on the South and connecting lines of heights at either end on the East and West. Mean elevation of these hills is 18,000 feet and that of its inhabited parts is about 9,000 feet above sea level.

PASSES

Communication on surface with the neighbouring countries is possible only through high Passes. These may briefly be described as follows:

Rohtang Pass: Rohtang Pass (13,500 feet above sea level), lowest of all, *links Lahaul with Kullu.* Most of the traffic between Lahaul and countries outside passes through it. There is now motorable road which opens in June/ July and closes in October/November. This Pass, true to its name (*Ro-thang* = plain of corpses) claims some human lives every year. With favourable weather local people can cross it in any month of the year.

Banghal Pass: It lies between *Lahaul and Bara Banghal.* It is only rarely used.

Shing-dkon Pass: *Shing-dkon* la (Pass where wood is scarce, 17, 000 feet) falls *between Lahaul and Zanskar.* It is used regularly by the people of Zanskar and Lahaul.

Baralacha Pass: Baralacha (*Para-latse* = Pass with cross roads on summit, 16,500 feet) lies *between Lahaul and Ladakh.* At one time one of the busiest route passed through it. But now traffic passes through it only rarely.

Kugti Pass: Kugti Pass (16,000 feet), lying *between Lahaul and Bharmaur* (Chamba) is used mostly by the Gaddi shepherds.

Kunzam Pass: Kunzam Pass (Pass with all roads converging, 16,000 feet), *lying between Lahaul and Spiti,* is now the most important Pass after Rohtang.

'OM Mani Padme Hum' is a sacred recital in the valley. Its repetitions is considered the panacea for all problems, real or imaginary. The deeper meaning of this utterance is– *"I invoke the path of Truth and experience of Universality". "so that the Jewline Luminosity of my immortal Mind be unfolded, within the depths of lotus centered consciousness, and, I will be wafted with the ecstasy of breaking through all bonds and horizons."*

The average elevation of peaks in Lahaul region is between 5,480 meters to 6,400 meters. The lowest point is 2,740 meters where the river Chenab makes its exit from the district. The average elevation of the Spiti terrain is about 4,570 meters and that of mountain ranges is over 5,485 meters. The lowest point is 3,350 meters above the mean sea level. Lahaul has three valleys,

i.e. *Chandra valley, Bhaga valley* and *Chandra-Bhaga valley.* The valley of the river Chandra is locally called *'Rangoli'*, 'Khoksar' is the first village in the valley.

The valley of the river Bhaga is locally called *'Gara'.* The river Bhaga starts from the South-Western foot of the Baralacha pass and upto village of Darcha, it flows in almost a narrow gorge, upto its junction with Chandra at Tandi. *The valley of the combined rivers of Chandra and Bhaga is called Chandra Bhaga valley, popularly known as 'Pattan'* It is also called as orchards and granary of Lahaul-Spiti. This area has the distinction of having the BARALACHA PASS, which is nearly eight kilometers long, also known as *'Pass with cross roads on summit'* where roads from Zanskar, Ladakh, Spiti and Lahaul meet. It also gives rise to the three important rivers of the region—Chandra, Bhaga and Yunan—in the South-East, North-West and North respectively.

Spiti in comparison to Lahaul is higher in elevation. In the North Chocho-Lang 'Kilta peak' exceeds, 6,400 meters, while in the East Spiti is protected by the main Himalayas which is over 7,000 meters at places. In the South, there is 'Manirang peak' with the elevation of about 4,600 meters and in the West Spiti is protected and separated from Lahaul by the Kunzam range. Spiti has four distinct regions. 'Sham', the lower region is situated on both the sides of the river Spiti between its confluence with Lingti and its junction with Pare. 'Pin region' is the valley of the same river located on both the sides of the river with an average of about ten inhabited villages. 'Bhar', the middle region is located midway of the river above Kaza. 'Tud', the higher region includes areas above Spiti and waste tracts of 'Tsarab'.

Spiti, Si— means 'Mani', Piti— means place. Spiti— *the place of Mani.* Spiti is also called "Piti" a veritable. Shangri-la is a cold mountain desert located on the Tibetan border and flanked on the South-East by district of Kinnaur, North East by Tibet, North by Ladakh, West by Lahaul and to the South by district of Kullu. Geographically and archaeologically, Spiti is a living museum. The mountains are devoid of any vegetation and erosion by wind, sun and snow over thousands of years has laid bare the rocks. The rugged and rocky mountain slopes sweep down to the river beds giving the landscape a moon like appearance. Spiti valley is formed by the Spiti river, which rises on the slopes of Kunzum la (4,520 mts.) and ends at the river's confluence with the 'Pare Chu' near 'Sumdo'. The length of the valley from Kunzum pass to Sumdo is 150 km. On its way, the Spiti river receives the water of many streams, of which *Guindi Nala, Pari Lungbi Chu, Pin river* and Lingti river are the most important. Pari Lungbi valley, Pin-valley and Lingti valley are only partly inhabited. Some other valleys, due to their elevation and rigorous climate, are not inhabited at all.

Spiti Geologically and archeologically, is a living museum. The 150 km valley carved by the river Spiti that originates on the eastern slopes of Kunzam La (4520 mts.), is part of the high altitude cold mountain desert. The Pin

valley, a side valley of the spiti has been declared a national wild life conservation park. Amidst its rare high altitude flora and fauna, is the elusive snow leopard.

Gentle in temperament and deeply religious, the people of Spiti live in harmony with the mighty mountain ranges around. Hostile terrain and extreme climate proved fertile ground for Buddhism to flourish. The warmth and innocence of the locals is infectious and their peculiar social customs, fairs and festivals, myths, belief, totems, taboos and folk tales are fascinating.

Spiti is a rich repository of Buddhist iconography replete with ancient murals, thangka paintings, wood carvings and metal images. Some of the monasteries dotting the landscape are over a thousand years old. The main monasteries known across the Buddhist world are Tabo, Kye and Dhankar. Besides the monasteries, places of interest in Spiti are Pin valley, Kaza, Kibber and Losar.

The mountain scape in Spiti has an exotic appearance. The river is a fast moving torrent which cuts its way through the ages to the bottom of the deep ravine. The valley is scarcely a mile across, with narrow strips of cultivable land lying 305 mts. (1,000 feet) above the river bed. Steep rocky mountains rise from these level strips to heights of several thousand feet. The valley of the Pin river is even wider than that of the Spiti. It joins the main Spiti valley at a point near 'Dankar', going up the South-Westerly direction and ending below the Pin Parbati range, on the other side of which lies the Parbati valley. The upper regions of Chandra and Bhaga valley are snow covered almost till the month of May and start snowing with the close of the year. There is great variation in temperature between lower portions of Lahaul and higher reaches of Spiti. The rainfall is extremely scanty. Lahaul has heavy snowfall as compared to Spiti, whereas only 70 to 75 centimeters of snow is recorded in winter.

The major rivers are, 'Chandra', 'Bhaga', 'Spiti' and 'Pin'. There are twenty one big and small glaciers. The Chandra and the Bhaga rivers rise on opposite side of *'Baralacha Pass'* at an elevation of nearly 4,890 mts. above the mean sea level. The Chandra flows to the South-East for 85 kilometers upto Shigri Glacier and then 96 km. to the North-West upto a place called Tandi. All along the course, the river Chandra, between Shigri and Tandi, the mid-Himalayan ranges close over the river and opposite the village *'Ghondla'*, it rises like a wall, a full 3,350 mts. above the bed of the river. Chandra is fed by a number of glaciers and the biggest among them is 'Bara Shigri' on the left bank of the river. On the right bank of the Chandra, the water from 'Samundri glacier' meets the river. The Bhaga river also has its source on the Baralacha Pass. On the North-West side, it enters the *'Suraj Tal'*, or the *'lake of the Sun'*, situated at an elevation of about 5,000 mets. above the mean sea level. At Darcha, it is joined by the Zanskar river from the West. Between Darcha and Tandi, around the villages of *Keylong, Kardung* and *Baelung,* there are rich cultivated tracts all around.

The river Zanskar rises in the extreme North of Lahaul region and after running about 36 km. in a barren tract in South-Easterly direction falls in the Bhaga river at 'Darcha'. SPITI is the main river of the Spiti region of the district. *It flows in both the districts; Lahaul-Spiti and Kinnaur.* In Kinnaur, near Chango village in Hangrang valley, it has the widest bed. It meets the river Satluj at 'Khab'. The river Pin is the most important tributary of Spiti, which joins it on the right bank. It is joined by several, small streams the chief among them are Palder Chin, Palder Chum and Shang on the right bank and Karve, Lavrang, Miedel Taking, Madang, Sagnam, Baraknit, Gooling, Seeling and Kis on the left bank. Besides the river Pin, the river Spiti is fed by Chiomo, Gyundi, Rohtang, Ulah, Langze, Mane, Surahal, Pomograng, Mamdang and Sumra streams on the right bank. The left bank tributaries are Lingti, Gimbo and Parechu.

The district is important from a Geologist's point of view because here a complete sequence of geological formation dating from the pre-Cambrian to the Cretaceous period with breaks in the upper carboniferous and Jurassic time is found. Most ancient rocks are found in the Spiti valley. These rocks are highly folded micaschists, slates and phyllites. Fossils of marine life are found in abundance in the Spiti valley. The rocks belong to the Paleozoic and Mesozic era which are characterized by the advent of air breathing mammals, and ammonites, development of winged insects, volcanic activity dinosaurs, conifers extinction of giant reptiles, advent of modern insects, flowering plants etc. Seismologically, Lahaul and Spiti lie in the Alpine-Himalayan mountain system which is a major earthquake belt of the earth.

Interdependent on each other for communications and trade both remain cut off from the rest of the world for a greater part of the year. Rohtang pass remains open from June to October and it is only at this time that one can cross the Kunzum pass to enter Spiti, the other route involves a perilous track up in the Satluj and Spiti river valleys from the Kinnaur side. During summer, strong wind blows down the valleys in the afternoons whipping up lot of dust. Even a short journey can cover one all over with a thin film of dust.

SPITI VALLEY GLACIERS

Glaciers in the spiti sub-catchment of the Satluj basin are receding at a much faster pace than ever before as studies undertaken by experts indicate "deglaciation" of over 25 per cent in the area since 1962 with bigger glaciers retreating at an astounding rate of 65 per cent. These observations were made in the latest Compendium of Environmental Statistics, Himachal Pradesh, 2012-13, brought out by the Department of Economics and Statistics by putting together data collected from various agencies like the Space Application Centre, Ahmedabad, and the Wadia Institute of Himalayan Geology, Dehradun, and the HP State Council for Science Technology and Environment.

The adverse affects of global warming and climate change are already becoming visible in various parts of the hill state. The study attributes the

accelerated melting rate of glaciers to the fact that the maximum and minimum temperatures at almost all locations including Losar, Kaza, Maling and Namgia, have risen. The Spiti valley, where apple cultivation was unheard of till a few years ago, is taking to commercial apple cultivation with people setting up orchards. The snow line, too, has been declining and agro climatic zones have practically been redefined owing to global warming.

The study took into account the monitoring of glaciers with the help of remote sensing and geographical information system (GIS) in order to estimate the retreat in terms of loss of area for the year 1962, 1993, 2001 and 2007. The comparison of the size of the glaciers during these years indicated that 5 per cent of the area was lost between 1962 and 1993, the pace of melting increased to 12 per cent by 2001, which further shot up to 13 per cent by 2007. The glaciers have been retreating, both in spatial as well as linear retreat in the Spiti sub-catchment.

Loss in Area of Glaciers in Spiti Basin Between 1962 and 2001

Glacier % loss in sq km in Area	area No of	1962 Area in glaciers	sq km	2001 Area in sq km
0 to 1	112	43.87	55.12	25.64 (increase)
1 to 3	51	93.26	81.50	12.60
3 to 5	12	49.01	34.43	29.74
5 to 10	08	58.00	36.12	37.72
Over 10	05	66.99	23.67	64.66
Total	**188**	**311.13**		**230.84**

During the study, it was found that the glacial area of the 188 glaciers taken into account had reduced to 230.84 sq km in 2001 from 311.13 sq km area it had in 1962, thereby indicating an overall reduction of 25.80 percent. While glaciers with an area of more than 10 sq km exhibited the maximum retreat of 65 percent, the ones ranging between five and 10 sq km lost the area by 38 percent while the smaller ones up to 3.5 sq km lost the area by 30 percent. The smallest ones with an area ranging between one to three sq km retreated at 13 per cent.

Data analysis indicated that the number of smaller glaciers with less than 1 sq km area had increased in the area mainly due to the fragmentation of bigger glaciers, triggered by climate variations over a period of time. The comparison of 812 glaciers between 2001 and 2007 indicated that a deglaciation of 11.04 percent had taken place.

HISTORY

Geographical information contained in 'Samhitas', 'Brahmanas', Upanishads' and 'Sutras' made us believe that no time had India considered Kailash Mansarovar region a foreign land which is still considered as a place

of pilgrimage for the Hindus. Tradition tells us that one of the earliest rulers of the land was 'Manu' who ruled between 3100 B.C. and 2550 B.C.The geographical knowledge which one derives from the accounts of the *'Mahabharta'* and the *'Bhagwad Gita'* provides sufficient ground for believing in the great Mahabharta war. In the ancient, Lahaul-Spiti must have been either the part of 'Kalakluta' or 'Mandamati' territory. The Himalayas were the part of the Ashokan empire. From the period of Kanishka, Kashmir to Kafiristan, there was a great Janapada 'Ki-Pin'.

In the neighbourhood of the Yamuna, Satluj and Beas, the Kunindas tribe was ruling. To this, Lahaul-Spiti must have been a part. Kullu was inhabited by *Kulutas.* Territory to the east of Kangra was occupied by Audumbaras. Yashodharman of Malwa (A.D. 530-540) had his empire upto the Himalayas in the North. All the kingdoms of 'Kapisa', 'Kashmir', 'Kuluta', 'Satadur', 'Mo-li-pa-La' and 'Suwarbngootra' were situated in the high Himalayas. *It was ruled by women and was known as the Kingdom of women.*

It is well known that under the Kushanas, North India including Central Asia, Pakistan, Afghanistan and East Iran were united under a single state formation. Coins and inscriptions pertaining to this period were found at Kanihara in Kangra. A stupa connected with the great Kushan King Kanishka named *'Kanika-chod-ten'* (Kanishka Chaitya, Kanishkha's stupa) is found in Zanskar. There is no doubt that Kanika is the name of the same as the Kushan King Kanishka. Similarly, a stupa called Kanika Chaitya (Kanishka Chaitya) in Peshawar (in Pakistan) built by Kanika (Kanishka) has been described by Al Bruni. Ladakh undoubtedly belonged to the empire of Kanishka. In such a condition when all the countries around Lahaul were under the Kushanas, we can say without doubt that Lahaul also formed part of Kushan empire. During the Gupta period and the rule of *'Kannauj'*, the position of Lahaul was probably that of an outland.

The most powerful of the Guptas, Samudragupta's empire extended only upto the Beas Valley. But during the reign of Harshavardhana of Thanesar (A.D. 606-664) Lahaul again became connected with the great empires. In the Kullu annals Chamba, which was founded in A.D. 550 with its capital at Brahampura (Bharmaur), is stated to have conquered Lahaul in A.D. 600 but soon was lost, perhaps only a portion, to Kullu. However the principalities of Brahmpura and Kullu were included in the empire of Harshavardhana. Therefore, through them Lahaul also became connected with the great empire. It is in the same period, as already stated, that first historical mention of Lahaul is found.

Hieun Tsang visited Kullu in A.D. 635 and noticed Lahaul as a country by the name of 'La-hua-La'. Spiti in early times was ruled by Sen Kings. One of the earliest known rulers was Samudra Sen. In the course of time, during the reign of Rajendra Sen, Kullu became tributary to Spiti for a short period. The fortunes of Spiti declined during the reign of Chet Sen and in the seventh

century, it was annexed by Ladakh. The kingdom of Ladakh in the time of Skyid-Lde-Ni-ma-mgon extended from the Northern mountain ranges upto Raduk including Demchong, Guge (South-East of Raduk and West of Mansarover) and the modern district of Lahaul-Spiti. His son Lde-Gtsug-mgon, became the ruler of Zanskar and Spiti. It is certain that rulers of Spiti were the 'Nonos' from the very beginning. It seems that during the strong rule of Ladakh, Spiti was an integral part of Ladakh and during the weak rule, it was an autonomous state until nominally attached to Ladakh.

In the eighth century A.D the Raja of Chamba, Ajaya Varman, A.D. 730-75, became a vassal of Kashmir. Thus Lahaul too came indirectly under the influence of Kashmir. This is evident from the carved wooden reliefs in the mixed Kashmir-Kannauj style of Lalitaditya's period found at Maylang (Mayling) in Lahaul.

Further down the Chandrabhaga, vestings of Kashmir art can be traced at Markula-Udaipur and Trilokinath. Two inscriptions in *'Sarda'* Character, one illegible and the other one containing mystic syllables, found near Tinan may perhaps belong to the same tradition of the period about A.D. 900-1000. The Kashmir influence lasted till eleventh century A.D. and has left its mark in "a pure Kashmiri temple of first rate quality erected or reconstructed" at Markula-Udaipur.

The rule of Ladakh over Lahaul began perhaps since when Lha-chen Utpala (A.D. 1080-1110), king of Ladakh, invaded Kullu and the Raja of Kullu promised to pay tribute in kind of iron and *mdsos,* Mdso, this is pronounced as 'Zo'; it is a cross breed between Yak and cow. As it can't withstand warm weather no mdso is found in Kullu. Although the Chronicles of Ladakh make no mention, it is believed that Lahaul too was conquered in the course of the invasion for the reason that the *mdsos,* which the king of Kullu promised to give as tribute could only come from Lahaul as there is no *mdso* found in Kullu. As a corollary, it is also believed that Lahaul at that time had been a province of Kullu, at least in part and its master, the Raja of Kullu, ordered the former to Supply *mdsos.*

Nothing can be said with certainty about the position of Lahaul in relation to Kullu and Chamba before the above event took place. It is generally assumed that Lahaul in that remote time was more or less both under Chamba and Kullu, or some parts were held by Kullu and the rest by Chamba. "There are indications in the records of these countries that Chamba may have held the main valley almost as far as the junction of the Chandra and Bhaga rivers at Gus, while Kullu had some influence in the Chandra and Bhaga valleys and in the wars of those times, the Chamba armies probably advanced by way of the Kugti Pass and Lahaul when invading Kullu".

One possible reason which strengthens this belief is that in the early times both Kullu and Chamba had their capitals nearest to Lahaul; Kullu had its capital at 'Nast' (Jagat Sukh) and Chamba at Brahampur (Bharmaur), from where they could have easy control over Lahaul.

According to one tradition, Chamba appears once to have been ruling all over Lahaul. In the 'HISTORY OF GODS' it is related that one of the gods went to Chamba to demand half of his kingdom from the Raja of that country. Moreover, Lahaul is accessible more conveniently from Chamba than Kullu.

Lha-Rabs

(History of Gods)

In the beginning there were no gods in the 'Ling'. Then 'Gyungdul' said, "We should go there to rule".

All the gods came from rGya carrying everything with them. They reached at Bara-lacha, then Na-phen Nu-phen (it is known as Lha-phug kLu-phug, cave of gods and Nagas lies on the side of Ladakh). There a fiendess caught them. She said, "You have brought my properties" and ordered them to put all the goods before her at once. They did accordingly. But Gepang put three grains each of Ne (Siberian barley) and buckwheat in a bamboo stick which he stuck beside the road.

On reaching Ze-mug, they found the same fiendess obstructing their way. Gyungdul was able to make her flee across nine Passes and nine Hills.

They heard human voice for the first time at Pyukar. They asked each other, "Who do live here"?

Tangjar' stayed to rule there. Other crossed Rang-tsa Pass. At Gule they heard human voice. 'Milang-tete' stayed there, Gyungdul stayed at Margyaling (Margyod), Tangjar Dong (Melagar) at Ropsang, Tinglo-gur (Wazir) at Sra-srin and Gepang at Yangling.

At the time only Mons were found living at Sra-srin. The gods, with the help of Gyungdul expelled them from there.

Then the Mother (Gepang) said to Gyungdul: "You are the eldest of nine brothers. Nine gods will come to you to pay respect after every three years".

She said to Milagn-tete: "You are Wazir (Minister); you have to go to demand Lha-ri Lha-thang (Hills and Plains of gods) from the Raja of Chamba".

To Melagar she told, "You are the youngest. You will have to open the doors of 'Lha-khang' (residences of the gods) of nine gods every year".

'Tinglo-gur' (Wazir) carried with him a spindle of gold, a spindle-stand of coral and a thread ball of silver and set out to Chamba to demand 'Lha-ri Lha-thang'.

At the Chamba Pass he met with the shepherd of the king of Chamba who invited him to play dice. Wazir put the above three articles at stake. The shepherd had with him nine kinds of dresses and foods. The Wazir lost the game but proposed to play again. This time they put as a stake an offer that the winner will be entitled to tear away the body of the loser from his thumb to toe. The Wazir won this time.

The shephered pleaded for mercy and offered to part with everything

that he had won and also whatever he possessed. The Wazir however, replied, "I want nothing. You go and tell your king that I want my "Lha-ri Lha-thang".

The next day when they met again the shepherd told that he forgot to deliver the message. The Wazir tied a piece of stone with the horn of a she-goat as a token of reminder. When the queen of Chamba came with a golden bucket and began to milk the she-goats, the particular goat made the mild spill out with the help of the piece of the stone which was tied with its horn. The king was very much enraged and ordered to bring the shepherd before him. He also called for a sword.

But the shepherd prayed;

Ral-dri shub nang la zhug
Gyal-po khri rtog la zhug".

(Pray, let the sword remain in the sheaf and the king reside on his throne). "This is not my idea, this is the idea of 'Botdev' (Bhot-god)".

Outside the Wazir sat on the water tap. A waterwomen came and said, "Bhot Bhot, away! Let the water come".

The Wazir replied, "I am not Bhot. I am Bhotdev". He sent a message also with the women for the king to come out.

Then he took the form of a ram and went in piercing a barrier of nine sheets of iron.

The king took him as a beggar and ordered to give something to eat and drink for him.

The Wazir refused to accept anything and asked the attendants to tell the Raja to come out. The king did not come.

The Wazir then laughed, with which there arose seven suns and burnt everything in the premises of the king's palace.

The king said, "I have come to know of your power, I request you not to do like this".

The Wazir made eclipse six suns. The king did not come out even then. He then asked "Should I cry"?

The king sent a message that he might do as he liked.

As soon as the Wazir began crying there started a storm and gale and all the plants in the vicinity were upside down.

Then king was heedless even then. Soon the Wazir started himself rolling on the ground and turned everything upside down.

Then the king came out and said, "Why should not I come out. Gyungdul is the eldest brother. He will get eighteen shares. I shall also have eighteen shares. Others will get three, four, five shares".

Then the king of Chamba came at the Kothi (palace) in Gule. 'Gyungdul' casued to fall snow nine yards deep. The Raja wondered as to who might be

as powerful as to cause snowfall in the months of 'Sharh-Shaun' (Asadh-Shravan). The people told him that there is a Naga god. This is his task. The Raja came to him and requested to make the snow melt within nine days and nine nights and promised to grant him half of his kingdom in consideration.

Within nine days it became dry. The king went to 'Tsho' (Riwalsar, in Mandi). On the return journey he came to Gyungdul and said, " You are a great god; you are powerful. I give half of my kingdom to Gyungdul".

[Note: The above account is an abstract of a story].

It is also probable that this fact of association of Lahaul with Kullu and Chamba was one of the reasons which prevented the compilers of the Chronicles of Ladakh from mentioning Lahaul separately among the countries conquered by the former. King Utpala appears to have subjugated entire Lahaul for it is believed that he was responsible for the conversion of Marikula Devi temple at Margul, situated at the extreme point from the side of Ladakh, into a shrine of Marichi Vajravarahi and the replacement of a part of the ceiling probably broken by avalanche. King Utpala was only a Chieftain of a small principality under the suzerainty of Guge, prior to his accession to the throne. His successful wars enabled him to subjugate Kullu and end the suzerainty of Guge over Ladakh. After this invasion the subordination of Kullu and Chamba came to end in Lahaul. The local chiefs were then perhaps made directly responsible to the king of Ladakh. It is likely that the *'Jos'* (Thakurs), who are related to the kings of Ladakh, as they belonged to the same *rus-pa* (clan) of *'Bu-ram-shing-pa'*, were installed at this time by the king of Ladakh.

In early times, in fact, the local chiefs, the *'Jos'* and the *'Ranas'*, were the real rulers and the only symbol of subjugation was the yearly tribute. When King Zain-ul-Abidin of Kashmir (A.D. 1420-1470) led an expedition against Tibet, he found Kullu under the Tibetans i.e. the Ladakhis. In the course of this invasion of Guge and Ladakh the king saved a golden statue of the Buddha at Sheh in Ladakh from the hands of his soldiers. The Badshah then returned by way of Kullu and Lahaul.

Of course the king had no intention of affecting a permanent conquest; it was merely one of the customary raids aiming at collecting plunder and extorting tribute. Lahaul, therefore, remained as before, a tributary to Ladakh. But Kullu must have taken the opportunity to overthrow the alien power. The Chronicle of Ladakh mentions another conquest of Kullu, perhaps again through Lahaul, by Tshe-dbang-rnam-rgyal (A.D. 1535-1575). But as it was merely a raid, Lahaul, this time also remained unaffected of the event.

The earliest evidence of Kullu's rule over Lahaul after its occupation by Ladakh is available in the reign of Bahadur Singh (A.D. 1532-1559). The Chronicle of *'Tinan'*, which was compiled at the death-ceremony of the chief Harya of Tinan, clearly concedes the supremacy of King *Bi-dhur-Singh* (Bahadur Singh), whose capital, it states, was situated at *Ma-gar-sa* (Naggar, Kullu). There is no doubt that a considerable portion of Lahaul was annexed

to Kullu during his time.

As we already know that before Lahaul fell into the hands of Bahadur Singh of Kullu, it was being ruled by the king of Ladakh. But Guge never held territory in Lahaul. Again when Guge was conquered by Seng-ge-rnam-rgyal (A.D. 1590-1635), king of Ladakh, Spiti and Zanskar were made over to his youngest son, but there is no mention of Lahaul.

In this task of forcing Ladakh to secede territory in Lahaul, Kullu was not alone. It is seen that the two States of Kullu and Chamba had at that time very close relations with each other. According to a record made in copperplate title deed, in A.D. 1559, towards the end of Bahadur Singh's reign, a marriage alliance took place between the two royal families. This deed was granted by Bhadur Singh to Ramapati, the Rajaguru of the Chamba Chiefs. The three daughters of the Kullu Raja were married to **Partap Singh Varman** (A.D. 1564-1582), son and heir of Ganesh Varman.

Chamba, its ally, then annexed quite a large portion of Lahaul, perhaps whole of Manchad upto the junction of the Bhaga and Chandra, to its kingdom. It is told in a tradition by the people of Gushal, on the left bank, at the junction of the Chandra and Bhaga rivers, that they once owned a copperplate deed granted by a Chamba Raja which was taken back from them when the country was annexed to Kullu.

In any way the control of Kullu did not extend beyond either Lot (Lod) of Kirting. In the lower parts of Manchad, *'Re-phag'* (Trilokinath) evidences of Chamba reign are available in abundance. The image of Marikula Devi at Markul-Udaipur was set up during the reign of Chamba king, Partap Singh Varman, by Thakur Himapal, probably an ancestor of the Ranas of Trilokinath, in A.D. 1569-1570.

Hermann Goetz asserts that the master of Manali temple, who in A.D. 1553 had erected the temple of 'Hidimba' for Bahadur Singh of Kullu, had indeed been also the architect and sculptor of the additional pillars, the 'Dvarpal statues', the window panels and the architraves supporting the ceiling. The tradition further relates that the reigning sovereign of Kullu, in order to prevent the artist ever making a duplicate of such a masterpiece as that of Doongri, cut off the artist's right hand. But the gifted artist trained his left hand and executed an even finer piece of carving at Markul than that at Doongri. This was evidently done against the wishes of the king of Kullu and under equally, if not more, powerful king who could not only give protection and safety to the life of the artist, but also possessed the capacity to suppress any displeasure if displayed by the Kullu king.

Since the reign of Bahadur Singh the rule of Kullu over Lahaul appears to have been unbroken till both Kullu and Lahaul were conquered by the Sikhs. The names of the next three Rajas occur continuously in a number of inscriptions, decrees and other documents found in various parts of Lahaul.

Jesuit Father, Azevedo, while going from Ladakh to Kullu and the Punjab

plains in A.D. 1631 mentions that Lahaul, which he calls *'Carcia'* (Garzha), was then subject to Kullu.

Absence of the name of Lahaul among the names of the countries divided amongst the sons of 'Seng-ge-rnam,-rgyal', as we know, also proves the above fact. At the most, the Chronicle of Ladakh mentions in its territory, the name of a village *'Dartse'*, which is situated at the head of Bhaga valley, which, if taken as area, includes the villages of 'Dar-tse'. 'Yo-tse', 'Rang-yo', 'Chi-ka', 'Ra-rig' and gsum-mdo at its largest extent.

Inscription No. 128 of the Francke's collection of inscriptions gives the most detailed and authentic description and is the most important inscription relating to this period, among all the kinds of the documents found so far in Lahaul. It makes admission of the authority of Raja **Partab Singh** (*circa* A.D. 1575-1608) of Kullu whose magnificent palace, it states, was situated at Magarsa. On this occasion many noblemen and ladies belonging to royal families, important public men and many commoners had gathered. Many of them have been named along with the name of the village from where they came and many with their house names, as is the custom in Lahaul. For our purpose the following four names are important, others are only of local interest. They are the three kings: Tshe-dbang-rnam-rgyal of Khangsar, Tshe-ring-dpal-de of Shila-makhar and bDe-Ijam of Ke-lang-mkhar and the fourth is Kun-zang-Ide-rdo-rje, younger brother of the king of Barbog. Of course, all the kings were contemporary of Partab Singh.

It is interesting to note that all the royal representatives have been designated as *rGyalpo* (king) or said to be related to king, instead of *Jo* by which title they are known in the history of Lahaul. Indeed this fact has not been asserted even in the three chronicles of the Chiefs of Lahaul who declare themselves as Thakurs or *Jos* and the people also know them by the same designation. The true position in this regard appears to be that while the *rGyalpos* were the chiefs of an area in the tradition of the *rGyalpos* of Ladakh, *'Jo'* was the title of village headman as there were'Jos' in the villages of *'Hayar', 'Kardand', 'Tino'. 'Cug-dra'* (Pyukar), *'Sa-rang', 'Bee-ling'* and many other villages. The change of title from *rGyalpo* to *'Jo'* took place sometime afterwards.

Shila is now a desolate place situated on a ridge about a mile above the present seat or palace *(mkhar)* of the *Jos* of *'Tinan'*. It is possible that at earlier time the *Jos* of *'Tinan'* had their residence there because it is safe from avalanche.

Nothing can be said about bDe-ljam, the king of Ke-lang, there does not even exist a family of *Jos* at Keylong. But a document from Barbog affirms; the truthfulness, of the inscription that there existed a family of *Jos* at Keylong. The name of Kun-zang-Ide-rdo-rje, younger brother of the king of Barbog, is not found mentioned in the Chronicle of Barbog but he may possibly be identified with one of the brothers of Nu-bk' a-bkra-shis. One of the most important things that we learn from the inscription is that there was no single

powerful king in Lahaul to be counted as paramount.

Indeed absence of single paramount king is one of the main reasons that Lahaul could never stand independent of the outside power within its known historic period. It is only the Jos of Keylong that is seen wielding some power outside their traditional territorial limit during the last days of Kullu reign and thereafter Sikhs and British Rule. The *Jos* of Keylong make boastful statements that they had been ruling over whole of the country since early times but this is not borne out by any evidence.

Then it is said that there is an eclipse of Kullu rule for thirty-five years, during the reign of Kalian Singh and Jagat Singh, successors of Prithvi Singh, for no record of their period have come to light. It can be said that Kalian Singh (A.D. 1635-1637), successor of Prithvi Singh, could not possibly have effective control because he reigned for a short period of only two years. But the same is not true about Jagat Singh (A.D. 1637-1672).

Jagat Singh had Lahaul under his sway and won some additional territory at the expense of Chamba. In A.D. 1683, at the time of *bDe-legs-rnam-rgyal* (A.D. 1675-1705) Ladakh was invaded by the 'QALMAQS' (Mongols). The war actually started in 1681 and lasted for three years. The cause of the war was a conflict in Tibet between two religious sects of *'Dug-pa'* (Red-hat) and *'Gelugpa'* (Yellow-hat). Ladakh took the side of the 'Dugpas' for its own lamas belonged to that sect. The 'Gelugpas' on the other hand invited the Mongols for their help and invaded Ladakh under dGa'-Idan-Tshe-dbang, a lama who had turned layman.

Simultaneously they invaded Lahaul as its Lamas were the followers of *'Dugpa sect'*. This invasion is remembered in Lahaul as Sog-po (Mongol) invasion and the Chronicle of Keylong record it as invasion by Tibet. The Mongol army stayed in Lahaul for two years, stormed the fort of Keylong and was then annihilated by glacier near *'Tinan'*.

The Ladakhis had to call the Mughals to their aid. The Mughal troop which was commanded by Fidai Khasn came from Kashmir. They put the Qalmaqs to flight and returned with much booty. bDe-legs-rnam-rgyal had to pay heavy bill for the aid rendered by Fidai Khan.

Mughals too had an ally who had to be rewarded at the expense of Ladakh. Bidhi Singh (A.D. 1672-1688) of Kullu, who had helped the Mughals, was rewarded with the annexation of the portion of the Upper Lahaul, i.e. the area of *'Dartse'*, to his State.

It appears that in Lahaul, towards Triloknath, Kullu could never extend its reign beyond Thirot. Thirot remained the dividing boundary between the territories of Kullu and Chamba since Bidhi Singh's time, when the boundary between Kullu and Chamba was established here for the first time till the end of Kullu rule in Lahaul.

It is most probable that the treaty between Ladakh and Kullu of Utpala's time was also snapped at the time when the portion of Upper Lahaul was

annexed to Kullu by Bidhi Singh. It is generally held that this treaty came to an end during the reign of bDe-Idan-rnam- rgyal (A.D. 1640-1675) when the biography of Seng-ge-rnam-rgyal was compiled and that after the ***battle of Bab-sgo*** (A.D. 1675) it was exchanged for a trade contract.

bDe-Idan-rnam-rgyal was an able and powerful king. At the time of his death the Ladakhi empire, although no longer independent of the Mughals as it had been under Seng-ge-rnam-rgyal, had attained its largest extent. Moreover, Kullu was in no way involved in the battle of Bab-sgo.

In fact it was after the war 1681-1683 that Ladakh really became powerless. Kullu then, as we already know, with the help of Mughals annexed the remaining part of Upper Lahaul to its State and it might have at the same time forced Ladakh to withdraw the treaty.

Raja Man Singh (A.D. 1688-1719) of Kullu in about 1700 had boundaries with Ladakh fixed at Lingti. He also then entered an agreement with the kings of Ladakh, which is usually known as trade contract.

After the Tibetan-Ladakhi Mughal war of 1681-83, Spiti was practically free but was only nominally under Ladakh. Raja Man Singh (A.D. 1688-1719) of Kullu invaded Spiti and extracted tribute and established a loose authority over Spiti. In the absence of information, it is difficult to establish history of this region in chronological order.

In Man Singh's time all the *Jos* of Lahaul redrafted their Chronicles wherein they tried to show their origin from Rajput race with the clear object that this will raise them in the eyes of the Kullu Rajas. While the *Jos* of Kelang and Tinan traced their origin from *Chhatri* (Kshatriya) race, clan. The *Jos* of Barbog, however, lost their right to Jagir, probably due to their loyalty to the kings of Ladakh.

Man Singh also built the GONDHLA FORT perhaps the same was called as *Rani-ki-kothi* and married daughter of the Gondhal Thakur. In about 1695 *Raja Udai Sing (A.D. 1690-1720) of Chamba renamed Margul as Udaipur* who then raised it to the status of a district centre in the part of Lahaul.

In the time of Raja Tedhi Singh (1742-1767), when no goldsmith from Kullu was able to manufacture a golden parasol required for *'Ragnaji'* (Ragunathji) to the satisfaction of the Raja, men were sent from Kullu on the advice of the Hakim to Shansha in Lahaul, to call Phuntsog, a goldsmith. The highly skilled goldsmith pleased the Raja with his work for which the latter offered him estate. But the unambitious smith showed satisfaction in his humble profession and expressed gratefulness towards the Raja for appreciating his work.

In the time of Raja Pritam Singh (A.D. 1767-1806) a Lahaul contingent assisted in the war with Mandi at Bajaura, where they fought under the banner of Gepang Lha. Mandi was defeated in this battle. Bikram Singh's (A.D. 1806-1816) name is found mentioned in an inscription on a stone slab still existing at Gemur Monastery. Name of *Jo* Dharma Singh of Khangsar, whom

Moorcroft met in 1820, is also found mentioned with him.

When Moorcraft and Trebeck passed through Lahaul in 1820, they found four villages still paying revenue to the State of Ladakh. It was continued until stopped by the British Government in 1862. These villages were— *'Barkalanak', 'Mooling', 'Shipting'* and *'Gus'* or *'Gushal'*. The *Jos* of Khangsar were perhaps managing this estate on behalf of the kings of Ladakh for the former were holding land and property in Mooling, one of the villages above estate, which must have been given by the kings of Ladakh in remuneration.

In those times 'Tandi' was the capital of Lahaul. It was the place for office and residence of the administrators and representatives of the Rajas of Kullu. During this time Baliram of Phurah, in Manchad, was judge who had his office at Tandi. He had a singular method of punishment. He did not fine the culprits but he tied them to a tree and then flogged. This tree was shown by the people even in around 1910. Later on the Capital was shifted from Tandi to Keylong during the British period.

In 1840, a batch of Sikh force after completely subjugating Mandi State, invaded Kullu which was captured unopposed and Jit Singh, the Raja of Kullu, was deposed and made prisoner. Lahaul then, along with Kullu, came under direct control of the Sikhs. When Cunningham visited Lahaul in 1839, he found it already under the Sikhs. House tax was being collected by the Sikh government. At the same time rates of toll were being adjusted by Zorawar Singh, the Governor of Ladakh. He had raised the duty on each carriage sheep from half an anna to four annas. This was considered very oppressive by the people and due to this little trade had passed through Lahaul during the preceding two years. Here we must also consider the fact why Zorawar Singh did not capture Lahaul while he was controlling the trade between Lahaul and Ladakh. The only reason for this is that when Zorawar invaded Ladakh, Zanskar and Spiti during 1834-35, he found Lahaul already under the Sikhs. Therefore he, did not come to Lahaul. It may be stated that for the same reason, that Kashmir was in possession of the Sikhs, he chose the course of his invasion of Ladakh through Kishtwar instead of Kashmir. Thus we see that the invasion of the Sikhs in 1840 was only an act of acquisition of actual possession, virtually it had become master of the valley since 1820.

In 1841, Zorawar Singh with a force of 6,000 men attacked Tibet, but could not stand the powerful attack of Tibetans and was killed on 14th December 1841. In 1842, Tibetan army invaded Ladakh and forces of Gulab Singh defeated them decisively on 27th December, 1842. Tibetan General 'Sukhang' was taken prisoner. In 1846, by the treaty of Amritsar between Gulab Singh and British East India Company, Spiti was taken by the British. The revenue settlement of Spiti was made by 'Vans Agnews' on 27th September 1847.

After the First Sikh War a treaty was concluded on 16th March, 1846 at 'AMRITSAR' between the British Government and Maharaja Gulab Singh according to which all the hilly and mountainous country East of the Indus and West of the Ravi, including Chamba, were made over to the Maharaja,

but Lahaul, part of the territory ceded by the Lahore State, to the British government, was retained under British rule. The boundary between Lahaul and Chamba was marked by the Nullahas of *'Chukam'* (Tso-khang) on the right and *'Nalda'* on the left banks of the Chandrabhaga and between Lahaul and Ladakh by Baralacha range. This part was known as "BRITISH LAHAUL". The other part, the area lying below Thirot, which was under the Rajas of Chamba and was left with Chamba even after the annexation of Lahaul to the British territory, was known as "CHAMBA LAHAUL". The two parts were united finally in 1975.

Lahaul was important for the British Government because an important trade route passed through it to the Central Asia, especially Tibet with which it wanted to have thriving trade connections. In this respect the Lahaulis were considered "of material assistance from political point of view." Immediately upon the annexation of Lahaul and Kullu in the British territory in A.D 1846 Lahaul was made a part of the Kullu subdivision which was put under the charge of an Assistant Commissioner, who worked under the Deputy Commissioner of the Kangra District with its headquarters at Dharamshala.

The whole of Lahaul, as it has already been during the Kullu reign, was divided into thirteen, later on fourteen, *'Kothis'*, but the kothis were not subdivided into *'Phatis'* as in Kullu. The highest office in Lahual was that of *'Negi'* called in the same manner as the Negi of a Kullu Kothi for his having responsibility of collection of revenue. It was also described as Wazir because Lahaul formed one of the waziries of Kullu.

The Negi had his headquarters at Keylong. He was invested with both criminal and civil powers. He was honorary magistrate, his jurisdiction was extending throughout Lahaul, he was vested with the powers of a subordinate magistrate of the second class. The Negi was also responsible for arranging for *'begar'*, or forced labour, procuring of supplies for travellers (perhaps Europeans and those holding official permission) and carriage of their baggage.

Bali Ram was the first Negi of Lahaul appointed by the British government. He belonged to village 'PHURAH' in Manchad and was judge during the rule of the Sikhs. Thakur Tara Chand of Khangsar was appointed the next Negi after Bali Ram who declined to fill the post. After this, the post remained hereditary till 1941 when a Naib Tehsildar was appointed.

In the autumn of 1849, Major Hay, Assistant Commissioner of Kullu, went to Spiti and took over the charge. Nono, the hereditary Wazir of Spiti, was entrusted with administration of the area and he was granted a Jagir. On 22nd July 1864, his son Tam-Zin-nam-Gyal became Wazir. In 1873, Nono was formally vested with honorary magisterial powers. During first Worlds War of 1914-19, Wazir Amar Chand of Lahaul not only had helped the British Government in the recruitment, but also took command in person as *'Jamadar'* in the 6th Labour Corps. For his valuable services, Wazir Amir Chand was given the title of *'Rai Bahadur'* in 1917. On his death in 1921, Waziri passed to his son 'Abhai Chand'. Abhai Chand's son 'Khushal Chand'

was colonel in the Indian Army. Khushal Chand and his brother Prithvi Chand have won *'Mahavir Chakra'* in the Kashmir Campaign. In 1941, a sub-tehsil of Lahaul and Spiti was created with Headquarters at Keylong. In 1960, the Govt. of Punjab converted Lahaul-Spiti area into a district with Headquarters at Keylong. In 1966, it was transferred to Himachal Pradesh.

The People: Swangla, Thakurs, Kanets, Bhots along with several scheduled caste communities of Chanals, Dombas, Hesis, Lohars etc. are inhabitants of the district of Lahaul-Spiti. Of all the tribals in Himachal Pradesh, those in many of the villages of the main Lahaul valley and some villages of the side valleys are, today, the shrewdest businessmen and wisest in certain worldly matters. The people in the Pattan valley are mostly Hindus akin to the adjoining region of the Kullu. There is marked admixture of Mongoloid and Indian features in both men and women in the valleys of Gara and Rangoli (Bhaga and Chandra). People of the Spiti and Pin valleys are having completely Mongoloid features. The people such as the Brahmins, Thakurs, Kanets or Bhots, Lohars (iron smiths), Dagis (carpenters), Hesis (landless labour or musicians) etc. are found in almost all villages of the agrarian set up. The scheduled castes are never discriminated against high caste people in the matters of entering the temples and monasteries. There is no restriction either on drawing water from the same sources from which high caste take it. The people of the Lahual are a mixed race. Linguistic researches have proved that in remote past, Lahaul was the home of an aboriginal tribe whose language and features resembled those of the 'Munda tribes' of Bengal and Central India. At a later period Tibetan settlers who came from the South and West, settled in Lahaul. The Saka and Khasa tribes of Central Asia were driven out by the Huns between the 6th century B.C. and the 5th century A.D. Many of these settled down in the Mid Himalayas between Garhwal and Ladakh. There is a nullah near Keylong known as the 'Shaks nullah' which seems to have taken its name after the Saka tribe that is believed to have settled in the Bhaga valley. Thus Lahaulis are the ultimate product of these different races.

The main dress of the people of Lahaul region consists of loose trousers made of dark thick cloth and a woollen coat, more or less like a gown of the same cloth. Sometimes, a jacket is also used over the coat. The head cap is similar to the one used by the Kinnauras. Women's dress in Lahaul consists of the tight fitting *'Pyjama'* and a *'Dugpo'* or ladies gown. A shirt like the Punjabi Kurta is worn as an underclothes beneath the *'Dugpo'*. Ornaments are also liked here much. Men generally wear gold rings, ear rings called *'Murki'* and *'Kyanti'* or neck ring. Women of Lahaul wear various types of ornaments. *'Krikisti'* is an ornament made of gold and silver and is worn on the head. *'Poshal'* an ornament meant for the forehead such as 'Bindi' or 'Teeka' is used in the plains. 'Dung Kitsi' is used round the waist. *'Phuli'* is nose ornament and is made of gold. *Nyagthang* is a chained silver ornament which is placed on the breast. In Spiti region, the women wear *'Yebzur'* or 'Beran', a cobrashaped cloth piece studded with numerous pieces of turquoise or coral

as golden charm boxes. People of Lahaul-Spiti have three meals a day -'Ken' or 'Tshema' in the morning. 'Shad' or 'Chhiken' in the noon and 'Yangskin' or 'Gongal' at night. Their staple food is Kalhu, buckwheat, barley and wheat. Besides, they consume a lot of *'Lugri'* or *'Tsagti', Chhang'* (beer) and salted tea mixed with butter. *'Arak'* (local distilled liquor) is also drunk occasionally. Smoking of tobacco is very common among the men folk, but is forbidden for the ladies.

RELIGION

In the Pattarn valley, pure Hinduism exists, In lower parts of Chandra and Bhaga valleys, the mixture of Hinduism and Buddhism is practised and in the Spiti and upper reaches of Chandra and Bhaga pure Buddhism is practised. The tribal deities 'Gyepang' and 'Dabla' are most popular. Besides these, there are 'Tanggur', 'Srowag', 'Zangdoulma', 'Mipusha' and 'Kyuling Sall', but there is only one devta with Kullu type Rath (body) who lives in Rwaling Village of Lahual. Four Buddhist sects represented in this region are well known, i.e. *Nyingmapa, Kagyudpa, Shakya* and *Buzhens.* Buzhens are the Lamas who entertain people by acting plays and chanting legends. Like their twins from Lahaul, the people of Spiti follow Lamaism. *With high passes standing between them and the 'civilized' world the people of these valley have developed an intense love for their home and culture, their songs and dance are as chaste and pure as the snow that clothes the mountains around. At the slightest excuse, these children of the 'Himalayas' dress up in their gayest and dance in the open amidst rugged hills with an abandon and ease unknown to the busy world of today. The Lahaul and Spiti valleys form a unique socio-physical unit of Himachal Pradesh.*

Lahaul and Spiti are known for their monasteries, locally called *gompas,* which are great treasure house of Buddhist faith and art. *'Khardang', 'Shashur', 'Gemur'* and *'Guru Ghantal'* are some of the famous monasteries in Lahoul and 'Tabo, Kee' Dhankar in Spiti. The interesting features of the flag bedecked gompas are the huge barrel like prayer drums revolve at a slight touch and are rotated by Lamas as they pareambulate these lobbier in grave meditation. There are also ornate paintings of saints and demons and a Buddha of a giant size swathed in purple and white with many attendant effigies of lesser divinities. These Monasteries also serve as centres of culture and have influenced religious life and the people for centuries. Monasteries and old residential buildings with frescos paintings and carvings on their walls and ceilings reveal a rich heritage of art. They also testify to the powers in cultural links that exist between the Buddhist centers in India and the entire Buddhist world. The people of the area are religious and an atmosphere of spiritual delight pervades the entire valley. Their religious and economic life is inextricably entwined with monastic order.

MARRIAGE SYSTEM

In Lahaul, there are *three* different methods of marriages prevalent. The

Tebagston or Mothebiah (arranged marriage). The Kowanchi Biah (arranged but performed very briefly) and the Kunmaibaghstan or Kunchi Biah (marriage by elopement). In Spiti, there are generally two types of marriages—arranged and Khandum. In the Khandum marriage, choice is made against the wishes of their parents. In the case of divorce in Lahaul-Spiti, simple woollen thread which is tied to the little fingers of both the companions is pulled apart in the presence of some elder persons and this decides the issue. This ritual is called 'Kupachacha' or 'Tshud-Thwagsti'.

Joint family system is strong in Lahaul. Polyandry which was the order of the day in the past has now broken up because of literacy, influence of culture of the plains on Lahaulis, economically well being and job opportunities outside Lahaul.

Famous Fairs: *Ladarch* is an annual fair held near the village of 'Kibber' in the month of July. 'Sissu fair' is a common fair celebrated all over the Buddhist Himalayas. At 'Shashur Gompa' (Monastry), it is held in June, at 'Gemur Gompa' in July and at 'Mani Gompa' of Gondhla in the month of August. 'Phagli' or 'Kun fair' is famous of Pattan valley held on *'amavasya'* in the month of February. 'Pori fair' is held in Pattan valley at Trilokinath temple in the month of August. Like Nathwara temple of Rajashtan, at Trilokinath temple, a lamp always keeps burning in pure Ghee.

Famous Dances: Broadly speaking, there are three traditional dance forms; (*i*) Shehni, in this form men and women both take part in dancing together; (*ii*) Ghure, in this dance there is no arm linking by the dancers. While moving in a group, they move in circle and semicircle. Ghure, in fact is a denomination both for the dance and songs merging into one; (*iii*) Garphi, this is the oldest form of dance in Lahual-Spiti. In this dance, movements are neither regular nor arranged. What the dancers exhibit is spontaneity of a wild and carefree life, expression of life and relaxation. Any song may be picked up to accompany it. Garphi generally takes place when people get intoxicated after taking quite a good quantity of home distilled liquor and are hardly left to follow any specific patterns. 'Betas' are the community of professional dancers. Seven different forms of dances are performed by them. They are *Gar, Jabru, Muknar, Bukum, Shon, Bhuchan* and *Devi* dance.

Important Festivals: *Fairs and Festivals of tribal areas, infact symbolize the whole essence of the life of the tribal people, be merry even in the harshest conditions of existence. In the rhythm of their music and dance, they forget all their problems. Life is at total equanimity with itself; replete with limitless joy.* Important festivals of Lahaul are, (i) Bumkhor, is a religious festival related to agriculture. People believe that if the religious books are taken around the fields, there will be bumper crop. (ii) Halda or Losar- Halda is a new year festival of Lahaul, celebrated in the month of January. To the tribals of this district, Halda has the significance as *'Deepawali'* as to the people of the rest of India. The festivities centre around' Shiskar *Apa'* who is the goddess of wealth in Lamastic Pantheon as to the people of this region. The day for *'Halda'*

is fixed by the Iamas. (iii) Khun or Phagli, is the biggest festival of Pattan valley. It has more or less the same importance in Pattan valley what *"Shivratri"* has elsewhere in India. Khun generally falls in the end of January or early February. The name of the festival has been derived from that of the month of *'Phagun'* or *'Phalgun'*; the last month of winter.

PAURI FAIR: This fair is celebrated during summer in the 3rd week of August every year. In earlier times this was the most prominent fair of Lahaul. People of all castes and creed gather there, not only from Lahaul but from Chamba and Kullu too. The fair is combination of pilgrimage and festive activities. Preparations are made at least a week in advance and most of the people leave their homes a day before the celebrations, where they have faced darshan of the statue of Triloknath (Shiva Lord of Three Worlds) or Avolokiteshvara as it is regarded by Buddhist. After paying their obeisance, people go to the parikrama gallery between the inner and outside walls of temple. Pilgrims/devotees usually complete three or seven clockwise circumambulations of the gallery/ rotating the prayer wheels and murmuring Mantras (OM MANI PADME HUM) every morning and evening till they stay there. Ghee and Mustard oil lamps are lighted continuously inside. People donate money and Ghee/ Oil to maintain the lamps, one of which is so big as to accommodate 16 Kgs. of Ghee (butter oil)/ oil. After the prayer and rituals, the fair begins. Temporary shops, tea stalls and hotels are established at the fair ground. As soon as darkness overtakes, the pilgrims dance in a huge circle to the melody of folk songs devotional or otherwise. On the second morning, a traditional procession is taken out, which is headed by the Thakur of Triloknath riding on a decorated horse. Their destination is the place where as per traditional lores, seven gods, the youngest of whom was Trilokinath had appeared from seven springs in the past. This is the most important ritual of the fair. The procession then returns to the fair ground for more festivities.

FAGLI FESTIVAL: Fagli, locally known as *Kus or Kuns* is one of the most important festival of the Pattan valley. It falls, after a fortnight of Khogla on Amawasya (Moonless Night) in the first/ second week of February. The houses are fully decorated and oil lamps are lit. A Baraza is set-up which consists of a bamboo stick, two to three feet tall, mounted on the floor. Around the stick a *white chader* is draped in such a manner as to suggest an angel dressed in white, sitting in the corner, ornamented with jewellery and marigold flowers. Delicious dishes are placed before the Baraza along with burning incense. The Baraza represents the angel "SHIKHARA- APPA) grand mother of the peak and here visit is considered to bring prosperity to the house. According to ritual demand the head of the family and his wife getup early in the morning to prepare (TOTU) (A dough of roasted barley flour and butter milk) and kwari. The Totu is taken upto the roof which is offered to the deities. Kwari is later thrown to the crows who await for it as if they have received the invitation. The totu is distributed among the family members as *prasada*. The couple go to pay their annual respects to their cows and sheep to express their

gratitude and acknowledge their dependence on these animals. Rest of the family members getup and pay their respects to their elders of the household by bowing to them and touching their feet. After breakfast they first visit their nearest and aged person within the village and then the entire village community congregate to pay their respects to each house with Marchu (Local puri). Each day of the festival has a special name to show its own significance. One day is called punha, a symbolic representation of ploughing the fields. Since the fields are covered under snow during the period, so symbolic ploughing is done. Two green willow sticks representing the bullocks and two more representing yoke and plough are moved forward in the room in the front of the Baraza. In the following weeks feasts and festivities continue among relatives and friends, along with the exchange of marigold flowers and other gifts.

It may be assumed that *'Fagli'* is a festival of celebrating the advent of Spring. (iv) Gotsi (Gochi). This festival is of Chandra and Bhaga valleys particularly. This is celebrated in the month of February at a house where a son is born during the preceding year. (v) Gyalto festival is held towards the end of December, when people bid farewell to the old year. (vi) Chhishu or Shisha festival, symbolic of good times in the region, is celebrated on the 10th of every month. (vii) Dachang, is a festival of arrows. This is celebrated by only the men in the month of February in any village and continues for six days. (viii) Thon Thon is celebrated in the month of April which marks the end of the winter. (ix) Yane is a festival in the which God Trilokinath is worshipped by old men and women, celebrated in the second week of June every year. (x) Namgan is celebrated in the month of September on the occasion of the harvest, people dress up in traditional dress and worship God. In this festival, horse race is organised. (xi) Chho Thang, in this festival, a Lama is called from Gompa and he reads *'Tanjives'* consisting of 108 scriptures. (xii) Bhinger is celebrated on the birth of a son or the first daughter. (xiii) Jig Jed festival is celebrated in the month of October in Spiti region at *Thang Jayl* monastery. (xiv) Gutor festival in Spiti region is held at the monasteries of *Kee, Tabo, Dhankar* and *Pin* in the month of November. This festival is celebrated every year. On these days, Lamas worship God Chaugayal and the next day in the evening while doing *'Chham dance'*, they throw the *'Saur'* into the fire. This is in the belief that the burning of Saur will finish all the diseases, (xv) Chakhr festival is celebrated, instead of Gutor, after every four years. Lamas worship God Chikchait, for six days and continue performing Chham dance. It is believed that miseries and diseases are burnt with the Chakhar. It is celebrated in the month of September. (xvi) Sonchoti (post death ceremony) is a peculiar festival of Pin valley celebrated by each Khangchan once in every six or seven years.

Galten Amchauth (festival of Diyaas): This festival is celebrated on account of the birthday of preacher of Budhism, J. Chaukava. This day, the people of Spiti light their homes with *'Deepaks'*, prepare delicious foods, wear new clothes, have sweets and invite people of same caste to their houses. This is celebrated in between 25th November to 1st week of December.

Lachhang: This festival is celebrated for the welcome of winter season. The local deity is worshipped with the hope that the winter would be happy and prosperous for the local people. It is celebrated on 25th of eleventh month of local calendar (mid November to first week of December).

Pingri: It is celebrated to mark birthday.

Paklen: It is celebrated at the time of marriage.

Dzeetha Dambargya is a form of worship in Lahaul. This is performed once or twice after the death of a person. Zimug Sringpo is believed to be the most powerful demon at Darcha, a village beyond Keylong and on the way to Ladakh via Baralacha.

Lahaul-Spiti one of the remotest and backward regions of our country, has not yet been developed fully. Therefore, the people of the region have more faith in customs, traditions and blind faiths as compared to those of the adjoining areas.

According to a legend, some people believe that the name of the village Tandi originally was Tan-dehi, where Draupadi, the wife of five Pandavas of Mahabharata war fame, gave her body or died. According to another legend, Rishi Vashisht died at Mandi and his body was cremated at the confluence of two rivers, the Chandra and Bhaga, where present village of Tandi is situated. Another legend says that Chandra, the daughter of moon, was in love with Bhaga, the son of God sun. Tandi is the place where both met and the celestial marriage was performed.

ECONOMY

It seems that primary source of economy is agriculture. Only about 25 per cent of the total landmass is under cultivation. Today people of Lahaul-Spiti cultivate *buckwheat, barley, wheat, cauliflower, cabbage* and cash crops like *Kuth, potato* and *hops.* Potato and other vegetables were first introduced by Moravian missionaries at Keylong in 1857. Now *peas, mustard, raddish, turnip, carrot, french bean, beat root, tomatoes, soyabeen* etc. are grown. Barley is the staple food of the people of this region. Kuth cultivation was introduced in 1925 and gradually it was popularised. *Lahaul-Spiti has earned the distinction of achieving the highest per hectare production of potato, relegating the Netherland, to second position.* The Lahaul valley may figure in records in another way too with potato fields located at elevations ranging 8000 to 11000 feet above the mean sea level.

Chief medicinal herbs are species of 'artimesia', 'ephedra', 'aconitum', podo phyllum', 'karu' and 'hyoscyamus niger'. Jelly of the fruit of Hippophae rhamnoides is recommended by Lamas in Lung complaints. *'Rattanjot'* is found in Spiti valley. Important forest products of Lahaul are *Karu, Patish* and *Kala Zira.* Cultivation of grass is the most remarkable feature of Lahaul agriculture. Lahaulis are forced to grow grass to save their livestock from starvation in the winter. A fruit-cum-demonstration farm at Tabo distribute and encourage farmers to sow fruit plants like apricot, almond and

apples. They are being provided improved saplings on 50% subsidy by the department.

The common livestock are yak, cow, equine, mule, donkey, sheep and goat and a little poultry. Besides the 'Zo' and 'Zomo' (male and female respectively) in progeny of a cross between cow and yak. It is believed that after six generation of the crossing of the cow with yak, the progeny is back again to pure yak. Zomo milk has a very high fat content. Among the wild animals in Lahaul, the brown and black bear, the ibex, wolf and marmot and in Spiti, the wild goat, the nabob or burral and occasionally a strong leopard or wolf are found.

Miscellany: In 1869, a branch post office was opened at 'Keylong' for summer seasons only. In 1935, a second post office was opened at 'Lote' in Pattan valley. Similarly, a branch office was opened at Kaza in 1939. The Moravian Mission led by Mrs. and Mr. Hyede opened the first primary school at Keylong and a branch school at Tholang in the Pattan valley in 1861. The first regular school was started by the district board Kangra in 1919 with Urdu as a medium. Spiti region had no school till one was established at Kaza in 1932. District board Kangra had opened a dispensary at Keylong in 1929 which functioned till 1943, when it was taken over by the government. But in Spiti region, a dispensary was opened in 1958. SEED FARM, a research unit, was established at 'Gorma' in Pattan valley in 1960. Raisin Grape research Substation was established at Thirot in Pattan valley. There is a Kuth and Dry fruit Research Unit at Keylong.

In the year 1978, keeping in view the aspiration of the people and with the desire to streamline the administrative set up, an Additional Deputy Commissioner was posted at Kaza. Under the single line administrative set up, the A.D.C. was vested with the powers of head of department of all the line departments in 1984.

Subsequently several district level officers of various departments were also posted. Today, therefore, the Spiti subdivision is virtually autonomous of the district in its day to day functioning. The segregation was taken a step further when in February 1980, Spiti was segregated from Integrated Tribal Development Project, Lahaul and Spiti and a separate project office was sanctioned for Spiti.

The chief administrative authority within the district vests in the Deputy Commissioner, who more due to single line administration is not only District Magistrate and Collector but for all intents and purposes is also the head of all the district level offices. In addition to the usual and traditional role as Deputy Commissioner he has multifarious duties. As Deputy Commissioner, he is the executive head of the District looking after development, Panchayats, local bodies and civil administration. As District Magistrate, he is responsible for the maintenance of law and order and is the head of Police and prosecuting agency in the district. As Collector he is at the apex of the revenue administration and is responsible for the collection of land-revenue and all dues recover-

able as arrears of land-revenue. He is also revenue-applause authority. He ensures the successful execution of plan-schemes and coordinates the functions of all development departments and in fact due to the peculiar circumstances and situation of the area his functions are largely those of a Development Officer. In order to avoid procedural delays and in the interest of early disposal of work, he has been given special and enhanced powers. He has been declared Head of Department for all offices functioning in the district.

The centrally sponsored *'Desert Development Programme'* 1978 has shown good results in the afforestation and generation of substantial employment opportunities to the local people. In 1985, to promote the psychological, physiological and social development of children in the age group of 0-6 years an integrated child development project was launched in Spiti subdivision. In 1987, the office of the Assistant Manager SC/ST Development Corporation was established at Kaza, providing financial assistance to the Scheduled caste/ Scheduled tribes people. In 1990 Antodya Programme was launched to uplift economically, the people living below poverty line.

LAHAUL-SPITI POPULATION SINCE 1901-2011

Year	*Persons*	*Males*	*Females*	*Percentage variation of Population*	*Females per 1000 of males*
1	2	3	4	5	6
1901	12,392	6,221	6,171	—	992
1911	12,981	6,522	6,459	+ 4.75	990
1921	12,836	6,440	6,396	- 1.92	993
1931	13,733	6,903	6, 830	+ 6.99	989

MANDI

(HQ, MANDI, ALTITUDE 754 METERS)

Languages spoken : MANDYALI, SUKETI AND HINDI

The district is situated between 31° -13'-50" and 32°-04'-30" North latitude and 76°-37'-20" and 77°-23'-15" East longitude. It is bounded by Kangra on the North-West, Hamirpur and Bilaspur in the West, Arki tehsil of Solan district in the South. Shimla district on the South-West and Kullu district in the East. The district is entirely hilly except 'Balh' area in Sundernagar tehsil and 'Chauntra' in Jogindernagar tehsil, which are fertile valleys. The area of 'Badar', 'Chohar', 'Saraj and 'Sonar' usually have sufficient snowfall every year from January to March and are cut off from other part of the district. The winter snow often comes down to 1,300 meters.

The Satluj is responsible for the excessive hot months near the East-South border. The *'Tattapani'* and *'Dehai' are the hottest places in the district.* The most unhealthy part of the year is early autumn when the rice fields are still damp from artificial flooding. *The district receives the highest rainfall in the Pradesh with an average annual precipitation of 2029 mm.*

District Mandi has following famous hill ranges occupying distinctive place in the geographical features of the district.

Dhaula Dhar: This range covers a good part of the Suket area. Dhauladhar range runs with the Eastern boundary of the district from North to South. 'Nagru' is the highest peak, with an elevation of about 4,400 meters. In the North-East, this range joins the Kullu district.

Ghogar Dhar : Ghogar Dhar contains the natural salt mines of 'Gumma' and 'Darang' and is fully covered with forests. It enters the Mandi district at *'Harabagh'* in Jogindernagar tehsil.

Sikandar Dhar : The name is attributed to Sikandar Lodhi, who ruled 375 years before the reign of Akbar is supposed to have crossed it on his way to the conquest of Kangra. The construction of a water tank and cantonment there are also attributed to him. This range can be divided into two sub-ranges, i.e., *'Kamlah range'* and *'Lindi Dhar'.* It runs from North-West boundary of Suket and Bilaspur.

Dhar Vairkot : This range starts from Rewalsar and extends towards Suket. Some of its off shoots join Kangra and Sikandar Dhar. Two main rivers which pass through the district are the Beas and the Satluj.

The Satluj : The Satluj enters the district near 'Firnu village' in the *Chawasigarh* and passes through the areas of Bagra, Mahunm, Derahal, Batwara and Dehar. The main tributaries of the Satluj are *'Khadel', 'Bhagwati', 'Bantrehr', 'Siwan Behna', 'Kattu', 'Bagra', 'Bahlu',* and *'Siun'.* The Satluj forms

the boundary of the district in the East and South.

The Beas : It enters Mandi from Eastern side at a village near 'Largi' where *'Sainj'* and *'Tihan'* streams join the river. The principal tributaries of the Beas on the North bank are *Uhl, Luni* and *Rina* and from South bank *Janjehli, Suketi, Bhakhar, Son, Ramoli* and *Jiuni.* The water of the Uhl is being used to generate the electric power at Jogindernagar. There is a dam at Pandoh on the Beas river to divert its water to the Satluj. The water has been channelled through two tunnels and is also used for generating power at Dehar and thereafter channelled to the Satluj. There are two bridges over the Beas at Mandi and Pandoh.

Lakes

District Mandi has many lakes important from tourists and religious point of view.

Rewalsar: It is situated in the South-West direction of Mandi at 1,300 meters above mean sea level. Padma Sambhava, renowned Buddhist, stayed there for some time in a monastery. The Hindus and Buddhists look at Rewalsar as the abode of Lomasha Rishi. The 10th Sikh Guru Govind Singh also stayed there for some time. A simple stone structure which stands about 160 meters above the lake was his abode.

Prashar: In the North-East direction of Mandi town, it is located at an altitude of about 2,743 meters above mean sea level. A fair is held here every year in the month of June.

Kamrunag: It is in the tehsil Chachyot at an altitude of about 3,150 meters. An annual fair in the month of June is a feature of the Kamrunag lake.

Macchial Lake: Macchial Lake is a low altitude lake which is situated in Mandi district (7 km from the Jogindernagar town). This lake is considered sacred and is named after Macchendru Devta or Matasya Avtar of Lord Vishnu.

Machhiyal is sacred to locals and surrounding villages. In earlier days people made their wishes to Machhendru Devta and on fulfillment of their wishes they offer the promised gift to Machhendru Devta. One of such offerings was to ornament the sacred Mahashir fish with gold nasal rings and in earlier days (15-20 year ago) such sacred Mahashir fish wearing golden rings could be noticed easily in the Lake. This tradition has almost disappeared nowadays. However it is still very common to feed sacred Mahashir fish to observe happy ceremony and/or as a wish for good luck and to avoid bad luck. A fair marking the commencement the Indian traditional month of Vaishakh is held here every year. Fair is held for 3 days in which people from surrounding villages gather and observe the fair with great pomp and show. Along with a number of other sports activities wrestling is center of interest which is held on the final day.

Kamru Nag Lake : Located at a height of 3,334 meters above sea level on the Mandi–Karsog road. The Lake is surrounded by tall cedar trees having

stunning silence. Mythology says that this lake was formed by Pandavas when they were on their way after Mahabharata with Deity Kamrunag (based on which this entire valley is known by Kamru Valley today) to find best place for their teacher, Dev Kamrunag and Deity love the isolation of this place so much that he decided to stay here for the rest of his life. On his request, Bhimsen one of the Pandava brothers formed the lake by pushing his elbow and forearm on the peak of the mountain. And that is the reason believed by locals after oval-shaped lake with depth unknown. Many a time in storms an almost 30-meter-tall cedar tree would fall into the lake to disappear. Today faith from all faiths of people brings them here. As an offering people throw money, silver coins and gold into the water. This place is available for visitors throughout the year except for winter months, i.e. December to March.

HISTORY

The present district of Mandi was formed with the merger of two princely states 'Mandi' and 'Suket' on 15th April 1948, when Himachal Pradesh came into existence. Ever since the formation of the district, it has not witnessed any changes in its jurisdiction. To understand completely the history of the district, it is necessary to discuss the history of both the princely states separately.

The chiefs of Mandi, Suket, Keonthal and Kishtwar are said to be from a common ancestor of the 'Chandravanshi' line of Rajputs of Sen dynasty of Bengal and they claim their descent from 'Pandvas' of the Mahabharta. The separation of Mandi from Suket took place about the year 1200 A.D. Upto that time, the two states had been united, but reigning chief Sahu Sen having quarrelled with younger brother Bahu Sen, the latter left Suket to seek his fortune elsewhere. The following list presents the name of the chiefs of Mandi state:

(1) Bahu Sen	(2) Nim Sen	(3) Nirhabat Sen
(4) Kahabat Sen	(5) Sammat Sen	(6) Bir Sen
(7) Samadar Sen	(8) Kesab Sen	(9) Malab Sen
(10) Jai Sen	(11) Krandchan Sen	(12) Ban Sen
(13) Kalian Sen	(14) Hira Sen	(15) Dharitri Sen
(16) Narinder Sen	(17) Prajar Sen	(18) Dilawar Sen
(19) Ajbar Sen	(20) Chatter Sen	(21) Sahib Sen
(22) Narayan Sen	(23) Keshab Sen	(24) Hari Sen
(25) Suraj Sen	(26) Shyam Sen	(27) Gur Sen
(28) Sidh Sen	(29) Samsher Sen	(30) Dhurjatiya Sen
(31) Shivman Sen	(32) Kaleshwar Sen	(33) Ishwari Sen
(34) Jalim Sen	(35) Balbir Sen	(36) –
(37) Bijai Sen	(38) Bhawani Sen	(39) Jogendra Sen

Bahu Sen, after leaving Suket, settled at Manglan in Kullu, where his descendants lived for eleven generations. Kranchan Sen was killed fighting against Kullu Raja and his Rani, who was pregnant at that time, fled alone to

her father who was the chief of 'Seokot' in Mandi. She gave birth to a child nearby at some distance from destination and fell exhausted under a Ban tree. In the next morning, some followers of the Rana of Seokot found her insensible and took to the chief's house. *He had no son and brought up his daughter's son as his own and gave him the name Ban, from the tree under which he was born.*

Ban had hardly crossed the age of 15 when he defeated the chief of 'Kilti' who used to plunder travellers. On the death of the chief of Seokot, Ban succeeded to the chiefship of Seokot. He, after sometime, killed the Rana of 'Sakor' and took possession of his lands. He then changed his residence to 'Bhiu', a few miles above Mandi on the bank of river to the present town of Mandi. His son Hira Sen was killed fighting with the Rana of *'Tilli'*. Both brothers Hira Sen and Daritri Sen had no heirs and so Narinder Sen, brother of Kalian Sen, succeeded Daritir Sen. Nothing much is known about Prajar Sen and Dilawar Sen, who succeeded Narinder Sen.

Ajbar Sen, nineteenth in descent from Bahu Sen, succeeded his father in 1527, may be called the *first Raja of Mandi.* He founded the town Mandi and built the old palace with four towers. Raja Ajbar Sen, after assuming full control, decided to reduce to submission the four Ranas of 'Maratu', 'Sadiana', 'Kunhal' and 'Gandharba'. He defeated them and pushed them into the hills. In another skirmish which took place later on, the chief of Gandharba was killed. Chatter Sen, the eldest son of Ajbar Sen, marched against Achab, Rana of Maratu, but was defeated, wounded in the thigh and his three of the chief men, who were brothers belonging to Khatri family got slain. Raja granted the lands conquered from the Ranas to the fourth one named *Madhusudhan.* Raja Ajbar Sen died in 1534 and was succeeded by his son Chatter Sen.

Little is recorded worthy writing about him. Chatter Sen's son Sahib Sen formed an alliance with Raja Jagat Singh of Kullu and they together defeated Jai Chand, the Raja of *Waziri Laksari'* and took possession of a great part of his territory. The portion now known as *'Saraj Mandi'*, falling to the share of Mandi, and Saraj Kullu to the share of Kullu, including 'Bokla', 'Palaham', 'Trilokpur' and 'Fatehpur'. In the second joint expedition against Jai Chand, Mandi got Sanor and Bada, while Kullu obtained Birkot, Madanpur with 12 neighbouring villages. Raja Narayan Sen, the next chief of Mandi, subdued the Rana of *'Ner', 'Bandoh'* and *'Chuhar'*. He became paralytic, but is said to have been cured by a *'Pir'* or *'Gosain'*. Of 'Keshav Sen' and 'Hari Sen', tradition says nothing.

Raja Suraj Sen was a very ambitious soldier. He attacked the Raja of Nabgat, brother-in-law of Raja Man Singh of Kullu. The Raja of Kullu helped his relative and defeated the Mandi forces, seizing 'Karanpur', 'Shahpur' and 'Shamsherpur' forts and taking from the Raja of Nabgat, as the price of his assistance, 'Dewal', 'Sansal' and 'Ber'. The boundary between Mandi and Kullu was fixed at the villages of Ber and Apju. Raja Suraj sen soon afterwards

made an effort to recover lost territory by sieging the villages of 'Mandanpur', 'Sapari' and 'Tarapurand', but was again driven out with loss. The Kullu army overran the whole of the Mandi state and took possession of salt mines, reducing the economic situation of the state of Mandi to a deplorable condition. This made Raja Suraj Sen to settle peace with Kullu Raja and ultimately boundary between the states was fixed as before. Under the agreement, Raja of Mandi was made to make payment of all expenses of the war.

Kamlagarh fort was built by Suraj Sen in 1625 A.D. In 1653, he took *'Patri'* and *'Sulani'* from Suket, the last was held by Mian Ram Chand. He built second palace at Mandi, known as 'Damdama'. He had eighteen sons and they all died in his life time and in great disappointment of an heir, he caused to be made a silver image which he named 'Madho Rai', to which he assigned the kingdom. This silver image is carried in procession by the people on the occasion of fairs and festivals; rendering high respect and adoration. The only daughter of Suraj Sen was married to Raja Hari Dev of Jammu.

Shyam Sen, brother of Suraj Sen, succeeded to the throne in 1658 and ruled for nearly fifteen years. He was a great traveller, having visited Nepal, Banaras and Jaganath. He took the territory of *'Dunjgarh'* from Kullu in 1659 and later in the same year conquered *Lohara* from Suket. He built the *'Shama Kali temple'* on the Dhar Taran above the Mandi town and a tank in the suburb beyond the Beas.

'Gur Sen' ruled only for five years. He had brought the image of God from Jagnath, which is preserved in the temple. He made alliance with Kahlur against Raja of Kangra (Katoch Rajputs) and a battle took place at 'Hatoli' between the rival forces with doubtful results. In 1675, he conquered Dhanyarn from Suket and next year Baira and Patri. Suket and Mandi have always been rivals and generally enemies, but there was no great result of their warfare. The fertile valley of Balh was common ground of desire and dispute.

Sidh Sen succeeded Gur Sen in 1678 A.D. Jippu, the illegitimate brother of Gur Sen, was a man of considerable ability. He remained minister during the first part of the reign of Sidh Sen. Mandi was very powerful under his control as never before or since. In 1688, he conquered the districts of *Nachan, Hatal, Dalel* and in the same year a terrible famine occurred, taking heavy toll of lives. In 1690, he captured *Dhanesargarh.* In 1695 he built the fort of Sarakhpur and in 1706, recaptured Hatoli and ravaged the 'Ladh' area belonging to Hamir Chand Katoch of Kangra. Guru Govind Singh visited Mandi in the close of the 17th century. He had been imprisoned at Sultanpur by Raj Singh, the chief of Kullu, from whom he had sought assistance against Mughal troops and his followers believe that Guruji escaped by using miraculous powers. Raja Sidh Sen of Mandi had entertained him with great hospitality believed that Raja Sidh Sen was also a possessor of great miraculous powers. He was of enormous stature. Sidh Sen built the great tank before the palace. He also built a temple to the god Ganesha, two miles from Mandi, and known as *'Sidh Ganesh'*,

and *'Triloknath'* near the river. He died at the age of hundred years and his reign lasted forty one years, Joala Sen, the only son of Sidh Sen, died during his life time and so Sidh Sen was succeeded by his grandson Shamsher Sen who married the daughter of Agar Sen, Raja of Chamba.

Raja Shamsher Sen was constantly at war with his neighbours with very indifferent success. He reconquered Madhopur from Kullu. He took the advantage of Raja Jai Singh's absence from Kullu at Lahore and so conquered *'Chaboroi', 'Ramgarh', 'Deogarh', 'Hashtpur'* and *'Sarni'* from Kullu state. Shamsher was followed by Dhur Jatiya, Shiv Man Sen and Kaleshwar Sen, without much reference to their credit and contribution.

Ishwari Sen was only five years old when his father Shiv Man Sen died in 1779 A.D. Raja Sansar Chand of Kangra, realising the value of time without losing further time, invaded Mandi and plundered the town. Sansar Chand made over the district of 'Hatoli' to Suket, 'Chuhari' to Kullu and kept himself the district of Nantpur. He carried Ishwari Sen to Kangra and kept him at 'Nadaun' as prisoner for twelve long years. When Gurkhas, on the invitation of the Raja of Kahlur, Mahan Chand, invaded Kangra, Ishwari Sen gave in his submission to Amar Singh Thapa, the Gurkha General, on condition of being left in unmolested possession of his territories and promising on his part to make no opposition to their attack on Kangra.

The Katoch forces were humiliated by combined forces of Gurkhas and Hill chiefs. Raja Sansar Chand closed himself along with his kith and kins in the Kangra fort, realizing little that this move will prove a death trap for him. Gurkha forces continued surrounding the fort a long time, giving most difficult time to the Raja of Kangra who for uptil few days back wanted to establish a centralized Hindu kingdom in the Western Himalayas by uniting all small princely states. On the retreat of the Gurkhas, in 1810 and the occupation of Kangra fort by Raja Ranjit Singh of Lahore, Sardar Dessa Singh Majithia was appointed Nazim of all the hill states including Mandi. Ishwari Sen was forced to Pay a *'Nazrana'* or tribute of Rs. 30,000/- annually, which continued till 1815, when Zalim Sen, brother of Ishwari Sen, went to Lahore to see whether he might not be able to obtain the throne for himself. Ranjit Singh who always delighted to sow dissensions between chiefs, warmly espoused the cause of Zalim Sen and compelled Ishwari Sen to pay a tribute of Rs. One lakh to retain his throne. Ishwari Sen had given an asylum for several wandering princes as the ex-Raja of Bushahr and ex-Raja of Nagpur.

Zalim Sen came to the throne in 1826 A.D. He had always quarrelled with his brother Ishwari Sen during the later years of his life and had been compelled to leave Mandi to take refuge with Sansar Chand of Kangra. Ishwari Sen had four illegitimate sons named *'Mian Rattan Sen', 'Kapur Sen', 'Balbir Sen'* and *'Bhag Sen'*. Zalim Sen paid a lakh of rupees as succession duty to Lahore and in following years, until his death in 1839 A.D., a tribute of Rs. 75,000/- was levied. Zalim Sen before his death made over the administration of the state of his younger nephew Balbir Sen, thought he was illegitimate by

paying large sum of money for succession at Lahore court. Zalim Sen disgraced himself by killing the efficient and faithful Prime Minister, named 'Dhari'.

Accession of Balbir Sen to the throne of Mandi was not welcomed by his own brothers and considered the throne disgraced by the son of a concubine. On the other side, after the death of Maharaja Ranjit Singh in 1839, a huge Sikh army had become difficult to manage. Prince Nao Nihal Singh, son of Maharaja Kharak Singh, felt that some employment must be found for troops who would otherwise quickly get beyond his control. The hill states of 'SUKET', 'MANDI', and 'KULLU' had been virtually conquered though not occupied by Sikh troops and the last acquisition Ladakh was only considered as a step to the conquest of a portion of Chinese territory. Before any expedition taken to the Chinese land, it was decided to fully reduce the Mandi State, and at all events not to leave so strong a fort as Kamlagarh in the rear of the Sikh army.

In 1840, a large army under General Vantura (a French) was sent to Mandi by Nao Nihal Singh. Encamping seven miles away at Sikandar range from Mandi, he sent message to Balbir Sen to pay certain arrears of the tribute. Raja Balbir Sen paid the money claimed and wrote to 'Colonel Tapp', political agent at Subathu, begging for an asylum. Balbir Sen having paid his tribute was ordered to attend the Sikh General in his camp. On his arrival, he was surrounded and imprisoned. He was not released until consented to everything demanded and so *Sikh troops took possession of the capital Mandi much against the prophecy of Guru Govind Singh to Raja Sidh Sen of Mandi, that capital would never fall into the hands of an enemy.* Raja was sent to Amritsar as a prisoner and was confined in the fort of *'Govindgrarh'.*

While General Vantura took possession of all but Kamlagarh fort without much resistance. Additional troops were sent under the command of Sardar Ajit Singh Sindhanwalia, but great sickness broke out amongst them and a large number of troops died. But the seize was pressed with great vigour to take control of Kamlagarh fort. On 5th November 1840, Prince Nao Nihal Singh died, but did not deter the courage of troops and ultimately on 29th November 1840, it capitulated. General Vantura, leaving Singh troops in possession, moved with remainder of his force of Kullu.

In January 1841, 'Sher Singh' became Maharaja of Lahore and ordered the release of the Raja of Mandi. Balbir Sen was allowed to take with him the silver image of Goddess Devi, which was carried away from her temple at Kamlagarh by Sikh troops. When Raja was sent to Amritsar, 'Shaikh Ghulam Mohiuddin' was the revenue officer, the most grasping one. Balbir Sen was directed to increase the revenue to four lakh of rupees, an amount which could never be raised by the Raja. Before the Anglo-Sikh war in 1845, the Raja sent several messages to Mr. Erskine, Superintendent of the Hill States, showing eagerness to obtain British protection against tyrannical interference of the Sikhs.

Cool and slow going approach of the British in this case made Raja to

send a contingent of 300 men under Wazir Gasaon to join the brigade of 'Sardar Ranjodh Singh Majithia' at the *battle of Aliwal*. After the battle of *'Sobraon'*, he with his neighbour of Suket sent a confidential agent Sibu Pandit to Mr. Erskine requesting for an interview. On 21st February 1846, this was granted and Raja of Mandi and Suket tendered allegiance to the British government at Bilaspur before Mr. Erskine. Raja Balbir Sen had not, however, waited for the decisive victory of Sobraon. On the 4th February, he surrounded Sardar Mangal Singh Ramgharia and made him to run for his life. But after some time, Mangal Singh much against solemn assurances returned by a double march and burnt a number of villages round Kamlagarh.

By the treaty of 9th march 1846, all the rights on forts and territories of the Maharaja in the Jalandhar-Doab were ceded to the British government.

Rana Bhup Sen, son of Tegha Sen, born in 1837 was hardly ten years old when he started asserting claims on the Mandi throne with the help of some designated persons. But the British government refused to revive the obsolete claims and granted *'Sanad'* on 24th October 1846 to Balbir Sen, defining his rights and obligations. Bhup Sen raised some 3,000 men from Kangra and Kahlur and attacked Mandi, destroyed property and plundered salt factories at Gumma. On the request of the Raja, the British government imprisoned Bhup Sen for a short period and soon released him on the promise of good conduct. Other than Raja, his minister Wazir Gasaon was the most powerful man in the state and so was viewed with jealousy by the Raja and with envy by a party headed by 'Purohit Harjas' and 'Wazir Singh'. Raja wanted to do away with the assistance of his minister, which he could not do, because of the British control and direction over state's administration. Raja Balbir Sen died on 20th January 1851, leaving a son Bijai Sen of four years of age, under the protection of trusted Wazir Gasaon. But this time it was very tough for Wazir Gasaon, since the party hostile to him had taken control of all the chief offices.

Knowing fully the disturbing conditions prevailing in the state, the British authority decided to constitute the council to run the state. Wazir Gasaon reputed to be the wisest man in all the hill country, was nominated President and Mian Bhag Singh and Purohit, the spiritual adviser of the late Raja, the other members. This council was set up in February 1851 A.D. Rana Bhup Sen and his two brothers had been proposed an allowance of Rs. 3,000/- per annum, but the government considered this too high and suggested Rs. 840/-, which Raja refused to accept. Later on, according to new arrangement, Bhup Sen was to receive Rs. 1,220/- a year. In 1852, the administration of Mandi had fallen into confusion as foreseen by Wazir Gasaon. This provided an opportunity to the British to reorganize the council of Regency prince Bijai Sen gains majority.

The Purohit was made in-charge of the palace and domestic arrangements, while mian Bhag Singh was master of the horse. All real powers were kept in the hands of Wazir Gasaon of all important departments. In

1856, the salaries of the members of the Council of Regency were doubled. During this period, a number of reforms were introduced such as the *reduction of forced labour'* and *'remarriage of widows'.* On 21st July 1859, Raja Bijai Sen was married to the granddaughter of the Raja of Datarpur, and on 25th July to a niece of the Raja of Haripur. Both the marriages took place when Raja had hardly crossed the age of thirteen. In May 1861, the Commissioner visited Mandi and finding that Purohit and Wazir were not doing their jobs with responsibility, ordered the deportation of Purohit *Shivshankar'* and his son to Kangra and fined Wazir two thousand rupees for negligence.

After this change, affairs moved smoothly and in 1863, 'Mr. Clarke', an officer of the education department, was appointed to superintend the Raja's education. *The government of India in 1864 granted the Raja a salute of eleven guns on his arrival at the headquarters of the district and on 12th October 1866, the Raja having attained his majority was invested in full Darbar with usual 'Khillats' of investiture.* Raja Bijai Sen initiated public works on a large scale. During his period, a good mule road from Baijnath to Sultanpur Kullu, over the Bhubu Pass was constructed. Although Raja was trained by British tutor, yet he also came under the influence of the *'Zanana'* and the evil counsel of men, who found interest in the incapacity of the chief. The administration of Mandi soon fell into the greatest confusion.

In 1868, Viceroy of India reminded the Raja *the order of 1846, according to which a Raja can be removed within no time if the affairs are not conducted according to the interest of the ruled.* This warning had a temporary improvement; then in 1870 government removed Mr. Clarke from the position of Councillor to the Raja, occupying since October 1866 and installed 'Mr. E. Harrison' as a new adviser to the Raja. With the coming of Mr. Harrison, a marked improvement took place in the state's administration. In October 1871, Lord Mayo, Viceroy of India, paid a visit to Mandi via Bilaspur and Suket and 'Hawa Mahal' was prepared for his reception. Mr. A. Brandreth, Commissioner of Punjab also accompanied him. The Raja of Mandi, Bijai Sen, attended Palampur Darbar. In 1872, Mr. Harrison left Mandi on his promotion to higher rank. In 1874, Sir Henry Davis, Lieutenant-Governor of Punjab, paid visit to Mandi state.

Mian Pradhan Singh (Sen), brother of Bijai Sen, who was popular among locals, died in 1875. He was a great asset to Bijai Sen. 'Mian Uttam Singh' was appointed Wazir in his place. In 1877 A.D. Raja Bijai Sen attended Delhi Darbar and in commemoration of the auspicious occasion, constructed the Victoria suspension bridge over the Beas at Mandi; costing nearly one lakh rupees. In 1877, Mian Uttam Singh was removed from office and Mian Man Singh, younger brother of the Raja, succeeded him. Later on, a council was set up by Colonel' W.G. Davis', the Commissioner with the consent of Bijai Sen, including other than Raja Mian Man Singh, 'Padha Jiwa Nand' and 'Munshi Ganga Singh'. In the following years, rift developed between the Raja and Mian Man Singh, leading to the resignation of Mian Man Singh.

Mian Uttam Singh was then recalled to office in 1880. In October 1881, 'Sir Robert Egerton', Lieutenant-Governor of Punjab on his way from Kullu to Kangra, passed through Mandi territory, halting at 'Badhwani', 'Jhatingri' and 'Dhelu'. Bijai Sen met Sir Robert Egerton at Jhatingri. In 1881, a suspension bridge was built over the UHL river, a tributary of the Beas. Mr. E.W. Purkis initiated many construction activities in the state.

In 1883, Sir Charles Aitchinson, accompanied by 'Col Gordon Young', the Commissioner visited Mandi on his way from Shimla via Bilaspur to Kullu. In 1884, Raja Bijai Sen married his two daughters to heir-apparent of Bushahr. Wazir Uttam Singh continued acting as Wazir from 1880 to October 1888 till death. He was succeeded by 'Jawahir Lal', which caused discontentment in *'Saraj area'*. Mr. 'H.J. Maynard', I.C.S. helped Raja to deal effectively with the trouble makers and later on 'Sardar Jawala Singh' was appointed as Wazir of the state. Mr. Maynard was relieved from the state at the end of March 1890, and on his suggestion, Raja engaged, Mr. C.E. Fendall as Superintendent of Works.

In 1893, another disturbance arose among the Saraj people on the pretext being the use of *'buffalo lymph'* for vaccination purposes. In consequence, Jawala Singh was removed and 'Mian Udhan Singh' was appointed as Wazir. In 1894, Mandi was visited by 'Sir Dennis Fitzpatrick', accompanied by Mr. Smith, the Commissioner. He came from Kullu via Dulchi pass and camped on the *'Paddal plain'*. The iron suspension bridge over the Suket Nala, near Mandi was inaugurated by him and named" The *Fitzpatrick Suspension Bridge"*. The period from 1893-1900 was unfortunate for Mandi. Two sons were born to the Raja, but both died in infancy. The Raja himself was regularly unwell. To add to the agony Mian Udham Singh and Mr. Fendall did not work harmoniously together.

In September 1899, Mandi was visited by His Excellency Lord Elgin. On his way to Kullu from Dharamshala, he halted at *'Dhelu'*, *'Urla'*, *'Drang'* and *'Kataula'*. Bijai Sen met him at the Katindi ridge. In 1901, when things had reached at the climax, both Udham Singh and Mr. Fendall were removed; and 'Padha Jiwa Nand' was recalled from Jodhpur state, where he was member of the state council, and made Wazir. In 1901, Mandi was visited by 'Sir W. Mackworth Young' and 'Mr. A. Anderson', the Commissioner. Meanwhile, Padha Jiwa Nand, effected constructive changes in the administration. For his invaluable services, Padha was bestowed upon the title of *'Rai Bahadur'* by government. Raja Sen died in 1902. In recognition to his good governance, he was invested with the title of K.C.S.I. three years after his death. There was no direct heir to Bijai Sen. In 1897, his illegitimate son, Kunwar Bhawani Sen was recognised as his successor; Bhawani Sen was formally installed to the throne of Mandi in 1903 by Sir Charles Rivaz, Lt. Governor of the Punjab.

Raja Bhawani Sen (A.D. 1903): The Raja being a minor, Mr. Miller, I.C.S. was appointed Superintendent of the state and took over charge on

30th November 1903. Bhawani Sen had his education at a college in Lahore, under the care of his tutor, Mr. E.M. Atkinson. On completion of his education, he returned to Mandi on 17th April 1904. *At the time of earthquake in 1905, Raja and Mr. Miller had a narrow escape in a Dak Bungalow at Palampur.* Much damage was done in the state. From Baijnath border to Mandi town only the village of 'Aiju' was left standing. On this occasion, the state acted with great liberty and benevolence. On 7th October 1905, the Raja was formally invested with full administrative powers by Mr. H.A. Anderson, I.C.S. and Mr. Miller then left the state. In November 1905, Raja visited Lahore with other Punjab chiefs, to meet the Prince of Wales.

Soon afterward, Lord Kitchner passed through Mandi on his way from Shimla to Kangra. In 1906, the *'Darbar Hall'* was built and in the following year, electric installation was carried out. For the next three years, the administration continued to be conducted efficiently under the supervision of Rai Bahadur Padha Jiwa Nand. From 1st March 1907, the reduction of the duty on salt came into effect. In 1908, Sir Louis Dane, Lt-Governor of Punjab came to Mandi on his way from Kullu via Dulchi pass.

In the year 1909, an agrarian disturbance took place, which spread almost in the entire state. Raja asked for help from outside. Two companies of 32nd Pioneers were called in, and order was soon restored. In the hour of crisis, Deputy Commissioner as well as the Assistant Commissioner of Kullu, soon arrived on the spot. Padha Jiwa Nand was then displaced by 'Indra Singh', son of the late Wazir Uttam Singh. Later on, Tikka Rajendra Pal was appointed adviser to the Raja and Munshi Amar Singh as acting Wazir. To review the whole revenue administration and to settle the question of *'begar'* on the request of the Raja. Mr. C.C. Garbett, I.C.S. was sent to Mandi in 1911. Mr. Garbett soon fell ill and was relieved by Mr. Gordon Walker.

Raja Bhawani Sen attended the coronation Darbar at Delhi in 1911, fell ill soon after, and died on 9th February 1912. The Raja had left no direct heir to succeed him. Mian Jogender Singh, the nearest relative of the deceased Raja, was formally installed by Lt-Governor of Punjab, 'Sir Louis Dane' on 10th April 1913. Raja being minor (only 8 years) placed under instruction in Queen Mary's College, Lahore. Mr. Gordon Walker was appointed Superintendent of the state, with Munshi Amar Singh as his assistant, and in 1916 he was relieved by Mr. H.W. Emerson. Raja Jogender Singh was admitted to the Chief's College, Lahore in 1916 under the care of Mr. T.P. Gillmore till 1923. In February 1925, the Raja was invested with full powers as a ruling chief by Colonel A.B. Minchin, agent to the Governor General Punjab states. During the great, war (1914-1919), Mandi state rendered valuable services to the Government.

Raja BHAWANI SEN: Raja BHAWANI SEN, 17th Raja of Mandi 1902 to 1912, born on 17th April 1883, educated at Aitchison Chiefs College, Lahore; married 1stly, a daughter of Kanwar Balbir Singh of Sirmur, married 2ndly, a daughter of Mian Surat Singh of Suket, married 3rdly, 1907, Rani Lalita Kumari,

who died on 4th May 1938, she was daughter of Raja Prithvi Dhwaj Shah, Taluqdar of Khairigarh-Singhai, and had issue. He died on 9th February 1912. The daughter, Rajkumari Dhanwati Devi, born 1905, educated at the Queen Mary School, Lahore; married March 1919, Kanwar Shiv PAL of Kutlehar, and had issue.

Raja Sir JOGINDER SEN Bahadur: Maj. Raja Sir JOGINDER SEN Bahadur, 18th Raja of Mandi 1913 to 1948, son of Mian Kishan Singh Sahib, born on 20th August 1904, K.C.S.I., educated at Queen Mary's College and Aitchison College, Lahore; Indian Ambassador to Brazil 1952 to 56; Member of Lok Sabha 1957 to 1962; Honorary Lt.-Col. 3rd and 17th Dogra Regiment and Bengal Sappers and Miners, married 1stly, 8th February 1923, Rani Amrit Kaur, born 1904, died in 1948, daughter of Col. Farzand i-Dilband Rasikhul-Itiqad Daulat-i-Inglishia Raja-i-Rajgan Maharaja Sir Jagatjit Singh Bahadur of Kapurthala, married 2ndly, on 13th May 1930, Kumari Kusum Kumari [HH Rani Kusum Kumari of Mandi], was born on 27th August 1913, and died in June 1998, daughter of Kunwar Prithiraj Singhji of Rajpipla, and had issue, two sons and two daughters. Raja Joginder Sen died 16th June 1986.

From 1st November 1921, the political control of the state was transferred from Punjab Government to the Government of India till 15th August 1947. On 8th March 1948, the last Raja Col. Jogender Sen decided to abolish the separate symbol of Mandi State and finally Mandi State became part of newly formed Himachal Pradesh on 15th April 1948.

SUKET

Suket state is also a part of modern Mandi district. The origin of the name 'Suket' is uncertain, but it may be a derivation of *'Sukshetra'*, means *'the good land'*, according to J. Hutchinson. Prior to its foundation, the whole tract was under the title of *'Rana'* or *'Thakur'* and the vernacular history gives a graphic account of their subjection by the early Rajas. Sir A. Cunningham assigns the foundation of Suket to an early period (A.D. 765). According to him, it is probable that, there was an early Sen dynasty in Bengal, whose ancestor named Vira Sena, reigned in the seventh century and from whom the later Sen dynasty was descended. Suket was founded by Vira or Bir Sen.

Bir Sen (A.D. 765): After crossing the Satluj at Jiuri Ferry, he made deep penetration into the hills. Ranas and Thakurs resented but due to mutual jealousies, could not provide a strong opposition. The first to take field against him was the 'Thakur of Karoli' (whose state was called Darehat), but was subdued and his fort captured. 'Sri Magal', the Rana of *'Batwara'*, who had come to help the Thakur of Karoli, also lost at the face of superior force of Bir Sen. Following up his initial successes, Bir Sen subdued the Thakur of Naggar (occupying territory of Kot and Paranga), 'Thakur of Chirag', (ruled Batal and Thana Chawindi), 'Thakur of Chindiwala' (ruling Udaipur) and 'Thakur of Khunu'. A pitched battle took place with the Rana of Sanyarto, who was ultimately captured but treated with consideration and provided a

Jagir, which remained under the control of his family till the reign of Shyam Sen (A.D. 1627-58). Bir Sen erected a fort on the out skirts of the *'Kunnu Dhar'* and settled down there with his family. In his renewed campaign against petty chiefs, he attacked the Thakur of Koti Dehar and seized the area of *'Nanj', 'Solalu' 'Belu'* and *'Thana Magra'*. He built two forts, one at *'Kajun'* and other at *'Magra'*.

Next he subdued the **'Thakur of Khandlikot', 'Thakur of Surhi'** (who owned the Thanas of Chandmari and Johar and also ilaqa of Pangan) and 'Thakur of Haryana'. Bir Sen then selected a site in the Surhi Ilaqa, where he built a palace and made it the capital of the state. He also built the fort of Chawasi and made it as a base and advance into Saraj and captured the forts of *Srigarh, Naraingarh, Raghupur, Janj, Madhupur, Banga, chanjwala. Magru, Mangarh, Tung, Jalauri, Himri, Raigarh, Fatehpur, Bomthaj, Raison, Godoh and Kot Mandi* from different Thakurs who probably till then had been more or less under Kullu. The Raja of Kullu, Bhup Pal tried to oppose the advance of Bir Sen, but he was defeated and taken prisoner. After the conquest of Kullu, Bir Sen captured *'Pandoh', 'Nachin'* and forts of *Chiryahon, Raiyahan, Jurahandi, Satgarh, Nandgarh, Chachiyot and Swapuri.* In the Westward, he moved upto as far as the *'Sikandar Kee Dhar'* (now in Mandi) and defeated the Rana of Hatli. To commemorate the event, he founded a fort named Birkot. Thereafter, Bir Sen fixed the boundary with Kangra, by erecting a fort at Seer Khad, called **'BIRA'**. He was succeeded by his son 'Dhir Sen', whose reign was short.

Bikram Sen: Raja of religious disposition soon after his accession, installed his brother **'Tribikram Sen'** as regent of the state and moved to Haridwar on pilgrimage. Kullu, a tributary of Suket still, was under the rule of Hast Pal, grandson of Bhup Pal. Tribikram Sen proved unfaithful and aimed at supplanting his brother with the help of Kullu chief. On learning this, Bikram Sen went to his kinsman, the Raja of Keonthal, who provided him with army. The opposing forces met at Jiuri in which both Tribikram Sen and Hast Pal fell in the battle. Bikram Sen then resumed his position as Raja and in a revengeful attitude invaded Kullu and subdued it. On Bikram Sen's demise, his son **'Dhartari Sen'** succeeded, but there is no record of events of his period. He had two sons and both died during his own lifetime. Of these, the younger was named **Kharak Sen** *(Mangal Sen and Pangla Sen in some other document).* He had a son named Lakshman Sen, a minor of two years of age, was made Raja on Dhartari Sen's death.

Lakshman Sen: The Raja of Kullu took advantage of the minority of Lakshman Sen and asserted independence. When Lakshman Sen came of age fourteen years later he invaded Kullu and overran the *Waziris of Ruppi, Lag-Sari and a part of Parol* and so Kullu again became a tributary of the Suket. Lakshman Sen was succeeded by his son **'Chander Sen'**, who died childless. His brother Bijai Sen, then came to the throne. Nothing of great relevance took place during his period.

Sahu Sen (A.D. 1000): Bijai Sen left two sons, named Sahu Sen and Bahu Sen, of whom the elder succeeded to the throne. Both brothers were not in good terms, and so Bahu Sen retired to 'Manglor' then in Kullu, where he established himself as a petty chief. His descendants in the twelfth generation founded Mandi state.

Rattan Sen (A.D. 1020): Very little is known about his period. On his demise, Rattan Sen was succeeded by his elder son 'Bilas Sen', a man of tyrannical attitude. He was poisoned after four years of his oppressive rule and his brother 'Samudra Sen' was installed Raja by officials. Bilas Sen left an infant son, named Sewant Sen. The Rani of Bilas Sen, sensing danger to the life of Sewant Sen fled to Saraj and found refuge with a *'Zamindar'*. Samudra Sen ruled for four years, leaving at his demise two minor sons named 'Hawant Sen' and 'Balwant Sen'. Both of them in succession were placed on the throne, but died before attaining their majority without any heirs. A search was, therefore, instituted to find out Bilas Sen's infant son, to restore him his legitimate rights.

Semant Sen (A.D. 1120): In gratitude for the kindness shown to him and his mother by the Zamindar, Sewant Sen conferred on him with a *'Jagir'* in the same village and built a fort there, naming it 'Rani Ka Kot'. Sewant Sen died after a long and prosperous reign. He was followed by four Rajas named 'Dilawar Sen', 'Biladar Sen', 'Ugar Sen' and 'Bir Sen'. The next Raja Mantar died without issue. Mian Madan who was widely respected for his courage and promptness was then acclaimed Raja.

Madan Sen (A.D. 1240): Madan Sen had a long and prosperous reign. His first expedition was against the Rana of Nachan. He built a fort at a short distance to the North of 'Pangna', the capital and called it 'MADANKOT'. He undertook an expedition across the Beas and overcame the Rana of Drang, and captured the salt mines at that place. The Rana of *'Gumma'* opposed the advancing Madan Sen, but lost very badly. He reconquered the Kullu territory. On his return journey, he built the fort of Madanpur. The Kullu record states that Madan Sen granted the territory from Manali to Bajaura to a local petty chief one Rana Bhosal. Bhajji, Shangri and Kumharsain, small states to the South of the Sutluj were also reduced to submission. 'Sri Mangal', *Rana of Batwara,* made an alliance with Kahlur and rebelled against Madan Sen.

On his defeat, Madan Sen expelled him from the state. *Sri Mangal then founded the small principality of 'Mangal'.* Madan Sen dealt severely with rebellious Rana of 'Hatli' and Thakurs of 'Mahal Morian'. He built the forts of Katwalwah (on the border of Kutlehr), restored the forts of *'Seoni'* and *'Tenoi'*, now in Bilaspur and erected the fort of Dehar in consequence of an omen. He built the temple of *'Asthambnath'* in Pangna and transferred it to Lohara on the Balh plain from Pangna. *Under Madan Sen's rule, Suket reached the Zenith of its prosperity.* Madan Sen was succeeded by 'Darir Sen', 'Dhartari Sen', 'Parbat Sen', 'Kam Sen' and three more weak rulers and eighth was 'Sangram Sen', who was 28th in succession from Bir Sen. During

the period of these weak rulers, Mandi Rajas found an opportunity to push their conquests. The period from 1240 to 1480 A.D nearly 240 years was of not much consequence in the history of Suket state.

Mahan Sen (A.D. 1480): Sangram Sen was followed by Mahan Sen. Mahan Sen bears an evil reputation in the record, which ultimately led to his death. As Mahan Sen had no son, he was succeeded by his uncle 'Haibat Sen'. This kind hearted ruler was followed by 'Amar Sen' and 'Ajimardan Sen'.

Parbat Sen (A.D. 1500): According to the records, he was pronounced a curse by a Purohit, who had committed suicide after being disgraced for having intimacy with a *'bandi'* or slave girl. He sought to expiate his son by conferring the Waziris of Lag and Sari on the Brahmin's family in *'Jagir'*, but to no purpose and died soon afterwards. From the Purohit's family was descended the line of 'Logwati Rajas' and they, then extended their sway over the main Beas Valley until finally overthrown by Jagat Singh, Raja of Kullu about A.D. 1650.

Kartar Sen (A.D. 1520): During his rule, *the capital was shifted from 'Lohara' to 'Kartarpur'* a newly founded town, after his own name, now called 'PURANA NAGAR'. His queen was a *'Jaswan princess'*, famous for her generosity.

Arjun Sen (A.D. 1540): He was contemporary of Bahadur Singh, son of Sidh Singh of Kullu. He was arrogant and of overbearing nature. Many of the *'Ranas'* and *'Thakurs'* revolted against him. During his reign, half the territory was alienated from the state and never regained.

Udai Sen (A.D. 1560): Udai Sen tried to restore the lost glory of Suket during his father's period, but with partial success. He subdued the rebellious petty chiefs, more especially the Rana of 'Cheddi', whose estate he confiscated and built a fort named *Udaipur* to commemorate his victory.

Dip Sen (A.D. 1590): Ruled for a long period without much details. He was followed by Shyam Sen.

Shyam Sen: (A.D. 1620): The Raja had two Ranis, one from *'Guler'* and other from *'Bushahr'*, who became enceinte about the same time. The Guleri Rani's son, Ram Sen, was born first and was recognised as *'Tikka'* apparent. The same Rani gave birth to a second son named Prithi Singh and a daughter. In the due course, Bushahri Rani also had a son, named Hari Singh. Bushahri Rani, to see that her son is installed as next heir apparent, made a plot to kill Ram Sen through Mian Jughanun. One day Mian Jughanun finding favourable opportunity pushed Ram Sen into cellar. Diligent search was made and at last it occurred to Naurang Singh, the Raja's younger brother. On this, plot being discovered, the Bushahri Rani was banished from the state, and the whole family of Mian Jughanun except a pregnant woman were executed. Jughanun Mians are descended from this woman. Later on Hari Singh was also displaced from the position heir presumptive, in favour of Prithi Singh.

Aurangzeb, the Mughal emperor, summoned Shyam Sen and Naurang Singh to Lahore and ordered them to capture a strong fortress. In the successful completion of this venture, Emperor conferred on the Raja Shyam Sen a *'Khillat'* or dress of honour, with permission to issue his own coins. The chief event of Shyam Sen's period was the war with Kahlur. Raja Shyam Sen's daughter was married to the Raja of Kahlur, Kalian Chand. The two armies met near Mahadeo and after a fierce battle, Kahlur and Mandi (Suraj Sen of Mandi was helping Kalian Chand) were defeated. Suraj Sen fled and Kalian Chand was mortally wounded by Pathans in the service of Suket and captured. To fulfil the bow of Kalian Chand to water his horse at the tank in Suket, Raja Shyam Sen ordered that the wounded Raja should be taken to Suket in a Palki, But Kalian Chand died on the way. The place where he died is still called *'Kalian Chand Ki Dwari'*, (Raja Kalian Chand had taken the bow to defeat Shyam Sen against the challenge thrown by his Rani, who was from Suket).

Raja Jagat Singh was contemporary of Shyam Sen. He had conceived the design of making himself paramount in the hills. After subduing Chamba and Basholi, he turned towards Mandi, Suket and Guler. Mandi Raja, Suraj Sen, escaped the plot, but Suket's Shyam Sen and Man Singh of Guler were not so lucky. Raja Shyam Sen and his brother Naurang Singh were imprisoned at Delhi on the complaint of Raja Jagat Singh of Nurpur, when they failed to furnish a contingent in an expedition to Jammu Hills. Man Singh of Guler had also been imprisoned on similar grounds. During his captivity, Shyam Sen is said to have prayed to 'Mahun Nag' who appeared to him in the form of a bee, and was promised an early release. In 1641 A.D. Raja Jagat Singh revolted against Mughal authority, which paved the way for the early release of Shyam Sen, Naurang Singh and Man Singh of Guler. On their way back from Delhi, the Rana of Bushahr attacked Shyam Sen, who had banished the former's sister. In this battle, Shyam Sen emerged victorious. On his return from Delhi, Shyam Sen, in gratitude for his deliverance, granted a jagir of Rs. 400/- a year to the temple to Mahun Nag (bee) owing to the Nag having appeared to the Raja in that town. Later on, grant was reduced to Rs. 300/- a year. Naurang Singh, the Raja's brother, is said to have died in prison. During Shyam Sen's imprisonment, Raja Jagat Singh of Kullu and Suraj Sen of Mandi had brought a substantial part of Suket's territory under their control.

The Kullu Raja seized the parganas of 'Srigarh', 'Pirkot', 'Naraingarh', 'Jangi', 'Jalauri', 'Ranghopur', 'Bari, 'Dumhri', 'Madanpur' and 'Bhomri', while Raja of Mandi acquired Garh, now called Saraj Mandi, Raigarh, Chanj-wala, Magrah, Tungasi, Madhopur, Bungha, Fatehpur, Baj Thaj, Bagrah, Bansi and Gudah areas. Some local Thakurs had also joined the invaders. Shyam Sen positioned against these invasions, through the Nawab of Sirhind. But before the liberation order could be implemented, Nawab died. Though fortunate in his wars with Bushahr and Kahlur, Shyam Sen's reign marked the beginning of rapid decline in the fortunes of Suket.

Ram Sen (A.D. 1650): Mandi and Suket had always been rivals and generally enemies. In Ram Sen's period, the struggle for the **'BALH'** track began, and it was the scene of many a conflict. *To protect the people of Madhopur, Ram Sen erected a fort and called it Ramgarh, after himself.* Raja Ram Sen removed his sister to Pangna on the suspicion of her chastity. The suspicion was groundless and so much disgraceful that she poisoned herself. Soon afterwards, Raja became insane and died.

Jit Sen (A.D. 1663): Owing to his father's insanity, Jit Sen had been appointed regent. He seems to have been of a weak disposition and also suffered from epilepsy. This illness as well as other misfortunes seems to have been attributed to the influence of the dead princess in Pangna, who was worshipped as a malevolent spirit. Jit Sen's twenty-two children died in infancy, and during his reign much territory was lost to the neighbouring states. Jit Sen also fought a battle against Shyam Sen, Raja of Mandi. The two armies met near *'Lohara' on the Balh plain* and after a short conflict, Jit Sen was defeated and he fled from the field. He was chased and overpowered by a Katoch Mian in the service of Mandi. The *life of Jit Sen was spared, but Katoch snatched the insignia of royalty from his head dress and took them to Shyam Sen.* For this services, Katoch Mian was given a quantity of salt from the Drang Mines. Mandi then annexed the Balh plain as far as the Suket Nala. Soon afterwards, Garur Sen son of Shyam Sen, with the help of the Raja of Kahlur, conquered *Garh Dhanyara, Bera* and *Peri.*

Sidh Sen, next Raja of Mandi, aided by Bhim Chand of Kahlur, seized the Dhar of Hatli and the fort of Birkot from Suket. The **Maryauli fort** was seized by Bhim Chand of Kahlur. The state Wazir, a Purohit named **Anup,** played treachery and assisted Raja of Mandi (Sidh Sen) against the Rana of *'Nachan'.* The Rana fought bravely for two years and at last was killed. His son Harnath fled to Kahlur. Some other forts including Nachan annexed to Mandi were—*Churyahan, Rayahan, Madangarh, Chaurahandi, Mastgarh, Nandgarh, Jaijios, Rajgarh and Shivpuri* also called Hat.

Garur Sen (A.D. 1721): Jit Sen died childless in 1721 A.D. The succession, therefore, descended to Garur Sen, grandson of Hari Singh, son of Rani of Bushahr, who had been banished from Suket in the reign of Shyam Sen. For a long time, people of Suket did not pay allegiance to him, and administration of the state remained in the hands of the 'Prithipur Mians', who had formed a kind of council. Seeing the feeling against him and fearing for his own life, Garur Sen retired to Kullu and later on moved to Kangra. At both the places, he was accorded high honour and reception. On his way to Kangra, he married the daughter of the Rana of *'Himli'.* Becoming aware of the support given to him by Kullu and Kangra, the people of Suket also bowed to his authority and paid allegiance.

Sundernagar was (*earlier known as Baned*) founded by Garur Sen and it became the capital of the state in the reign of Bikram Sen. Garur Sen's Rani got the 'Suraj Kund' temple constructed. By her, Garur Sen had two sons.

Bikram Sen and Bahadur Singh. *The purohits of the state had fallen into disfavour after the false accusation against the daughter of Raja Shyam Sen who had poisoned herself to death and appeared in the dreams of her father Shyam Sen, brother Ram Sen and now Raja Garur Sen and warned them against Purohits.* Garur Sen died in A.D. 1748.

Bhikam Sen (A.D. 1748): This period was the beginning of great political developments in the Punjab. In 1747, Ahamd Shah Durrani invaded the province and in 1752, it was ceded to him by his namesake, Ahmad Shah of Delhi. From 1765-70, many hill states declared their independence. For a short break in 1758, all the Eastern hill states and even Mughal Governor of Kangra were subject to *Adina Begh Khan.* He built ADINANAGAR near Pathankot and died in 1758. Meanwhile, the Sikhs had been emerging a strong force and *Jassa Singh Ramgarhia was the first to invade the Kangra Hills and probably Suket too.* However, the state annals do not make any reference to the Sikhs. Raja Bhikam Sen had two sons, 'Ranjit Sen' and 'Kishan Singh'. Ranjit Sen succeeded in 1762 after his father's death.

Ranjit Sen (A.D. 1762): To recover Nachan from Mandi, Ranjit Sen sent his younger brother Kishan Singh. After severe fighting, he captured Shivapuri or Hat, but his lead and powder ran short, and he sent messenger to Suket, who proved disloyal and unfaithful and instilled confusion into the Raja's mind against his younger brother. In the case of no supplies, Kishan Singh was forced to abandon the expedition. He then went to Sansar Chand of Kangra, who was his son-in-law and with his help, sacked and burnt Suket. In 1775 A.D., he retired to Jaganath. As earlier said, Jassa Singh Ramgarhia who made several hill states as subjects, retired from the hills in 1775, after being defeated on the plains, leaving authority in the hands of Jai Singh Kanheya, who held it till 1786.

Ranjit Sen had two Ranis, one from Sirmaur and the second from Guler. The Sirmauri Rani had a son named Bikram Sen and Guleria Rani's sons were **Amar Singh and Mian Singh,** both died young. The administration of Ranjit Sen was in the hands of an able and faithful minister, named 'Narpat'. Bikram Sen, the heir apparent and minister Narpat were not in good terms, and on one occasion, the younger prince in anger drew his sword and was about to strike when his father intervened. On this Bikram withdrew to Mahal-Morian (now in district Hamirpur) and resided there till his father's death in 1761 A.D. from poison, accidentally administered by a physician. On the other side, Ghamand Chand and Sansar Chand tried to liberate Kangra fort from Mughals, but in vain. Sansar Chand then asked for help from Jai Singh Kanheya, and after the death of the old Nawab Saif Ali Khan in 1783, the fortress fell into the hands of Sikhs with whom it remained till 1786. On Jai Singh's defeat in the plains, it was ceded to Sansar Chand and along with it he acquired the paramount power over hill states between the Satluj and the Ravi rivers, including Basholi and Chamba. Suket also became a tributary, but seems to have suffered less than other states, perhaps because of Sansar

Chand's relationship to Kishan Singh, Ranjit Sen's younger brother, whose daughter he had married.

Bikram Sen (A.D. 1791): His first act after his father's funeral obsequies was to imprison Wazir Narpat in the *'fort of Batwara'*, where he was soon afterwards executed. In 1792, Raja Sansar Chand invaded Mandi and made Raja Ishwari Sen, a minor, prisoner and kept him at Nadaun for twelve years. Sansar chand was helped in this venture by Kishan Singh. 'Pannu Wazir' was killed in a battle at Sikandar where Mandi had the help of Kahlur and Gurkhas, his brother was then appointed to the office of Wazir but was shot dead while out for hunting by Mian Bishan Singh, son of Kishan Singh to whom he had acted discourteously. Bikram Sen removed the capital to Baned *(now called Sundernagar).* Suket or Nagar, then came to be called **'Purana Nagar'.**

Meanwhile Gurkhas were emerging as a strong force. By 1805, Sansar Chand's arrogance had reached to such a point that the hill chiefs of Kangra state all joined against him and Raja of Bilaspur (Kahlur), sent and invitation to Amar Singh Thapa, the Gurkha Commander. Sansar Chand's forces were defeated in Mahal-Morian and the Gurkhas laid seize to Kangra fort. On reaching Nadaun, they liberated Ishwari Sen of Mandi. With the help of the Raja of Bilaspur and the Gurkhas, Ishwari Sen was restored the six forts including Hatli and Balh from Bikram Sen. *He was secretly carried off by some of his officials from the captivity of Gurkhas.* In 1808, the forts of Hatli and Birkot had been seized by Mandi. The Kangra fort remained under Gurkhas for four years from 1806 to 1809, but they were unable to capture it.

In 1809, Raja Sansar Chand in utter despair, called for help from Maharaja Ranjit Singh and Gurkhas were compelled to retire across the Satluj. The Kangra fort and the suzerainty over hill states then passed into the hands of the Sikhs to whom all the states including Suket became a tributary. Bikram Sen had two sons, named Ugar Sen and Jagat Singh, and one daughter married in Nurpur. The erection of Pali fort was one of the events of his reign. *William Moorcraft (1820 A.D.) was probably the first European to visit Suket, on his way to Kullu.* He had left a vivid account of the state's life, culture and geographical conditions. But he does not mention anything about the Raja and the capital city. Bikram Sen died in 1838 and was succeeded by his son Ugar Sen.

Ugar Sen (A.D. 1838): He was married four times, first in Kutlehr and by this Rani he had two sons, Shib Singh and Ram Singh and a daughter named Dei Sharda, who in 1853 was married to Raja Sri Singh of *Chamba.* His Jamwali Rani bore Rudra Sen (heir-apparent) and Patiala Rani, Mian Narain Singh. He also had three sons by concubines. In the early part of his reign, a revolt took place in Kahlur, in which Ugar Sen played the role of a good neighbour to bring peace and tranquility in the Kahlur state. In spite of that, both the states, i.e. Suket and Kahlur were not in good terms.

In 1839, a traveller 'Mr. Vigne' visited Suket on his way back from the inner mountains. He mentions very little in his travelogues about the Suket.

In 1840, Nau Nihal Singh, grandson of Ranjit Singh, under the command of General Ventura sent force to siege the Rajas of Suket, Mandi and Kullu, before the invasion of Central Tibet. Raja Ugar Sen gave in his submission and was treated kindly. The Raja of Mandi was allured to Sikh camp, made a prisoner and sent to Amritsar. The Raja of Kullu fled into the mountains. Soon after this trouble was over, a disagreement arose between Ugar Sen and heir-apparent Rudar Sen, then only 14 years of age. In consequence of which, the latter retired to Mandi. He was brought back from Mandi by Raja Ugar Sen with the good offices of Balbir Sen of that state. In the same year 1843, Rudra Sen was married to a daughter of the Katoch family and a little later Narendra Singh, son of Bishan Singh, was reconciled to Rudra Sen, resulting in another estrangement between Ugar Sen and Rudra Sen.

Narendra Singh had married his daughter to Maharaja Sher Singh of Lahore and thereby secured his support for himself and Rudra Sen'. Purohit Devi Datt, Gordhan Kayat, Mian Kesu, Thakur Das Khatri and Tana Gital all supported Rudra Sen for this reason. One Shib Datt had great influence over the Raja and his removal was the main object. But disclosure of some papers by Padha Narotam and Dhari spoiled the whole scheme and they were all treated with great harshness. Narotam was appointed Purohit instead. Rudra Sen, who had sought refuge after being liberated, afterwards reconciled to his father through Mr. G.C. Barnes and came back to Suket. These events took place in 1844-45. In 1845, the Sikh army invaded British territory by crossing the Satluj and Suket was called upon to furnish contingent. But Ugar Sen joined hands with Raja of Mandi, Balbir Sen immediately after the battle of Sobraon had tendered allegiance to the British government and both the chiefs on 21st February 1846 visited Mr. Erskine at Bilaspur. Ugar Sen Expelled the Sikhs from the state. *On 9th March 1846, a treaty was concluded between the British and the Sikhs. Under this treaty, Mandi and Suket came directly under the British control and were placed incharge of commissioner of Jalandhar. In October 1846, a Sanad was granted to Suket, defining rights and obligations of the Raja.*

In 1853, Rudra Sen contracted two marriages– one in 'Garhwal' and other in 'Kahlur'.

In 1857, family trouble again came to light, owing to an attempt to arrest Wazir Narottam, who wielded supreme influence with the Raja and Rudra Sen again left Suket. For one and a half years, he remained in Jalandhar and Lahore. In 1859, Rudra Sen returned to Mandi on the occasion of the marriage of Bijai Sen of *'Mandi'* to the daughter of the Raja of Datarpur. Ugar Sen, who was disturbed with these development, approached 'Colonel Lake', the Commissioner of Jalandhar, that if Rudra Sen did not agree to make peace, he should be directed to remove himself to a distance, so as not to cause trouble in the state. Accordingly Rudra Sen left his Ranis in Mandi and went to Patiala.

After some time, Kahluri Rani with son Arimardan Sen (born in 1863) joined him at Haripur in Patiala. Two years later, a daughter was born who

was afterwards married to the Raja of Sirmaur. In 1866, a second son named Dusht Nikanden Sen was born. The Garhwali Rani had died in Mandi Meanwhile, Narottam Purohit continued to hold the office of Wazir and he was also Wazir of the Narsingh temple. He also built the Durga temple.

It is said that Narottam Purohit made a law that widows should be sold and proceeds credited to the state and their property to the Narsinghji Temple. Narottam appointed one Laongu as his deputy and placed all the hill tracts under him. Soon afterwards, Raja appointed Laongu's brother 'Dhaungal' as Wazir and Narottam was dismissed from office. Dhaungal's administration was oppressive. There was strong discontentment against him amongst the people. Once when he was on tour to the hills, they seized him and kept him Prisoner for twelve days in 'Garh Chawasi'. Raja Ugar Sen learning about the misdeeds of Dhaungal Wazir, put him in jail for nine months with Rs. 200,000/- fine. Wazir Dhaungal had reintroduced the fines called *'dand'* from respectable people. Raja Ugar Sen was well versed in Sanskrit and was also acquainted with music and medicine. He built the temple of Shiva at *'Amla Bimala'*. In 1876, he had paralysis and died in the same year.

Rudra Sen (A.D. 1876): He was installed as Raja by 'Colonel Davies', Commissioner of Jalandhar, after the death of Raja Ugar Sen, his father. He was an oppressive ruler. Rudra Sen reappointed Dhaungal as Wazir and 'Ramditta Mal' to examine the state accounts. After occupying the throne, he returned to Haripur and brought his family back to Suket, but not before marrying the daughter of Jai Singh of 'Arki'. And enquiry was set up against the oppression of Rudra Sen. On the basis of the report prepared by enquiry committee, Rudra Sen was deposed in 1879 and after spending few years in Lahore and Jalandhar, he finally settled in Hoshiarpur, where he died in 1887.

Arimardan Sen (A.D. 1879): He was only 15 years of age at the time of installation. Mian Sib Singh, the brother, and Jagat Singh, the uncle of Raja Sen were appointed regents of the state, Sardar Hardyal Singh of Kangra was appointed Tehsildar and three years later became Superintendent. Arimardan Sen died at *'Dharamshala'* soon after his accession.

Dusht Nikandan Sen (A.D. 1879): Arimardan Sen was succeeded by his younger brother Dusht Nikandan Sen. Being minor, the administration remained in the hands of Superintendent Sardar Hardyal Singh till his retirement in 1884. Then 'Mr. Donald' was appointed Wazir till 1891. In 1888, the land assessment was reduced in the entire state. In march 1891, Mr. C.J. Hallifax, I.C.S. was appointed advisor to the Raja and remained till May 1893.

Raja Dusht Nikandan Sen took keen interest in the improvement of administration. A dispensary was opened at 'Baned', the capital, shortly after his accession, in 1893 a school at Bhojpur, a post office in 1900 and a telegraph office in 1906 were opened by him. The bridge over the Satluj at Jiuri was completed in 1889. Dusht Nikandan Sen was married in 1881 to a niece of Raja Dhian Singh of Arki. He had two sons named 'Bhim Sen'

(born in 1885) and 'Duthian Lachman Singh' (born in 1894). The Raja died in 1908 A.D.

Bhim Sen (A.D. 1908): Dusht Nikandan was succeeded by his elder son Bhim Sen. He became Raja of Suket 1908 to 1919 was born on 26th November 1885. He was married 1stly to Kumari Padmawati Devi, who died in May 1959, she was daughter of Kanwar Surat Singh of Sirmaur, married 2ndly to Rajkumari Radha Devi, daughter of Rana Raghubir Chand of Koti, she died in June 1939, married 3rdly to Kumari Tuleshwari Devi, daughter of Mian Kajan Singh of Mohanpur in Koti. He died on 13th October 1919. He was educated at the *Chiefs College*, Lahore and invested with full powers by 'Sir Louis Dane' K.C.S.I. (01.01.1918) Lt. Governor of the Punjab. Bhim Sen erected a fully equipped hospital at Baned, named the 'King Edward Hospital', built bungalows at Baned, Seri and Dehar and a motor road from Suket to Mandi. For his services to the British during the great war, he received from the King Emperor the distinction of Knighthood. In 1919, Bhim Sen died without leaving any issue.

Lakshman Sen: He was Raja of Suket from 1919 to 1948. Born on 14th August 1895, succeeded his brother Bhim Sen 13th October 1919, educated at Aitchison Chiefs' College, Lahore, married in 1925 to Rani Kalawati Devi, daughter of Kanwar Guman Singh of Koti, and his second wife was a Kumari of Mahlog, and had issue. He died on 30th July 1970 at Suket. He took great interest in public works and land revenue settlement. The 'Lakshman-Bhim Club', 'the Prince of Wales Orphan Home' and Chief Court Buildings' were constructed during his period.

Lalit Sen: Lalit Sen Bahadur was the 51st Raja of Suket 1970 to 1985. He was born on 21st April 1932 in Shimla, married on 21st February 1951, Rani Krishna Kumari, daughter of Rai-i-Rayan Maharawal Shri Sir Lakshman Singhji Bahadur of Dungarpur, and his second wife was Maharani Manhar Kanwarba Sahiba, and had issue. He died 18th October 1985 in Delhi. He had a son named Raja Hari Sen Bahadur and daughter Rajkumari Shailaja Devi, born on 13th November 1966.

On 1st November 1921, Suket was transferred from the political control of Punjab government to that of Government of India till 15th August 1947.

GENEALOGY OF SUKET

(1) Vir Sen (1211-1246)
(2) Dhir Sen (1246-1253)
(3) Vikram Sen (1253-1263)
(4) Dharti Sen
(5) Lakshman Sen
(6) Chander Sen
(7) Bijai Sen
(8) Sahu Sen (1000 A.D.)
(9) Rattan Sen (1020 A.D.)
(10) Bilas Sen
(11) Samudra Sen
(12) Hemant Sen
(13) Balwant Sen
(14) Semant Sen (1120 A.D.)
(15) Dilawar Sen
(16) Biladar Sen
(17) Ugar Sen
(18) Bir Sen (or Bikram Sen)

(19) Mantar Sen
(20) Madan Sen (1240 A.D.)
(21) Dilwar Sen
(22) Darir Sen
(23) Dhartari Sen
(24) Parbat Sen
(25) Kam Sen
(26) Parbat Sen
(27) Mahan Sen
(28) Haibat Sen (Hemant Sen)
(29) Amar Sen (1480 A.D.)
(30) Ajimardan Sen
(31) Parbat Sen (1500 A.D.)
(32) Kartar Sen (1520-1540 A.D.)
(33) Arjun Sen (1540-1560)
(34) Udai Sen (1560-1590)
(35) Dip Sen (1590-1620)
(36) Shyam Sen (1620-1650)
(37) Ram Sen (1650-1663)
(38) Jit Sen (1663-1721)
(39) Garur Sen (1721-1748)
(40) Bhikam Sen (1748-1762)
(41) Ranjit Sen (1762-1791)
(42) Bikram Sen (1791-1838)
(43) Ugar Sen (1838-1876)
(44) Rudra Sen (1876-1887)
(45) Arimardan Sen (1879-1879)
(46) Dusht Nikandan (1879-1908)
(47) Bhim Sen (1908-1919)
(48) Lakshman Sen (1919-1948)

ECONOMY

Mandi district is predominantly an agricultural tract and bulk of the people depend on agriculture for their livelihood. From the agriculture point of view, the district can be divided into three distinct regions, i.e. (i) Balh valley, Baldwara and Sandhol Valley in the foot hills, (ii) Nagwain, Gohar, Rewalsar area and the parts of Jogender Nagar and Karsog tehsils under mid hills and (iii) the area of Janjehli, Gadagosain, Chuhar valley, Seri, Kothai and Pangna is the high hills.

The soil in the district can be classified into brown hill and sub-mountain soil. The brown hill soil occurs in Chauntra, Drang, Mandi, Sadar, Rewalsar, Dhaampur, Gopalpur, Chachiyot and Sundernagar Development blocks, whereas sub-mountain soil predominantly occurs in Saraj and Karsog blocks. The main crops in the district are—maize, wheat, paddy and pulses. The *Improved Agricultural Development Programme* was started in Mandi on the *14th November 1962* in collaboration with the **'Federal Republic of Germany'**. The programme was spread over from 1962 to 74 and was adjudged as one of the best composite and integrated agricultural projects in the country.

It had two basic objectives, i.e. (i) to improve the existing agricultural conditions, and (ii) to change the direction of agricultural production in order to improve the production of cash crops more suited to the area. A Dairy and Agricultural Workshop was set up at **'Sundernagar'** and **'Bhangrotu'**. The agro-climatic conditions in Mandi district are most suitable of cultivating a variety for fruit. The apple orchards are located predominantly in KARSOG and CHACHIYOT tehsils, while plum and apricot orchards have come up in Mandi and Sundernagar. Many projects have been initiated with the assistance of Federal Republic of Germany in Mandi district. The plum varieties found

in the district are *'Sentaroza'* and *Merycozo'*. Walnuts are grown all over the district and commercial varieties of walnuts have found great favour. Citrus fruit like Kagzi Lemons, Kinnu/oranges are being produced in the down areas of Sundernagar, Mandi, Sarkaghat and Jogindernagar tehsils. Two canning-cum-fruit preservation plants at Panarsa and Jarol (Sundernagar) have been established. The apple processing plant at Jarol, which is a unit of HPMC, is proving a boon to the horticulturists. The bee keeping centres have assumed an added importance in the apple cultivation which are most essential to rear for *cross-pollination.*

Next to agriculture, livestock is the chief wealth of the people in the district. Every house invariably has a few cows or buffaloes, sheep, goats, pigs or ponies. The improvement of breed of livestock in the district is the main responsibility of Animal Husbandry Department. In this regard, there are 69 artificial insemination centres for cows and buffaloes in the district. Artificial insemination is being done by deep frosin technique by the superior *gonaplaz* of Jersy breed in cows and by Murrah breed in buffaloes.

In order to supply improved breed animals, two Jersy cattle breeding farms one at 'KAMAND' and the other at 'KARSOG' are functioning. For harnessing the full production and benefit of milch cattle, high quality nutritious fodder and grass are essential. Keeping in view this aspect, improved food like *Napier grass* has been introduced in the district. Legumes like barseen etc. have been introduced for supplying green fodder as well as barseen mixed with oats is sown. There are two feed and fodder development centres at 'Kamand' and 'Sinog' in the district. One sheep breeding farm is functioning at Nagwain where exotic Russian *Marino* breed are being kept. To meet the changing needs of nutritious diet of the people, under Indo-German Agriculture Project, main poultry farm was set up at ***Chauntra*** with four extension centres at Sundernagar, Padhar, Takoti and Mandi with a poultry farm attached to each.

The Sundernangar unit was raised to poultry farm during the subsequent years and now meets the requirements of the breeders of Bilaspur, Kullu and Mandi districts. While *Leghorn* hens are propagated in the district which are famous for their egg laying capacity. There is a small poultry feed processing plant at 'Bhangrotu' for distribution of poultry feed. To popularise the poultry, more and more farms are being setup by locals with the help of the state Government. This has also reduced the unemployment in the district. In the field of dairy development in collaboration with the Indo-German Programme, a dairy plant was set up at Chakkar (Mandi) fed by five chilling centres located at Bhambla, Sidhiani, Kumn, Koti and Katula. Training is imparted to educated youth with regard to the animal husbandry and dairy development at Kamand and Sundernagar. Dairy farming is promoted by the Government on a large scale to meet local and external requirements.

Mandi district is crisscrossed by the perennial rivers and streams. The erstwhile Mandi and Suket states were pioneer in regulating the *pisciculture.*

At present, two rivers, the Beas and the Satluj are extensively used for fish production. The MASHEER fish is found in the river Satluj near Dehar, while Barbustar (Mashir), Labeo diplostomus (Gid), Labeo dyochelous (Kuni) and Oreigus sin (Himalayan Barbel) for the main food fishery are found in both the rivers and their tributaries. A trout hatchery is maintained well stocked at 'Barot' on the river Uhl. This farm was set up during the states times. *Pandoh, Mandi, Kunkatar, Sandhol, Dehar, Barot, Pum Bridge, Kamand, Balichowki and Manglore* are famous for trout fishing. Pandoh reservoir and Sundernagar barrage are also found quite suitable for the propagation of trout fish.

The first hydroelectric power unit was setup in the Western Himalayas in the Mandi state at Jogindernagar in February 1926 and its first stage was completed in 1932.

The hydroelectric power project at Barot and Jogindernagar in Mandi district was designed and executed by a man who was himself, without a doubt, a powerhouse of competence.

The arms are on the side in a no-nonsense stance. The chin is downright stubborn. And the steel grey eyes gaze back at you with absolute and uncompromising determination. As you observe the portrait of this extraordinary man, you realize that steely determination is quite definitely what it must have taken Colonel Basil Condon Battye to complete Barot's hydroelectric power project within a short time span of six to eight years. a marvel of human ingenuity and quite paradoxically, engineering simplicity.

It was the late 1920s. Electricity was now urgently required for Lahore and parts of the Punjab. Colonel Battye, the Chief Engineer at the time, was assigned the task of doing so. His only brief: *To complete the task on a war footing.*

Colonel Battye was a man who loved taking on the impossible only as much as he loved the wild, rugged beauty of Barot. Given to death-defying motorcycle trips along dangerous mountain trails, he decided after some exploration, to harness the river Uhl, a tributary of the Beas meandering across Barot, tunnel it through the mountains and send it down to a powerhouse to be located at Jogindernagar. There was one rider he added to his own brief...that the natural beauty of the region would remain unblemished.

It all sounded quite simple enough. However, to first transport the gigantic turbines, alternators, exciters and other essential reinforced steel required for the project was itself a daunting task. To deal with the situation, the Colonel decided to build a railway track from Pathankot, where the material was deposited and then carry it all the way right into the site of the plant at Jogindernagar. Here, it was put together by the simple process of precision riveting.

Today, even after decades, the entire system remains in almost mint condition requiring only basic maintenance, thanks to flawless workmanship and material bought from L. De. Roll Iron Works Co., Berne Foundry

Switzerland and the British Thompson Houston Co. Ltd, Rugby, England.

The Colonel's old cottage at Shannan is located amidst a pastoral field scape; with goats and sheep freely crisscrossing the area and is now used as an officer's rest house.

Descend another two kilometers of forest land and you see Barot lying at your feet like a picturesque screen, saver. The bubbling river Uhl, two large reservoirs and the entire waterworks take nothing away except your breath.\

In 1932, at the stroke of sundown, Lahore came alive with electricity. Overjoyed with his team's achievement, a jubilant Colonel Battye decided to drive back the same night to his beloved Barot so he could share his success and celebrate it with his men. That was his last and final hurrah, as he lost his life in an accident *en route.* The spirit of daring and adventure with which he lived his 50 years, was also to be the cause of his death.

Mandi district is rich in forest, mineral and horticultural resources and has got great potentialities for the establishment of small scale and cottage industries. To create trained manpower for the industrial sector, the Polytechnic at Sundernagar provides full time diploma courses in civil, mechanical, electrical and automobile engineering etc. The *Industrial Training Institute,* Mandi provides training in respect of turner, fitter, electrician, draftsman, surveyor, carpenter, motor mechanic, tailoring, stenography, mechanical, refrigeration etc.

To impart technical education to young people; Jawahar Lal Nehru Government Technical College Sundernagar, and Indian Institute of Technology Kamand (Mandi) doing pioneering Job.

Mandi district is famous for its *salt mines* since time immemorial. The district has many other important minerals such as:

(a) Coal: Mines lenses are located at Mansai, Tanaren, Deri and Julvandan. But none of them is large enough to be exploited for local use.

(b) Dolomite: It is found associated with salt deposits at Maigol, Gumma and Darang.

(c) Iron ores: Deposits of magnesite and hematite occur as Bands in schists and quartzites of Chail series in Kolikohar ridge, North of Jogindernagar at Koharkhas and also at Thunag in *Charyan Dhar, Rayan Dhar Sangalwara* area. The concentration of ore is so low that it cannot be exploited economically.

(d) Limestone: Fairly large deposits of limestone occurs near Pongali, Dhanesri, Harabagh and Largi. Magnesium rich limestone occurs at Talwara and Baned. Limestone is raw material for cement besides it is also used in the production of lime and steel. It is called *marble* if it is in the crystal lime form.

(e) Rock Salt: The rock salt contains about 40-70 per cent sodium chloride and three per cent potassium chloride with 20 per cent insoluble. *Rock salt is the only economic mineral of Mandi district.* Reserves are found in 'Ghyar-ki-dhar' above the Mandi-Palampur road. The main salt

concentrations are the two plugs of 'Maigal' and 'Darang' in the South of Mandi town and in the North of Shilaswar Khad. Gumma is the later edition in the rock salt deposits. The mines have been taken over by the government of India and are under the control of Salt Commissioner.

Fairs and Festivals: The predominant size of Hindus are occupying the areas of Mandi district. Some of the important fairs celebrated in the district are:

(i) Shivratri Fair: The observance of the fair is marked on the Shivaratri day when the village gods are carried in palanquins or *rathas* (chariots by people) to Mandi to pay homage to Madho Rai and the Raja. Members of caste denominations such as Brahmin and Kshatriya carry their gods and goddesses by palanquins or on their back. However, some exceptions of carrying them in vehicles by some caste groups have been noted. Thereafter, the fair lasts for seven days.

It is an accepted practice that every deity that is brought to the festival (decorated with glittering embroidered drapery) visits Madho Rai temple first to pay obeisance to Lord Vishnu and then proceed to the palace in a colourful procession called the Shoba Yatra, known locally as *'Zareb,'* to honour the ruler (the regent of the Lord Mado Rai). (It is said that Madho Rai comes out of his temple only once a year on the Shivaratri day and leads the procession.). The ruler thereafter pay obeisance to Lord Shiva at the Bhootnath temple where the main festival of Shivaratri is held. The palanquins of the deities are swayed to the drum beats and folk music to indicate their happiness after visiting the temples of Vishnu and Shiva.

There is pecking order that is maintained in the sequence of worship by the deities invited to the fair, based on rank and status. The day after the Shivaratri, on the second day of the fair, a pageant of gods with folk bands, dancers and devotees (all dressed in their colourful attire) and with lot of fanfare, is held in *Paddal*, a large open ground at the confluence of the Beas and Suketi rivers. Some 200 deities arrive from shrines around Mandi town and are assigned places at the Paddal grounds as per the pecking order, where the devotees offer worship to all the deities. The pageant is held every day of the festival.

Mandi town, where the festival is held, was ruled by Raja Ajbar Sen who was considered the first great ruler of Mandi State in the sixteenth century, since he not only combined the hereditary regions but also added to it by conquering new areas. Apart from his palace, he built the temple of Bhootnath (temple for Shiva) at the centre of the Mandi town, which is one of the two focal temples of the festival. In the theocratic state that evolved during this period, worship of Shiva and related goddesses was dominant. However, the theocratic nature of the state received special emphasis when, during Raja Suraj Sen's reign, Vishnu worship also became integral to the State. Raja Suraj Sen (1664 to 1679), who did not have an heir, built the temple known as

"Madhav Rai temple", dedicated to a form of Lord Vishnu, as protector of Mandi. An elegant silver image of Radha and Krishna was made by his goldsmith Bhima, in the year 1705, which was named "Madho Rai" and deified, and ordained as the King of the State of Mandi thereafter. Since then the rulers served the state as servants of Madho Rai and custodians of the State. Suraj Sen's successors have also held the deity of the temple in great reverence. This god is represented with precedence over all other gods on various religious occasions.

However, the specific observance of this festival as a fair, starting with Shivaratri, is linked to its ruler Ishwari Sen. Ishawri Sen was held a prisoner for 12 years after he lost his kingdom in the war waged by Sansar Chand of Kangra, in 1792.

(ii) Kao fair (at Village Kao, started during the second World War, to pray to the goddess Kamesha to end the war).

(iii) Mahunag Fair (according to local legend, Mahunag is the incarnation of Raja Karna of the Mahabharata fame).

(iv) Mamail Fair (at Mamail near Karsog).

(v) Rewalsar Fair (celebrated by Buddhists from all over the country).

(vi) Nalwari Fair at Sundernagar, Bhangrotu and Barchhwar.

Bhootnath Temple: Bhootnath Temple, with an idol of a manifestation of god Shiva, an ancient temple dated to the 1520s, is synonymous with Mandi. It is in the heart of the town. The Nandi, Shiva's mount, faces the deity from the ornamented double-arched entrance. The festival of Shivaratri is the prime event at this temple; the temple is the focal point of the seven day festival. A legend is told of the building of Bhoothnath Temple. It is said that, in 1526, Raja Ajber Sen heard the story of a cow offering milk on her own volition to a particular stone in a forest in Mandi. Lord Shiva is said to have appeared in the Raja's dream and directed him to extricate the Shiva Linga that was buried at that site. Thereafter, the Raja found the Shiva Linga at the indicated location, which he deified in a temple that he erected in 1526, at the place it was found. He called it the "Bhootnath Temple" and started the observance of the Shivaratri festival at Mandi. Concurrent with this event, the Raja shifted his capital from Bhiuli to Mandi.

People: The original inhabitants of this area are Rajputs, Brahmins, Kanets and Khatris. The other sections of the people constitute of Gujjars (leading a nomadic life) and scheduled castes, such as Badhi or Nagalu, Chamar, Mochi, Ramdasi or Ramdasia Chanal, Daole-Daule, Dhaogiri or Dhuai, Dumme, Jogi, Kabirpanthi, Julaha, Keer, Koli, Lohar and Rehar.

Food Habits: The morning meal is called *'Nuhari'* or *'Kalwar'*. The *'Dupheri'* is eaten at mid-day. It consists of rice or chapatis made of wheat or maize or millets. In the evening, some well to do families take tea. In the night, they have a supper which is called *'Biali'* at which rice or wheat/maize

'chapatis' are taken with *dal* or vegetables. Meat is eaten by men and women of all classes, but widows generally abstain from it. Jhol (Rice-Chhach) is quite common. In some areas, people are fond of drinking.

Dress: Generally clothing for men consists of shirt and pyjama. The turban has now been replaced by a type of Gandhi cap. In winter, people use woollen clothes prepared from home spun wool which is locally woven. The women wear a long shirt and *'pyjama'* or *'Suthan'*. The head is covered with coloured *'dupatta'*. In the Karsog tehsil, *'Dhatu'* is quite popular. Married women use coloured *'dupatta'*, while widows generally use white *'dupatta'*.

DECADEL VARIATIONS IN POPULATION SINCE 1901-2011

Year	Persons	Males	Females	Decadel variation	Percentage variation decadel	Females per 1000 of males
1	2	3	4	5	6	7
1901	228,721	119,860	108,861	—	—	908
1911	236,038	122,692	113.346	+7,317	+3.20	924
1921	239,376	123,833	115,543	+3,338	+1.41	933

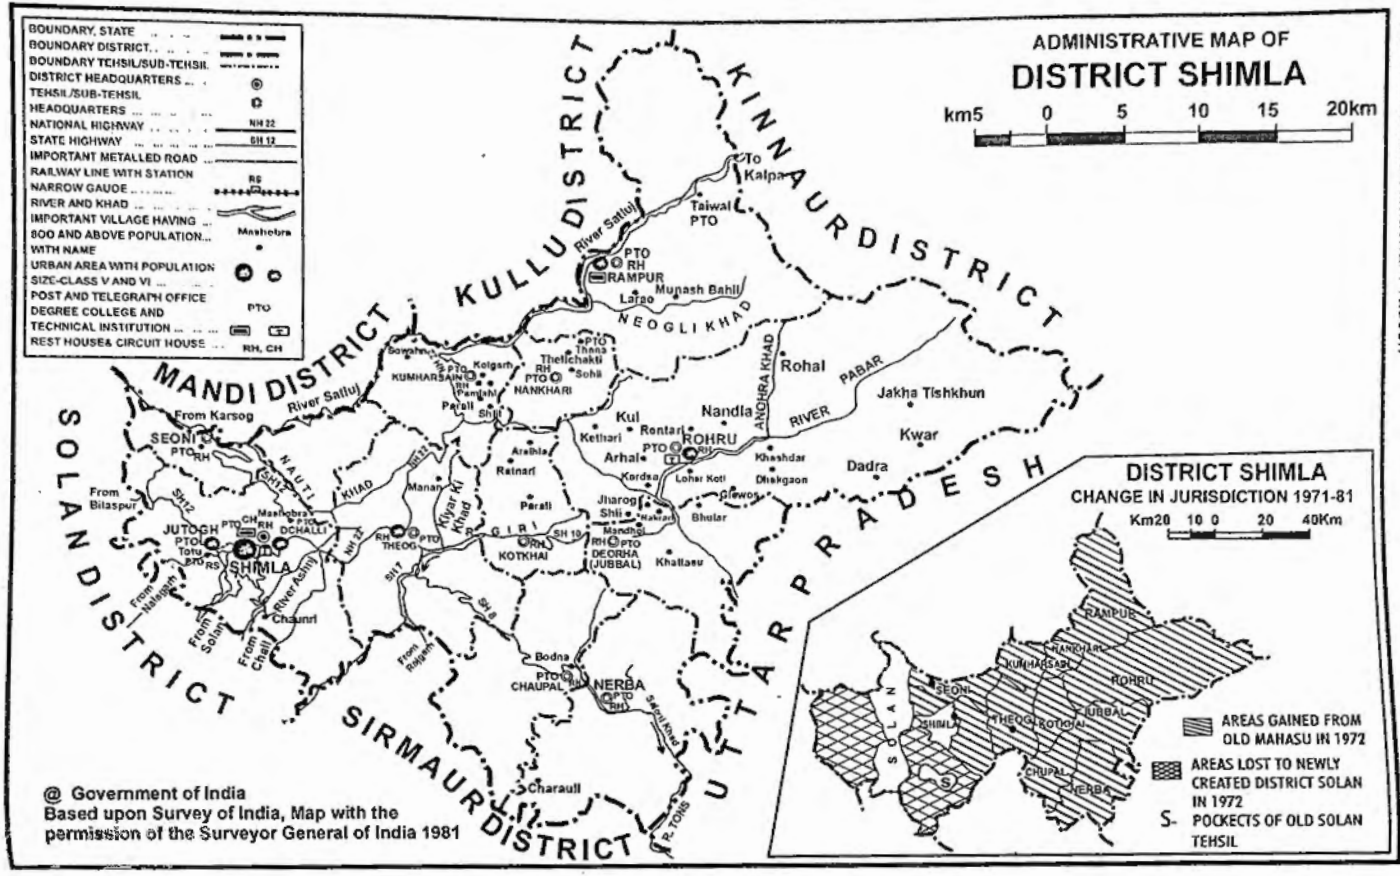
SHIMLA

(HQ, SHIMLA, ALTITUDE 2,206 METERS)

Languages spoken : KEONTHALI, KOCHI, BRARI, MAHASUI, HINDI, PUNJABI ETC.



Shimla district lies between the longitudes 77° 0' and 78° 19' East and latitudes 30° 45' and 31° 44' North. It is bounded by Mandi and Kullu in the North, Kinnaur in the East, the State of Uttrakhand and district Sirmaur in the South and by Solan district in the South West. The elevation of the district ranges from 300 to 6,000 meters. Shimla district has some famous peaks, such as *'Jakhoo'* (or Jakhu) in Shimla town. *'Siah'* near Chail, *'Chooradhar'* in tehsil Chaupal, *'Chansal'* in Rohru tehsil, *'Hattoo'* in Kumharsain tehsil and *'Shali'* in Sunni tehsil. The topography of the district is rugged and tough. The prevalence of interlocking spurs, narrow and steep sided valleys with high peaks and dense forests of *'Kail'* and *'Deodar'* in the whole district adds to the youthfulness of its topography. Due to topographical variations, the district has varying climates according to the elevation of the area. In Shimla district, December, January and February are severe cold months, when the winter season is at its peak. Snow may fall as early as the beginning of October, but usually the areas have snowfall from later part of December and continue till mid of the March. Bulk of the precipitation is received generally during the rainy season. The average rainfall in the district is 1,028 mm. The maximum temperature is 25° to 30° in June-July.

RIVER SYSTEM

Shimla district has the 'Satluj', 'Pabbar' and 'Giri' flowing through it. The district has quite a good area attached to these rivers. The river Satluj, after flowing through Kinnaur, enters Shimla district at 'Badhal' in Rampur tehsil and takes course by touching Kumharsain and Sunni tehsil. From its entry in Rampur tehsil to its exit in Sunni tehsil, the river forms boundary line of Shimla district with Nirmand and Anni tehsils of Kullu district and Karsog tehsil of Mandi district. The main streams falling in the Satluj in Shimla district are *'Nogli', 'Machhada', 'Bhaira', 'Kingol', 'Khekhar', 'Chamda', 'Savera', 'Bagh'* etc. Most of these streams falling in the Satluj are perennial. There are a number of suspension bridges over Satluj at Rampur, Luri, Sunni and Tattapani.

The Giri or Giri Ganga originates from the hills north of Choordhar called *'Kupar'*. The main tributary of the Giri is *'Ashni'* which rises near Mahasu in the Shimla range and receive considerable volume of water from the Eastern face of the hill, upon which the Shimla town stands, joins the Giri at a point where the river turns South-East.

The Pabbar river rises from the base of *'Chandranahan'* peak in between

@ Government of India
Based upon Survey of India, Map with the permission of the Surveyor General of India 1981

Sangla tehsil of Kinnaur district and Rohru tehsil of Shimla district. It passes through tehsil Rohru, Jubbal and merges with the river Tons at *'Tiuni'* in Uttrakhand. The main drainages feeding this river are, *Shikhari, Andhra, Pejore, Hatkoti* etc. All of these streams are perennial.

The study made by geologists revealed that the present area of the Shimla district, some 1,200-1,500 million years ago, was a part of sea called *'Tethys'*. About 275 million years ago, with complete glaciation, the now nonexistent sea was covered with floating icebergs. Some 25-30 million years ago, the Himalayan mountain ranges started rising and with the uplift, a long narrow depression was formed in front of it, where again the sediments were deposited. That period has a very congenial climate for life. The extinct life of that period was found in fossil remains. About two to three million years ago, these rocks were again lifted up by similar forces as at the time of the Himalayan uplift and changed into low mountain, now called the Shivalik range.

Shimla district derives its name from Shimla town which was once a small village inhabited by the Charcoal manufacturers. The climatic conditions prevailing here attracted the attention of the British and they gradually developed this village as a large town. It became the formal seat of the summer capital of the government of India in 1864, when Lord Lawrence came to the town along with the members of Supreme Council and all the public offices. The Punjab Government went to Shimla in 1871 but from 1876 onward, it remained their summer capital till 1947 and after the partition of Punjab, it served as the headquarters of Punjab Government till its offices moved to Chandigarh.

HISTORY

The present district of Shimla includes the following princely states in its geographical panorama. Some of these states were of little of consequence and nothing much is available about their rule, relation with neighbouring states and administration. Brief accounts of the erstwhile states have been given below:

BALSAN

Balsan state was situated between 30° 58' and 31° 7' North and 77° 24' and 77° 35' East with an area of 51 square miles (nearly 83 sq. kilometres). It lies about 50 kilometre to the East to Shimla, across the Giri, a tributary of Yamuna. The area is fertile and beautifully wooded with fine forests of Deodar.

Balsan was an offshoot of ancient Sirmaur and trace its origin from the old Rathore family of Sirmaur. Balsan was founded by *'Alak Singh'* before 12th century A. D. The state was acquired by conquest (for which date is not available) and previous to the Gurkha's invasion, of 1805, was feudatory of Sirmaur. At the time of Gurkha invasion, it was however, subordinate to Kumharsain and ruled by Jog Raj Singh. He assisted the British forces. His principal exploit was the capture of the *'Nagan fort'* together with a hundred Gurkhas, whom he had handed over to General Ochterlony. At the close of the war he was therefore granted an independent *sanad* on 15th September, 1815. The obligation to supply 30 *begaris* was later commuted to an annual cash payment of Rs. 1080/-. During 1857 revolt Jog Raj Singh again behaved with loyalty and rendered invaluable help to the Europeans residing in the nearby areas by giving them safe shelter. In acknowledgment of these services he was given in public Darbar a *Khilat* in 1858

and the hereditary title of **Rana** was conferred (NO. LIV) on the Chief of Balsan. Rana Jog Raj Singh died at the age of 87 in 1867. Rana Jog Raj Singh was succeeded by his son **Bhup Singh** II who died in 1889 and was succeeded by his grandson **Bir Singh.** Rana Bir Singh died in 1918 without male issue and was succeeded by his brother **Rana Attar Singh.** He died on 19th May, 1936 and was succeeded by his son **Ram Bahadur Singh.**

RAN BAHADUR SINGH: He was Rana of Balsan from 1936 to 1943 (abdicated). He was born in 1905, married 1stly on 1st July 1925, Rani Parvati Kumari, daughter of Rana Jai Singh of Kotkhai, and his first wife, Rani Kamla Devi, married 2ndly, Rani Vidya Kumari, daughter of Rana Jai Singh of Kotkhai, and his second wife, Rani Lakshmi Kumari, and had four sons and eight daughters. He died in 1965. Rana Attar Singh exercised full power of administration limited only by the usual control over death sentences on the part of the superintendent of the Hill States. Balsan ranked *eleventh in order of precedence* amongst the Shimla Hill States. The Chief was not entitled to pay a formal visit to the Viceroy, but was allowed the privilege of an informal interview once during the viceroy's terms of office. Balsan state was liable to the operation of the *'nazarana'* rules upto 1911, when on the occasion of coronation Darbar all such levies were abolished. The last Rana of Balsan state was Tikka Vidya Bhushan Singh.

VIDYA BHUSHAN SINGH: He was Rana of Balsan from 1943 to 1948, born on 10th June 1938, succeeded to the throne on the abdication of his father in 1943. He was married to Rajkumari Girija Kumari [Rajmata Sahiba of Balsan], born 31st August 1931, daughter of Raja Duleep Singhji of Jhabua, educated at St. Raphael's School, Indore; and had, two sons. Vidya Bhushan Singh died on 17th July 1979.

On 15th April, 1948 Balsan state was merged with Himachal Pradesh. At present it is a part of **'Theog'** tehsil of Shimla district.

GENEALOGY OF BALSAN

(1) Alak Singh,	(2) Kalak Singh	(3) Ram Singh,	(4) Kaiser Singh
(5) Bhag Singh,	(6) Jai Dev Singh	(7) Bhup Singh, (I)	(8) Natha Singh
(9) Jog Singh,	(10) Jagad Singh	(11) Deep Singh,	(12) Man Singh
(13) Teg Singh,	(14) Jai Singh	(15) Dharam Singh	
(16) Jog Raj Singh (Died 1867)		(17) Sahib Singh (Died in 1884)	
(18) Bhup Singh (II) (Died 1889)		(19) Vir Singh (Died in 1918)	
(20) Attar Singh (1920-36)		(21) Ram Bahadur Singh (1936-1947)	

(22) Tikka Vidya Bhushan Singh (born on 10th June, 1938)

BHAJJI

One of Shimla Hill States, lying between 30° 7' and 31°17' North and 77° 23' East with an area of 96 square miles (nearly 160sq. km.). Bhajji was located on the banks of the river *Nauti Khad* and the Satluj and culminated in the Shali peak, measuring about 3, 208 mt. above mean sea level. It is located nearly 40 km. away from Shimla. Bhajji had its boundaries with *Suket* in the North, *'Sangri'* and *'Kumharsain'* in the East, *'Keonthal', 'Madhan', 'Koti', 'Patiala'* and *'Dhami'* in the South and *'Baghal'* in the West.

Bhajji was founded by the descendants of the Kutlehar state's (in Kangra) Rajput heir, who was second son of the 24th descendant of Kutlehr, named Jaspal. The founder of Bhajji was *Cheru.* After the foundation of Bhajji he changed his name

from Cheru to 'Udaipal'. The twenty ninth descendant of Cheru named 'Sohan Pal' founded the Sunni village and transferred his capital from *'Mul Bhajji'* to *'Sunni'*.

Bhajji was overrun by Gurkhas between 1803-1815. When in 1815 the Gurkhas were expelled by the British government, the Rana of Bhajji, Rudar Pal' was restored and confirmed in possession of the state by a *sanad* under the usual feudal service in time of war. Rana Rudar Pal abdicated in 1842, about fourteen years before his death and made over the state to his son Ran Bahadur Singh and himself became a recluse at Haridwar.

Rana Ran Bahadur Singh: He was born in 1824 and was the Rana of Bhajji from 1824 to 1875, married and had three sons named - Rana Durga Singh (born in 1842), Mian Parmatam Singh (born in 1844) and Mian Bijai Singh (born in 1850). Ran Bahadur was formally installed in April 1844 and *'Khilat'* of the value of Rs. 1,100/- was granted to the Rana in 1855, by which the condition requiring the chief to maintain 40 *begaris* at the constant service of the British Government, was commuted to an annual cash payment of Rs. 1,440/-. Ran Bahadur Singh died in 1875 and was succeeded by his son Durga Singh.

Rana Durga Singh: Born in 1842, he was Rana of Bhajji from 1875 to 1913. He succeeded to the gaddi on 18th November 1875, married to the ranis from Mandi, Suket, Kangra and Mahli and had three sons and three daughters. They were-Tikka Inder Singh, who died young, Kanwar Prajapal (born in 1898 and died young), Rana Birpal (born in 1906), two daughter married to the Raja Mahendra Chand of Nadaun and third Rajkumari married to Rana Vidyadhar Singh Kumharsain. He died in 1913. Durga Singh was succeeded by his infant son Inder Singh (Veer Pal Singh).

Rana Birpal: Born on 19th April 1891 and was rana of Bhajji from 1918-1940, succeeded to the throne on 9th May 1913 as an infant, educated of Aitchison Chief's College Lahore. He married on 25th November 1925 to Rani Sarat Kumari Devi (died in February 1968) daughter of Raja Pitamber Dev of Aul. Rana Birpal died on 17 November 1961. He had two sons namely Rana Ram Chandrapal (born in 1928) and Rajkumar Shyam Chandra Pal Singh (born on 27 May 1931 in Sunni), married to Kanwarani Shyama Devi, daughter of Raja Brij Dev Narain Singh of Daltanganj (Chandpur) and has two daughters and a son. During his minority the state was administered by a manager. The last Rana of the State was Ram Chand Singh Pal.

Rana Ram Chandra Pal Singh: Born on 27th January 1928 at Cuttack, Orissa, he was Rana of Bhajji from 1940 to 2012. Was granted full ruling powers on 17th April 1947, educated at Queen's Mary College Lahore and later at Aitchison Chief's College Lahore. He joined Indian Administrative Services and retired in 1982. He married in November 1951 to Rani Nirmala Devi, daughter of Colonel Maharaja Mahendra Sir Yadvendra Singh Ju Deo Bahadur of Panna. Ram Chandra Pal died in 2012. He had a son named Tikka Moh Chandrapal Singh, born on 7th September 1953 at Cuttack, who was educated at Mayo College Ajmer and Delhi University, Married on 3rd November 2000 in Shimla to Tikkarani Naintara Kumari. He died in 2011 before the death of his father Rana Ram Chandra Pal Singh.

In 1948 Bhajji was made a tehsil of Himachal Pradesh. At present Bhajji is a part of Sunni tehsil of Shimla district. Opium, famous for its purity, was article of export from this state. Its chief town Sunni was famous for its sulphur springs,

which have medicinal value and for a suspension bridge across the river. The state maintained a local force of 32 men with 2 serviceable guns. Bhajji ranked *ninth in order of precedence* among Shimla Hill States. The *Rana* was not entitled to pay a formal visit to the viceroy, but was allowed the privilege of an informal interview once during His Excellency's term of office.

Bhajji state was liable to the operation of the *Nazarana* rules upto 1911, when on occasion of the coronation Darbar, all such levies were, abolished. The village of Sunni on the bank of Satluj is said to have been founded by 'Sohan Pal' the 29th in succession from Charu.

(47) Ram Chand Singh Pal (1940)		

KOTI

Koti state was located on the East of Shimla. Its total area was nearly 70 square kilometre. Koti had its boundaries on the North-East Bhajji and in the West were located Patiala, Shimla and Keonthal state. Koti was founded by the descendants of Kutlehar state of Kangra. The Rajas of Bhajji and Koti were real brothers. Both these states were founded simultaneously. The twenty fourth ruler of Kutlehar had five sons. Four among them— 'Cheru', 'Chand', 'Shogu' and 'Bhogu' along with their sister crossed over the Satluj river and settled at 'Mool Bhajji'. Shogu and Bhogu along with their sister moved towards *Fagu*. Bhogu married a Kanet maiden and founded the village 'Fagyana', while Shogu and his sister turned towards spiritual world. Shogu is worshipped as a *'Devta'* in Fagu area, while his sister as 'Devi' in Keonthal and Tharoch. Local residents held them in high esteem.

The state had 24 rulers, since Thakur Chand. For long period *'Mool Koti'* remained the capital of the state. Tara Chand Thakur changed its capital from *'Koti'* to *'Kayar Koti'*, which continued so till 1947.

There is not much historical records about the Koti state, except certain folk songs and folk tales, which can't be treated fully reliable. In 1809 Gurkhas attacked Koti and put it under their control. Gurkhas used to collect Rs. 2000/- from Koti

state annually as tax. In 1815, when Gurkhas were defeated in Anglo-Gurkha war, Koti once again became tributary of the Keonthal state.

During the revolt of 1857, the Raja of Koti, Hari Chand helped British national who had run away from Shimla and seeking protection. As a reward of his services, British granted him the title of *'Rana'*. Rana Raghuvir Chand rented a part of his territory for Rs. 2825/- annually, to be used for *'Shimla Water Supply'* scheme.

In 1948 when Himachal Pradesh came into existence *'Koti'* became part of Kasumpatti tehsil and merged with Mahasu district. At present (2014) Koti is part of Shimla (Rural) tehsil.

GENEALOGY OF KOTI

The *'Vamshavali'* founded of Koti state is incomplete. Some of the names are -

(1) Chand (founder of Koti)
(2) Gopi Chand
(3) Padam Chand
(4) Pratam Chand (born in 1790) Eighth from Gopi Chand
(5) Hari Chand (1838-73)
(6) Bishan Chand (1973-91)
(7) Raghuvir Chand (born 1865)
(8) Tikka Vashisht Singh (1898)
(9) Debesh Singh (born in 1921)
(10) Tara Singh

In the History of modern Himachal for the first time any heir apparent of a former princely state Mool Koti, Tikka Anirudh Singh was formally anointed on 29th November 2010.

BUSHAHR

Bushahr was eighty four miles long, sixty two miles wide on the Eastern side, twelve miles wide on the Western, lying between 31° 6' and 32° 5' North and 77° 32' and 79° 4' East with an area of 3,820 square miles (near about 6200 sq. km.) including that of Saire. The greater part of Bushahr was lying within the drainage area of the Satluj, which runs from North-West to South-West and has a total length within the state nearly 160 km. Two immense mountain chains bound the Satluj drainage area on the North and South, both rising to snowclad peaks. The country is formed of a great mass of mountainous spurs with very precipitous sides jugging out in every direction from the main ranges, between which there are narrow ravines or small rivers with sheer banks.

After Kashmir, it was one of the oldest of the hill states in the Western Himalayas. According to one legend, the Bushahr dynasty was founded by 'Pradhuman' the son of Lord Krishan. In order to marry the daughter of Banasur, the local chief of Shonitpur (Sarahan), Pradhuman is said to have come to that place and after the death of Banasur in an encounter with him, he became the chief of Bushahr and Kinnaur regions, since Banasur had no male heir.

Another legend describes Pradhuman the younger of the two brothers who had come from 'Kanchanaapuri' in the South, on pilgrimage to *'Bhimakali'* temple at Sarahan. Since the throne of the state was vacant at that time due to the death of the last Raja without heir, Pradhuman who happened to enter the palace gate first at a specified time as had been ordained by the goddess Bhimakali, was declared by the people as their ruler. The elder brother was appointed as the priest of the royal family with a Jagir at 'Village *Rawain'*, near *'Sarahan'*.

According to C.F. Kennedy, Bushahr state was founded by Danbar Singh, an immigrant Rajput from Deccan in 1412 A.D. The seat of the Government, it is

said, was at *'Kamru'* and from that place, the founder and his descendants conquered the lower hills. The earlier historical mention of Bushahr is found in the chronicle of Kullu, when it was overrun by Meru Varman of Chamba towards the end of the 7th century A.D. Shittal Pal, the son of Datesh Pal of Kullu, it is said, had fled to Bushahr and took refuge. Jareshwar Pal, the 6th generation from Shittal Pal, recovered the state Kullu from the state of Chamba with the help of Bushahr state around 780-800 A.D., when Chamba was invaded by the Kiras. Capital of Bushahr state was shifted from 'Kamru to Sarahan' sometimes in the beginning of the 10th century A.D. Raja Chattar Singh, who was 110th from Pradhuman, is said to have conquered the entire area of South of Sarahan including Kinnaur. Seemingly, there were three paramount powers in the Shimla Hill States about this period. These were *'Bushahr', 'Bilaspur'* and *'Sirmaur'*. Raja Chattar Singh, apart from being supreme in his own time, has been counted as a virtuous ruler also. 'Raja Kehri Singh' son of Raja Chattar Singh is described as the highest skilled warrior of the time. He was an *'ajanabahu'*, like the divine Ram Chandra, (i.e. he would touch his knees with his hands when standing upright).

Once the Mughal emperor Aurangzeb held a great durbar of the hill chieftains, which Raja Kehri Singh also attended. When he appeared at Delhi, it was observed with surprise and wonder, that wherever he went, he was sheltered from the sun rays by a small cloud shading him from above in the shape of a *'Chhatra'* (umbrella). When the Mughal emperor asked about this phenomenon, the Raja answered that it was a favour of the gods and goddesses of his country, who wished to protect a hill man from unaccustomed heat of the plains. Emperor, greatly pleased and conferred the *'title of Chhatarpati'* upon Raja Kehri Singh. Raja Kehri Singh is said to have reduced to tribute the Rajas of *Sirmaur, Garhwal, Mandi* and *Suket* and to have subdued the Thakurs of Keonthal, Kotkhai, Kumharsain, Balsan, Theog, Darkoti etc.

Raja Kehri Singh was a contemporary of 'Grajayadoke', the ruler of Tibet. During this time, the Raja of Ladakh annexed a part of Tibetan territory. A Tibetan Commander, 'Guldenchhen' started preparation to take back the territory. Kehri Singh learnt about it and concluded a treaty with Tibet. Raja Kehri Singh had also defeated Tibetan Commander Guldenchhen in a battle in the later half of the 17th century. In the end of the battle, a treaty was signed. The terms of the treaty were such.

"Till the black crow does not turn white, till Mansarover does not go dry, till whole of the snow from above the Kailash does not melt, the Kailash will remain the boundary line between Kinnaur and Tibet".

The Tibetan-Ladakhi-Mughal war took place in 1681-83 A.D. Kehri Singh sided with Tibet, in this war against Ladakh. At the time of this war, there was an alliance and a brief general agreement about friendly relations and an exchange of envoys between Raja Kehri Singh of Bushahr and the Government of the VI Dalai Lama. According to the language of treaty, the Kailash would remain the boundary line of Bushahr with Tibet; Tibet and Bushahr would remain friends and the traders from both sides would enjoy all facilities without payment of any tax. The tax free trade continued between the Kinnauras and Tibetans till the international border was sealed in 1962. He also received *'Hangrang valley'* from Tibet as a Jagir.

The army of Kinnaur under the command of Chhadas, emerged victorious in the battle which ensued. Kehri Singh was followed by Raja Vijay Singh and Udai

Singh about whom nothing much is known. Raja Ram Singh, who followed Udai Singh, made *'Rampur'* his capital. In his time, Kullu Raja Bidhi Singh invaded Bushahr and annexed the Kothis of 'Dhawal', 'Kot Kandi' and 'Balramgarh' in outer Saraj. Raja Bidhi Singh of Kullu died in 1688 and succeeded by Man Singh, who ruled from 1688 to 1719 and captured a *'taluka'* of outer Saraj which to-date forms part of Kullu. Evidently, the Kullu rulers were powerful and were able to subjugate the Rajas of Bushahr.

It was thus during the reign of Kehri Singh that Bushahr for ever gave away outer Saraj Kullu state. Raja Ram Singh was succeeded by Raja Rudra Singh. His period was perhaps a normal one, without any mentionable event. He was followed by Raja Ugar Singh who is said to have taken by the force of arms the *'pargana of Suhel'*, which he handed over as a gift to the Raja of Kumharsain, to have maintained at the same time his suzerainty over that principality, as well as over Keonthal, Kotkhai and Theog. There had always been a long standing hostility between the houses of Sirmaur and Bushahr till Raja Ugar Singh married the daughter of Sirmaur house when a friendly understanding took place. Raja Ugar Singh had two Ranis, one from Sirmaur and other was a relative of the Thakur of Dhami, from whom he had a son, Mahinder Singh and a daughter.

Raja Ugar Singh died in 1811 and succeeded by his eight year old son, 'Mahinder Singh'. During the minority of Raja Mahinder Singh, the state was administered by the Rani, his mother and the hereditary wazirs. Bushahr had the disadvantage of having a weak army. The numerical strength of the army was estimated to be 3,000 strong men, out of which 1,000 were armed with matchlocks. This distracted and disorganized army was too easy to be run over by any compact body of soldiers.

Taking advantage of the minority of the Raja and weak army, Gurkhas invaded the country. The minor Raja, who could not withstand the invasion, fled away along with his mother to Kinnaur. The Gurkhas looted the treasuries and completely destroyed the archives and the records of the state. An attempt was also made by the Gurkhas to reach the state treasure of Kamru, where the young Raja had taken refuge. There the Gurkha force was surprised by the Kinnaura guerilla force at *'Sholtu bridge'* and severely mauled in the night attack.

From 1803 to 1815, most part of the erstwhile Bushahr state, except Kinnaur, was held by Gurkhas. After the British declaration of war against the Gurkhas at the end of 1814, the hill people got the encouragement and joined in an attempt to drive out the Gurkhas. Wazir 'Tikka Ram' and 'Badri Dass' provided a good leadership to the Kinnaura army. A decisive battle was fought as Sholtu bridge near *Chargaon village*. To hold the march of the Gurkhas, people destroyed the *Wangtu* bridge on the Satluj and this sealed the fate of the Gurkhas. After the discomfiture of the Gurkhas, the Raja, his mother and the Rani returned to Sarahan in 1815. The British government granted a *Sanad* dated 6th November to Raja Mahinder Singh, restoring to him all his former territories *'except Rawin and Kotgarh'*, which were kept as British possession and later transferred to Keonthal in exchange for Shimla. The state thus became yet another British protectorate. Raja Mahinder Singh died at the age of 47 in 1850 A.D. and was succeeded by his son Shamsher Singh, a minor.

In the state, next to the Raja were three Kanait hereditary wazir families, named Pawari, Kohal and Shua. The Pawaries were originally from Kullu, the Kohals

came from Garhwal seven generations ago and the Shua wazirs were the natives of the state. In the Pawari family of Kinnaur, the best known names are **Manohar Dass** and **Ran Bahadur Singh**. Ran Bahadur Singh was at one time a very influential man and was held in great esteem in Kinnaur. He claimed independence of *'Dodra Kawar'* which was turned down by **Tikka Ragunath Singh**. As a matter of fact, there was a revolt by the locals in Dodra Kawar in favour of wazir Ran Bahadur Singh and against the Bushahr state. He defied the Raja and withstood all types of pressure. In 1850, **Raja Shamsher Singh** succeeded as a minor to the gaddi. The British government then made an arrangement of three Wazirs (ministers) of equal rank, having a number of subordinates.

The state was first administered by **'Mansukh Das'**, as Regent and then by **'Shyam Lal'**, Tehsildar of Nurpur, as Manager under the agent for the hill states. This arrangement was made to reduce the powers of the Raja. The 1857 uprising came as a great opportunity to the Raja to show his displeasure and resentment. He stopped paying tribute and treated officials passing through his territory with discourtesy. Lord William Hay, the Deputy Commissioner of Shimla-cum-Agent of the Hill States, wanted to punish the Bushahr ruler, but Sir John Lawrence, the then Chief Commissioner of the Punjab, did not consider this idea praiseworthy. Thus Raja's behaviour during the war period was overlooked and he went unpunished.

In 1859, **Fateh Singh**, an illegitimate brother of Shamsher Singh, instigated revolt against the revenue payment in cash as introduced by **'Munshi Ram Lal'** in 1854, after seeking the approval of the Raja. The method followed for action appeared to be in malcontents. The farmers decided to leave their fields uncultivated, till their grievances were redressed. **Mr. G. Barnes**, the Superintendent, Shimla Hill States arrived at Bushahr to settle the dispute. He restored the old system of payment in kind.

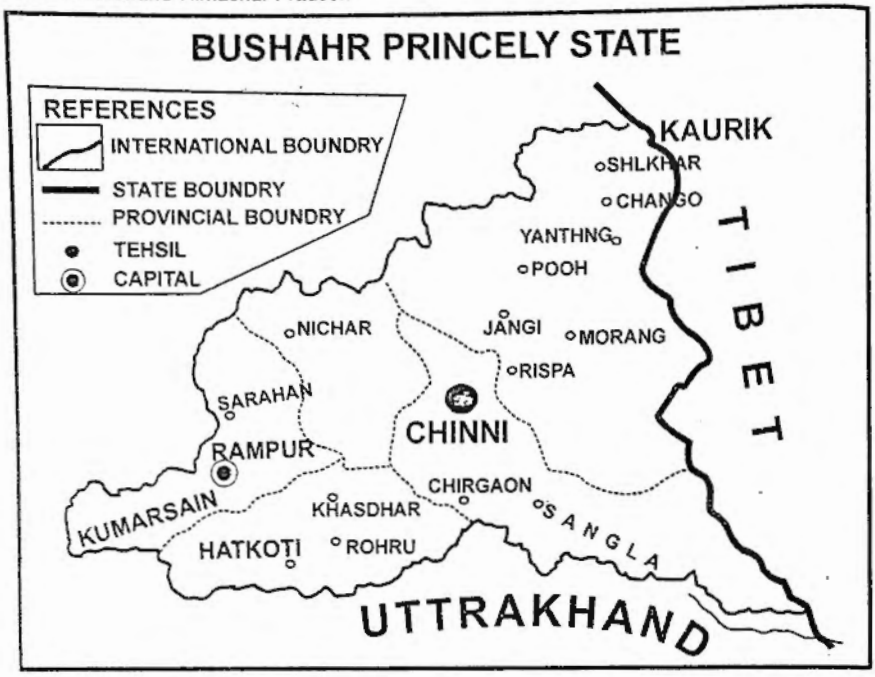
He also enhanced the powers of the three Wazirs to show little regards to the dignity of the Raja. Since then, the Raja for many years showed a preference for easy living to the cares of state management and the administration was practically left in the hands of the hereditary Wazirs with anything but good results. In the year 1887, Raja Shamsher Singh was forced to abdicate the throne in favour of his only legitimate son **Tikka Ragunath Singh.** He administered the state with some degree of success until his death in 1898.

There is a folk song which describes the escape of Tikka Ragunath Singh from Bushahr to Sirmaur in 1883, owing to his dislike of the proposed matrimonial alliance with Mandi, which he was induced to accept afterwards. He got excellent land settlement for the first time in the region in 1893-94. Wazir Ran Bahadur Singh was his trusted adviser. Tikka Ragunath Singh was survived by an infant son who died eleven months after the death of his father. After his death, Shamsher Singh, who was still alive, made an attempt to regain the administration, but the British intervened and instead made, **Rai Sahib Mangat Ram**, formerly manager of the Kumharsain state, as the Chief Wazir, with full powers of a ruler.

Raja Shamsher Singh, who was then seventy years old, feared the extinction of his lineage. The Raja, therefore, adopted **'Surender Shah'** the younger brother of the Garhwal ruler as his son, because Raja Shamsher Singh's only surviving son from a concubine, **'Padam Singh'**, was considered illegitimate. The British first recognised Surender Shah, but later on cancelled his adoption and also expelled

him from the state in consequence of this complicity in an attempt to murder a forest officer, Mr. Gibson. In the autumn of 1898-99, the Superintendent of Shimla Hill States, visited the Bushahr State, but Raja Shamsher Singh refused to meet him, for which he was fined Rs. 1,000/- as a punishment for showing disrespect to the paramount power.

Wazir Ran Bahadur Singh, who was in revolt against Raja Tikka Ragunath Singh, was arrested and released after latter's death. He made another attempt in 1906 to constitute *'Dodra Kawar'* an independent principality. The people of the area were also with him. But at the instance of the Superintendent of Hill State, he was again arrested in 1906 and lodged in Shimla jail for two months, where he died later on.



Padam Singh: Padam Singh was Raja of Bushahr from 1914 to 1947. He was born in 1873 and succeeded to the throne on 5th August 1914, installed on 30th November 1917, C.I.E. [June 1931], married 9 wives (4 from Kotkhai, one from Mandi, one from Suket, married (a), a daughter of Rai Mian Hira Singh, Rai of Sangri, married 8thly, Rani Jwale Dei, daughter of Col. Maharaja Sir Jai Chand of Lambagraon, who died on 22nd July 1949, and married 9thly, Rani Shanta Devi [later Rajmata of Bushahr], daughter of Thakur Bir Singh of Dhadi, and had issue.

In 1914, the British agreed to recognize Padam Singh as legitimate heir to Raja Shamsher Singh as he was a natural son of the late Raja. The Raja of Bilaspur performed the *'raj tilak ceremony'* placing the tilak mark on Raja Padam Singh's forehead. Other ruling chiefs who attended the ceremony were the Rana of Kumharsain and the Raja of Sangri. The Thakur of Khaneti and the Thakur of Delath, the two chiefs who were feudatory to Bushahr, also attended and the Raja of Jubbal was represented by his brother Kanwar Isri Singh. In 1864 the Raja of Bushahr leased his forest to the British Government for a period of fifty years. By a supplementary agreement executed in 1871, he also leased his rights to extract timber and other forest products. The terms of these leases were in 1877 embodied in a single agreement which besides securing to the Raja an annual payment of Rs. 10,000 in consideration of the rights conceded, made more definite provision for the conservancy of the forests granted. This agreement of 1877 was terminated in 1927; and in 1929 a fresh agreement was made with effect from the 1st November 1928 to continue in force for twenty five years. Under the new Agreement more definite provisions for the conservancy of the forests were made and the annual payment to the Raja was raised to 1,00,000 per annum.

Under the terms of the *Sanad* the Bushahri Raja was required to join the British Army with his armed retainers and hill porters when called upon to do so, and to construct roads within his territory. The annual tribute of Rs. 15,000/- imposed by the *Sanad* was reduced in 1847 to Rs. 3945 as compensation for the abolition of transit duties. The state maintained force of 75 Infantry and Police. He was still Raja of Bushahr holding the reins of the government in 1947, when India became independent.

The Bushahr was the largest state among Shimla Hill States; but the people were poor, the population sparse, the revenue was small and the country generally backward in every sense. On Bushahr's relations with the neighbouring principalities J.C. French has made an interesting observation:

"It is to be regretted that the archives and records of the State, as well as the Raja's family, were entirely destroyed by the Gurkhas. Thus nothing certain related to the origin of either came under our observation, or resulted from our enquiries;

but there in no doubt that the Raja is descended from and ancient an noble Rajput family; it is said that it is originated from Chittore".

"There always was an enmity between the houses of Bushahr and Kullu which frequently sent parties across the Satluj to the left bank and seized on different tracts and states tributary to Bushahr, building forts for the purpose of maintaining them; and even when, they coalesced against their common enemy the Gurkhas, their natural jealousy could not be suppressed, the soldiers of Kullu unwillingly yielding to Bushahr the forts taken by the combined troops from the Gurkhas and garrisoned by them. It is also said that none of the families of rank on the south side of the Satluj will intermarry with those of Kullu and Sirmaur, likewise, there were continual feuds and disputes till the late Raja married daughter of that house when a friendly understanding took place. Before the Gurkha invasion, a similar vexatious warfare subsisted between Garhwal and Bushahr, which was only terminated by the issue of that invasion and the destruction of the former State".

The art of Bushahr shows a variety of influences, ranging from the Chinese to Garhwal and Kangra. Kullu style also seems to have invaded Bushahr art. This Kullu style is derivative from Kahlur and, as M.S. Randhawa opines, if indigenous to Bushahr it may have reached from Bilaspur direct. J.C. French describes the frescoes in the Shish Mahal which was built some 40 years before his visit (1931), which covered the whole of the walls and were mostly life-size figures of Rama, Sita and Krishna in a late Kangra valley style. Above them were painted some sporting scenes with savage vigour. "The contrast of subject in these Paintings illustrates Krishna, Rama and Sita; above are blood sports."

"Near the Shish Mahal is a Hindu temple with a fresco painted in Tibetan style.

The subject is a treaty between Bushahr State and Tibet in the days of the Mughal Emperors. It is interesting to find it side by side with the Shish Mahal frescoes. Neither shows the slightest sign of any influence from the other. In Rampur Bushahr the art of the Himalayas and the art of the land beyond the Himalayas, of Tibet and the Far East, meet with a crash."

"Few miles beyond Rampur is *'Sarahan'*, the ancient capital of the Bushahr State. There is an old palace there, with sloping roofs and overhanging caves. To any one unacquainted with Hill architecture it would be seen to show Chinese influence. But of course there is nothing of a sort there. It is in the style found in the Kangra valley and in the Chamba palace, except that it is in wood instead of brick or plastered mud".

A struggle similar to the struggles of many native Indian states was launched in Rampur Bushahr too for its merger with Indian Union. In March 1948, a public meeting was organized at Sarahan. Master Annu Lal, a freedom fighter, presided over the meeting. In this meeting, speakers highlighted the grievances of the people and injustice perpetuated by state officials against the innocent masses. The police arrested some leaders including *Master Annu Lal.* After arrest when police had hardly reached 'Gaura', the agitated masses reached the scene and freed the leaders. On hearing of this incident, D.S.P. Rampur and Magistrate arrived at Gaura with armed constabulary, but people faced it with great courage. The people arrested all the state officials and then reached Rampur. Here the people's rule was declared.

Baldev Singh, the then Diwan of the state, who was at Shimla, moved towards Rampur along with a section of armed police. *A fierce battle took place at 'Rampur', in which many people were killed and their dead bodies were tied with stones and thrown in the river Satluj.* This act of the police agitated the people more. Sensing a serious trouble, the ruler of Rampur, Raja Padam Singh had no option but to accept the integration of the state with the Indian Union.

VIR BHADRA SINGH: Raja of Rampur-Bushahr since 1947. Born 23rd June 1934 in Sarahan District, Shimla. Married 1stly, on 28th May 1954, Rajkumari Rattan Kumari, who was born on 16th August 1934 in Jubbal. She died on 27th September 1983 in Shimla, daughter of HH Raja Rana Digvijay Chand of Jubbal, and his wife, Rani Hemant Kanwar. Vir Bhadra Singh Married 2ndly on 28th November 1985 at Junga, Rani Pratibha Kumari, born 16th June 1956, daughter of Raja Hitendra Sen of Keonthal, and his first wife, Rani Shanta Devi. Raja Vir Bhadra Singh has four daughters by the first wife, and one son and one daughter by the second wife. The daughters are- Rajkumari Abhilasha Kumari, born on 23rd February 1956, Rajkumari Jyotsna Kumari, born on 27th February 1958, Rajkumari Anuradha Kumari, born on 14th December 1960 (died unmarried 4th May 1999). Rajkumari Meenakshi Kumari, born on 27th June 1966, Rajkumari Aprajita Kumari, born on 6th December 1986 (from 2nd wife). The son is Vikramaditya Singh born on 17th October 1989 at Shimla. Vir Bhadra Singh is member of Congress party since the beginning and became chief minister of the state 6th time in 2012.

Ultimately in April 1948, Rampur Bushahr became part and parcel of the centrally administered Chief Commissioner's province of Himachal Pradesh. Raja Padam Singh has left two sons, Raja Vir Bhadra Singh and Raj Kumar Devinder Singh. Raja Vir Bhadra became the Chief Minister of the state later on. There are two genealogical tables, one kept by the ruling family at Rampur and another at Kamru. The former does not add 'Singh' as suffix to Pradhuman.

(126) Rudar Singh	(127) Ugar Singh	(128) Mahinder Singh
(129) Shamsher Singh	(130) Padam Singh	(131) Vir Bhadra Singh

DARKOTI

Darkoti was a small state, located in 31° 7' North and 77° 38' East with an area of 8 square miles. The founder ruler of the state was Durga Singh, who is said to be a scion of the house of Jaipur (Marwar). The history of Darkoti state is not available, except some references here and there.

On the expulsion of Gurkha's, Rana Sateesh Ram was confirmed in the chiefship. He died in 1854 and the subsequent succession to the *gaddi* (throne) had been followed, the eldest son in each case succeeding his father: Paras Ram Singh (1854);

Ram Singh (1856); Ram Saran Singh (1883); Rana Ragunath Singh (1918); and Shiv Singh.

The state forests were managed by government, the net profit being paid to the Rana. It was excused tribute on account of its small size. It maintained no force or police. In the settlement made in 1839 the village of *Sosum,* belonging to Darkoti was erroneously included in Kotkhai, district of Shimla and was restored to Darkoti in 1843. Darkoti Sate was liable to the operation of the Nazarana rule 1911, when on the occasion of the coronation Darbar, all such levies were abolished. On 15th April 1948, when Himachal Pradesh came into existence, Darkoti was merged with Mahasu district.

GENEOLOGY OF DARKOTI

(1) Durga Singh	(2) Proti Ram	(3) Girdh Ram	(4) Nari Ram
(5) Megh Singh	(6) Hari Singh	(7) Rattan Singh	(8) Gopi Chand

(25) Ragunath Singh (1918)		(26) Shiv Singh	

THAROCH

Tharoch state was situated between 30° 55' and 31° 3' North and 77° 38' and 77° 51' East with an area of 75 square miles (nearly 124 sq. km.). It was lying on the bank of the Tons, a tributary of the Yamuna beyond Jubbal and close to Dehradun border. The Thakur owned some splendid forests of deodar. Tharoch was founded by a Sisodia Rajpur *'Kishan Singh'*, sometime around 15th century. Tharoch formerly formed a part of Sirmaur state and was bestowed as a gift on Kishan Singh. After Kishan Singh thirty six Thakurs ruled over this state. Kishan Singh was the descendant of *Deo Karan*, who was a prince of Udaipur. Nothing much is available about the history of Tharoch of its initial years.

When Gurkhas attacked Tharoch, its ruler was Thakur Karam Singh who was however a nominal ruler and on account of his great age and infirmities his brother Jhobu held the executive administration of the country. In 1819, British authorities bestowed a *sanad* on Jhobu, conferring the state on him and his heirs after the death of his brother.

Karam Singh died in 1819 and state was granted to Jhobu, the obligation to supply, eight *begaris* imposed by the *sanad* being later commuted to an annual cash payment of Rs. 288/-.

In 1838 Karam Singh's son *Ranjit Singh* set up his claims and formed a strong party in his favour. Jhobu, who was incompetent and not liked by the people, was compelled to abdicate in 1838 in favour of his son *Shyam Singh.* But the agreement did not continue for long, owing to intrigues set on foot by Jhobu and Ranjit Singh, who now united their interests. Shyam Singh was therefore required to abdicate in A.D. 1841 and the state was then incorporated with Jubbal state. The claim of Ranjit Singh was finally acknowledged and the state was restored to him in 1843, on his agreeing to abstain from anti-state and anti people activities practised by Jhobu

and Shyam Singh, both of whom were jointly sanctioned a pension of Rs. 500/- per annum by the British Government.

Ranjeet Singh occupied throne on 6th October 1843. A *sanad* was granted to him conferring the state on him and his posterity in perpetuity, subject to usual condition of military service. The Tharoch chief formerly enjoyed the title of *Rana,* but this ceased when the state was incorporated with Jubbal in 1841, being kept with that state under British control, it was restored in 1843. The rulers were then styled *Thakurs.* Thakur Ranjeet died in 1877, was succeeded by his grandson Kedar Singh, who was then a boy and the state was placed under the management of a council. He received full powers in 1883. He married two ladies of the Bushahr family.

Kedar Singh died in 1903 and was succeeded by his eldest son Surat Singh, who was invested with powers on attaining majority in 1908. The state was liable to the operation of the Nazarana rules upto 1911, when on the occasion of the coronation Darbar, all such levies were abolished. In 1929 the permanent title of Rana was conferred on Thakur Surat Singh. The state maintained a force of 6 armed police.

On 15th April 1948, Tharoch was merged with Chaupal and became part of Himachal Pradesh.

GENEOLOGY OF THAROCH

(1) Kishan Singh	(2) Vishan Singh	(3) Heera Singh (I)
(4) Veer Singh	(5) Rai Singh	(6) Ram Singh
(7) Badri Singh	(8) Kesar Singh	(9) Peekhu Singh

(35) Ranjeet singh (1838-77)	(36) Kedar Singh (1877-1903)	
(37) Surat singh (1903-48)		

DHADI

Dhadi was an offshoot of Tharoch. It was founded by a brave Sisodia Rajput, who settled near the confluence of *'Tons'* and *'Pabbar'* and founded Dhadi on the right side of the river Pabbar. Formerly, a dependency of Tharoch and then Bushahr, Dhadi was annexed to Rawingarh at the time of Gurkha supremacy. After the expulsion of Gurkhas, there is no reference to Dhadi as a separate entity. In 1891, British decided to separate Dhadi and Rawingarh as independent from each other. But later on in 1896 both, Rawingarh and Dhadi were made feudatory to Jubbal state. The history of Dhadi is not available in cohesive form. On 15th April 1948, when Himachal Pradesh was formed Dhadi became part of Jubbal tehsil of Mahasu district.

We have only few names of Dhadi Thakurs:

(1) Thakur Kehar Singh (2) Badri Singh

(3) Narain Singh (4) Veer Singh (Died in 1907)

(5) Dharam Singh (1907-48)

KUMHARSAIN

Kumharsain state was lying between 31° 6' and 31° 20' North and 77° 22' and 77° 35' East with an area of 90 square miles (nearly 150 sq. km.). The territory lies on the left bank of the Satluj, immediately below Kotgarh and North of Narkanda. Kumharsain Village, the capital of the state lies 40 miles East of Shimla on the Hindustan Tibet Road (NH). Narkanda the famous resort lies in this state. On the North of Kumharsain lies the Satluj, on the South Ghund and Balsan states and Kotkhai area, on the East lies Bushahr, Khaneti and Kotgarh and on the West lies the states of Shangri, Bhajji and Keonthal.

It is said that *'Kumharsain', 'Khaneti', 'Delath', 'Karangla' and Kotkhai'* had a common origin. Kumharsain was founded by one Kirat Chand sometime in the 11th century. Before him territory was ruled by Koteshwar Devta. Kirat Chand (Singh) along with his four brothers settled at Karnangla. He had come from Gaya, because of the fear of Mahmud Ghazani. Some says that first of all he settled at Kumharsain. The early history of Kumharsain is incoherent and largely depending upon hearsays.

Ajmer Singh was one of the bravest ruler of Kumharsain. He had occupied the fort of Shari and Shangri. Shangri at that time was under the authority of Kullu State. Kullu ruler Raja Man Singh launched attack on Kumharsain, but the ruler of the state Ajmer Singh defeated him first at *'Karangla'* and then *Nagi* and forced Man Singh to flee across the Satluj. At the time of Gurkha invasion, Kumharsain was a tributary of Bushahr and was itself the overlord of *'Balsan', 'Bharauli'* and *'Madhan'*. During the subsequent occupation it became independent of Bushahr but it also lost its own tributaries which were made independent by General Ochterlony after Anglo - Gurkha was in 1815 A.D.

On the arrival of Gurkhas, Rana Kehar Singh of Kumharsain took refuge in Kullu and returned only in 1815 after the expulsion of Gurkhas. General Ochterlony returned Rana Kehar Singh with his state Kumharsain but refused to recognise his rights over Balsan, Bharauli and Madhan. Kumharsain was also declared independent from Bushahr state. In 1816 the British government issued him a *sanad* prescribing among other things the maintenance of 40 *begaris* at the permanent service of the government. This condition was later commuted to an annual cash payment of Rs.1440/-. Kehar Singh died in 1839 without male issue and the state then lapsed to the government. In consideration, however of the attachment of Kehar Singh to British interests during Nepalese war, it was decided that the rule of his house should be continued. and Pritam Singh a distant collateral, was appointed to the *gaddi* in 1840.

Rana Pritam Singh: He ruled the state from 1840-1858. At the time of 1857, rana helped the British. He had two daughters and a son. They were-Rana Bhawani Singh and of the two daughters whose name are unknown, one of them married to Rana Ram Saran Singh of Kotkhai and other one married to Raja Samsher Singh of Bushahr. Rana Pritam Singh died in 1858 and succeeded by his son Bhawani Singh. The sanad granted to Pritam Singh was identical with that granted to Kehar

Singh; but on Pritam Singh's succession the annual tribute of Rs.1,440/- was raised to Rs. 2,000/-. Pritam Singh behaved loyally towards the British government in the first Sikh war, crossing the Satluj at the head of three hundred matchlock men he laid successful siege to the Kullu fort of Srigarh. Pritam Singh died in 1858 and was succeeded by his son **Bhawani Singh.**

Rana Bhawani Singh: He succeeded his father and occupied the throne from 1858 to 1874. He had two daughter and two sons, namely -Rana Hira Singh (born in 1851), Kanwar Inder Singh (born in 1872, married to Kanwarani Janki Devi of Delath), two daughters, whose name was not known both married to Raja Amar Chand Bahadur of Bilaspur. Rana Bhawani Singh died in 1874. Then his son Hira Singh succeeded, but owing to his mental incapacity, the state was administered by a Council of Manager during the forty years of his chiefship.

Rana Hira Singh: Born in 1857, succeeded on 12th November 1874 as 56th Rana of Kumharsain, after the death of his father Rana Bhawani Singh. Since he was of unsound mind the state during his tenure was controlled by the council of Regency from 1874 to 1896. He had two sons namely Tikka Bedar Singh who died very young and Rana Viidyadhar Singh, who ultimately succeeded to the gaddi; Rana Hira Singh died on 24th August 1914, was succeeded by his son, **Rana Vidyadhar Singh.**

Rana Vidyadhar Singh: He succeeded on 24th August 1914 and occupied the throne from 1914-1945. Was born in 1895, educated of Aitchison's College Lahore, married 1stly a daughter of Rana Durga Singh of Bhajji, secondly Rani Pratiba Devi , daughter of Raja Dhyan Singh of Baghal and thirdly a rani from Basantpur. He had a son and a daughter, namely-Rana Sumeshwar Singh (born in 1930) and Kumari Shashi Rajkumari (married to Rana Samsher Jung Bahadur of Nepal) Rana Vidyadhar Singh died in 1945. He received the powers of a Manager in 1917 and full powers in 1920. The Rana was not entitled to pay a formal visit to the viceroy, but was allowed the privilege of an informal interview during the viceroy's term of office. The state was liable to the operation of the *Nazarana* rules upto 1911, when on the occasion of the coronation Darbar, all such levies were abolished. In 1927 land settlement was re- introduced in the Kumharsain state.

Rana Sumeshwar Singh: Born in 1930, rana Sumeshwar Singh ascended the throne in 1945 and continued to the head of Kumharsain royal family till 1996. He married to Rani Ishwari Rajya Lakshmi Devi, daughter of General Shri Sur Samsher Jung Bahadur Rana of Nepal. He has two daughters namely-Rajkumari Kumari Pratima Kumari and Rajkumari Rajeshwari Kumari. Rana Samsher Singh died in 1996.

Rana Surender Singh: In 1996, when Rana Sumeshwar Singh died, the only male member alive in the family was Rana Surender Singh, son of Kanwar Inder Singh, so he was installed ceremonial rana of the Kumharsain State. He married to Rani Sita Devi, daughter Kanwar Shyam Singh of Sangri and has two sons namely. Tikka Kamlender Singh and Kanwar Vimalendra Singh.

On 15th April 1948, Kumharsain was merged with the then Mahasu district and now is the part of Shimla district. At present Kumharsain is the tehsil of Shimla district.

(57) Vidyadhar Singh (1914-48)

KHANETI

Khaneti was founded by the son of Kirat Singh named **Sabir Chand**. In the establishment of this state his brother Jai Singh also assisted him. Both Sabir Chand and Jai Singh ruled over *'Khaneti'*, *'Kotkhai'* and *'Kotgarh'*. **Duni Chand** and **Ahimal Singh**, six generation rulers from Sabir Chand had confrontation on the question of chiefship and finally Duni Chand became Thakur of Khaneti and Ahimal Singh of Kotgarh. In the 15th century **Thakur Tara Chand** of Khaneti defeated Garhwal state. But later on Kullu defeated Khaneti very badly. Consequently Tara Chand left Khaneti and settled at *'Debari'*. This made state headless and adjoining rulers started annexing its areas, which reduced its size considerably.

After the expulsion of Gurkhas Khaneti became feudatory of Bushahr state. During the rule of Lal Thakur in 1890, Khaneti was declared independent on certain condition.

Thakur Among Chand a Hindu Rajput, related to the Rana of Kumharsain was chief of the state in the beginning of the 20th century. He was educated at Aitchinson college.

GENEOLOGY OF KHANETI

We received the name of only the following rulers of Khaneti:

(1) Sabir Chand
(2) Duni Chand (after five generations)
(3) Tara Chand
(4) Bir Chand (1550 A.D.)
(5) Pratap Chand
(6) Rasal Chand (during Gurkhas invasion) (7)
Nain Chand (died in 1858)
(8) Saran Chand (1858-88)
(9) Lal Chand (1888 - 99)
(10) Amog Chand (1899)
(11) Krishan Chand.

On 15th April 1948 Khaneti was merged with Himachal Pradesh

DELATH

Delath state was founded by Prithi Singh, who was said to be a brother of Kirat Chand, the founder of Kumharsain. The area of the state was four square miles (nearly 6.5 sq. km.), divided into three parganas. Kumharsain, Khaneti and Delath were all feudatories of Bushahr state. Delath used to give Rs. 150/- as tribute to Bushahr and Rs. 30/- to the wazir of the Bushahr state. Like other hill states, Delath also remained under the control of Gurkhas from 1810 to 1815. In 1815 the state came under the control of British, who in 1816 handed over its control to Bushahr. The last rana of the Delath was Pratap Singh.

On 15th, April, 1948, when Himachal Pradesh was formed Delath was merged with Bushahr and became part of Mahasu district of Himachal Pradesh. At present it is a part of Rampur tehsil of Shimla district.

GENEOLOGY OF DELATH

DHAMI

Dhami was one of the pettiest of Shimla Hill States lying between 31° 7' and 31° 13' North and 77° 3' and 77° 11' East, sixteen miles west of Shimla (25 km.) with an area of 26 square miles (45 square km.). It was surrounded by Bhajji in the North. Patiala in South-East and Baghal in the West. The capital of the state was *'Halog'*.

Among the hill states *Dhami was the only state founded by the descendants of Prithvi Raj Chauhan.* It was founded by Govind Pal. The ancestors of the founder were said to have been driven out by Shah-bu-ddin Gauri from Delhi to Rajpura in Ambala district. From Rajpura they came to Dhami and created a state for

themselves. At that time this territory was occupied by *Mavanas.* Probably in the thirteenth century, Govind Pal defeated these local *Mavanas* and founded the Dhami state. In the beginning the rulers of Dhami used to use suffix *'Pal'* with their name, but 58th ruler was first to use *'Singh suffix'.* In its initial years for nearly 400 years Dhami was a feudatory of Bilaspur.

Dalel Singh was rana of Dhami from 1778 to 1803. Was married and had a son named Pritam Singh. Rana Dalel Singh died in 1803 and was succeeded by his son. Pritam Singh occupied throne in 1803 and continued till his death in 1813. He had seven sons and a daughter. They were- Rana Goverdhan Singh, Kanwar Singh, Bishan Singh (died in 1864), Kanwar Gyan Singh (died in 1837), Kanwar Zalim Singh (died in 1886), Kanwar Kapoor Singh (born in 1859), Kanwar Praduman Singh and Kumari Padmawati (married to Kanwar Mangal Singh of Koti). In 1805, when Gurkhas invaded hill states, Dhami also came under their control. From 1805 to 1815 Dhami remained with Gurkhas.

Rana Goverdhan Singh- He succeeded his father rana Pritam Singh in 1813 and continued till 1867,. He had two sons named Rana Fateh Singh and Kanwar Narender Singh . During Anglo-Gurkha war the Raja of Dhami Goverdhan Singh helped British. On the expulsion of Gurkhas Rana Goverdhan Singh was of the age of twenty. He was granted an independent *Sanad.* The obligation to supply 40 *begaris,* imposed by this *sanad* was later commuted to an annual cash payment of Rs. 720/ -, which in 1858 was reduced to Rs. 360/- for the life of Goverdhan Singh in consideration of his loyal behaviour during the 1857 revolt. Goverdhan Singh died in 1867 and was succeeded by his son Fateh Singh.

Rana Fateh Singh: Fateh Singh was born in 1853 or 1855, succeeded his father Rana Goverdhan Singh in 1867 and continued till 1894. He was conferred to succession on 26th January 1870. He had two son and two daughters. They were- Rana Hira Singh (born in 1878), Karnwar Jwala Singh (born in 1884) Kumari Amba Devi (married Raja Baldev Singh of Poonch) and the second daughter whose name could not be traced also married to her brother-in-law. Rana Fateh Singh died in 1894. In 1888 the tribute payable by the state was again reduced to Rs. 360/- for his life time. He was succeeded by his son ***Heera Singh.***

Rana Hira Singh: Born in 1878, succeeded his father rana Fateh Singh as rana of Dhami in 1894 and continued till 1920. In 1913 he was conferred C.I.E. He had three sons and a daughter, namely Rana Dalip Singh Bahadur, Kanwar Ratan Singh (had two wives, Kanwarani Bhagwati Devi from Jubbal and Kanwarani Sudha Kumari from Orchha). Bikram Singh (married Kanwarani Sheela Kumari of Jubbal), Rana Hira Singh died in January 1920. He also, in 1901, obtained a remission of half the tribute of the state. Heera Singh was succeeded by his son ***Rana Dalip Singh.***

Rana Dalip Singh Bahadur: Born on 5th November 1908, he was educated at Bishop Cotton School Shimla and Aitchison Chief's College Lahore. He continued to be Rana of Dhami till 1948 and owner of Dhami ancestral Jagir till his death on 8th May 1987. It was during his tenure that Praja Mandal movement was on its peak and Dhami firing tragedy took place. He married to Rajkumari Tara Devi daughter of Rana Surat Singh of Tharoch. He had three son and two daughters namely -Rajkumari Meena Devi (born on 29th May 1926, married to Tikka Yashdan Singh of Mandi in 1959), Tikka Shamsher Singh (born on 28 November 1928 and died unmarried in 1977), Raj Kumar Pratap Singh (he succeeded as Rana Pratap Singh). Raj Kumari Indu Kumari (born in 1935, married in 1978 to Mr. Suresh

Chand Karol), Raj Kumari Pawan Kumari (born in 1947, married to Sanjeev Mohinder Singh of Harnoli in Punjab). During whose minority the state was administered by a *council*. Rana Dalip Singh imposed complete prohibition in his state in 1930. This was probably the only instance in pre- independent India when a feudatory or princely state had imposed complete ban only Liquor in the Himalayan belt. Rana Dalip Singh died on 8th May 1987.

Rana Pratap Singh: Born 1933, married in 1972 and became Tikka of Dhami after the death of his elder brother Tikka Samsher Singh in 1977, married to Kumari Hemlata, daughter of Thakur Dayal Singh from Una district. They have a son named Tikka Jagdeep Singh born on 17 October 1974 and a daughter Raj Kumari Hireshwari born on 12 September 1973. Rana Pratap Singh is the current owner of Dhami Jagir and the Palace at Halog in Dhami.

As in the case of other tiny states, the Rana of Dhami was not entitled to pay a formal visit to the Vicerory but was allowed the privilege of an informal interview once during the Viceroy's terms of office.

On 15th April 1948, Dhami became part of Himachal Pradesh, under Kasumpati tehsil, district Mahasu. At present it is a part of Shimla district's Kasumpati assembly seat, and has got the status of Sub-tehsil now.

JUBBAL STATE

Jubbal state was lying to the East of Shimla, between Sirmaur and Rampur Bushahr between 30° 46' and 31° 8' North and 77° 27' and 77° 50' East. It has an area of 288 square miles (nearly 480 square kilometres). The Jubbal area is very beautiful and is well covered with magnificent forest trees. The chief products are grain, tobacco, apple and opium.

It is said that the ancestors of the rulers of Jubbal state were once rulers of Sirmaur state and they belonged to the *Rathore clan* of *Chandravamshi* Rajputs. It

was the eldest son of Raja Ugar Chand (whose capital Sirmauri Tal was washed away by floods) named *'Karan Chand'* who founded the Jubbal state. He had two brothers, *'Mool Chand'* and *'Duni Chand'*. *Mool Chand* ruled over Sari area and *Duni Chand* acquired Rawingarh.

One tradition goes that the old Sirmauri Raja presented one of his wives, as a religious act to a Brahmin of local renowned. In the Brahmin's house three sons were born of this lady, who founded the Hill Chiefships of *'Jubbal'*, *'Rawingarh'* and *'Sairi'*. The Jubbal state was originally a tributary of Sirmaur, but after the Gurkha war it became independent. Karam Chand made *'SONEPUR'* his capital in the beginning and later on moved it to *Purana Jubbal*. During his rule, there were a number of petty *Thakurs* creating trouble from time to time. But it was only Amar Chand, successor of Karan Chand, who subdued them and extended his boundaries.

Rana Bhag Chand the fifth ruler destroyed a number of *Thakurais* and expanded his state. This created suspicion in the mind of Garhwal Raja, who attacked Jubbal and arrested Rana Bhag Chand and took him to Garhwal. There he fell in love with princess of the state, but refused to marry her. On finding a suitable opportunity, he escaped from the prison and reached back Jubbal. The Rani of Garhwal was the daughter from the princely family of Sirmaur. On hearing the story of Rana Bhag Chand's dubious character, Sirmauri army attacked Jubbal, but could not capture Bhag Chand. Instead of him, his successor Narain Chand came under their grip. He was taken into custody but died soon after.

Narain Chand's son Roop Chand accepted the overlordship of Sirmaur. But his successor Tek Chand, revolted against Sirmaur's authority. He was succeeded by his son Gohar Chand (Gir Chand) who subsequently shifted his capital from Purana Jubbal to *DEORHA* (the present Jubbal).

Rana Hukam Chand was a great ruler of the state. He fought many battles against *'Bushahr'*, *'Garhwal'* and *'Sirmaur'* states. At the time of Gurkha invasion, Jubbal was a tributary of Sirmaur and ruled by Rana Puran Chand. During the occupation, it became separated and in 1815 Rana Puran Chand was granted an independent sanad. His wazir *'Dangi'* was also a famous warrior. The sanad prescribed the maintenance of 70 begaris at the permanent service of the government. This condition was subsequently commuted to an annual tribute of Rs.2,520/-.

Puran Chand misgoverned the state and in 1832, he abdicated in favour of British government, receiving a maintenance allowance of Rs. 4,400/- per annum. He soon resented this arrangement. After a lengthy correspondence, Puran Chand was restored. He however died before effect could be given to this decision and the state remained under government control, until his son Karam Chand came of age.

Karam Chan was invested with full powers in 1853. His rule was harsh and unpopular. He died in 1877 at Challpal. Karam Chand was succeeded by his son Padam Chand.

PADAM CHAND: Born in 1862, he succeeded on 17th March 1877 and continued till 1877. He had marital relations with the princely state of Delath, Dehra Gopipur, Rawingarh and Sairi in Shimla district. He had eleven sons with following names RajKumar Bharat Chand (born in 1880 and died in 1883). Rajkumar Sudhar Chand (died in 1886), Rajkumar Pratap Chand (died in 1887), Rajkumar Uday Chand (died in 1890), Rana Gyan Chand (born in 1887), Rajkumar Ishwari Singh (born on 2nd September 1890, was granted the jagir of Basa Nerwa married to a rajput lady

from Badyar in Himachal and had two sons, namely Kanwar Raghuvir Singh born in 1916 and Kanwar Bhawani Singh born in 1919. Ishwari Singh died in 1936). Rana Bhagat Chand Bahadur (born in 1888), Raj Kumar Nigham Singh (born in 1891 and died in 1917), Raj Kumar Lakshmi Singh (born in 1893 and died on 7th April 1894) Raj Kumar Krishan Singh (born on 16th January 1897, had two wives, one from Kunihar and other the daughter of Kanwar Hira Singh of Chamba) and Raj Kumar Durga Singh (born in 1897). Rana Padam Chand also had five daughters, first two were married to Raja Bijey Sen of Keonthal, third one to Yuvraj Bhagwant Singh of Orchha and last two to Raja Bikram Singh of Baghal.

GYAN CHAND: Rana of Jubbal from 1898 to 1910, born in 1887, educated at Aitchison Chief's College, Lahore; married 1stly in 1904, sister of Raja Pratap Bikram Shah of Khairigarh-Singhai, married 2ndly in 1904, Rani Sita Devi, who died in Hardwar in 1980. He died on 29th April 1910. He had male heir and so was succeeded by his half brother Bhagat Chand in 1910.

RAJ KUMAR DURGA SINGH: Born on 15 July 1897, when Rana Gyan Chand of Jubbal died in 1910, with out having children, his mother claimed the throne for Raj Kumar Durga Singh on the ground that she was the senior most Rajmata of Jubbal State and that her second son, RajKumar Durga Singh, should be made the ruler of Jubbal as he was the full brother of Rana Gyan Chand . She field a case at the High Court of Calcutta in Bengal (there was no Supreme Court in India in those days) and even went there herself to Calcutta, which was nearly 2,000 kilometres away, (there were no aeroplanes then and Calcutta was the capital of India in 1910). However, the judgement went in favour of Rana Bhagat Chand, as in the eyes of the British Government, all legal wives of the ruler were of equal rank, and the throne would pass to the next elder son, regardless of he was a full or step brother of the deceased ruler. He married four wives, the first two were from Dhami State, the third was from Bhajji State and the fourth. Kumari Mangla Devi who died in 2000, was also from Dhami, and had fourteen children.

BHAGAT CHAND: Bhagat Chand K.C.S.I., Raja of Jubbal from 1910 to 1946, was born on 12th October 1888 and succeeded on 29th April 1910, Raja (Hereditary), K.C.S.I. [1936], C.S.I. [1928], educated at Aitchison's Chiefs College in Lahore, Pakistan and graduated with a diploma in 1907, Zamindar in the Dehra Dun District of Uttrakhand, as well as owner of extensive properties in Shimla, Delhi and Jagadhri in Haryana. He attended the Coronation Durbar of Their Imperial Majesties King George the Fifth and Queen Mary at Delhi in 1911. He represented the Shimla Hill States in the Council of Princes from 1921 to 1924, he was elected a Member of the Standing Committee of the Chamber of Princes in 1939.

He created an Endowment Trust Fund to make Education and Medical Relief free and independent of the State in memory of his late father, Rana Padam Chand Bahadur of Jubbal State. He abolished many small taxes in the State on the Occasion of his Silver Jubilee in 1935. He made an extensive tour round the world accompanied by the Rani Sahiba from 1932 to 1934. He abdicated from the throne on 12th October 1946, in favour of his eldest son Tikka Digvijay Chand, after ruling for 36 years. During his long reign, Jubbal State made great economic progress, Forest Rest Houses were constructed in Chopal, the Southern portion of Jubbal State and one at Deorah, the capital of Jubbal State, which is in the Northern part of the State.

The State was one of the first Princely Kingdoms to avail itself of electricity with

the construction of a hydroelectric plant in 1924. Education and Medical Services were made free by him in the State and the Raja Sahib established a college of higher education for his subjects in Shimla, married 1stly, 1912, Rani Tara Devi, who died 1918, daughter of Kanwar Mohan Singh of Keonthal, married 2ndly on 11th May 1919, Rani Bai Shri Leila Ba Kunverba Sahiba, born on 14th February 1893 in Gondal, she died on 7th March 1975 at New Delhi, daughter of HH Maharaja Shri Sir Bhagwat Sinhji Sagram Sinhji Sahib of Gondal, and his first wife, HH Maharani Shri Nandkunverba Sahiba. He died on 5th October 1951 at Woodville Palace, Shimla, leaving behind an efficient and modern state with sound finances.

DIGVIJAY CHAND: He was Raja of Jubbal from 1946 to 1948, born in 1913, educated at the Aitchison's Chiefs College in Lahore, now in Pakistan, Honourary A.D.C. to the President of India, Dr. Rajendra Prasad, from 1957 to 1960, held the Honarary rank of Major in the Brigade of Guards, married on 31st January 1932, Rani Hemant Kanwar, who was born on 13th September 1913, and she died on 11th March 1964, daughter of HH Shri Huzur Raja Sir Arjun Singhji Sahib Bahadur, Raja of Narsingarh, and his first wife, HH Rani Shiv Kunwarji. Digvijay Chand died on 30th December 1966.

Rana Digvijay Chand had two daughters and two sons, namely-Maharani Devender Kumari (born on 13 July 1933, married on 21 April 1954 to Maharaja Madneshwar Singh Deo Surguja) Rajkumari Rattan Kumari (born on 16 August 1934, married on 28 May 1954 to Raja Vir Bhadra Singh of Bushahr, died on 27 September 1983), Tikka Dig Pal Chand (born in 1935 and died on 10th October 1936) and Raja Yogender Chand (born in 1937).

YOGENDER CHAND: Presently owner of Jubbal Palace since 1966. Born on 20th July 1937 in Jubbal, educated at the Doon School, Dehra Doon, Uttaranchal, and passed out in 1954. He graduated in 1958 from Hindu College, Delhi University. Married on 5th May 1960, Rani Sudha Kumari, daughter of Raja Hitender Sen of Keonthal, and has one son and four daughters. He joined active politics and became member of Congress party.

Elected to State Legislative Assembly in 1985 on Congress (1) ticket and in November 1993 as an Independent candidate. Returned to the House in 1998 as a Congress Candidate. He contested the Vidhan Sabha election again from Chaupal in February 2003 on Congress ticket, but lost to an independent candidate. He retired from active politics in December 2007 and resigned from the Congress party at same time. He has four children, namely Rajkumari Bhawna Kumari (born on December 1963, married on 5th March 1990 to Kanwar Shyamendra Singh of Nagod), Rajkumari Shrikriti (born on 10th May 1966, married on Ist December 1997 to Kanwar Rageshwar Singh of Bushahr), Rajkumari Aditya Kumari (born on 12 August 1967) Rajkumari Urvashi (born on 11 February 1972 and died unmarried on 31st May 1994) and Tikka Anirudh Chand (born in 1975).

In 1896 the *'Thakurais'* of 'RAWINGARH' and 'DHADI' were declared subordinate to Jubbal. Each paid an annual tribute of one musk pod. Jubbal, however did not interfere with the administration of Thakurais. In 1918 the hereditary title of *Raja* was conferred on the chief of Jubbal. The state maintained a force of 45 Armed police. The last Chief of the state was Digvijay Chand.

The Jubbal state contained 84 villages, including *'Deorha'* its capital and residence of the Rana, situated in 31° 7' North and 77° 44' East, on a tributary of the

river Pabbar, in a deep valley, terraced of a careful cultivation of rice and other cash crops. The Raja's residence was built in a partially Chinese style. The lower portion consisting of masonry, while upper half was ringed round with wooden galleries capped by overhanging caves. The palace is remarkable for enormous masses of deodar timber used in its construction.

On 15th April 1948 Jubbal became part of Himachal Pradesh. At present it is in district Shimla and having the status of a tehsil.

GENEOLOGY OF JUBBAL

18. Baghat Chand (1910-1946)
19. Digvijay Chand (1948)

RAWINGARH THAKURAIS

Rawingarh state was a feudatory of Jubbal, situated in 31° 7' North and 77° 48' East and comprising about 7 square miles (nearly 12 sq. km.) of territory round the fort of *Rawingarh,* which crowns an isolated hill on the left bank of the river Pabbar, here crossed by a wooden bridge. The elevation of the fort above sea level is 5,408 feet. Rawingarh's boundary was extended upto *Tons* river. It was founded by **Duni Chand**, the third son of the last ruler (ancient) of Sirmaur Raja Ugar Chand.

The *Thakurs* of Rawain were from the same stock as the Jubbal family. The state was originally fief of Tehri, but the Eastern portion was run by the Bushahri forces sometime before the Gurkha invasion. At that time, the ruler of the state was **Himmat Singh** and he was helped by the ruler of Jubbal in retaining his hold on the cis-Pabbar portion. After the expulsion of Gurkhas the state was partitioned between the British, the Raja of Garhwal and Rana of Rawain. The portion retained by the British was in 1830 given to Keonthal, in exchange of land taken up for station of Shimla.

A small community of Brahmins holds surrounding valley and had charge of two temples of Tibetan Architecture.

Thakur Kedar Singh succeeded Thakur Hari Chand in 1904 with full powers, but death pronouncement by him required confirmation from the Superintendent Shimla Hill States. Soon the affairs of the state fell into some confusion. On the Thakur's application a Government official was appointed to help him in the administration. Born in 1876 and was Rana of Rawingarh from 1904 to 1950, he married to a Kumari of Khaneti and had four sons namely-Kanwar Ratan Singh (died young), Kanwar Fateh Singh (born in 1906 and over looked in succession, he had three sons and three daughter), Kanwar Ajit Singh (had three sons and a daughter), and Kanwar Atar Singh (had three sons and a daughter). The period of Kidar Singh was in a way a period of Political awakening in India and many

parts of the state were having Praja Mandal movement for democratization of administration in the princely states. Thakur Kidar Singh died in 1950. The last ruler of Rawingarh was Fateh Singh.
